MBS("GMImage.SetFont"; $img; "@/Library/Fonts/Arial.ttf")
MBS("GMImage.SetfontPointSize"; $img; 14)
MBS("GMImage.Annotate"; $img; "Hello World"; "+20+20")
```

For Windows use different font path:

```
MBS("GMImage.SetFont"; $img; "@c:\Windows\Fonts\Tahoma.ttf")
MBS("GMImage.Annotate"; $img; "Hello World"; "+20+20")
```

Load pictures, sets puts text on it in yellow and centered:

```
# load image from container
Set Variable [ $ref; Wert:MBS("GMImage.NewFromContainer"; Annotate Image::InputImage) ]
# set font and font size
Set Variable [ $r; Wert:MBS("GMImage.SetFontPointSize"; $ref; Annotate Image::FontSize) ]
Set Variable [ $r; Wert:MBS("GMImage.SetFont"; $ref; Annotate Image::FontPath) ]
# set color to yellow
Set Variable [ $r; Wert:MBS("GMImage.SetFillColor"; $ref; "RGB 1 1 0") ]
# draw in rectangle with width and height of image (here 640 by 480) centered.
Set Variable [ $r; Wert:MBS("GMImage.Annotate"; $ref; Annotate Image::Text; "640x480"; "CenterGravity") ]
# save image
Set Field [ Annotate Image::OutputImage; MBS( "GMImage.WriteToPNGContainer"; $ref ) ]
# and free memory
Set Variable [ $Error; Wert:MBS("GMImage.Release";$ref) ]
```

Text and gravity only:

```
MBS("GMImage.Annotate"; $ref; Annotate Image::Text; ""; "SouthWestGravity")
```

Write text with Arial Black:

```
Set Variable [ $ref ; Value: MBS("GMImage.NewFromContainer"; Annotate Image::InputImage) ]
Set Variable [ $r ; Value: MBS("GMImage.SetFontPointSize"; $ref; 72) ]
Set Variable [ $r ; Value: MBS("GMImage.SetFont"; $ref; "Arial Black") ]
Set Variable [ $r ; Value: MBS("GMImage.SetFillColor"; $ref; "RGB 0 0 0") ]
Set Variable [ $r ; Value: MBS("GMImage.Annotate"; $ref; "Hello World"; "100x200+10+80"; 1) ]
Set Field [ Annotate Image::OutputImage ; MBS( "GMImage.WriteToPNGContainer"; $ref ) ]
Set Variable [ $Error ; Value: MBS("GMImage.Release";$ref) ]
```

85.25 **GMImage.AutoOrient**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.AutoOrient"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns OK or error.

Description

This allows the image to be viewed correctly when the orientation attribute is not available, or is not respected.

85.25.1 Blog Entries

Created 28th December 2018, last changed 14th May 2019.

85.26 GImage.AveragePixelValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.AveragePixelValue"; ImageRef { ; X; Y; Width; Height })

Parameters

ImageRef

The image reference number.

1

X

Optional

X-Position of the rectangle.

\$left

Y

Optional

Y-Position of the rectangle.

\$top

Width

Optional

The width of the rectangle. Default is width of image.

\$width

Height

Optional

The height of the rectangle. Default is height of image.

\$height

Result Returns the average pixel value.

Description

Value is in range from 0.0 to 1.0 depending if it is more black (0.0) or white (1.0).

Make sure the pixels are in RGB format before you call this method. (Use GImage.SetType with value 6.)

This function is designed to test if a certain area in the image is white or black.

Does not check alpha channel!

Version 9.1 and later uses full image if rectangle is missed.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.BaseRows"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.30 GMImage.Blur

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Blur"; ImageRef { ; radius; sigma })

Parameters

ImageRef

The image reference number.

1

radius

Optional

Optional, The radius of the Gaussian, in pixels, not counting the center pixel.

0

sigma

Optional

Optional, The standard deviation of the Laplacian, in pixels.

1

Result Returns "OK" on success.

Description

Examples

Blurs image

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Blur"; $Image; 10; 5);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$Result)
```

85.31 GMImage.BlurChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.BlurChannel"; ImageRef; ChannelType; radius; sigma)

Parameters

ImageRef

The image reference number.

1

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

radius

The radius of the Gaussian, in pixels, not counting the center pixel.

0

sigma

The standard deviation of the Laplacian, in pixels.

1

Result Returns "OK" on success.

Description

See also

85.32 GImage.Border

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Border"; ImageRef { ; Geometry })

Parameters

ImageRef

The image reference number.

1

Geometry

Optional

Optional, The rectangle with border width and height. Geometry is specified as a width and height "100x200". "100x200"

Result Returns "OK" on success.

Description

The color of the border is specified by the borderColor attribute.

Offset from geometry is not used, just width and height.

Examples

Add whitespace on top and bottom of image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$r = MBS( "GImage.SetBorderColor"; $Image; "white" );
$r = MBS("GImage.Border";$Image; "0x100");
$Result = MBS("GImage.WriteToPNGContainer"; $Image);

$r = MBS("GImage.Release";$Image)
];
$Result)
```

Add white space:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromContainer"; ScancodeTests::MyImage ) ]
Set Variable [ $r ; Value: MBS("GImage.SetBorderColor"; $image; "white") ]
Set Variable [ $r ; Value: MBS("GImage.Border"; $image; "20x2") ]
```

85.33 GImage.BoundingBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.BoundingBox"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a string with a geometry.

Description

The current fuzz value is used when discriminating between pixels. This is the crop bounding box used by `crop(Geometry(0,0))`;

85.34 GMImage.Channel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Channel"; ImageRef; ChannelType)

Parameters

ImageRef

The image reference number.

1

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

Result Returns "OK" on success.

Description

Examples

Extracts the red channel:

```
Let ( [
  $Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
  $Result = MBS("GMImage.Channel";$Image; 1);
  $Result = MBS("GMImage.WriteToPNGContainer"; $Image);
  $Error = MBS("GMImage.Release";$Image)
] ;
$Result)

85.35 GMImage.Charcoal

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Charcoal"; ImageRef { ; radius; sigma })

Parameters

ImageRef

The image reference number.

1

radius

Optional

Optional, The radius of the Gaussian, in pixels, not counting the center pixel.

0

sigma

Optional

Optional, The standard deviation of the Laplacian, in pixels.

1

Result Returns "OK" on success.

Description

Examples

Apply Charcoal effect to an image

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Charcoal"; $Image; 10; 5);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$Result)

85.36 GMImage.Chop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Chop"; ImageRef; Geometry)

Parameters

ImageRef

The image reference number.

1

Geometry

The area to remove. A Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

Result Returns "OK" on success.

Description

85.37 GImage.ClipMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.ClipMask"; ImageRef; clipMask)

Parameters

ImageRef

The image reference number.

1

clipMask

The image reference number.

2

Result Returns "OK" on success.

Description

The clip mask must be the same dimensions as the image. Pass an invalid image to unset an existing clip mask.

See also

- 85.38 GImage.ClipPath 4387

85.39 GImage.Coders

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	8.4	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Coders")

Result Returns JSON or error.

Description

For each coder, we have the following entries:

Name	Format ID ("magick")
Description	Format description
Note	Usage note for user
Version	Support library version
Module	Name of loadable module
Readable	Whether this coder can read.
Writable	Whether this coder can write.
MultiFrame	Coder may read/write multiple frames (default True)
BlobSupport	Coder uses BLOB APIs (default True)
ThreadSupport	Coder is thread safe (default True)

85.40 GMImage.Colorize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Colorize"; ImageRef; opacity; penColor)

Parameters

ImageRef

The image reference number.

1

opacity

Percent from 0 to 100.

50

penColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description

Blends the fill color with each pixel in the image.

A percentage blend is specified with opacity. Control the application of different color components by specifying a different percentage for each component (e.g. 90/100/10 is 90% red, 100% green, and 10% blue).

Examples

Colorize an image:

```
Set Variable [ $image ; Value: MBS( "GMImage.NewFromContainer"; test::Input ) ]
```

```
Set Variable [ $r ; Value: MBS( "GMImage.Colorize"; $image; 50; "RGB 1 0 0" ) ]
```

```
Set Field [ test::Output ; MBS( "GMImage.WriteToPNGContainer"; $image ) ]
```

```
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $image ) ]
```

85.41 GMImage.ColorizeRGB

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.ColorizeRGB"; ImageRef; opacityRed; opacityGreen; opacityBlue; penColor)

Parameters

ImageRef

The image reference number.

1

opacityRed

Percent from 0 to 100.

50

opacityGreen

Percent from 0 to 100.

50

opacityBlue

Percent from 0 to 100.

50

penColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description

Blends the fill color with each pixel in the image.

A percentage blend is specified with opacity. Control the application of different color components by specifying a different percentage for each component (e.g. 90/100/10 is 90% red, 100% green, and 10% blue).

Examples

Colorize an image

```
MBS("GMImage.ColorizeRGB"; $BigImageRef; 10; 0; 0; "green")
```

Colorize by adding 10% blue:

```
Set Variable [ $BigImageRef; Value:MBS("GMImage.NewFromContainer"; Test::BigImage) ]
```

```
# 10% blue
```

```
Set Variable [ $Result; Value:MBS("GMImage.ColorizeRGB"; $BigImageRef; 10; 10; 10; "blue") ]
```

Set Field [Test::Result; MBS("GMImage.WriteToJPEGContainer"; \$BigImageRef)]

Set Variable [\$Error; Value:MBS("GMImage.Release";\$BigImageRef)]

85.43 GImage.Compare

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Compare"; ImageRef; OtherImageRef)

Parameters

ImageRef

The image reference number.

1

OtherImageRef

The image reference number.

1

Result Returns true if equal and false if not equal.

Description

Sets meanErrorPerPixel, normalizedMaxError, and normalizedMeanError in the current image. False is returned if the images are identical.

Examples

Compare images:

```

Set Variable [ $img1; Value:MBS( "GImage.NewFromContainer"; test::Container1 ) ]
Set Variable [ $img2; Value:MBS( "GImage.NewFromContainer"; test::Container2 ) ]
Set Variable [ $result; Value:MBS( "GImage.Compare"; $img1; $img2 ) ]

85.44 GImage.Composite

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Composite"; ImageRef; OtherImageRef; GravityType { ; CompositeOperator })

Parameters

ImageRef

The image reference number.

1

OtherImageRef

The second image reference (a number returned from the GImage.New functions)

2

GravityType

The Gravity Type. Can be ForgetGravity=0, NorthWestGravity=1, NorthGravity=2, NorthEastGravity=3, WestGravity=4, CenterGravity=5, EastGravity=6, SouthWestGravity=7, SouthGravity=8, SouthEastGravity=9, StaticGravity=10.

0

CompositeOperator

Optional

Optional operator. Can be one of the following numbers: UndefinedCompositeOp = 0, OverCompositeOp = 1, InCompositeOp = 2, OutCompositeOp = 3, AtopCompositeOp = 4, XorCompositeOp = 5, PlusCompositeOp = 6, MinusCompositeOp = 7, AddCompositeOp = 8, SubtractCompositeOp = 9, DifferenceCompositeOp = 10, MultiplyCompositeOp = 11, BumpmapCompositeOp = 12, CopyCompositeOp = 13, CopyRedCompositeOp = 14, CopyGreenCompositeOp = 15, CopyBlueCompositeOp = 16, CopyOpacityCompositeOp = 17, ClearCompositeOp = 18, DissolveCompositeOp = 19, DisplaceCompositeOp = 20, ModulateCompositeOp = 21, ThresholdCompositeOp = 22, NoCompositeOp = 23, DarkenCompositeOp = 24, LightenCompositeOp = 25, HueCompositeOp = 26, SaturateCompositeOp = 27, ColorizeCompositeOp = 28, LuminizeCompositeOp = 29, CopyCyanCompositeOp = 32, CopyMagentaCompositeOp = 33, CopyYellowCompositeOp = 34, CopyBlackCompositeOp = 35, DivideCompositeOp = 36. Default is 2.

2

Result Returns "OK" on success.

Description

Examples

Load image and compose it on another one:

```
# load images...
Set Variable [ $Image1 ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/logo.png" ) ]
Set Variable [ $Image2 ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/input.jpg" ) ]
# maybe scale it?
Set Variable [ $r ; Value: MBS( "GImage.Scale"; $Image1; "500x500" ) ]
# put first on second
```

```
Set Variable [ $r ; Value: MBS( "GMImage.Composite"; $Image2; $Image1; 5; 1) ]  
# and save to file  
Set Variable [ $r ; Value: MBS( "GMImage.WriteToFile"; $Image2; "/Users/cs/Pictures/output.jpg") ]  
# free memory  
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image1) ]  
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image2) ]
```

85.45 GMMImage.CompositeXY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMMImage.CompositeXY"; ImageRef; OtherImageRef; xOffset; yOffset { ; CompositeOperator })

Parameters

ImageRef

The image reference number.

1

OtherImageRef

The second image reference (a number returned from the GMMImage.New functions)

2

xOffset

The x offset.

0

yOffset

The y offset.

0

CompositeOperator

Optional

Optional operator. Can be one of the following numbers: UndefinedCompositeOp = 0, OverCompositeOp = 1, InCompositeOp = 2, OutCompositeOp = 3, AtopCompositeOp = 4, XorCompositeOp = 5, PlusCompositeOp = 6, MinusCompositeOp = 7, AddCompositeOp = 8, SubtractCompositeOp = 9, DifferenceCompositeOp = 10, MultiplyCompositeOp = 11, BumpmapCompositeOp = 12, CopyCompositeOp = 13, CopyRedCompositeOp = 14, CopyGreenCompositeOp = 15, CopyBlueCompositeOp = 16, CopyOpacityCompositeOp = 17, ClearCompositeOp = 18, DissolveCompositeOp = 19, DisplaceCompositeOp = 20, ModulateCompositeOp = 21, ThresholdCompositeOp = 22, NoCompositeOp = 23, DarkenCompositeOp = 24, LightenCompositeOp = 25, HueCompositeOp = 26, SaturateCompositeOp = 27, ColorizeCompositeOp = 28, LuminizeCompositeOp = 29, CopyCyanCompositeOp = 32, CopyMagentaCompositeOp = 33, CopyYellowCompositeOp = 34, CopyBlackCompositeOp = 35, DivideCompositeOp = 36. Default is 2.

2

Result Returns "OK" on success.

Description

You can use this function for example to add a watermark image.

Examples

Compose a picture on second:

```
# load images...
Set Variable [ $Image1 ; Value: MBS( "GMMImage.NewFromFile"; "/Users/cs/Pictures/IMG_3625.jpg" ) ]
Set Variable [ $Image2 ; Value: MBS( "GMMImage.NewFromFile"; "/Users/cs/Pictures/mond.jpg" ) ]
# put first on second
```

85.45. *GMIMAGE.COMPOSITEXY*

4399

```
Set Variable [ $r ; Value: MBS( "GMImage.CompositeXY"; $Image2; $Image1; 500; 200) ]
# and save to file
Set Variable [ $r ; Value: MBS( "GMImage.WriteToFile"; $Image2; "/Users/cs/Pictures/output.jpg") ]
# free memory
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image1) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image2) ]
```

85.46 GImage.Contrast

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Contrast"; ImageRef; sharpen)

Parameters

ImageRef

The image reference number.

1

sharpen

The sharpen value. An integer number, either 0 or 1.

1

Result Returns "OK" on success.

Description

Enhances the intensity differences between the lighter and darker elements of the image. Set sharpen to a value other than 0 to increase the image contrast otherwise the contrast is reduced.

Examples

Changes contrast:

```
# load images...
Set Variable [ $Image ; Value: MBS( "GImage.NewFromContainer"; test::Input ) ]
# change contrast
Set Variable [ $r ; Value: MBS( "GImage.Contrast"; $Image; 1 ) ]
# and save to container
Set Field [ test::Output ; MBS( "GImage.WriteToPNGContainer"; $Image; "test.png" ) ]
# free memory
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

85.47 GMImage.Copy

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Copy"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the ImageRef number on success.

Description

Please call GMImage.Release later to free memory for this image.

85.48 GImage.CopyChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	7.3	Yes	Yes	Yes	Yes	Yes

MBS("GImage.CopyChannel"; SourceImage; SourceChannel; DestImage; DestChannel)

Parameters

SourceImage

The image reference number of source image.

\$sourceImage

SourceChannel

The source channel. Can be Red, Green, Blue or Opacity.

"Opacity"

DestImage

The image reference number of dest image.

\$destImage

DestChannel

The dest channel. Can be Red, Green, Blue or Opacity.

"Opacity"

Result Returns OK or error.

Description

e.g. to copy opacity from one image to other.

Examples

Clip an image:

```
Set Variable [ $gray ; Value: "# 777777" ]
# Read in source image
Set Variable [ $SourceImage ; Value: MBS( "GImage.NewFromContainer"; Clip Image::Input ) ]
Set Variable [ $sourceWidth ; Value: MBS( "GImage.GetWidth"; $SourceImage ) ]
Set Variable [ $sourceHeight ; Value: MBS( "GImage.GetHeight"; $SourceImage ) ]
#
# Scale to dest size
Set Variable [ $sourceSize ; Value: If($sourceWidth >$sourceHeight; $sourceHeight; $sourceWidth) ]
Set Variable [ $destWidth ; Value: GetAsNumber ( Clip Image::Width ) ]
Set Variable [ $destHeight ; Value: GetAsNumber ( Clip Image::Height ) ]
Set Variable [ $destSize ; Value: If($destWidth >$destHeight; $destHeight; $destWidth) ]
Set Variable [ $tempImage ; Value: MBS( "GImage.New"; $sourceSize & "x" & $sourceSize; "transparent"
) ]
Set Variable [ $r ; Value: MBS( "GImage.CompositeXY"; $tempImage; $sourceImage; -($sourceWidth-
$sourceSize)/2; -($sourceHeight-$sourceSize)/2; 1) ]
Set Variable [ $r ; Value: MBS( "GImage.Scale"; $tempImage; $destSize & "x" & $destSize ) ]
#
```

```

# Build mask
Set Variable [ $clipImage ; Value: MBS( "GMImage.New"; $destSize & "x" & $destSize; "transparent" ) ]
Set Variable [ $r ; Value: MBS( "GMImage.SetFillColor"; $clipImage; "black" ) ]
Set Variable [ $radius ; Value: $destSize/2 ]
Set Variable [ $r ; Value: MBS( "GMImage.DrawCircle"; $clipImage; $radius; $radius; 0; $radius ) ]
#
# Apply mask
Set Variable [ $r ; Value: MBS( "GMImage.CopyChannel"; $tempImage; "Opacity"; $clipImage; "Opacity" ) ]
#
# Create destination image
Set Variable [ $destImage ; Value: MBS( "GMImage.New"; $destWidth & "x" & $destHeight; $gray ) ]
Set Variable [ $r ; Value: MBS( "GMImage.CompositeXY"; $destImage; $tempImage; ($destWidth-$destSize)/2; ($destHeight-$destSize)/2; 1 ) ]
Set Field [ Clip Image::Output ; MBS( "GMImage.WriteToPNGContainer"; $destImage ) ]
#
# Memory cleanup
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $SourceImage ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $tempImage ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $clipImage ) ]

```

Created 16th July 2017, last changed 21st December 2018.

85.49 GMImage.Crop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Crop"; ImageRef; geometry)

Parameters

ImageRef

The image reference number.

1

geometry

The rectangle to crop. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

Result Returns "OK" on success.

Description

You can add pixels with GMImage.Border function.

Examples

Crops the image:

```
Let ( [
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$Width = MBS("GMImage.GetWidth";$Image);
$Height = MBS("GMImage.GetHeight";$Image);
$Width = $Width/2;
$Height = $Height/2;
$ScaleResult = MBS("GMImage.Crop";$Image; $Width & "x" & $Height);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$error = MBS("GMImage.Release";$Image)
];
$Result)
```

Create barcode and crop it:

```
Set Field [ Barcode Generation::Image ; "" ]
Set Variable [ $img ; Value: MBS("Barcode.Generate"; Barcode Generation::Symbology; Barcode Generation::Text) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $ImageHeight ; Value: MBS("GMImage.GetHeight"; $img) ]
Set Variable [ $ImageWidth ; Value: MBS("GMImage.GetWidth"; $img) ]
# calculate the crop rectangle
Set Variable [ $w ; Value: $ImageWidth ]
Set Variable [ $h ; Value: $ImageHeight ]
```

```

Set Variable [ $x ; Value: 0 ]
Set Variable [ $y ; Value: $ImageHeight - 50 ]
# crop
Set Variable [ $r ; Value: MBS("GImage.Crop"; $img; $w & "x" & $h & "+" & $x & "+" & $y) ]
Set Field [ Barcode Generation::Image ; MBS( "GImage.WriteToPNGContainer"; $img; "barcode.png") ]
Set Variable [ $r ; Value: MBS( "GImage.Destroy"; $img ) ]
End If

```

85.50 GMImage.CycleColormap

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.CycleColormap"; ImageRef; amount)

Parameters

ImageRef

The image reference number.

1

amount

the number of colors to cycle.

1

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.51 GImage.Despeckle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Despeckle"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.52 **GMImage.Directory**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Directory"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the directory string.

Description

Created 18th August 2014, last changed 18th August 2014.

85.53 GImage.DrawArc

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.DrawArc"; ImageRef; startX; startY; endX; endY; startDegrees; endDegrees)

Parameters

ImageRef

The image reference number.

1

startX

The X coordinate for start position.

startY

The Y coordinate for start position.

endX

The X coordinate for end position.

endY

The Y coordinate for end position.

startDegrees

The start degree value.

endDegrees

The end degree value.

Result Returns OK or error message.

Description

Draw an arc using the stroke color and based on the circle starting at coordinates startX,startY, and ending with coordinates endX,endY, and bounded by the rotational arc startDegrees,endDegrees.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

Examples

Creates a new image with a round rectangle:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawArc"; $img; 50; 50; 250; 150; 0; 90) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

- 85.285 *GMImage.SetStrokeColor* 4706
- 85.340 *GMImage.WriteToPNGContainer* 4777

Example Databases

- [GraphicsMagick/Drawing](#)

Created 18th August 2014, last changed 21st December 2018.

85.54 GImage.DrawCircle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.DrawCircle"; ImageRef; originX; originY; perimX; perimY)

Parameters

ImageRef

The image reference number.

1

originX

The X coordinate for start position.

originY

The Y coordinate for start position.

perimX

The perimeter width.

perimY

The perimeter height.

Result Returns OK or error message.

Description

Draw a circle using the stroke color and thickness using specified origin and perimeter coordinates. If a fill color is specified, then the object is filled.

PerimX/PerimY define a point where the circle goes through, so put it a radius away from the origin.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

Examples

Creates a new image and draws a circle inside:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawCircle"; $img; 150; 100; 100; 100) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

Draws a circle in a rectangle in a circle:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "100x100"; "white" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetFillColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetStrokeColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $r; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 90 ) ]
```

85.54. *GMIMAGE.DRAWCIRCLE* 4413

Set Variable [\$r; Value:MBS("GMImage.DrawRectangle"; \$img; 22; 22; 100-22; 100-22)]

Set Variable [\$r; Value:MBS("GMImage.DrawCircle"; \$img; 50; 50; 50; 100-22)]

Set Field [test::test; MBS("GMImage.WriteToPNGContainer"; \$img; "test.png")]

Set Variable [\$r; Value:MBS("GMImage.Release"; \$img)]

85.55 GImage.DrawEllipse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.DrawEllipse"; ImageRef; originX; originY; radiusX; radiusY; arcStart; arcEnd)

Parameters

ImageRef

The image reference number.

1

originX

The X coordinate for origin position.

originY

The Y coordinate for origin position.

radiusX

The radius.

radiusY

The radius.

arcStart

The start degree value.

arcEnd

The end degree value.

Result Returns OK or error message.

Description

Draw an ellipse using the stroke color and thickness, specified origin, x & y radius, as well as specified start and end of arc in degrees. If a fill color is specified, then the object is filled.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

Examples

Draws an ellipse in a new image:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawEllipse"; $img; 150; 100; 80; 60; 0; 360) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

Created 18th August 2014, last changed 21st December 2018.

85.56 GImage.DrawLine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.DrawLine"; ImageRef; startX; startY; endX; endY)

Parameters

ImageRef

The image reference number.

1

startX

The start X position.

startY

The start Y position.

endX

The end X position.

endY

The end Y position.

Result Returns OK or error message.

Description

Draw a line using stroke color and thickness using starting and ending coordinates.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

Examples

Create an image with a line:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $f; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $l; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $d; Wert:MBS("GImage.DrawLine"; $img; 50; 50; 250; 150) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

Draw a line from pos to pos2 on column x:

```
MBS( "GImage.DrawLine"; $img; $x; $pos; $x; $pos2 )
```

85.58 GImage.DrawRectangle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.DrawRectangle"; ImageRef; upperLeftX; upperLeftY; lowerRightX; lowerRightY)

Parameters

ImageRef

The image reference number.

1

upperLeftX

Upper left X position.

upperLeftY

Upper left Y position.

lowerRightX

Lower right X position.

lowerRightY

Lower right Y position.

Result Returns OK or error message.

Description

Draw a rectangle using stroke color and thickness from upper-left coordinates to lower-right coordinates. If a fill color is specified, then the object is filled.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

Examples

Creates a new image and draws a rectangle inside:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawRectangle"; $img; 50; 50; 250; 150) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

Draws a circle in a rectangle in a circle:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "100x100"; "white" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetFillColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetStrokeColor"; $img; "RGB 0 0 1" ) ]
```

```

Set Variable [ $r; Value:MBS( "GMImage.DrawCircle"; $img; 50; 50; 50; 90 ) ]
Set Variable [ $r; Value:MBS( "GMImage.DrawRectangle"; $img; 22; 22; 100-22; 100-22 ) ]
Set Variable [ $r; Value:MBS( "GMImage.DrawCircle"; $img; 50; 50; 50; 100-22 ) ]
Set Field [ test::test; MBS( "GMImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GMImage.Release"; $img ) ]

```

Draw something and write to file on desktop:

```

# New Image
Set Variable [ $img; Value:MBS("GMImage.New"; "300x200"; "RGB 1 1 1") ]
# Set colors and line width
Set Variable [ $r; Value:MBS("GMImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $r; Value:MBS("GMImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $r; Value:MBS("GMImage.SetLineWidth"; $img; 5) ]
# draw a rectangle
Set Variable [ $r; Value:MBS("GMImage.DrawRectangle"; $img; 50; 50; 250; 150) ]
# save to test.png on desktop:
Set Variable [ $DesktopPath; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $DesktopPath; "test.png") ]
Set Variable [ $r; Value:MBS("GMImage.WriteToFile"; $img; $path) ]
# cleanup
Set Variable [ $r; Value:MBS("GMImage.Release"; $img) ]

```

85.59 GImage.DrawRoundRectangle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.DrawRoundRectangle"; ImageRef; upperLeftX; upperLeftY; lowerRightX; lowerRightY; cornerWidth; cornerHeight)

Parameters

ImageRef

The image reference number.

1

upperLeftX

Upper left X position.

upperLeftY

Upper left Y position.

lowerRightX

Lower right X position.

lowerRightY

Lower right Y position.

cornerWidth

The width of the corner arc.

cornerHeight

The height of the corner arc.

Result Returns OK or error message.

Description

Draw a rounded rectangle using stroke color and thickness, with specified center coordinate, specified width and height, and specified corner width and height. If a fill color is specified, then the object is filled.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

Examples

Creates a new image and draws a round rectangle inside:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawRoundRectangle"; $img; 50; 50; 250; 150; 10; 10) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

85.61 GMImage.Emboss

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Emboss"; ImageRef { ; radius; sigma })

Parameters

ImageRef

The image reference number.

1

radius

Optional

Optional, The radius of the Gaussian, in pixels, not counting the center pixel.

0

sigma

Optional

Optional, The standard deviation of the Laplacian, in pixels.

1

Result Returns "OK" on success.

Description

Examples

Apply an emboss effect to an image

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Emboss"; $Image; 10; 5);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	10.1	Yes	Yes	Yes	Yes	Yes

MBS("GImage.ExifThumbnail"; ImageRef { ; FileName })

Parameters

ImageRef

The image reference number.

1

FileName

Optional

File name to pass to FileMaker with container.

"test.jpg"

Result Returns container value or error.

Description

Returns a JPEG in a container.

85.65.1 Blog Entries

- [MBS FileMaker Plugin, version 10.1pr5](#)

Created 22nd February 2020, last changed 22nd February 2020.

85.66 GMImage.Extent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Extent"; ImageRef; geometry { ; Color; GravityType })

Parameters

ImageRef

The image reference number.

1

geometry

The rectangle to use. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

Color

Optional

The background color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. #FF0000 for full red.

"RGB 1 0 0"

GravityType

Optional

The Gravity Type. Can be number of text value. Can be ForgetGravity=0, NorthWestGravity=1, NorthGravity=2, NorthEastGravity=3, WestGravity=4, CenterGravity=5, EastGravity=6, SouthWestGravity=7, SouthGravity=8, SouthEastGravity=9, StaticGravity=10.

0

Result Returns OK or error.

Description

Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.

Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.

Examples

Extent image with red space around:

```
Set Variable [ $BigImageRef ; Value: MBS("GMImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result ; Value: MBS("GMImage.Extent"; $BigImageRef; "1000x1000"; "red"; "center") ]
Set Field [ Test::Result ; MBS( "GMImage.WriteToPNGContainer"; $BigImageRef; "test.png" ) ]
Set Variable [ $Error ; Value: MBS("GMImage.Destroy";$BigImageRef) ]
```

85.67 **GMImage.FillPattern**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.FillPattern"; ImageRef; fillPatternRef)

Parameters

ImageRef

The image reference number.

1

fillPatternRef

The image reference number.

2

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.68 GImage.FindColorInColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	5.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.FindColorInColumn"; ImageRef; x; y; color { ; Invert; Tolerance })

Parameters

ImageRef

The image reference number.

1

x

The x coordinate. Zero based from 0 to GImage.GetWidth-1.

10

y

The y coordinate. Zero based from 0 to GImage.GetHeight-1.

10

color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Invert

Optional

If 0, we find first pixel matching your color. If 1 we find first pixel not matching the color. Default is 0.

0

Tolerance

Optional

The tolerance for comparison. Normally a small value like 3. So if color is 255, 255, 255 and pixel is 252, 252, 252 we have a match for tolerance being 3.

3

Result Returns position or error.

Description

You can find first pixel matching your given color in the column starting with given y position and given tolerance. If you set Invert to 1, the plugin returns row for first pixel not matching color.

Returns -1 if not found.

Examples

Finds color in column:

```
MBS("GImage.FindColorInColumn"; $img; $x; $y; $ColorToSearch; 1; 3)
```

85.69 GImage.FindColorInRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	5.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.FindColorInRow"; ImageRef; x; y; color { ; Invert; Tolerance })

Parameters

ImageRef

The image reference number.

1

x

The x coordinate. Zero based from 0 to GImage.GetWidth-1.

10

y

The y coordinate. Zero based from 0 to GImage.GetHeight-1.

10

color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Invert

Optional

If 0, we find first pixel matching your color. If 1 we find first pixel not matching the color. Default is 0.

0

Tolerance

Optional

The tolerance for comparison. Normally a small value like 3. So if color is 65535, 65535, 65535 and pixel is 64764, 64764, 64764 we have a match for tolerance being 800.

800

Result Returns position or error.

Description

You can find first pixel matching your given color in the row starting with given x position and given tolerance. If you set Invert to 1, the plugin returns column for first pixel not matching color.

Returns -1 if not found.

Examples

Finds color in row:

MBS("GImage.FindColorInRow"; \$img; \$x; \$y; \$ColorToSearch; 1; 3)

Result Returns "OK" on success.

Description

Fill pixels starting at target-pixel and stopping at pixels matching specified border color. Uses current fuzz setting when determining color match:

Created 18th August 2014, last changed 11st November 2019.

85.72 GImage.FloodFillColorXY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.FloodFillColorXY"; ImageRef; x; y; fillColor { ; borderColor })

Parameters

ImageRef

The image reference number.

1

x

x Position

0

y

y Position

0

fillColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

borderColor

Optional

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description

Uses current fuzz setting when determining color match.

Examples

Make a picture transparent:

```
# load a picture
Set Variable [ $image; Value:MBS( "GImage.NewFromContainer"; Test::BigImage) ]
# white in RGB
Set Variable [ $f; Value:"white" ]
# Replace all white with nearly white
```

```
Set Variable [ $r; Value:MBS( "GMImage.ReplaceColor"; $image; $f; "COLOR 65535 65278 65535"; 0 ) ]
# now flood fill it with 5 as tolerance
Set Variable [ $r; Value:MBS( "GMImage.SetColorFuzz"; $image; 5 ) ]
Set Variable [ $r; Value:MBS( "GMImage.FloodFillColorXY"; $image; 0; 0; $f ) ]
# now set back fuzz and make transparent using white
Set Variable [ $r; Value:MBS( "GMImage.SetColorFuzz"; $image; 0 ) ]
Set Variable [ $imagecolor; Value:MBS( "GMImage.Transparent"; $image; $f ) ]
# write back to container
Set Field [ Test::Result; MBS( "GMImage.WriteToPNGContainer"; $image;) ]
# cleanup
Set Variable [ $Error; Value:MBS("GMImage.Release";$image) ]
```

85.73 GImage.FloodFillOpacity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.FloodFillOpacity"; ImageRef; x; y; opacity; PaintMethod)

Parameters

ImageRef

The image reference number.

1

x

The X Position

0

y

The Y Position

0

opacity

A value from 0 to 65535.

127*257

PaintMethod

PointMethod = 0, ReplaceMethod = 1, FloodfillMethod = 2, FillToBorderMethod = 3, ResetMethod = 4

1

Result Returns "OK" on success.

85.74 **GMImage.FloodFillTexture**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.FloodFillTexture"; ImageRef; Geometry; texture { ; borderColor })

Parameters

ImageRef

The image reference number.

1

Geometry

The point. A Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" +20+30

texture

The image reference number.

2

borderColor

Optional

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description

Fills pixels starting at target-pixel and stopping at pixels matching specified border color. Uses current fuzz setting when determining color match.

85.75 GImage.FloodFillTextureXY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.FloodFillTextureXY"; ImageRef; x; y; texture { ; borderColor })

Parameters

ImageRef

The image reference number.

1

x

x Position

0

y

y Position

0

texture

The image reference number.

2

borderColor

Optional

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description

Fills pixels that match the color of the target pixel and are neighbors of the target pixel. Uses current fuzz setting when determining color match.

85.76 GMImage.Flop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Flop"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns "OK" on success.

Description

Examples

Mirror the picture.

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Flop"; $Image);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$Result)
```

Created 18th August 2014, last changed 21st December 2018.

85.77 GMImage.FontMap

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	10.1	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.FontMap")

Result Returns XML text or error.

Description

The MBS Plugin provides to GraphicsMagick the font map to use.

This is a XML defining which fonts are available.

Use this function to learn what fonts may be available or debug to see why a font doesn't load.

See also

85.78 GImage.FontTypeMetrics

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	7.3	Yes	Yes	Yes	Yes	Yes

MBS("GImage.FontTypeMetrics"; ImageRef; text)

Parameters

ImageRef

The image reference number.

1

text

Some text

"Hello World"

Result Returns list or error.

Description

Obtain font metrics for text string given current font, point size, and density settings.

Returns list with following values:

- text width in pixel
- text height in pixel
- Ascent, the distance in pixels from the text baseline to the highest/upper grid coordinate used to place an outline point.
- Descent, the distance in pixels from the baseline to the lowest grid coordinate used to place an outline point. Always a negative value.
- Maximum horizontal advance in pixels.
- Font size

To extract values, please pass through `Math.TextToNumber` or similar functions which always uses dot as decimal separator.

Examples

Draw some text on a picture:

```
# open a picture
Set Variable [ $ref ; Value: MBS("GImage.NewFromContainer"; Annotate Image::InputImage) ]
# set font size
Set Variable [ $r ; Value: MBS("GImage.SetFontPointsize"; $ref; 20) ]
# set the font
Set Variable [ $r ; Value: MBS("GImage.SetFont"; $ref; "@/System/Library/Fonts/LucidaGrande.ttc") ]
# set the fill color
```

```

Set Variable [ $r ; Value: MBS("GMImage.SetFillColor"; $ref; "RGB 0 0 0") ]
# Query size for this text:
Set Variable [ $r ; Value: MBS("GMImage.FontTypeMetrics"; $ref; Annotate Image::Text) ]
# draw the text:
Set Variable [ $r ; Value: MBS("GMImage.Annotate"; $ref; Annotate Image::Text; "100x200+10+40"; 1) ]
# write image
Set Field [ Annotate Image::OutputImage ; MBS( "GMImage.WriteToPNGContainer"; $ref ) ]
# free memory
Set Variable [ $Error ; Value: MBS("GMImage.Release";$ref) ]

```

Measure text:

```
MBS("GMImage.FontTypeMetrics"; $ref; Annotate Image::Text)
```

Example result: "528.000000

47.000000

39.000000

-8.000000

66.000000

40.000000"

85.79 GImage.Format

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Format"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the long image format description.

Description

See also

- 85.32 GImage.Border 4378

- 85.311 GImage.Spread 4738

Created 18th August 2014, last changed 18th August 2014.

85.80 GMImage.Frame

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Frame"; ImageRef; width; height; innerBevel; outerBevel)

Parameters

ImageRef

The image reference number.

1

width

The width of the frame

300

height

The height of the frame

200

innerBevel

The inner bevel size

6

outerBevel

The outer bevel size

6

Result Returns "OK" on success.

Description

Examples

Adds a frame to the image:

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Frame"; $Image);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$Result)

85.81 GMImage.Free

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	8.4	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Free"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns OK or error.

Description

Please call this function when you are done with the image to free memory.

The plugin doesn't know whether you need the image later, so it can't free the memory for you.

You can use `GMImage.ImageCount` to find out how many images are open in memory.

85.83 GImage.Gamma

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Gamma"; ImageRef; gammaRed; gammaGreen; gammaBlue)

Parameters

ImageRef

The image reference number.

1

gammaRed

The gamma value for the red channel. (or if only one value is given the gamma value for all channels)

0.5

gammaGreen

The gamma value for the green channel.

0.5

gammaBlue

The gamma value for the blue channel.

0.5

Result Returns "OK" on success.

Description

You can also pass only one gamma value for all three channels.

See also

- 85.121 GImage.GetGamma

Created 18th August 2014, last changed 18th August 2014.

85.84 GImage.GaussianBlur

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GaussianBlur"; ImageRef; width; sigma)

Parameters

ImageRef

The image reference number.

1

width

The number of neighbor pixels to be included in the convolution mask is specified by width

100

sigma

Specifies the standard deviation of the gaussian bell curve

1

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.85 GImage.GaussianBlurChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GaussianBlurChannel"; ImageRef; ChannelType; width; sigma)

Parameters

ImageRef

The image reference number.

1

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

width

The number of neighbor pixels to be included in the convolution mask is specified by width

100

sigma

Specifies the standard deviation of the gaussian bell curve

1

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.86 GMImage.Geometry

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Geometry"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the geometry string.

Description

Created 18th August 2014, last changed 18th August 2014.

85.87 GImage.GetAdjoin

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetAdjoin"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a boolean value.

Description

See also

- 85.113 GImage.GetEndian 4491

85.88 GImage.GetAnimationDelay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetAnimationDelay"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns animation delay value as number.

Description

Time in 1/100ths of a second which must expire before displaying the next image in an animated sequence.

Time in 1/100ths of a second (0 to 65535) which must expire before displaying the next image in an animated sequence. This option is useful for regulating the animation of a sequence of GIF images within Netscape.

Created 18th August 2014, last changed 11st September 2017.

85.89 GImage.GetAnimationIterations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetAnimationIterations"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the Number of iterations to loop an animation for.

Description

See also

- 85.230 GImage.SetAnimationIterations

4636

Created 18th August 2014, last changed 18th August 2014.

85.90 **GMImage.GetAntiAlias**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.GetAntiAlias"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a boolean value.

Description

See also

- 85.231 [GMImage.SetAntiAlias](#)

4637

Created 18th August 2014, last changed 18th August 2014.

85.91 GImage.GetAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "GImage.GetAttribute"; ImageRef; name { ; Encoding } )
```

Parameters

ImageRef

The image reference number.

1

name

The name of the attribute.

Encoding

Optional

The text encoding. Default is UTF-8.

UTF8

Result Returns the value as string.

Description

Any number of named attributes may be attached to the image. For example, the image comment is a named image attribute with the name "comment". EXIF tags are attached to the image as named attributes. Use the syntax "EXIF:<tag>" to request an EXIF tag similar to "EXIF:DateTime":

Examples

Read EXIF DateTime:

```
MBS( "GImage.GetAttribute"; $image; "EXIF:DateTime" )
```

Query IPTC Keywords:

```
MBS("GImage.GetAttribute"; $img; "IPTC:2:25"; "UTF-8")
```

Query JPEG Quality used to compress image:

```
Set Variable [ $img; Value:MBS("GImage.NewFromContainer"; Image::InputImage) ]
Set Variable [ $value; Value:MBS("GImage.GetAttribute"; $img; "JPEG-Quality") ]
Show Custom Dialog [ "JPEG Quality used to compress image"; $value ]
Set Variable [ $r; Value:MBS("GImage.Release"; $img) ]
```

Read PNG original color type:

```
MBS("GImage.GetAttribute"; $image; "png:IHDR.color-type-orig")
// Value is combination of 0 = gray, 1 = palette, 2 = color, 4 = alpha
// e.g. 4 = Gray + Alpha, 6 = RGBA, 2 = RGB, 0 = Gray
```

Query JPEG Colorspace:

```
MBS("GMImage.GetAttribute"; $img; "JPEG-Colorspace-Name") & " " & MBS("GMImage.GetAttribute";
$img; "JPEG-Colorspace")
// the numbers are: 1 = grayscale, 2 = RGB, 3 = YCbCr, 4 = CMYK, 5 = YCCK
```

Show GPS location:

```
Set Variable [ $img ; Value: MBS("GMImage.NewFromContainer"; GraphicsMagick Exif::InputImage) ]
Set Variable [ $lat ; Value: MBS("GMImage.GetAttribute"; $img; "EXIF:GPSLatitude") ]
Set Variable [ $long ; Value: MBS("GMImage.GetAttribute"; $img; "EXIF:GPSLongitude") ]
Show Custom Dialog [ "GPS" ; $lat & " / " & $long ]
Set Variable [ $r ; Value: MBS("GMImage.Release"; $img) ]
```

85.92 GImage.GetAttributeNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	9.2	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetAttributeNames"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns list or error.

Description

Only attributes created before are visible, so e.g. EXIF data may not yet be loaded and parsed.

Examples

Show attributes:

```
Set Variable [ $ImageRef ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image2.png") ]
Show Custom Dialog [ "Attributes" ; MBS( "GImage.GetAttributeNames"; $ImageRef ) ]
Set Variable [ $r ; Value: MBS("GImage.Release"; $ImageRef) ]

85.93 GMImage.GetAttributesJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	9.2	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.GetAttributesJSON"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns JSON object or error.

Description

Only attributes created before are visible, so e.g. EXIF data may not yet be loaded and parsed. e.g. for a PNG this may include the original color type and the bit depth:

```
{
```

```
  "png:IHDR.color-type-orig":  "4",
  "png:IHDR.bit-depth-orig":  "16"
```

```
}
```

Examples

Show attributes:

```
Set Variable [ $ImageRef ; Value: MBS("GMImage.NewFromFile"; "/Users/cs/Desktop/image2.png") ]
Show Custom Dialog [ "Attributes" ; MBS( "GMImage.GetAttributesJSON"; $ImageRef ) ]
Set Variable [ $r ; Value: MBS("GMImage.Release"; $ImageRef) ]
```

85.94 **GMImage.GetBackgroundColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.GetBackgroundColor"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a color value as string.

Description

See also

- 85.95 *GMImage.GetBackgroundTexture* 4472

85.95 GImage.GetBackgroundTexture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetBackgroundTexture"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the image name as string.

Description

See also

85.96 GMImage.GetBorderColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.GetBorderColor"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a color value as string.

Description

85.97 GImage.GetBoxColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetBoxColor"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a color value as string.

Description

85.98 GMImage.GetChannelDepth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.GetChannelDepth"; ImageRef; ChannelType)

Parameters

ImageRef

The image reference number.

1

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

Result Returns a depth value.

Description

See also

- 85.300 GMImage.SetchannelDepth

4724

Created 18th August 2014, last changed 27th May 2018.

85.99 GImage.GetClassType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetClassType"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the class type number.

Description

Value is either 1 for DirectClass or 2 for PseudoClass.

Examples

Show image class type:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
Set Variable [ $value ; Value: MBS("GImage.GetClassType"; $image) ]
Show Custom Dialog [ "Class" ; $value ]
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

85.100 GImage.GetClipMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	7.3	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetClipMask"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns image reference or error.

Description

Please call GImage.Release later to free memory for this image.

85.102 GImage.GetColorMapSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetColorMapSize"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns a number.

Description**See also**

- 85.171 GImage.GetcolorMap 4554
- 85.103 GImage.GetColorSpace 4480
- 85.240 GImage.SetColorMapSize 4649
- 85.241 GImage.SetColorSpace 4650

Created 18th August 2014, last changed 18th August 2014.

85.103 GImage.GetColorSpace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetColorSpace"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the color space type as number.

Description

UndefinedColorspace = 0, RGBColorspace = 1 (Plain old RGB colorspace), GRAYColorspace = 2 (Plain old full-range grayscale), TransparentColorspace = 3 (RGB but preserve matte channel during quantize), OHTAColorspace = 4, XYZColorspace = 5 (CIE XYZ), YCCColorspace = 6 (Kodak PhotoCD PhotoYCC), YIQColorspace = 7, YPbPrColorspace = 8, YUVCColorspace = 9, CMYKColorspace = 10 (Cyan, magenta, yellow, black, alpha), sRGBColorspace = 11 (Kodak PhotoCD sRGB), HSLColorspace = 12 (Hue, saturation, luminosity), HWBColorspace = 13 (Hue, whiteness, blackness), LABColorspace = 14 (LAB colorspace not supported yet other than via lcms), CineonLogRGBColorspace = 15 (RGB data with Cineon Log scaling, 2.048 density range), Rec601LumaColorspace = 16 (Luma (Y) according to ITU-R 601), Rec601YCbCrColorspace = 17 (YCbCr according to ITU-R 601), Rec709LumaColorspace = 18 (Luma (Y) according to ITU-R 709), Rec709YCbCrColorspace = 19 (YCbCr according to ITU-R 709)

Examples

Shows color space for image:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image2.png") ]
Set Variable [ $value ; Value: MBS("GImage.GetColorSpace"; $image) ]
Show Custom Dialog [ "ColorSpace" ; $value ]
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

- 85.297 GImage.SetVerbose 4721

Created 18th August 2014, last changed 18th August 2014.

85.106 GImage.GetCompressType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetCompressType"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a number.

Description

UndefinedCompression = 0, NoCompression = 1, BZipCompression = 2, FaxCompression = 3, Group4Compression = 4, JPEGCompression = 5, LosslessJPEGCompression = 6, LZWCompression = 7, RLECompression = 8, ZipCompression = 9

Examples

Shows compression:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
```

```
Set Variable [ $value ; Value: MBS("GImage.GetCompressType"; $image) ]
```

```
Show Custom Dialog [ "Compress type" ; $value ]
```

```
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

Created 18th August 2014, last changed 18th August 2014.

85.108 GImage.GetDefineSet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetDefineSet"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns a boolean value.

Description

Tagged image format define. Similar to the get/setdefineValue() functions except that passing the flag value 'true' creates a value-less define with that format and key. Passing the flag value 'false' removes any existing matching definition. The method returns 'true' if a matching key exists, and 'false' if no matching key exists.

See also

- 85.109 GImage.GetDefineValue 4487
- 85.246 GImage.SetDefineSet 4656

Created 18th August 2014, last changed 18th August 2014.

85.109 GImage.GetDefineValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetDefineValue"; ImageRef; magick; key)

Parameters**ImageRef**

The image reference number.

1

magick

The name of the codec

key

A key name as string

Result Returns the value as string.

Description

Tagged image format define (set/access coder-specific option) The magick option specifies the coder the define applies to. The key option provides the key specific to that coder. The value option provides the value to set (if any). See the get/set defineSet functions if the key must be removed entirely.

85.110 GImage.GetDensity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetDensity"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns a geomery as string.

Description**Examples**

Load image and get density:

```
$image = MBS( "GImage.NewFromContainer"; MediaField)
$res = MBS( "GImage.GetDensity"; $image )
MBS( "GMimage.Release"; $image )
```

85.111 GMImage.GetDepth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.GetDepth"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a number.

Description

Examples

Queries color depth:

```
Set Variable [ $image ; Value: MBS("GMImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
```

```
Set Variable [ $value ; Value: MBS("GMImage.GetDepth"; $image) ]
```

```
Show Custom Dialog [ "Depth" ; $value ]
```

```
Set Variable [ $r ; Value: MBS("GMImage.Release"; $image) ]
```

85.112 GImage.GetEXIFOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	6.5	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetEXIFOrientation"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns value or error.

Description

Returns number from 0 to 8 depending on rotation.

This function can only read orientation, if there is an EXIF block in image.

Examples

Shows EXIF orientation:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
Set Variable [ $value ; Value: MBS("GImage.GetEXIFOrientation"; $image) ]
Show Custom Dialog [ "Orientation in EXIF" ; $value ]
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

Created 18th August 2014, last changed 18th August 2014.

85.120 GImage.GetFontSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetFontSize"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a number.

Description

See also

- 85.257 GImage.SetFontSize

4669

Created 18th August 2014, last changed 18th August 2014.

85.121 GImage.GetGamma

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetGamma"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns the Gamma level of the image as number.

Description**See also**

- 85.83 GImage.Gamma 4458
- 85.131 GImage.GetLabel 4510
- 85.134 GImage.GetMatte 4513

85.122 GImage.GetGifDisposeMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetGifDisposeMethod"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a number.

Description

See also

- 85.258 GImage.SetGifDisposeMethod

4670

Created 18th August 2014, last changed 18th August 2014.

85.123 GImage.GetHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetHeight"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the image height.

Description

Examples

Show with and height

```
Let ( [
  $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
  $Width = MBS("GImage.GetWidth"; $Image);
  $Height = MBS("GImage.GetHeight"; $Image);
  $Error = MBS("GMimage.Release"; $Image)
];
$Width & " x " & $Height )
```

Query size of image into \$h and \$w:

```
Set Variable [ $Image ; Value: MBS( "GImage.NewFromContainer"; ImageView::ImageContainer ) ]
Set Variable [ $w ; Value: MBS( "GImage.GetWidth"; $Image ) ]
Set Variable [ $h ; Value: MBS( "GImage.GetHeight"; $Image ) ]
Set Variable [ $r ; Value: MBS( "GMimage.Release"; $Image ) ]
```

85.124 GImage.GetICCColorProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetICCColorProfile"; ImageRef { ; Filename })

Parameters

ImageRef

The image reference number.

1

Filename

Optional

The filename to use for the profile. Default is "profile.icc".

"myprofile.icc"

Result Returns a container value with the profile file inside.

Description

Examples

Queries profile:

```
$Profile = MBS("GImage.GeticcColorProfile"; $Image);
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	6.2	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetIPTCProfileValues"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns list or error.

Description**Examples**

Queries IPTC values:

```
Set Variable [ $img; Value:MBS("GImage.NewFromContainer"; IPTC::InputImage) ]
```

```
Set Field [ IPTC::values; MBS("GImage.GetiptcProfileValues"; $img) ]
```

```
Set Variable [ $r; Value:MBS("GImage.Release"; $img) ]
```

85.138 GImage.GetOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetOrientation"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a number.

Description

UndefinedOrientation = 0, TopLeftOrientation = 1, (Line direction: Left to right, Frame Direction: Top to bottom) TopRightOrientation = 2, (Line direction: Right to left, Frame Direction: Top to bottom) BottomRightOrientation = 3, (Line direction: Right to left, Frame Direction: Bottom to top) BottomLeftOrientation = 4, (Line direction: Left to right, Frame Direction: Bottom to top) LeftTopOrientation = 5, (Line direction: Top to bottom, Frame Direction: Left to right) RightTopOrientation = 6, (Line direction: Top to bottom, Frame Direction: Right to left) RightBottomOrientation = 7, (Line direction: Bottom to top, Frame Direction: Right to left) LeftBottomOrientation = 8 (Line direction: Bottom to top, Frame Direction: Left to right)

Examples

Set and query orientation:

```
Set Variable [ $Image ; Value: MBS("GImage.New"; "200x200"; "white") ]
Set Variable [ $r ; Value: MBS("GImage.SetOrientation"; $Image; 5) ]
Show Custom Dialog [ "LineWidth" ; MBS("GImage.GetOrientation";$Image;) ]
Set Variable [ $r ; Value: MBS("GImage.Release";$Image) ]
```

Created 18th August 2014, last changed 18th August 2014.

85.142 GImage.GetPixelColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetPixelColor"; ImageRef; x; y)

Parameters

ImageRef

The image reference number.

1

x

The horizontal position. Range from 0 to GImage.GetWidth-1.

0

y

The vertical position. Range from 0 to GImage.GetHeight-1.

0

Result Returns a color value as string.

Description

Returned color is 16bit in v9.0 or later.

You may need to divide values by 257 if you need 8 bit values.

Examples

Open picture and read first pixel:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$colorValue = MBS("GImage.GetPixelColor"; $Image; 0; 0);
$error = MBS("GImage.Release"; $Image)
];
$colorValue )
```

Trims space around image and make transparent:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GImage.SetBackgroundColor"; $BigImageRef; "RGB 1 0 0" ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 5 ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetMatte"; $BigImageRef; 1 ) ]
Set Variable [ $farbe; Value:MBS( "GImage.GetPixelColor"; $BigImageRef; 0; 0 ) ]
Set Variable [ $Result; Value:MBS( "GImage.ReplaceColor"; $BigImageRef; $farbe; "RGB 1 1 1"; 5) ]
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release"; $BigImageRef) ]
```

85.143 GImage.GetProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetProfile"; ImageRef; name { ; Filename })

Parameters

ImageRef

The image reference number.

1

name

the string with the name of the profile.

"IPTC"

Filename

Optional

The filename to use for the profile. Default is "profile".

"myprofile.icc"

Result Returns a container file value with the embedded profile file.

Description

Valid names are: "8BIM", "8BIMTEXT", "APP1", "EXIF", "APP1JPEG", "ICC", "ICM", & "IPTC" or an existing user/format-defined profile name.

Examples

Get EXIF data blob:

```
MBS( "GImage.Getprofile"; $img; "EXIF" )
```

Created 18th August 2014, last changed 18th August 2014.

85.145 GImage.GetQuantizeColorSpace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetQuantizeColorSpace"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a number.

Description

UndefinedColorspace = 0, RGBColorspace = 1 (Plain old RGB colorspace), GRAYColorspace = 2 (Plain old full-range grayscale), TransparentColorspace = 3 (RGB but preserve matte channel during quantize), OHTAColorspace = 4, XYZColorspace = 5 (CIE XYZ), YCCColorspace = 6 (Kodak PhotoCD PhotoYCC), YIQColorspace = 7, YPbPrColorspace = 8, YUVCColorspace = 9, CMYKColorspace = 10 (Cyan, magenta, yellow, black, alpha), sRGBColorspace = 11 (Kodak PhotoCD sRGB), HSLColorspace = 12 (Hue, saturation, luminosity), HWBColorspace = 13 (Hue, whiteness, blackness), LABColorspace = 14 (LAB colorspace not supported yet other than via lcms), CineonLogRGBColorspace = 15 (RGB data with Cineon Log scaling, 2.048 density range), Rec601LumaColorspace = 16 (Luma (Y) according to ITU-R 601), Rec601YCbCrColorspace = 17 (YCbCr according to ITU-R 601), Rec709LumaColorspace = 18 (Luma (Y) according to ITU-R 709), Rec709YCbCrColorspace = 19 (YCbCr according to ITU-R 709)

Created 18th August 2014, last changed 18th August 2014.

85.149 GImage.GetQuiet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetQuiet"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns 1, 0 or error.

Description

If enabled, suppress all warning messages. Error messages are still reported.

85.156 **GImage.GetStrokeDashArray**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	4.2	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetStrokeDashArray"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns list of values or error.

Description

The strokeDashArray represents an array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2.

Created 18th August 2014, last changed 18th August 2014.

85.160 GImage.GetStrokeMiterLimit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetStrokeMiterLimit"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns a number.

Description

When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.

85.169 GImage.GetWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetWidth"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns the Image width.

Description

Examples

Show with and height

```
Let ( [
  $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
  $Width = MBS("GImage.GetWidth"; $Image);
  $Height = MBS("GImage.GetHeight"; $Image);
  $Error = MBS("GImage.Release"; $Image)
];
$Width & " x " & $Height )
```

Query size of image into \$h and \$w:

```
Set Variable [ $Image ; Value: MBS( "GImage.NewFromContainer"; ImageView::ImageContainer ) ]
Set Variable [ $w ; Value: MBS( "GImage.GetWidth"; $Image ) ]
Set Variable [ $h ; Value: MBS( "GImage.GetHeight"; $Image ) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

85.170 GImage.GetXMP

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	6.3	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetXMP"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns XML text or error.

Description

XMP data is a XML file with a given structure.

You can easily use the XML.Query function to get values.

Examples

Query XMP data from image:

```
Variable setzen [ $img; Wert:MBS( "GImage.NewImagesFromFile"; "/Users/cs/Desktop/test.tif" ) ]
```

```
Variable setzen [ $xmp; Wert:MBS( "GImage.GetXMP"; $img ) ]
```

```
Variable setzen [ $r; Wert:MBS( "GImage.Release"; $img ) ]
```

85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.GetcolorMap"; ImageRef; index)

Parameters**ImageRef**

The image reference number.

1

index

Position of the entry. Zero based.

0

Result Returns a color as string.

Description**See also**

- 85.101 GImage.GetColorFuzz 4478
- 85.102 GImage.GetColorMapSize 4479
- 85.103 GImage.GetColorSpace 4480

Created 18th August 2014, last changed 18th August 2014.

85.172 GImage.Hash

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	9.4	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Hash"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns text or error.

Description

Hash is returned as 64 characters being 1 or 0.

We convert image to 8x8, turn grayscale and check if pixels are above or below mean value.

This hash is quite immune against resizing, compression artifacts and hue changes.

You can use Text.LevenshteinDistance or Text.JaroWinklerDistance to compare two hashes.

Examples

Play with hash function:

```
Set Variable [ $ImageRef ; Value: MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Hash1 ; Value: MBS("GImage.Hash"; $ImageRef) ]
Set Variable [ $r ; Value: MBS( "GImage.Flip"; $ImageRef ) ]
Set Variable [ $Hash2 ; Value: MBS("GImage.Hash"; $ImageRef) ]
Set Variable [ $r ; Value: MBS( "GImage.Flop"; $ImageRef ) ]
Set Variable [ $Hash3 ; Value: MBS("GImage.Hash"; $ImageRef) ]
Set Variable [ $Error ; Value: MBS("GImage.Release"; $ImageRef) ]
Show Custom Dialog [ "Hash original: " & $hash1 & §& "Hash after 1x mirror: " & $hash2 & §& "Hash
after 2x mirror: " & ... ]
```

85.173 GImage.ImageCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	5.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.ImageCount")

Result Returns Number.

Description

This function allows you to check if you properly released all images from memory when your script is done. See also GImage.Release.

See also

85.174 GImage.Implode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Implode"; ImageRef; factor)

Parameters

ImageRef

The image reference number.

1

factor

The implode factor.

0

Result Returns "OK" on success.

Description

Examples

Applies the implode effect:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Implode";$Image; 5);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

85.175 GImage.InvertChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	8.4	Yes	Yes	Yes	Yes	Yes

MBS("GImage.InvertChannel"; ImageRef; Channel)

Parameters

ImageRef

The image reference number.

1

Channel

Which channel to work with. Can be opacity, red, green or blue. The value rgb will apply effect to all three color channels.

"rgb"

Result Returns OK or error.

Description

All pixel values are negated.

This is same as MBS("GImage.MultiplyChannel"; ImageRef; Channel; -1; 0; 65535), but a bit faster.

Examples

Invert image:

```
Set Variable [ $image ; Value: MBS( "GImage.NewFromContainer"; Invert::Input ) ]
# each channel...
// Set Variable [ $r ; Value: MBS( "GImage.InvertChannel"; $image; "red" ) ]
// Set Variable [ $g ; Value: MBS( "GImage.InvertChannel"; $image ) ]
// Set Variable [ $b ; Value: MBS( "GImage.InvertChannel"; $image; "blue" ) ]
# all channels...
Set Variable [ $r ; Value: MBS( "GImage.InvertChannel"; $image; "rgb" ) ]
Set Field [ Invert::Output ; MBS( "GImage.WriteToPNGContainer"; $image; "output.png" ) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $image ) ]
```

Created 4th July 2018, last changed 28th November 2019.

85.177 GImage.Level

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Level"; ImageRef; blackPoint; whitePoint { ; midPoint })

Parameters**ImageRef**

The image reference number.

1

blackPoint

The black point.

0

whitePoint

The white point.

1.0

midPoint

Optional

The middle point.

1.0

Result Returns "OK" on success.

Description

Adjust the levels of the image by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten.

85.178 GMImage.LevelChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.LevelChannel"; ImageRef; ChannelType; blackPoint; whitePoint { ; midPoint })

Parameters

ImageRef

The image reference number.

1

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

blackPoint

The black point.

0

whitePoint

The white point.

1.0

midPoint

Optional

The middle point.

1.0

Result Returns "OK" on success.

Description

85.179 GImage.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	8.1	Yes	Yes	Yes	Yes	Yes

MBS("GImage.List")

Result Returns list or error.

Description

Returns IDs for all images in memory. If this list is growing, you may have forgotten to call GImage.Release in your scripts.

Normally after all scripts are done, this list should be empty, except for static images you want to load once and reuse from time to time.

85.180 GImage.Magnify

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Magnify"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns "OK" on success.

Description

Increases image size to 200% .

Examples

Magnificates an image:

```
# load images...
Set Variable [ $Image ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/IMG_3625.jpg" ) ]
# put first on second
Set Variable [ $r ; Value: MBS( "GImage.Magnify"; $Image ) ]
# magnify image
Set Variable [ $r ; Value: MBS( "GImage.WriteToFile"; $Image; "/Users/cs/Pictures/output.jpg" ) ]
# free memory
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

85.181 GImage.Map

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Map"; ImageRef; mapImage { ; dither })

Parameters**ImageRef**

The image reference number.

1

mapImage

The image reference number.

2

dither

Optional

Optional, a boolean whether to dither.

0

Result Returns "OK" on success.

Description**See also**

85.182 GImage.MatteFloodfill

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.MatteFloodfill"; ImageRef; target; opacity; x; y; PaintMethod)

Parameters**ImageRef**

The image reference number.

1

target

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

opacity

The opacity value from 0 to 65535.

127*257

x

The X Position.

0

y

The Y Position.

0

PaintMethod

PointMethod = 0, ReplaceMethod = 1, FloodfillMethod = 2, FillToBorderMethod = 3, ResetMethod = 4

2

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 11st November 2019.

85.183 GImage.MeanErrorPerPixel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.MeanErrorPerPixel"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns the mean error per pixel as number.

Description

Created 18th August 2014, last changed 18th August 2014.

85.184 GImage.MedianFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.MedianFilter"; ImageRef; radius)

Parameters

ImageRef

The image reference number.

1

radius

The radius.

0.0

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.185 GImage.Minify

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Minify"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns "OK" on success.

Description

Reduces image size to 50% .

Examples

Shrinks image:

```
# load images...
Set Variable [ $Image ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/IMG_3625.jpg" ) ]
# minimize first
Set Variable [ $r ; Value: MBS( "GImage.Minify"; $Image ) ]
# and save to file
Set Variable [ $r ; Value: MBS( "GImage.WriteToFile"; $Image; "/Users/cs/Pictures/output.jpg" ) ]
# free memory
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

85.186 GImage.Modulate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Modulate"; ImageRef; brightness; saturation; hue)

Parameters

ImageRef

The image reference number.

1

brightness

The brightness value.

100

saturation

The saturation value.

0

hue

The hue value.

100

Result Returns "OK" on success.

Description

Modulation of saturation and brightness is as a ratio of the current value (100 for no change). Modulation of hue is an absolute rotation of -180 degrees to +180 degrees from the current position corresponding to an argument range of 0 to 200 (100 for no change).

Examples

Increase brightness:

```
MBS("GImage.Modulate"; $Image; 110; 100; 100);
```

Increase saturation:

```
MBS("GImage.Modulate"; $Image; 100; 110; 100);
```

Increase hue:

```
MBS("GImage.Modulate"; $Image; 100; 100; 110);
```

Modulate an image:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromContainer"; MyTable::InputImage) ]
Set Variable [ $r ; Value: MBS ("GImage.Modulate" ; $image ; 150 ; 150 ; 150 ) ]
Set Field [ MyTable::Brightened ; MBS("GImage.WriteToJPEGContainer";$image) ]
```

85.186. *GMIMAGE.MODULATE* 4573

Set Variable [\$r ; Value: MBS("GMImage.Release"; \$image)]

See also

- 85.338 GMImage.WriteToJPEGContainer 4773

Created 18th August 2014, last changed 26th April 2019.

85.187 GImage.MontageGeometry

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.MontageGeometry"; ImageRef)

Parameters

ImageRef

The image reference number.

1

Result Returns a geometry string.

Description

Created 18th August 2014, last changed 18th August 2014.

85.188 GImage.MotionBlur

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.MotionBlur"; ImageRef; radius; sigma; angle)

Parameters**ImageRef**

The image reference number.

1

radius

Specifies the radius of the Gaussian, in pixels, not counting the center pixel.

10

sigma

Specifies the standard deviation of the Laplacian, in pixels.

5

angle

specifies the angle the object appears to be coming from (zero degrees is from the right).

0

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.189 GImage.MultiplyChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	5.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.MultiplyChannel"; ImageRef; Channel; Factor { ; Add1; Add2 })

Parameters

ImageRef

The image reference number.

1

Channel

Which channel to work with. Can be opacity, red, green or blue. The value rgb will apply effect to all three color channels.

"rgb"

Factor

The multiplication factor. Range from -1.0 to 1.0.

0.1

Add1

Optional

The value to add before multiply. Usually between -65535 and 65535.

0

Add2

Optional

The value to add after multiply. Usually in range from -65535 to 65535.

65535*0.9

Result Returns OK or error.

Description

For every pixel component, we apply the formula:

$$\text{newValue} = ((\text{Add1} + \text{oldValue}) * \text{Factor}) + \text{Add2}$$

This can be used to change brightness or make opacity less/more transparent.

Examples

Multiplies existing opacity channel to make image 90% transparent:

```
// existing values * 0.1 and add 90% to the value to move to higher range.
```

```
MBS("GImage.MultiplyChannel"; $ImageRef; "opacity"; 0.1; 0; 255*0.9)
```

Invert image via multiply:

```
Set Variable [ $image ; Value: MBS( "GImage.NewFromContainer"; Invert::Input ) ]
```

```
# each channel...
```

```
// Set Variable [ $r ; Value: MBS( "GImage.MultiplyChannel"; $image; "red"; -1; 0; 65535) ]
```

```
// Set Variable [ $r ; Value: MBS( "GImage.MultiplyChannel"; $image; "green"; -1; 0; 65535) ]
```

85.189. GMIMAGE.MULTIPLYCHANNEL

4577

```
// Set Variable [ $r ; Value: MBS( "GMImage.MultiplyChannel"; $image; "blue"; -1; 0; 65535) ]  
# all channels...  
Set Variable [ $r ; Value: MBS( "GMImage.MultiplyChannel"; $image; "rgb"; -1; 0; 65535) ]  
Set Field [ Invert::Output ; MBS( "GMImage.WriteToPNGContainer"; $image; "output.png" ) ]  
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $image) ]
```

85.190 GImage.Negate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Negate"; ImageRef; grayscale)

Parameters**ImageRef**

The image reference number.

1

grayscale

Set grayscale to only negate grayscale values in image.

1

Result Returns "OK" on success.

Description**Examples**

Negates an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Negate";$Image);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

85.191 GImage.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.New"; Geometry; Color)

Parameters**Geometry**

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

Color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns the ImageRef number on success.

Description

Please call GImage.Release later to free memory for this image.

Image reference numbers are starting at 18000 and counting up for each new image.

Examples

New white image:

```
MBS( "GImage.New"; "16x16"; "white" )
```

New red image:

```
MBS( "GImage.New"; "16x16"; "# FF0000" )
```

Create red square and save to container:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "red" ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

Build in a calculation:

```
SetVars ( [
```

```
img = MBS( "GImage.New"; "16x16"; "random" );
result = MBS( "GImage.WriteToPNGContainer"; img; "test.png" );
```

```
r = MBS( "GMImage.Release"; img)

]; result )
```

Create picture with red and 50% alpha:

```
# Create picture
Set Variable [ $img; Value:MBS( "GMImage.New"; "16x16"; "white" ) ]
# Add alpha channel
Set Variable [ $r; Value:MBS( "GMImage.SetMatte"; $img; 1 ) ]
# Set background color and fill

85.192 GImage.NewFromBase64

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.NewFromBase64"; text)

Parameters

text

The text to decode.

Result Returns the ImageRef number on success.

Description

Please call GImage.Release later to free memory for this image.

This is useful for images you got from an email.

Image reference numbers are starting at 18000 and counting up for each new image.

85.193 GImage.NewFromContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.NewFromContainer"; data)

Parameters

data

A value from a Container Field.

Result Returns the ImageRef number on success.

Description

Please call GImage.Release later to free memory for this image.

Image reference numbers are starting at 18000 and counting up for each new image.

Examples

Show with and height

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Width = MBS("GImage.GetWidth";$Image);
$Height = MBS("GImage.GetHeight";$Image);
$error = MBS("GImage.Release";$Image)
];
$Width & " x " & $Height )
```

Load from container:

```
MBS( "GImage.NewFromContainer"; test::test)
```

85.194 GImage.NewFromFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.NewFromFile"; Path { ; Magick })

Parameters

Path

The platform specific file path.

"/test.jpg"

Magick

Optional

Available in MBS FileMaker Plugin 8.4 or newer.

The magick setting to define which codec to use.

"JPG"

Result Returns the ImageRef number on success.

Description

Please call GImage.Release later to free memory for this image.

Image reference numbers are starting at 18000 and counting up for each new image.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	5.1	Yes	Yes	Yes	Yes	Yes

MBS("GImage.NewImagesFromFile"; Path)

Parameters

Path

The platform specific file path.

"/test.tif"

Result Returns list of image references or error.

Description

This is for loading multi image tiff files.

Please call GImage.Release later to free memory for each image.

Image reference numbers are starting at 18000 and counting up for each new image.

Examples

Loads from file and writes to other file:

```
Set Variable [ $img; Value:MBS("GImage.NewImagesFromFile"; "/Users/cs/Desktop/test.jpg") ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r; Value:MBS( "GImage.WriteToFile"; $img; "/Users/cs/Desktop/test.tif" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
End If

Created 18th August 2014, last changed 18th August 2014.

85.201 GImage.OilPaint

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.OilPaint"; ImageRef { ; radius })

Parameters

ImageRef

The image reference number.

1

radius

Optional

The radius.

3.0

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.202 GImage.Opacity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Opacity"; ImageRef; opacity)

Parameters

ImageRef

The image reference number.

1

opacity

The opacity, range from 0 to 255.

127

Result Returns "OK" on success.

Description

If the image pixels are opaque then they are set to the specified opacity value, otherwise they are blended with the supplied opacity value. The value of opacity ranges from 0 (completely opaque) to MaxRGB. The defines OpaqueOpacity and TransparentOpacity are available to specify completely opaque or completely transparent, respectively.

85.203 GImage.Opacity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Opacity"; ImageRef; opaqueColor; penColor)

Parameters

ImageRef

The image reference number.

1

opaqueColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

penColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

85 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS("GImage.PushClipPath"; ImageRef; name)

Parameters**ImageRef**

The image reference number.

1

name

The name of the new clippath.

"Clip1"

Result Returns OK or error.

Description

Clip patch definition consists of subsequent drawing commands, terminated by GImage.PopClipPath.

85.207 GImage.Quantize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Quantize"; ImageRef { ; measureError })

Parameters

ImageRef

The image reference number.

1

measureError

Optional

Optionally, a boolean value.

0

Result Returns "OK" on success.

Description

See GImage.SetQuantizeColorSpace, GImage.SetQuantizeColors, GImage.SetQuantizeDither and GImage.SetQuantizeTreeDepth for options.

Examples

Quantize picture:

```
Set Variable [ $BigImageRef ; Value: MBS("GImage.NewFromContainer"; Test::BigImage) ]
# reduce to 20 colors, so we see the effect. Normally 256
Set Variable [ $Result ; Value: MBS( "GImage.SetQuantizeColors"; $BigImageRef; 20) // 256 ) ]
# Enable dithering, turn off to really see the effect
Set Variable [ $Result ; Value: MBS( "GImage.SetQuantizeDither"; $BigImageRef; 1 ) ]
# Quantize to palette colors
Set Variable [ $Result ; Value: MBS( "GImage.SetQuantizeColorSpace"; $BigImageRef; 4 /* palette */ )
]
# Do it!
Set Variable [ $Result ; Value: MBS("GImage.Quantize"; $BigImageRef) ]
# Type should now be 4 for palette
Set Variable [ $Result ; Value: MBS("GImage.GetType"; $BigImageRef) ]
# save as GIF
Set Field [ Test::Result ; MBS( "GImage.WriteToGIFContainer"; $BigImageRef ) ]
Set Variable [ $Error ; Value: MBS("GImage.Release";$BigImageRef) ]
```

85.209 GImage.Raise

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Raise"; ImageRef { ; geometry; raisedFlag })

Parameters

ImageRef

The image reference number.

1

geometry

Optional

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

raisedFlag

Optional

A boolean flag.

0

Result Returns "OK" on success.

Description

Examples

Raises the border of an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$ScaleResult = MBS("GImage.Raise";$Image);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

Raise an image:

```
# load images...
Set Variable [ $Image ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/IMG_3625.jpg") ]
# raise image
Set Variable [ $r ; Value: MBS( "GImage.Raise"; $Image) ]
# and save to file
Set Variable [ $r ; Value: MBS( "GImage.WriteToFile"; $Image; "/Users/cs/Pictures/output.jpg") ]
# free memory
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image) ]
```

85.210 GImage.RandomThreshold

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.RandomThreshold"; ImageRef; thresholds)

Parameters

ImageRef

The image reference number.

1

thresholds

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

Result Returns "OK" on success.

Description

Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds_ argument is a geometry containing LOWx-HIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a ChannelType argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

Created 18th August 2014, last changed 18th August 2014.

85.211 GImage.RandomThresholdChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.RandomThresholdChannel"; ImageRef; thresholds; ChannelType)

Parameters

ImageRef

The image reference number.

1

thresholds

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20".

For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

"100x200"

ChannelType

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

Result Returns "OK" on success.

Description

Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds_ argument is a geometry containing LOWx-HIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a ChannelType argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	8.3	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Read"; ImageRef; Spec { ; Geometry })

Parameters

ImageRef

The image reference number.

1

Spec

The image specification. e.g. native file path

Geometry

Optional

The image size. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

Result Returns OK or error.

Description

This allows you to directly specify the coders to use and include options.

e.g. gradient coder takes a range of two colors to create gradient.

Examples

Reads in a gradient image:

```
Set Variable [ $image ; Value: MBS( "GImage.New"; "200x200"; "white" ) ]
Set Variable [ $r ; Value: MBS( "GImage.Read"; $image; "gradient:# 20a0ff-# ffff00;" ) ]
// Set Variable [ $r ; Value: MBS( "GImage.Read"; $image; "gradient:white-black" ) ]
Set Field [ Contacts::Photo Container ; MBS( "GImage.WriteToPNGContainer"; $image; "gradient.png" ) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $image) ]
```

85.213 GImage.ReduceNoise

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.ReduceNoise"; ImageRef { ; order })

Parameters**ImageRef**

The image reference number.

1

order

Optional

The order value.

0

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.214 GImage.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Release"; ImageRef)

(old name: GImage.Destroy)

Parameters

ImageRef

The image reference number.

1

Result Returns OK or error.

Description

Please call this function when you are done with the image to free memory.

The plugin doesn't know whether you need the image later, so it can't free the memory for you.

You can use GImage.ImageCount to find out how many images are open in memory.

On the long term, we will change all examples to use GImage.Release instead of GImage.Destroy and later deprecate GImage.Destroy and hide it in documentation.

You need to release all image references returned by functions GImage.New, GImage.NewFromBase64, GImage.NewFromContainer, GImage.NewFromFile, GImage.NewFromHex, GImage.NewImagesFromContainer, GImage.NewImagesFromFile, GImage.Copy, GImage.GetClipMask, MenuItem.GetImage, MenuItem.GetMixedStateImage, MenuItem.GetOffStateImage, MenuItem.GetOnStateImage, Twain.CurrentImage, and Barcode.Generate.

Examples

Show with and height

```
Let ( [
  $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
  $Width = MBS("GImage.GetWidth";$Image);
  $Height = MBS("GImage.GetHeight";$Image);
  $Error = MBS("GImage.Destroy";$Image)
];
$Width & " x " & $Height )
```

Create red square and save to container:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "red" ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Destroy"; $img ) ]
```

85.215 GImage.ReleaseAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	7.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.ReleaseAll")

(old name: GImage.DestroyAll)

Result Returns OK or error.

Description

On the long term, we will change all examples to use GImage.ReleaseAll instead of GImage.DestroyAll and later deprecate GImage.DestroyAll and hide it in documentation.

Be aware that on a server this may free objects, which are used by other scripts running in parallel!

85.217 GImage.ReplaceColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	4.3	Yes	Yes	Yes	Yes	Yes

MBS("GImage.ReplaceColor"; ImageRef; color1; color2 { ; Tolerance })

Parameters

ImageRef

The image reference number.

1

color1

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

color2

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 0 1 0"

Tolerance

Optional

The tolerance to allow for a match. Pass 1 to have one channel be matched if value is one away, e.g. 128 is accepted if searched for 127 or 129. Default is 0.

1

Result Returns OK or error.

Description

Match is exact, so no fuzzy matching.

Examples

Replaces a nearly white color with red:

```
Set Variable [ $img; Wert:MBS( "GImage.NewFromContainer"; Replace Colors::Input) ]
Set Variable [ $r; Wert:MBS( "GImage.ReplaceColor"; $img; "COLOR 65278 65278 65278"; "COLOR 65535 0 0") ]
Set Variable [ Replace Colors::Output; MBS( "GImage.WriteToPNGContainer"; $img; "logo.png" ) ]
Set Variable [ $r; Wert:MBS( "GImage.Release"; $img ) ]
```

Replace white with transparent:

```

Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
# Set type to RGBA
Set Variable [ $Result; Value:MBS("GImage.SetType"; $BigImageRef; 7) ]
# Replace white with transparent
Set Variable [ $Result; Value:MBS("GImage.ReplaceColor"; $BigImageRef; "white"; "transparent"; 10) ]
# save as PNG
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]

```

Trims space around image and make transparent:

```

Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GImage.SetBackgroundColor"; $BigImageRef; "RGB 1 0 0" ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 5 ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetMatte"; $BigImageRef; 1 ) ]
Set Variable [ $farbe; Value:MBS( "GImage.GetPixelColor"; $BigImageRef; 0; 0 ) ]
Set Variable [ $Result; Value:MBS( "GImage.ReplaceColor"; $BigImageRef; $farbe; "RGB 1 1 1"; 5) ]
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]

```

Replace black in black & white picture with red:

```

Set Variable [ $image ; Value: MBS( "GImage.NewFromContainer"; test::Input ) ]
Set Variable [ $r ; Value: MBS( "GImage.ReplaceColor"; $image; "black"; "red"; 1) ]
Set Field [ test::Output ; MBS( "GImage.WriteToPNGContainer"; $image) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $image) ]

```

85.218 GImage.Resize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Resize"; ImageRef; geometry { ; FilterTypes; Blur })

Parameters

ImageRef

The image reference number.

1

geometry

The rectangle to use. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

FilterTypes

Optional

Which filter to use. Can be one of Undefined, Point, Box, Triangle, Hermite, Hanning, Hamming, Blackman, Gaussian, Quadratic, Cubic, Catrom, Mitchell, Lanczos, Bessel, or Sinc. "Cubic"

Blur

Optional

The blur radius. Only used if filter is specified.

3

Result Returns OK or error.

Description

If filter or blur is not specified, we use image defaults.

Examples

Resize image to 1000x1000 with cubic filter:

```
Set Variable [ $BigImageRef ; Value: MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result ; Value: MBS("GImage.Resize"; $BigImageRef; "1000x1000"; "Cubic"; 0) ]
Set Field [ Test::Result ; MBS( "GImage.WriteToPNGContainer"; $BigImageRef; "test.png" ) ]
Set Variable [ $Error ; Value: MBS("GImage.Destroy";$BigImageRef) ]
```

Created 18th August 2014, last changed 18th August 2014.

85.221 GImage.Rotate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Rotate"; ImageRef; degrees)

Parameters

ImageRef

The image reference number.

1

degrees

The angle in degrees.

90

Result Returns "OK" on success.

Description

Positive angles rotate the image in a clockwise direction while negative angles rotate counter-clockwise.

Examples

Rotates image by 90 degree to right

```
Let (
[
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GImage.Rotate"; $Image; 90);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GImage.Release"; $Image)
];
$Result)
```

Custom function to rotate image:

```
/*
MBS_Image_Rotate (Picture; rotation)
```

Picture: Container 'MyTable::MyField'
rotation: Grad ° - numeric Value, positiv OR negative

Benjamin Fehr, EfficientBizz GmbH
<http://www.efficientbizz.com>
/

```
Let (
[
```

```

$image = MBS("GMImage.NewFromContainer"; Picture);
$rotateResult = MBS("GMImage.Rotate"; $image; rotation);
$result = MBS("GMImage.WriteToPNGContainer"; $image);
$destroyResult = MBS("GMImage.Release"; $image)
];

$result)

```

85.225 GImage.Scale

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Scale"; ImageRef; Geometry)

Parameters

ImageRef

The image reference number.

1

Geometry

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "300x200"

Result Returns "OK" on success.

Description

GraphicsMagick has added a number of qualifiers to the standard geometry string for use when resizing images. The form of an extended geometry string is "<width>x<height>{ +- } <xoffset>{ +- } <yoffset>{ % } { ! } { < } { > } ". Extended geometry strings should only be used when resizing an image. Using an extended geometry string for other applications may cause the API call to fail. The available qualifiers are shown in the following table:

Qualifier	Description
%	Interpret width and height as a percentage of the current size.
!	Resize to width and height exactly, losing original aspect ratio.
<	Resize only if the image is smaller than the geometry specification.
>	Resize only if the image is greater than the geometry specification.

Examples

Scales the image to 50% with calculating ourself

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Width = MBS("GImage.GetWidth";$Image);
$Height = MBS("GImage.GetHeight";$Image);
$Width = $Width/2;
$Height = $Height/2;
$ScaleResult = MBS("GImage.Scale";$Image; $Width & "x" & $Height);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
```

```
$Result)
```

Scales the image to 50% easily

```
Let ( [
$Image = MBS("GUIImage.NewFromContainer"; GraphicsMagick::image);
$ScaleResult = MBS("GUIImage.Scale";$Image; "50% ");
$Result = MBS("GUIImage.WriteToPNGContainer"; $Image);
$error = MBS("GMimage.Release";$Image)
] ;
$Result)
```

Scales the image down to 640 pixel width, if it is bigger

```
Let ( [
$Image = MBS("GUIImage.NewFromContainer"; GraphicsMagick::image);
$ScaleResult = MBS("GUIImage.Scale";$Image; "640>");
$Result = MBS("GUIImage.WriteToPNGContainer"; $Image);
$error = MBS("GMimage.Release";$Image)
] ;
$Result)
```

Scale as script:

```
Set Variable [ $Image; Value:MBS("GUIImage.NewFromContainer"; Image Scaling::InputImage) ]
Set Variable [ $r; Value:MBS("GUIImage.Scale"; $Image; "800x600") ]
Set Field [ Image Scaling::Result; MBS("GUIImage.WriteToPNGContainer"; $Image) ]
Set Variable [ $r; Value: MBS("GMimage.Release"; $Image) ]
```

Download picture and scale it down:

```
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionURL"; $curl; MIX::URL) ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionFollowLocation"; $curl; 1) ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionMaxRedirs"; $curl; 3) ]
Set Variable [ $result ; Value: MBS("CURL.Perform"; $curl) ]
Set Variable [ $debug ; Value: MBS( "CURL.GetDebugAsText"; $curl) ]
If [ $result = "OK" ]
Set Variable [ $Image ; Value: MBS( "CURL.GetResultAsContainer"; $curl) ]
Set Variable [ $ImageRef ; Value: MBS("GUIImage.NewFromContainer"; $image) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r ; Value: MBS("GUIImage.Scale";$ImageRef; "256x256>") ]
Set Variable [ $ScaledImage ; Value: MBS("GUIImage.WriteToJPEGContainer"; $ImageRef) ]
If [ MBS("IsError") = 0 ]
Set Field [ MIX::Image ; $ScaledImage ]
End If
Set Variable [ $r ; Value: MBS("GMimage.Release";$ImageRef) ]
```

End If

End If

Set Variable [\$r ; Value: MBS(”CURL.Cleanup”; \$curl)]

Created 18th August 2014, last changed 18th August 2014.

85.227 GImage.Segment

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Segment"; ImageRef; clusterThreshold; smoothingThreshold)

Parameters

ImageRef

The image reference number.

1

clusterThreshold

the cluster threshold

1.0

smoothingThreshold

the smoothing threshold

1.5

Result Returns "OK" on success.

Description

Segment (coalesce similar image components) by analyzing the histograms of the color components and identifying units that are homogeneous with the fuzzy c-means technique. Also uses QuantizeColorSpace and Verbose image attributes

85.228 GImage.SetAdjoin

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetAdjoin"; ImageRef; flag)

Parameters**ImageRef**

The image reference number.

1

flag

a boolean value

0

Result Returns "OK" on success.

Description**See also**

- 85.87 GImage.GetAdjoin 4462

85.229 GImage.SetAnimationDelay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetAnimationDelay"; ImageRef; delay)

Parameters**ImageRef**

The image reference number.

1

delay

Time in 1/100ths of a second

10

Result Returns "OK" on success.

Description

Time in 1/100ths of a second which must expire before displaying the next image in an animated sequence.

Time in 1/100ths of a second (0 to 65535) which must expire before displaying the next image in an animated sequence. This option is useful for regulating the animation of a sequence of GIF images within Netscape.

85.230 GImage.SetAnimationIterations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetAnimationIterations"; ImageRef; iterations)

Parameters

ImageRef

The image reference number.

1

iterations

the Number of iterations to loop an animation for

10

Result Returns "OK" on success.

Description

See also

- 85.89 GImage.GetAnimationIterations

Created 18th August 2014, last changed 18th August 2014.

85.231 GImage.SetAntiAlias

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetAntiAlias"; ImageRef; flag)

Parameters

ImageRef

The image reference number.

1

flag

a boolean value

0

Result Returns "OK" on success.

Description

See also

- 85.90 GImage.GetAntiAlias

4465

Created 18th August 2014, last changed 18th August 2014.

85.232 GImage.SetAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetAttribute"; ImageRef; name; value { ; Encoding })

Parameters

ImageRef

The image reference number.

1

name

The name of the attribute.

value

The value of the attribute.

Encoding

Optional

The text encoding. Default is UTF-8.

UTF8

Result Returns "OK" on success.

Description

GraphicsMagick does not support writing attributes back to files, so this only stores new value in memory for GImage.GetAttribute to query.

85.233 GImage.SetBackgroundColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetBackgroundColor"; ImageRef; color)

Parameters**ImageRef**

The image reference number.

1

color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description**Examples**

Create picture with red and 50% alpha:

```
# Create picture
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "white" ) ]
# Add alpha channel
Set Variable [ $r; Value:MBS( "GImage.SetMatte"; $img; 1 ) ]
# Set background color and fill
Set Variable [ $r; Value:MBS( "GImage.SetBackgroundColor"; $img; "COLOR 65535 0 0 0.5" ) ]
Set Variable [ $r; Value:MBS( "GImage.Erase"; $img ) ]
# Write to field
Set Variable [ $pic; Value:MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Field [ test::r; $pic ]
# Cleanup
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

85.235 GImage.SetBorderColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetBorderColor"; ImageRef; color)

Parameters

ImageRef

The image reference number.

1

color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description

You can set this and call GImage.Border to add border with given color.

Examples

Add whitespace on top and bottom of image:

```
Let ( [
```

```
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$r = MBS( "GImage.SetBorderColor"; $Image; "white" );
$r = MBS("GImage.Border";$Image; "0x100");
$result = MBS("GImage.WriteToPNGContainer"; $Image);
```

```
$r = MBS("GMImage.Release";$Image)
];
```

```
$Result)
```

85.237 GImage.SetCacheThreshold

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetCacheThreshold"; threshold)

Parameters**threshold**

The Pixel cache threshold in megabytes

1

Result Returns "OK" on success.

Description

Once this memory threshold is exceeded, all subsequent pixels cache operations are to/from disk. This setting is shared by all Image objects.

See also

- 85.1 GImage.AdaptiveThreshold

4337

Created 18th August 2014, last changed 11st March 2017.

85.238 GImage.SetClassType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetClassType"; ImageRef; classtype)

Parameters**ImageRef**

The image reference number.

1

classtype

The class type number

2

Result Returns "OK" on success.

Description

setting a DirectClass image to PseudoClass will result in the loss of color information if the number of colors in the image is greater than the maximum palette size (either 256 or 65536 entries depending on the value of QuantumDepth when ImageMagick was built).

See also

85.239 GMImage.SetColorFuzz

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.SetColorFuzz"; ImageRef; value)

Parameters**ImageRef**

The image reference number.

1

value

a float number.

1.0

Result Returns "OK" on success.

Description

Used for example with GMImage.Trim function.

Range is from 0 to 65535 with zero being no fuzz and 65535 to match all colors.

Useful range may be around 50*257.

Examples

Trim a picture:

```
Set Variable [ $BigImageRef; Value:MBS("GMImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GMImage.SetBackgroundColor"; $BigImageRef; "white" ) ]
Set Variable [ $Result; Value:MBS( "GMImage.SetColorFuzz"; $BigImageRef; 100 ) ]
Set Variable [ $Result; Value:MBS("GMImage.Trim"; $BigImageRef) ]
Set Field [ Test::Result; MBS( "GMImage.WriteToJPEGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GMImage.Release";$BigImageRef) ]
```

Make a picture transparent:

```
# load a picture
Set Variable [ $image; Value:MBS( "GMImage.NewFromContainer"; Test::BigImage) ]
# white in RGB
Set Variable [ $f; Value:"white" ]
# Replace all white with nearly white
Set Variable [ $r; Value:MBS( "GMImage.ReplaceColor"; $image; $f; "white"; 0 ) ]
# now flood fill it with 5 as tolerance
Set Variable [ $r; Value:MBS( "GMImage.SetColorFuzz"; $image; 5 ) ]
Set Variable [ $r; Value:MBS( "GMImage.FloodFillColorXY"; $image; 0; 0; $f ) ]
# now set back fuzz and make transparent using white
Set Variable [ $r; Value:MBS( "GMImage.SetColorFuzz"; $image; 0 ) ]
Set Variable [ $imagecolor; Value:MBS( "GMImage.Transparent"; $image; $f ) ]
# write back to container
```

```
Set Field [ Test::Result; MBS( "GMImage.WriteToPNGContainer"; $image; ) ]  
# cleanup  
Set Variable [ $Error; Value:MBS("GMImage.Release";$image) ]
```

85.244 GMImage.SetCompressType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.SetCompressType"; ImageRef; CompressionType)

Parameters

ImageRef

The image reference number.

1

CompressionType

UndefinedCompression = 0, NoCompression = 1, BZipCompression = 2, FaxCompression = 3, Group4Compression = 4, JPEGCompression = 5, LosslessJPEGCompression = 6, LZWCompression = 7, RLECompression = 8, ZipCompression = 9

1

Result Returns "OK" on success.

Description

Examples

Convert image to 1 bit TIFF:

```
# Load from container
$image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);

# make black and white with threshold
$result = MBS("GMImage.Threshold"; $image; 127);

# mark as monochrome image
$result = MBS("GMImage.SetMonochrome"; $image; 1);

# set type to 1 for black/white
$result = MBS("GMImage.SetType"; $image; 1);

# set to use TIFF for compression
$result = MBS("GMImage.SetMagick"; $image; "TIFF");

# set to use CCITT 4 Fax compression
$result = MBS("GMImage.SetCompressType"; $image; 4);

# and write to a file
$result = MBS("GMImage.WriteToFile"; $image; "/tmp/test.tif");

# cleanup
$error = MBS("GMImage.Release"; $image)
```

Created 18th August 2014, last changed 18th August 2014.

85.246 GImage.SetDefineSet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetDefineSet"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns "OK" on success.

Description

Tagged image format define. Similar to the get/setdefineValue() functions except that passing the flag value 'true' creates a value-less define with that format and key. Passing the flag value 'false' removes any existing matching definition. The method returns 'true' if a matching key exists, and 'false' if no matching key exists.

See also

- 85.108 GImage.GetDefineSet 4486
- 85.247 GImage.SetDefineValue 4657

Created 18th August 2014, last changed 18th August 2014.

85.247 GImage.SetDefineValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetDefineValue"; ImageRef; magick; key; value)

Parameters**ImageRef**

The image reference number.

1

magick

The name of the codec

key

A key name as string

value

The value as string

Result Returns "OK" on success.

Description

Tagged image format define (set/access coder-specific option) The magick option specifies the coder the define applies to. The key option provides the key specific to that coder. The value option provides the value to set (if any). See the get/set defineSet functions if the key must be removed entirely.

See also

- 85.109 GImage.GetDefineValue 4487

85.248 GImage.SetDensity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetDensity"; ImageRef; geometry)

Parameters

ImageRef

The image reference number.

1

geometry

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

Result Returns "OK" on success.

Description

Please use GImage.SetResolutionUnits to define units.

Examples

Loads image and writes back with new DPI setting:

```
Set Variable [ $ImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS("GImage.SetDensity"; $ImageRef; "300x300") ]
Set Variable [ $Result; Value:MBS("GImage.SetQuality"; $ImageRef; 90) ]
Set Field [ Test::Result; MBS( "GImage.WriteToJPEGContainer"; $ImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$ImageRef) ]
```

Set resolution and remove all metadata with different resolution:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image );
$r = MBS("GImage.SetDensity"; $Image; "72x72") ;
$r = MBS( "GImage.SetProfile"; $Image; "EXIF"; "" ) ;
$r = MBS( "GImage.SetProfile"; $Image; "IPTC"; "" ) ;
$r = MBS( "GImage.SetProfile"; $Image; "XMP"; "" ) ;
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result
)
```

85.250 GImage.SetEXIFOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	6.5	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetEXIFOrientation"; ImageRef; Orientation)

Parameters

ImageRef

The image reference number.

1

Orientation

The orientation value: UndefinedOrientation = 0, TopLeftOrientation = 1, (Line direction: Left to right, Frame Direction: Top to bottom) TopRightOrientation = 2, (Line direction: Right to left, Frame Direction: Top to bottom) BottomRightOrientation = 3, (Line direction: Right to left, Frame Direction: Bottom to top) BottomLeftOrientation = 4, (Line direction: Left to right, Frame Direction: Bottom to top) LeftTopOrientation = 5, (Line direction: Top to bottom, Frame Direction: Left to right) RightTopOrientation = 6, (Line direction: Top to bottom, Frame Direction: Right to left) RightBottomOrientation = 7, (Line direction: Bottom to top, Frame Direction: Right to left) LeftBottomOrientation = 8 (Line direction: Bottom to top, Frame Direction: Left to right)

1

Result Returns OK or error.

Description

Changing orientation may need to set orientation via GImage.SetOrientation and GImage.SetEXIFOrientation. With a JPEG you have orientation both in JPEG header and in EXIF metadata.

85.253 GImage.SetFillColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetFillColor"; ImageRef; color)

Parameters

ImageRef

The image reference number.

1

color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description

Examples

Set red fill color:

```
MBS( "GImage.SetFillColor"; $img; "red" )
```

Draws a circle in a rectangle in a circle:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "100x100"; "white" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetFillColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $s; Value:MBS( "GImage.SetStrokeColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $c; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 90 ) ]
Set Variable [ $r; Value:MBS( "GImage.DrawRectangle"; $img; 22; 22; 100-22; 100-22 ) ]
Set Variable [ $c; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 100-22 ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

85.255 GImage.SetFilterType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetFilterType"; ImageRef; FilterType)

Parameters

ImageRef

The image reference number.

1

FilterType

The filter type. Possible values: UndefinedFilter = 0, PointFilter = 1, BoxFilter = 2, TriangleFilter = 3, HermiteFilter = 4, HanningFilter = 5, HammingFilter = 6, BlackmanFilter = 7, GaussianFilter = 8, QuadraticFilter = 9, CubicFilter = 10, CatromFilter = 11, MitchellFilter = 12, LanczosFilter = 13, BesselFilter = 14, SincFilter = 15

2

Result Returns "OK" on success.

Description

Version 9.0 or newer lets you pass filter by name instead of number.

Examples

Set filter type to 1:

```
MBS( "GImage.SetFilterType"; $cross; 1 )
```

85.258 GImage.SetGifDisposeMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetGifDisposeMethod"; ImageRef; disposeMethod)

Parameters**ImageRef**

The image reference number.

1

disposeMethod

The dispose Method number.

Result Returns "OK" on success.

Description

Disposal	Description
0	No disposal specified.
1	Do not dispose between frames.
2	Overwrite frame with background color from header.
3	Overwrite with previous frame.

85.259 GImage.SetICCColorProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetICCColorProfile"; ImageRef; data)

Parameters

ImageRef

The image reference number.

1

data

a Container field value with an embedded file containing the profile.

Result Returns "OK" on success.

Description

Supplied via a Blob since GraphicsMagick do not currently support formatting this data structure directly. If there is not already an ICC color profile, the profile is merely attached to the image without transforming the pixels. If there is already an ICC color profile (the source profile), the pixels are translated according to the source and target profiles, and the existing profile is replaced with the target profile.

Also see GImage.SetRenderingIntent, which allows specifying the rendering intent if the profile is executed. Specifications for ICC color profiles and their usage are available from the International Color Consortium for the format of ICC color profiles.

Examples

Removes an existing profile:

```
MBS("GImage.SetICCColorProfile"; $Image; "")
```

Assigns new profile from container:

```
MBS("GImage.SetICCColorProfile"; $Image; MyTable::ProfileContainer);
```

85.266 GImage.SetMatte

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetMatte"; ImageRef; flag)

Parameters

ImageRef

The image reference number.

1

flag

A boolean value.

1

Result Returns "OK" on success.

Description

Examples

Removes alpha channel:

```
MBS("GImage.SetMatte"; $image; 0)
```

Adds an alpha channel:

```
MBS("GImage.SetMatte"; $image; 1)
```

Create picture with red and 50% alpha:

```
# Create picture
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "white" ) ]
# Add alpha channel
Set Variable [ $r; Value:MBS( "GImage.SetMatte"; $img; 1 ) ]
# Set background color and fill
Set Variable [ $r; Value:MBS( "GImage.SetBackgroundColor"; $img; "COLOR 65535 0 0 0.5" ) ]
Set Variable [ $r; Value:MBS( "GImage.Erase"; $img ) ]
# Write to field
Set Variable [ $pic; Value:MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Field [ test::r; $pic ]
# Cleanup
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

85.268 GImage.SetModulusDepth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetModulusDepth"; ImageRef; modulusDepth)

Parameters**ImageRef**

The image reference number.

1

modulusDepth

The new value.

8

Result Returns "OK" on success.

Description

The minimum number of bits required to support red/green/blue components without loss of accuracy.

See also

- 85.136 GImage.GetModulusDepth

85.270 GImage.SetOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetOrientation"; ImageRef; Orientation)

Parameters

ImageRef

The image reference number.

1

Orientation

The orientation value: UndefinedOrientation = 0, TopLeftOrientation = 1, (Line direction: Left to right, Frame Direction: Top to bottom) TopRightOrientation = 2, (Line direction: Right to left, Frame Direction: Top to bottom) BottomRightOrientation = 3, (Line direction: Right to left, Frame Direction: Bottom to top) BottomLeftOrientation = 4, (Line direction: Left to right, Frame Direction: Bottom to top) LeftTopOrientation = 5, (Line direction: Top to bottom, Frame Direction: Left to right) RightTopOrientation = 6, (Line direction: Top to bottom, Frame Direction: Right to left) RightBottomOrientation = 7, (Line direction: Bottom to top, Frame Direction: Right to left) LeftBottomOrientation = 8 (Line direction: Bottom to top, Frame Direction: Left to right)

1

Result Returns "OK" on success.

Description

Examples

Set orientation

```
# load a picture
Set Variable [ $image; Value:MBS( "GImage.NewFromContainer"; Test::BigImage) ]
# Set orientation to 1
Set Variable [ $r; Value:MBS( "GImage.SetOrientation"; $image; 1) ]
# write back to container
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $image;) ]
# cleanup
Set Variable [ $Error; Value:MBS("GImage.Release";$image) ]
```

85.272 GImage.SetPixelColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetPixelColor"; ImageRef; x; y; color)

Parameters

ImageRef

The image reference number.

1

x

The horizontal position. Range from 0 to GImage.GetWidth-1.

0

y

The vertical position. Range from 0 to GImage.GetHeight-1.

0

color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Created 18th August 2014, last changed 11st November 2019.

85.273 GImage.SetProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetProfile"; ImageRef; name; data)

Parameters

ImageRef

The image reference number.

1

name

The string with the name of the profile.

"IPTC"

data

The container field value with the embedded profile file.

Result Returns "OK" on success.

Description

Remove the profile by passing an empty container field. Valid names are "*", "8BIM", "ICM", "IPTC", "EXIF", or a user/format-defined profile name.

Examples

Remove XMP:

```
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $imageRef; "XMP"; "" ) ]
```

Remove IPTC:

```
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $imageRef; "IPTC"; "" ) ]
```

Remove EXIF:

```
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $imageRef; "EXIF"; "" ) ]
```

Clear all profiles:

```
Set Variable [ $Image ; Value: MBS("GImage.NewFromContainer"; MyTable::BMPContainer) ]
# remove metadata
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $Image; "EXIF"; "" ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $Image; "IPTC"; "" ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $Image; "XMP"; "" ) ]
# write back as JPEG
Set Variable [ $r ; Value: MBS("GImage.SetQuality";$Image; 90) ]
Set Field [ MyTable::JPEGContainer ; MBS("GImage.WriteToJPEGContainer"; $Image) ]
```

85.273. *GMIMAGE.SETPROFILE* 4691
Set Variable [\$r ; Value: MBS("GMImage.Release";\$Image)]

- [MBS FileMaker Plugin, version 8.4pr6](#)

Created 18th August 2014, last changed 21st December 2018.

85.274 GImage.SetQuality

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetQuality"; ImageRef; quality)

Parameters

ImageRef

The image reference number.

1

quality

a number in range of 0 to 100.

75

Result Returns "OK" on success.

Description

Examples

Recompresses the image with JPEG compressor and a really bad quality:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.SetQuality"; $Image; 5);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release"; $Image)
] ;
$Result)
```

Converts to JPEG with 90% compression:

```
Set Variable [ $ImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS("GImage.SetQuality"; $ImageRef; 90) ]
Set Field [ Test::Result; MBS( "GImage.WriteToJPEGContainer"; $ImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release"; $ImageRef) ]
```

85.283 GImage.SetSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetSize"; ImageRef; Size)

Parameters**ImageRef**

The image reference number.

1

Size

The rectangle. A Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

Result Returns "OK" on success.

Description

Width and height of a raw image (an image which does not support width and height information). Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetStrokeColor"; ImageRef; color)

Parameters

ImageRef

The image reference number.

1

color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description

The plugin has a list so some colors can be simply named like "red".

Examples

Set color to red:

```
MBS( "GImage.SetStrokeColor"; $img; "red" )
```

Draws a circle in a rectangle in a circle:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "100x100"; "white" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetFillColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $s; Value:MBS( "GImage.SetStrokeColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $c; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 90 ) ]
Set Variable [ $r; Value:MBS( "GImage.DrawRectangle"; $img; 22; 22; 100-22; 100-22 ) ]
Set Variable [ $c; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 100-22 ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

85.286 GImage.SetStrokeDashArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	4.2	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetStrokeDashArray"; ImageRef; Pattern)

Parameters

ImageRef

The image reference number.

1

Pattern

The list of pattern numbers. can be separated by space or newline.

"5 3 2"

Result Returns OK or error.

Description

The strokeDashArray represents an array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2.

Examples

Set a pattern

MBS("GImage.SetStrokeDashArray"; \$ImageRef; "5 3 2")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetStrokeDashOffset"; ImageRef; offset)

Parameters**ImageRef**

The image reference number.

1

offset

The new value.

1.5

Result Returns "OK" on success.

Description

While drawing using a dash pattern, specify distance into the dash pattern to start the dash (default 0).

85.290 GImage.SetStrokeMiterLimit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetStrokeMiterLimit"; ImageRef; value)

Parameters**ImageRef**

The image reference number.

1

value

The new value.

Result Returns "OK" on success.

Description

When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.

- 85.254 GImage.SetFillRule 4666

Created 18th August 2014, last changed 18th August 2014.

85.296 GImage.SetType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SetType"; ImageRef; type)

Parameters**ImageRef**

The image reference number.

1

type

UndefinedType = 0, BilevelType = 1, GrayscaleType = 2, GrayscaleMatteType = 3, PaletteType = 4, PaletteMatteType = 5, TrueColorType = 6, TrueColorMatteType = 7, ColorSeparationType = 8, ColorSeparationMatteType = 9, OptimizeType = 10

6

Result Returns "OK" on success.

Description

Changing the type from TrueColorType to GrayscaleType will convert a color picture to grayscale.

Examples

Change the picture to grayscale.

```
Let ( [
  $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
  $Result = MBS("GImage.SetType"; $Image; 2);
  $Result = MBS("GImage.WriteToPNGContainer"; $Image);
  $Error = MBS("GImage.Release"; $Image)
] ;
$Result)
```

Convert image to 1 bit TIFF:

```
# Load from container
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);

# make black and white with threshold
$Result = MBS("GImage.Threshold"; $Image; 127);

# mark as monochrome image
$Result = MBS("GImage.SetMonochrome"; $Image; 1);

# set type to 1 for black/white
$Result = MBS("GImage.SetType"; $Image; 1);
```

```
# set to use TIFF for compression
$Result = MBS("GImage.SetMagick";$Image; "TIFF");

# set to use CCITT 4 Fax compression
$Result = MBS("GImage.SetCompressType";$Image; 4);

# and write to a file
$Result = MBS("GImage.WriteToFile"; $Image; "/tmp/test.tif");

# cleanup
$error = MBS("GImage.Release";$Image)
```

Change picture to RGB:

```
MBS("GImage.SetType"; $image; 6);
```

Replace white with transparent:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
# Set type to RGBA
Set Variable [ $Result; Value:MBS("GImage.SetType"; $BigImageRef; 7) ]
# Replace white with transparent
Set Variable [ $Result; Value:MBS("GImage.ReplaceColor"; $BigImageRef; "white"; "transparent"; 10) ]
# save as PNG
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]
```

85.303 GMImage.Sharpen

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GMImage.Sharpen"; ImageRef { ; radius; sigma })

Parameters**ImageRef**

The image reference number.

1

radius

Optional

Optional, The radius of the Gaussian, in pixels, not counting the center pixel.

0

sigma

Optional

Optional, The standard deviation of the Laplacian, in pixels.

1

Result Returns "OK" on success.

Description**Examples**

Applies the sharpen effect to the image:

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Sharpen"; $Image; 10; 5);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);

85.305 GImage.Shave

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Shave"; ImageRef; Geometry)

Parameters**ImageRef**

The image reference number.

1

Geometry

The rectangle where to draw. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200%!"

"100x200"

Result Returns "OK" on success.

Description**Examples**

Shaves an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$ShaveResult = MBS("GImage.Shave";$Image; "10x10");
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Signature"; ImageRef { ; force })

Parameters

ImageRef

The image reference number.

1

force

Optional

Optional, a boolean value.

0

Result Returns the signature string.

Description

Created 18th August 2014, last changed 18th August 2014.

85.308 GImage.SkewX

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SkewX"; ImageRef; angle)

Parameters**ImageRef**

The image reference number.

1

angle

The angle for the skew operation.

0

Result Returns OK or error.

Description**See also**

- 85.191 GImage.New 4580
- 85.306 GImage.Shear 4732
- 85.309 GImage.SkewY 4735

85.309 GImage.SkewY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS("GImage.SkewY"; ImageRef; angle)

Parameters**ImageRef**

The image reference number.

1

angle

The angle for the skew operation.

0

Result Returns OK or error.

Description**See also**

- 85.191 GImage.New 4580
- 85.306 GImage.Shear 4732
- 85.308 GImage.SkewX 4734

85.310 GImage.Solarize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Solarize"; ImageRef { ; factor })

Parameters**ImageRef**

The image reference number.

1

factor

Optional

The factor.

50.0

Result Returns "OK" on success.

Description**Examples**

Applies the solarize effect to an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Solarize";$Image);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

85.315 GImage.StrokePattern

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.StrokePattern"; ImageRef; patternImageRef)

Parameters

ImageRef

The image reference number.

1

patternImageRef

The image reference number.

2

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.316 GImage.Swirl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Swirl"; ImageRef; degrees)

Parameters

ImageRef

The image reference number.

1

degrees

The degrees.

90

Result Returns "OK" on success.

Description

Examples

Does a swirl on the image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Swirl";$Image; 90);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
] ;
$Result)
```

- 85.338 GImage.WriteToJPEGContainer 4773

Example Databases

- [GraphicsMagick/GraphicsMagick Sample](#)

Created 18th August 2014, last changed 21st December 2018.

85.317 GImage.Texture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Texture"; ImageRef; texture)

Parameters

ImageRef

The image reference number.

1

texture

The image reference number.

2

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.318 GImage.Threshold

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Threshold"; ImageRef { ; threshold })

Parameters

ImageRef

The image reference number.

1

threshold

Optional

The range of the threshold parameter is 0 to MaxRGB (65535).

127*256

Result Returns "OK" on success.

Description

Examples

Applies a threshold on the image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Threshold";$Image; 127);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

Convert image to 1 bit TIFF:

```
# Load from container
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);

# make black and white with threshold
$Result = MBS("GImage.Threshold";$Image; 127);

# mark as monochrome image
$Result = MBS("GImage.SetMonochrome";$Image; 1);

# set type to 1 for black/white
$Result = MBS("GImage.SetType";$Image; 1);

# set to use TIFF for compression
$Result = MBS("GImage.SetMagick";$Image; "TIFF");
```

```
# set to use CCITT 4 Fax compression
$Result = MBS("GMImage.SetCompressType";$Image; 4);

# and write to a file
$Result = MBS("GMImage.WriteToFile"; $Image; "/tmp/test.tif");

# cleanup
$error = MBS("GMImage.Release";$Image)
```

Make a picture black and transparent:

```
Set Variable [ $image; Value:MBS( "GMImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $r; Value:MBS( "GMImage.Threshold"; $image; 127) ]
Set Variable [ $imagecolor; Value:MBS( "GMImage.Transparent"; $image; "white") ]
Set Field [ Test::Result; MBS( "GMImage.WriteToPNGContainer"; $image;) ]
Set Variable [ $Error; Value:MBS("GMImage.Release";$image) ]
```

85.327 GImage.Translation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Translation"; ImageRef; X; Y)

Parameters**ImageRef**

The image reference number.

1

X

The x coordinate.

10

Y

The y coordinate.

10

Result Returns OK or error.

Description

Sets the new coordinate origin.

See also

- 85.328 GImage.Transparent

4756

Created 18th August 2014, last changed 18th August 2014.

85.328 GImage.Transparent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Transparent"; ImageRef; Color)

Parameters**ImageRef**

The image reference number.

1

Color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

Result Returns "OK" on success.

Description**Examples**

Make a picture transparent:

```
# load a picture
Set Variable [ $image; Value:MBS( "GImage.NewFromContainer"; Test::BigImage) ]
# white in RGB
Set Variable [ $f; Value:"COLOR 65535 65535 65535" ]
# Replace all white with nearly white
Set Variable [ $r; Value:MBS( "GImage.ReplaceColor"; $image; $f; "COLOR 65535 65278 65535"; 0) ]
# now flood fill it with 5 as tolerance
Set Variable [ $r; Value:MBS( "GImage.SetColorFuzz"; $image; 5 ) ]
Set Variable [ $r; Value:MBS( "GImage.FloodFillColorXY"; $image; 0; 0; $f ) ]
# now set back fuzz and make transparent using white
Set Variable [ $r; Value:MBS( "GImage.SetColorFuzz"; $image; 0 ) ]
Set Variable [ $imagecolor; Value:MBS( "GImage.Transparent"; $image; $f) ]
# write back to container
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $image;) ]
# cleanup
Set Variable [ $Error; Value:MBS("GMimage.Release";$image) ]
```

85.329 GImage.Trim

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Trim"; ImageRef)

Parameters**ImageRef**

The image reference number.

1

Result Returns "OK" on success.

Description

Use GImage.SetColorFuzz to set the fuzzy level.

Trim looks on what pixel colors the edges have and checks if there is a smaller rectangle where all pixel outside have same color. See GImage.BoundingBox for the bounding box of content.

Examples

Trim a picture:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 100 ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Field [ Test::Result; MBS( "GImage.WriteToJPEGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]
```

Trim white around picture:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
# set one white pixel to make sure it trims only white
Set Variable [ $Result; Value:MBS( "GImage.SetPixelColor"; $BigImageRef; 0; 0; "white" ) ]
# allows up to 5 away into gray for comparing to white
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 5 ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Field [ Test::Result; MBS( "GImage.WriteToJPEGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]
```

Trims space around image and make transparent:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GImage.SetBackgroundColor"; $BigImageRef; "RGB 1 0 0" ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 5 ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetMatte"; $BigImageRef; 1 ) ]
```

```
Set Variable [ $farbe; Value:MBS( "GImage.GetPixelColor"; $BigImageRef; 0; 0 ) ]  
Set Variable [ $Result; Value:MBS( "GImage.ReplaceColor"; $BigImageRef; $farbe; "RGB 1 1 1"; 5 ) ]  
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]  
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]
```

85.330 GImage.Unsharpmask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Unsharpmask"; ImageRef; radius; sigma; amount; threshold)

Parameters

ImageRef

The image reference number.

1

radius

the radius of the Gaussian, in pixels, not counting the center pixel.

3

sigma

the standard deviation of the Gaussian, in pixels.

1

amount

the percentage of the difference between the original and the blur image that is added back into the original.

50

threshold

the threshold in pixels needed to apply the diffence amount.

3

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.331 GImage.UnsharpmaskChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.UnsharpmaskChannel"; ImageRef; ChannelType; radius; sigma; amount; threshold)

Parameters**ImageRef**

The image reference number.

1

ChannelType

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

radius

the radius of the Gaussian, in pixels, not counting the center pixel.

3

sigma

the standard deviation of the Gaussian, in pixels.

1

amount

the percentage of the difference between the original and the blur image that is added back into the original.

50

threshold

the threshold in pixels needed to apply the diffence amount.

3

Result Returns "OK" on success.

Description

Created 18th August 2014, last changed 18th August 2014.

85.332 GImage.Wave

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.Wave"; ImageRef { ; amplitude; wavelength })

Parameters**ImageRef**

The image reference number.

1

amplitude

Optional

The amplitude

25.0

wavelength

Optional

The wave length

150.0

Result Returns "OK" on success.

Description**See also**

85.333 GImage.WriteImages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	3.4	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteImages"; ImageList; Path; Adjoin)

Parameters

ImageList

The list of image references (numbers returned from the GImage.New functions) separated by either space or new line character.

"1 2 3"

Path

A platform specific filepath where to write the image.

"C:\Test.tif"

Adjoin

Whether to write one file per image or one image file with all images.

1

Result Returns OK or error message.

Description

This function can be used to create multi image tiff files.

See GImage.NewImagesFromFile and GImage.NewImagesFromContainer for reading multi picture files.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

85.334 GImage.WriteToBMPContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.4	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteToBMPContainer"; ImageRef { ; Filename })

Parameters**ImageRef**

The image reference number.

1

Filename

Optional

The file name to use for the container. Default is "image.bmp"
"ball.bmp"

Result Returns a container value.

Description

For preview a JPEG version is included as well as a file name "image.bmp" and the image size.
See also GImage.WriteToFile, GImage.WriteToPNGContainer, GImage.WriteToTiffContainer, GImage.WriteToJPEGContainer and GImage.WriteToGIFContainer.

Examples

Get a container value from the picture in BMP format.

MBS("GImage.WriteToBMPContainer"; \$MyImageRef; "logo.bmp")

85.334.1 FileMaker Magazin

- Ausgabe 5/2011, Seite 33

Created 18th August 2014, last changed 16th October 2014.

85.335 GImage.WriteToContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	9.3	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteToContainer"; ImageRef { ; FileName })

Parameters

ImageRef

The image reference number.

1

FileName

Optional

File name to pass to FileMaker with container.

"test.jpg"

Result Returns OK or error.

Description

Please set type you want with GImage.SetMagick function.

Similar to other write functions, but allows you to use whatever magick type is set for codec.

This function is similar to our specialized functions GImage.WriteToBMPContainer, GImage.WriteToGIFContainer, GImage.WriteToJPEGContainer, GImage.WriteToPDFContainer, GImage.WriteToPNGContainer and GImage.WriteToTiffContainer, but you can specify the codec to use. Image is compressed and passed to FileMaker with filename. Then FileMaker (or our plugin for older FileMaker versions before 13) can detect the type from filename and generate required previews.

Examples

Save an image as PNG:

```
Set Variable [ $BigImageRef ; Value: MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result ; Value: MBS("GImage.SetMagick"; $BigImageRef; "PNG") ]
Set Field [ Test::Result ; MBS( "GImage.WriteToContainer"; $BigImageRef; "test.png" ) ]
Set Variable [ $Error ; Value: MBS("GImage.Destroy";$BigImageRef) ]
```

Created 20th July 2019, last changed 22nd February 2020.

85.336 GImage.WriteToFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteToFile"; ImageRef; Path)

Parameters**ImageRef**

The image reference number.

1

Path

A platform specific filepath where to write the image.

"C:\Test.jpg"

Result Returns "OK" on success.

Description

See also GImage.WriteToPNGContainer, GImage.WriteToBMPCContainer, GImage.WriteToTiffContainer, GImage.WriteToJPEGContainer and GImage.WriteToGIFContainer.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Save file to Bob's desktop as GIF file on Mac OS X:

```
MBS( "GImage.WriteToFile"; $BigImageRef; "/Users/Bob/Desktop/test.gif" )
```

Save file to Bob's desktop as JPG file on Windows:

```
MBS( "GImage.WriteToFile"; $BigImageRef; "C:\Data\logo.jpg" )
```

Convert image to 1 bit TIFF:

```
# Load from container
```

```
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
```

```
# make black and white with threshold
```

```
$Result = MBS("GImage.Threshold";$Image; 127);
```

```
# mark as monochrome image
```

```
$Result = MBS("GImage.SetMonochrome";$Image; 1);
```

```
# set type to 1 for black/white
```

```
$Result = MBS("GImage.SetType";$Image; 1);
```

```

# set to use TIFF for compression
$Result = MBS("GImage.SetMagick";$Image; "TIFF");

# set to use CCITT 4 Fax compression
$Result = MBS("GImage.SetCompressType";$Image; 4);

# and write to a file
$Result = MBS("GImage.WriteToFile"; $Image; "/tmp/test.tif");

# cleanup
$error = MBS("GImage.Release";$Image)

```

Loads from file and writes to other file:

```

Set Variable [ $img; Value:MBS("GImage.NewImagesFromFile"; "/Users/cs/Desktop/test.jpg") ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r; Value:MBS( "GImage.WriteToFile"; $img; "/Users/cs/Desktop/test.tif" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
End If

```

Draw something and write to file on desktop:

```

# New Image
Set Variable [ $img; Value:MBS("GImage.New"; "300x200"; "RGB 1 1 1") ]
# Set colors and line width
Set Variable [ $r; Value:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $r; Value:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $r; Value:MBS("GImage.SetLineWidth"; $img; 5) ]
# draw a rectangle
Set Variable [ $r; Value:MBS("GImage.DrawRectangle"; $img; 50; 50; 250; 150) ]
# save to test.png on desktop:
Set Variable [ $DesktopPath; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $DesktopPath; "test.png") ]
Set Variable [ $r; Value:MBS("GImage.WriteToFile"; $img; $path) ]
# cleanup
Set Variable [ $r; Value:MBS("GImage.Release"; $img) ]

```

85.337 GImage.WriteToGIFContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.4	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteToGIFContainer"; ImageRef { ; Filename })

Parameters

ImageRef

The image reference number.

1

Filename

Optional

The file name to use for the container. Default is "image.gif"
"ball.gif"

Result Returns a container value.

Description

For preview a JPEG version is included as well as a file name "image.gif" and the image size.

See also GImage.WriteToFile, GImage.WriteToPNGContainer, GImage.WriteToTiffContainer, GImage.WriteToBMPContainer and GImage.WriteToJPEGContainer.

Examples

Get a container value from the picture in GIF format.

MBS("GImage.WriteToGIFContainer"; \$MyImageRef; "logo.gif")

85.337.2 FileMaker Magazin

- Ausgabe 5/2011, Seite 33

Created 18th August 2014, last changed 24th August 2017.

85.338 GImage.WriteToJPEGContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteToJPEGContainer"; ImageRef { ; Filename })

Parameters**ImageRef**

The image reference number.

1

Filename

Optional

The file name to use for the container. Default is "image.jpg"

"ball.jpg"

Result Returns a container value.

Description

Includes a file name "image.jpg" and the image size.

For the quality setting use the GImage.SetQuality function.

For most cases the PNG file format is the better choice as it supports transparency and lossless compression.

See also GImage.WriteToFile, GImage.WriteToPNGContainer, GImage.WriteToTiffContainer, GImage.WriteToBMPContainer and GImage.WriteToGIFContainer.

Examples

Recompresses the image with JPEG compressor and a really bad quality:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.SetQuality";$Image; 5);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

Save JPEG image to container as script:

```
Set Variable [ $Image ; Value: MBS("GImage.NewFromContainer"; MyTable::BMPContainer) ]
Set Variable [ $r ; Value: MBS("GImage.SetQuality";$Image; 90) ]
Set Field [ MyTable::JPEGContainer ; MBS("GImage.WriteToJPEGContainer"; $Image) ]
Set Variable [ $r ; Value: MBS("GImage.Release";$Image) ]
```

85.339 GImage.WriteToPDFContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	7.4	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteToPDFContainer"; ImageRef { ; Filename })

Parameters**ImageRef**

The image reference number.

1

Filename

Optional

The file name to use for the container. Default is "image.pdf"

"test.pdf"

Result Returns OK or error.

Description

For preview a JPEG version is included as well as a file name and the image size.

Please make sure the DPI value is set via GImage.SetDensity function as an incorrect value can crop the PDF page.

See also GImage.WriteToFile, GImage.WriteToJPEGContainer, GImage.WriteToBMPContainer and GImage.WriteToGIFContainer.

If you need more options for PDF file, please use our DynaPDF functions.

Examples

Load image and Save to container as PDF:

```
Let ( [
```

```
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
```

```
$Result = MBS("GImage.WriteToPDFContainer"; $Image; "image.pdf");
```

```
$Error = MBS("GImage.Release";$Image)
```

```
];
```

```
$Result)
```

85.340 GImage.WriteToPNGContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteToPNGContainer"; ImageRef { ; Filename })

Parameters**ImageRef**

The image reference number.

1

Filename

Optional

The file name to use for the container. Default is "image.png"

"ball.png"

Result Returns a container value.

Description

For preview a JPEG version is included as well as a file name "image.png" and the image size.

See also GImage.WriteToFile, GImage.WriteToJPEGContainer, GImage.WriteToBMPContainer and GImage.WriteToGIFContainer.

Some images have bad ICC profile, so saving them will crash (version 3.4 or lower) or return error (3.5 and newer). In this case, please use MBS("GImage.SetICCPProfile"; ImageRef; "") to remove the profile.

Examples

Get a container value from the picture in PNG format.

```
MBS( "GImage.WriteToPNGContainer"; $MyImageRef; "logo.png" )
```

Make a barcode and store it as PNG in a container:

```
Set Variable [ $image; Value:MBS( "Barcode.Generate"; "UPCA"; "72527270270" ) ]
```

```
If [ MBS("Iserror") = 0 ]
```

```
Set Field [ MyTable::BarCodeContainer; MBS( "GImage.WriteToPNGContainer"; $image; "barcode.png" ) ]
```

```
Set Variable [ $r; Value:MBS("GImage.Release"; $image) ]
```

```
Else
```

```
Set Field [ MyTable::BarCodeContainer; "" ]
```

```
End If
```

Create red square and save to container:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "red" ) ]
```

```
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
```

```
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

85.341 GImage.WriteToTiffContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GraphicsMagick	4.4	Yes	Yes	Yes	Yes	Yes

MBS("GImage.WriteToTiffContainer"; ImageRef { ; Filename })

Parameters**ImageRef**

The image reference number.

1

Filename

Optional

The file name to use for the container. Default is "image.tif"
"ball.tif"

Result Returns a container value.

Description

For preview a JPEG version is included as well as a file name "image.tif" and the image size.

See also GImage.WriteToFile, GImage.WriteToJPEGContainer, GImage.WriteToPNGContainer, GImage.WriteToBMPCContainer and GImage.WriteToGIFContainer.

Examples

Get a container value from the picture in Tiff format.

```
MBS( "GImage.WriteToTIFFContainer"; $MyImageRef; "logo.tif" )
```

Convert image to 1 bit TIFF:

```
# Load from container
```

```
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
```

```
# make black and white with threshold
```

```
$Result = MBS("GImage.Threshold";$Image; 127);
```

```
# mark as monochrome image
```

```
$Result = MBS("GImage.SetMonochrome";$Image; 1);
```

```
# set type to 1 for black/white
```

```
$Result = MBS("GImage.SetType";$Image; 1);
```

```
# set to use TIFF for compression
```

```
$Result = MBS("GImage.SetMagick";$Image; "TIFF");
```

```
# set to use CCITT 4 Fax compression
```

```
$Result = MBS("GImage.SetCompressType";$Image; 4);
```

```
# and write to a file
$Result = MBS("GImage.WriteToTiffContainer"; $Image; "test.tif");

# cleanup
$error = MBS("GImage.Release";$Image)
```

Chapter 86

Hash

Calculate hash value of text.

86.1 Hash.CRC32

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	8.3	Yes	Yes	Yes	Yes	Yes

MBS("Hash.CRC32"; InputType; InputData { ; InputEncoding; StartValue })

Parameters

InputType

The type of input. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

InputData

The actual input data. Text, container or file path.

"Hello World"

InputEncoding

Optional

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

StartValue

Optional

The start value for the CRC. Default is zero.

0

Result Returns OK or error.

Description

Same algorithm as used for zip functions.

Examples

CRC32 of Hello:

```
MBS("Hash.CRC32"; "Text"; "Hello"; "UTF-8"; 0)
```

86.1.1 Blog Entries

- [MBS FileMaker Plugin, version 8.3pr6](#)

Created 11st July 2018, last changed 11st July 2018.

86.2 Hash.Digest

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	4.1	Yes	Yes	Yes	Yes	Yes

MBS("Hash.Digest"; Algorithm; InputType; InputData; InputEncoding; OutputType { ; OutputInfo })

Parameters

Algorithm

Which algorithm to use. Can be MD4, MD5, SHA, SHA1, MDC2, RIPEMD160, SHA224, SHA256, SHA384 or SHA512.

"SHA512"

InputType

The type of input. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

InputData

The actual input data. Text, container or file path.

"Hello World"

InputEncoding

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

OutputType

The output type. Can be Base64, Hex, Text, File, Path.

"Hex"

OutputInfo

Optional

The addition info for output. For text it is the text encoding, for file container the file name and for path the actual native file path.

""

Result Returns error or hash.

Description

Input can be one of different types:

- Text, you pass "text", your text and the text encoding. If no or invalid encoding name is passed, the native one is used. The encoding can be one of the following strings: ansi, windows, mac, latin1, utf8, dos or native.
- PDF, you pass the container with the PDF file inside.
- Image, you pass the container with an image file (JPEG, GIF, TIFF, PNG, PICT).
- Data, you pass container and plugin looks for the file data inside.

- Hex, you pass a hex encoded text.
- Base64, you pass a base64 encoded text.
- Path, you pass the file path to a file to read.
- Container, you pass a container which is packed with all its content.

Now for output we can return the digest in various ways:

- Text, we return the hash as text in the encoding. This is not recommended for hash values. `OutputInfo` parameter is text encoding.
- Base64, the hash is returned as base64 encoded text.
- Hex, the hash is returned as hex encoded text.
- File, the hash is returned as a container value with a file inside containing the hash. `OutputInfo` parameter is the filename to be stored in the container value.
- Path, the hash is written to a file. In the `OutputInfo` parameter you provide a native file path.
- JPEG, a container with a JPEG image.
- GIF, a container with a GIF image.
- TIFF, a container with a TIFF image.
- PNG, a container with a PNG image.

Possible digest engines:

DSA-SHA, DSA, MD5, MDC2, RIPEMD160, SHA, SHA1, SHA224, SHA256, SHA384 or SHA512.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Calculate MD5 from text:

```
MBS( "Hash.Digest"; "MD5"; "Text"; "Hello World"; "UTF-8"; "Hex"; "" )
```

Calculate SHA512 from image in container and encode it as base64:

```
MBS( "Hash.Digest"; "SHA512"; "Image"; MyTable::MyContainer; ""; "Base64"; "" )
```

Hash of PDF in container:

```
MBS( "Hash.Digest"; "SHA512"; "PDF"; MyTable::MyContainer; ""; "Hex"; "" )
```

Hash a file with MD5:

```
MBS( "Hash.Digest"; "MD5"; "Path"; "/Users/cs/Desktop/test.fmp12"; ""; "Hex"; "" )
```

Stream file to AWS:

```
# Build a path to file (local) and in AWS
Set Variable [ $Filename ; Value: "test.pdf" ]
Set Variable [ $Path ; Value: "/" & $BucketName & "/PDF/" & $Filename ]
Set Variable [ $localPath ; Value: "/Users/cs/Desktop/license.pdf" ]
# calculate hash for file to upload
Set Variable [ $HashedPayload ; Value: Lower(MBS( "Hash.Digest"; "sha256"; "path"; $localPath; ""; "hex"
)) ]
# upload
Set Variable [ $curl ; Value: MBS("CURL.New") ]
# file content is streamed
Set Variable [ $result ; Value: MBS("CURL.OpenInputFile"; $curl; $localPath) ]
# setup AWS
Set Variable [ $result ; Value: MBS("CURL.SetupAWS"; $curl; $AWSAccessKeyId; $AWSSecretAccessKey;
$Region; $Service; $Path; $Domain; $Verb; $HashedPayload; $headers) ]
Set Field [ CURL Test::Result ; MBS("CURL.Perform"; $curl) ]
Set Field [ CURL Test::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result ; Value: MBS("CURL.Cleanup"; $curl) ]
```

86.3 Hash.DigestFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Hash.DigestFile"; Algorithm; FilePath; OutputType { ; OutputInfo })

Parameters

Algorithm

Which algorithm to use. Can be MD4, MD5, SHA, SHA1, MDC2, RIPEMD160, SHA224, SHA256, SHA384 or SHA512.

"SHA512"

FilePath

The native file path to use.

"C:\test.dat"

OutputType

The output type. Can be Base64, Hex, Text, File, Path.

"Hex"

OutputInfo

Optional

The addition info for output. For text it is the text encoding, for file container the file name and for path the actual native file path.

""

Result Returns OK or error.

Description

This function is optimized to process files on disk in chunks, so it works well for several GB of file sizes.

For output we can return the digest in various ways:

- Base64, the hash is returned as base64 encoded text.
- Hex, the hash is returned as hex encoded text.

Possible digest engines:

DSA-SHA, DSA, MD5, MDC2, RIPEMD160, SHA, SHA1, SHA224, SHA256, SHA384 or SHA512.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Create MD5 of file:

```
MBS("Hash.DigestFile"; "MD5"; "/Users/cs/Movies/test.mov"; "hex")
```

Created 12nd April 2019, last changed 12nd April 2019.

86.4 Hash.MD5

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	2.7	Yes	Yes	Yes	Yes	Yes

MBS("Hash.MD5"; text { ; Flags })

Parameters

text

The text to process.

"Hello World"

Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded.

Pass 2 if input data is Hex encoded and plugin should decode it first.

0

Result Returns MD5 hash.

Description

Text is converted to UTF-8 to make sure the text encoding doesn't change the hash value.

Hashes are used to store a fingerprint of some data. When hashes are not equal, the data is probably also not equal.

This function is good to make hashes for passwords. You don't save the password in your database, but only the hash. On login, you calculate the hash for the password entered by the user and compare the hash with the stored one. This way the database only contains hashes. And it's unlikely someone finds the password given the hash, except for easy cases like "hello" where google will tell you the text for the hash.

To make hashes more secure, use a prefix/suffix like the user id or simply your application name. This way even hello as a password will be quite impossible to recover from the hash.

SHA-512 is stronger than MD5.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

Examples

Calculate hash of password:

```
MBS( "Hash.MD5"; $password )
```

Testing flags:

```
Set Variable [ $hash1; Value:MBS( "Hash.MD5"; "Hello" ) ]
```

```
Set Variable [ $hash2; Value:MBS( "Hash.MD5"; "48656C6C6F"; 2 ) ]
```

```
Show Custom Dialog [ "Two calculations for same hash..."; $hash1 & $hash2 ]
```

FileMaker 16 vs. Plugin:

```
# MBS Plugin:  
MBS( "Hash.MD5"; "Hello World")  
# Same via FileMaker 16 native:  
HexEncode( CryptDigest ( "Hello World"; "MD5" ))
```

86.5 Hash.MD5.HMAC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	4.0	Yes	Yes	Yes	Yes	Yes

MBS("Hash.MD5.HMAC"; key; data { ; Flags })

Parameters

key

The key text to use.

"Hello"

data

The data text to use.

"World"

Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded. Pass 2 if key is Hex encoded and plugin should decode it first. Pass 4 if data is hex encoded and plugin should decode it first.

0

Result Returns the hash string.

Description

Keyed-Hash Message Authentication Code is a way to add salt to a hash for more security.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

Examples

Hash empty string

MBS("Hash.MD5.HMAC"; ""; "")

Example result: 74E6F7298A9C2D168935F58C001BAD88

Hash a test string

MBS("Hash.MD5.HMAC"; "key"; "The quick brown fox jumps over the lazy dog")

Example result: 80070713463E7749B90C2DC24911E275

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
```

```
MBS( "Hash.MD5.HMAC"; "Key"; "Data")
```

```
# Same via FileMaker 16 native:  
HexEncode( CryptAuthCode ( "Data" ; "MD5" ; "Key" ))
```

86.6 Hash.PBKDF2.HMAC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	3.3	Yes	Yes	Yes	Yes	Yes

MBS("Hash.PBKDF2.HMAC"; salt; password; iterations; desiredHashLength; hashAlgorithm { ; Flags })

Parameters

salt

The key text to use.

"Hello"

password

The data text to use.

"World"

iterations

Number of loops that the hash algorithm does.

100

desiredHashLength

Number of bytes that you want the resulting hash to be. 16 or 32 bytes are commonly used.

32

hashAlgorithm

The hash algorithm. Can be MD5, SHA1, SHA256 or SHA512.

"MD5"

Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded. Pass 2 if salt is Hex encoded and plugin should decode it first. Pass 4 if password is hex encoded and plugin should decode it first.

0

Result Returns the hash or error.

Description

Same as Crypto.PBKDF2 in Xojo (Real Studio):

<http://docs.realsoftware.com/index.php/Crypto.PBKDF2>

Examples

Calculate password hash:

MBS("Hash.PBKDF2.HMAC"; "Hello"; "World"; 100; 32; "SHA512")

Example result: 2CFDC277C8B84693B85E18D5A0176249EF29B74DFDF2EE6826636F5ACBF70D0

86.7 Hash.RandomHexString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	3.3	Yes	Yes	Yes	Yes	Yes

MBS("Hash.RandomHexString"; Length)

Parameters

Length

The length of the text to return in characters. Result string will be double that size as it is hex.
32

Result Returns text.

Description

You can use these strings for hash seeds.

Examples

Creates 8 byte string:

MBS("Hash.RandomHexString"; 8)

See also

86.8 Hash.RandomString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Hash.RandomString"; Length { ; Characters })

Parameters

Length

The length of the text to return in characters.

32

Characters

Optional

Optional, a list of characters to use instead of default set.

"1234"

Result Returns text.

Description

User Characters: a to z, A to Z and 0 to 9.

You can use this strings for hash seeds or as password suggestions.

Examples

Creates 8 byte string:

```
MBS( "Hash.RandomString"; 8 )
```

Create random text with only digits:

```
MBS("Hash.RandomString"; 32; "1234567890")
```

Create random hex number:

```
MBS("Hash.RandomString"; 32; "1234567890ABCDEF")
```

Create random password using digits and punctuation:

```
MBS("Hash.RandomString"; 10; "1234567890ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz~!@# $% ^& *-_+=.")
```

86.9 Hash.SHA1

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	3.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "Hash.SHA1"; text { ; Flags } )
```

Parameters

text

The text to process.

"Hello World"

Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded.

Pass 2 if input data is Hex encoded and plugin should decode it first.

0

Result Returns SHA-256 hash.

Description

Text is converted to UTF-8 to make sure the text encoding doesn't change the hash value.

Hashes are used to store a fingerprint of some data. When hashes are not equal, the data is probably also not equal.

This function is good to make hashes for passwords. You don't save the password in your database, but only the hash. On login, you calculate the hash for the password entered by the user and compare the hash with the stored one. This way the database only contains hashes. And it's unlikely someone finds the password given the hash, except for easy cases like "hello" where google will tell you the text for the hash.

To make hashes more secure, use a prefix/suffix like the user id or simply your application name. This way even hello as a password will be quite impossible to recover from the hash.

SHA-1 is stronger than MD5 and weaker than SHA-512.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

Examples

Calculate hash of password:

```
MBS( "Hash.SHA1"; $password )
```

Calculate empty hash:

```
MBS("Hash.SHA1"; "")
```

Example result: DA39A3EE5E6B4B0D3255BFEF95601890AFD80709

Calculate empty hash as Base64:

```
MBS("Hash.SHA1"; ""); 1)
```

Example result: "2jmj7l5rSw0yVb/vlWAYkK/YBwk="

Calculate for two similar texts:

```
MBS("Hash.SHA1"; "Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")
```

Example result: 68AC906495480A3404BEEE4874ED853A037A7A8F

Encode Password like in PHP:

```
# original in PHP:
#
# $nonce_date_pwd = pack("A*",$nonce) . pack("A*",$CREATIONDATE) . pack("H*", sha1($password));
# $PASSWORDDDIGEST = base64_encode( pack('H*', sha1($nonce_date_pwd)));
#
# in FileMaker:
#
# you can use Hash.RandomHexString to make your Nonce.
#
Set Variable [ $NonceHexEncoded ; Wert: MBS("Text.EncodeToHex"; Password Digest::Nonce) ]
Set Variable [ $CreationDateHexEncoded ; Wert: MBS("Text.EncodeToHex"; Password Digest::CreationDate) ]
Set Variable [ $PasswordHashHexEncoded ; Wert: MBS( "Hash.SHA1"; Password Digest::Password; 0 ) ]
Set Variable [ $Input ; Wert: $NonceHexEncoded & $CreationDateHexEncoded & $PasswordHashHexEncoded ]
# build hash by decoding from Hex, doing SHA1 and encode back to Base64
Set Variable [ $PasswordDigest ; Wert: MBS( "Hash.Digest"; "SHA1"; "hex"; $input; "" ; "Base64"; "" ) ]
Set Field [ Password Digest::PasswordDigest ; $PasswordDigest ]
```

Calculate for two similar texts:

```
MBS("Hash.SHA1"; "Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
```

Example result: D8E8ECE39C437E515AA8997C1A1E94F1ED2A0E62

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
MBS( "Hash.SHA1"; "Hello World")
# Same via FileMaker 16 native:
HexEncode( CryptDigest ( "Hello World"; "SHA1" ))
```

86.12 Hash.SHA256.HMAC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Hash.SHA256.HMAC"; key; data { ; Flags })

Parameters

key

The key text to use.

"Hello"

data

The data text to use.

"World"

Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded. Pass 2 if key is Hex encoded and plugin should decode it first. Pass 4 if data is hex encoded and plugin should decode it first.

0

Result Returns the hash string.

Description

Keyed-Hash Message Authentication Code is a way to add salt to a hash for more security.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

Can be used to sign requests for Amazon MWS.

Examples

Hash empty string

MBS("Hash.SHA256.HMAC"; ""; "")

Example result: B613679A0814D9EC772F95D778C35FC5FF1697C493715653C6C712144292C5AD

Hash a test string

MBS("Hash.SHA256.HMAC"; "key"; "The quick brown fox jumps over the lazy dog")

Example result: F7BC83F430538424B13298E6AA6FB143EF4D59A14946175997479DBC2D1A3CD8

Hash with flags:

```
MBS( "Hash.SHA256.HMAC"; "6B6579"; "54686520717569636B2062726F776E20666F78206A756D7073206F766572207468652+4)
```

Example result: F7BC83F430538424B13298E6AA6FB143EF4D59A14946175997479DBC2D1A3CD8

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
MBS( "Hash.SHA256.HMAC"; "Key"; "Data")
# Same via FileMaker 16 native:
HexEncode( CryptAuthCode ( "Data" ; "SHA256" ; "Key" ))
```

Calculate Amazon AWS Signature for canonical query:

```
Set Variable [ $Verb ; Value: "POST" ]
Set Variable [ $Domain ; Value: "mws.amazonservices.com" ]
Set Variable [ $Path ; Value: "/Orders/2013-09-01" ]
Set Variable [ $QueryString ; Value: "AWSAccessKeyId=AKIAJVZ5JFVD2SERTQIA& Action=GetOrder& AmazonOrderId.Id.1=112-4707920-3733828& SellerId=A1DGCWQ1HE6UN1& SignatureMethod=HmacSHA256& SignatureVersion=2& Timestamp=2018-01-24T22%3A34%3A24Z& Version=2013-09-01" ]
Set Variable [ $SecretKey ; Value: "1234567890" ]
Set Variable [ $Signature ; Value: MBS( "Hash.SHA256.HMAC"; $SecretKey; $Verb & Char(10) & $Domain & Char(10) & $Path & Char(10) & $QueryString; 1 ) ]
Show Custom Dialog [ "AWS Signature" ; $signature ]
```

Example result: "hTX0IGOH+lWyaqZBf513TcB6Mk3U/hidyQvJASsn7aE="

Calculate a JSON Web Token (JWT) in FileMaker:

```
// Header: { \alg\":"HS256\","typ\":"JWT\" }
// Payload: { "iss":"scotch.io","exp":1300819380,"name":"Chris Sevilleja","admin":true }

// expected result: eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJsb2dnZWVJbGZlIjoiYWRtaW4iLCJpYXQiOiE0MjI3NzkraSYs8EXBxLN_oWnFSRgCzcmJmMjLiuuyu5CSpyHI
```

```
Let ( [
secret = "secretkey";
header = " { \alg\":"HS256\","typ\":"JWT\" } ";
payload = " { \loggedInAs\":"admin\","iat\":"1422779638 } ";
encodedString = MBS( "Text.EncodeToBase64URL"; header; "UTF-8") & " " & MBS( "Text.EncodeToBase64URL"; payload; "UTF-8");
// calculate hash
hash = MBS( "Hash.SHA256.HMAC"; secret; encodedString; 1 );
// transcode from Base64 to Base64 URL:
hash = MBS( "Text.EncodeToBase64URL"; MBS( "Text.DecodeFromBase64"; hash; "Windows" ); "Windows" );
// and built final result:
result = MBS( "Text.EncodeToBase64URL"; header; "UTF-8") & " " & MBS( "Text.EncodeToBase64URL"; payload; "UTF-8") & " " & hash
```

86.12. *HASH.SHA256.HMAC* 4811
] ; result)

Created 18th August 2014, last changed 1st February 2020.

86.13 Hash.SHA512

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	2.7	Yes	Yes	Yes	Yes	Yes

```
MBS( "Hash.SHA512"; text { ; Flags } )
```

Parameters

text

The text to process.

```
"Hello World"
```

Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded.

Pass 2 if input data is Hex encoded and plugin should decode it first.

```
0
```

Result Returns SHA-512 hash.

Description

Text is converted to UTF-8 to make sure the text encoding doesn't change the hash value.

Hashes are used to store a fingerprint of some data. When hashes are not equal, the data is probably also not equal.

This function is good to make hashes for passwords. You don't save the password in your database, but only the hash. On login, you calculate the hash for the password entered by the user and compare the hash with the stored one. This way the database only contains hashes. And it's unlikely someone finds the password given the hash, except for easy cases like "hello" where google will tell you the text for the hash.

To make hashes more secure, use a prefix/suffix like the user id or simply your application name. This way even hello as a password will be quite impossible to recover from the hash.

SHA-512 is stronger than MD5.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

Examples

Calculate hash of password:

```
MBS( "Hash.SHA512"; $password )
```

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
```

```
MBS( "Hash.SHA512"; "Hello World")
```

```
# Same via FileMaker 16 native:
```

```
HexEncode( CryptDigest ( "Hello World"; "SHA512" ) )
```

86.14 Hash.SHA512.HMAC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 Hash	4.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "Hash.SHA512.HMAC"; key; data { ; Flags } )
```

Parameters

key

The key text to use.

```
"Hello"
```

data

The data text to use.

```
"World"
```

Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded. Pass 2 if key is Hex encoded and plugin should decode it first. Pass 4 if data is hex encoded and plugin should decode it first.

```
0
```

Result Returns the hash string.

Description

Keyed-Hash Message Authentication Code is a way to add salt to a hash for more security.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the `Text.ReplaceNewline` function before you compare hashes to results in other development tools. Chapter 87

HealthKit

Functions for health data on iOS.

87.1 HealthKit.AuthorizationStatusForType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.AuthorizationStatusForType"; Type)

Parameters

Type

The type to check.

"BiologicalSex"

Result Returns value or error.

Description

Returns the application's authorization status for the given object type.

Value is NotDetermined, SharingDenied or SharingAuthorized.

Use HealthKit.RequestAuthorizationToShareTypes to request authentication.

Please enable HealthKit for the app entitlements for Xcode, add HealthKit framework and set NSHealthShareUsageDescription descriptor for info.plist.

Examples

Check status:

```
Set Variable [ $r ; Value: MBS( "HealthKit.AuthorizationStatusForType"; "BiologicalSex" ) ]  
Show Custom Dialog [ "Status" ; $r ]
```

See also

- 87.7 HealthKit.RequestAuthorizationToShareTypes

4824

Created 25th April 2018, last changed 9th August 2018.

87.2 HealthKit.BiologicalSex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.BiologicalSex")

Result Returns sex value or error.

Description

Before calling this function, the application should request authorization to access objects with the BiologicalSex type.

Returns error message, NotSet, Female, Male or Other.

Examples

Show sex:

```
Show Custom Dialog [ "Biological Sex" ; MBS( "HealthKit.BiologicalSex" ) ]
```

Created 25th April 2018, last changed 25th April 2018.

87.3 HealthKit.BloodType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.BloodType")

Result Returns value or error.

Description

Returns an object encapsulating the user's blood type.

Before calling this method, the application should request authorization to access objects with the BloodType type.

Value can be NotSet, APositive, ANegative, BPositive, BNegative, ABPositive, ABNegative, OPositive or ONegative.

Examples

Show blood type:

```
Show Custom Dialog [ "Blood Type" ; MBS( "HealthKit.BloodType" ) ]
```

Created 25th April 2018, last changed 25th April 2018.

87.4 HealthKit.DateOfBirth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.DateOfBirth")

Result Returns date or error.

Description

Returns the user's date of birth in the Gregorian calendar.

Before calling this method, the application should request authorization to access objects with the DateOfBirth type.

Examples

Show date of birth as date and components:

```
Show Custom Dialog [ "Date of Birth" ; MBS( "HealthKit.DateOfBirth" ) & §& MBS( "HealthKit.DateOfBirthComponents" ) ]
```

See also

- 87.5 HealthKit.DateOfBirthComponents

4822

Created 25th April 2018, last changed 25th April 2018.

87.5 HealthKit.DateOfBirthComponents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.DateOfBirthComponents")

Result Returns date components or error.

Description

For iOS 10.0 or newer.

Returns the user's date of birth in the Gregorian calendar.

Before calling this method, the application should request authorization to access objects with the DateOfBirth type.

Examples

Show date of birth as date and components:

```
Show Custom Dialog [ "Date of Birth" ; MBS( "HealthKit.DateOfBirth" ) & §& MBS( "HealthKit.DateOfBirthComponents" ) ]
```

See also

- 87.4 HealthKit.DateOfBirth

4821

Created 25th April 2018, last changed 25th April 2018.

87.6 HealthKit.FitzpatrickSkinType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.FitzpatrickSkinType")

Result Returns value or error.

Description

Returns an object encapsulating the user's Fitzpatrick skin type.

Before calling this method, the application should request authorization to access objects with the FitzpatrickSkinType type.

This represents the skin type of an individual based on the Fitzpatrick scale.

The Fitzpatrick scale is a numerical classification for skin color based on the skin's response to sun exposure in terms of the degree of burning and tanning.

I Pale white skin that always burns easily in the sun and never tans.

II White skin that burns easily and tans minimally.

III White to light brown skin that burns moderately and tans uniformly.

IV Beige-olive, lightly tanned skin that burns minimally and tans moderately.

V Brown skin that rarely burns and tans profusely.

VI Dark brown to black skin that never burns and tans profusely.

Examples

Show skin type:

Show Custom Dialog ["Skin Type" ; MBS("HealthKit.FitzpatrickSkinType")]

Created 25th April 2018, last changed 25th April 2018.

87.7 HealthKit.RequestAuthorizationToShareTypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.RequestAuthorizationToShareTypes"; ShareList; ReadList { ; FileName; ScriptName })

Parameters

ShareList

The list of sample types to share. Can be empty if you just read.
 """

ReadList

The list of object types to read.
 "BiologicalSex\$BloodType"

FileName

Optional
 The file name of the script to call.
 Get(FileName)

ScriptName

Optional
 The name of the script to trigger.
 "AuthorizationCompleted"

Result Returns OK or error.

Description

Prompts the user to authorize the application for reading and saving objects of the given types. Before attempting to execute queries or save objects, the application should first request authorization from the user to read and share every type of object for which the application may require access. The request is performed asynchronously and its completion will be executed on an arbitrary background queue after the user has responded. If the user has already chosen whether to grant the application access to all of the types provided, then the completion will be called without prompting the user.

We call optionally your script to pass in the result. You get a list of values. First entry is Success or Cancel. Second value is the error message.

The success parameter of the completion indicates whether prompting the user, if necessary, completed successfully and was not cancelled by the user. It does NOT indicate whether the application was granted authorization.

To customize the messages displayed on the authorization sheet, set the following keys in your app's Info.plist file. Set the NSHealthShareUsageDescription key to customize the message for reading data.

Set the NSHealthUpdateUsageDescription key to customize the message for writing data.

Supported quantity types:

- Body Measurements: BodyFatPercentage, BodyMass, BodyMassIndex, Height, LeanBodyMass, WaistCircumference.
- Fitness: StepCount, DistanceWalkingRunning, DistanceCycling, DistanceWheelchair, BasalEnergyBurned, ActiveEnergyBurned, FlightsClimbed, NikeFuel, AppleExerciseTime, PushCount, DistanceSwimming, SwimmingStrokeCount, VO2Max.
- Vitals: HeartRate, BodyTemperature, BasalBodyTemperature, BloodPressureSystolic, BloodPressureDiastolic, RespiratoryRate.
- Results: OxygenSaturation, PeripheralPerfusionIndex, BloodGlucose, NumberOfTimesFallen, ElectrodermalActivity, InhalerUsage, InsulinDelivery, BloodAlcoholContent, ForcedVitalCapacity, ForcedExpiratoryVolume1, PeakExpiratoryFlowRate.

Nutrition: DietaryFatTotal, DietaryFatPolyunsaturated, DietaryFatMonounsaturated, DietaryFatSaturated, DietaryCholesterol, DietarySodium, DietaryCarbohydrates, DietaryFiber, DietarySugar, DietaryEnergyConsumed, DietaryProtein, DietaryVitaminA, DietaryVitaminB6, DietaryVitaminB12, DietaryVitaminC, DietaryVitaminD, DietaryVitaminE, DietaryVitaminK, DietaryCalcium, DietaryIron, DietaryThiamin, DietaryRiboflavin, DietaryNiacin, DietaryFolate, DietaryBiotin, DietaryPantothenicAcid, DietaryPhosphorus, DietaryIodine, DietaryMagnesium, DietaryZinc, DietarySelenium, DietaryCopper, DietaryManganese, DietaryChromium, DietaryMolybdenum, DietaryChloride, DietaryPotassium, DietaryCaffeine, DietaryWater.

- UVExposure

Sample Types include Quantity types plus:

- Workout
- SleepAnalysis, AppleStandHour, CervicalMucusQuality, OvulationTestResult, MenstrualFlow, Inter-menstrualBleeding, SexualActivity and MindfulSession.
- BloodPressure and CDA.

Object Types include all above plus:

- activitySummary
- BiologicalSex
- BloodType
- DateOfBirth
- FitzpatrickSkinType

- WheelchairUse

Please enable HealthKit for the app entitlements for Xcode, add HealthKit framework and set NSHealthShareUsageDescription descriptor for info.plist.

Examples

Request authorization:

```
Set Variable [ $r ; Value: MBS( "HealthKit.RequestAuthorizationToShareTypes"; "" ; "BiologicalSex$Blood-  
Type$WheelchairUse$DateOfBirth$FitzpatrickSkinType$StepCount" ; Get(FileName); "AuthorizeTrigger"  
) ]  
If [ $r "OK" ]  
Show Custom Dialog [ "Error" ; $r ]  
End If
```

See also

- 87.1 HealthKit.AuthorizationStatusForType 4817

Created 25th April 2018, last changed 13th January 2020.

87.8 HealthKit.SampleQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

```
MBS( "HealthKit.SampleQuery"; QuantityType; Unit; StartDate; EndDate { ; SortKey; ascending; limit }
)
```

Parameters

QuantityType

The quantity type to lookup.

"StepCount"

Unit

The unit to use. Can be SI unit or for example count for counters. See Apple documentation for details.

"count"

StartDate

The start date for the search.

Date (1 ; 1 ; 2018)

EndDate

The end date for the search.

Date (2 ; 1 ; 2018)

SortKey

Optional

How to sort. Can be StartDate or EndDate.

"StartDate"

ascending

Optional

Whether to prefer ascending instead of descending. Pass 1 for ascending or 0 for descending.

1

limit

Optional

The limit for search. Default 0 for no limit.

0

Result Returns values as JSON or error.

Description

Before calling this method, the application should request authorization to access objects with the desired quantity type.

Supported quantity types:

Body Measurements:

BodyFatPercentage, BodyMass, BodyMassIndex, Height, LeanBodyMass, WaistCircumference.

Fitness:

StepCount, DistanceWalkingRunning, DistanceCycling, DistanceWheelchair, BasalEnergyBurned, ActiveEnergyBurned, FlightsClimbed, NikeFuel, AppleExerciseTime, PushCount, DistanceSwimming, SwimmingStrokeCount, VO2Max.

Vitals:

HeartRate, BodyTemperature, BasalBodyTemperature, BloodPressureSystolic, BloodPressureDiastolic, RespiratoryRate.

Results:

OxygenSaturation, PeripheralPerfusionIndex, BloodGlucose, NumberOfTimesFallen, ElectrodermalActivity, InhalerUsage, InsulinDelivery, BloodAlcoholContent, ForcedVitalCapacity, ForcedExpiratoryVolume1, PeakExpiratoryFlowRate.

Nutrition:

DietaryFatTotal, DietaryFatPolyunsaturated, DietaryFatMonounsaturated, DietaryFatSaturated, DietaryCholesterol, DietarySodium, DietaryCarbohydrates, DietaryFiber, DietarySugar, DietaryEnergyConsumed, DietaryProtein, DietaryVitaminA, DietaryVitaminB6, DietaryVitaminB12, DietaryVitaminC, DietaryVitaminD, DietaryVitaminE, DietaryVitaminK, DietaryCalcium, DietaryIron, DietaryThiamin, DietaryRiboflavin, DietaryNiacin, DietaryFolate, DietaryBiotin, DietaryPantothenicAcid, DietaryPhosphorus, DietaryIodine, DietaryMagnesium, DietaryZinc, DietarySelenium, DietaryCopper, DietaryManganese, DietaryChromium, DietaryMolybdenum, DietaryChloride, DietaryPotassium, DietaryCaffeine, DietaryWater.

UVExposure

Examples

Query step count:

```
Set Field [ Placeholder::Result ; MBS( "HealthKit.SampleQuery"; "StepCount"; "count"; Date ( 1 ; 1 ; 2018 ); Date ( 1 ; 1 ; 2019 ) ) ]
```

87.8.1 Blog Entries

- [HealthKit for FileMaker on iOS](#)

Created 25th April 2018, last changed 26th April 2018.

87.9 HealthKit.WheelchairUse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.WheelchairUse")

Result Returns value or error.

Description

Returns an object encapsulating the user's wheelchair use.

Before calling this method, the application should request authorization to access objects with the WheelchairUse type.

Value is NotSet, No or Yes.

Examples

Show wheelchair usage:

Show Custom Dialog ["Wheelchair used" ; MBS("HealthKit.WheelchairUse")]

Created 25th April 2018, last changed 25th April 2018.

87.10 HealthKit.isHealthDataAvailable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 HealthKit	8.2	No	No	No	No	Yes

MBS("HealthKit.isHealthDataAvailable")

Result Returns 1, 0 or error.

Description

Returns 1 if HealthKit is supported on the device.

HealthKit is not supported on all iOS devices. Call isHealthDataAvailable before attempting to use other parts of the framework.

Please ask for a plugin with HealthKit included. We often ship without this feature as you can only use it in apps which opt-in for HealthKit.

Examples

Check status:

```
Show Custom Dialog [ "Health available" ; Let ( [ r = Let ( [ r = MBS( "HealthKit.isHealthDataAvailable" ); text = Case ( r = 1 ; "yes"; r = 0 ; "no" ; r ) ] ; text) ]
```

Created 25th April 2018, last changed 30th March 2019.

Chapter 88

HotKey

Hotkeys to execute scripts.

88.1 HotKey.GetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.4	Yes	Yes	No	No	No

MBS("HotKey.GetEnabled"; HotKeyRef)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.
\$hotkey

Result Returns 1, 0 or error.

Description

The plugin does not trigger script if hotkey is temporary disabled.

88.7 HotKey.GetModifiers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.2	Yes	Yes	No	No	No

MBS("HotKey.GetModifiers"; HotKeyRef)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.
\$hotkey

Result Returns modifiers or error.

Description

Created 21st October 2015, last changed 21st October 2015.

88.12 HotKey.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.2	Yes	Yes	No	No	No

MBS("HotKey.List")

Result Returns list or error.

Description

Returns list with IDs for currently registered hotkeys.

This helps debugging, especially finding scripts which do not release their objects properly.

Created 29th June 2015, last changed 21st September 2015.

88.13 HotKey.Register

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.0	Yes	Yes	No	No	No

MBS("HotKey.Register"; Code; Modifiers { ; Exclusive; FileName; ScriptName; Local; Name; Tag })

Parameters

Code

The virtual key code of the key to watch. Can be number or name of key.

"F5"

Modifiers

The keyboard modifiers to look for. Can be number of text. Text can include command, shift, alpha, option and control. Added in 6.2 for Windows: RightShift, RightOption and RightControl.

"control"

Exclusive

Optional

Pass 1 to register exclusive or 0 for non exclusive.

0

FileName

Optional

The database file name where the script is located.

"test.fmp12"

ScriptName

Optional

The script name.

"MyScript"

Local

Optional

Pass 1 to have hotkey only run script if FileMaker is frontmost. Else pass 0 (default) to have a global hotkey.

0

Name

Optional

The name for the hotkey. e.g. you can use this property to later decide in a script what to do.

"Test Hotkey"

Tag

Optional

The tag for the hotkey. e.g. you can use this property to later decide in a script what to do.

Result Returns reference or error.

Description

Only one such combination can exist for the current application, i.e. multiple entities in the same application

cannot register for the same hot key combination. The same hot key can, however, be registered by multiple applications. This means that multiple applications can potentially be notified when a particular hot key is requested.

You can request exclusive registration for your process by passing 1 for exclusive parameter. Please use `HotKey.SetScript` to assign a script for the hotkey or use parameters here.

Added Windows support with version 5.2.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Register Control-F5:

```
Set Field [ HotKeys::HotKey ID; MBS("Hotkey.Register"; "F5"; "control") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; HotKeys::HotKey ID; Get(FileName); "HotkeyAction") ]
```

Register key 37 (L on US keyboard) with modifiers:

```
Set Field [ HotKeys::HotKey ID; MBS("Hotkey.Register"; 37; "shift-control-command-option") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; HotKeys::HotKey ID; Get(FileName); "HotkeyAction") ]
```

Register Control-F5 for showing/hiding data viewer:

```
Set Variable [ $hotkey; Value:MBS("HotKey.Register"; "F5"; "control") ]
Set Variable [ $r; Value:MBS( "HotKey.SetEvaluate"; $hotkey; "MBS(\ "MenuBar.RunMenuCommand\ ";
49297)" ) ]
// Mac & Windows
```

Register Control-F5 to write text file on desktop with content of data viewer:

```
MBS( "HotKey.SetEvaluate";
MBS("HotKey.Register"; "F5"; "control");
"MBS( \ "Text.WriteTextFile\ ";
MBS( \ "FM.DataViewerContent\ " );
MBS( \ "Path.AddPathComponent\ ";
MBS( \ "Folders.UserDesktop\ " );
\ "Data Viewer \ " & substitute(substitute(Get(CurrentTimestamp); \":\"; \"-"); \"/\"; \"-") & \".txt\"
);
\ "UTF-8\ "
)"
)
// Mac only.
```

Register Control-F6 to write current script a text file to desktop:

```

MBS( "HotKey.SetEvaluate";
MBS("HotKey.Register"; "F6"; "control");
"MBS( \"Text.WriteTextFile\";
MBS( \"ScriptWorkspace.ScriptText\" );
MBS( \"Path.AddPathComponent\";
MBS( \"Folders.UserDesktop\" );
\"Script \" & substitute(substitute(MBS( \"ScriptWorkspace.CurrentTab\" ); \":\"; \";\"-\" ); \"/\"; \";\"-\" )
& \".txt\" );
\"UTF-8\"
)\"
)
// Mac only

```

Register hotkey Control-F7 for Windows to insert XML snippet:

```

MBS( "HotKey.SetEvaluate"; MBS("HotKey.Register"; "F7"; "control");
"Let ( [
xml = \"<fmxmlsnippet type=\\\\"FMObjectList\\\\"><Step enable=\\\\"True\\\\" id=\\\\"89\\\\" name=\\\\"#
(comment)\\\\"><Text>loop counting up from 1 to $count</Text></Step><Step enable=\\\\"True\\\\"

Created 4th February 2015, last changed 20th November 2019.

88.14 HotKey.SetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.4	Yes	Yes	No	No	No

MBS("HotKey.SetEnabled"; HotKeyRef; Value)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.
\$hotkey

Value

The new state. 1 to enable, 0 to disable.

1

Result Returns OK or error.

Description

The plugin does not trigger script if hotkey is temporary disabled.

Examples

Set state:

MBS("HotKey.SetEnabled"; "35001"; 0)

See also

88.15 HotKey.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	6.1	Yes	Yes	No	No	No

MBS("HotKey.SetEvaluate"; HotKeyRef; Expression)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the hotkey reference, so you can pass it to other functions if needed.

Examples

Sets expression to run when hotkey is pressed:

```
Variable setzen [ $result ; Wert: MBS( "HotKey.SetEvaluate"; $curl; "Let ( $$Cancelled = 1 ; 1 )" ) ]
```

Set to write to a log file when a key is pressed:

```
MBS( "HotKey.SetEvaluate"; $hotkey; "MBS(\ "Text.AppendTextFile\"; Get(CurrentHostTimeStamp) & \": Key F5 pressed$\"; \"/Users/cs/Desktop/hotkey.txt\"; \ "native\ ")")
```

Register Control-F5 for showing/hiding data viewer:

```
Set Variable [ $hotkey; Value:MBS("HotKey.Register"; "F5"; "control") ]
Set Variable [ $r; Value:MBS( "HotKey.SetEvaluate"; $hotkey; "MBS(\ "MenuBar.RunMenuCommand\"; 49297)" ) ]
```

Register Control-F5 to write text file on desktop with content of data viewer:

```
MBS( "HotKey.SetEvaluate";
MBS("HotKey.Register"; "F5"; "control");
"MBS( \ "Text.WriteTextFile\";
MBS( \ "FM.DataViewerContent\ " );
MBS( \ "Path.AddPathComponent\";
MBS( \ "Folders.UserDesktop\ " );
\ "Data Viewer \ " & substitute(substitute(Get(CurrentTimestamp); \":\"; \ "-\"); \"/\"; \ "-\") & \ ".txt\ "
```

- Evaluate vs. Script Trigger

Created 4th March 2016, last changed 15th November 2019.

88.16 HotKey.SetIgnoreOnModal

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.4	Yes	Yes	No	No	No

MBS("HotKey.SetIgnoreOnModal"; HotKeyRef; Value)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

Value

The new state. 1 to enable, 0 to disable.

1

Result Returns OK or error.

Description

If set to 1, Hotkey scripts are not triggered in case a modal window is frontmost.

Examples

Set state:

MBS("HotKey.SetIgnoreOnModal"; "35001"; 1)

88.17 HotKey.SetKeyUp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	7.1	Yes	Yes	No	No	No

MBS("HotKey.SetKeyUp"; HotKeyRef; Value)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

Value

Pass 1 to receive key down and up events. Pass 0 to only get one event for key down.

1

Result Returns OK or error.

Description

The script parameter will have two values. First is the hotkey ID and second KeyDown or KeyUp as text.

See also

88.18 HotKey.SetLocal

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.4	Yes	Yes	No	No	No

MBS("HotKey.SetLocal"; HotKeyRef; Local)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

Local

Set to 1 to only run hotkey if FileMaker is frontmost application.

0

Result Returns OK or error.

Description

Examples

Create hotkey and set local only:

```
Set Variable [ $HotKeyID; Value:MBS("Hotkey.Register"; "F5"; "shift control") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; $HotKeyID; Get(FileName); "HotkeyAction") ]
Set Variable [ $r; Value:MBS("HotKey.SetLocal"; $HotKeyID; 1) ]
```

88.19 HotKey.SetName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.4	Yes	Yes	No	No	No

MBS("HotKey.SetName"; HotKeyRef)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

Result Returns OK or error.

Description

This is just your own name which you can query. The plugin does not use this information.

Examples

Register new hotkey with name:

```
Set Variable [ $HotKeyID; Value:MBS("Hotkey.Register"; "F5"; "shift control") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; $HotKeyID; Get(FileName); "HotkeyAction") ]
Set Variable [ $r; Value:MBS("HotKey.SetName"; $HotKeyID; "Search People") ]
```

88.20 HotKey.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 HotKey	5.0	Yes	Yes	No	No	No

MBS("HotKey.SetScript"; HotKeyRef; Filename; ScriptName)

Parameters

HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Register Control-F5:

```
Set Field [ HotKeys::HotKey ID; MBS("Hotkey.Register"; "F5"; "control") ]
```

```
Set Variable [ $r; Value:MBS("HotKey.SetScript"; HotKeys::HotKey ID; Get(FileName); "HotkeyAction") ]

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 IKPictureTaker	3.5	Yes	No	No	No	No

MBS("IKPictureTaker.GetShowEmptyPicture" { ; ImageType; Filename })

Parameters

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns image or error.

89.23 IKPictureTaker.SetMirroring

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 IKPictureTaker	3.5	Yes	No	No	No	No

MBS("IKPictureTaker.SetMirroring"; Value)

Parameters

Value

The new setting.

1

Result Returns OK or error.

Description

See also

- 89.7 IKPictureTaker.GetMirroring

4865

Created 18th August 2014, last changed 18th August 2014.

89.24 IKPictureTaker.SetNotification

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 IKPictureTaker	3.5	Yes	No	No	No	No

MBS("IKPictureTaker.SetNotification"; FileName; ScriptName)

Parameters

FileName

The name of the FileMaker File that contains the script.

"test.fp7"

ScriptName

The name of the script to run.

"MyScript"

Result Returns OK on success.

Description

This script is called whenever the buttons in the panel are called.

Parameter to this script is "0" for cancel and "1" for OK.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Installs notification script:

```
MBS( "IKPictureTaker.SetNotification"; Get(Filename); "GotImage" )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 IKPictureTaker	3.5	Yes	No	No	No	No

MBS("IKPictureTaker.SetOutputImageMaxSize"; Width; Height)

Parameters

Width

The maximum image width.

500

Height

The maximum image height.

500

Result Returns OK or error.

Description

See also

Chapter 90

IKSlideShow

Run slideshow on Mac OS X.

90.1 IKSlideShow.Add

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	1.6	Yes	No	No	No	No

MBS("IKSlideShow.Add"; container)

Parameters

container

The container with the image or the file.

Result Returns the number of slides added or an error message.

Description

The container can contain an image (GIF, PNG, BMP, JPEG) or an image file (TIFF, BMP, PNG, JPEG) and other formats supported by Mac OS X) or a PDF file.

For PDF files each page is made one slide.

This is the general function. It may often be better to use the functions IKSlideShow.AddImage, IKSlideShow.AddPath, IKSlideShow.AddPDF or IKSlideShow.AddURL.

Sets mode to images.

See also

- 90.2 IKSlideShow.AddImage 4893
- 90.4 IKSlideShow.AddPath 4895
- 90.3 IKSlideShow.AddPDF 4894

90.2 IKSlideShow.AddImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	3.1	Yes	No	No	No	No

MBS("IKSlideShow.AddImage"; Image)

Parameters

Image

The image as container.

\$img

Result Returns the number of slides added or an error message.

Description

The container can contain an image (GIF, PNG, BMP, JPEG) or an image file (TIFF, BMP, PNG, JPEG and other formats supported by Mac OS X).

Sets mode to images.

90.3 IKSlideShow.AddPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	3.1	Yes	No	No	No	No

MBS("IKSlideShow.AddPDF"; PDF)

Parameters

PDF

The PDF.

\$pdf

Result Returns the number of slides added or an error message.

Description

Each page is made one slide.

You can pass a container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Sets mode to PDF.

See also

- 90.1 IKSlideShow.Add 4891

90.4 IKSlideShow.AddPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	3.1	Yes	No	No	No	No

MBS("IKSlideShow.AddPath"; Path)

Parameters

Path

The native file path to the image file.

"/Users/test/Images/test.jpg"

Result Returns the number of slides added or an error message.

Description

The file can contain an image (GIF, PNG, BMP, JPEG) or an image file (TIFF, BMP, PNG, JPEG and other formats supported by Mac OS X)

Sets mode to images.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

90.5 IKSlideShow.AddURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	3.1	Yes	No	No	No	No

MBS("IKSlideShow.AddURL"; URL)

Parameters

URL

The file url to the image.

"https://www.mbsplugins.de/images/realworld-disney.jpg"

Result Returns the number of slides added or an error message.

Description

The URL can be http/https and some other formats Apple's frameworks know about.

Sets mode to images.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	1.6	Yes	No	No	No	No

MBS("IKSlideShow.Clear" { ; Index })

Parameters

Index

Optional

The index of the item to remove. From 0 to IKSlideShow.Count-1.

If parameter is not provided, we clear all items.

0

Result Returns OK or error.

90.15 IKSlideShow.GetStartPaused

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	1.6	Yes	No	No	No	No

MBS("IKSlideShow.GetStartPaused")

Result Returns the current value for the start pause setting.

Description

Default value is false.

See also

- 90.14 IKSlideShow.GetStartIndex 4905

90.17 IKSlideShow.ItemAtIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	6.4	Yes	No	No	No	No

MBS("IKSlideShow.ItemAtIndex"; Index { ; Filename; Type })

Parameters

Index

From 0 to IKSlideShow.Count-1.

0

Filename

Optional

For PDF or image files returned an optional file name.

"test.jpg"

Type

Optional

For images the type you like to get. Can be JPEG, TIFF, PNG, GIF, BMP or PDF.

"JPEG"

Result Returns value or error.

Description

Examples

Add an item and query it back:

```
Set Variable [ $r; Value:MBS( "IKSlideShow.AddURL"; "http://www.mbsplugins.de/images/xdc2016.jpg"
) ]
Show Custom Dialog [ "Count"; MBS( "IKSlideShow.Count" ) ]
Show Custom Dialog [ "First item"; MBS( "IKSlideShow.ItemAtIndex"; 0 ) ]
```

90.19 IKSlideShow.SetAudioFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	6.4	Yes	No	No	No	No

MBS("IKSlideShow.SetAudioFile"; Path)

Parameters

Path

The native file path to the audio file.

"/Users/cs/Desktop/test.m4a"

Result Returns OK or error.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	3.1	Yes	No	No	No	No

MBS("IKSlideShow.SetMode"; Mode)

Parameters

Mode

Can be images, PDF or mixed.

Result Returns OK on success.

Description

A slideshow is in one of three modes. Our Add methods set the mode automatically, so you may need to use this method to set the mode you want after adding items.

Examples

Set mode to PDF:

```
MBS( "IKSlideShow.SetMode"; "pdf" )
```

Set mode to Mixed:

```
MBS( "IKSlideShow.SetMode"; "Mixed" )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 IKSlideShow	1.6	Yes	No	No	No	No

MBS("IKSlideShow.SetPDFDisplayBox"; display box)

Parameters

display box

The new display box value.

Result The current display box value or an error message.

Description

possible values:

kPDFDisplayBoxMediaBox = 0

kPDFDisplayBoxCropBox = 1

kPDFDisplayBoxBleedBox = 2

kPDFDisplayBoxTrimBox = 3

kPDFDisplayBoxArtBox = 4

91.19 IKDeviceBrowserPanel.SetDisplaysLocalScanners

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKDeviceBrowserPanel.SetDisplaysLocalScanners"; Value)

Parameters

Value

The new setting.

1

Result Returns OK or error.

Description

Examples

Enable local scanners:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetDisplaysLocalScanners"; 1 ) ]
```

91.23 IKDeviceBrowserPanel.SetMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKDeviceBrowserPanel.SetMode"; Mode)

Parameters

Mode

The new mode. Can be Icon, Outline or Table.

"Icon"

Result Returns OK or error.

Description

Examples

Set mode to table:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetMode"; "table" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKDeviceBrowserPanel.SetPrompt"; text)

Parameters

text

The new text.

"Please select an item:"

Result Returns OK or error.

Description

This text is shown on the top of the dialog over the listbox.

Examples

Set prompt:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetPrompt"; "Please choose scanner:" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKDeviceBrowserPanel.SetSelectButtonLabel"; text)

Parameters

text

The new text.

"Select"

Result Returns OK or error.

Description

Examples

Localize select button:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetSelectButtonLabel"; "Auswählen" ) ]
```

91.26 IKDeviceBrowserPanel.SetTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKDeviceBrowserPanel.SetTrigger"; FileName; ScriptName)

Parameters

FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

ScriptName

The name of the script to run.

"MyScript"

Result Returns OK or error.

Description

Script parameter will be Cancel, Select or Close depending what the user clicked.

Examples

Store selected scanner in triggered script:

```
Set Variable [ $Param; Value:Get(ScriptParameter) ]
If [ $Param = "Select" ]
Set Variable [ $name; Value:MBS("IKDeviceBrowserPanel.SelectedDeviceName") ]
Set Field [ ImageCapture Dialogs::ScannerName; $name ]
End If
```

Set trigger script:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetTrigger"; Get(FileName); "Scanner Selection Trigger" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKDeviceBrowserPanel.Show")

Result Returns OK or Cancel.

Description

This is not a dialog, so please have the script end with this command as the window will stay open while other script steps run.

Before calling this function, make sure you called ImageCapture.Initialize once.

Examples

Show the device browser window:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.Reset" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetCancelButtonLabel"; "Cancel" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetSelectButtonLabel"; "Select" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetWindowTitle"; "Scanner Choice" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetDisplaysLocalScanners"; 1 ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetDisplaysLocalCameras"; 1 ) ]

91.45 IKScannerDevicePanel.ImageCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKScannerDevicePanel.ImageCount")

Result Returns number or error.

Description

Either you use the trigger and process each image there or you can call later `IKScannerDevicePanel.ImageCount` and `IKScannerDevicePanel.NextImage` to get the images.

See also

Created 7th November 2016, last changed 7th November 2016.

91.46 IKScannerDevicePanel.NextImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKScannerDevicePanel.NextImage")

Result Returns path or error.

Description

Either you use the trigger and process each image there or you can call later `IKScannerDevicePanel.ImageCount` and `IKScannerDevicePanel.NextImage` to get the images.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

91.48 IKScannerDevicePanel.SetCloseTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	8.1	Yes	No	No	No	No

MBS("IKScannerDevicePanel.SetCloseTrigger"; FileName; ScriptName { ; Parameter })

Parameters

FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

ScriptName

The name of the script to run.

"MyScript"

Parameter

Optional

The optional script parameter.

Result Returns OK or error.

Description

This script will be called whenever the panel closes.

Either by code or by user clicking close button.

If the normal trigger run and you delayed work on the files, you can process them now.

Examples

Set close trigger script:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetCloseTrigger"; Get(FileName); "Scanner Dialog Close Trigger" ) ]
```

Clear close trigger script:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetCloseTrigger"; "" ; "" ) ]
```

91.49 IKScannerDevicePanel.SetCombine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKScannerDevicePanel.SetCombine"; Flag)

Parameters**Flag**

The new setting. 1 to combine. 0 to not combine.

1

Result Returns OK or error.

Description

This is a checkbox in the advanced options and defines whether for PDF output all pages are merged into one file.

Created 11st December 2016, last changed 19th December 2016.

91.50 IKScannerDevicePanel.SetDocumentName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKScannerDevicePanel.SetDocumentName"; Name)

Parameters

Name

The file name to use. File extensions and numbers may be added.
"Scan"

Result Returns OK or error.

Description

Please set before the panel opens.

In 8.2 or newer, you can set it while panel is open, too.

Examples

Set the file name:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetDocumentName"; "Scan" ) ]
```

91.51 IKScannerDevicePanel.SetDownloadsDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKScannerDevicePanel.SetDownloadsDirectory"; Path)

Parameters

Path

The native path to the folder to store images.

Result Returns OK or error.

Description

Please make sure you can write to this folder.
We recommend a temporary folder.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Scan to desktop folder:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetDownloadsDirectory"; MBS("Folders.UserDesktop") ) ]
```

91.58 IKScannerDevicePanel.SetTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKScannerDevicePanel.SetTrigger"; FileName; ScriptName)

Parameters

FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

ScriptName

The name of the script to run.

"MyScript"

Result Returns OK or error.

Description

You get a call for each picture as user may import several.

The parameter to your script is the native file path to the image file.

If scan is to PDF and we use document feeder, be aware that you may get a trigger with same file path again if a new page is added.

Either you use the trigger and process each image there or you can call later IKScannerDevicePanel.ImageCount and IKScannerDevicePanel.NextImage to get the images.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Set trigger script:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetTrigger"; Get(FileName); "Scanner Dialog Trigger" ) ]
```

Import image in triggered script:

```
Set Variable [ $Path; Value:Get(ScriptParameter) ]
Set Variable [ $Image; Value:MBS("Container.ReadFile"; $path) ]
If [ MBS("ISError") = 0 ]
New Record/Request
Set Field [ ImageCapture Dialogs::Image; $Image ]
Commit Records/Requests [ No dialog ]
End If
```

Clear trigger script:

91.58. *IKSCANNERDEVICEPANEL.SETTRIGGER* 4983
Set Variable [\$r; Value:MBS("IKScannerDevicePanel.SetTrigger"; ""; "")]

91.61 IKScannerDevicePanel.Show

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.5	Yes	No	No	No	No

MBS("IKScannerDevicePanel.Show")

Result Returns OK or error.

Description

This is not a dialog, so please have the script end with this command as the window will stay open while other script steps run.

Before calling this function, make sure you called ImageCapture.Initialize once, best in your start script.

Examples

Show scan window:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.Reset" ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetWindowTitle"; "Scanner" ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetDocumentName"; "Scan" ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetDownloadsDirectory"; MBS("Folders.UserDesktop") ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetScannerDeviceName"; ImageCapture Dialogs::ScannerName ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetTrigger"; Get(FileName); "Scanner Dialog Trigger" ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.Show" ) ]
```

91.63 ImageCapture.CameraInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	8.3	Yes	No	No	No	No

MBS("ImageCapture.CameraInfo"; Selector)

Parameters

Selector

Which value to query.
"name"

Result Returns OK or error.

Description

Selector	Description
tetheredCaptureEnabled	This property is set to 1 when tethered capture is enabled on the device. Use ImageCapture.RequestEnableTethering and ImageCapture.RequestDisableTethering to enable or disable tethered capture on the device.
batteryLevelAvailable	Indicates if the device has reported battery charge level.
batteryLevel	Indicates the battery charge level. Its value ranges from 0 to 100.
contentCatalogPercentCompleted	Indicates the percentage of content cataloging completed on the device. Its value ranges from 0 to 100.
timeOffset	Indicates the time offset, in seconds, between the camera's clock and the computer's clock. This value is positive if the camera's clock is ahead of the computer's clock. This property should be ignored if the camera's capabilities property does not contain ICCameraDeviceCanSyncClock.
isAccessRestrictedAppleDevice	Set to 1 if the device is made by Apple and is pass-coded locked and connected to an untrusted host.
mountPoint	Filesystem mount point for a device with transportType of ICTransportType-MassStorage. This will be "" for all other devices.

91.64 ImageCapture.CloseDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.CloseDevice" { ; Wait })

Parameters

Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

Result Returns OK or error.

Description

Added 20 seconds timeout for version 8.5.

Examples

Closes device:

Set Variable [\$r; Value:MBS("ImageCapture.CloseDevice")]

91.65 ImageCapture.Contents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	8.3	Yes	No	No	No	No

MBS("ImageCapture.Contents")

Result Returns JSON or error.

Description

The structure of the elements in this JSON array will reflect the folder structure of the storage reported by the camera. Each item in this array will correspond to a storage on the camera.

The plugin provides all details as a big JSON block for your analyzes.

91.67 ImageCapture.Devices

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.Devices" { ; Filter })

Parameters

Filter

Optional

Available in MBS FileMaker Plugin 8.3 or newer.

You can filter devices by passing criteria here. The filter string can contain camera, scanner, local, remote, Bonjour, bluetooth or shared to only show those devices.

"Camera, local"

Result Returns UUIDs or error.

Description

Returns a list of UUIDs for devices.

Please pass the UUIDs to the ImageCapture.DeviceInfo function to query details.

Before calling this function, make sure you called ImageCapture.Initialize once, best in your start script.

Version 10.0 or later filters duplicates away.

Examples

List devices:

```
Set Variable [ $Devices; Value:MBS("ImageCapture.Devices") ]
# loop over entries
Set Variable [ $Count; Value:ValueCount($Devices) ]
If [ $Count >0 ]
Set Variable [ $Index; Value:1 ]
Loop
# Check Device
Set Variable [ $ID; Value:GetValue($Devices; $index) ]
New Record/Request
Set Field [ Devices::Name; MBS("ImageCapture.DeviceInfo"; $ID; "name") ]
Set Field [ Devices::ID; $ID ]
Set Field [ Devices::Remote; Let ( [ r = MBS("ImageCapture.DeviceInfo"; $ID; "remote") ] ; If(r = 1; "yes"; "no") ) ]
Set Field [ Devices::Shared; Let ( [ r = MBS("ImageCapture.DeviceInfo"; $ID; "shared") ] ; If(r = 1; "yes"; "no") ) ]
Set Field [ Devices::transportType; MBS("ImageCapture.DeviceInfo"; $ID; "transportType") ]
Set Field [ Devices::serialNumberString; MBS("ImageCapture.DeviceInfo"; $ID; "serialNumberString") ]
Set Field [ Devices::locationDescription; MBS("ImageCapture.DeviceInfo"; $ID; "locationDescription") ]
Set Field [ Devices::persistentIDString; MBS("ImageCapture.DeviceInfo"; $ID; "persistentIDString") ]
```

```
Set Field [ Devices::icon; MBS("ImageCapture.DeviceInfo"; $ID; "icon") ]
Set Field [ Devices::capabilities; MBS("ImageCapture.DeviceInfo"; $ID; "capabilities") ]
Commit Records/Requests [ No dialog ]
# next
Set Variable [ $Index; Value:$index + 1 ]
Exit Loop If [ $index >$Count ]
End Loop
End If
```

91.68 ImageCapture.DevicesJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	8.3	Yes	No	No	No	No

MBS("ImageCapture.DevicesJSON" { ; Filter })

Parameters

Filter

Optional

You can filter devices by passing criteria here. The filter string can contain camera, scanner, local, remote, bonjour, bluetooth or shared to only show those devices.

"Camera, local"

Result Returns JSON or error.

Description

The JSON includes names & IDs of the devices.

Please pass the index or UUIDs to the ImageCapture.DeviceInfo function to query details.

Keys include UUIDString, Name, persistentIDString, serialNumberString, locationDescription, index, remote and shared.

Examples

Check devices:

MBS("ImageCapture.DevicesJSON")

91.69 ImageCapture.Download

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	8.3	Yes	No	No	No	No

MBS("ImageCapture.Download"; FileName { ; Folder; DeleteAfterDownload })

Parameters

FileName

The file name of the media file to download.

"IMG1234.JPG"

Folder

Optional

Path of destination folder. If empty, we use temporary folder.

"/Users/cs/Download"

DeleteAfterDownload

Optional

Pass 1 to delete file on device after successful download.

0

Result Returns file path or error.

Description

On success returns native file path of downloaded file.

You can import file e.g. with Files.ReadFile.

You can use ImageCapture.MediaFileNames to learn list of file names.

91.71 ImageCapture.GetFeatureValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.GetFeatureValue"; FeatureName; Selector)

Parameters

FeatureName

The name of the feature.

\$name

Selector

What value to query.

"value"

Result Returns value or error.

Description

Selector	Description	Value
type	The type of feature. Can be Enumeration, Range, Boolean or Template.	„Boolean“
internalName	The internal name of this feature.	
humanReadableName	The human readable name of this feature.	
tooltip	Tooltip text describing the feature.	
value	The value of this feature. (boolean values)	
currentValue	The current value. Attempting to set the current value to a value that is not coincident with a step will result in a value corresponding to the nearest step being assigned to the current value.	
defaultValue	The default value. Attempting to set the default value to a value that is not coincident with a step will result in a value corresponding to the nearest step being assigned to the default value.	
minValue	The minimum value.	0
maxValue	The maximum value.	100
stepSize	The step size.	5
menuItemLabels	The human readable menu item labels to be used in a menu to allow the user to select the current value from an array of possible values. (enumeration)	
menuItemLabelsFootprints	Tooltip text associated with the menu items. (enumeration)	
values	An array of possible values. All items in this array must be of same type. (enumeration)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.GetParameter"; Selector)

Parameters

Selector

Which value to query.

”name”

Result Returns OK or error.

Description

<p>acceptThreshold@BlackAndWhiteScanning availableFunctionalUnitType bitDepth currentDocumentName defaultThreshold@BlackAndWhiteScanning documentHeight documentLoaded documentName documentSize documentType documentUnit documentWidth downloadDirectory duplexScanningEnabled evenPageOrientation maxMemory@Scan measurementUnit nativeResolution nativeYResolution oddPageOrientation overviewImage overviewResolution overviewScannedProgress physicalHeight physicalSize physicalWidth preferredUnitType preferredResolution preferredScaleFactor reverseOrderPageOrder scanArea scanAreaOrientation scanProgress@PercentDone start supportedBitDepth supportedDocumentTypes supportedMeasurementUnits supportedResolutions supportedScaleFactors supportedScanning threshold@BlackAndWhiteScanning transferMode useThreshold@BlackAndWhiteScanning</p>	<p>Description Indicates if this functional unit accepts threshold value to be used when performing a scan in black & white. The bit depth to use when performing the final scan. This can include Flatbed, DocumentFeeder, NegativeTransparency or PositiveTransparency. The bit depth to use when performing the final scan. This will always be one of the supported bit depths. Indicates if this functional unit can perform an overview scan. Not all functional units can perform an overview scan. For example, a document feeder or a sheet feeder unit cannot perform an overview scan. Default threshold value used when performing a scan in black & white. This value is from 0 to 255. The document height. Indicates whether the feeder has documents to scan. This value will change when the document is loaded or removed from the feeder, if the scanner module has the capability to detect this state. The document name. Document size of the current document type expressed in current measurement unit. Current document type. The document unit. The document width. The download directory. Indicates whether duplex scanning is enabled. Desired orientation of the even pages of the scanned document. The total maximum load size requested when performing a memory-based transfer. Current measurement unit. Can be Inches, Centimeters, Picas, Points, Twips or Pixels. Optical resolution along the X axis. Optical resolution along the Y axis. Desired orientation of the odd pages of the scanned document. Overview scan image. This property will be empty for functional units that do not support overview scans. Overview image resolution. Value returned to this will be contained by resolution allowed by the device. Indicates if an overview scan is in progress. Physical height of the scan area in current measurement unit. Physical size of the scan area in current measurement unit. Physical width of the scan area in current measurement unit. The pixel data type. Can be BW, Gray, RGB, Palette, CMYK, CMYK_VIV, YUVK or CMYKZ. Preferred scan resolution in DPI. Preferred scale factor in percentage. Indicates whether the document feeder feeds pages from back to front. Current scan resolution. This will always be one of the supported resolution values. Current scale factor. This will always be one of the supported scale factor values. The area to scan. This property along with scanAreaOrientation describes the area to be scanned. Desired orientation of the scan area. This property along with scanArea describes the area to be scanned. 1 for Normal, 2 Flipped horizontally, 3 Rotated 180°, 4 Flipped vertically, 5 Rotated 90° CCW and flipped vertically, 6 Rotated 90° CCW, 7 Rotated 90° CW and flipped vertically, 8 Rotated 90° CW. Indicates percentage of scan completed. Indicates the current state of the functional unit. 1 for Ready, Add 2 for Scan In Progress, Add 4 for Overview Scan in Progress Supported bit depths. Can include 1, 8 or 16. Supported document types. Supported measurement units. Can be Inches, Centimeters, Picas, Points, Twips or Pixels. Supported scan resolution in DPI. Supported scale factors in percentage. Indicates whether duplex scanning is supported. Threshold value to be used when performing a scan in black & white. This value should be from 0 to 255. The transfer mode for scanned document. Can be File or Memory, but Plugins only supports File. Indicates if this functional unit uses threshold value to be used when performing a scan in black & white.</p>	<p>Example "Flatbed@DocumentFeeder" 8 127 1 "Scan" "A1" "JPEG" "/Users/ry/Desktop" 1 "Inches" 1 "1024" 100 100 300 100 1 0.5 2 "18" "Inches" "RGB@Image" "100" 1 127 "File" 1</p>
---	--	---

Examples

Query available functional unit types:

MBS("ImageCapture.GetParameter"; "availableFunctionalUnitTypes")

Example result: Flatbed

DocumentFeeder

Query supported resolutions:

Set Variable [\$supportedResolutions; Value:MBS("ImageCapture.GetParameter"; "supportedResolutions")]

Example result: 100

150

200

300

400

600

Query supported document types:

MBS("ImageCapture.GetParameter"; "supportedDocumentTypes")

Example result: A4

B5

USLetter

USLegal

A5

USExecutive

Query supported bit depths:

MBS("ImageCapture.GetParameter"; "supportedBitDepths")

Example result: 1

8

Set scan area to physical size:

Set Variable [\$physicalWidth; Value:MBS("ImageCapture.GetParameter"; "physicalWidth")]

Set Variable [\$physicalHeight; Value:MBS("ImageCapture.GetParameter"; "physicalHeight")]

Set Variable [\$r; Value:MBS("ImageCapture.SetParameter"; "scanArea"; 0; 0; \$physicalWidth; \$physical-Height)]

Query folder path for image files:

MBS("ImageCapture.GetParameter"; "downloadsDirectory")

Example result: "/Users/cs/Pictures"

91.75 ImageCapture.ImagePaths

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.ImagePaths")

Result Returns list or error.

Description

After you scanned, you can use this function to query list of image file paths.

File paths are returned as native file paths.

Please use Container.ReadFile to read file and Files.Delete to delete them if needed.

Examples

Query images and import them:

```

Set Variable [ $Paths; Value:MBS("ImageCapture.ImagePaths") ]
Set Variable [ $Count; Value:ValueCount ( $Paths ) ]
Set Variable [ $Index; Value:1 ]
Loop
Set Variable [ $Path; Value:GetValue($Paths; $index) ]
New Record/Request
Set Field [ Images::Image; MBS("Container.ReadFile"; $path) ]
Set Variable [ $r; Value:MBS( "Files.Delete"; $Path ) ]
Commit Records/Requests [ No dialog ]
Set Variable [ $Index; Value:$index + 1 ]
Exit Loop If [ $index >$count ]
End Loop

```

91.76 ImageCapture.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.Initialize")

Result Returns OK or error.

Description

The plugin will now browse for devices and wait till at least till all local devices have been found. Network devices may be discovered a second later. So call this in your start script or first time user goes to scanning. Device count may change over time as devices are discovered or go away.

Examples

Initialize:

```
Set Variable [ $r; Value:MBS("ImageCapture.Initialize") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Initialize"; $r ]
Exit Script [ ]
End If
```

91.79 ImageCapture.OpenDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.OpenDevice"; Device { ; Wait })

Parameters

Device

The device ID. Can be zero based index in device list. Or UUID, Name or persitent ID string.

0

Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

Result Returns OK or error.

Description

A client MUST open a session on a device in order to use the device.

If needed closes current device to open new device.

Added 20 seconds timeout for version 8.1.

With ImageCapture.DeviceInfo you can query hasOpenSession later to verify you have a session open.

Examples

Open device:

```
Set Variable [ $r; Value:MBS("ImageCapture.OpenDevice"; Images::Device) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to open"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ ]
End If
```

91.80 ImageCapture.PDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	9.1	Yes	No	No	No	No

MBS("ImageCapture.PDF" { ; FileName })

Parameters

FileName

Optional

The filename to use.

"scan.pdf"

Result Returns PDF container value or error.

Description

We get the file path list and create a new PDF document, add all the images and than return the PDF. You can store it in a container field or export to a file (with Container.WriteFile).

Examples

Get a PDF into a field:

```
Set Variable [ $pdf; MBS("ImageCapture.PDF") ]
If [ MBS("IsError") = ]
Set Field [ MyTable::MyPDF; $pdf]
End If
```

91.85 ImageCapture.RequestOverviewScan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.RequestOverviewScan" { ; Wait })

Parameters

Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

Result Returns OK or error.

Description

If a progress dialog from our plugin is visible, the plugin will keep it updated with progress.

MBS Plugin 8.5 and newer observes progress and returns timeout error if scanner didn't do anything for 60 seconds.

91.86 ImageCapture.RequestScan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

```
MBS( "ImageCapture.RequestScan" { ; Wait } )
```

Parameters

Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

Result Returns OK or error.

Description

If a progress dialog from our plugin is visible, the plugin will keep it updated with progress.

Please use ImageCapture.SetParameter to configure scanner before requesting the scan, e.g. for duplex.

MBS Plugin 8.5 and newer observes progress and returns timeout error if scanner didn't do anything for 60 seconds.

Please call ImageCapture.OpenDevice to open device before requesting a scan.

Examples

Scan images:

```
# set parameters
Set Variable [ $physicalWidth; Value:MBS("ImageCapture.GetParameter"; "physicalWidth") ]
Set Variable [ $physicalHeight; Value:MBS("ImageCapture.GetParameter"; "physicalHeight") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "scanArea"; 0; 0; $physicalWidth; $physical-
Height) ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "documentType"; "USLetter") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "documentName"; "Scan") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "resolution"; 300) ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "pixelDataType"; "RGB") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "documentUTI"; "jpeg") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "downloadsDirectory"; "temp") ]
Set Variable [ $p; Value:MBS( "ProgressDialog.Reset") ]
Set Variable [ $p; Value:MBS( "ProgressDialog.SetTitle"; "Scanning" ) ]
Set Variable [ $p; Value:MBS( "ProgressDialog.SetBottomText"; "" ) ]
Set Variable [ $p; Value:MBS( "ProgressDialog.SetTopText"; "Scan from Flatbet scanner." ) ]
Set Variable [ $p; Value:MBS( "ProgressDialog.SetButtonCaption"; "Cancel" ) ]
Set Variable [ $p; Value:MBS( "ProgressDialog.SetProgress"; -1 ) ]
```

```

Set Variable [ $p; Value:MBS( "ProgressDialog.Show" ) ]
Set Variable [ $r; Value:MBS("ImageCapture.requestScan" ) ]
Set Variable [ $p; Value:MBS( "ProgressDialog.Hide" ) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed start scan"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ ]
End If
Set Variable [ $Paths; Value:MBS("ImageCapture.ImagePaths" ) ]
Set Variable [ $Count; Value:ValueCount ( $Paths ) ]
Set Variable [ $Index; Value:1 ]
Loop
Set Variable [ $Path; Value:GetValue($Paths; $index) ]
New Record/Request
Set Field [ Images::Image; MBS("Container.ReadFile"; $path) ]
Set Variable [ $r; Value:MBS( "Files.Delete"; $Path ) ]
Commit Records/Requests [ No dialog ]
Set Variable [ $Index; Value:$index + 1 ]
Exit Loop If [ $index >$count ]
End Loop

```

Run scan with duplex:

```

# set parameters
Set Variable [ $physicalWidth ; Value: MBS("ImageCapture.GetParameter"; "physicalWidth" ) ]
Set Variable [ $physicalHeight ; Value: MBS("ImageCapture.GetParameter"; "physicalHeight" ) ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "documentType"; "A4" ) ]

91.87 ImageCapture.RequestSelectFunctionalUnit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.RequestSelectFunctionalUnit"; Unit { ; Wait })

Parameters**Unit**

The functional unit to request. Can be Flatbed, PositiveTransparency, NegativeTransparency or Document-Feeder.

"Flatbed"

Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

Result Returns OK or error.

Description**Examples**

Request flatbed unit:

```
Set Variable [ $r; Value:MBS("ImageCapture.requestSelectFunctionalUnit"; "Flatbed") ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to get flatbed?"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ ]
End If
```

Request document feeder:

```
MBS("ImageCapture.requestSelectFunctionalUnit"; "DocumentFeeder")
```

Open device and request document feeder:

```
Set Variable [ $r ; Value: MBS("ImageCapture.OpenDevice"; Images::Device) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to open" ; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ Text Result: ]
End If
Pause/Resume Script [ Duration (seconds): ,1 ]
Set Variable [ $r ; Value: MBS("ImageCapture.GetParameter"; "availableFunctionalUnitTypes") ]
If [ Length ( $r ) >0 ]
# if we have more than one, pick one
Set Variable [ $r ; Value: MBS("ImageCapture.requestSelectFunctionalUnit"; "DocumentFeeder") ]
If [ MBS("iserror") ]
```

```
Show Custom Dialog [ "Failed to get flatbed?" ; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ Text Result: ]
End If
End If
```

91.88 ImageCapture.RequestSyncClock

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	8.3	Yes	No	No	No	No

MBS("ImageCapture.RequestSyncClock")

Result Returns OK or error.

Description

Synchronize camera's clock with the computer's clock. You should send this request only if the camera has the ICCameraDeviceCanSyncClock capability.

See also

- 91.86 ImageCapture.RequestScan

91.89 ImageCapture.RequestTakePicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	8.3	Yes	No	No	No	No

MBS("ImageCapture.RequestTakePicture")

Result Returns OK or error.

Description

Works only if the camera capabilities include ICCameraDeviceCanTakePicture.
You MUST call ImageCapture.RequestEnableTethering before requesting take picture.

You may need to add a script pause after this to let the camera do the work.

91.90 ImageCapture.SetFeatureValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.SetFeatureValue"; FeatureName; Selector; Value)

Parameters**FeatureName**

The name of the feature.

\$name

Selector

What value to set. Can be "value" for boolean values or "currentValue" for range or enumeration values.
"value"

Value

The new value.

Result Returns OK or error.

Description**See also**

- 91.72 ImageCapture.GetFeatures 5001

91.91 ImageCapture.SetParameter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	6.4	Yes	No	No	No	No

MBS("ImageCapture.SetParameter"; Selector; Value)

Parameters

Selector

The value to set.
"documentName"

Value

The value to set.

Result Returns OK or error.

Description

Selector	Description	Example
bitDepth	The bit depth to use when performing the final scan. This will always be one of the supported bit depths.	8
documentName	The document name.	."Scan"
documentType	Current document type.	."A4"
documentUTI	The document UTI. Can be set using JPEG, JPES2000, PDF, TIFF or PNG.	."JPEG"
downloadDirectory	The download directory. If you pass "temp", we use the user's temp folder.	."/Users/ev/Desktop"
maxMemoryUsageSize	The total maximum hard size requested when performing a memory based transfer.	."100000000"
measurementUnit	Current measurement unit. Can be inches, Centimeters, Pica, Points, Picas or EmAs.	."Inches"
overviewResolution	Overview image resolution. Value assigned to this will be constrained by resolution allowed by the device.	300
resolution	Current main resolution. This will always be one of the supported resolution values.	127
thresholdOffBlackAndWhiteScanning	Threshold value to be used when performing a scan in black & white. This value should be from 0 to 255.	."100"
transferMode	The transfer mode for scanned document. Can be File or Stream, but Plugins only supports File.	1
useThresholdOffBlackAndWhiteScanning	Indicator if this function will use threshold value to be used when performing a scan in black & white.	1
validationMethod	Current color method. This will always be one of the supported color format names.	."RGB"
validationType	The pixel data type. Can be BW, Gray, RGB, Palette, CMY, CMYK, YUV, YUVK or CMYKZ.	."RGB"
widthOfOrientation	Default orientation of the scan area. This property along with scanArea describes the area to be scanned. 1 for Normal, 2 Flipped horizontally, 3 Rotated 180°, 4 Flipped vertically, 5 Rotated 90° CCW and Flipped vertically, 6 Rotated 90° CW, 7 Rotated 90° CW and Flipped vertically, 8 Rotated 90° CW.	1
widthOfPageOrientation	Default orientation of the full page of the scanned document.	1
widthOfPageOrientation	Default orientation of the cover page of the scanned document.	1
scanArea	Four parameters with X, Y, Width and Height to define scan.	

For scan area, please pass x, y, width and height as separate parameters.

Default folder for files is temporary folder.

List of valid document types: Default, A4, B5, USLetter, USLegal, A5, ISOB4, ISOB6, USLedger, USExecutive, A3, ISOB3, A6, C4, C5, C6, 4A0, 2A0, A0, A1, A2, A7, A8, A9, 10, ISOB0, ISOB1, ISOB2, ISOB5, ISOB7, ISOB8, ISOB9, ISOB10, JISB0, JISB1, JISB2, JISB3, JISB4, JISB6, JISB7, JISB8, JISB9, JISB10, C0, C1, C2, C3, C7, C8, C9, C10, USStatement, BusinessCard, E, 3R, 4R, 5R, 6R, 8R, S8R, 10R, S10R, 11R, 12R, S12R, 110, APSH, APSC, APSP, 135, MF, LF.

Examples

Set scan area to physical size:

```
Set Variable [ $physicalWidth; Value:MBS("ImageCapture.GetParameter"; "physicalWidth") ]
Set Variable [ $physicalHeight; Value:MBS("ImageCapture.GetParameter"; "physicalHeight") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "scanArea"; 0; 0; $physicalWidth; $physical-Height) ]
```

Set to US Letter format:

```
MBS("ImageCapture.SetParameter"; "documentType"; "USLetter")
```

Set document name:

```
MBS("ImageCapture.SetParameter"; "documentName"; "Scan")
```

Set resolution to 300 dpi:

```
MBS("ImageCapture.SetParameter"; "resolution"; 300)
```

Set to scan 8 bit RGB picture:

```
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]  
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "pixelDataType"; "RGB") ]
```

Set JPEG image type:

```
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "documentUTI"; "jpeg") ]
```

Use temporary folder for temp files:

```
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "downloadsDirectory"; "temp") ]
```

Set scan area:

```
MBS( "ImageCapture.SetParameter"; "scanArea"; $x; $y; $w; $h )
```

Enable duplex:

```
MBS("ImageCapture.SetParameter"; "duplexScanningEnabled"; 1)
```

Set to A4 format:

```
MBS("ImageCapture.SetParameter"; "documentType"; "A4")
```

Switch to color or gray:

```
If [ $gray ]  
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]  
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "pixelDataType"; "Gray") ]  
Else  
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]  
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "pixelDataType"; "RGB") ]  
End If
```

Run scan with duplex:

```
# set parameters  
Set Variable [ $physicalWidth ; Value: MBS("ImageCapture.GetParameter"; "physicalWidth") ]  
Set Variable [ $physicalHeight ; Value: MBS("ImageCapture.GetParameter"; "physicalHeight") ]
```

```

Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "documentType"; "A4") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "documentName"; "Scan") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "resolution"; 300) ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "pixelDataType"; "RGB") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "documentUTI"; "jpeg") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "downloadsDirectory"; "temp") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "duplexScanningEnabled"; 1) ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "scanArea"; 0; 0; $physicalWidth; $physicalHeight) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.Reset") ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetTitle"; "Scanning" ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetBottomText"; "" ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetTopText"; "Scan from Flatbet scanner." ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetButtonCaption"; "Cancel" ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetProgress"; -1 ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.Show" ) ]
Set Variable [ $r ; Value: MBS("ImageCapture.requestScan") ]
Set Variable [ $p ; Value: MBS("ProgressDialog.Hide" ) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed start scan" ; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ Text Result: ]
End If
#
# read images
Pause/Resume Script [ Duration (seconds): ,1 ]
Set Variable [ $Paths ; Value: MBS("ImageCapture.ImagePaths") ]
If [ Length ( $Paths ) >0 ]
Set Variable [ $Count ; Value: ValueCount ( $Paths ) ]
If [ $Count >0 ]
Set Variable [ $Index ; Value: 1 ]
Loop

91.92 ImageCapture.Thumbnail

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 ImageCapture	8.3	Yes	No	No	No	No

MBS("ImageCapture.Thumbnail"; FileName { ; ImageType; Filename })

Parameters

FileName

The file name of the media file to download.

"IMG1234.JPG"

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns image or error.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker 56 ContinuityCamera	9.2	Yes	No	No	No	No

MBS("ContinuityCamera.Import"; Type)

Parameters

Type

Pass 0 for Photo (default) or 1 for document.

0

Result Returns OK or error.

Description

Examples

Import photo:

```
Set Variable [ $r ; Value: MBS("ContinuityCamera.Import";0) ]
```

Import document:

```
Set Variable [ $r ; Value: MBS("ContinuityCamera.Import"; 1) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker 56 ContinuityCamera	9.2	Yes	No	No	No	No

MBS("ContinuityCamera.PopupMenu"; mode { ; x; y; window; item; objectName })

Parameters

mode

The mode to use. Can be "mouse", "screen" or "window". Default is mouse for leaving away the parameter or passing empty text. Version 8.3 adds mode "content" to make it relative to the content part of the window, below toolbars.

"mouse"

x

Optional

The relative x coordinates for the position relative to the mouse, screen or window.

0

y

Optional

The relative y coordinates for the position relative to the mouse, screen or window.

0

window

Optional

The window reference for the showing menu relative to a window.

\$window

item

Optional

The menu item to be positioned at the specified location in the view.

\$item

objectName

Optional

The object name for mode=object.

"web"

Result Returns 1, 0 or error.

Description

Returns 1 if item was selected or 0 if not.

92.4 ContinuityCamera.Result

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker 56 ContinuityCamera	9.2	Yes	No	No	No	No

MBS("ContinuityCamera.Result" { ; FileName })

Parameters

FileName

Optional

File name to use.

"test.jpg"

Result Returns container value or error.

Description

The result may be PNG, PDF, JPEG or TIFF document.

Usually documents come as PDF and images as JPEG.

Examples

Write result to container field:

Set Field [ContinuityCamera::Image ; MBS("ContinuityCamera.Result")]

92.5 ContinuityCamera.SetScriptTrigger

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92	ImagePicker 56 ContinuityCamera	9.2	Yes	No	No	No	No

MBS("ContinuityCamera.SetScriptTrigger"; Filename; ScriptName)

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

When some picture or document is available, we call the script.

Parameter to the script is currently the document type, e.g. JPEG, TIFF or PDF.

Examples

Set trigger:

```
Set Variable [ $r ; Value: MBS("ContinuityCamera.SetScriptTrigger"; Get(FileName); "ContinuityCamera-Trigger") ]
```

92.6 UIImagePickerController.AvailableCaptureModesForCameraDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 UIImagePickerController	7.3	No	No	No	No	Yes

MBS("UIImagePickerController.AvailableCaptureModesForCameraDevice"; CameraDevice)

Parameters**CameraDevice**

The new setting. Can be front or rear.
"front"

Result Returns list or error.

Description

List contains Photo if photo is available and video if video is available.
Created 17th June 2017, last changed 18th June 2017.

92.7 UIImagePickerController.AvailableMediaTypesForSourceType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 UIImagePickerController	7.3	No	No	No	No	Yes

MBS("UIImagePickerController.AvailableMediaTypesForSourceType"; sourceType)

Parameters

sourceType

The source to use to pick an image. Can be PhotoLibrary, Camera or SavedPhotosAlbum. "Camera"

Result Returns list or error.

Description

Some iOS devices support video recording. Use this method, along with the UIImagePickerController.isSourceTypeAvailable function, to determine if video recording is available on a device. The availability of video recording is indicated by the presence of the kUTTypeMovie (public.movie) media type for the camera source type.

92.8 ImagePicker.ClearMedia

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.ClearMedia")

Result Returns OK or error.

Description

This is optional and can be called when you are done with current video or image, so plugin can release memory.

92.10 ImagePicker.Dismiss

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.Dismiss")

Result Returns OK or error.

Description

Something you can call in a script to cancel the message creation.

Examples

Close picker:

```
Set Variable [ $r ; Value: MBS( "ImagePicker.Dismiss" ) ]
```

92.11 ImagePicker.GetAllowsEditing

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.GetAllowsEditing")

Result Returns value or error.

Description

A Boolean value indicating whether the user is allowed to edit a selected still image or movie. This property is set to 0 by default.

See also

- 92.38 ImagePicker.SetAllowsEditing

5074

Created 17th June 2017, last changed 18th June 2017.

92.12 ImagePicker.GetCameraCaptureMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.GetCameraCaptureMode")

Result Returns value or error.

Description

The capture mode used by the camera.

See also

92.13 ImagePicker.GetCameraDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.GetCameraDevice")

Result Returns OK or error.

Description

The camera used by the image picker controller.

Default is Rear.

See also

- 92.14 ImagePicker.GetCameraFlashMode 5047

Created 17th June 2017, last changed 18th June 2017.

92.14 ImagePicker.GetCameraFlashMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.GetCameraFlashMode")

Result Returns value or error.

Description

The flash mode used by the active camera.

The value of this property specifies the behavior of the still-image flash when the value of the cameraCaptureMode property is photo, and specifies the behavior of the video torch when cameraCaptureMode is video.

See also

- 92.12 ImagePicker.GetCameraCaptureMode 5045

Created 17th June 2017, last changed 18th June 2017.

92.18 ImagePicker.GetShowsCameraControls

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.GetShowsCameraControls")

Result Returns value or error.

Description

Indicates whether the image picker displays the default camera controls.

The default value of this property is 1, which specifies that the default camera controls are visible in the picker. Set it to 0 to hide the default controls if you want to instead provide a custom overlay view using the cameraOverlayView property.

If you set this property to 0 and provide your own custom controls, you can take multiple pictures before dismissing the image picker interface. However, if you set this property to 1, your delegate must dismiss the image picker interface after the user takes one picture or cancels the operation.

You can access this property only when the source type of the image picker is set to Camera. Attempting to access this property for other source types results in an error. Depending on the value you assign to the mediaTypes property, the default controls display the still camera or movie camera interface, or a selection control that lets the user choose the picker interface.

- 92.45 ImagePicker.SetShowsCameraControls

5081

Created 17th June 2017, last changed 18th June 2017.

92.19 ImagePicker.GetSourceType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.GetSourceType")

Result Returns value or error.

Description

The type of picker interface to be displayed by the controller.

Prior to running the picker interface, set this value to the desired source type. The source type you set must be available and an error will be returned if it is not. If you change this property while the picker is visible, the picker interface changes to match the new value in this property.

The default value is PhotoLibrary.

92.20 ImagePicker.GetVideoMaximumDuration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.GetVideoMaximumDuration")

Result Returns value or error.

Description

The maximum duration, in seconds, for a video recording.

The default value for this property is 10 minutes (600 seconds). When a user taps the Share button to send a movie to MMS, MobileMe, YouTube, or another destination, an appropriate duration limit and an appropriate video quality are enforced.

This property is available only if the `mediaTypes` property's value array includes the `kUTTypeMovie` (public.movie) media type.

92.22 ImagePicker.IsCameraDeviceAvailable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.IsCameraDeviceAvailable"; CameraDevice)

Parameters

CameraDevice

The new setting. Can be front or rear.
"front"

Result Returns 1, 0 or error.

Description

Returns a Boolean value that indicates whether a given camera is available.

See also

- 92.25 ImagePicker.IsSourceTypeAvailable

5058

Created 17th June 2017, last changed 18th June 2017.

92.23 ImagePicker.IsFlashAvailableForCameraDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.IsFlashAvailableForCameraDevice"; CameraDevice)

Parameters

CameraDevice

Which camera to check. Can be front or rear.

"front"

Result Returns 1, 0 or error.

Description

Indicates whether a given camera has flash illumination capability.

Returns 1 if flash is available or 0 if not.

Created 17th June 2017, last changed 18th June 2017.

92.24 ImagePicker.IsPresented

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.IsPresented")

Result Returns 1, 0 or error.

Description

Returns 1 if visible and 0 if not.

See also

- 92.37 ImagePicker.Present

5073

Created 17th June 2017, last changed 18th June 2017.

92.25 UIImagePickerController.IsSourceTypeAvailable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 UIImagePickerController	7.3	No	No	No	No	Yes

MBS("UIImagePickerController.IsSourceTypeAvailable"; sourceType)

Parameters

sourceType

The source to use to pick an image. Can be PhotoLibrary, Camera or SavedPhotosAlbum. "Camera"

Result Returns OK or error.

Description

Returns a Boolean value indicating whether the device supports picking media using the specified source type.

1 if the device supports the specified source type; 0 if the specified source type is not available.

Because a media source may not be present or may be unavailable, devices may not always support all source types. For example, if you attempt to pick an image from the user's library and the library is empty, this method returns 0. Similarly, if the camera is already in use, this method returns 0.

Before attempting to use an UIImagePickerController object to pick an image, you must call this method to ensure that the desired source type is available.

Examples

Check for source type being available:

```
Set Variable [ $SourceType ; Value: Get( ScriptParameter ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.IsSourceTypeAvailable"; $sourceType ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't pick picture." ; "The source " & $sourceType & " is not available." ]
Exit Script [ Text Result: "failed" ]
End If
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.MediaEditedImage" { ; ImageType; FileName; WithEXIF })

Parameters

ImageType

Optional

The image type to return. Can be png or jpeg.

"jpeg"

FileName

Optional

The file name to include in container value.

"test.jpg"

WithEXIF

Optional

Pass 1 to include metadata in image. Default is 0 for no metadata.

0

Result Returns OK or error.

Description

If no image is available, we return empty result.

92.40 UIImagePickerController.SetCameraDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 UIImagePickerController	7.3	No	No	No	No	Yes

MBS("UIImagePickerController"; CameraDevice)

Parameters

CameraDevice

The new setting. Can be front or rear.
"front"

Result Returns OK or error.

Description

The camera used by the image picker controller.
Default is Rear.

92.41 ImagePicker.SetCameraFlashMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.SetCameraFlashMode"; Value)

Parameters

Value

The new setting. Can be On, Off and Auto.

"Auto"

Result Returns OK or error.

Description

The flash mode used by the active camera.

The value of this property specifies the behavior of the still-image flash when the value of the cameraCaptureMode property is photo, and specifies the behavior of the video torch when cameraCaptureMode is video.

92.42 ImagePicker.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.SetEvaluate"; Expression)

Parameters

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

Result Returns OK or error.

Description

Parameter may be "Cancel" if user canceled the dialog or "Image" if something was picked.

Created 17th June 2017, last changed 4th April 2018.

92.43 UIImagePickerController.SetOverlayImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 UIImagePickerController	8.3	No	No	No	No	Yes

MBS("UIImagePickerController"; Image)

Parameters

Image

The new overlay image. Proportional stretched to screen size. But you can use different images for different devices for best results.

Result Returns OK or error.

Description

This can be used to show additional framing rectangle or instructions to the user.

Examples

Show image picker with overlay:

```
Set Variable [ $r ; Value: MBS( "UIImagePickerController.New" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetCameraCaptureMode"; "Photo" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetShowsCameraControls"; 1 ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetSourceType"; "Camera" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetOverlayImage"; Placeholder::Container ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.Present" ) ]
```

92.44 ImagePicker.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.SetScript"; FileName; ScriptName)

Parameters

FileName

The file name for the script to trigger.

"test.fmp12"

ScriptName

The script name of the script to launch.

"EmailComposerFinished"

Result Returns OK or error.

Description

Parameter may be "Cancel" if user canceled the dialog or "Image" if something was picked.

Created 17th June 2017, last changed 18th June 2017.

92.45 ImagePicker.SetShowsCameraControls

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.SetShowsCameraControls"; Value)

Parameters

Value

The new setting. Pass 1 to show camera controls or 0 to hide.

1

Result Returns OK or error.

Description

Indicates whether the image picker displays the default camera controls.

The default value of this property is 1, which specifies that the default camera controls are visible in the picker. Set it to 0 to hide the default controls if you want to instead provide a custom overlay view using the `cameraOverlayView` property.

If you set this property to 0 and provide your own custom controls, you can take multiple pictures before dismissing the image picker interface. However, if you set this property to 1, your delegate must dismiss the image picker interface after the user takes one picture or cancels the operation.

You can access this property only when the source type of the image picker is set to Camera. Attempting to access this property for other source types results in an error. Depending on the value you assign to the `mediaTypes` property, the default controls display the still camera or movie camera interface, or a selection control that lets the user choose the picker interface.

92.46 UIImagePickerController

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 UIImagePickerController	7.3	No	No	No	No	Yes

MBS("UIImagePickerController"; sourceType)

Parameters

sourceType

The source to use to pick an image. Can be PhotoLibrary, Camera or SavedPhotosAlbum. "Camera"

Result Returns OK or error.

Description

The type of picker interface to be displayed by the controller.

Prior to running the picker interface, set this value to the desired source type. The source type you set must be available and an error will be returned if it is not. If you change this property while the picker is visible, the picker interface changes to match the new value in this property.

The default value is PhotoLibrary.

92.47 ImagePicker.SetVideoMaximumDuration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.SetVideoMaximumDuration"; Value)

Parameters**Value**

The new maximum length in seconds.

300

Result Returns OK or error.

Description

The maximum duration, in seconds, for a video recording.

The default value for this property is 10 minutes (600 seconds). When a user taps the Share button to send a movie to MMS, MobileMe, YouTube, or another destination, an appropriate duration limit and an appropriate video quality are enforced.

This property is available only if the `mediaTypes` property's value array includes the `kUTTypeMovie` (`public.movie`) media type.

See also

- 92.20 `ImagePicker.GetVideoMaximumDuration`

5053

Created 17th June 2017, last changed 18th June 2017.

92.48 ImagePicker.StartVideoCapture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.StartVideoCapture")

Result Returns OK or error.

Description

Select the camera via ImagePicker.SetCameraDevice function.

Returns OK on success or "Failed" on failure. This method may return a value of "Failed" for various reasons, among them the following:

- Movie capture is already in progress
- The device does not support movie capture
- The device is out of disk space

Use this function in conjunction to initiate the programmatic capture of a movie. You can take more than one movie without leaving the interface, but to do so requires you to hide the default image picker controls. Calling this method while a movie is being captured has no effect. You must call the ImagePicker.stopVideoCapture function, and then wait until the associated script trigger is run, before you can capture another movie.

Calling this method when the source type of the image picker is set to a value other than Camera results in an error.

See also

- 92.40 ImagePicker.SetCameraDevice 5076
- 92.49 ImagePicker.StopVideoCapture 5085

Created 17th June 2017, last changed 18th June 2017.

92.49 ImagePicker.StopVideoCapture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.StopVideoCapture")

Result Returns OK or error.

Description

After you call this method to stop video capture, the system calls the script trigger.

See also

- 92.48 ImagePicker.StartVideoCapture

5084

Created 17th June 2017, last changed 18th June 2017.

92.50 ImagePicker.TakePicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.TakePicture")

Result Returns OK or error.

Description

Use this method in conjunction to initiate the programmatic capture of a still image. This supports taking more than one picture without leaving the interface, but requires that you hide the default image picker controls.

Calling this method while an image is being captured has no effect. You must wait until the script trigger is run before you can capture another picture.

Calling this method when the source type of the image picker is set to a value other than Camera results in an error.

Created 17th June 2017, last changed 18th June 2017.

92.51 ImagePicker.VideoIsCompatibleWithSavedPhotosAlbum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.VideoIsCompatibleWithSavedPhotosAlbum"; FilePath)

Parameters**FilePath**

The file path to the video file.

Result Returns 1, 0 or error.

Description

Is a specific video eligible to be saved to the saved photos album?

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

See also

- 121.2 `Path.FileMakerPathToNativePath`

6139

Created 17th June 2017, last changed 18th June 2017.

92.52 ImagePicker.WriteImageToSavedPhotosAlbum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.WriteImageToSavedPhotosAlbum"; Image { ; FileName; ScriptName; Parameter })

Parameters

Image

The image container to add to photo roll.

FileName

Optional

The file name for the script.

Get(FileName)

ScriptName

Optional

The script name for the trigger.

Parameter

Optional

The script parameter to use.

Result Returns OK or error.

Description

The work is done in background and we can optionally trigger a script when done.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Add image to saved photos:

```
If [ IsEmpty ( ImagePicker::Picture ) ]
```

```
Show Custom Dialog [ "No image?" ]
```

```
Else
```

```
Set Variable [ $path ; Value: MBS( "ImagePicker.WriteImageToSavedPhotosAlbum"; ImagePicker::Picture;
```

```
Get(FileName); "AddedToCameraRoll" ) ]
```

```
End If
```

92.53 ImagePicker.WriteVideoToSavedPhotosAlbum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 ImagePicker	7.3	No	No	No	No	Yes

MBS("ImagePicker.WriteVideoToSavedPhotosAlbum"; FilePath { ; FileName; ScriptName; Parameter })

Parameters

FilePath

The file path to the video file.

FileName

Optional

The file name for the script.

Get(FileName)

ScriptName

Optional

The script name for the trigger.

Parameter

Optional

The script parameter to use.

Result Returns OK or error.

Description

The work is done in background and we can optionally trigger a script when done.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Chapter 93

ImageView

A control to show images with animation on a layout on macOS and iOS.

You can use this instead of a webviewer to show GIF animations.

93.1 ImageView.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	Yes

MBS("ImageView.Clear"; ImageView)

Parameters

ImageView

The image view reference number.

\$\$ImageView

Result Returns OK or error.

Description

See also

- 93.12 ImageView.Release

5104

Created 14th September 2017, last changed 14th September 2017.

93.2 ImageView.CreateWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	Yes

MBS("ImageView.CreateWithControl"; WindowRef; ControlName { ; DX; DY })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

DX

Optional

A delta to move drop area more to left or right.

0

DY

Optional

A delta to move drop area more to top or bottom.

0

Result Returns image view reference number or error.

Description

Use ImageView.Release later to destroy the image view.

If you use a register (tab controls) on the window, be aware that the image view actually is in front of the register (tab controls). So you need to check in the script which register page is current and should show what image view. Or by a trigger you turn the visibility on and off.

Image view reference numbers are starting at 74000 and counting up for each new image view.

If you create a control on a new window, you may do window update command in your script first to have FileMaker actually build the window with controls and display it. A short script pause or using FM.RunScriptLater with 0.1 delay can help having all controls draw themselves. Then you can use this command to put our control on top. We use GetControl() to query left, top, width and height and this gives empty value if control is not yet here.

Examples

Create image view with control as placeholder:

```

# Query size of image
Set Variable [ $Image ; Value: MBS( "GMImage.NewFromContainer"; ImageView::ImageContainer ) ]
Set Variable [ $w ; Value: MBS( "GMImage.GetWidth"; $Image ) ]
Set Variable [ $h ; Value: MBS( "GMImage.GetHeight"; $Image ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image ) ]

# We play half size for retina screen resolution
Set Variable [ $h ; Value: Round($h/2;0) ]
Set Variable [ $w ; Value: Round($w/2;0) ]

# We play half size for retina screen resolution
Set Variable [ $$ImageView ; Value: MBS("ImageView.CreateWithControl"; 0; "Placeholder") ]
Set Variable [ $r ; Value: MBS("ImageView.SetImage"; $$ImageView; ImageView::ImageContainer) ]

```

93.3 ImageView.CreateWithSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	Yes

MBS("ImageView.CreateWithSize"; WindowRef; x; y; w; h)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

x

The left coordinate in the window.

0

y

The top coordinate in the window.

0

w

The width of the image view in the window.

100

h

The height of the image view in the window.

100

Result Returns image view reference number or error.

Description

Use ImageView.Release later to destroy the image view.

If you use a register (tab controls) on the window, be aware that the image view actually is in front of the register (tab controls). So you need to check in the script which register page is current and should show what image view. Or by a trigger you turn the visibility on and off.

Image view reference numbers are starting at 74000 and counting up for each new image view.

Examples

Create image view with size:

```
# Query size of image
Set Variable [ $Image ; Value: MBS( "GMImage.NewFromContainer"; ImageView::ImageContainer ) ]
Set Variable [ $w ; Value: MBS( "GMImage.GetWidth"; $Image ) ]
Set Variable [ $h ; Value: MBS( "GMImage.GetHeight"; $Image ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image ) ]
```

```
# We play half size for retina screen resolution
Set Variable [ $h ; Value: Round($h/2;0) ]
Set Variable [ $w ; Value: Round($w/2;0) ]
```

```
# We play half size for retina screen resolution
Set Variable [ $$ImageView ; Value: MBS("ImageView.CreateWithSize"; 0; 100; 100; $w; $h) ]
Set Variable [ $r ; Value: MBS("ImageView.SetImage"; $$ImageView; ImageView::ImageContainer) ]
```

- 165.23 TextView.GetWidth 7901

Created 14th September 2017, last changed 14th September 2017.

93.12 ImageView.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	Yes

MBS("ImageView.Release"; ImageView)

Parameters

ImageView

The image view reference number.

\$\$ImageView

Result Returns OK on success.

Description

Examples

Close image view:

```
If [ Length ( $$ImageView ) >0 ]
Set Variable [ $r ; Value: MBS("ImageView.Release"; $$ImageView) ]
Set Variable [ $$ImageView ; Value: "" ]
End If
```

Created 14th September 2017, last changed 14th September 2017.

93.13 **ImageView.ReleaseAll**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	Yes

MBS("ImageView.ReleaseAll")

Result Returns number of views released.

Description

See also

- 93.12 [ImageView.Release](#) 5104
- 106.54 [MapView.ReleaseAll](#) 5700
- 165.28 [TextView.ReleaseAll](#) 7906

Example Databases

- [Mac and iOS/ImageView](#)

Created 14th September 2017, last changed 14th September 2017.

93.14 `UIImageView.SetFrame`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 UIImageView	7.4	Yes	No	No	No	Yes

MBS("UIImageView.SetFrame"; UIImageView; X; Y; Width; Height { ; swap })

Parameters

UIImageView

The image view reference number.

\$\$UIImageView

X

The x coordinate.

Y

The y coordinate.

Width

The width of the control.

Height

The height of the control.

swap

Optional

Whether to swap y coordinate. By default we swap them. Pass 0 to disable or 1 to swap.

1

Result Returns OK or error.

Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

Created 14th September 2017, last changed 14th September 2017.

93.15 **ImageView.SetFrameWithControl**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	9.0	Yes	No	No	No	Yes

MBS("ImageView.SetFrameWithControl"; ImageView; ControlName { ; DX; DY })

Parameters

ImageView

The image view reference number.

\$\$ImageView

ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

DX

Optional

A delta to move drop area more to left or right.

0

DY

Optional

A delta to move drop area more to top or bottom.

0

Result Returns OK or error.

Description

If you moved control in layout mode, this can move the drop area back to the new position.

Also useful to switch between different locations on the layout.

93.16 `ImageView.SetImage`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	Yes

MBS("ImageView.SetImage"; ImageView; image)

Parameters

ImageView

The image view reference number.

\$\$ImageView

image

the image to use. For best results, pass a container value with a PNG image. For animation, pass a GIF image.

Result Returns OK or error.

Description

We treat GIF images special and animate them.

Examples

Sets image:

```
Set Variable [ $r ; Value: MBS("ImageView.SetImage"; $$ImageView; ImageView::ImageContainer) ]
```

Created 14th September 2017, last changed 14th September 2017.

93.17 **ImageView.SetTag**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	Yes

MBS("ImageView.SetTag"; ImageView; tag)

Parameters

ImageView

The image view reference number.

\$\$ImageView

tag

A string you want to associate with the image view.

Result Returns OK or error message.

Description

Use the tag to store whatever value you want to associate with the image view. You can later query it using `ImageView.GetTag`.

See also

93.18 `ImageView.SetToolTip`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	No

MBS("ImageView.SetToolTip"; ImageView; Tooltip)

Parameters

ImageView

The image view reference number.

\$\$ImageView

Tooltip

The new help text.

"Hello"

Result Returns OK or error.

Description

The tooltip is visible on Mac when mouse stays over control. There are no tooltips for iOS.

See also

93.19 **ImageView.SetVisible**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageView	7.4	Yes	No	No	No	Yes

MBS("ImageView.SetVisible"; ImageView; Visible)

Parameters

ImageView

The image view reference number.

\$\$ImageView

Visible

The new visible state.

1

Result Returns OK or error.

Description

By default we create it visible, but you can hide it if it's on a register and the user clicked to other tab.

94.8 iOSApp.SetDidBecomeActiveEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 iOSApp	8.2	No	No	No	No	Yes

MBS("iOSApp.SetDidBecomeActiveEvaluate"; Expression)

Parameters

Expression

The expression to evaluate.

Result Returns OK or error.

Description

An app is active when it is receiving events. An active app can be said to have focus. It gains focus after being launched, loses focus when an overlay window pops up or when the device is locked, and gains focus when the device is unlocked.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 iOSApp	8.2	No	No	No	No	Yes

MBS("iOSApp.SetDidBecomeActiveScript"; Filename; ScriptName { ; Parameter })

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Parameter

Optional

The script parameter.

Result Returns OK or error.

Description

An app is active when it is receiving events. An active app can be said to have focus. It gains focus after being launched, loses focus when an overlay window pops up or when the device is locked, and gains focus when the device is unlocked.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 iOSApp	7.4	No	No	No	No	Yes

MBS("iOSApp.SetDidReceiveMemoryWarningEvaluate"; Expression)

Parameters

Expression

The expression to evaluate.

Result Returns OK or error.

Description

Posted when the app receives a warning from the operating system about low memory availability.

See also

- 94.3 iOSApp.GetDidReceiveMemoryWarningEvaluate 5115
- 94.13 iOSApp.SetDidReceiveMemoryWarningScript 5125

Created 23th September 2017, last changed 23th September 2017.

94.13 iOSApp.SetDidReceiveMemoryWarningScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 iOSApp	7.4	No	No	No	No	Yes

MBS("iOSApp.SetDidReceiveMemoryWarningScript"; Filename; ScriptName { ; Parameter })

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Parameter

Optional

The script parameter.

Result Returns OK or error.

Description

Posted when the app receives a warning from the operating system about low memory availability.

Examples

Set trigger:

```
MBS( "iOSApp.SetDidReceiveMemoryWarningScript"; Get(Filename); "MemoryTrigger")
```

See also

- 94.3 iOSApp.GetDidReceiveMemoryWarningEvaluate 5115

Created 23th September 2017, last changed 23th September 2017.

94.14 iOSApp.SetIdleTimerDisabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 iOSApp	10.1	No	No	No	No	Yes

MBS("iOSApp.SetIdleTimerDisabled"; Value)

Parameters

Value

The new value. Pass 1 to disable idle sleep or pass 0 to enable.

1

Result Returns OK or error.

Description

The default value of this property is 0. When most apps have no touches as user input for a short period, the system puts the device into a "sleep" state where the screen dims. This is done for the purposes of conserving power. However, apps that don't have user input except for the accelerometer—games, for instance—can, by setting this property to 1, disable the "idle timer" to avert system sleep.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 iOSApp	7.4	No	No	No	No	Yes

MBS("iOSApp.SetSignificantTimeChangeEvaluate"; Expression)

Parameters

Expression

The expression to evaluate.

Result Returns OK or error.

Description

Posted when there is a significant change in time, for example, change to a new day (midnight), carrier time update, and change to or from daylight savings time.

See also

- 94.5 iOSApp.GetSignificantTimeChangeEvaluate 5117
- 94.16 iOSApp.SetSignificantTimeChangeScript 5128

Created 23th September 2017, last changed 23th September 2017.

94.16 iOSApp.SetSignificantTimeChangeScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 iOSApp	7.4	No	No	No	No	Yes

MBS("iOSApp.SetSignificantTimeChangeScript"; Filename; ScriptName { ; Parameter })

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Parameter

Optional

The script parameter.

Result Returns OK or error.

Description

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 iOSApp	7.4	No	No	No	No	Yes

MBS("iOSApp.SetWillEnterForegroundEvaluate"; Expression)

Parameters

Expression

The expression to evaluate.

Result Returns OK or error.

Description

Posted shortly before an app leaves the background state on its way to becoming the active app.

Examples

Show msgbox when app comes to foreground:

```
Set Variable [ $m ; Value: MBS( "iOSApp.SetWillEnterForegroundEvaluate"; "MBS(\`msgbox\`; \`Hello\`)" ) ]
```

Chapter 95

iOSDevice

iOS commands to query device details.

95.1 iOSDevice.BatteryLevel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.BatteryLevel")

Result Returns value or error.

Description

Battery level ranges from 0.0 (fully discharged) to 1.0 (100% charged). Before accessing this property, ensure that battery monitoring is enabled.

If battery monitoring is not enabled, battery state is Unknown and the value of this property is -1.0.

Examples

Show battery level:

Show Custom Dialog ["Battery Level" ; MBS("iOSDevice.BatteryLevel")]

See also

- 95.2 iOSDevice.BatteryState

5134

Created 18th March 2017, last changed 25th November 2017.

95.2 iOSDevice.BatteryState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.BatteryState")

Result Returns value or error.

Description

Value is Unknown, Unplugged, Charging or Full.

See also

- 95.1 iOSDevice.BatteryLevel

5133

Created 18th March 2017, last changed 18th March 2017.

95.3 iOSDevice.IdentifierForVendor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.IdentifierForVendor")

Result Returns UUID or error.

Description

The value of this property is the same for apps that come from the same vendor running on the same device. A different value is returned for apps on the same device that come from different vendors, and for apps on different devices regardless of vendor.

Examples

Show identifier:

Show Custom Dialog ["Identifier" ; MBS("iOSDevice.IdentifierForVendor")]

Created 18th March 2017, last changed 25th November 2017.

95.4 iOSDevice.IsBatteryMonitoringEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.IsBatteryMonitoringEnabled")

Result Returns 1, 0 or error.

Description

Returns 1 if enabled or 0 if disabled.

See also

- 95.11 iOSDevice.SetBatteryMonitoringEnabled

5143

Created 18th March 2017, last changed 18th March 2017.

95.5 iOSDevice.LocalizedModel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.LocalizedModel")

Result Returns text or error.

Description

The value of this property is a string that contains a localized version of the string returned from iOSDevice.Model.

See also

- 95.6 iOSDevice.Model

5138

Created 18th March 2017, last changed 18th March 2017.

95.6 iOSDevice.Model

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.Model")

Result Returns text or error.

Description

Possible examples of model strings are "iPhone" and "iPod touch".

Examples

Show model:

```
Show Custom Dialog [ "Model" ; MBS( "iOSDevice.Model" ) ]
```

See also

- 95.5 iOSDevice.LocalizedModel 5137
- 95.7 iOSDevice.Name 5139

Created 18th March 2017, last changed 25th November 2017.

95.7 iOSDevice.Name

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.Name")

Result Returns text or error.

Description

The value of this property is an arbitrary alphanumeric string that is associated with the device as an identifier. For example, you can find the name of an iOS device in the General >About settings.

Examples

Show name:

Show Custom Dialog ["Name" ; MBS("iOSDevice.Name")]

See also

- 95.6 iOSDevice.Model

95.8 iOSDevice.Orientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.Orientation")

Result Returns value or error.

Description

The value of the property is a constant that indicates the current orientation of the device. This value represents the physical orientation of the device and may be different from the current orientation of your application's user interface.

Value can be Portrait, PortraitUpsideDown, LandscapeLeft, LandscapeRight, FaceUp, FaceDown or Unknown.

Created 18th March 2017, last changed 18th March 2017.

95.9 iOSDevice.OrientationIsLandscape

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.OrientationIsLandscape")

Result Returns 1, 0 or error.

Description

See also

- 95.10 iOSDevice.OrientationIsPortrait

5142

Created 18th March 2017, last changed 18th March 2017.

95.10 iOSDevice.OrientationIsPortrait

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.OrientationIsPortrait")

Result Returns 1, 0 or error.

Description

See also

- 95.9 iOSDevice.OrientationIsLandscape

5141

Created 18th March 2017, last changed 18th March 2017.

95.11 iOSDevice.SetBatteryMonitoringEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.SetBatteryMonitoringEnabled"; State)

Parameters

State

The new state of monitoring. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Enable battery monitoring if your app needs to be notified of changes to the battery state, or if you want to check the battery charge level.

The default value of this property is 0, which:

- Disables the posting of battery-related notifications
- Disables the ability to read battery charge level and battery state

Examples

Enable battery monitoring:

MBS("iOSDevice.SetBatteryMonitoringEnabled"; 1)

See also

- 95.4 iOSDevice.IsBatteryMonitoringEnabled

5136

Created 18th March 2017, last changed 25th November 2017.

95.12 iOSDevice.SystemName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.SystemName")

Result Returns text or error.

Description

Examples

Show system name:

Show Custom Dialog ["Name" ; MBS("iOSDevice.SystemName")]

Created 18th March 2017, last changed 25th November 2017.

95.13 iOSDevice.SystemVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.SystemVersion")

Result Returns text or error.

Description

An example of the system version is @"1.2".

Examples

Show system version:

Show Custom Dialog ["Version" ; MBS("iOSDevice.SystemVersion")]

See also

- 124.62 Version

6338

Created 18th March 2017, last changed 25th November 2017.

95.14 iOSDevice.UserInterfaceIdiom

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 iOSDevice	7.2	No	No	No	No	Yes

MBS("iOSDevice.UserInterfaceIdiom")

Result Returns value or error.

Description

For universal applications, you can use this property to tailor the behavior of your application for a specific type of device. For example, iPhone and iPad devices have different screen sizes, so you might want to create different views and controls based on the type of the current device.

Value is Phone, Pad, TV or CarPlay. FileMaker does not support all of those.

Created 18th March 2017, last changed 18th March 2017.

Chapter 96

iOSKeyboard

iOS Keyboard state and evaluation when it changes.

96.1 iOSKeyboard.GetDidHideEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSKeyboard	7.4	No	No	No	No	Yes

MBS("iOSKeyboard.GetDidHideEvaluate")

Result Returns expression or error.

Description

See also

- 96.2 iOSKeyboard.GetDidShowEvaluate 5148
- 96.3 iOSKeyboard.GetWillHideEvaluate 5149
- 96.4 iOSKeyboard.GetWillShowEvaluate 5150

- 96.6 iOSKeyboard.SetDidShowEvaluate 5152
- 96.7 iOSKeyboard.SetWillHideEvaluate 5153
- 96.8 iOSKeyboard.SetWillShowEvaluate 5154

Created 19th September 2017, last changed 19th September 2017.

96.5 iOSKeyboard.SetDidHideEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSKeyboard	7.4	No	No	No	No	Yes

MBS("iOSKeyboard.SetDidHideEvaluate"; Expression)

Parameters

Expression

The expression to evaluate.

Result Returns OK or error.

Description

The plugin can evaluate this expression to set variables, call plugin functions to trigger other things.

Examples

Set variable when keyboard hides:

```
MBS("iOSKeyboard.SetDidHideEvaluate"; "Let( [ $$keyboardVisible=0 ] ;0)")
```

See also

- 96.7 iOSKeyboard.SetWillHideEvaluate 5153
- 96.8 iOSKeyboard.SetWillShowEvaluate 5154

Created 19th September 2017, last changed 19th September 2017.

96.6 iOSKeyboard.SetDidShowEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSKeyboard	7.4	No	No	No	No	Yes

MBS("iOSKeyboard.SetDidShowEvaluate"; Expression)

Parameters

Expression

The expression to evaluate.

Result Returns OK or error.

Description

The plugin can evaluate this expression to set variables, call plugin functions to trigger other things.

Examples

Set variable when keyboard shows:

```
MBS("iOSKeyboard.SetDidShowEvaluate"; "Let( [ $$keyboardVisible=1 ] ;0)")
```

Created 19th September 2017, last changed 19th September 2017.

96.9 iOSKeyboard.State

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSKeyboard	7.4	No	No	No	No	Yes

MBS("iOSKeyboard.State")

Result Returns number or error.

Description

State is 0 for hidden, 1 for showing animation, 2 for showing, 3 for hiding animation.
Created 19th September 2017, last changed 19th September 2017.

Chapter 97

Java

Execute code in java classes.

You can initialize Java VM with a list of jar files. Than create objects, call methods, set and query fields.

97.1 Java.CallObjectMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.CallObjectMethod"; JObject; MethodName; Signature { ; Params })

Parameters

JObject

The java object reference number.

\$j

MethodName

The name of the method.

"test"

Signature

The java signature of the method. This describes the parameter types. Please use "javap -s test.class" with file path to class file to show the signatures for a class.

" [] "

Params

Optional

The parameters to pass. Pass one parameter in FileMaker for each parameter to pass.

Result Returns OK or error.

Description

Parameters and return type is detected by plugin automatically from signature.
Please call later `Java.Release` to release an object if this function returns one.

Java is only available if you call `Java.Initialize` before to load the java runtime.
Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

Examples

Init a class and a call a method:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()V" ) ]
Set Variable [ $r; Value:MBS( "Java.CallObjectMethod"; $j; "getValue"; "(I)" ) ]
Show Custom Dialog [ "value"; $r ]
Set Variable [ $r; Value:MBS( "Java.Release"; $j ) ]
```

Call method passing parameter and another to query:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()V" ) ]
Set Variable [ $r; Value:MBS( "Java.CallObjectMethod"; $j; "setValue"; "(IV"; 1234 ) ]
Set Variable [ $r; Value:MBS( "Java.CallObjectMethod"; $j; "getValue"; "(I)" ) ]
Show Custom Dialog [ "value"; $r ]
Set Variable [ $r; Value:MBS( "Java.Release"; $j ) ]
```

Call a void method

```
// public void DoSomething()
Set Variable [ $r; Value:MBS( "Java.CallObjectMethod"; $j; "DoSomething"; "()V" ) ]
```

See also

Created 2nd October 2016, last changed 22nd November 2018.

97.2 Java.CallStaticMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.CallStaticMethod"; ClassName; MethodName; Signature { ; Params })

Parameters

ClassName

The name of the java class.
"com.mbs.test"

MethodName

The name of the method.
"test"

Signature

The java signature of the method. This describes the parameter types. Please use "javap -s test.class" with file path to class file to show the signatures for a class.
" [] "

Params

Optional

The parameters to pass. Pass one parameter in FileMaker for each parameter to pass.

Result Returns result or error.

Description

Parameters and return type is detected by plugin automatically from signature.
Please call later Java.Release to release an object if this function returns one.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

Examples

Call Function GetString:

```
MBS( "Java.CallStaticMethod"; "test"; "GetString"; "()Ljava/lang/String;" )
```

Call function returning an integer:

```
// public static int method_int(int a, double b, char c, long d, short e)
Set Variable [ $r; Value:MBS( "Java.CallStaticMethod"; "tests"; "method_int"; "(IDCJS)I"; 10000; 2000; 300; 40; 5 ) ]
```

```
If [ MBS("IsError") or ($r 12345) ]  
Show Custom Dialog [ "Java Error"; $r ]  
Exit Script [ Result: "Static int method failed" ]  
End If
```

Call function returning a double value:

```
// public static double method_double(int a, double b, char c, long d, short e)  
Set Variable [ $r; Value:MBS( "Java.CallStaticMethod"; "tests"; "method_double"; "(IDCJS)D"; 10000;  
2000; 300; 40; 5 ) ]  
If [ MBS("IsError") or ($r 12345) ]  
Show Custom Dialog [ "Java Error"; $r ]  
Exit Script [ Result: "Static double method failed" ]  
End If
```

Created 2nd October 2016, last changed 22nd November 2018.

97.3 Java.GetContainerFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.GetContainerFileName")

Result Returns text or error.

Description

See also

- 97.12 Java.SetContainerFileName

5175

Created 13th October 2016, last changed 13th October 2016.

97.4 Java.GetObjectField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.GetObjectField"; JObject; FieldName; Signature)

Parameters

JObject

The java object reference number.

\$j

FieldName

The name of the field.

"test"

Signature

The java signature of the field. This describes the data type of the field.

"I"

Result Returns OK or error.

Description

Data type is automatically detected by plugin from signature.

If you read an object value, please call Java.Release later for it.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

Examples

Test object field:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "value"; "I"; 2345 ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "value"; "I" ) ]
```

```
Show Custom Dialog [ "value"; $r ]
```

```
Set Variable [ $r; Value:MBS( "Java.Release"; $j ) ]
```

Queries various fields:

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_boolean"; "Z" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_byte"; "B" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_byteArray"; " [ B" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_char"; "C" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_charArray"; " [ C" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_double"; "D" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_float"; "F" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_int"; "I" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_long"; "J" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_short"; "S" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_string"; "Ljava/lang/String;" ) ]
```

97.5 Java.GetStaticField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.GetStaticField"; ClassName; FieldName; Signature)

Parameters

ClassName

The name of the java class.
"com.mbs.test"

FieldName

The name of the field.
"test"

Signature

The java signature of the field. This describes the data type of the field.
"I"

Result Returns value or error.

Description

This is like a global variable as there is only one value for all objects of the class.
Data type is automatically detected by plugin from signature.
If you read an object value, please call Java.Release later for it.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

Examples

Test static field:

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "test"; "n"; "I"; 3456 ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "test"; "n"; "I" ) ]
Show Custom Dialog [ "value"; $r ]
```

Query various static fields:

```
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_boolean"; "Z" ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_byte"; "B" ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_byteArray"; " [ B" ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_char"; "C" ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_charArray"; " [ C" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_double"; "D") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_float"; "F") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_int"; "I") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_long"; "J") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_short"; "S") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_string"; "Ljava/lang/String;")
]
```

- [97.6 Java.Initialize](#) 5166
- [97.10 Java.Release](#) 5173
- [97.14 Java.SetStaticField](#) 5178

Example Databases

- [Java/Java Example/Java Example](#)
- [Java/Java Tests/Java Tests](#)

Created 2nd October 2016, last changed 17th August 2018.

97.6 Java.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.Initialize" { ; LibPath; ClassPathList; Option })

Parameters

LibPath

Optional

Path to java library (e.g. jvm.dll) If empty, the plugin uses the Java framework on Mac and looks into registry on Windows to find newest Java installation.

e.g. on Windows: "C:\Program Files\Java\jre1.8.0_101\bin\server\jvm.dll"
""

ClassPathList

Optional

The list of native paths to the jar files to load. Please pass here all jar files you want to use.

"/Users/cs/Desktop/test.jar"

Option

Optional

Pass a parameter for each additional option to pass to Java VM initialization.

Result Returns OK or error.

Description

You can either pass path to jvm library file or let the plugin look for it. To access classes, you need to pass paths to the jar and class files you want to use.

Returns error if already a JavaVM is initialized.

Please be aware that you can only have one VM running at a given time, so you can't use Java in other plugin and our plugin together.

This should work fine for any Java version starting with 1.4 or newer. Tested with 1.7 and 1.8.

May not initialize probably if other plugin initialized Java before.

Returns "Using existing Java VM." in case an existing Java VM initialized by other plugin is used. In that case we can't pass your class paths or other options!

On Windows, we look into Local Machine\SOFTWARE\JavaSoft\Java Runtime Environment in registry to find the newest entry and the path to the jvm.dll file. Please note that on Windows you can install 32-bit and 64-bit version of Java and you need the matching bit number to FileMaker application.

If you get error 126 on Windows, maybe MSVCR100.DLL is missing. So install Visual Studio 2010 runtime libraries. You can download them from Microsoft website. Do not download them from other websites

spreading malware!

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Initialize java:

```
Set Variable [ $r ; Value: MBS("Java.Initialize") ]
If [ MBS("Java.Initialized") ]
Show Custom anzeigen [ "Java" ; "Java initialized." ]
Else
Show Custom anzeigen [ "Java" ; "Java failed to initialize" & $r ]
End If
```

Initialize on Linux:

```
Set Variable [ $r ; Value: MBS("Java.Initialize"; "/home/cs/jrel.6.0_05/lib/x64/client/libjvm.so"; "/java/test.jar$/java/drive" ) ]
```

Init with three class path entries:

```
MBS("Java.Initialize"; Java Test::Path to Java Library; Java Test::ClassPath1 & $r & Java Test::ClassPath2 & $r & Java Test::ClassPath3)
```

97.7 Java.Initialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.Initialized")

Result Returns 1, 0 or error.

Description

Examples

Check if Java is initialized:

```
MBS("Java.Initialized")
```

Initialize java:

```
Set Variable [ $r ; Value: MBS("Java.Initialize") ]
If [ MBS("Java.Initialized") ]
Show Custom anzeigen [ "Java" ; "Java initialized." ]
Else
Show Custom anzeigen [ "Java" ; "Java failed to initialize" & $r ]
End If
```

97.8 Java.NewClassObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.NewClassObject"; ClassName; ConstructorName; Signature { ; Params })

Parameters

ClassName

The name of the java class.

"com.mbs.test"

ConstructorName

The name of the constructor.

"test"

Signature

The java signature of the method. This describes the parameter types.

"()"

Params

Optional

The parameters to pass. Pass one parameter in FileMaker for each parameter to pass.

Result Returns object reference or error.

Description

Parameters and return type is detected by plugin automatically from signature.

Please call later Java.Release to release the object.

Java is only available if you call Java.Initialize before to load the java runtime.

Examples

Create a new test object with default constructor:

```
MBS( "Java.NewClassObject"; "test"; "<init>"; "()" )
```

97.9 Java.ObjectClassName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.ObjectClassName"; JObject)

Parameters

JObject

The java object reference number.

\$j

Result Returns text or error.

Description

Examples

Query object name:

```
MBS( "Java.ObjectClassName"; $j )
```

Create object and query class name:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()V" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.ObjectClassName"; $j ) ]
```

```
Show Custom Dialog [ "value"; $r ]
```

```
Set Variable [ $r; Value:MBS( "Java.Release"; $j ) ]
```

Created 2nd October 2016, last changed 2nd October 2016.

97.10 Java.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.Release"; JObject)

Parameters

JObject

The java object reference number.

\$j

Result Returns OK or error.

Description

Please call that for all java objects to release memory.

Examples

Release object in \$j:

Set Variable [\$r; Value:MBS("Java.Release"; \$j)]

97.11 Java.ReleaseAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.ReleaseAll")

Result Returns OK or error.

Description

This is called for you in Java.Close.

Be aware that on a server this may free objects, which are used by other scripts running in parallel!

See also

97.12 Java.SetContainerFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.SetContainerFileName"; FileName)

Parameters

FileName

The file name to use for container.

"test.jpg"

Result Returns OK or error.

Description

When a function call to Java returns a ByteArray, we pack it into a container using this file name. The file name than determents for FileMaker the type of file.

Examples

Set file name:

MBS("Java.SetContainerFileName"; "Logo.jpg")

Created 13th October 2016, last changed 6th September 2019.

97.13 Java.SetObjectField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.SetObjectField"; JObject; FieldName; Signature; Value)

Parameters

JObject

The java object reference number.

\$j

FieldName

The name of the field.

"test"

Signature

The java signature of the field. This describes the data type of the field.

"I"

Value

The value to use for the field.

123

Result Returns OK or error.

Description

Data type is automatically detected by plugin from signature.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

Examples

Test object field:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()"V" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "value"; "I"; 2345) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "value"; "I" ) ]
```

```
Show Custom Dialog [ "value"; $r ]
```

```
Set Variable [ $r; Value:MBS( "Java.Release"; $j) ]
```

Sets various fields:

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_boolean"; "Z"; 1) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_byte"; "B"; 123) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_byteArray"; "[ B"; Java Test::TestContainer) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_char"; "C"; 123) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_charArray"; " [ C"; "123") ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_double"; "D"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_float"; "F"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_int"; "I"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_long"; "J"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_short"; "S"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_string"; "Ljava/lang/String;"; "123") ]
```

97.14 Java.SetStaticField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 Java	6.5	Yes	Yes	Yes	Yes	No

MBS("Java.SetStaticField"; ClassName; FieldName; Signature; Value)

Parameters

ClassName

The name of the java class.
"com.mbs.test"

FieldName

The name of the field.
"test"

Signature

The java signature of the field. This describes the data type of the field.
"I"

Value

The value to use for the field.
123

Result Returns OK or error.

Description

This is like a global variable as there is only one value for all objects of the class.
Data type is automatically detected by plugin from signature.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

Examples

Test static field:

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "test"; "n"; "I"; 3456) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "test"; "n"; "I") ]
```

```
Show Custom Dialog [ "value"; $r ]
```

Set various static fields:

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_boolean"; "Z"; 1) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_byte"; "B"; 123) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_byteArray"; " [ B"; Java  
Test::TestContainer) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_char"; "C"; 123) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_charArray"; " [ C"; "123") ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_double"; "D"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_float"; "F"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_int"; "I"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_long"; "J"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_short"; "S"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_string"; "Ljava/lang/String;";
"123") ]
```

Chapter 98

JavaScript

Run Javascript without Webviewer cross-platform, even on server.

98.1 JS.AddFileMakerEvaluateFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.AddFileMakerEvaluateFunction"; JSRef; Name)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the function.

"test"

Result Returns OK or error.

Description

The function will take string parameter and evaluate the result in FileMaker. Result is returned as text to JavaScript.

For increased security we prefer all FileMaker developers define their own function name, so if you get some foreign JavaScript, it can't know the function name and mess with FileMaker.

Examples

Evaluate something with FileMaker in JavaScript:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]  
Set Variable [ $r ; Value: MBS( "JS.AddFileMakerEvaluateFunction"; $js; "FMEval" ) ]  
Show Custom Dialog [ "Result" ; MBS( "JS.Evaluate"; $JS; " \"got AccountName: \" + FMEval(\ "Get(Ac-  
countName)\")" ) ]  
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

See also

- 98.6 JS.Evaluate 5190
- 98.8 JS.Free 5196
- 98.11 JS.New 5201

Example Databases

- [JavaScript/JavaScript](#)

Created 7th December 2019, last changed 12nd December 2019.

98.2 JS.AddFileMakerRunScriptFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.AddFileMakerRunScriptFunction"; JSRef; Name)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the function.

"test"

Result Returns OK or error.

Description

Scripts are queued and run later when JavaScript finished.

The function in JavaScript returns the error code from FileMaker, which is zero for success.

For increased security we prefer all FileMaker developers define their own function name, so if you get some foreign JavaScript, it can't know the function name and mess with FileMaker. Be aware that this function may launch any script in the solution, even those not shown in the menu.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Run a script from JavaScript:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "JS.AddFileMakerRunScriptFunction"; $js; "FMRun" ) ]
```

```
Show Custom Dialog [ "Result" ; MBS( "JS.Evaluate"; $JS; " \start script: \ + FMRun(\ "JavaScript.fmp12\ ", \ "testRun\ ", \ "Hello World\ ") ) ]
```

```
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Created 7th December 2019, last changed 8th December 2019.

98.3 JS.AddFileMakerSQLFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.AddFileMakerSQLFunction"; JSRef; Name)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the function.

"test"

Result Returns OK or error.

Description

The function will take string parameter with file name and SQL and evaluate the result in FileMaker. Result is returned as text to JavaScript. You can pass additional parameters for filling parameters in SQL.

For increased security we prefer all FileMaker developers define their own function name, so if you get some foreign JavaScript, it can't know the function name and mess with FileMaker. Be aware that users may run commands like DELETE to delete all records of a table!

Examples

Run SQL from JavaScript:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "JS.AddFileMakerSQLFunction"; $js; "FMSQL" ) ]
```

```
Show Custom Dialog [ "Result" ; MBS( "JS.Evaluate"; $JS; " \"got SQL result: \" + FMSQL( \"JavaScript.fmp12\", \"SELECT COUNT(*) FROM JavaScript\" ) ) ]
```

```
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

See also

98.4 JS.AddFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.AddFunction"; JSRef; Name; JavaScript)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the function.

"test"

JavaScript

The JavaScript code.

"function (x,y) { return x+y; } "

Result Returns OK or error.

Description

Optional provide a file name to show in stack traces.

Function source code may contain a function name, but we use only the name parameter to register the function as global one.

Examples

Define a function and call it:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $js; "adder"; "function (x,y) { return x+y; } " ) ]
Show Custom Dialog [ "Result" ; MBS( "JS.CallFunction"; $JS; "adder"; 3; 4 ) ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Initialize JavaScript environment with two functions:

```
If [ Length($$js) = 0 ]
Set Variable [ $$js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $$js; "makeCRCTable"; "function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
}
```

```
return crcTable;
} ” ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $$js; "crc32"; "function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++ ) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i)) & 0xFF ] ;
}

return (crc ^(-1)) »>0;
} ” ]
End If
```

98.5 JS.CallFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.CallFunction"; JSRef; Name; Parameters)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the function.

"test"

Parameters

JSON to pass as parameter.

Result Returns JSON or error.

Description

Parameters are passed to the function. Please pass as many parameters in FileMaker as needed.

If the function needs more parameter, undefined values are used to fill up.

If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a JSON value.

Examples

Define a function and call it:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $js; "adder"; "function (x,y) { return x+y; } " ) ]
Show Custom Dialog [ "Result" ; MBS( "JS.CallFunction"; $JS; "adder"; 3; 4 ) ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Concat strings:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $js; "Concat"; "function (x,y) { return x+\\" \"+y; } " ) ]
Show Custom Dialog [ "Result" ; MBS( "JS.CallFunction"; $JS; "Concat"; "\\"Hello\\""; "\\"World\\"" ) ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Call a function:

```
If [ Length($js) >0 ]
Set Variable [ $p ; Value: MBS( "JSON.CreateString"; test::Input ) ]
Set Field [ test::Output ; MBS( "JS.CallFunction"; $js; "crc32"; $p ) ]
End If
```

98.6 JS.Evaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.Evaluate"; JSRef; JavaScript)

Parameters

JSRef

The JavaScript reference number.

\$js

JavaScript

A JavaScript expression.

"1+2"

Result Returns JSON or error.

Description

This may include definition of functions and objects and using them.

Result is converted to JSON and returned.

Examples

Evaluate some expressions:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "4+5" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "test"; "\"Hello World\"" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "test + test;" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Defines and runs a function in JavaScript:

```
Let( [
f = "
function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
return crcTable;
```

```

}

function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i) & 0xFF ) ;
}

return (crc ^(-1)) »>0;
};

crc32(InputChange);";
j = MBS( "JS.New" );
r = MBS( "JS.SetGlobalPropertyValue"; j; "InputChange"; "Hello World" );
r = MBS( "JS.Evaluate"; j; f );
x = MBS( "JS.Free"; j )
];r)

```

Initialize JavaScript environment with two functions:

```

If [ Length($$js) = 0 ]
Set Variable [ $$js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $$js;
"function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n=0; n <256; n++) {
c = n;
for(var k=0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
return crcTable;
}

function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i) & 0xFF ) ;
}

return (crc ^(-1)) »>0;
};"} ]

```

End If

List global properties:

```
MBS( "JS.Evaluate"; $$JS; "Object.keys(globalThis);" )
```

Query now in JavaScript:

```
MBS( "JS.Evaluate"; $$JS; "performance.now();" )
```

Measure tikem for a test function:

```
MBS("JS.Evaluate"; $js; "function testFunction() {
for (var i = 0; i <1e6; i++) { }
}")
```

```
var t1 = performance.now();
testFunction();
var t2 = performance.now();
```

```
('test took: ' + (t2 - t1) + ' milliseconds');
```

98.7 JS.EvaluateToString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.EvaluateToString"; JSRef; JavaScript)

Parameters

JSRef

The JavaScript reference number.

\$js

JavaScript

A JavaScript expression.

"1+2"

Result Returns text or error.

Description

This may include definition of functions and objects and using them.

Result is converted to string and returned.

Examples

Evaluate some text:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.EvaluateToString"; $js; "e = \"test\"; e + String.fromCharCode(33)" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Defines and runs a function in JavaScript:

```
Let( [
f = "
function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
return crcTable;
}
```

```
function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i) & 0xFF) ];
}

return (crc ^(-1)) »>0;
};

crc32(InputChange);";
j = MBS( "JS.New" );
r = MBS( "JS.SetGlobalPropertyValue"; j; "InputChange"; "Hello World" );
r = MBS( "JS.EvaluateToString"; j; f );
x = MBS( "JS.Free"; j )
];r)
```

98.8 JS.Free

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.Free"; JSRef)

Parameters

JSRef

The JavaScript reference number.

\$js

Result Returns OK or error.

Description

Examples

Evaluate some expressions:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "4+5" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "test"; "\"Hello World\"" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "test + test;" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Cleanup script:

```
If [ Length($$js) >0 ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $$js ) ]
Set Variable [ $$js ; Value: "" ]
End If
```

98.9 JS.GetGlobalProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.GetGlobalProperty"; JSRef; Name)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the variable.

"test"

Result Returns JSON value or error.

Description

Returns value as JSON encoded.

Examples

Get and set some properties:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
# try number
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v1"; 123 ) ]
Set Variable [ $v1 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v1" ) ]
# try some JSON array
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v2"; " [ 1,2,3 ] " ) ]
Set Variable [ $v2 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v2" ) ]
# try some text
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v3"; "\"test\"" ) ]
Set Variable [ $v3 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v3" ) ]
# show results
Show Custom Dialog [ "Property" ; $v1 & §& $v2 & §& $v3 ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Example Databases

- [JavaScript/JavaScript](#)

Created 7th December 2019, last changed 7th December 2019.

98.10 JS.GetGlobalPropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.GetGlobalPropertyValue"; JSRef; Name)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the variable.

"test"

Result Returns value or error.

Description

Returns value as number, text or JSON encoded.

This is a simplified version of JS.GetGlobalProperty to avoid extra JSON encoding for simple values. Objects are still returned JSON encoded.

Examples

Queries a number value:

```
MBS( "JS.GetGlobalPropertyValue"; $js; "Hello")
```

98.11 JS.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.New")

Result Returns JS reference number or error.

Description

This object contains all the functions and properties you defined. Please release the object later with the JS.Free function.

Your own JavaScript engine is useful for:

- Running some snippet of JavaScript code without web viewer.
- Using various JavaScript libraries
- Providing a scripting language to your own solution.
- Doing JavaScript on server side.
- Working with JSON data
- Enjoy using regular expressions, unicode text functions, number parsing and formatting with no platform dependencies

Examples

Evaluate a bit of JavaScript:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "4+5" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

98.12 JS.Now

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS("JS.Now"; JSRef)

Parameters

JSRef

The JavaScript reference number.

\$js

Result Returns number or error.

Description

This is seconds since 1st January 1970 multiplied by 1000 and may contain fraction with microseconds.

Get current time in POSIX milliseconds, as seen by the ECMAScript environment. The return value matches Date.now() with the reservation that sub-millisecond resolution may be available.

Examples

Query current time:

MBS("JS.Now"; \$\$JS)

Example result: 1579438706835.8249512

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.SetGlobalProperty"; JSRef; Name; Value)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the variable.

"test"

Value

The JSON value.

" [1,2,3] "

Result Returns OK or error.

Description

Please pass value as JSON value.

Examples

Get and set some properties:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
# try number
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v1"; 123 ) ]
Set Variable [ $v1 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v1" ) ]
# try some JSON array
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v2"; " [ 1,2,3 ] " ) ]
Set Variable [ $v2 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v2" ) ]
# try some text
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v3"; "\"test\"" ) ]
Set Variable [ $v3 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v3" ) ]
# show results
Show Custom Dialog [ "Property" ; $v1 & $& $v2 & $& $v3 ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

98.15 JS.SetGlobalPropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JS.SetGlobalPropertyValue"; JSRef; Name; Value)

Parameters

JSRef

The JavaScript reference number.

\$js

Name

The name of the variable.

"test"

Value

The number or text value.

123

Result Returns OK or error.

Description

Please pass value as number or text.

Container, date, time and timestamp are converted to text.

This is a simplified version of JS.SetGlobalProperty to avoid extra JSON encoding for simple values.

Examples

Sets a variable with name:

MBS("JS.SetGlobalPropertyValue"; \$js; "Hello"; 123,45)

98.16 JS.StringCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS("JS.StringCount")

Result Returns number or error.

Description

A fresh JavaScript engine already has about 1000 strings.

98.16.1 Blog Entries

- [MBS FileMaker Plugin, version 10.1pr2](#)

Created 31st January 2020, last changed 31st January 2020.

98.17 JS.TimeToDateComponents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS("JS.TimeToDateComponents"; JSRef; Time)

Parameters

JSRef

The JavaScript reference number.

\$js

Time

The time value.

1579438861538

Result Returns JSON or error.

Description

Convert a time value to components (year, month, day, hour, minute, second) interpreted in UTC. If the time value is invalid, e.g. beyond the valid ECMAScript time range, an error is thrown.

Examples

Query date components for now:

```
MBS( "JS.TimeToDateComponents"; $$JS; MBS( "JS.Now"; $$JS ) )
```

```
Example result: {
  "year": 2020,
  "month": 1,
  "day": 19,
  "hours": 12,
  "minutes": 59,
  "seconds": 13,
  "milliseconds": 806,
  "weekday": 0,
  "timezone": "UTC",
  "weekdayText": "Sunday"
}
```

MBS("JS.TimeToUTCDate"; JSRef; Time)

Parameters

JSRef

The JavaScript reference number.

\$js

Time

The time value.

1579438861538

Result Returns timestamp or error.

Description

Examples

Query now as timestamp:

```
MBS( "JS.TimeToUTCDate"; $$JS; MBS( "JS.Now"; $$JS ) )
```

Example result: 19.01.2020 12:59:46

See also

98.19 JS.UTCDateToTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS("JS.UTCDateToTime"; JSRef; TS)

Parameters

JSRef

The JavaScript reference number.

\$js

TS

The timestamp to convert. Must be in UTC timezone.

Result Returns double or error.

Description

Convert components (year, month, day, hour, minute, seconds) in timestamp, interpreted in UTC, into a time value.

Examples

Tests time functions:

```
Let( [
c = MBS( "JS.New" );
r = MBS( "JS.UTCDateToTime"; c; Get(CurrentTimeStamp) );
d = MBS( "JS.TimeToDateComponents"; c; r )
]; r & $& d)
```

Example result: 1582121231000

```
{
"year": 2020,
"month": 2,
"day": 19,
"hours": 14,
"minutes": 7,
"seconds": 11,
"milliseconds": 0,
"weekday": 3,
"timezone": "UTC",
"weekdayText": "Wednesday"
}
```

Chapter 99

JavaScriptMac

Run Javascript without Webviewer on Mac/iOS, even on server.

Supported for iOS with MBS Plugin 7.5 or newer.

99.1 JavaScript.CheckScriptSyntax

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.CheckScriptSyntax"; JavaScriptContext; Script { ; URL; startingLineNumber })

Parameters

JavaScriptContext

The reference number of the javascript context.

\$Context

Script

The script to evaluate.

URL

Optional

The source URL for this script. A URL for the script's source file. Used by debuggers and when reporting exceptions. This parameter is informative only: it does not change the behavior of the script.

startingLineNumber

Optional

An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.

1

Result Returns OK or error.

Description

Returns OK on success or error message.

Examples

Check syntax:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]  
Set Variable [ $r ; Value: MBS( "JavaScript.CheckScriptSyntax"; $js; "test+++++" ) ]  
Show Custom Dialog [ "Result" ; $r ]  
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

See also

99.2 JavaScript.EvaluateScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.EvaluateScript"; JavaScriptContext; Script { ; URL; startingLineNumber })

Parameters

JavaScriptContext

The reference number of the javascript context.

\$Context

Script

The script to evaluate.

URL

Optional

The source URL for this script. A URL for the script's source file. Used by debuggers and when reporting exceptions. This parameter is informative only: it does not change the behavior of the script.

startingLineNumber

Optional

An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.

1

Result Returns text or error.

Description

See also `WebView.RunJavaScript` or `WebView.Evaluate` for use with web viewer.

Examples

Set variables and use them in the script:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.SetProperty"; $js; "FirstName"; "Joe" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.SetProperty"; $js; "LastName"; "Miller" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.EvaluateScript"; $js; "FirstName + ' ' + LastName;" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

Evaluate in javascript the FileMaker get function:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.RegisterEvaluateFunction"; $js; "FMEvaluate" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.EvaluateScript"; $js; "FMEvaluate('Get(AccountName)') + '
from javascript'" ) ]
Show Custom Dialog [ "Result" ; $r ]
```

```
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

Defines and runs a function in JavaScript:

```
Let( [
f = "
function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
return crcTable;
}

function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++ ) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i)) & 0xFF ] ;
}

return (crc ^(-1)) »>0;
} ;

crc32(InputChange);";
j = MBS( "JavaScript.New" );
r = MBS( "JavaScript.SetProperty"; j; "InputChange"; "Hello World" );
r = MBS( "JavaScript.EvaluateScript"; j; f );
x = MBS( "JavaScript.Release"; j )
] ;r)
```

99.3 JavaScript.GetProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.GetProperty"; JavaScriptContext; PropertyName)

Parameters

JavaScriptContext

The reference number of the javascript context.

\$Context

PropertyName

The name of the property.

"FirstName"

Result Returns text or error.

Description

Examples

Set and query property:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.SetProperty"; $js; "FirstName"; "Joe" ) ]
Show Custom Dialog [ "Result" ; MBS( "JavaScript.GetProperty"; $js; "FirstName" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

99.5 JavaScript.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.New")

Result Returns reference number or error.

Description

Reference numbers start at 47000.

Works in FileMaker 32-bit and 64-bit.

Supported for iOS with MBS Plugin 7.5.

Check JS Functions for JavaScript engine cross platform.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.RegisterEvaluateFunction"; JavaScriptContext; FunctionName)

Parameters

JavaScriptContext

The reference number of the javascript context.

\$Context

FunctionName

The name for the new function.

"Evaluate"

Result Returns OK or error.

Description

The javascript function takes one parameter which is expression to evaluate. Returns the text of the expression result.

Call later like this: FMEvaluate("Get(AccountName)")

Examples

Register function:

```
MBS( "JavaScript.RegisterEvaluateFunction"; $$Context; "FMEvaluate" )
```

```
# later:
```

```
# FMEvaluate("Get(AccountName)")
```

Evaluate in javascript the FileMaker get function:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "JavaScript.RegisterEvaluateFunction"; $js; "FMEvaluate" ) ]
```

```
Set Variable [ $r ; Value: MBS( "JavaScript.EvaluateScript"; $js; "FMEvaluate('Get(AccountName)') + ' from javascript'" ) ]
```

```
Show Custom Dialog [ "Result" ; $r ]
```

```
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

Created 7th November 2015, last changed 9th January 2020.

99.7 JavaScript.RegisterFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.RegisterFunction"; JavaScriptContext; FunctionName { ; ParameterNames; Body; SourceURL; startingLineNumber })

Parameters

JavaScriptContext

The reference number of the javascript context.

\$Context

FunctionName

The name for the new function.

"test"

ParameterNames

Optional

The names for the parameters.

"Value\$Count"

Body

Optional

The body of the function.

"return value;"

SourceURL

Optional

A text containing a URL for the script's source file. This is only used when reporting exceptions. Pass empty text if you do not care to include source file information in exceptions.

startingLineNumber

Optional

An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.

1

Result Returns OK or error.

Description

Examples

Register a function:

```
Set Variable [ $r; Value:MBS( "JavaScript.RegisterFunction"; $$Context; "Test"; "Value$Count"; "return Value * Count;" ) ]
```

See also

99.8 JavaScript.RegisterRunScriptFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.RegisterRunScriptFunction"; JavaScriptContext; FunctionName)

Parameters

JavaScriptContext

The reference number of the javascript context.

\$Context

FunctionName

The name for the new function.

"StartScript"

Result Returns OK or error.

Description

The javascript function takes first parameter the filename, second parameter the script name. Optionally third parameter is passed as text to the script.

Call for example like this: FMRunScript('Javascript.fp7', 'test', 'Hello World')

Examples

Register RunScript function:

```
Set Variable [ $r; Value:MBS( "JavaScript.RegisterRunScriptFunction"; $$Context; "FMRunScript" ) ]
```

```
# later:
```

```
# FMRunScript('Javascript.fp7', 'test', 'Hello World')
```

99.9 JavaScript.RegisterSQLQueryFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.RegisterSQLQueryFunction"; JavaScriptContext; FunctionName)

Parameters

JavaScriptContext

The reference number of the javascript context.

\$Context

FunctionName

The name for the new function.

"SQLQuery"

Result Returns OK or error.

Description

The javascript function has as parameter first the SQL expression. Second optional parameter is the file name to limit query to only this FileMaker database file. Third and fourth parameter are separators for column or row which can be text or number. Default is column = tab and row = return. Fifth and following parameters are passed as parameters to SQL.

Call like this:

```
FMQuery('select * from Hello')
```

or

```
FMQuery('select * from Hello where "Count"=?', 'JavaScript.fmp12', 9, 13, 2)
```

Examples

Register query function:

```
MBS( "JavaScript.RegisterSQLQueryFunction"; $$Context; "FMQuery" )
```

99.11 JavaScript.SetProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS("JavaScript.SetProperty"; JavaScriptContext; PropertyName; Value)

Parameters

JavaScriptContext

The reference number of the javascript context.

\$Context

PropertyName

The name of the property.

"FirstName"

Value

The new text value.

"Joe"

Result Returns OK or error.

Description

Examples

Set and query property:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.SetProperty"; $js; "FirstName"; "Joe" ) ]
Show Custom Dialog [ "Result" ; MBS( "JavaScript.GetProperty"; $js; "FirstName" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

Chapter 100

JSON

Parse or build JSON texts.

100.1 Dictionary.ToJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
65 Dictionary 100 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS("Dictionary.ToJSON"; DictionaryRef)

Parameters

DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.
\$dic

Result Returns OK or error.

Description

This is useful for passing data from dictionary to some javascript.

Examples

Test exporting dictionaries:

```
#  
#  
# Create new Dictionary  
#  
Set Variable [ $param; Value:MBS( "Dictionary.Create" ) ]  
#  
# Fill in values  
#
```

```

Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "text"; Pass Parameters with Dictionary::TextField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "number"; Pass Parameters with Dictionary::NumberField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "date"; Pass Parameters with Dictionary::DateField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "time"; Pass Parameters with Dictionary::TimeField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "timestamp"; Pass Parameters with Dictionary::TimeStampField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "container"; Pass Parameters with Dictionary::ContainerField ) ]
#
# Call save xml, json and text
#
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToXML"; $param; 1); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.xml"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToText"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.txt"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToJSON"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.json.txt"); "UTF8" ) ]
#
# free memory
#
Set Variable [ $r; Value:MBS("Dictionary.Release"; $param) ]

```

100.1.1 **Blog Entries**

- [MBS FileMaker Plugin, version 6.1pr3](#)

Created 25th February 2016, last changed 20th February 2018.

100.2 FM.SQL.JSONRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 80 FMSQL 100 JSON	8.1	Yes	Yes	Yes	Yes	Yes

MBS("FM.SQL.JSONRecord"; SQLref; Row; FieldNames { ; Flags })

Parameters

SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

Row

The row you like to get.

1

FieldNames

A list of field names for the JSON.

"Model\$Names"

Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

Result Returns JSON text or error.

Description

You provide list of field names, which should be in same order as fields in SQL result.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

Examples

Query JSON record:

```
Set Variable [ $sql ; Value: MBS( "FM.SQL.Execute"; "" ; "SELECT \"First\", \"Last\", Birthday, \"Photo Container\" FROM Contacts" ) ]
```

```
Set Variable [ $json ; Value: MBS( "FM.SQL.JSONRecord"; $sql; 0; "First$Last$Birthday$Photo"; 2 ) ]
```

```
Show Custom Dialog [ "JSON" ; $json ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $sql ) ]
```

Query record as JSON:

```
Let ( [
```

```
fields = MBS( "FM.QueryFieldsForTableName"; "Contacts");
```

```
Records = MBS( "FM.SQL.Execute"; "" ; "SELECT \"\" & substitute(fields; $; \"\", \") & \"\" FROM \"Contacts\" WHERE \"First\" = ?"; "Joe");
```

100.2. *FM.SQL.JSONRECORD*

5235

```
json = MBS( "FM.SQL.JSONRecord"; Records; 0; fields);  
r = MBS( "FM.SQL.Release"; Records ) ]  
; json )
```

Created 4th March 2018, last changed 8th April 2019.

100.3 FM.SQL.JSONRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 80 FMSQL 100 JSON	8.1	Yes	Yes	Yes	Yes	Yes

MBS("FM.SQL.JSONRecords"; SQLref; FieldNames { ; Flags })

Parameters

SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

FieldNames

A list of field names for the JSON.

"Model\$Names"

Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

Result Returns JSON text or error.

Description

You provide list of field names, which should be in same order as fields in SQL result.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

Examples

Query JSON:

```
Set Variable [ $sql ; Value: MBS( "FM.SQL.Execute"; "" ; "SELECT \"First\", \"Last\", Birthday, \"Photo Container\" FROM Contacts" ) ]
```

```
Set Variable [ $json ; Value: MBS( "FM.SQL.JSONRecords"; $sql; "First$Last$Birthday$Photo"; 2 ) ]
```

```
Show Custom Dialog [ "JSON" ; $json ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $sql ) ]
```

Make a JSON query in one Let statment:

```
Let (
```

```
[
```

```
$sdat = "10/1/2019 00:00";
```

```
$edat = "10/10/2019 00:00";
```

```
sku = "'PARbh50','PARgy50'";
```

```
sql1 = MBS("FM.SQL.Execute"; "" ; "Select docnum,linetotal,db from \"MyTable\" where ItemCode in (\" & sku & \") and DocDate between ? and ?"; $sdat; $edat);
```

```
json = MBS( "FM.SQL.JSONRecords"; sql1; "DocNum$LineTotal$DB"; 1);
```

```
r = MBS( "FM.SQL.Release"; sql1 )
```

100.3. *FM.SQL.JSONRECORDS*

5237

```
] ; json  
)
```

Created 4th March 2018, last changed 16th December 2019.

100.4 JSON.AddBooleanToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.AddBooleanToObject"; json; name; value)

Parameters

json

A JSON text or reference.

[false,true,false]

name

The name of the key.

"Hello"

value

The boolean to be added. Pass 1 for true and 0 for false.

1

Result Returns JSON code or error.

Description

Same as JSON.AddItemToArray, but calls JSON.CreateBoolean automatically for you.

With version 6, you can pass several parameters to add several entries to the array. When adding to a JSON reference, the function returns that reference number.

Examples

Add a boolean to object:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Set Variable [ $json; Value:MBS( "JSON.AddBooleanToObject"; $json; "test"; 1 ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

Add a value:

```
MBS( "JSON.AddBooleanToObject"; " { } "; "test"; 1 )
```

```
Example result: {
  "test": true
}
```

100.5 JSON.AddFalseToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.AddFalseToObject"; json; name)

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

name

The name of the Object property.

```
"length"
```

Result Returns JSON code.

Description

With version 6, you can pass several parameters to add several entries to the object. When adding to a JSON reference, the function returns that reference number.

Examples

Adds two entries with false to empty array:

```
MBS( "JSON.AddFalseToObject"; " { } "; "hello"; "world" )
```

```
Example result: {
"hello": false,
"world": false
}
```

Adds false to object:

```
MBS( "JSON.AddFalseToObject"; " { } "; "test" )
```

```
Example result: {
"test": false
}
```

100.6 JSON.AddItemToArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.AddItemToArray"; json; json2)

Parameters

json

A JSON text or reference.

[1,2,3]

json2

A JSON text or reference.

4

Result Returns JSON code.

Description

With version 6, you can pass several parameters to add several entries to the array. When adding to a JSON reference, the function returns that reference number.

Examples

Adds an item to array:

```
MBS( "JSON.AddItemToArray"; " [ 1,2,3 ] "; MBS("JSON.CreateNumber"; 4) )
```

Example result: [1, 2, 3, 4]

Add three items to empty array:

```
MBS( "JSON.AddItemToArray"; " [ ] "; "1"; "2"; "\"Heinz\"")
```

Example result: [1, 2, "Heinz"]

Adds an item to the array:

```
MBS( "JSON.AddItemToArray"; " [ ] "; 67 )
```

Example result: [67]

- [Proj/PROJ Library](#)

Created 18th August 2014, last changed 11st December 2016.

100.7 JSON.AddItemToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.AddItemToObject"; json; name; json2 )
```

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

name

The name of the Object property.

```
"length"
```

json2

The JSON text for the item.

```
50
```

Result Returns JSON code.

Description

With version 6, you can pass several parameters to add several entries to the object.

When adding to a JSON reference, the function returns that reference number.

Examples

Build nested objects:

```
Set Variable [ $j1; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j2; MBS( "JSON.AddStringToObject"; $j1; "name"; "" ) ]
Set Variable [ $j3; MBS( "JSON.AddStringToObject"; $j2; "record_type"; "MX" ) ]
Display Dialog [ "JSON"; $j3 ]
Set Variable [ $j4; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j5; MBS( "JSON.AddItemToObject"; $j4; "record"; $j3 ) ]
Display Dialog [ "JSON"; $j4 ]
```

Add two items to an object:

```
MBS( "JSON.AddItemToObject"; " { } "; "Values"; " [ 1,2 ] "; "Name"; " { \"FirstName\": \"Heinz\" } " )
```

```
Example result: {
  "Values": [ 1, 2 ],
  "Name": {
    "FirstName": "Heinz"
  }
}
```

Add big number:

```
MBS( "JSON.AddItemToObject"; " { } "; "test"; "12063660878882855000013426248015578834577" )
```

```
Example result: {
  "test": 12063660878882855000013426248015578834577
}
```

Create JSON with values in fields on current layout:

```
Let ( [
  // Create object as reference
  j = MBS( "JSON.CreateObjectRef" );
  // List fields in current layout
  fields = FieldNames ( get(FileName) ; get(LayoutName) );
  // how many?
  c = ValueCount ( fields );
  // make a loop to add field values
  r = While ( i = 1 ; i < c ; [ name = GetValue ( fields ; i ); r = MBS( "JSON.AddItemToObject"; j; name;
  MBS( "JSON.CreateValue"; GetField ( name ) ); i = i + 1 ] ; i );
  // format the result
  text = MBS( "JSON.Format"; j );
  // free json
  r = MBS( "JSON.Release"; j )
];
// return result as text
text )
```

```
Example result: {
  "First": "John",
  "Last": "Miller",
  "Group": "",
  "Company": "Some Ltd.",
  "ID": 12
}
```

100.8 JSON.AddNullToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.AddNullToObject"; json; name)

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

name

The name of the Object property.

"length"

Result Returns JSON code.

Description

With version 6, you can pass several parameters to add several entries to the object. When adding to a JSON reference, the function returns that reference number.

Examples

Add two null entries:

```
MBS( "JSON.AddNullToObject"; " { } "; "hello"; "test")
```

```
Example result: {
"hello": null,
"test": null
}
```

Adds a NULL value:

```
MBS( "JSON.AddNullToObject"; " { } "; "test" )
```

```
Example result: {
"test": null
}
```

100.9 JSON.AddNumberToArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.AddNumberToArray"; json; value )
```

Parameters

json

A JSON text or reference.

```
[ 1,2,3 ]
```

value

The number to be added

```
5
```

Result Returns JSON code or error.

Description

Same as JSON.AddItemToArray, but calls JSON.CreateNumber automatically for you.

With version 6, you can pass several parameters to add several entries to the array.

When adding to a JSON reference, the function returns that reference number.

Examples

Adds an item to array:

```
MBS( "JSON.AddItemToArray"; " [ 1,2,3 ] "; 4)
```

Example result: [1, 2, 3, 4]

Add 4 numbers to an array:

```
MBS( "JSON.AddNumberToArray"; " [ ] "; 1; 2; 3; 4 )
```

Example result: [1, 2, 3, 4]

Add big number:

```
MBS( "JSON.AddNumberToArray"; " [ ] "; 12063660878882855000013426248015578834577 )
```

Example result: [12063660878882855000013426248015578834577]

Use While loop to create JSON array:

```
Let ( [
// Create array object
j = MBS( "JSON.CreateArrayRef" );
// make a loop to add numbers
r = While ( $i = 0 ; $i < 10 ; [ r = MBS( "JSON.AddNumberToArray"; j; $i ); $i = $i + 1 ] ; $i );
```

```
// format the result
text = MBS( "JSON.Format"; j );
// free json
r = MBS( "JSON.Release"; j )
];
// return result as text
text )
```

100.10 JSON.AddNumberToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.AddNumberToObject"; json; name; value)

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

name

The name of the Object property.

```
"length"
```

value

The number value to add.

```
123.45
```

Result Returns JSON code.

Description

With version 6, you can pass several parameters to add several entries to the object.

When adding to a JSON reference, the function returns that reference number.

Examples

Adds two number entries to an object:

```
MBS( "JSON.AddNumberToObject"; " { } "; "hello"; 1; "test"; 5)
```

Example result: {

```
"hello": 1,
```

```
"test": 5
```

```
}
```

Adds number:

```
MBS( "JSON.AddNumberToObject"; " { } "; "test"; 123 )
```

Example result: {

```
"test": 123
```

```
}
```

Add big number:

```
MBS( "JSON.AddNumberToObject"; " { } "; "zahl"; 12063660878882855000013426248015578834577 )
```

Example result: {

```
"zahl": 12063660878882855000013426248015578834577
```

```
}
```

100.11 JSON.AddStringToArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.3	Yes	Yes	Yes	Yes	Yes

MBS("JSON.AddStringToArray"; json; value)

Parameters

json

A JSON text or reference.

["1","2"]

value

The new text.

"Hello"

Result Returns JSON code.

Description

Same as JSON.AddItemToArray, but calls JSON.CreateString automatically for you.

With version 6, you can pass several parameters to add several entries to the array.

When adding to a JSON reference, the function returns that reference number.

Examples

Adds a string to an array:

```
MBS( "JSON.AddStringToArray"; " [ \"1\", \"2\", \"3\" ] "; "4")
```

Example result: ["1", "2", "3", "4"]

Adds 4 strings to an array:

```
MBS( "JSON.AddStringToArray"; " [ ] "; "1"; "2"; "3"; "4" )
```

Example result: ["1", "2", "3", "4"]

100.12 JSON.AddStringToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.AddStringToObject"; json; name; value)

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

name

The name of the Object property.

```
"length"
```

value

The text value to add.

```
"Hello"
```

Result Returns JSON code.

Description

With version 6, you can pass several parameters to add several entries to the object.

When adding to a JSON reference, the function returns that reference number.

Examples

Create object, add content and pick value:

```
Let(
[
j = MBS( "JSON.CreateObject" );
j = MBS( "JSON.AddStringToObject"; j; "hello"; "world" );
r = MBS( "JSON.GetObjectItem"; j; "hello" )
];
r)
```

Example result: "world"

Build nested objects:

```
Set Variable [ $j1; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j2; MBS( "JSON.AddStringToObject"; $j1; "name"; "" ) ]
Set Variable [ $j3; MBS( "JSON.AddStringToObject"; $j2; "record_type"; "MX" ) ]
Display Dialog [ "JSON"; $j3 ]
Set Variable [ $j4; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j5; MBS( "JSON.AddItemToObject"; $j4; "record"; $j3 ) ]
Display Dialog [ "JSON"; $j4 ]
```

Add two entries in one call:

```
MBS( "JSON.AddStringToObject"; " { } "; "hello"; "world"; "test"; "entry")
```

```
Example result: {
"hello": "world",
"test": "entry"
}
```

Adds string to object:

```
MBS( "JSON.AddStringToObject"; " { } "; "test"; "Hello World" )
```

```
Example result: {
"test": "Hello World"
}
```

100.13 JSON.AddTrueToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.AddTrueToObject"; json; name)

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

name

The name of the Object property.

```
"length"
```

Result Returns JSON code.

Description

With version 6, you can pass several parameters to add several entries to the object. When adding to a JSON reference, the function returns that reference number.

Examples

Adds two entries with true to empty array:

```
MBS( "JSON.AddTrueToObject"; " { } "; "hello"; "world"
```

```
Example result: {
  "hello": true,
  "world": true
}
```

Adds true to object:

```
MBS( "JSON.AddTrueToObject"; " { } "; "test" )
```

```
Example result: {
  "test": true
}
```

100.14 JSON.Clone

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Clone"; JSON)

Parameters

JSON

The JSON text or reference number.

" [1,2,3] "

Result Returns reference number or error.

Description

A new reference number with a new json object or array behind and all content copied.

100.14.1 Blog Entries

- [MBS FileMaker Plugin, version 6.1pr5](#)

Created 5th March 2016, last changed 5th March 2016.

100.15 JSON.Colorize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	8.2	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Colorize"; json)

Parameters

json

A JSON text.

```
{ "key": "value" }
```

Result Returns formatted text or error.

Description

This colorizes an existing JSON text to show to user.

Keys get blue, text value purple, numbers and others orange and brackets black.

Text is returned only with colors. You can apply text font and font size with normal FileMaker functions. Processing time is linear to length, so should be faster than custom functions.

Examples

Colorize a field:

```
Set Field [ Data::JSON ; MBS("JSON.Colorize"; Data::JSON) ]
```

100.16 JSON.Compact

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Compact"; json)

Parameters

json

A JSON text or reference.

" [1,2,3] "

Result Returns JSON code.

Description

Examples

Creates compact text of JSON with spaces:

MBS("JSON.Compact"; " [1, 3, 4] ")

Example result: [1,3,4]

Compacts JSON and removes spaces:

MBS("JSON.Compact"; " [1 , 2 , 3] ")

Example result: [1,2,3]

100.17 JSON.CreateArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateArray")

Result Returns JSON code.

Description

Examples

Creates a new empty array:

```
$a = MBS("JSON.CreateArray")
```

Example result: []

See also

100.18 JSON.CreateArrayRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.CreateArrayRef" )
```

Result Returns reference number or error.

Description

Please use JSON.Release later to free the json object.

You can pass the reference number to all MBS JSON functions instead of JSON text.

Examples

Test array reference functions:

```
# create array reference
$ref = MBS( "JSON.CreateArrayRef" )
# add some numbers
$r = MBS( "JSON.AddNumberToArray"; $ref; 1; 2; 3 )
# add some texts
$r = MBS( "JSON.AddStringToArray"; $ref; "Hello"; "World" )
# get JSON text for this array:
$text = MBS( "JSON.Compact"; $ref )
# free memory
$r = MBS( "JSON.Release"; $ref )
```

Use While loop to create JSON array:

```
Let ( [
// Create array object
j = MBS( "JSON.CreateArrayRef" );
// make a loop to add numbers
r = While ( $i = 0 ; $i <10 ; [ r = MBS( "JSON.AddNumberToArray"; j; $i ); $i = $i + 1 ] ; $i );
// format the result
text = MBS( "JSON.Format"; j );
// free json
r = MBS( "JSON.Release"; j )
];
// return result as text
text )
```

Example result: [0, 1, 2, 3, 4, 5, 6, 7, 8, 9]

Create complex JSON:

```
Set Variable [ $a ; Value: MBS( "JSON.CreateArrayRef" ) ]
#
# first entry
```

```

Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "FieldType"; 11 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNullToObject"; $o; "FieldName" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $o; "Value"; "Julien" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddBooleanToObject"; $o; "EmptyMatch"; False ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToArray"; $a; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
# second entry
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "FieldType"; 23 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNullToObject"; $o; "FieldName" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $o; "Value"; "Stadel" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddBooleanToObject"; $o; "EmptyMatch"; False ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToArray"; $a; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
# surrounding object
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $o; "Data"; $a ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "Id"; 123 ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $a ) ]
#
# put in final object
Set Variable [ $j ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $j; "Address"; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
Set Field [ JSON::JSON ; MBS("JSON.Colorize"; MBS("JSON.Format"; $j)) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $j ) ]

```

100.19 JSON.CreateBool

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateBool"; value)

Parameters

value

The boolean value.

1

Result Returns JSON code.

Description

Examples

Creates true node:

```
MBS( "JSON.CreateBool"; 1 )
```

Example result: true

Creates false node:

```
MBS( "JSON.CreateBool"; 0 )
```

Example result: false

See also

Created 18th August 2014, last changed 11st December 2016.

100.20 JSON.CreateBoolean

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateBoolean"; Value)

Parameters

Value

The boolean value. Pass 1 for true and 0 for false.

1

Result Returns JSON or error.

Description

As we pass JSON in JSON around, you can simply write "false" directly instead of calling one of this functions.

Examples

Create a boolean with an expression:

```
Set Variable [ $json; Value:MBS( "JSON.CreateBoolean"; Length($text) >0 ) ]
```

Example result: true

See also

- 100.4 JSON.AddBooleanToObject 5238

100.21 JSON.CreateDoubleArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateDoubleArray" { ; values })

Parameters

values

Optional

Optional parameters for the array values. Pass one parameter per item to be added to the array.

1

Result Returns JSON code.

Description

This is for creating an array with floating point numbers.
For integer numbers, please use JSON.CreateIntegerArray.

Examples

Creates number array:

```
MBS( "JSON.CreateDoubleArray"; 1; 2; 3)
```

Example result: [1, 2, 3]

See also

- 100.23 JSON.CreateIntegerArray 5272

100.22 JSON.CreateFalse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateFalse")

Result Returns JSON code.

Description

As we pass JSON in JSON around, you can simply write "false" directly instead of calling one of this functions.

Examples

Creates false:

MBS("JSON.CreateFalse")

Example result: false

See also

- 100.24 JSON.CreateNull 5273

100.23 JSON.CreateIntegerArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.CreateIntegerArray" { ; values } )
```

Parameters

values

Optional

Optional parameters for the array values. Pass one parameter per item to be added to the array.

1

Result Returns JSON code.

Description

For floating point numbers, please use `JSON.CreateDoubleArray`.

Examples

Creates number array:

```
MBS( "JSON.CreateIntegerArray"; 1; 2; 3)
```

Example result: [1, 2, 3]

Adds an item to the object with an integer array:

```
MBS( "JSON.AddItemToObject"; " { } "; "test"; MBS( "JSON.CreateIntegerArray"; 1; 2; 3 ) )
```

Example result: {

```
"test": [ 1, 2, 3 ]
```

```
}
```

100.24 JSON.CreateNull

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateNull")

Result Returns JSON code which is "null" text.

Description

As we pass JSON in JSON around, you can simply write "null" directly instead of calling one of this functions.

Examples

Creates NULL node:

```
MBS("JSON.CreateNull")
```

Example result: null

See also

100.25 JSON.CreateNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateNumber"; value)

Parameters

value

The number value.

123.4

Result Returns JSON code.

Description

Version 10.0 or newer preserve formatting if you pass a text with a number containing digits with optionally one dot and one minus.

Examples

Creates a number:

```
MBS( "JSON.CreateNumber"; 123 )
```

Example result: 123

Create big number:

```
MBS( "JSON.CreateNumber"; 12063660878882855000013426248015578834577 )
```

Pass through vs. number parsing:

```
MBS( "JSON.CreateNumber"; "123.5" ) & §& MBS( "JSON.CreateNumber"; 123,5 )
// in German with comma as separator second one is parsed as double precision value.
```

Example result: 123.5

123.500000

100.26 JSON.CreateObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateObject")

Result Returns JSON code.

Description

Examples

Creates empty object:

```
MBS( "JSON.CreateObject" )
```

Example result: { }

Build nested objects:

```
Set Variable [ $j1; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j2; MBS( "JSON.AddStringToObject"; $j1; "name"; "" ) ]
Set Variable [ $j3; MBS( "JSON.AddStringToObject"; $j2; "record_type"; "MX" ) ]
Display Dialog [ "JSON"; $j3 ]
Set Variable [ $j4; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j5; MBS( "JSON.AddItemToObject"; $j4; "record"; $j3 ) ]
Display Dialog [ "JSON"; $j4 ]
```

100.26.1 **Blog Entries**

- [Generate JSON with MBS Plugin](#)

Created 18th August 2014, last changed 11st December 2016.

100.27 JSON.CreateObjectRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.CreateObjectRef" )
```

Result Returns reference number or error.

Description

Please use JSON.Release later to free the json object.

You can pass the reference number to all MBS JSON functions instead of JSON text.

Examples

Try object reference functions:

```
# create object reference
$ref = MBS( "JSON.CreateObjectRef" )
# add some texts
$r = MBS("JSON.AddStringToObject"; $ref; "FirstName"; "Joe"; "LastName"; "Miller")
# add some number
$r = MBS("JSON.AddNumberToObject"; $ref; "Age"; 50)
# add a true value:
$r = MBS( "JSON.AddTrueToObject"; $ref; "married" )
# get the text
$text = MBS( "JSON.Format"; $ref)
# free memory
$r = MBS( "JSON.release"; $ref)
```

Create JSON with values in fields on current layout:

```
Let ( [
// Create object as reference
j = MBS( "JSON.CreateObjectRef" );
// List fields in current layout
fields = FieldNames ( get(FileName) ; get(LayoutName) );
// how many?
c = ValueCount ( fields );
// make a loop to add field values
r = While ( i = 1 ; i < c ; [ name = GetValue ( fields ; i ); r = MBS( "JSON.AddItemToObject"; j; name;
MBS( "JSON.CreateValue"; GetField ( name ) ); i = i + 1 ] ; i );
// format the result
text = MBS( "JSON.Format"; j );
// free json
r = MBS( "JSON.Release"; j )
];
// return result as text
text )
```

```
Example result: {
  "First": "John",
  "Last": "Miller",
  "Group": "",
  "Company": "Some Ltd.",
  "ID": 12
}
```

Create complex JSON:

```
Set Variable [ $a ; Value: MBS( "JSON.CreateArrayRef" ) ]
#
# first entry
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "FieldType"; 11 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNullToObject"; $o; "FieldName" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $o; "Value"; "Julien" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddBooleanToObject"; $o; "EmptyMatch"; False ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToArray"; $a; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
# second entry
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "FieldType"; 23 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNullToObject"; $o; "FieldName" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $o; "Value"; "Stadel" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddBooleanToObject"; $o; "EmptyMatch"; False ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToArray"; $a; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
# surrounding object
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $o; "Data"; $a ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "Id"; 123 ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $a ) ]
#
# put in final object
Set Variable [ $j ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $j; "Address"; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
Set Field [ JSON::JSON ; MBS("JSON.Colorize"; MBS("JSON.Format"; $j)) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $j ) ]
```

```
Example result: {
  "Address": {
    "Data": [
      {
```

```

"FieldType": 11,
"FieldName": null,
"Value": "Julien",
"EmptyMatch": false
},
{
"FieldType": 23,
"FieldName": null,
"Value": "Stadel",
"EmptyMatch": false
}
],
"Id": 123
}
}

```

100.28 JSON.CreateString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateString"; Text)

Parameters

Text

The text to use.

"Hello World"

Result Returns JSON code.

Description

The text is escaped.

Examples

Creates new text node:

MBS("JSON.CreateString"; "Hello World")

Example result: "Hello World"

100.29 JSON.CreateStringArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateStringArray" { ; values })

Parameters

values

Optional

Optional parameters for the array values. Pass one parameter per item to be added to the array.
"Hello"

Result Returns JSON code.

Description

Examples

Creates string array:

MBS("JSON.CreateStringArray"; "Hello"; "World")

Example result: ["Hello", "World"]

See also

100.30 JSON.CreateStringArrayWithList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.1	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateStringArrayWithList"; valueList)

Parameters**valueList**

List of values separated by return character.

"Hello\$World"

Result Returns JSON code or error.

Description**Examples**

Create a list:

MBS("JSON.CreateStringArrayWithList"; "Hello\$World\$Test")

100.31 JSON.CreateTrue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateTrue")

Result Returns JSON code.

Description

As we pass JSON in JSON around, you can simply write "true" directly instead of calling one of this functions.

Examples

Creates false:

```
MBS( "JSON.CreateTrue"
```

Example result: true

100.32 JSON.CreateValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	9.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.CreateValue"; Value)

Parameters

Value

The value to pass. Can be number, date, time, timestamp or text.

"Hello"

Result Returns JSON or error.

Description

Convenience function to either create text or number depending on FileMaker data type.

Examples

Create with number:

MBS("JSON.CreateValue"; 123)

Example result: 123

Create with string:

MBS("JSON.CreateValue"; "Hello" & §& "World" & char(9) & "test")

Example result: "Hello\rWorld\ttest"

100.33 JSON.DeleteItemFromArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.DeleteItemFromArray"; json; index)

Parameters

json

A JSON text or reference.

[1,2,3]

index

The zero based index of the value.

1

Result Returns JSON code.

Description

Returns the JSON reference number if called with reference number. Otherwise returns new JSON text.

Examples

Create array with numbers and delete last entry:

```
Let(
[
j = MBS( "JSON.CreateDoubleArray"; 1; 2; 3);
r = MBS( "JSON.DeleteItemFromArray"; j; MBS( "JSON.GetArraySize"; j )-1 )
];
r)
```

100.34 JSON.DeleteItemFromObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.DeleteItemFromObject"; json; name)

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

name

The name of the item.

```
"key"
```

Result Returns JSON code.

Description

Returns the JSON reference number if called with reference number. Otherwise returns new JSON text.

Examples

Add and delete item:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Set Variable [ $r; Value:MBS( "JSON.AddBooleanToObject"; $json; "test"; 1 ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.DeleteItemFromObject"; $json; "test" ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

100.35 JSON.EqualContent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	10.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.EqualContent"; json1; json2)

Parameters

json1

A JSON text or reference.

```
{ "key": "value" }
```

json2

A JSON text or reference.

```
{ "key": "value" }
```

Result Returns 1, 0 or error.

Description

We compare recursively all nodes.

If structure and values are the same, we return 1, otherwise 0.

Objects do not need to have same order for entries.

While JSON.Equals checks the type, this function does check the content.

Examples

Compare 123 with text to it as number:

```
MBS( "JSON.EqualContent"; "\"123\""; "123")
```

Example result: 1

See also

- [100.36 JSON.Equals](#)

100.36 JSON.Equals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	9.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Equals"; json1; json2)

Parameters

json1

A JSON text or reference.

```
{ "key": "value" }
```

json2

A JSON text or reference.

```
{ "key": "value" }
```

Result Returns 1, 0 or error.

Description

We compare recursively all nodes.

If structure and values are the same, we return 1, otherwise 0.

Objects do not need to have same order for entries.

Examples

Compare two numbers:

```
MBS( "JSON.Equals"; 1; 1 )
```

Example result: 1

Comparing strings:

```
MBS( "JSON.Equals"; "\"Hello\""; "\"World\"" ) &
MBS( "JSON.Equals"; "\"Hello\""; "\"Hello\"" )
```

Example result: 01

Comparing booleans:

```
MBS( "JSON.Equals"; true; true ) &
MBS( "JSON.Equals"; false; false ) &
MBS( "JSON.Equals"; true; false ) &
MBS( "JSON.Equals"; false; true )
```

Example result: 1100

Compare objects:

```
MBS( "JSON.Equals"; " { \"key\": \"value\" } "; " { \"key\": \"value\" } " ) & MBS( "JSON.Equals"; "
{ \"key\": \"value\" } "; " { \"key\": \"Value\" } " )
```

5290

100.37 JSON.FindValueInArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	9.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.FindValueInArray"; json; find { ; byContent })

Parameters**json**

A JSON text or reference.

```
{ "key": "value" }
```

find

A JSON text or reference to find.

```
{ "key": "value" }
```

byContent

Optional

Compare JSON by content, so number can be found via text. Default is 0, so type counts first.

1

Result Returns index or error.

Description

Returns zero based index or -1 if not found.

Version 10.0 or newer finds optionally by content, so number can be found via text.

Examples

Find value in an array of numbers:

```
MBS( "JSON.FindValueInArray"; " [ 5,6,7,1,4,3,7 ] "; 3)
```

Example result: 5

Find text:

```
MBS( "JSON.FindValueInArray"; " [ \"Hello\", \"World\", \"Test\" ] "; "\"World\"")
```

Example result: 1

Find objects:

```
MBS( "JSON.FindValueInArray"; " [ { \"Hello\":123 } , { \"World\":234 } , { \"Test\":345 } ] "; " { \"World\":234 } ")
```

Example result: 1

100.38 JSON.FindValueInObjectArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	9.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.FindValueInObjectArray"; json; Label; find { ; byContent })

Parameters

json

A JSON text or reference.

" [{ \"key\": 1 }] "

Label

The label for the value in the object to compare.

"key"

find

A JSON text or reference to find.

1

byContent

Optional

Compare JSON by content, so number can be found via text. Default is 0, so type counts first.

1

Result Returns index or error.

Description

Returns zero based index or -1 if not found.

We look into each object in the array, check if it has a value for the given label and compare that to the one to find.

Version 10.0 or newer finds optionally by content, so number can be found via text.

Examples

Find item:

MBS("JSON.FindValueInObjectArray"; " [{ \"key\": 1 }] "; "key"; 1)

Example result: 0

100.39 JSON.Format

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.4	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Format"; json)

Parameters

json

A JSON text or reference.

" [1,2,3] "

Result Returns JSON code.

Description

Examples

Format some object:

```
Set Variable [ $json; Value:MBS( "JSON.Format"; " { \"Hello\": \"World\" } " ) ]
Show Custom Dialog [ $json ]
```

Parse some JSON, display it formatted and release:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

100.40 JSON.GetArrayItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetArrayItem"; json; index { ; AsReference })

Parameters

json

A JSON text or reference.

" [1,2,3] "

index

The index of the array element.

0

AsReference

Optional

Whether to return a reference number (1) instead of the JSON text (0). Default is 0 for JSON text.

0

Result Returns JSON code.

Description

Index is zero based.

Examples

Create array and pick second item:

```
Let(
[
j = MBS( "JSON.CreateDoubleArray"; 1; 2; 3);
r = MBS( "JSON.GetArrayItem"; j; 1 )
];
r)
```

100.41 JSON.GetArrayItemsAsList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.2	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetArrayItemsAsList"; json { ; ReturnValues } )
```

Parameters

json

A JSON text or reference.

```
" [ 1,2,3 ] "
```

ReturnValues

Optional

Available in MBS FileMaker Plugin 8.1 or newer.

Pass 1 to return values instead of keeping strings in quotes.

1

Result Returns list or error.

Description

Intended for arrays containing text or numbers.

Broken in version 6.0. Please use 6.1. Version 6.5 and newer doesn't add an extra newline any more.

Examples

Query a list from JSON array:

```
MBS( "JSON.GetArrayItemsAsList"; " [ 1,2,3 ] " )
```

Now a list of strings:

```
MBS( "JSON.GetArrayItemsAsList"; " [ \"Hello\", \"World\", \"Test\" ] " )
```

Now an array with objects:

```
MBS( "JSON.GetArrayItemsAsList"; " [ \"Hello\", \"World\", { \"Hello\": \"test\" } ] " )
```

100.42 JSON.GetArrayPathItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	7.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetArrayPathItems"; json; Path { ; AsValue } )
```

Parameters

json

A JSON text or reference.

```
" { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "
```

Path

The path through the json hierarchy as list. For object, pass name of item to choose. For array pass index.
"people\$0\$last"

AsValue

Optional

Pass 1 to return as value, e.g. text or number. Pass 0 (or nothing) to return as JSON.

Result Returns OK or error.

Description

The path describes the way through the hierarchy to find the JSON node to return.

Result can be JSON or the value.

Examples

Query all test values in objects in array:

```
MBS("JSON.GetArrayPathItems"; JSON Test::JSON; "test")
```

Lookup items in array:

```
MBS( "JSON.GetArrayPathItems"; " [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } , { \"first\": \"Peter\", \"last\": \"Miller\", \"city\": \"New York\" } ] "; "first"; 0 )
```

Example result: "Christian"

"Peter"

Lookup item values in array:

```
MBS( "JSON.GetArrayPathItems"; " [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } , { \"first\": \"Peter\", \"last\": \"Miller\", \"city\": \"New York\" } ] "; "first"; 1 )
```

Example result: Christian

Peter

100.43 JSON.GetArraySize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetArraySize"; json)

Parameters

json

A JSON text or reference.

" [1,2,3] "

Result Returns number of array entries.

Description

Examples

Checks number of array elements:

MBS("JSON.GetArraySize"; " [1, 2, 3, 4] ")

100.44 JSON.GetDoubleValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetDoubleValue"; json)

Parameters

json

A JSON text or reference.

"3.4"

Result Returns the value.

Description

Examples

Queries double value:

MBS("JSON.GetDoubleValue"; "3.4")

See also

- 100.55 JSON.GetValue

5320

Created 18th August 2014, last changed 3th February 2016.

100.45 JSON.GetIntegerValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetIntegerValue"; json)

Parameters

json

A JSON text or reference.

" [1,2,3] "

Result Returns the value.

Description

Examples

Queries integer value:

MBS("JSON.GetIntegerValue"; "3")

Created 18th August 2014, last changed 3th February 2016.

100.46 JSON.GetObjectItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetObjectItem"; json; name { ; AsReference } )
```

Parameters

json

A JSON text or reference.

```
" [ 1,2,3 ] "
```

name

The name of the key to query.

```
"test"
```

AsReference

Optional

Whether to return a reference number (1) instead of the JSON text (0). Default is 0 for JSON text.

```
0
```

Result Returns JSON code.

Description

You still need functions like `JSON.GetStringValue` to get back the decoded string.

Examples

Create object, add content and pick value:

```
Let(
[
j = MBS( "JSON.CreateObject" );
j = MBS( "JSON.AddStringToObject"; j; "hello"; "world" );
r = MBS( "JSON.GetObjectItem"; j; "hello" )
];
r)
```

Pick a text from a JSON dictionary:

```
set $json to " { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } "
set $first to MBS("JSON.GetObjectItem"; $json; "first")
set $firstText to MBS("JSON.GetStringValue"; $first)
display dialog $firstText
```

Extract error details from JSON:

```
# JSON in field:
# {
# "error": {
```

```

# "message": "Your card's expiration year is invalid.",
# "type": "card_error",
# "param": "exp_year",
# "code": "invalid_expiry_year"
# }
# }
# get it in variable
Set Variable [ $json; Value:test::input ]
# pick error node
Set Variable [ $error; Value:MBS("JSON.GetObjectItem"; $json; "error") ]
If [ $error = "" ]
Show Custom Dialog [ "No error"; "No error node in the JSON." ]
Else
# get message node
Set Variable [ $message; Value:MBS("JSON.GetObjectItem"; $error; "message") ]
# decode text
Set Variable [ $messageText; Value:MBS("JSON.GetStringValue"; $message) ]
# get code node
Set Variable [ $code; Value:MBS("JSON.GetObjectItem"; $error; "code") ]
# decode text
Set Variable [ $codeText; Value:MBS("JSON.GetStringValue"; $code) ]
# show result
Show Custom Dialog [ "Got error"; "Message: " & $messageText & §& "Code: " & $codeText ]
End If

```

100.47 JSON.GetObjectItemTree

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	3.2	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetObjectItemTree"; json; names)

Parameters

json

A JSON text or reference.

" [1,2,3] "

names

The names for keys to query. Pass several parameters to go down an object tree. For arrays you can pass index.

"test"

Result Returns JSON or error.

Description

You still need functions like JSON.GetStringValue to get back the decoded string.

Works also for arrays where you pass in index.

Examples

Query properties object and inside it the lastname object and there the value property:

```
MBS("JSON.GetObjectItemTree"; JSON Test::JSON; "properties"; "lastname"; "value")
```

Look into object tree, pick addresses, first address, than value and there the content of street:

```
MBS("JSON.GetStringValue"; MBS( "JSON.GetObjectItemTree"; test::JSON ; "addresses"; 0; "value"; "streetAddress" ))
```

100.48 JSON.GetObjectItemTreeRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetObjectItemTreeRef"; json; names)

Parameters

json

A JSON text or reference.

" [1,2,3] "

names

The names for keys to query. Pass several parameters to go down an object tree. For arrays you can pass index.

"test"

Result Returns reference number or error.

Description

You still need functions like JSON.GetStringValue to get back the decoded string.

Works also for arrays where you pass in index.

Same as JSON.GetObjectItemTree, but returns reference number.

See also

100.49 JSON.GetObjectName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetObjectName"; json; index)

Parameters

json

A JSON text or reference.

" { \"a\": \"b\", \"c\": \"d\" } "

index

The index of the item to get the name from. From 0 to JSON.GetObjectSize-1.

0

Result Returns name of item.

Description

Examples

Gets first object item's name:

MBS("JSON.GetObjectName"; " { \"a\": \"b\", \"c\": \"d\" } "; 0)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetObjectNameList"; json )
```

Parameters

json

A JSON text or reference.

```
" { \"a\": \"b\", \"c\": \"d\" } "
```

Result Returns name of items as list.

Description

Examples

Gets first object item's name:

```
MBS( "JSON.GetObjectNameList"; " { \"a\": \"b\", \"c\": \"d\" } " )
// return a and b as list.
```

100.51 JSON.GetObjectSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetObjectSize"; json)

Parameters

json

A JSON text or reference.

" { \"a\": \"b\", \"c\": \"d\" } "

Result Returns number of object entries.

Description

Examples

Checks number of object elements:

MBS("JSON.GetObjectSize"; " { \"a\": \"b\", \"c\": \"d\" } ")

Example result: 2

100.52 JSON.GetPathItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetPathItem"; json; Path { ; Flags } )
```

Parameters

json

A JSON text or reference.

```
" { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "
```

Path

The path through the json hierarchy as list. For object, pass name of item to choose. For array pass index. "people\$0\$last"

Flags

Optional

Pass 1 to return as value, e.g. text or number. Pass 0 (or nothing) to return as JSON.

Add 2 to return empty in case of error, e.g. value not existing. (new in 7.5)

Result Returns value or error.

Description

The path describes the way through the hierarchy to find the JSON node to return.

Result can be JSON or the value.

If path ends with # in an array, we return number of elements.

Examples

Query people ->first entry:

```
MBS( "JSON.GetPathItem"; " { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "; "people$0")
```

Query people ->first entry ->last name:

```
MBS( "JSON.GetPathItem"; " { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "; "people$0$last")
```

Query people:

```
MBS( "JSON.GetPathItem"; " { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "; "people")
```

Query IP via ipinfo.io:

Go to Layout ["Table"]

New Record/Request

```

# Start new session
Set Variable [ $curl; Value:MBS("CURL.New") ]
# Set URL to load (HTTP, HTTPS, FTP, FTPS, SFTP, etc.)
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "http://ipinfo.io") ]
# RUN now
Set Variable [ $result; Value:MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ Table::DebugLog; MBS("CURL.GetDebugAsText"; $curl) ]
Set Field [ Table::Result; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
If [ $result = "OK" ]
# Check HTTP error code
Set Variable [ $response; Value:MBS("CURL.GetResponseCode"; $curl) ]
If [ $response = 200 ]
# Query values from JSON
Set Variable [ $json; Value:MBS( "JSON.Parse"; Table::Result ) ]
Set Field [ Table::IP; MBS("JSON.GetPathItem"; $json; "ip"; 1) ]
Set Field [ Table::Hostname; MBS("JSON.GetPathItem"; $json; "hostname"; 1) ]
Set Field [ Table::City; MBS("JSON.GetPathItem"; $json; "city"; 1) ]
Set Field [ Table::Region; MBS("JSON.GetPathItem"; $json; "region"; 1) ]
Set Field [ Table::Country; MBS("JSON.GetPathItem"; $json; "country"; 1) ]
Set Field [ Table::Location; MBS("JSON.GetPathItem"; $json; "loc"; 1) ]
Set Field [ Table::Company or Provider; MBS("JSON.GetPathItem"; $json; "org"; 1) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json ) ]
End If
End If
# Cleanup
Set Variable [ $result; Value:MBS("CURL.Cleanup"; $curl) ]
Commit Records/Requests [ No dialog ]

```

Query number of entries in array:

```
MBS( "JSON.GetPathItem"; " { \"IDs\": [ 1,5,8,2,5 ] } "; "IDs$# ")
```

Example result: 5

100.53 JSON.GetStringValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetStringValue"; json )
```

Parameters

json

A JSON text or reference.

" [1,2,3] "

Result Returns text.

Description

Examples

Get string value:

```
MBS( "JSON.GetStringValue"; "\"Hello\rjust a test\"" )
```

Example result: Hello

just a test

Extract error details from JSON:

```
# JSON in field:
# {
# "error": {
# "message": "Your card's expiration year is invalid.",
# "type": "card_error",
# "param": "exp_year",
# "code": "invalid_expiry_year"
# }
# }
# get it in variable
Set Variable [ $json; Value:test::input ]
# pick error node
Set Variable [ $error; Value:MBS("JSON.GetObjectItem"; $json; "error") ]
If [ $error = "" ]
Show Custom Dialog [ "No error"; "No error node in the JSON." ]
Else
# get message node
Set Variable [ $message; Value:MBS("JSON.GetObjectItem"; $error; "message") ]
# decode text
Set Variable [ $messageText; Value:MBS("JSON.GetStringValue"; $message) ]
# get code node
Set Variable [ $code; Value:MBS("JSON.GetObjectItem"; $error; "code") ]
# decode text
```

```
Set Variable [ $codeText; Value:MBS("JSON.GetStringValue"; $code) ]
# show result
Show Custom Dialog [ "Got error"; "Message: " & $messageText & $& "Code: " & $codeText ]
End If
```

Decode string with unicode text:

```
MBS( "JSON.GetStringValue"; "\"Hello \u00e4\"" )
```

100.54 JSON.GetType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetType"; json)

Parameters

json

A JSON text or reference.

" [1,2,3] "

Result Returns type: false, true, null, string, array, object or number.

Description

Examples

Creates array and queries type:

MBS("JSON.GetType"; MBS("JSON.CreateDoubleArray"; 1; 2; 3))

Example result: array

Query type of value:

MBS("JSON.GetType"; 123)

Example result: number

Query type of value:

MBS("JSON.GetType"; " [] ")

Example result: array

See also

- 100.21 JSON.CreateDoubleArray

Created 18th August 2014, last changed 11st December 2016.

100.55 JSON.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS("JSON.GetValue"; json)

Parameters

json

A JSON text or reference.

"1.3"

Result Returns value or error.

Description

This is same as using JSON.GetDoubleValue or JSON.GetStringValue, but automatically detect type.

For boolean value return 0 or 1.

For object or array returns JSON text.

Numbers are returned as numbers.

Examples

Returns 5 for a numeric value:

MBS("JSON.GetValue"; "5")

Example result: 5

Returns text:

MBS("JSON.GetValue"; "\"Test JSON\"")

Example result: Test JSON

Returns 1 for boolean:

MBS("JSON.GetValue"; "true")

Example result: 1

100.56 JSON.Import

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	5.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.Import"; JSON; InsertFileName { ; TableNamePrefix } )
```

Parameters

JSON

The JSON data to import. Please pass text, not reference numbers.

InsertFileName

The file name of where the insert table is inside. Can be empty.

Get(FileName)

TableNamePrefix

Optional

The prefix to put in front of all tables.

"Import"

Result Returns number or error.

Description

This function can import any JSON into FileMaker tables with all fields and attributes.

Returns number of records to be added. This function prefers the import and runs it later at idle time. In a script please call JSON.Import and then loop and do script pauses. Then use JSON.Import.Status to check regularly for updates. When you get back Finished as status, the script can continue with other work.

If you have a JSON file you need to import regularly into FileMaker and you have no XSLT to transform it for FileMaker, you can use this plugin function. On the first run, it creates for a sample JSON file the required tables and fields. Then you can define any layout or script to process values, e.g. copy into your tables. On further runs the plugin may add more fields (if newer JSON file has more fields) and import newer records.

All tables have three default fields. `_RecordUUID` is a unique identifier for the record. `_ParentRecordUUID` provides a link to the record one level higher in the JSON. This can be used to find child/parent records. The `_CreationTimeStamp` is the creation date, so you can distinguish different imports.

As a lot of records with a lot of data is imported and you may not need everything, you may want to put the imports in an extra FileMaker file. You decide if you clear tables before import or you want to keep history of all imports.

If the JSON has errors like a missing `<` in the JSON, you get an error. If you switch on IgnoreError parameter, the plugin reads everything until the error is reached which may give less records than possible.

This function works at idle time which is currently (FM 14) not supported on server.

Requires FileMaker 12 or newer.

On Server, please add a loop calling JSON.Import.Work to make progress.

See also XML.Import.SetBaseFields and XML.Import.SetExtraField.

Examples

Imports test.json into FileMaker:

```
Set Variable [ $text; Value:MBS("Text.ReadTextFile"; "/Users/cs/Desktop/test.json"; "UTF-8") ]
Set Variable [ $r; Value:MBS("JSON.Import"; $text; ""; "") ]
Set Variable [ $text; Value:"" ]
If [ MBS("IsError") = 0 ]
Set Variable [ $total; Value:MBS("JSON.Import.Total") ]
Loop
Set Variable [ $todo; Value:MBS("JSON.Import.TODO") ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $s; Value:MBS("JSON.Import.Status") ]
Exit Loop If [ $s "Working" ]
End Loop
Show Custom Dialog [ "JSON Import"; $r & " " & $s ]
End If
```

Import script with progress bar for importing JSON with Windows ANSI encoding:

```
Go to Layout [ "JSON Import" (Import2Row) ]
Delete All Records [ No dialog ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetBottomText"; "") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetTopText"; "Importiere JSON") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetTitle"; "Import...") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetButtonCaption"; "Abbrechen") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetProgress"; -1) ]
Set Variable [ $r; Value:MBS("ProgressDialog.Show") ]
Pause/Resume Script [ Duration (seconds): ,1 ]
Set Variable [ $text; Value:MBS("Text.ReadTextFile"; "/Users/cs/Desktop/test.JSON"; "Windows") ]
Set Variable [ $r; Value:MBS("JSON.Import"; $text; ""; "Import2") ]
Set Variable [ $text; Value:"" ]
If [ MBS("IsError") = 0 ]
Set Variable [ $total; Value:MBS("JSON.Import.Total") ]
Loop
Set Variable [ $todo; Value:MBS("JSON.Import.TODO") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetProgress"; ($total - $todo) * 100 / $total) ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetBottomText"; "Schritt " & ($total - $todo) & " von " & $total) ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $s; Value:MBS("JSON.Import.Status") ]
Exit Loop If [ $s "Working" ]
If [ MBS("ProgressDialog.GetCancel") = 1 ]
Set Variable [ $r; Value:MBS("ProgressDialog.Hide") ]
```

```

Set Variable [ $r; Value:MBS("JSON.Import.Cancel") ]
Exit Script [ ]
End If
End Loop
Set Variable [ $r; Value:MBS("ProgressDialog.Hide") ]
Show Custom Dialog [ "JSON Import"; $r & " " & $s ]
End If
Set Variable [ $r; Value:MBS("ProgressDialog.Hide") ]

```

Created 26th October 2015, last changed 26th October 2015.

100.58 JSON.Import.ErrorCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	9.3	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Import.ErrorCount")

Result Returns number or error.

Description

Should be zero if we had no errors while importing.

See also

- [100.59 JSON.Import.Errors](#) 5327
- [191.14 XML.Import.ErrorCount](#) 9278

100.58.1 Blog Entries

100.59 JSON.Import.Errors

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	9.3	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Import.Errors")

Result Returns list or error.

Description

We remove duplicates, so you may not see all errors.

See also

- 100.58 JSON.Import.ErrorCount 5326
- 100.60 JSON.Import.Status 5328

100.60 JSON.Import.Status

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	5.4	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Import.Status")

Result Returns status value.

Description

Returns Working, Finished or Unknown depending of the state.

So before first import, it is unknown. Than with first import it switches to working. Now when it's ready, you get back Finished.

Created 26th October 2015, last changed 26th October 2015.

100.61 JSON.Import.TODO

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	5.4	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Import.TODO" { ; Selector })

Parameters

Selector

Optional

Which value to return. By default we return number of records to create. You can pass here "Tables" to get number of tables, "Fields" to get number of fields or "Records" to get number of records.

Result Returns number.

- 100.63 JSON.Import.Work 5331
- 191.20 XML.Import.Total 9284

Example Databases

- [JSON/JSON Import](#)

Created 26th October 2015, last changed 26th October 2015.

100.63 JSON.Import.Work

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	5.4	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Import.Work")

Result Returns OK or error.

Description

Normally we do import on idle while a script pause. But on server this does not work.

You can call this method in a loop to do the inserts for the import.

But it will not create the tables and fields required for import.

100.64 JSON.IsValid

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.3	Yes	Yes	Yes	Yes	Yes

MBS("JSON.IsValid"; JSON)

Parameters

JSON

The JSON text to parse.

" [1,2,3] "

Result Returns 1, 0 or error.

Description

This parses the JSON text and returns 1 on success or 0 on failure.

Examples

Checks validity:

MBS("JSON.IsValid"; " [1,2,3] ")

Example result: 1

Checks with error:

MBS("JSON.IsValid"; " [1,hello,3] ")

Example result: 0

100.65 JSON.Parse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Parse"; JSON)

Parameters

JSON

The JSON text to parse.

" [1,2,3] "

Result Returns reference number or error.

Description

Please use JSON.Release later to free the json object.

You can pass the reference number to all MBS JSON functions instead of JSON text.

Examples

Parse an array:

```
# parse some json
$ref = MBS( "JSON.Parse"; " [ 1,2,3 ] " )
# query array size:
MBS( "JSON.GetArraySize"; $ref)
# free memory
MBS( "JSON.Release"; $ref)
```

Parse some JSON, display it formatted and release:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

Query IP via ipinfo.io:

```
Go to Layout [ "Table" ]
New Record/Request
# Start new session
Set Variable [ $curl; Value:MBS("CURL.New") ]
# Set URL to load (HTTP, HTTPS, FTP, FTPS, SFTP, etc.)
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "http://ipinfo.io") ]
# RUN now
Set Variable [ $result; Value:MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ Table::DebugLog; MBS("CURL.GetDebugAsText"; $curl) ]
Set Field [ Table::Result; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
If [ $result = "OK" ]
```

```

# Check HTTP error code
Set Variable [ $response; Value:MBS("CURL.GetResponseCode"; $curl) ]
If [ $response = 200 ]
# Query values from JSON
Set Variable [ $json; Value:MBS( "JSON.Parse"; Table::Result ) ]
Set Field [ Table::IP; MBS("JSON.GetPathItem"; $json; "ip"; 1) ]
Set Field [ Table::Hostname; MBS("JSON.GetPathItem"; $json; "hostname"; 1) ]
Set Field [ Table::City; MBS("JSON.GetPathItem"; $json; "city"; 1) ]
Set Field [ Table::Region; MBS("JSON.GetPathItem"; $json; "region"; 1) ]
Set Field [ Table::Country; MBS("JSON.GetPathItem"; $json; "country"; 1) ]
Set Field [ Table::Location; MBS("JSON.GetPathItem"; $json; "loc"; 1) ]
Set Field [ Table::Company or Provider; MBS("JSON.GetPathItem"; $json; "org"; 1) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json ) ]
End If
End If
# Cleanup
Set Variable [ $result; Value:MBS("CURL.Cleanup"; $curl) ]
Commit Records/Requests [ No dialog ]

```

100.66 JSON.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Release"; JSONRef)

Parameters

JSONRef

The JSON reference number.

\$json

Result Returns OK or error.

Description

Examples

Parse some JSON, display it formatted and release:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

100.67 JSON.ReleaseAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS("JSON.ReleaseAll")

Result Returns OK or error.

Description

After this call all reference numbers are invalid.

This is useful if you start a script which creates dozens of JSON reference numbers and you don't want to keep track of those IDs.

Be aware that on a server this may free objects, which are used by other scripts running in parallel!

Examples

Release all JSON objects:

```
Set Variable [ $r; Value:MBS( "JSON.ReleaseAll" ) ]
```

100.68 JSON.ReplaceItemInArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.3	Yes	Yes	Yes	Yes	Yes

MBS("JSON.ReplaceItemInArray"; json; index; json2)

Parameters**json**

A JSON text or reference.

" [1,2,3,4] "

index

The index of the array item.

2

json2

The new json item for the array.

5

Result Returns JSON code.

Description**Examples**

Replace a value in array:

MBS("JSON.ReplaceItemInArray"; " [1,2,3,4] "; 2; "5")

Example result: [1, 2, 5, 4]

100.69 JSON.ReplaceItemInObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	4.3	Yes	Yes	Yes	Yes	Yes

MBS("JSON.ReplaceItemInObject"; json; name; json2)

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

name

The name of the Object property.

```
"key"
```

json2

The JSON text for the item.

```
"Hello"
```

Result Returns JSON code.

Description

Examples

Replace key with new Value:

```
MBS( "JSON.ReplaceItemInObject"; " { \"key\": \"value\" } "; "key"; "\"Hello\"" )
```

Example result: {

```
"key": "Hello"
```

```
}
```

100.70 JSON.SetPathItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS("JSON.SetPathItem"; json; Path; Value)

Parameters

json

A JSON text or reference.

" [1,2,3] "

Path

The path through the json hierarchy as list. For object, pass name of item to choose. For array pass index. For last array you can use special value "append" to add an entry.

"people\$0\$last"

Value

The new value as JSON.

"\"Hello\""

Result Returns JSON or error.

Description

The path describes the way through the hierarchy to find the JSON node to return.

Please pass in new value as JSON.

Version 9.2 automatically creates missing object/array entries. The value parameter will be treated as text if it is not a valid JSON instead of reporting an error.

Examples

Adds an entry with country:

```
MBS( "JSON.SetPathItem"; " { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "; "people$0$country"; "\"Germany\"" )
```

```
Example result: {
  "people": [ {
    "first": "Christian",
    "last": "Schmitz",
    "city": "Nickenich",
    "country": "Germany"
  } ]
}
```

Sets an entry in an array:

```
MBS( "JSON.SetPathItem"; " [ 1,2,3 ] "; "1"; 5)
```

Example result: [1, 5, 3]

Adds an entry to array in object:

```
MBS( "JSON.SetPathItem"; " { \"test\": [ 1,2,3 ] } "; "test$append"; 5)
```

Example result: {
 "test": [1, 2, 3, 5]
}

Sets hierarchical item:

```
MBS( "JSON.SetPathItem"; " { } "; "Hello$World$Test"; "Hello" )
```

Example result: {
 "Hello": {
 "World": {
 "Test": "Hello"
 }
 }
}

Create missing array entries and add our new one:

```
MBS( "JSON.SetPathItem"; " [ ] "; "5"; "6th item" )
```

Example result: [null, null, null, null, null, 6]

100.71 JSON.Sort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	9.3	Yes	Yes	Yes	Yes	Yes

MBS("JSON.Sort"; json)

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

Result Returns JSON code.

Description

Examples

Sort an array of numbers:

```
MBS( "JSON.Sort"; " [ 9,4,3.2,3.1,123 ] " )
```

Sort text values:

```
MBS( "JSON.Sort"; " [ \"123\", \"Hello\", \"FileMaker\", \"World\" ] " )
```

Sort keys in object:

```
MBS( "JSON.Sort"; " { \"last\":123, \"first\":456 } " )
```

100.72 JSON.ToHTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JSON	8.2	Yes	Yes	Yes	Yes	Yes

MBS("JSON.ToHTML"; json { ; Flags; CSS Style })

Parameters

json

A JSON text or reference.

```
{ "key": "value" }
```

Flags

Optional

The flags for processing. Currently you can pass 1 to exclude html header and just get a HTML table.

0

CSS Style

Optional

Extra CSS / HTML to include.

Result Returns HTML text or error.

Description

We build for you a HTML with tables for each array and object. We include values and tag rows with even/odd CSS classes.

Examples

Convert some JSON:

```
MBS("JSON.ToHTML"; JSON Input; 0;
/* CSS style to include */
"<style>
td
{
vertical-align:top;
}

.odd
{
background-color: white;
}

.even
{
background-color: # DDD;
}
</style>")
```

100.73 LDAP.AddJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP 100 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.AddJSON"; LDAPRef; dn; JSON)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

dn

The name of the entry to add.

JSON

The JSON to parse. Must be a JSON array with entries. Each entry has an element operation with Add, Replace, Delete or Increment. Also a node with name "type" and the type to set. Then you can pass with value a single value or with values a list of values.

Result Returns OK or error.

Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

Sample JSON for structure:

```
[ {
  "operation": "Add",
  "type": "xxx",

  "values": [ "Hello", "World" ]

} ,
{
  "operation": "Add",
  "type": "yyy",
  "value": "Other"
} ]
```

Type is the name of the attribute, e.g. cn.

Version 10.1 or newer accepts name instead of type for the key to match the search results.

Examples

Add a new employee to LDAP:

```
Set Variable [ $ldap ; Value: MBS("LDAP.Connect"; "ldap.test.de"; 0; 389 ) ]
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "cn=admin,dc=ldap,dc=test,dc=de"; "S2A2S@home";
"simple" ) ]
Set Variable [ $r ; Value: MBS("LDAP.AddJSON"; $ldap; Employee::_LDAP.Entry.CN; Employee::_LDAP.JSON.Add)
]
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]
```

Example result: Input JSON used:

```
[
{
"operation": "Add",
"name": "objectClass",
"values": [
"posixAccount",
"shadowAccount",
"top",
"inetOrgPerson",
"organizationalPerson",
"person"
]
},
{
"operation": "Add",
"name": "uid",
"value": "bob.miller"
},
{
"operation": "Add",
"name": "uidNumber",
"value": "1"
},
{
"operation": "Add",
"name": "cn",
"value": "Bob Miller"
},
{
"operation": "Add",
"name": "mail",
"value": "bob.miller@test.de"
},
{
"operation": "Add",
"name": "homeDirectory",
"value": "/usr/local/var/"
}
]
```

```

{
  "operation": "Add",
  "name": "sn",
  "value": "Miller"
},
{
  "operation": "Add",
  "name": "employeeType",
  "value": "Employee"
},
{
  "operation": "Add",
  "name": "givenName",
  "value": "Bob"
},
{
  "operation": "Add",
  "name": "employeeNumber",
  "value": "77"
},
{
  "operation": "Add",
  "name": "userPassword",
  "value": "xxxx"
},
{
  "operation": "Add",
  "name": "gidNumber",
  "value": "100"
}
]

```

100.74 LDAP.JSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP 100 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.JSON"; LDAPRef)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

Result Returns OK or error.

Description

Please first search, then query here the result as JSON.

Examples

Query JSON:

```
# Connect
Set Variable [ $r ; Value: MBS("LDAP.Connect"; "ldap.forumsys.com"; 0; 389) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "LDAP error" ; "Failed to connect." & $r ]
Else
Set Variable [ $ldap ; Value: $r ]
# Login
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "uid=tesla,dc=example,dc=com"; "password"; "simple") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "LDAP error" ; "Failed to authenticate." & $r ]
Else
# Search
Set Variable [ $r ; Value: MBS("LDAP.Search"; $ldap; "dc=example,dc=com"; "subtree"; "(givenName=*)"; "" ; 0; 20; 999) ]
# Check results
Show Custom Dialog [ "JSON" ; MBS("LDAP.JSON"; $ldap) ]
End If
# Cleanup
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]
End If
```

```
Example result: [ {
  "dn": "uid=test,dc=example,dc=com",
  "attributes": [ {
    "name": "objectClass",
    "values": [ "posixAccount", "top", "inetOrgPerson" ]
  } , {
```

```

"name": "gidNumber",
"values": [ "0" ]
}, {
"name": "givenName",
"values": [ "Test" ]
}, {
"name": "sn",
"values": [ "Test" ]
}, {
"name": "displayName",
"values": [ "Test" ]
}, {
"name": "uid",
"values": [ "test" ]
}, {
"name": "initials",
"values": [ "TS" ]
}, {
"name": "homeDirectory",
"values": [ "home" ]
}, {
"name": "cn",
"values": [ "Test" ]
}, {
"name": "uidNumber",
"values": [ "24601" ]
}, {
"name": "o",
"values": [ "Company" ]
} ]
} ]

```

Query a person via JSON:

```

Set Variable [ $ldap ; Value: MBS("LDAP.Connect"; "ldap.test.de"; 0; 389 ) ]
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "cn=admin,dc=ldap,dc=test,dc=de"; "S2A2S@home";
"simple" ) ]

Created 11st December 2017, last changed 29th February 2020.

100.75 LDAP.ModifyJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP 100 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.ModifyJSON"; LDAPRef; dn; JSON)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

dn

The name of the entry to add.

JSON

The JSON to parse. Must be a JSON array with entries. Each entry has an element operation with Add, Replace, Delete or Increment. Also a node with name "type" and the type to set. Than you can pass with value a single value or with values a list of values.

Result Returns OK or error.

Description

If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain.

Sample JSON for structure:

```
[ {
  "operation": "Add",
  "type": "xxx",

  "values": [ "Hello", "World" ]

},
{
  "operation": "Replace",
  "type": "yyy",
  "value": "Other"
},
{
  "operation": "Delete",
  "type": "zzz"
} ]
```

Version 10.1 or newer accepts name instead of type for the key to match the search results.

Chapter 101

Keychain

Manage passwords in Mac & iOS Keychain

101.1 Keychain.AddPassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 Keychain	8.4	Yes	No	No	No	Yes

MBS("Keychain.AddPassword"; Name; Location; Username; Password)

Parameters

Name

The name of the entry.

"MyDatabase"

Location

The location where the database is. Must be prefixed with FMP. e.g. "FMP: " or "FMPADMIN: " followed with the name or IP.

"FMPADMIN: mbs.test.ifmcloud.com"

Username

The user name.

"Admin"

Password

The password to store.

"HelloWorld"

Result Returns OK or error.

Description

Only if FileMaker you provide correct entries for FileMaker, it will find the entry.

So please check what FileMaker writes for your entry there.

Examples

Add a new password:

```
MBS("Keychain.AddPassword"; "Anlagen"; "FMP: Anlagen"; "Admin"; "HelloWorld")
```

See also

- 101.5 Keychain.UpdatePassword

5362

Created 25th August 2018, last changed 26th August 2018.

101.2 Keychain.DeletePassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 Keychain	8.4	Yes	No	No	No	Yes

MBS("Keychain.DeletePassword"; Location; Username)

Parameters

Location

The location where the database is. Must be prefixed with FMP. e.g. "FMP: " or "FMPADMIN: " followed with the name or IP.

"FMPADMIN: mbs.test.ifmcloud.com"

Username

The user name.

"Admin"

Result Returns OK or error.

Description

We look for a FileMaker password with given account name and location.

Examples

Deletes a password:

MBS("Keychain.DeletePassword"; "FMP: Anlagen"; "Admin")

See also

- 101.5 Keychain.UpdatePassword

101.3 Keychain.ListAccounts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 Keychain	8.4	Yes	No	No	No	Yes

MBS("Keychain.ListAccounts"; Location)

Parameters

Location

The location where the database is. Must be prefixed with FMP. e.g. "FMP: " or "FMPADMIN: " followed with the name or IP.

"FMPADMIN: mbs.test.ifmcloud.com"

Result Returns OK or error.

Description

Examples

Lists my accounts in Cloud:

MBS("Keychain.ListAccounts"; "FMPADMIN: monkeybread.fmi.filemaker-cloud.com")

Created 25th August 2018, last changed 25th August 2018.

101.4 Keychain.ListDatabases

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 Keychain	8.4	Yes	No	No	No	Yes

MBS("Keychain.ListDatabases")

Result Returns OK or error.

Description

Examples

Lists my databases:

MBS("Keychain.ListDatabases")

Created 25th August 2018, last changed 25th August 2018.

101.5 Keychain.UpdatePassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 Keychain	8.4	Yes	No	No	No	Yes

MBS("Keychain.UpdatePassword"; Location; Username; Password)

Parameters

Location

The location where the database is. Must be prefixed with FMP. e.g. "FMP: " or "FMPADMIN: " followed with the name or IP.

"FMPADMIN: mbs.test.ifmcloud.com"

Username

The user name.

"Admin"

Password

The new password to store.

"New password"

Result Returns OK or error.

Description

Examples

Updates account with new password:

MBS("Keychain.UpdatePassword"; "FMP: Anlagen"; "Admin"; "NewPassword")

See also

- 101.1 Keychain.AddPassword 5357

Created 25th August 2018, last changed 25th August 2018.

Chapter 102

LDAP

Query LDAP or Active Directory servers to manager user accounts.

The plugin can query, modify, add and delete values.

FileMaker can use LDAP or Active Directory for authentication. You can manage users in FileMaker database and send updates to your authentication server via our plugin.

102.1 LDAP.Add

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.Add"; LDAPRef; dn; Type { ; Value })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

dn

The name of the entry to add.

Type

The name of the attribute to add.

Value

Optional

The value for the attribute.

Result Returns OK or error.

Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

With 6.4 plugin you can pass several more value parameters to form a list of values.
Deprecated. Please use LDAP.AddJSON instead.

Examples

Add a value:

```
MBS( "LDAP.Add"; $ldap; "test"; "cn"; "Hello" )
```

Add a value with 3 values:

```
MBS( "LDAP.Add"; $ldap; "test"; "cn"; "Hello"; "World"; "test" )
```

Created 15th December 2015, last changed 29th February 2020.

102.2 LDAP.AddJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP 100 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.AddJSON"; LDAPRef; dn; JSON)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

dn

The name of the entry to add.

JSON

The JSON to parse. Must be a JSON array with entries. Each entry has an element operation with Add, Replace, Delete or Increment. Also a node with name "type" and the type to set. Then you can pass with value a single value or with values a list of values.

Result Returns OK or error.

Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

Sample JSON for structure:

```
[ {
  "operation": "Add",
  "type": "xxx",

  "values": [ "Hello", "World" ]

} ,
{
  "operation": "Add",
  "type": "yyy",
  "value": "Other"
} ]
```

Type is the name of the attribute, e.g. cn.

Version 10.1 or newer accepts name instead of type for the key to match the search results.

Examples

Add a new employee to LDAP:

```
Set Variable [ $ldap ; Value: MBS("LDAP.Connect"; "ldap.test.de"; 0; 389 ) ]
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "cn=admin,dc=ldap,dc=test,dc=de"; "S2A2S@home";
"simple" ) ]
Set Variable [ $r ; Value: MBS("LDAP.AddJSON"; $ldap; Employee::_LDAP.Entry.CN; Employee::_LDAP.JSON.Add)
]
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]
```

Example result: Input JSON used:

```
[
{
"operation": "Add",
"name": "objectClass",
"values": [
"posixAccount",
"shadowAccount",
"top",
"inetOrgPerson",
"organizationalPerson",
"person"
]
},
{
"operation": "Add",
"name": "uid",
"value": "bob.miller"
},
{
"operation": "Add",
"name": "uidNumber",
"value": "1"
},
{
"operation": "Add",
"name": "cn",
"value": "Bob Miller"
},
{
"operation": "Add",
"name": "mail",
"value": "bob.miller@test.de"
},
{
"operation": "Add",
"name": "homeDirectory",
"value": "/usr/local/var/"
},
]
```

```

{
"operation": "Add",
"name": "sn",
"value": "Miller"
},
{
"operation": "Add",
"name": "employeeType",
"value": "Employee"
},
{
"operation": "Add",
"name": "givenName",
"value": "Bob"
},
{
"operation": "Add",
"name": "employeeNumber",
"value": "77"
},
{
"operation": "Add",
"name": "userPassword",
"value": "xxxx"
},
{
"operation": "Add",
"name": "gidNumber",
"value": "100"
}
]

```

102.3 LDAP.AddList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.4	Yes	Yes	Yes	Yes	No

MBS("LDAP.AddList"; LDAPRef; dn; Type; List)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

dn

The name of the entry to add.

Type

The name of the attribute to add.

List

The value for the attribute as a list.

"Hello\$World"

Result Returns OK or error.

Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

The list of values are transformed into a list for LDAP.

Deprecated. Please use LDAP.AddJSON instead.

Examples

Add a list of values to a value:

```
MBS("LDAP.AddList"; $$connectLDAP; "CN=Test_FMPRO_TEMPO2,OU=Eleves,DC=mss,DC=qc,DC=ca";
"objectClass"; "user$top$person$organizationalPerson")
```

102.4 LDAP.AddRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	7.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.AddRecord"; LDAPRef; dn; Type { ; Value; TypeN; ValueN })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

dn

The name of the entry to add.

Type

The name of the attribute to add.

Value

Optional

The value for the attribute.

TypeN

Optional

nth attribute name.

ValueN

Optional

nth attribute value.

Result Returns OK or error.

Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

This version of the Add can add several keys and values with simple text values.

So please pass as many parameters as you need, always with key and value.

Deprecated. Please use LDAP.AddJSON instead.

Examples

Add two values:

MBS("LDAP.Add"; \$ldap; "test"; "cn"; "Hello"; "fn"; "World")

102.5 LDAP.Bind

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.Bind"; LDAPRef; DN; Cred; AuthMethod { ; Domain })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

DN

Test that contains the distinguished name of the entry used to bind. This can be a DN, a UPN, a WinNT style user name, or other name that the directory server will accept as an identifier.

Cred

The credentials with which to authenticate. Arbitrary credentials can be passed using this parameter. The format and content of the credentials depends on the setting of the method parameter.

AuthMethod

The authentication method to use. Can be simple, SASL or Negotiate. On Mac OS X, also none, KRBv4, KRBv41 and KRBv42 are accepted. On Windows, also Sicily, MSN, NTLM, DPA, SSPI, Digest and External are accepted.

"simple"

Domain

Optional

Domain for Windows.

Result Returns OK or error.

Description

See also SystemInfo.ADSYSTEMINFO function to query details about logged in computer user.

Examples

Authenticate connection:

```
Set Variable [ $r; Value:MBS("LDAP.Bind"; $ldap; $UserName; $Password; $AuthMethod) ]
```

102.6 LDAP.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.Connect"; IP; SSL; Port)

Parameters

IP

The IP or domain name of the server. If prefixed with ldap:// or ldaps://, the plugin will remove that prefix. If prefix is ldaps://, the plugin will assume SSL is enabled.

"192.168.2.222"

SSL

Whether to use SSL. 1 to enable or 0 to not enable.

1

Port

The port to use. If zero or undefined, the default port is used. e.g. 636 for LDAPS or 389 for LDAP.

Result Returns reference number or error.

Description

Returns the references number which you pass to other LDAP functions.

Please call LDAP.Release later to close connection.

Examples

Connect to local LDAP server:

```
MBS( "LDAP.Connect"; "localhost"; 0; 389 )
```

Connect to LDAP server:

```
MBS( "LDAP.Connect"; "ldap.internal"; 1)
```

Connect via IP and special port:

```
MBS( "LDAP.Connect"; "192.168.1.123"; 1; 3636)
```

Connect using URL:

```
MBS( "LDAP.Connect"; "ldaps://192.168.1.123")
```

102.7 LDAP.Delete

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.Delete"; LDAPRef; dn)

Parameters

LDAPRef

The reference number for the LDAP connection.
\$ldap

dn

The distinguished name of the entry to delete.

Result Returns OK or error.

Description

Be aware that LDAP does not support deletion of entire subtrees in a single operation. When connecting to an LDAP 2 server, the application must perform a bind operation first.

Created 11st December 2017, last changed 29th February 2020.

102.13 LDAP.Modify

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.Modify"; LDAPRef; OperationType; dn; Type { ; Value })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

OperationType

What to do. Can be Delete, Replace or Add.

"Replace"

dn

The name of the entry to modify.

Type

The name of the attribute to modify.

Value

Optional

The value for the attribute.

Result Returns OK or error.

Description

If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain.

Deprecated. Please use LDAP.ModifyJSON instead.

Created 15th December 2015, last changed 29th February 2020.

102.14 LDAP.ModifyJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP 100 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.ModifyJSON"; LDAPRef; dn; JSON)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

dn

The name of the entry to add.

JSON

The JSON to parse. Must be a JSON array with entries. Each entry has an element operation with Add, Replace, Delete or Increment. Also a node with name "type" and the type to set. Than you can pass with value a single value or with values a list of values.

Result Returns OK or error.

Description

If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain.

Sample JSON for structure:

```
[ {
  "operation": "Add",
  "type": "xxx",

  "values": [ "Hello", "World" ]

},
{
  "operation": "Replace",
  "type": "yyy",
  "value": "Other"
},
{
  "operation": "Delete",
  "type": "zzz"
} ]
```

Version 10.1 or newer accepts name instead of type for the key to match the search results.

102.15 LDAP.ModifyRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	7.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.ModifyRecord"; LDAPRef; OperationType; dn; Type { ; Value; TypeN; ValueN })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

OperationType

What to do. Can be Delete, Replace or Add.

"Replace"

dn

The name of the entry to modify.

Type

The name of the attribute to modify.

Value

Optional

The value for the attribute.

TypeN

Optional

nth attribute name.

ValueN

Optional

nth attribute value.

Result Returns OK or error.

Description

If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain.

This version of the Modify can add several keys and values with simple text values.

So please pass as many parameters as you need, always with key and value.

Deprecated. Please use LDAP.ModifyJSON instead.

102.17 LDAP.Rename

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.Rename"; LDAPRef; DN; NewRDN { ; NewParent; DeleteOldRdn })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

DN

The distinguished name of the entry to be renamed.

NewRDN

The new relative distinguished name.

NewParent

Optional

The distinguished name of the new parent for this entry. This parameter enables you to move the entry to a new parent container. Can be empty.

DeleteOldRdn

Optional

1 if the old relative distinguished name should be deleted; 0 if the old relative distinguished name should be retained.

1

Result Returns OK or error.

Description

This function is available effective with LDAP 3.

102.18 LDAP.Search

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.Search"; LDAPRef; Base; Scope; Filter; Attributes; AttributesOnly { ; Timeout; Size Limit })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

Base

the distinguished name of the entry at which to start the search.

Scope

Value to indicate the search scope. Can be:

Base: Search the base entry only. OneLevel: Search all entries in the first level below the base entry, excluding the base entry. Subtree: Search the base entry and all entries in the tree below the base.

On Mac can also be Children.

"Subtree"

Filter

A text that specifies the search filter.

Attributes

List indicating which attributes to return for each matching entry.

"cn\$sn"

AttributesOnly

Boolean value that should be 0 if both attribute types and values are to be returned, 1 if only types are required.

0

Timeout

Optional

Timeout in seconds. Specifies both the local search time-out value, in seconds, and the operation time limit that is sent to the server within the search request.

10

Size Limit

Optional

Limit on the number of entries to return from the search. A value of zero indicates no limit.

Result Returns OK or error.

Description

Searches the LDAP directory and returns a requested set of attributes for each matched entry.

On success, you can use `LDAP.SearchResult.Count` to find out the number of entries found.

Examples

Search for name:

```
MBS( "LDAP.Search"; $ldap; "dc=example,dc=com"; "Subtree"; "(sn=Jensen)")
```

Find entries with a givenName:

```
MBS("LDAP.Search"; $ldap; ""; "Subtree"; "(givenName=*)"; ""; 0; 20; 999)
```

102.19 LDAP.SearchResult.AttributeCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.SearchResult.AttributeCount"; LDAPRef; EntryIndex)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

Result Returns number or error.

Description

Examples

Query number of attributes in an entry:

```
Set Variable [ $AttributeCount; Value:MBS("LDAP.SearchResult.AttributeCount"; $ldap; $EntryIndex) ]
```

102.21 LDAP.SearchResult.AttributeNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.SearchResult.AttributeNames"; LDAPRef; EntryIndex { ; NoReturnEnding })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Examples

Query names of attributes as list:

MBS("LDAP.SearchResult.AttributeNames"; \$ldap; \$EntryIndex)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.SearchResult.AttributeValue"; LDAPRef; EntryIndex; AttributeIndex; ValueIndex)

Parameters**LDAPRef**

The reference number for the LDAP connection.

\$ldap

EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

AttributeIndex

The index of the attribute. From 0 to LDAP.SearchResult.AttributeCount-1.

0

ValueIndex

The index of the value. Must be range from zero to LDAP.SearchResult.AttributeValueCount-1.

0

Result Returns OK or error.

Description**See also**

- 102.26 LDAP.SearchResult.Count 5407

Created 15th December 2015, last changed 15th December 2015.

102.23 LDAP.SearchResult.AttributeValueCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.SearchResult.AttributeValueCount"; LDAPRef; EntryIndex; AttributeIndex)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

AttributeIndex

The index of the attribute. From 0 to LDAP.SearchResult.AttributeCount-1.

0

Result Returns number or error.

Description

If the plugin has no value, this is zero. If the attribute is a list and has more than one entry, the result is >1.

Examples

Query attribute values as list:

```
Set Variable [ $AttributeValues; Value:MBS("LDAP.SearchResult.AttributeValues"; $ldap; $EntryIndex; $AttributeIndex; 1) ]
```

102.25 LDAP.SearchResult.AttributeValuesByName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	7.4	Yes	Yes	Yes	Yes	No

MBS("LDAP.SearchResult.AttributeValuesByName"; LDAPRef; EntryIndex; AttributeName { ; NoReturnEnding })

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

AttributeName

The name of the attribute.

"FirstName"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 1 to include none, so a list with one value behaves as a text value.

1

Result Returns value, list or error.

Description

This function searches attributes by name instead of index.

If nothing is found, you get empty result.

102.28 LDAP.SetNetworkTimeout

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	No	Yes	Yes	No

MBS("LDAP.SetNetworkTimeout"; LDAPRef; Timeout)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

Timeout

The new timeout in seconds.

5

Result Returns OK or error.

Description

This function sets the socket level timeout.

Value is in seconds. Resolution is in microseconds.

Examples

Sets network timeout:

```
Variable setzen [ $r ; Wert: MBS("LDAP.SetNetworkTimeout"; $ldap; 3) ]
```

See also

102.29 LDAP.SetProtocolVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.SetProtocolVersion"; LDAPRef; Version)

Parameters**LDAPRef**

The reference number for the LDAP connection.

\$ldap

Version

Can be 1, 2 or 3 to specify LDAP version.

3

Result Returns OK or error.

Description**Examples**

Sets version 3:

MBS("LDAP.SetProtocolVersion"; \$ldap; 3)

See also

- 102.9 LDAP.GetProtocolVersion

5380

Created 15th December 2015, last changed 15th December 2015.

102.30 LDAP.SetReferrals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.SetReferrals"; LDAPRef; Value)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

Value

The new setting.

0

Result Returns OK or error.

Description

Specifies whether to automatically follow referrals returned by the LDAP server.

See also

- 102.10 LDAP.GetReferrals

5381

Created 18th December 2015, last changed 18th December 2015.

102.31 LDAP.SetTimeOut

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	No	Yes	Yes	No

MBS("LDAP.SetTimeOut"; LDAPRef; Timeout)

Parameters

LDAPRef

The reference number for the LDAP connection.
\$ldap

Timeout

The new timeout in seconds.
5

Result Returns OK or error.

Description

This sets the default timeout for the ldap connection.
Value is in seconds. Resolution is in microseconds.

Examples

Sets timeout to 3 seconds:

```
Variable setzen [ $r ; Wert: MBS("LDAP.SetTimeOut"; $ldap; 3) ]
```

102.32 LDAP.SimpleBind

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS("LDAP.SimpleBind"; LDAPRef; dn; Password)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

dn

The name of the user to bind as. The bind operation uses the dn and password parameters to authenticate the user.

Password

The password of the user specified in the dn parameter.

Result Returns OK or error.

Description

Examples

Binds anonymously to the server:

```
MBS( "LDAP.SimpleBind"; $ldap)
```

Created 15th December 2015, last changed 15th December 2015.

102.33 LDAP.StartTLS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 LDAP	9.3	Yes	Yes	Yes	Yes	No

MBS("LDAP.StartTLS"; LDAPRef)

Parameters

LDAPRef

The reference number for the LDAP connection.

\$ldap

Result Returns OK or error.

Description

Sends a StartTLS request to a server, waits for the reply, and then installs TLS handlers on the session if the request succeeded.

Created 13th August 2019, last changed 13th August 2019.

102.34 SystemInfo.ADSystemInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo 102 LDAP	9.3	No	Yes	No	No	No

MBS("SystemInfo.ADSystemInfo")

Result Returns JSON or error.

Description

This call may take a second if a query needs to be sent to server.

Returns JSON with details including UserName, ComputerName, SiteName, DomainShortName, DomainDNSName, ForestDNSName, PDCRoleOwner, SchemaRoleOwner, IsNativeMode, DCName and DCSiteName.

The result is an empty JSON object in case of no Active Directory in use.

Examples

Query Active Directory details on Windows:

MBS("SystemInfo.ADSystemInfo")

Example result: {

"UserName": "CN=John Doe,OU=2SH User,DC=2SXXX,DC=2S",

"ComputerName": "CN=2SMBP16W10,CN=Computers,DC=2SXXX,DC=2S",

"SiteName": "Default-First-Site-Name",

"DomainShortName": "2SXXX",

"DomainDNSName": "2SXXX.2S",

"ForestDNSName": "2SXXX.2S",

"PDCRoleOwner": "CN=NTDS Settings,CN=2SDCERP,CN=Servers,CN=Default-First-Site-Name,CN=Sites,CN=Configuration,DC=2SXXX,DC=2S",

"SchemaRoleOwner": "CN=NTDS Settings,CN=2SDCERP,CN=Servers,CN=Default-First-Site-Name,CN=Sites,CN=Configuration,DC=2SXXX,DC=2S",

"IsNativeMode": true,

"DCName": "2SDCSTORAGE.2SXXX.2S",

"DCSiteName": "Default-First-Site-Name"

}

Chapter 103

List

Text functions for working with lists.

For big lists, our QuickList functions are much faster. Because the list is only parsed once and stored indexed in memory.

103.1 List.AddPostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS("List.AddPostfix"; List; Postfix { ; NoReturnEnding })

Parameters

List

The list to process.

"Hello\$World"

Postfix

The text to append.

"!"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Examples

Add postfix to list:

```
MBS( "List.AddPostfix"; "Hello$World"; "!")
```

See also

- 103.2 List.AddPrefix 5419
- 103.42 QuickList.AddPostfix 5478
- 103.43 QuickList.AddPrefix 5480

103.1.1 Blog Entries

- [MBS FileMaker Plugin, version 6.1pr5](#)

Created 4th March 2016, last changed 4th March 2016.

103.2 List.AddPrefix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS("List.AddPrefix"; List; Prefix { ; NoReturnEnding })

Parameters

List

The list to process.

"Hello\$World"

Prefix

The text to prepend.

"!"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Examples

Add prefix to list:

MBS("List.AddPrefix"; "Hello\$World"; "!")

See also

- 103.1 List.AddPostfix 5417
- 103.42 QuickList.AddPostfix 5478

- [MBS FileMaker Plugin, version 6.1pr5](#)

Created 4th March 2016, last changed 12nd March 2016.

103.3 List.AddValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS("List.AddValue"; List; Text)

Parameters

List

The list to process.

"Hello" §" §"World"

Text

The text to add.

"Hello"

Result Returns list or error.

Description

For big lists, using QuickList functions is much faster. The list is only parsed once and stored in memory.

See also

- 103.14 List.GetValue 5436

- 103.64 QuickList.InsertValue 5513

Created 11st March 2017, last changed 11st March 2017.

103.4 List.And

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("List.And"; List1; List2 { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Performs a logical AND operation.

Examples

Perform logical AND on list:

MBS("List.AND"; "1§2§3§4"; "3§4§5§6")

See also

- [103.5 List.AndColumn](#) 5422

103.5 List.AndColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS("List.AndColumn"; List1; List2; Separator; Column { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

Column

The index of the column to compare. Starts with 0 for first column.

0

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Performs a logical AND operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as List.And, but slower.

Examples

And two lists based on 2 column:

```
MBS( "List.AndColumn";
"1 test 3$a b c$d$e f";
"2 test 4$a f c$d b";
" "; 1 )
```

Example result: 2 test 4

a f c

103.5. *LIST.ANDCOLUMN* 5423

103.6 List.BestMatch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS("List.BestMatch"; List; SearchText)

Parameters

List

The list to process.

"Hello" §" §"World"

SearchText

The text to search.

"Hello"

Result Returns best match, empty or error.

Description

If not found, returns empty result, so FileMaker function isEmpty() will tell you if it's empty (instead of just having no text).

Uses internally the Text.LevenshteinDistance function to compare all items and look for best match.

If no entry matches over 50% , this may return empty text.

See also QuickList.BestMatch in case you need to query several times and want to load list only once.

Examples

Looking for best match for Hilo will find Hello:

MBS("List.BestMatch"; "Test\$Hello\$World\$Hallo"; "Hilo")

103.7 List.CSVSplit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.4	Yes	Yes	Yes	Yes	Yes

MBS("List.CSVSplit"; Text { ; Delimiter })

Parameters

Text

The CSV text.

"Hello;World"

Delimiter

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The delimiter to use. If empty, we auto detect it.

","

Result Returns list or error.

Description

Plugin automatically detects if comma or semicolon is used.

Returns list with all values.

Version 8 can detect tab character, too.

Examples

Split with one value:

```
MBS("List.CSVSplit"; "hello")
```

Split with three values:

```
MBS("List.CSVSplit"; "\hello\";\test\";\CSV\")
```

Split with 3 rows and 3 values:

```
MBS("List.CSVSplit"; "\hello1\";\test\";\CSV\">$\"hello2\";\test\";\CSV\">$\"hello3\";\test\";\CSV\")
```

103.8 List.CountValues

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	8.1	Yes	Yes	Yes	Yes	Yes

MBS("List.CountValues"; List)

Parameters

List

The list to process.

"Hello" §" §"World"

Result Returns list or error.

Description

The result contains count, tab and the word and is not sorted.

Examples

List values:

MBS("List.CountValues"; "Hello\$World\$Hello")

Example result: 1 World

2 Hello

103.9 List.CrossProduct

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS("List.CrossProduct"; List1; List2 { ; Prefix; Midfix; Postfix; Flags })

Parameters

List1

The first list to process.
"Hello\$World"

List2

The second list to process.
"1\$2"

Prefix

Optional
The prefix to use

Midfix

Optional
The middle to use. This text is put between texts from both lists.

Postfix

Optional
The postfix to use

Flags

Optional
Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists. Add 2 for a diagonal cross, so we combine each element of first list with the same element index from the second list.
1

Result Returns list or error.

Description

Optionally adds prefix, postfix and midfix.
Returns empty list if one of the lists are empty!

Examples

Test with all parameters:

```
MBS( "List.CrossProduct"; "Hello$World"; "1$2"; "before"; "middle"; "after" )
```

Combine elements from lists:

```
MBS( "List.CrossProduct"; "Hello$World"; "1$2"; "before"; "middle"; "after"; 2 )
```

103.9. *LIST.CROSSPRODUCT*

103.10 List.DeCombine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.3	Yes	Yes	Yes	Yes	Yes

MBS("List.DeCombine"; List; ColumnDelimiter; StartColumn; EndColumn { ; NoReturnEnding })

Parameters

List

The list to process.

"Hello" §" §"World"

ColumnDelimiter

The delimiter between columns. This is also used in result.

" | "

StartColumn

Index of column to start. First is 0.

0

EndColumn

Index of column to end. First is 0. If you only want one column, please pass same value for start and end column.

0

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

This function combines values from a list by picking only given columns.

Examples

Queries second word in each entry:

```
MBS( "List.DeCombine"; "Hello | The | World$Thats | What | WeMake$YUPP | Thats | Fun"; " | "; 1; 1;1 )
```

Example result: "The\$What\$Thats"

Query fist word in each entry:

```
MBS( "List.DeCombine"; "Hello | The | World$Thats | What | WeMake$YUPP | Thats | Fun"; " | "; 0; 0;1 )
```

Example result: "Hello\$Thats\$YUPP"

Query first adn second word in each entry:

103.10. *LIST.DECOMBINE*

5431

MBS("List.DeCombine"; "Hello | The | World\$Thats | What | WeMake\$YUPP | Thats | Fun"; " | "; 0; 1 ;1)

Example result: "Hello | The\$Thats | What\$YUPP | Thats"

103.11 List.Deserialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS("List.Deserialize"; Text { ; NoReturnEnding })

Parameters

Text

The serialized data as text.

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Examples

Save and restore a list:

```
Set Variable [ $list; Value:"Hello$World$1234$Just a test!" ]
```

```
Set Variable [ $text; Value:MBS("List.Serialize"; $list) ]
```

```

103.12 List.FindEquals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS("List.FindEquals"; List1; List2 { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns new list.

Description

Examples

Find equal entries in both lists:

MBS("List.FindEquals"; "Hello" §"World"; "Hello" §"Friends")

103 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS("List.FindUnequals"; List1; List2 { ; NoReturnEnding; NotFromSecondList })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

NotFromSecondList

Optional

Pass 1 to only returns items from first list not present in second list. Default is 0 to get items from both lists.

0

Result Returns new list.

Description

Examples

Find non equal entries in both lists:

```
MBS( "List.FindUnequals"; "Hello§World"; "Hello§Friends"; 1 )
```

Example result: "World

Friends"

Find items in first list which are not in second list:

```
MBS( "List.FindUnequals"; "Hello§World"; "Hello§Friends"; 1; 1 )
```

Example result: "Hello"

103.14 List.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS("List.GetValue"; List; Index)

Parameters

List

The list to process.

"Hello" §" §"World"

Index

The index of the value to get. Must be in range from 0 to QuickList.Count-1.

\$index

Result Returns list or error.

Description

If you enable tracing with Trace command, this function will be much slower due to the debug output.

See also

103.15 List.HasDuplicateItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS("List.HasDuplicateItems"; List)

Parameters

List

The list to process.

"Hello" §"Hello" §"World"

Result Returns 1, 0 or error.

Description

Returns 1 if duplicate lines are found or 0 if not.

See also

103.16 List.HasValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.4	Yes	Yes	Yes	Yes	Yes

MBS("List.HasValue"; List; Value)

Parameters

List

The list to process.
"Hello" §" §"World"

Value

The value to check.
"Hello"

Result Returns 1, 0 or error.

Description

Returns 1 if value is found or 0 if not. Text comparison is case sensitive.

Examples

Check if value is in list:

```
MBS( "List.HasValue"; "1§2§3"; "2" )
```

Print what user selected:

```
# Show dialog to select something
Set Variable [ $r; Value:MBS("ListDialog.ClearList") ]
Set Variable [ $r; Value:MBS("ListDialog.SetPrompt"; "Please select items to print:") ]
# We use tags as the visible titles may be localized.
Set Variable [ $r; Value:MBS("ListDialog.AddItemToList"; "Werbung§Angebot§Rechnung§Erinnerung"; "Flyer§Of-fer§Invoice§Reminder") ]
Set Variable [ $r; Value:MBS("ListDialog.SetAllowMultipleSelection"; 1) ]
Set Variable [ $r; Value:MBS("ListDialog.SetSelectedTitle"; "Offer") ]
# Show dialog
Set Variable [ $r; Value:MBS("ListDialog.ShowDialog") ]

103.17 List.InsertValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS("List.InsertValue"; List; Index; Text)

Parameters

List

The list to process.

"Hello" §" §"World"

Index

the index where to insert.

0

Text

The text to add.

"Hello"

Result Returns list or error.

Description

Please note that List.AddValue is more efficient than inserting.

103.18 List.MatchesPostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS("List.MatchesPostfix"; List; Text { ; NoReturnEnding })

Parameters

List

The list of texts to search.

"Hello"

Text

The text to find.

"Hello"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns new list or error.

Description

Comparison is case insensitive.

Examples

Finds list entries with matching postfixes:

MBS("List.MatchesPostfix"; "Hello\$auto\$World"; "o")

See also

103.19 List.MatchesPrefix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS("List.MatchesPrefix"; List; Text { ; NoReturnEnding })

Parameters

List

The list of texts to search.

"Hello"

Text

The text to find.

"Hello"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns new list or error.

Description

Comparison is case insensitive.

Examples

Finds matching prefixes:

MBS("List.MatchesPrefix"; "Hello\$www\$World"; "w")

103.20 List.Not

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("List.Not"; List1; List2 { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns OK or error.

Description

Performs a logical NOT operation.

Examples

Operate not on two lists:

MBS("List.Not"; "Abc\$Def\$Ghi\$Jkl"; "Abc\$Jkl\$Zui\$Edf")

See also

- 103.21 List.NotColumn 5444

103.21 List.NotColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS("List.NotColumn"; List1; List2; Separator; Column { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

Column

The index of the column to compare. Starts with 0 for first column.

0

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Performs a logical NOT operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as List.Not, but slower.

103.22 List.Or

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("List.Or"; List1; List2 { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Performs a logical OR operation.

Examples

Perform logical OR on list:

MBS("List.Or"; "1§2§3§4"; "3§4§5§6")

See also

103.23 List.OrColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS("List.OrColumn"; List1; List2; Separator; Column { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

Column

The index of the column to compare. Starts with 0 for first column.

0

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Performs a logical OR operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as List.Or, but slower.

Examples

Trying OR based on second column:

MBS("List.OrColumn"; "1 test 3\$a b c\$d\$e f"; "2 test 4\$a f c\$d b"; " "; 1)

Example result: 1 test 3

a b c

d

e f

2 test 4

103.24 List.RegExMatch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("List.RegExMatch"; List; Pattern; CompilerOptions; ExecuteOptions { ; NoReturnEnding })

Parameters

List

The list of texts to search.

"Hello"

Pattern

The pattern to use.

"H(*)"

CompilerOptions

A number for the options to use. e.g. 1 for case insensitive or 512 for ungreedy.

512+1

ExecuteOptions

The options for executing.

0

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

This compiles the pattern, executes it and looks if we have a match or not for each list item.

Returns the list items which match.

Examples

Match Hello with pattern:

```
MBS( "List.RegExMatch"; "Hello$Test$World$House$Test"; "H(*)o")
```

same without return on end of result:

```
MBS( "List.RegExMatch"; "Hello$Test$World$House$Test"; "H(*)o"; 0; 0; 1)
```

103.25 List.Remove

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS("List.Remove"; List; Index)

Parameters

List

The list to process.

"Hello" §" §"World"

Index

The index of the item to remove. Range from 0 to QuickList.Count-1.

0

Result Returns list or error.

Description

Returns a new list where the value is missing.

For big lists, using QuickList functions is much faster. The list is only parsed once and stored in memory.

103.26 List.RemoveDuplicateItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS("List.RemoveDuplicateItems"; List { ; NoReturnEnding; RemoveAll })

Parameters

List

The list to process.

"Hello" §"Hello" §"World"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

RemoveAll

Optional

If duplicate is found also remove the first occurrence. Set to 1 to enable or 0 to disable. Default is disabled.

1

Result Returns new list.

Description

Similar to UniqueValues function in FileMaker to find unique values.

Examples

Remove duplicates:

```
MBS( "List.RemoveDuplicateItems"; "Hello$World$Hello" )
```

Remove all duplicates

```
MBS( "List.RemoveDuplicateItems"; "Hello$World$Hello"; 0; 1 )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS("List.RemoveEmptyItems"; List { ; NoReturnEnding })

Parameters

List

The list to process.

"Hello" §" §"World"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns new list.

Description

Examples

Remove empty lines:

MBS("List.RemoveEmptyItems"; "Hello" §" §"World")

103.28 List.RemovePostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS("List.RemovePostfix"; List; Postfix { ; NoReturnEnding; CaseSensitive })

Parameters

List

The list to process.

"Hello\$World"

Postfix

The text to remove.

"llo"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

CaseSensitive

Optional

Whether to match with case sensitive comparison. Default is 0 for case insensitive. You can pass 1 to have a case sensitive comparison.

0

Result Returns list or error.

Description

Examples

Remove postfix from list:

MBS("List.RemovePostfix"; "Hello?\$Other\$World?"; "?")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS("List.RemovePrefix"; List; Prefix { ; NoReturnEnding; CaseSensitive })

Parameters

List

The list to process.

"Hello\$World"

Prefix

The text to remove.

"H"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

CaseSensitive

Optional

Whether to match with case sensitive comparison. Default is 0 for case insensitive. You can pass 1 to have a case sensitive comparison.

0

Result Returns list or error.

Description

Examples

Remove prefix from list:

```
MBS( "List.RemovePrefix"; "testHello$Other$testWorld"; "test")
```

List files with relative paths:

```
MBS( "List.RemovePrefix"; MBS( "Files.ListRecursive"; "/Users/Shared/"); "/Users/Shared/")
```

103.30 List.RemoveValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS("List.RemoveValue"; List; Value { ; All })

Parameters

List

The list to process.

"Hello" §" §"World"

Value

The value to remove.

"Hello"

All

Optional

Optional, pass 1 to remove all values with the given value. Pass 0 (default) to remove only the first matching value.

0

Result Returns list or error.

Description

Examples

Remove one value:

MBS("List.RemoveValue"; "Hello§123§World§123§abc"; "123")

Example result: Hello

World

123

abc

Remove all values:

MBS("List.RemoveValue"; "Hello§123§World§123§abc"; "123"; 1)

Example result: Hello

World

abc

103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("List.Reverse"; List { ; NoReturnEnding })

Parameters

List

The list to sort.

"Hello" §"World"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns OK or error.

Description

Examples

Reverse list:

MBS("List.Reverse"; "Hello\$World\$Test")

103.32 List.Serialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS("List.Serialize"; List)

Parameters

List

The list to process.

"Hello" §" §"World"

Result Returns text or error.

Description

The dictionary content is stored in a base64 encoded string which the plugin function List.Deserialize and QuickList.Deserialize can read.

Using this function allows to store a list in a text field or transmit it with Socket functions, SerialPort functions or by writing it to a file.

Examples

Save and restore a list:

```
Set Variable [ $list; Value:"Hello$World$1234$Just a test!" ]
```

```
Set Variable [ $text; Value:MBS("List.Serialize"; $list) ]
```

```
Show Custom Dialog [ "List"; "Encoded: " & $text & §& §& "Decoded: " & MBS("List.Deserialize"; $text) ]
```

103.33 List.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS("List.SetValue"; List; Index; Text)

Parameters

List

The list to process.

"Hello" §" §"World"

Index

The index of the value to set. Must be in range from 0 to ValueCount(List).

\$index

Text

The text to add.

"Hello"

Result Returns list or error.

Description

If index is equal to count, we append the text to the list.

For big lists, using QuickList functions is much faster. The list is only parsed once and stored in memory.

Created 11st March 2017, last changed 29th March 2019.

103.34 List.Sort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS("List.Sort"; List { ; Flags; NoReturnEnding })

Parameters

List

The list to sort.
"Hello" §"World"

Flags

Optional

Optional, whether to sort case insensitive or descending. Pass 1 to sort case insensitive or 0 to sort case sensitive. Add 2 to sort descending. Add 4 for sorting dates in DD.MM.YYYY style and 8 for sorting dates in MM.DD.YYYY style. Add 16 for number sorting (new in 7.5).

1

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns new list.

Description

Version 6.2 adds new modes for date sorting. Mode 4 for DD.MM.YYYY style and mode 8 for MM.DD.YYYY style.

Version 7.5 adds number sorting.

Examples

Sort case sensitive:

```
MBS( "List.Sort"; "Hello$World$Test" )
```

Sort case insensitive:

```
MBS( "List.Sort"; "Hello$World$test"; 1 )
```

Sort case sensitive and descending:

```
MBS( "List.Sort"; "Hello$World$Test"; 2 )
```

Sort case insensitive and descending:

```
MBS( "List.Sort"; "Hello$World$test"; 3 )
```

Sort German dates:

```
Show Custom Dialog [ MBS("List.Sort"; "01.01.2001§12.04.1981§01.04.1981§12.07.1981§12.01.1981§23.11.2014";  
4; 0) ]
```

Sort US dates:

```
Show Custom Dialog [ MBS("List.Sort"; "01/01/2001§04/12/1981§04/01/1981§07/12/1981§01/12/1981§11/23/2014";  
8; 0) ]
```

Sort numbers

```
MBS( "List.Sort"; "1§555§7"; 16 )
```

Example result: "1

7

555

"

103.35 List.SubList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS("List.SubList"; List; Index; Count { ; NoReturnEnding })

Parameters

List

The list to process.

"Hello" §"" §"World"

Index

The zero based index where to start. Or in other words: How many entries to skip.

3

Count

How many entries to copy. If negative, we pick the other items left.

5

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns OK or error.

Description

Examples

Get first item:

```
MBS( "List.SubList"; "Hello"; 0; 1; 1)
```

Example result: "Hello"

Get all items:

```
MBS( "List.SubList"; "a$b$c$d$e"; 0; -1)
```

Example result: "a

b

c

d

e

"

Get 2 items starting at offset 2:

```
MBS( "List.SubList"; "a$b$c$d$e"; 2; 2)
```

Example result: "c
d
"

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS("List.Trim"; List { ; NoReturnEnding })

Parameters**List**

The list to sort.

"Hello" §"World"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns OK or error.

Description**Examples**

Trim list values:

MBS("List.Trim"; " Hello §With tab §")

Created 21st October 2017, last changed 21st October 2017.

103.37 List.ValueIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS("List.ValueIndex"; List; Value)

Parameters

List

The list of texts to search.

"Hello"

Value

The text to find.

"Hello"

Result Returns index, nothing or error.

Description

Returns zero based index (0 = first list value).

Returns empty result if not found.

Comparison is case insensitive.

Examples

Searches a word in a list:

Returns 4

MBS("List.ValueIndex"; "Hello\$1\$2\$3\$World"; "world")

103.37.1 Blog Entries

Created 20th November 2015, last changed 20th November 2015.

103.38 List.XOr

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("List.XOr"; List1; List2 { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Performs an exclusive logical OR operation.

Examples

Perform logical XOR on list:

MBS("List.XOr"; "1§2§3§4"; "3§4§5§6")

103.39 List.XOrColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS("List.XOrColumn"; List1; List2; Separator; Column { ; NoReturnEnding })

Parameters

List1

The first list.

"Hello" §"World"

List2

The second list.

"Hello" §"Friends"

Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

Column

The index of the column to compare. Starts with 0 for first column.

0

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Performs an exclusive logical OR operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as List.XOr, but slower.

103.40 QuickList.AddList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.AddList"; List1; List2 { ; Separator })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The list to add.

\$List2

Separator

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The separator to use. Can be ASCII character number (e.g. 9 for tab) or a text where we use first character as separator. Default is newline character.

" | "

Result Returns OK or error.

Description

Examples

Create a quicklist and add a list:

```
Set Variable [ $q; Value:MBS("QuickList.New"; "Hello$World") ]
Set Variable [ $r; Value:MBS("QuickList.AddList"; $q; "Hello$World") ]
Show Custom Dialog [ MBS("QuickList.GetList"; $q) ]
Set Variable [ $r; Value:MBS("QuickList.Free"; $q) ]
```

103.41 QuickList.AddMultiValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.2	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.AddMultiValue"; ListRef; Text; Count { ; Separator })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Text

The text to add. Can be a list itself.

"Hello"

Count

The number of times to add the value/list. Default is 0.

5

Separator

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The separator to use. Can be ASCII character number (e.g. 9 for tab) or a text where we use first character as separator. Default is newline.

" | "

Result Returns OK or error.

Description

Examples

Create a list:

```
Let ( [
q = MBS( "QuickList.New" );
r = MBS( "QuickList.AddValue"; q; "First" );
r = MBS( "QuickList.AddMultiValue"; q; "Middle"; 10 );
r = MBS( "QuickList.AddValue"; q; "Last" );
list = MBS("QuickList.GetList"; q);
r = MBS( "QuickList.Free"; q )
]; list )
```

Example result: First

Middle

Middle

Middle

Middle

Middle

Middle

Middle

Middle

Middle

Middle

Last

Create list from list:

```
Let ( [  
q = MBS( "QuickList.New" );  
r = MBS( "QuickList.AddMultiValue"; q; "Hello$World"; 3 );  
list = MBS("QuickList.GetList"; q);  
r = MBS( "QuickList.Free"; q )  
] ; list )
```

Example result: Hello

World

Hello

World

Hello

World

103.42 QuickList.AddPostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.AddPostfix"; ListRef; Postfix { ; ReturnNewList })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Postfix

The text to append.

"!"

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.
Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list or error.

Description

Examples

Try in one Let statement:

```
Let( [
list = MBS("QuickList.New"; "Hello$World");
e = MBS("QuickList.AddPrefix"; list; ">");
e = MBS("QuickList.AddPostfix"; list; "<");
r = MBS("QuickList.GetList"; list);

103.44 QuickList.AddQuickList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.AddQuickList"; ListRef; ListRef2)

Parameters

ListRef

The reference to the list returned from QuickList.New function.
\$List

ListRef2

The reference to the list returned from QuickList.New function.
\$List

Result Returns OK or error.

Description

Examples

Build two quicklists and add one to other:

```
Set Variable [ $q; Value:MBS("QuickList.New"; "Hello$World") ]
Set Variable [ $o; Value:MBS("QuickList.New"; "1$2") ]
Set Variable [ $r; Value:MBS("QuickList.AddQuickList"; $q; $o) ]
Show Custom Dialog [ MBS("QuickList.GetList"; $q) ]
Set Variable [ $r; Value:MBS("QuickList.Free"; $q) ]
Set Variable [ $r; Value:MBS("QuickList.Free"; $o) ]
```

103.45 QuickList.AddSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.1	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.AddSQL"; ListRef; SQL Statement; FileName { ; Params })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

SQL Statement

SQL Statement as a Text string

FileName

The target database name. Can be empty to not limit query to one database.

""

Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

Result Returns number of items added or error.

Description

All values in the result set are added as text to the list.

Returns error in case of SQL error with error message.

This function is currently only supported for FileMaker 11 and newer. If you need it for older versions, please contact us.

Examples

Fill a list and return it:

```
# create new list
$list = MBS("QuickList.New")
# add values via SQL
MBS("QuickList.AddSQL"; $list; "SELECT TextField FROM \"Test Table\"")
# query list content for displaying
$text = MBS("QuickList.GetList"; $list)
# and free it
MBS("QuickList.Free"; $list )
```

Add values based on SQL query in current file and one parameter:

```
MBS("QuickList.AddSQL"; "12002"; "SELECT TextField FROM \"Test Table\" WHERE NumberField>?";
```

```
Get(FileName); 1 )
```

Run query with quoted names and parameters for value:

```
Set Variable [ $Text ; Value: MBS("QuickList.AddSQL"; $ListNum; "SELECT \"MyField\" from \"MyTable\"  
Where \"SomeField\" = ?"; Get(FileName); "xyz") ]
```

103.46 QuickList.AddValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.AddValue"; ListRef; Text)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Text

The text to add.

"Hello"

Result Returns OK or error.

Description

Building list via plugin can be much faster than building using FileMaker internal functions.

Examples

Add items to a list:

```
$listID = MBS( "QuickList.New"; "Hello$World" )
$r = MBS( "QuickList.AddValue"; $listID; "1234" )
$r = MBS( "QuickList.AddValue"; $listID; "5678" )
$list = MBS( "QuickList.GetList"; $listID )
$r = MBS( "QuickList.Free"; $listID )
```

103.47 QuickList.And

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.And"; List1; List2 { ; ReturnNewList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

Description

Performs a logical AND operation.

Examples

Performs And on two quicklists:

```
$list1 = MBS( "QuickList.New"; "a$b$c$d" )
$list2 = MBS( "QuickList.New"; "a$d" )
$list3 = MBS( "QuickList.And"; $list1; $list2; 1 )
$list = MBS( "QuickList.GetList"; $list3 )
$r = MBS( "QuickList.Free"; $list1 )
$r = MBS( "QuickList.Free"; $list2 )
$r = MBS( "QuickList.Free"; $list3 )
```

103.48 QuickList.AndColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.AndColumn"; List1; List2; Separator; Column { ; ReturnNewList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

Column

The index of the column to compare. Starts with 0 for first column.

0

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

Description

Performs a logical AND operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as QuickList.And, but slower.

103.49 QuickList.BestMatch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.BestMatch"; ListRef; SearchText)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

SearchText

The text to search.

"Hello"

Result Returns best match, empty or error.

Description

If not found, returns empty result, so FileMaker function isEmpty() will tell you if it's empty (instead of just having no text).

Uses internally the Text.LevenshteinDistance function to compare all items and look for best match.

If no entry matches over 50% , this may return empty text.

103.50 QuickList.CSVSplit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.CSVSplit"; Text { ; Delimiter })

Parameters

Text

The CSV text.

"Hello;World"

Delimiter

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The delimiter to use. If empty, we auto detect it.

","

Result Returns QuickList reference number or error.

Description

Plugin automatically detects if comma or semicolon is used.

Returns list with all values.

Version 8 can detect tab character, too.

Examples

Try with 3 values:

```
MBS("QuickList.CSVSplit"; "\hello\";\test\";\CSV\")
```

103.54 QuickList.CrossProduct

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.CrossProduct"; List1; List2 { ; Prefix; Midfix; Postfix; Flags })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

Prefix

Optional

The prefix to use

Midfix

Optional

The middle to use. This text is put between texts from both lists.

Postfix

Optional

The postfix to use

Flags

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter. Add 2 for a diagonal cross, so we combine each element of first list with the same element index from the second list.

0

Result Returns list or error.

Description

Optionally adds prefix, postfix and midfix.

Returns empty list if one of the lists are empty!

Examples

Try in a Let statement:

```
Let( [
list1 = MBS("QuickList.New"; "Hello$World");
list2 = MBS("QuickList.New"; "1$2");
e = MBS("QuickList.CrossProduct"; list1; list2);
r = MBS("QuickList.GetList"; list1);

103.55 QuickList.DeCombine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.DeCombine"; ListRef; ColumnDelimiter; StartColumn; EndColumn { ; ReturnNewList; NoReturnEnding })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

ColumnDelimiter

The delimiter between cols. This is also used in result.

" | "

StartColumn

Index of column to start. First is 0.

0

EndColumn

Index of column to end. First is 0. If you only want one column, please pass same value for start and end column.

0

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to return a text list.

0

NoReturnEnding

Optional

If you passed 0 for ReturnNewList, decides about new list: Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns new list or error.

Description

This function combines values from a list by picking only given columns.

Examples

Sort a list column:

```
Set Variable [ $List ; Value: "65412 | Schreiber | Klaus | 459oz8235" & §& "76542 | Abraham | Hermmann | 38957zf" & §& "85112 | Behrens | Robert | 489748hj" ]
```

```
Set Variable [ $QuickList1 ; Value: MBS( "QuickList.New"; $list ) ]
```

```
#
```

```

Set Variable [ $QuickList2 ; Value: MBS( "QuickList.DeCombine"; $QuickList1; " | "; 1 /* StartColumn*/;
1 /* EndColumn */; 1 /* New List*/ ) ]
Set Variable [ $List2 ; Value: MBS( "QuickList.GetList"; $QuickList2) ]
Set Variable [ $r ; Value: MBS( "QuickList.SortWith"; $QuickList2; 1; $QuickList1 ) ]
Set Variable [ $List1 ; Value: MBS( "QuickList.GetList"; $QuickList1) ]
#
Set Variable [ $r ; Value: MBS( "QuickList.Free"; $QuickList1 ) ]
Set Variable [ $r ; Value: MBS( "QuickList.Free"; $QuickList2 ) ]

```

103.56 QuickList.Deserialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.Deserialize"; Text)

Parameters

Text

The serialized data as text.

Result Returns quick list reference number or error.

Description

Examples

Create and save a list to restore it:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$1234$Just a test!" ) ]
Set Variable [ $text; Value:MBS("Quicklist.Serialize"; $list) ]
Set Variable [ $secondList; Value:MBS("Quicklist.Deserialize"; $text) ]
Show Custom Dialog [ "List"; "Encoded: " & $text & $& $& "Decoded: " & MBS("QuickList.GetList";
$secondList) ]
Set Variable [ $r; Value:MBS("Quicklist.Free"; $list) ]
Set Variable [ $r; Value:MBS("Quicklist.Free"; $secondList) ]
```

103.57 QuickList.FindEquals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.FindEquals"; List1; List2 { ; ReturnNewList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.
Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

103.58 QuickList.FindUnequals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.FindUnequals"; List1; List2 { ; ReturnNewList; NotFromSecondList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter.

0

NotFromSecondList

Optional

Pass 1 to only returns items from first list not present in second list. Default is 0 to get items from both lists.

0

Result Returns list, OK or error.

Description

103.59 QuickList.Free

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.Free"; ListRef)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Result Returns OK or error.

Description

Please call this for each list to make sure you don't run out of memory.

Examples

Creates list and frees it:

```
$list = MBS( "QuickList.New"; "Hello$World$Test" )
$r = MBS( "QuickList.Free"; $list)
```

103.60 QuickList.GetList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.GetList"; ListRef { ; NoReturnEnding; Delimiter })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Delimiter

Optional

The delimiter to use. Can be empty to have no delimiter. Common use is to pass "§", ", " or "; ".
", "

Result Returns text or error.

Description

Lines are separated by return character.

Examples

Create a list and query it:

```
$listID = MBS( "QuickList.New"; "Hello$World" )
$list = MBS( "QuickList.GetList"; $listID )
$r = MBS( "QuickList.Free"; $listID )
```

Try with delimiter:

```
Set Variable [ $listID; Value:MBS( "QuickList.New"; "Hello$World" ) ]
Set Variable [ $list1; Value:MBS( "QuickList.GetList"; $listID ) ]
Show Custom Dialog [ "Result default"; $list1 ]
Set Variable [ $list2; Value:MBS( "QuickList.GetList"; $listID; 0; "" ) ]
Show Custom Dialog [ "Result with empty delimiter"; $list2 ]
Set Variable [ $list3; Value:MBS( "QuickList.GetList"; $listID; 0; " " ) ]
Show Custom Dialog [ "Result with space delimiter"; $list3 ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $listID ) ]
```

103.61 QuickList.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.GetValue"; ListRef; Index)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Index

The index of the value to get. Must be in range from 0 to QuickList.Count-1.

\$index

Result Returns OK or error.

Description

Using our QuickList functions is much faster than using GetValue(listOfValues;valueNumber) function in FileMaker for large lists.

If you enable tracing with Trace command, this function will be much slower due to the debug output.

Examples

Query values from List:

```
$listID = MBS( "QuickList.New"; "Hello$World" )
$v1 = MBS( "QuickList.GetValue"; $listID; 1 )
$v2 = MBS( "QuickList.GetValue"; $listID; 2 )
$r = MBS("QuickList.Free"; $listID)
```

103.62 QuickList.HasDuplicateItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.HasDuplicateItems"; ListRef)

Parameters

ListRef

The reference to the list returned from QuickList.New function.
\$List

Result Returns 1, 0 or error.

Description

Returns 1 if duplicate lines are found or 0 if not.

See also

103.63 QuickList.HasValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.HasValue"; ListRef; Value)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Value

The value to check.

"Hello"

Result Returns 1, 0 or error.

Description

Returns 1 if value is found or 0 if not. Text comparison is case sensitive.

Examples

Checks if list contains value:

```
Set Variable [ $q; Value:MBS("QuickList.New"; "Hello$World") ]
Show Custom Dialog [ "Contains World"; MBS("QuickList.HasValue"; $q; "World") ]
Show Custom Dialog [ "Contains Test"; MBS("QuickList.HasValue"; $q; "Test") ]
Set Variable [ $r; Value:MBS("QuickList.Free"; $q) ]
```

103.64 QuickList.InsertValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.InsertValue"; ListRef; Index; Text)

Parameters**ListRef**

The reference to the list returned from QuickList.New function.

\$List

Index

the index where to insert.

0

Text

The text to add.

"Hello"

Result Returns OK or error.

Description

Please note that QuickList.AddValue is more efficient than inserting.

103.66 QuickList.MatchesPostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.MatchesPostfix"; ListRef; Text { ; Flags })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Text

The text to find.

"Hello"

Flags

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter. Add 2 to split. This is only useful with first option together (so pass 3 for both). Matching entries will be in new list and non matching entries will stay in old list. Add 4 to reverse operation (NOT).

0

Result Returns OK, list or error.

Description

Comparison is case insensitive.

Examples

Finds list entries with same postfixes:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$auto" ) ]
Set Variable [ $matchesList; Value:MBS( "QuickList.MatchesPostfix"; $list; "o"; 0 ) ]
Set Variable [ $text; Value:MBS( "QuickList.GetList"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
Show Custom Dialog [ "result"; $text ]
```

103.67 QuickList.MatchesPrefix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.MatchesPrefix"; ListRef; Text { ; Flags })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Text

The text to find.

"Hello"

Flags

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter. Add 2 to split. This is only useful with first option together (so pass 3 for both). Matching entries will be in new list and non matching entries will stay in old list. Add 4 to reverse operation (NOT).

0

Result Returns OK, list or error.

Description

Comparison is case insensitive.

Examples

Finds list entries with same prefixes:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$auto" ) ]
Set Variable [ $matchesList; Value:MBS( "QuickList.MatchesPrefix"; $list; "w"; 0 ) ]
Set Variable [ $text; Value:MBS( "QuickList.GetList"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
Show Custom Dialog [ "result"; $text ]
```

Find entries not matching in prefix:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$auto" ) ]
Set Variable [ $matchesList; Value:MBS( "QuickList.MatchesPrefix"; $list; "w"; 4 ) ]
Set Variable [ $text; Value:MBS( "QuickList.GetList"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
Show Custom Dialog [ "Result"; $text ]
```

103.68 QuickList.MatchesSubString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.MatchesSubString"; ListRef; Text { ; Flags })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Text

The text to find.

"Hello"

Flags

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter. Add 2 to split. This is only useful with first option together (so pass 3 for both). Matching entries will be in new list and non matching entries will stay in old list. Add 4 to reverse operation (NOT).

0

Result Returns OK, list or error.

Description

Comparison is case insensitive. (currently case sensitive on Windows)

Examples

Split a list matching substring:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$auto" ) ]
Set Variable [ $matchesList; Value:MBS( "QuickList.MatchesSubString"; $list; "orl"; 3 ) ]
Set Variable [ $text1; Value:MBS( "QuickList.GetList"; $list ) ]
Set Variable [ $text2; Value:MBS( "QuickList.GetList"; $matchesList ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $matchesList ) ]
Show Custom Dialog [ "Result"; "Matches: " & $text1 & $r "Others: " & $text2 ]
```

103.69 QuickList.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.New" { ; Text; Separator; RefNum })

Parameters

Text

Optional

Initial list content.

"Hello\$World\$Test"

Separator

Optional

The separator to use. Can be ASCII character number (e.g. 9 for tab) or a text where we use first character as separator. Default is newline.

" | "

RefNum

Optional

The desired reference number. Leave empty for default.

"IDs"

Result Returns reference number or error.

Description

You can provide whatever separator you need. Default is new line characters. But works also fine with comma, semicolon or tab characters.

Please use QuickList.Free to release the list later.

QuickList reference numbers are starting at 12000 and counting up for each new list.

Examples

Creates new list:

```
MBS( "QuickList.New"; "Hello$World$Test" )
```

Create list with | as separator:

```
MBS("QuickList.New"; "Hello | World"; " | ")
```

Parse with newline as separator:

```
MBS("QuickList.GetList"; MBS( "QuickList.New"; "1$2" & Char(10) & "3" & Char(13) & "4" ))
```

accepts CR and LF as delimiter.

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

Description

Performs a logical NOT operation.

103.71 QuickList.NotColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.NotColumn"; List1; List2; Separator; Column { ; ReturnNewList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

Column

The index of the column to compare. Starts with 0 for first column.

0

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

Description

Performs a logical NOT operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as QuickList.Not, but slower.

103.72 QuickList.Or

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.Or"; List1; List2 { ; ReturnNewList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

Description

Performs a logical OR operation.

Examples

Creates two lists and combines them:

```
$list1 = MBS( "QuickList.New"; "Hello$World")
```

```
$list2 = MBS( "QuickList.New"; "a$b")
```

```
$list3 = MBS( "QuickList.Or"; $list1; $list2; 1 )
```

```
$list = MBS( "QuickList.GetList"; $list3)
```

```
$r = MBS("QuickList.Free"; $list1)
```

```
$r = MBS("QuickList.Free"; $list2)
```

```
$r = MBS("QuickList.Free"; $list3)
```

MBS("QuickList.OrColumn"; List1; List2; Separator; Column { ; ReturnNewList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

Column

The index of the column to compare. Starts with 0 for first column.

0

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

Description

Performs a logical OR operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as QuickList.Or, but slower.

103 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.Pop"; ListRef)

Parameters

ListRef

The reference to the list returned from QuickList.New function.
\$List

Result Returns value or error.

Description

Examples

Push and pop:

```
Set Variable [ $list; Value:MBS( "QuickList.New" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "Hello" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "World" ) ]
Show Custom Dialog [ "List"; MBS( "QuickList.Pop"; $list ) ]
Show Custom Dialog [ "List"; MBS( "QuickList.Pop"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
```

103.75 QuickList.PopFirst

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.PopFirst"; ListRef)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Result Returns value or error.

Description

Please note that QuickList.Pop is more efficient than QuickList.PopFirst.

Examples

Push and pop first:

```
Set Variable [ $list; Value:MBS( "QuickList.New" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "Hello" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "World" ) ]
Show Custom Dialog [ "List"; MBS( "QuickList.PopFirst"; $list ) ]
Show Custom Dialog [ "List"; MBS( "QuickList.PopFirst"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
```

MBS("QuickList.Push"; ListRef; Text)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Text

The text to add.

"Hello"

Result Returns OK or error.

Description

Examples

Trying push:

```
Set Variable [ $list; Value:MBS( "QuickList.New" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "Hello" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "World" ) ]

103.77 QuickList.RegExMatch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "QuickList.RegExMatch"; ListRef; Pattern; CompilerOptions; ExecuteOptions { ; ReturnNewList }
)
```

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Pattern

The pattern to use.

"H(.*)"

CompilerOptions

A number for the options to use. e.g. 1 for case insensitive or 512 for ungreedy.

512+1

ExecuteOptions

The options for executing.

0

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list or error.

Description

This compiles the pattern, executes it and looks if we have a match or not for each list item.

Returns the list items which match.

103.81 QuickList.RemovePostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.RemovePostfix"; ListRef; Postfix { ; ReturnNewList; CaseSensitive })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Postfix

The text to remove.

"llo"

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

CaseSensitive

Optional

Whether to match with case sensitive comparison. Default is 0 for case insensitive. You can pass 1 to have a case sensitive comparison.

0

Result Returns list or error.

Description

Examples

Try in one let statement:

```
Let( [
list = MBS("QuickList.New"; ">Hello<$>World<");
e = MBS("QuickList.RemovePrefix"; list; ">");
e = MBS("QuickList.RemovePostfix"; list; "<");
r = MBS("QuickList.GetList"; list);

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.RemoveValue"; ListRef; Value { ; All })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Value

The value to remove.

"Hello"

All

Optional

Optional, pass 1 to remove all values with the given value. Pass 0 (default) to remove only the first matching value.

0

Result Returns OK or error.

Description

103.84 QuickList.Reserve

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.Reserve"; ListRef; Size)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Size

The new size in entries. So passing 100 will make sure we have space for 100 list entries at least. If more are added, the list grows automatically.

100

Result Returns OK or error.

Description

To ensure upfront that enough memory is available.

This will not change the count, just preallocate memory.

103.86 QuickList.Serialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.Serialize"; ListRef)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Result Returns text or error.

Description

The dictionary content is stored in a base64 encoded string which the plugin function List.Deserialize and QuickList.Deserialize can read.

Using this function allows to store a list in a text field or transmit it with Socket functions, SerialPort functions or by writing it to a file.

Examples

Create and save a list to restore it:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$1234$Just a test!" ) ]
Set Variable [ $text; Value:MBS("Quicklist.Serialize"; $list) ]
Set Variable [ $secondList; Value:MBS("Quicklist.Deserialize"; $text) ]
Show Custom Dialog [ "List"; "Encoded: " & $text & $& $& "Decoded: " & MBS("QuickList.GetList";
$secondList) ]
Set Variable [ $r; Value:MBS("Quicklist.Free"; $list) ]
Set Variable [ $r; Value:MBS("Quicklist.Free"; $secondList) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.SetList"; ListRef; Text { ; Separator })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Text

New content for the list.

"Hello\$World\$Test"

Separator

Optional

The separator to use. Can be ASCII character number (e.g. 9 for tab) or a text where we use first character as separator.

" | "

Result Returns OK or error.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.SetValue"; ListRef; Index; Text)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Index

The index of the value to get. Must be in range from 0 to QuickList.Count-1.

\$index

Text

The text to add.

"Hello"

Result Returns OK or error.

Description

If index is equal to count, we append the text to the list.

Examples

Tries set value:

```
Variable setzen [ $list; Wert:MBS( "QuickList.New"; "Hello$World$Test" ) ]
Variable setzen [ $r; Wert:MBS( "QuickList.SetValue"; $list; 0; "Element 0" ) ]
Eigenes Dialogfeld anzeigen [ "List contains"; MBS( "QuickList.GetList"; $list) ]

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Flags

Optional

Optional, whether to sort case insensitive or descending. Pass 1 to sort case insensitive or 0 to sort case sensitive. Add 2 to sort descending. Add 4 for sorting dates in DD.MM.YYYY style and 8 for sorting dates in MM.DD.YYYY style.

1

Result Returns OK or error.

Description

Version 6.2 adds new modes for date sorting. Mode 4 for DD.MM.YYYY style and mode 8 for MM.DD.YYYY style.

Examples

Sort a list:

```
Let
( [
l = MBS("QuickList.New"; "aßeä$1");
r = MBS("QuickList.Sort"; l);
list = MBS("QuickList.GetList"; l);
r = MBS("QuickList.Free"; l)
]; list )
```

Sort a list ascending case sensitive:

```
Let
( [
l = MBS("QuickList.New"; "Aßeä$1");
r = MBS("QuickList.Sort"; l);
list = MBS("QuickList.GetList"; l);
r = MBS("QuickList.Free"; l)
]; list )
```

Sort a list descending case insensitive:

103.89. QUICKLIST.SORT

5551

```
Let  
( [  
l = MBS("QuickList.New"; "A§e§ä§Ä§9§1");  
r = MBS("QuickList.Sort"; l; 3);  
list = MBS("QuickList.GetList"; l);  
r = MBS("QuickList.Free"; l)  
]; list )
```

103.90 QuickList.SortWith

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	6.2	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.SortWith"; ListRef; Flags; List1 { ; List2 })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Flags

Optional, whether to sort case insensitive or descending. Pass 1 to sort case insensitive or 0 to sort case sensitive. Add 2 to sort descending. Add 4 for sorting dates in DD.MM.YYYY style and 8 for sorting dates in MM.DD.YYYY style.

1

List1

The first list to sort with.

\$list1

List2

Optional

The second list to sort with.

\$list2

Result Returns OK or error.

Description

We sort the first list and move all items in other lists as well to match the order.

You can pass as many lists in the parameters as needed, not just 2.

Examples

Test sorting with four lists:

```
# build some lists
Set Variable [ $keys; Value:MBS( "QuickList.New"; "234$123$545$152" ) ]
Set Variable [ $firstnames; Value:MBS( "QuickList.New"; "Bob$John$Bill$Chris" ) ]
Set Variable [ $lastnames; Value:MBS( "QuickList.New"; "Miller$Jones$Becks$Meyer" ) ]
Set Variable [ $cities; Value:MBS( "QuickList.New"; "New York$Santa Clara$San Francisco$Atlanta" ) ]
# show before
Set Variable [ $r1; Value:MBS( "List.CrossProduct"; MBS("QuickList.GetList"; $keys); MBS("QuickList.GetList"; $firstnames); "" ; " ; "" ; 2) ]
Set Variable [ $r2; Value:MBS( "List.CrossProduct"; MBS("QuickList.GetList"; $lastnames); MBS("QuickList.GetList"; $cities); "" ; " ; "" ; 2) ]
Set Variable [ $r3; Value:MBS( "List.CrossProduct"; $r1; $r2; "" ; " ; "" ; 2) ]
# sort
Set Variable [ $r; Value:MBS( "QuickList.SortWith"; $keys; 0; $firstnames; $lastnames; $cities) ]
```

```
# show result:
Set Variable [ $r1; Value:MBS( "List.CrossProduct"; MBS("QuickList.GetList"; $keys); MBS("QuickList.GetList"; $firstnames); ""; ", "; ""; 2) ]
Set Variable [ $r2; Value:MBS( "List.CrossProduct"; MBS("QuickList.GetList"; $lastnames); MBS("QuickList.GetList"; $cities); ""; ", "; ""; 2) ]
Set Variable [ $r4; Value:MBS( "List.CrossProduct"; $r1; $r2; ""; ", "; ""; 2) ]
Show Custom Dialog [ "Sort results"; "Before: " & $r3 & $r4 & "Sorted: " & $r4 ]
# cleanup memory
Set Variable [ $r; Value:MBS( "QuickList.Free"; $keys) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $cities) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $firstnames) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $lastnames) ]
```

Sort a list column:

```
Set Variable [ $List ; Value: "65412 | Schreiber | Klaus | 459oz8235" & $r3 & "76542 | Abraham | Hermmann | 38957zf" & $r4 & "85112 | Behrens | Robert | 489748hj" ]
Set Variable [ $QuickList1 ; Value: MBS( "QuickList.New"; $List ) ]
#
Set Variable [ $QuickList2 ; Value: MBS( "QuickList.DeCombine"; $QuickList1; " | "; 1 /* StartColumn*/; 1 /* EndColumn */; 1 /* New List*/ ) ]
Set Variable [ $List2 ; Value: MBS( "QuickList.GetList"; $QuickList2) ]
Set Variable [ $r ; Value: MBS( "QuickList.SortWith"; $QuickList2; 1; $QuickList1 ) ]
Set Variable [ $List1 ; Value: MBS( "QuickList.GetList"; $QuickList1) ]
#
Set Variable [ $r ; Value: MBS( "QuickList.Free"; $QuickList1 ) ]
Set Variable [ $r ; Value: MBS( "QuickList.Free"; $QuickList2 ) ]
```

- [MBS FileMaker Plugin, version 6.2pr2](#)

Created 25th March 2016, last changed 21st December 2018.

103.91 QuickList.SubList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.SubList"; ListRef; Index; Count { ; ReturnNewList; NoReturnEnding })

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Index

The zero based index where to start. Or in other words: How many entries to skip.

3

Count

How many entries to copy. If negative, we pick the other items left.

5

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to return a text list.

0

NoReturnEnding

Optional

If you passed 0 for ReturnNewList, decides about new list: Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns OK or error.

Description

Can return new QuickList or normal list.

103.93 QuickList.ValueIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.ValueIndex"; ListRef; Value)

Parameters

ListRef

The reference to the list returned from QuickList.New function.

\$List

Value

The text to find.

"Hello"

Result Returns index, nothing or error.

Description

Returns zero based index (0 = first list value).

Returns empty result if not found.

Comparison is case insensitive.

103.94 QuickList.XOr

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.XOr"; List1; List2 { ; ReturnNewList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.
Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

Description

Performs an exclusive logical OR operation.

103.95 QuickList.XOrColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS("QuickList.XOrColumn"; List1; List2; Separator; Column { ; ReturnNewList })

Parameters

List1

The reference to the first quicklist.

\$List1

List2

The reference to the second quicklist.

\$List2

Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

Column

The index of the column to compare. Starts with 0 for first column.

0

ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter.

0

Result Returns list, OK or error.

Description

Performs an exclusive logical OR operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as QuickList.XOr, but slower.

Chapter 104

ListDialog

Functions for a dialog to pick items from a list.

104.1 ListDialog.AddItemToList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	4.2	Yes	Yes	No	No	No

```
MBS( "ListDialog.AddItemToList"; title { ; tag; Header } )
```

Parameters

title

The title to show.

"Hello World"

tag

Optional

The tag, e.g. the record ID.

"1234"

Header

Optional

Pass 1 to make this an header item, which is shown differently.

1

Result Returns OK.

Description

Examples

Clears list and adds three lines:

```
MBS( "ListDialog.ClearList" )  
MBS( "ListDialog.AddItemToList"; "Bob"; 1 )  
MBS( "ListDialog.AddItemToList"; "Joe"; 2 )  
MBS( "ListDialog.AddItemToList"; "Tim"; 3 )
```

104.2 ListDialog.AddItemstoList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	4.2	Yes	Yes	No	No	No

MBS("ListDialog.AddItemstoList"; titles { ; tags })

Parameters

titles

The titles to add.

"Hello World"

tags

Optional

The tags, e.g. the record ID.

"1234"

Result Returns number of items.

Description

You can pass a list of items (separated with new line character)

If tag for an item is # , plugin will mark this entry as header item.

Examples

Add two items

```
MBS( "ListDialog.AddItemstoList"; "Hello$World" )
```

Add header with two items

```
MBS( "ListDialog.AddItemstoList"; "Names$Steve$Joe$Geoff"; "# §1§2§3" )
```

104.3 ListDialog.AddSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	5.1	Yes	Yes	No	No	No

MBS("ListDialog.AddSQL"; SQL Statement; FileName { ; Params })

Parameters

SQL Statement

SQL Statement as a Text string

FileName

The target database name. Can be empty to not limit query to one database.

””

Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

Result Returns number of items added or error.

Description

First field from SQL result is used as text, second as tag and third as header flag.

Tag and header columns are optional.

Examples

Add items:

MBS("ListDialog.AddSQL"; "select Text, Tag, Header from Liste")

104 ListDialog	4.2	Yes	Yes	No	No	No

MBS("ListDialog.ClearList")

Result Returns OK.

Description

Also clears the selection.

Examples

Clears list and adds three lines:

```
MBS( "ListDialog.ClearList" )
MBS( "ListDialog.AddItemToList"; "Bob"; 1 )
MBS( "ListDialog.AddItemToList"; "Joe"; 2 )
MBS( "ListDialog.AddItemToList"; "Tim"; 3 )

Created 18th August 2014, last changed 11st October 2019.

104.18 ListDialog.GetSelectedTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	4.2	Yes	Yes	No	No	No

MBS("ListDialog.GetSelectedTag")

Result Returns text.

Description

The tag allows you to store anything with the list like a record ID.

Text is empty if nothing is selected.

This can be a list if used with multiple selection.

Created 18th August 2014, last changed 18th August 2014.

104.23 ListDialog.ListItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	4.2	Yes	Yes	No	No	No

MBS("ListDialog.ListItem"; Index)

Parameters

Index

The index from 0 to ListDialog.ListCount-1.

\$index

Result Returns text.

Description

See also

- 104.22 ListDialog.ListCount 5585
- 104.24 ListDialog.ListTag 5587

Created 18th August 2014, last changed 18th August 2014.

104.24 ListDialog.ListTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	4.2	Yes	Yes	No	No	No

MBS("ListDialog.ListTag"; Index)

Parameters

Index

The index from 0 to ListDialog.ListCount-1.

\$index

Result Returns text.

Description

The tag allows you to store anything with the list like a record ID.

104.26 ListDialog.SetAllowEmptySelection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	5.0	Yes	Yes	No	No	No

MBS("ListDialog.SetAllowEmptySelection"; value)

Parameters

value

Whether to allow empty selections. Pass 1 to allow and 0 to disallow.

1

Result Returns OK or error.

Description

Examples

Enable empty selection:

```
MBS( "ListDialog.SetAllowEmptySelection"; 1 )
```

Disable empty selection:

```
MBS( "ListDialog.SetAllowEmptySelection"; 0 )
```

104.28 ListDialog.SetCancelButtonLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	4.2	Yes	Yes	No	No	No

MBS("ListDialog.SetCancelButtonLabel"; text)

Parameters**text**

The new text.
"Cancel"

Result Returns OK.

Description**Examples**

Sets label:

MBS("ListDialog.SetCancelButtonLabel"; "Abbrechen")

See also

- 104.9 ListDialog.GetCancelButtonLabel 5572

104.29 ListDialog.SetColumnCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	9.2	Yes	Yes	No	No	No

MBS("ListDialog.SetColumnCount"; Value)

Parameters

Value

The new column count.

2

Result Returns OK or error.

Description

Currently we support up to 5 columns.
Default is 1 column unless you change it.

Examples

Set column headers:

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnCount"; 2) ]
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnHeader"; 0; "Column left") ]
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnHeader"; 1; "Column right") ]
```

104.30 ListDialog.SetColumnHeader

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	9.2	Yes	Yes	No	No	No

MBS("ListDialog.SetColumnHeader"; Index; Text)

Parameters

Index

The index of the column starting with zero for the first one.

0

Text

The text for the column header.

"Hello"

Result Returns OK or error.

Description

Examples

Set column headers:

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnCount"; 2) ]
```

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnHeader"; 0; "Column left") ]
```

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnHeader"; 1; "Column right") ]
```

104.31 ListDialog.SetHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	4.3	Yes	Yes	No	No	No

MBS("ListDialog.SetHeight")

Result Returns OK.

Description

See also ListDialog.SetWidth, ListDialog.GetWidth and ListDialog.GetHeight.

Examples

Set size to 800x600:

```
MBS( "ListDialog.SetWidth"; 800 )
```

```
MBS( "ListDialog.SetHeight"; 600 )
```

See also

104.32 ListDialog.SetOtherButtonEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	9.5	Yes	Yes	No	No	No

MBS("ListDialog.SetOtherButtonEvaluate")

Result Returns OK or error.

Description

If set, we run this expression instead of closing the dialog.

This can be useful to start action while dialog stays open. Please note you can't run a script while dialog is open.

Other button is only visible if the label is set.

Examples

Add a button and let it run showurl to open website:

```
Set Variable [ $r ; Value: MBS("ListDialog.SetOtherButtonLabel"; "Help") ]
```

```
Set Variable [ $r ; Value: MBS("ListDialog.SetOtherButtonEvaluate"; "MBS( \"ShowURL\"; \"https://mb-splugins.eu\" )" ) ]
```

104.33 ListDialog.SetOtherButtonLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	9.5	Yes	Yes	No	No	No

MBS("ListDialog.SetOtherButtonLabel"; text)

Parameters

text

The new text.

"Help"

Result Returns OK or error.

Description

Other button is only visible if the label is set.

If expression to evaluate is set, the evaluate happens when button is clicked. If no expression is set, the result for running the dialog and clicking this button is "Other".

Examples

Add a button and let it run showurl to open website:

```
Set Variable [ $r ; Value: MBS("ListDialog.SetOtherButtonLabel"; "Help") ]
```

```
Set Variable [ $r ; Value: MBS("ListDialog.SetOtherButtonEvaluate"; "MBS( \"ShowURL\"; \"https://mb-plugins.eu\" )" ) ]

104.43 ListDialog.ShowDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 ListDialog	4.2	Yes	Yes	No	No	No

MBS("ListDialog.ShowDialog" { ; TopMost })

Parameters

TopMost

Optional

Available in MBS FileMaker Plugin 10.1 or newer.

Whether the dialog will get top most flag on Windows. Pass 1 to make it topmost, pass 0 or nothing for normal behavior.

Result Returns OK or Cancel.

Description

Examples

Shows a dialog:

```
Set Variable [ $r; Value:MBS("ListDialog.ClearList") ]
Set Variable [ $r; Value:MBS("ListDialog.SetPrompt"; "Please select an item:") ]
Set Variable [ $r; Value:MBS("ListDialog.AddItemToList"; "First Item"; "1234") ]
Set Variable [ $r; Value:MBS("ListDialog.SetAllowMultipleSelection"; 1) ]
Set Variable [ $r; Value:MBS("ListDialog.SetSelectedTitle"; "1234") ]
Set Variable [ $r; Value:MBS("ListDialog.ShowDialog") ]
Set Field [ ListDialog::Result; $r ]
Set Field [ ListDialog::Selected Tag; MBS("ListDialog.GetSelectedTag") ]
Set Field [ ListDialog::Selected; MBS("ListDialog.GetSelectedTitle") ]
```

Chapter 105

MailComposer

A panel for iOS to edit and send an email.

You can add attachments and optionally html content.

105.1 MailComposer.AddAttachmentContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.AddAttachmentContainer"; Container; Name { ; MimeType })

Parameters

Container

The container to attach to email.

Attachment::Container

Name

The name for the attachment.

"sample.pdf"

MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
"application/octet-stream"

Result Returns OK or error.

Description

You can use `Text.FileExtensionToMimeType` to find the mime type for a file extension.

You can use `AddAttachment` several times to add several attachments.

Examples

Adds an attachment:

```

Set Variable [ $FieldName ; Value: Get(ScriptParameter) ]
Set Variable [ $Container ; Value: GetField ( $FieldName) ]
If [ IsEmpty ( $container ) = 0 ]

105.2 MailComposer.AddAttachmentFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.AddAttachmentFile"; Path; Name { ; mimeType })

Parameters

Path

The native file path to the file to include as attachment.

"/Users/cs/Desktop/sample.pdf"

Name

The name for the attachment.

"sample.pdf"

MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
"application/octet-stream"

Result Returns OK or error.

Description

Attachments over 100 MB are not supported.

You can use `Text.FileExtensionToMimeType` to find the mime type for a file extension.

You can use `AddAttachment` several times to add several attachments.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

105.3 MailComposer.AddAttachmentText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.AddAttachmentText"; Text; Encoding; Name { ; MimeType })

Parameters

Text

The text to use for the attachment.

"Hello World"

Encoding

The text encoding for text parameter. Default is UTF-8.

"UTF8"

Name

The name for the attachment. If empty, version 6.2 or newer uses file name from file path.

"sample.txt"

MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "text/plain".

"text/plain"

Result Returns OK or error.

Description

Attachments over 100 MB are not supported.

You can use `Text.FileExtensionToMimeType` to find the mime type for a file extension.

You can use `AddAttachment` several times to add several attachments.

105.4 MailComposer.CanSendMail

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.CanSendMail")

Result Returns 1, 0 or error.

Description

Returns 1 if the user has set up the device for sending email.

The client may continue to set the recipients and content if the return value was 1. If 0 was the result, the client has a couple options. It may choose to simply notify the user of the inability to send mail, or it may issue a "mailto" URL via Open URL.

This function can be called before having a composer initialized.

Examples

Checks whether we can email:

```
Set Variable [ $r ; Value: MBS( "MailComposer.CanSendMail" ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't send emails." ; "This iOS device is not configured to send emails." ]
Exit Script [ Text Result: "failed" ]
End If
```

Created 10th June 2017, last changed 10th June 2017.

105.6 MailComposer.Error

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.Error")

Result Returns error text or empty.

Description

Returns empty result if there was no error.

Examples

Show result in a field:

```
Set Variable [ $result ; Value: MBS( "MailComposer.Result" ) ]
Set Variable [ $error ; Value: MBS( "MailComposer.Error" ) ]
Set Field [ Placeholder::Result ; $result & ": " & $error ]
```

105.16 MailComposer.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.New")

Result Returns OK or error.

Description

Resets last error and clears last email content.

Examples

Start a new email:

```
Set Variable [ $r ; Value: MBS( "MailComposer.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MailComposer.SetSubject"; Placeholder::Subject ) ]
```

105.17 MailComposer.Present

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.Present")

Result Returns OK or error.

Description

This will show the user interface and start the process.

Your script may call this in a script and then wait for the script trigger.

Examples

Setups email and send:

```

Set Variable [ $r ; Value: MBS( "MailComposer.CanSendMail" ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't send emails." ; "This iOS device is not configured to send emails." ]
Exit Script [ Text Result: "failed" ]
End If
Set Variable [ $r ; Value: MBS( "MailComposer.New" ) ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetSubject"; Placeholder::Subject ) ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetScript"; Get(FileName); "Sent" ) ]
If [ Length ( Placeholder::Body ) > 0 ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetMessageBody"; Placeholder::Body; Position ( Placeholder::Body ; "<html>" ; 1 ; 1 ) > 0 ) ]
End If
If [ Length ( Placeholder::CCRecipients ) > 0 ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetCCRecipients"; Placeholder::CCRecipients ) ]
End If

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.SetBCCRecipients"; Recipients)

Parameters

Recipients

List of recipients.

Result Returns OK or error.

Description

Will set the BCC header for the email message. This should be called prior to display.

Recipient addresses should be specified as per RFC5322.

After the view has been presented to the user, this method will no longer change the value.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.SetEvaluate"; Expression)

Parameters**Expression**

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

Result Returns OK or error.

Description

In the script you can check with MailComposer.Result and MailComposer.Error what happened.

See also

105.22 MailComposer.SetMessageBody

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.SetMessageBody"; Body; IsHTML)

Parameters

Body

The text containing the body contents of the email message.

IsHTML

A boolean value indicating if the body argument is to be interpreted as HTML content. Pass 1 if Body is html or 0 for plain text. Default is 0 for plain text.

0

Result Returns OK or error.

Description

This method will set the body of the email message. This should be called prior to display. The user's signature, if specified, will be added after the body content.

105.23 MailComposer.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.SetScript"; FileName; ScriptName { ; Parameter })

Parameters

FileName

The file name for the script to trigger.

"test.fmp12"

ScriptName

The script name of the script to launch.

"EmailComposerFinished"

Parameter

Optional

The parameter to pass to the script.

Result Returns OK or error.

Description

In the script you can check with MailComposer.Result and MailComposer.Error what happened.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Set script:

```
Set Variable [ $r ; Value: MBS( "MailComposer.SetScript"; Get(FileName); "Sent") ]
```

105.24 MailComposer.SetSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 MailComposer	7.3	No	No	No	No	Yes

MBS("MailComposer.SetSubject"; Subject)

Parameters

Subject

The new subject.
"Hello World"

Result Returns OK or error.

Description

This method will set the Subject header for the email message. This should be called prior to display. Newlines are removed from the parameter. After the view has been presented to the user, this method will no longer change the value.

Examples

Start a new email:

```
Set Variable [ $r ; Value: MBS( "MailComposer.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MailComposer.SetSubject"; Placeholder::Subject ) ]
```

Chapter 106

MapView

MapKit functions for MacOS to show maps.

106.1 MapView.AddCircle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.4	Yes	No	No	No	Yes

MBS("MapView.AddCircle"; MapView; JSON)

Parameters

MapView

The map view reference number.

\$\$MapView

JSON

The JSON to describe the circle.

```
{ "address": "Nickenich", "radius": 500, "title": "Monkeybread Software", "subtitle": "MBS is here", "color": "# FF000077" }
```

Result Returns identifier or error.

Description

The JSON may contain the following entries:

You can either pass latitude and longitude together or pass the address and we lookup it to find coordinates.

Examples

Add circle for MBS with address string:

```
Set Variable [ $r ; Value: MBS( "MapView.AddCircle"; $$MapView; " { \"address\": \"Nickenich\",
```

latitude	The latitude of the coordinate.
longitude	The longitude of the coordinate.
address	The address to lookup to find latitude or longitude.
radius	The radius in meter.
title	The title for the circle.
subtitle	The subtitle for the item.
strokeColor	The stroke color as name or hex notation.
fillColor	The fill color as name or hex notation.
identifier	The identifier to use. Can be empty to get new identifier auto assigned.

```
\”radius\”: 500, \”title\”: \”Monkeybread Software\”, \”subtitle\”: \”MBS is here\”, \”color\”: \”#FF000077\” } ”) ]
```

Add circle for MBS with coordinates:

```
Set Variable [ $r ; Value: MBS( ”MapView.AddCircle”; $$MapView; ” { \”longitude\”: 7.329722, \”latitude\”: 50.413333, \”radius\”: 500, \”title\”: \”Monkeybread Software\”, \”subtitle\”: \”MBS is here\”, \”color\”: \”# FF000077\” } ”) ]
```

106.2 MapView.AddPin

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.AddPin"; MapView; Latitude; Longitude { ; Title; Subtitle; Identifier; color })

Parameters

MapView

The map view reference number.

\$\$MapView

Latitude

The latitude of the coordinate.

Longitude

The longitude of the coordinate.

Title

Optional

The title for the pin.

Subtitle

Optional

The subtitle for the pin.

Identifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger.

color

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.

"# FF0000"

Result Returns identifier or error.

Description

Deprecated. Please use MapView.AddPoint function instead for more options.

See also

106.3 MapView.AddPinWithAddress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.AddPinWithAddress"; MapView; Address { ; Title; Subtitle; Identifier; color })

Parameters

MapView

The map view reference number.

\$\$MapView

Address

The address to lookup.”

”New York”

Title

Optional

The title for the pin.

Subtitle

Optional

The subtitle for the pin.

Identifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger.

color

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.

”# FF0000”

Result Returns identifier or error.

Description

Deprecated. Please use MapView.AddPoint function instead for more options.

106.4 MapView.AddPoint

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.4	Yes	No	No	No	Yes

MBS("MapView.AddPoint"; MapView; JSON)

Parameters

MapView

The map view reference number.

\$\$MapView

JSON

The JSON to describe the point.

Result Returns identifier or error.

Description

The JSON may contain the following entries:

latitude	The latitude of the coordinate.
longitude	The longitude of the coordinate.
address	The address to lookup to find latitude or longitude.
radius	The radius in meter.
title	The title for the pin.
subtitle	The subtitle for the item.
color	The color as name or hex notation for the pin.
identifier	The identifier to use. Can be empty to get new identifier auto assigned.
image	The base64 encoded image data to use.
imageWidth	Optional the image width to use.
imageHeight	Optional the image height to use.
clusteringIdentifier	Optionally an identifier that determines whether the annotation view participates in clustering.
displayPriority	Optionally the display priority of this annotation view. Can be Required, High, Low or Default.

New in 9.5 are some boolean keys named `enabled`, `draggable` and `canShowCallout` to customize behavior.

You can either pass latitude and longitude together or pass the address and we lookup it to find coordinates.

Examples

Create MBS Pin on map with custom image:

```
Set Variable [ $json ; Value: " { \"address\": \"Nickenich\", \"title\": \"Monkeybread Software\", \"subtitle\": \"MBS is here\", \"imageWidth\": 40, \"imageHeight\": 40 } "
```

```
# add image from container field to JSON
Set Variable [ $json ; Value: MBS( "JSON.AddStringToObject"; $json; "image"; Base64Encode ( MapView::image ) ) ]
# show
Set Variable [ $r ; Value: MBS( "MapView.AddPoint"; $$MapView; $JSON) ]
```

Adds simple pin for Hamburg:

```
Set Variable [ $r ; Value: MBS( "MapView.AddPoint"; $$MapView; " { \"address\": \"Hamburg, Germany\", \"title\": \"Hamburg\" } ") ]
```

106.5 MapView.AddPolygon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.4	Yes	No	No	No	Yes

MBS("MapView.AddPolygon"; MapView; JSON)

Parameters

MapView

The map view reference number.

\$\$MapView

JSON

The JSON to describe the circle.

Result Returns identifier or error.

Description

The JSON may contain the following entries:

coordinates	The JSON array with the objects for the coordinates. Each entry can contain either longitude & latitude pair, x and y pair or address value.
title	The title for the polygon.
subtitle	The subtitle for the item.
fillColor	The fill color as name or hex notation for the polygon.
strokeColor	The stroke color as name or hex notation for the polygon.
identifier	The identifier to use. Can be empty to get new identifier auto assigned.
lineWidth	The line width to use. Default 5 point.

You can either pass latitude and longitude together or pass the address and we lookup it to find coordinates.

Examples

Add polygon from Hamburg to Munich and Cologne:

```
Set Variable [ $r ; Value: MBS( "MapView.AddPolygon"; $$MapView; " { \"coordinates\": [ { \"address\": \"Hamburg, Germany\" } , { \"address\": \"Munich, Germany\" } , { \"address\": \"Cologne, Germany\" } ] , \"strokeColor\": \"# FF00077\" } ) ]
```

Add polygon with some coordinates:

```
Set Variable [ $r ; Value: MBS( "MapView.AddPolygon"; $$MapView; " { \"coordinates\": [ { \"longitude\": 7.3, \"latitude\": 50.4 } , { \"longitude\": 7.3, \"latitude\": 50.5 } ,
```

```
{ \"longitude\": 7.4, \"latitude\": 50.5 } ,  
{ \"longitude\": 7.4, \"latitude\": 50.4 }  
],  
\"strokeColor\": \"# FF000077\"  
} ” ]
```

106.6 MapView.AddPolyline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.4	Yes	No	No	No	Yes

MBS("MapView.AddPolyline"; MapView; JSON)

Parameters

MapView

The map view reference number.

\$\$MapView

JSON

The JSON to describe the circle.

Result Returns identifier or error.

Description

The JSON may contain the following entries:

coordinates	The JSON array with the objects for the coordinates. Each entry can contain either longitude & latitude pair or address value.
title	The title for the poly line.
subtitle	The subtitle for the item.
fillColor	The fill color as name or hex notation for the line.
strokeColor	The stroke color as name or hex notation for the line.
identifier	The identifier to use. Can be empty to get new identifier auto assigned.
lineWidth	The line width to use. Default 5 point.

You can either pass latitude and longitude together or pass the address and we lookup it to find coordinates.

Examples

Add poly line from Hamburg to Munich and Cologne:

```
Set Variable [ $r ; Value: MBS( "MapView.AddPolyline"; $$MapView; " { \"coordinates\": [ { \"address\": \"Hamburg, Germany\" } , { \"address\": \"Munich, Germany\" } , { \"address\": \"Cologne, Germany\" } ] , \"strokeColor\": \"# FF00077\" } )" ]
```

106.7 MapView.Annotations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.4	Yes	No	No	No	Yes

MBS("MapView.Annotations"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns list of identifiers or error.

Description

Examples

Queries annotations:

MBS("MapView.Annotations"; 78001)

106.7.1 Blog Entries

- [MBS FileMaker Plugin, version 9.4pr6](#)

Created 7th September 2019, last changed 7th September 2019.

106.8 MapView.CreateWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.CreateWithControl"; WindowRef; ControlName { ; DX; DY })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

DX

Optional

A delta to move drop area more to left or right.

0

DY

Optional

A delta to move drop area more to top or bottom.

0

Result Returns map view reference number or error.

Description

Use MapView.Release later to destroy the image view.

If you use a register (tab controls) on the window, be aware that the image view actually is in front of the register (tab controls). So you need to check in the script which register page is current and should show what image view. Or by a trigger you turn the visibility on and off.

Image view reference numbers are starting at 78000 and counting up for each new map view.

Not supported for MacOS 32-bit.

Does not work for WebDirect.

When creating on a card window, please pass reference to parent window or just 0 for front window. On MacOS you may need to pass delta y value to adjust position.

If you create a control on a new window, you may do window update command in your script first to

106.8. MAPVIEW.CREATEWITHCONTROL 5651

have FileMaker actually build the window with controls and display it. A short script pause or using FM.RunScriptLater with 0.1 delay can help having all controls draw themselves. Then you can use this command to put our control on top. We use GetControl() to query left, top, width and height and this gives empty value if control is not yet here.

106.9 MapView.CreateWithSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.CreateWithSize"; WindowRef; x; y; w; h)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

x

The left coordinate in the window.

0

y

The top coordinate in the window.

0

w

The width of the image view in the window.

100

h

The height of the image view in the window.

100

Result Returns map view reference number or error.

Description

Use MapView.Release later to destroy the image view.

If you use a register (tab controls) on the window, be aware that the image view actually is in front of the register (tab controls). So you need to check in the script which register page is current and should show what image view. Or by a trigger you turn the visibility on and off.

106.10 MapView.FormatDistance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.2	Yes	No	Yes, macOS only	No	Yes

MBS("MapView.FormatDistance"; distance)

Parameters

distance

The distance in meters to format.

123

Result Returns text or error.

Description

Uses current locale for formatting, so it uses km in Europe and miles in USA.

Examples

Format a distance:

MBS("MapView.FormatDistance"; 9555)

Example result: "9,6 km"

106.15 MapView.GetAutoResizingMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetAutoResizingMask"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns number or error.

Description

This defines whether web viewer changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.5	Yes	No	No	No	Yes

MBS("MapView.GetOverlayPoints"; MapView; Overlay Identifier)

Parameters

MapView

The map view reference number.

\$\$MapView

Overlay Identifier

The identifier for the overlay.

"82001"

Result Returns JSON or error.

Description

Only for polygon and poly line overlays.

Returns JSON with points (x/y) and coordinates (longitude/latitude).

Examples

Queries points for an overlay:

MBS("MapView.GetOverlayPoints"; \$\$MapView; 82002)

```
Example result: {
  "points" : [
    {
      "y" : 90572524.642136484,
      "latitude" : 50.399999999999984,
      "x" : 139661002.52444446,
      "longitude" : 7.3000000000000114
    },
    {
      "y" : 90455421.722824365,
      "latitude" : 50.499999999999993,
      "x" : 139661002.52444446,
      "longitude" : 7.3000000000000114
    },
    {
      "y" : 90455421.722824365,
      "latitude" : 50.499999999999993,
      "x" : 139735567.92888889,
      "longitude" : 7.4000000000000057
    },
    {
      "y" : 90572524.642136484,
```

5668

```
"latitude" : 50.399999999999984,  
"x" : 139735567.92888889,  
"longitude" : 7.4000000000000057  
}  
],  
"pointCount" : 4  
}
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetPitchEnabled"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns OK or error.

Description

A Boolean value indicating whether the map camera's pitch information is used.

See also

106.32 MapView.GetScrollEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetScrollEnabled"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns 0, 1 or error.

Description

A Boolean value that determines whether the user may scroll around the map.

See also

- 106.25 MapView.GetPitchEnabled 5670

106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetShowsTraffic"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns 0, 1 or error.

Description

A Boolean value indicating whether the map displays traffic information.

See also

- 106.36 MapView.GetShowsScale 5681
- 106.84 MapView.SetShowsTraffic 5733

Created 14th January 2019, last changed 15th January 2019.

106.38 MapView.GetShowsUserLocation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetShowsUserLocation"; MapView)

Parameters**MapView**

The map view reference number.

\$\$MapView

Result Returns 0, 1 or error.

Description

A Boolean value indicating whether the map should try to display the user's location.

See also

- 106.85 MapView.SetShowsUserLocation

5734

Created 14th January 2019, last changed 15th January 2019.

106.39 MapView.GetShowsZoomControls

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	No

MBS("MapView.GetShowsZoomControls"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns 0, 1 or error.

Description

A Boolean indicating whether the map displays zoom controls.

See also

- 106.86 MapView.SetShowsZoomControls

5736

Created 14th January 2019, last changed 15th January 2019.

106.40 MapView.GetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetTag"; MapView)

Parameters**MapView**

The map view reference number.

\$\$MapView

Result Returns the stored tag value or an error.

Description**See also**

- 93.7 ImageView.GetTag 5099
- 106.19 MapView.GetLeft 5663
- 106.42 MapView.GetTop 5687

- 165.20 TextView.GetTag 7898

Created 14th January 2019, last changed 15th January 2019.

106.41 MapView.GetToolTip

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	No

MBS("MapView.GetToolTip"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns text or error.

Description

The tooltip is visible on Mac when mouse stays over control. There are no tooltips for iOS.

See also

- 93.8 [ImageView.GetToolTip](#) 5100

Created 14th January 2019, last changed 15th January 2019.

106.42 MapView.GetTop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetTop"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns y coordinate or error.

Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

See also

- 93.9 ImageView.GetTop 5101

106.43 MapView.GetVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetVisible"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns 1, 0 or error.

Description

Returns 1 if visible and 0 if hidden.

See also

- 93.10 ImageView.GetVisible 5102
- 93.19 ImageView.SetVisible 5111
- 106.44 MapView.GetVisibleMapRect 5689
- 106.89 MapView.SetVisible 5739
- 165.22 TextView.GetVisible 7900
- 165.42 TextView.SetVisible 7921

Created 14th January 2019, last changed 15th January 2019.

106.44 MapView.GetVisibleMapRect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetVisibleMapRect"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns map rect as JSON or error.

Description

This property represents the same basic information as the region property but specified as a map rectangle instead of a region.

Examples

Queries map rect:

MBS("MapView.GetVisibleMapRect"; \$\$MapView)

```
Example result: {
"x" : 140455603.74390683,
"height" : 799234.62509903312,
"y" : 86194618.191567183,
"width" : 1501801.5633610785
}
```

106.45 MapView.GetWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetWidth"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns width or error.

Description

See also

- 93.11 ImageView.GetWidth 5103
- 106.18 MapView.GetHeight 5662
- 106.19 MapView.GetLeft 5663

106.46 MapView.GetZoomEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.GetZoomEnabled"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns 0, 1 or error.

Description

A Boolean value that determines whether the user may use pinch gestures to zoom in and out of the map.

See also

106.48 MapView.IsUserLocationVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.IsUserLocationVisible"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns OK or error.

Description

This property tells you whether the icon used to represent the user's current location is visible in the map view. When determining whether the current location is visible, this property factors in the horizontal accuracy of the location data. Specifically, if the rectangle represented by the user's current location plus or minus the horizontal accuracy of that location intersects the map's visible rectangle, this property contains the value 1. If that location rectangle does not intersect the map's visible rectangle, this property contains the value 0.

If the user's location cannot be determined, this property contains the value 0.

106.51 MapView.ParseDistance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.2	Yes	No	Yes, macOS only	No	Yes

MBS("MapView.ParseDistance"; text)

Parameters

text

The text to parse.

"8 km"

Result Returns number or error.

Description

Uses current locale, so may use miles in US and km in Europe.

Returns distance in meters.

Examples

Parse 8 km:

MBS("MapView.ParseDistance"; "8 km")

Example result: 8000

106.52 MapView.PlanRoute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.2	Yes	No	Yes, macOS only	No	Yes

MBS("MapView.PlanRoute"; MapView; SourceAddress; DestinationAddress; Mode { ; TransportType; StartIdentifier; EndIdentifier; StartColor; EndColor })

Parameters

MapView

The map view reference number.

\$\$MapView

SourceAddress

The address where to start.

"Köln"

DestinationAddress

The address where to end.

"München"

Mode

Various options. Add 1 to show route on map. Add 2 to show alternative routes on the map. Add 4 to show start of route with a pin. Add 8 to show end of route with a pin. Add 16 to zoom map to show whole of the router. Add 32 to return result as JSON. Add 64 to include poly lines in JSON.

1+4+8+16

TransportType

Optional

The type of transportation to use. Value can be a combination of 1 for car, 2 for walk. Default is by car.

1

StartIdentifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger. If empty, the plugin assigns a number automatically.

EndIdentifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger. If empty, the plugin assigns a number automatically.

StartColor

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.

"# FF0000"

EndColor

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.
”# FF0000”

Result Returns result or error.

Description

The plugin will lookup coordinates for the given addresses and request a route calculation. Then we may add show routes and optionally return JSON with results.

Examples

Plan a route and store JSON:

```
Set Variable [ $r ; Value: MBS(”MapView.PlanRoute”; $$MapView; ”Köln”; ”München”; 1+2+4+8+16+32; 1+2+4) ]
```

```
Set Field [ MapView::Route ; $r ]
```

106.55 MapView.RemoveAnnotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.4	Yes	No	No	No	Yes

MBS("MapView.RemoveAnnotation"; MapView; Annotation Identifier)

Parameters

MapView

The map view reference number.

\$\$MapView

Annotation Identifier

The identifier for the annotation to remove.

"82001"

Result Returns OK or error.

Description

See also MapView.RemoveOverlay for overlays.

Examples

Remove an annotation:

MBS("MapView.RemoveAnnotation"; \$MapView; \$AnnotationIdentifier)

106.59 MapView.Screenshot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.3	Yes	No	No	No	Yes

MBS("MapView.Screenshot"; MapView { ; ImageType; Filename })

Parameters

MapView

The map view reference number.

\$\$MapView

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns container or error.

Description

This includes annotations and overlays as they are visible.

Examples

Save screenshot to deektop:

```
If [ Length ( $$MapView ) > 0 ]
```

```
Set Variable [ $screenshot ; Value: MBS("MapView.Screenshot"; $$MapView; "PNG") ]
```

```
Set Variable [ $file ; Value: MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "mapview.png" ) ]
```

```
Set Variable [ $r ; Value: MBS( "Container.WriteFile"; $screenshot; $file ) ]
```

```
End If
```

106.60 MapView.SelectedAnnotations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.5	Yes	No	No	No	Yes

MBS("MapView.SelectedAnnotations"; MapView)

Parameters

MapView

The map view reference number.

\$\$MapView

Result Returns list of identifiers or error.

Description

Examples

Queries annotations:

MBS("MapView.SelectedAnnotations"; 78001)

106.61 MapView.SetAnnotationCoordinate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.4	Yes	No	No	No	Yes

MBS("MapView.SetAnnotationCoordinate"; MapView; Annotation Identifier; JSON)

Parameters

MapView

The map view reference number.

\$\$MapView

Annotation Identifier

The identifier for the annotation to remove.

"82001"

JSON

The JSON to describe the coordinate. Can include keys longitude and latitude with values or a key address with address string.

" { \"address\": \"Restaurant Waldfrieden, Nickenich\" } "

Result Returns OK or error.

Description

Examples

Changes position of Pin:

```
Set Variable [ $json ; Value: " { \"address\": \"Restaurant Waldfrieden, Nickenich\" } " ]
```

```
Set Variable [ $r ; Value: MBS( "MapView.SetAnnotationCoordinate"; $$MapView; "82001"; $JSON) ]

106 MapView	9.5	Yes	No	No	No	Yes

MBS("MapView.SetAnnotationDragImage"; MapView; Annotation Identifier; Image)

Parameters

MapView

The map view reference number.

\$\$MapView

Annotation Identifier

The identifier for the annotation.

"82001"

Image

The image to use. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

Result Returns OK or error.

Description

Only for point annotations.

106.65 MapView.SetAutoResizingMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetAutoResizingMask"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new setting.

4+8

Result Returns OK or error.

Description

This defines whether web viewer changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

Examples

Make mapview resizable:

MBS("MapView.SetAutoResizingMask"; \$\$MapView; 2+16)

106.66 MapView.SetColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.4	Yes	No	No	No	Yes

MBS("MapView.SetColor"; MapView; Annotation Identifier; color)

Parameters

MapView

The map view reference number.

\$\$MapView

Annotation Identifier

The identifier for the annotation.

"82001"

color

The color to use. Can be a color name or hex notation like in HTML.

"# FF0000"

Result Returns OK or error.

Description

Examples

Changes color to blue:

MBS("MapView.SetColor"; "78001"; "82001"; "# 0000FF")

Created 7th September 2019, last changed 9th September 2019.

106.67 MapView.SetCoordinate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetCoordinate"; MapView; Latitude; Longitude { ; ZoomLevel; Animated })

Parameters

MapView

The map view reference number.

\$\$MapView

Latitude

The latitude of the coordinate.

Longitude

The longitude of the coordinate.

ZoomLevel

Optional

Optional zoom level in range from 0 to 20.

Animated

Optional

Whether to animate the change. Default is 1 to animate.

1

Result Returns OK or error.

Description

See also

- 106.49 MapView.MouseCoordinate

5694

Example Databases

- [Mac and iOS/MapKit/MapView BeeExample](#)
- [Mac and iOS/MapKit/MapView Click Polygons](#)

106.68 MapView.SetFrame

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetFrame"; MapView; X; Y; Width; Height { ; swap })

Parameters

MapView

The map view reference number.

\$\$MapView

X

The x coordinate.

Y

The y coordinate.

Width

The width of the control.

Height

The height of the control.

swap

Optional

Whether to swap y coordinate. By default we swap them. Pass 0 to disable or 1 to swap.

1

Result Returns OK or error.

Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

106.69 MapView.SetFrameWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetFrameWithControl"; MapView; ControlName { ; DX; DY })

Parameters

MapView

The map view reference number.

\$\$MapView

ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

DX

Optional

A delta to move drop area more to left or right.

0

DY

Optional

A delta to move drop area more to top or bottom.

0

Result Returns OK or error.

Description

If you moved control in layout mode, this can move the drop area back to the new position.

Also useful to switch between different locations on the layout.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetMapType"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new map type. Can be Standard, Satellite, Hybrid, SatelliteFlyover, HybridFlyover or MutedStandard. "Hybrid"

Result Returns OK or error.

Description

Examples

Switch to hybrid flyover:

MBS("MapView.SetMapType"; \$\$MapView; "HybridFlyover")

106.71 MapView.SetOverlayFillColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.5	Yes	No	No	No	Yes

MBS("MapView.SetOverlayFillColor"; MapView; Overlay Identifier; color)

Parameters

MapView

The map view reference number.

\$\$MapView

Overlay Identifier

The identifier for the overlay to use.

"82001"

color

A color value. This can be a common color name or color in hex notation: # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"# FF0000"

Result Returns OK or error.

Description

Examples

Change color to red:

MBS("MapView.SetOverlayFillColor"; \$\$MapView; "82001"; "# FF0000")

106.72 MapView.SetOverlayLineWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.5	Yes	No	No	No	Yes

MBS("MapView.SetOverlayLineWidth"; MapView; Overlay Identifier; LineWidth)

Parameters

MapView

The map view reference number.

\$\$MapView

Overlay Identifier

The identifier for the overlay to use.

"82001"

LineWidth

The new line width to use. Zero is default for width of street.

5

Result Returns OK or error.

Description

Examples

Make a thick line:

```
MBS( "MapView.SetOverlayLineWidth"; $$MapView; "82001"; 10 )
```

See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.5	Yes	No	No	No	Yes

MBS("MapView.SetOverlayPoints"; MapView; Overlay Identifier; JSON)

Parameters

MapView

The map view reference number.

\$\$MapView

Overlay Identifier

The identifier for the overlay.

"82001"

JSON

The JSON array with points. Can be given with objects for the coordinates. Each entry can contain either longitude & latitude pair, x and y pair or address value.

```
" [ { \"latitude\" : 50.4, \"longitude\" : 7.3 } , { \"latitude\" : 50.5, \"longitude\" : 7.3 } , { \"latitude\" : 50.49, \"longitude\" : 7.4 } , { \"latitude\" : 50.4, \"longitude\" : 7.4 } ] "
```

Result Returns OK or error.

Description

Only for polygon and poly line overlays.

Examples

Change coordiantes for a polygon:

```
MBS( "MapView.SetOverlayPoints"; $$MapView; 82002; $NewCoordinates )
```

106.76 MapView.SetRegion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetRegion"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

An JSON with region details. Can be degree or meter based for span. latitude and longitude to define center coordinate. Add latitudeMeters/longitudeMeters or latitudeDelta/longitudeDelta to define span. If there is an address key, we query coordiantes of the given address string instead of using coordinates.

Result Returns OK or error.

Description

Examples

Sets region:

```
MBS( "MapView.SetRegion"; $$MapView; " { \"longitude\" : 9.3726796999999955, \"longitudeDelta\" : 2.0140728459134323, \"latitude\" : 53.6798862999999907, \"latitudeDelta\" : 0.63485953767546732 } ")
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetRotateEnabled"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

A Boolean value indicating whether the map camera's heading information is used.

When this property is set to 1 and a valid camera is associated with the map, the camera's heading angle is used to rotate the plane of the map around its center point. When this property is set to false, the camera's heading angle is ignored and the map is always oriented so that true north is situated at the top of the map view.

106.78 MapView.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.3	Yes	No	No	No	Yes

MBS("MapView.SetScript"; MapView { ; Filename; ScriptName })

Parameters

MapView

The map view reference number.

\$\$MapView

Filename

Optional

The database file name where the script is located.

"test.fmp12"

ScriptName

Optional

The script name.

"MyScript"

Result Returns OK or error.

Description

Script is called for pins with identifiers when clicked.

With version 9.5, we start passing JSON with various values included. Version 9.3 and 9.4 only pass annotation identifier.

The JSON includes mapViewID, annotationIdentifier, latitude, longitude, mouseInViewX, mouseInViewY, mouseInWindowX, mouseInWindowY, mouseLocationX, mouseLocationY, reason and overlayIdentifiers.

overlayIdentifiers are found by bounding rectangles, so we don't check polygons or circles exactly!

The JSON contains an entry reason for why the script was called including Touch, Click, AnnotationMoved, and AnnotationSelected.

Examples

Set script:

```
Set Variable [ $$MapView ; Value: MBS("MapView.CreateWithControl"; 0; "Placeholder") ]
Set Variable [ $r ; Value: MBS("MapView.SetScript"; $$MapView; Get(Filename); "PinClicked") ]
```

106.79 MapView.SetScrollEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetScrollEnabled"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

A Boolean value that determines whether the user may scroll around the map.

106.80 MapView.SetShowsBuildings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetShowsBuildings"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

A Boolean indicating whether the map displays extruded building information.

When this property is set to 1 and the camera has a pitch angle greater than zero, the map extrudes buildings so that they extend above the map plane, creating a 3D effect. The mapType property must be set to Standard for extruded buildings to be displayed. The default value of this property is 1.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetShowsCompass"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

A Boolean indicating whether the map displays a compass control.

Use this property to show or hide a control that lets users change the heading orientation of the map.

106.82 MapView.SetShowsPointsOfInterest

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetShowsPointsOfInterest"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

A Boolean indicating whether the map displays point-of-interest information.

When this property is set to 1, the map displays icons and labels for restaurants, schools, and other relevant points of interest. The mapType property must be set to Standard or Hybrid for points of interest to be displayed. The default value of this property is 1.

Created 14th January 2019, last changed 15th January 2019.

106.85 MapView.SetShowsUserLocation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetShowsUserLocation"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

A Boolean value indicating whether the map should try to display the user's location.

This property does not indicate whether the user's position is actually visible on the map, only whether the map view should try to display it. Setting this property to 1 causes the map view to use the Core Location framework to find the current location and try to display it on the map. As long as this property is 1, the map view continues to track the user's location and update it periodically. The default value of this property is 0.

Showing the user's location does not guarantee that the location is visible on the map. The user might have scrolled the map to a different point, causing the current location to be offscreen. To determine whether the user's current location is currently displayed on the map, use the `MapView.IsUserLocationVisible` function.

Examples

Create map view and show user location:

```
Set Variable [ $$MapView ; Value: MBS("MapView.CreateWithControl"; 0; "Placeholder") ]
Set Variable [ $r ; Value: MBS( "MapView.SetShowsUserLocation"; $$MapView; 1 ) ]
# may trigger dialog to ask for location permissions
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetTag"; MapView; tag)

Parameters

MapView

The map view reference number.

\$\$MapView

tag

A string you want to associate with the map view.

Result Returns OK or error.

Description

Use the tag to store whatever value you want to associate with the image view. You can later query it using MapView.GetTag.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	No

MBS("MapView.SetToolTip"; MapView; Tooltip)

Parameters

MapView

The map view reference number.

\$\$MapView

Tooltip

The new help text.

"Hello"

Result Returns OK or error.

Description

The tooltip is visible on Mac when mouse stays over control. There are no tooltips for iOS.

106.89 MapView.SetVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetVisible"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new visible state. Can be 1 for visible and 0 for hidden.

1

Result Returns OK or error.

Description

By default we create it visible, but you can hide it if it's on a register and the user clicked to other tab.

106.90 MapView.SetVisibleMapRect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetVisibleMapRect"; MapView; Rect)

Parameters

MapView

The map view reference number.

\$\$MapView

Rect

The map rectangle. A JSON with x, y, width and height.

Result Returns OK or error.

Description

Changes the currently visible portion of the map and optionally animates the change.

Examples

Sets visible rect:

```
MBS( "MapView.SetVisibleMapRect"; $$MapView; " { \"x\": 140455603.74390683, \"height\": 799234.62509903312, \"y\": 86194618.191567183, \"width\": 1501801.5633610785 } "
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.SetZoomEnabled"; MapView; Value)

Parameters

MapView

The map view reference number.

\$\$MapView

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

A Boolean value that determines whether the user may use pinch gestures to zoom in and out of the map.

106.92 MapView.SetZoomLevel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.5	Yes	No	No	No	Yes

MBS("MapView.SetZoomLevel"; MapView; ZoomLevel { ; Animated })

Parameters

MapView

The map view reference number.

\$\$MapView

ZoomLevel

The new zoom level. Range 1 to 20.

5

Animated

Optional

Whether to animate. Pass 1 to animate or 0 to not animate. Default is animated.

1

Result Returns OK or error.

Description

Examples

Zoom one level in:

```
MBS( "MapView.SetZoomLevel"; $$MapView; MBS( "MapView.GetZoomLevel"; $$MapView ) + 1; 1)
```

Zoom out:

```
MBS( "MapView.SetZoomLevel"; $$MapView; 1; 1)

106.93 MapView.ShowAddress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	No	No	Yes

MBS("MapView.ShowAddress"; MapView; Address { ; addPin; Identifier; color })

Parameters

MapView

The map view reference number.

\$\$MapView

Address

The address to lookup.

"New York"

addPin

Optional

Whether to add a pin. Pass 0 to just show the area or 1 to add pin and show the area.

1

Identifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger.

color

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.

"# FF0000"

Result Returns OK, identifier or error.

Description

Asynchronously queries coordinate for given address and shows it.

Examples

Show pin in New York in green:

```
MBS("MapView.ShowAddress"; $$MapView; "New York"; 1; ""; "# 00FF00")
```

106.95 MapView.Snapshot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 MapView	9.0	Yes	No	Yes, macOS only	No	Yes

MBS("MapView.Snapshot"; Options { ; ImageType; Filename })

Parameters

Options

The options as JSON block. All values are optional and have default.

```
" { \"width\": 800, \"height\": 600 } "
```

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns image or error.

Description

Not sure if this works on server!

Keys in the JSON include:

width	The pixel width requested. Default is 256.
height	The pixel height requested. Default is 256.
scale	The scale of the display, defaults to screen scale. Only for iOS.
showsPointsOfInterest	Whether to show points of interests. Pass 1 to enable or 0 to disable.
showsBuildings	Show buildings. Pass 1 to enable or 0 to disable.
mapType	Pass Standard, Satellite, Hybrid, SatelliteFlyover, HybridFlyover or Muted-Standard.
mapRect	An object with x, y, width and height for the map rectangle to show in world coordinates.
region	An object with region details. Can be degree or meter based for span. latitude and longitude to define center coordinate. Add latitudeMeters/longitudeMeters or latitudeDelta/longitudeDelta to define span.
camera	The JSON object for camera specification.
appearance	Which appearance to use for MacOS 10.14. Can be Dark, Light or current. Default is current of Mac.

Camera specification includes center coordinate (latitude and longitude) and can be either looking from eye

point (eyeLatitude, eyeLongitude and altitude) or looking from distance (distance, pitch and heading).

Rendering may take a few seconds, but gets faster over time due to caching.

Examples

Make a snapshot with all options default:

```
Set Field [ Snapshots::Image ; MBS( "MapView.Snapshot"; " { } " ) ]
```

Snapshot with camera:

```
Set Variable [ $json ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $json; "width"; 800 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $json; "height"; 600 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $json; "mapType"; "HybridFlyover" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $json; "showsBuildings"; 1 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $json; "showsPointsOfInterest"; 1 ) ]
#
Set Variable [ $camera ; Value: MBS( "JSON.CreateObjectRef" ) ]
# The coordinate point on which the map should be centered.
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "latitude"; 40.7457172 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "longitude"; -73.9941266 ) ]
#
# The line-of-sight distance from the camera to the center coordinate of the map.
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "distance"; 3000 ) ]
#
# The viewing angle of the camera, measured in degrees.
# A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a
camera that is pitched toward the horizon by the specified number of degrees. If the map type is satellite or
hybrid, the pitch value is clamped to 0.
# The value in this property may be clamped to a maximum value to maintain map readability. There is
no fixed maximum value, though, because the actual maximum value is dependent on the current altitude
of the camera.
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "pitch"; 70 ) ]
#
# The heading of the camera (measured in degrees) relative to true north.
# The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the
top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "heading"; 28 ) ]
#
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $json; "camera"; $camera ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $camera ) ]
#
Set Variable [ $options ; Value: MBS( "JSON.Format"; $json ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $json ) ]
Set Variable [ $image ; Value: MBS( "MapView.Snapshot"; $options; "PNG"; "map.png" ) ]
If [ MBS("isError") ]
Show Custom Dialog [ "Failed to render map" ; $image ]
```

```
Else  
Set Field [ Snapshots::Image ; $image ]  
End If
```

Example Databases

- [Markdown](#)

Created 13th April 2015, last changed 4th June 2015.

107.4 Markdown.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 Markdown	5.1	Yes	Yes	Yes	Yes	Yes

MBS("Markdown.Release"; MarkdownRef)

Parameters

MarkdownRef

The reference to the Markdown object as returned by Markdown.Create function.

\$ref

Result Returns OK or error.

Description

Examples

Create and query html:

```
Set Variable [ $r ; Value: MBS("Markdown.Create"; "Text attributes italic, bold, 'monospace',
~~strikethrough~~.") ]
```

```
Set Variable [ $html ; Value: MBS("Markdown.HTML"; $r) ]
```

```
Set Variable [ $r ; Value: MBS("Markdown.Release"; $r) ]
```

Chapter 108

Math

Math functions.

108.1 Math.BitwiseAND

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS("Math.BitwiseAND"; value1; value2)

Parameters

value1

The first number.

5

value2

The second number.

6

Result Returns number.

Description

Only for integer numbers. You can pass several values to combine more than 2 values.

Updated to use 64-bit signed integers in version 7.3.

Examples

Applies bitwise and for three numbers which gives 16:

```
MBS("Math.BitwiseAND"; 255; 48; 18)
```

Created 18th August 2014, last changed 14th July 2017.

108.2 Math.BitwiseNOT

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS("Math.BitwiseNOT"; value)

Parameters

value

The number to use.

255

Result Returns number.

Description

Only for integer number.

Updated to use 64-bit signed integers in version 7.3.

Examples

Calculates Bitwise NOT of 255:

MBS("Math.BitwiseNOT"; 255)

See also

108.3 Math.BitwiseOR

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS("Math.BitwiseOR"; value1; value2)

Parameters

value1

The first number.

5

value2

The second number.

6

Result Returns number.

Description

Only for integer numbers. You can pass several values to combine more than 2 values.

Updated to use 64-bit signed integers in version 7.3.

Examples

Applies bitwise or for three numbers which gives 23:

```
MBS("Math.BitwiseOR"; 5; 6; 16)
```

108.4 Math.BitwiseShiftLeft

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS("Math.BitwiseShiftLeft"; value; steps)

Parameters

value

The number to shift.

2

steps

The number of steps to shift.

1

Result Returns number.

Description

Only for integer numbers.

Updated to use 64-bit signed integers in version 7.3.

Examples

Shifts number. 4 shifted by 2 to left results in 16.

MBS("Math.BitwiseShiftLeft"; 16; 2)

108.5 Math.BitwiseShiftRight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS("Math.BitwiseShiftRight"; value; steps)

Parameters

value

The number to shift.

2

steps

The number of steps to shift.

1

Result Returns number.

Description

Only for integer numbers.

Updated to use 64-bit signed integers in version 7.3.

Examples

Shifts number. 16 shifted by 2 to right results in 4

MBS("Math.BitwiseShiftRight"; 16; 2)

108.6 Math.BitwiseXOR

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS("Math.BitwiseXOR"; value1; value2)

Parameters

value1

The first number.

5

value2

The second number.

6

Result Returns number.

Description

Only for integer numbers. You can pass several values to combine more than 2 values.

Updated to use 64-bit signed integers in version 7.3.

Examples

Applies bitwise or for three numbers which gives 19:

```
MBS("Math.BitwiseXOR"; 5; 6; 16)
```

108.7 Math.DecToHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	2.5	Yes	Yes	Yes	Yes	Yes

MBS("Math.DecToHex"; number { ; NoLeadingZeros })

Parameters

number

The number you want to convert to hexadecimal.
1234

NoLeadingZeros

Optional
Optional, whether to avoid leading zeros. Default is 0.
0

Result Returns the hexadecimal number.

Description

Works with 32 bit integers.

Examples

Query number for 65535. Returns 0000FFFF.

MBS("Math.DecToHex"; 65535)

Query number without leading zeros for 4096. Returns 1000.

MBS("Math.DecToHex"; 4096)

Example Databases

- [MBS Filemaker Plugin, version 2.5pr3](#)

Created 18th August 2014, last changed 18th August 2014.

108.8 Math.DecodeNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	6.4	Yes	Yes	Yes	Yes	Yes

MBS("Math.DecodeNumber"; NumberType; Bits; Text { ; BigEndian })

Parameters

NumberType

Which type of number to encode. Can be "Float", "Integer" or "UnsignedInteger".
"Float"

Bits

The number of bits. Can be 32 or 64 for float. Can be 8, 16, 24, 32 or 64 for integers.
32

Text

The hex encoded binary data.
"14EF"

BigEndian

Optional
Pass 1 to encode big endian. Default is 0 for little endian.
0

Result Returns number or error.

Description

This may be useful for binary protocols with serial ports or sockets.

Examples

Decodes a 32-bit floating point number:

MBS("Math.DecodeNumber"; "Float"; 32; "79E9F642")

Decode a 8-bit integer number:

MBS("Math.DecodeNumber"; "Integer"; 8; "C8")

Decode a 64-bit unsigned integer:

MBS("Math.DecodeNumber"; "UnsignedInteger"; 64; "C0BA8A3CD5620400")

Decode big endian 64-bit:

MBS("Math.DecodeNumber"; "Integer"; 64; "0000000000000001"; 1)

Created 14th July 2016, last changed 1st August 2016.

108.9 Math.EncodeNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	6.4	Yes	Yes	Yes	Yes	Yes

MBS("Math.EncodeNumber"; NumberType; Bits; Number { ; BigEndian })

Parameters

NumberType

Which type of number to encode. Can be "Float", "Integer" or "UnsignedInteger".
"Float"

Bits

The number of bits. Can be 32 or 64 for float. Can be 8, 16, 24, 32 or 64 for integers.
32

Number

The number to encode.
123

BigEndian

Optional
Pass 1 to encode big endian. Default is 0 for little endian.
0

Result Returns hex text or error.

Description

You can use Math.DecodeNumber to decode it again.

Examples

Encodes a 32-bit floating point number:

```
MBS( "Math.EncodeNumber"; "Float"; 32; 123.456 )
// 79E9F642
```

Encode 8 bit signed integer:

```
MBS( "Math.EncodeNumber"; "Integer"; 8; -56 )
// C8
```

Encode 64-bit unsigned integer:

```
MBS( "Math.EncodeNumber"; "UnsignedInteger"; 64; 1234567890123456)
// C0BA8A3CD5620400
```

Encodes number with big/little endian:

```
MBS( "Math.EncodeNumber"; "Float"; 32; 123,456; 1 ) & §& MBS( "Math.EncodeNumber"; "Float"; 32;
```

5764

123,456; 0)

Encode number with big endian and extended to 16 bytes:

```
"000000000000000000000000" & MBS( "Math.EncodeNumber"; "Integer"; 32; 1234567;1 )
```

108.10 Math.HexToDec

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	2.5	Yes	Yes	Yes	Yes	Yes

MBS("Math.HexToDec"; hexNumber)

Parameters

hexNumber

The hex number you want to convert to hexadecimal.

FEDC

Result Returns the decimal number.

Description

Works with 32 bit integers, so hex number has a maximal length of 8 characters.

Examples

Query number for hex number FFFF (returns 65535)

MBS("Math.HexToDec"; "FFFF")

Example Databases

108.11 Math.InchToPixel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	3.4	Yes	Yes	Yes	Yes	Yes

MBS("Math.InchToPixel"; Value; Resolution)

Parameters

Value

The value to convert.

123

Resolution

The resolution used in dpi. Default is 72 dpi.

72

Result Return value or error.

Description

The formula is: $\text{result} = \text{value} * \text{resolution}$.

Examples

Convert 3 inches to pixel:

```
MBS( "Math.InchToPixel"; 3 )
```

108.11.1 Blog Entries

108.12 Math.InsidePolygon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	2.2	Yes	Yes	Yes	Yes	Yes

MBS("Math.InsidePolygon"; X; Y; Values)

Parameters

X

The X coordinate

30

Y

The Y coordinate

30

Values

The list of x and y values. Delimiter is semicolon. Numbers in US format.

"10;20;30;20;30;40;10;40"

Description

Examples

Check if point is inside polygon:

```
$result = MBS("Math.InsidePolygon"; 30; 30; "10;20;30;20;30;40;10;40")
```

Check with GPS coordinates:

```
MBS("Math.InsidePolygon"; 45.787; 4.831;
"45.78603562364937;4.830036163330078;
45.788691544176785;4.830873012542725;
45.78536975331141;4.833780527114868;
45.7881753329116;4.834917783737183")

108.13 Math.IsValidCC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Math.IsValidCC"; text)

Parameters

text

The text with the number.

"12345678"

Result Returns 1 on success or 0 on failure.

Description

This function implements the Luhn algorithm. This is a simple checksum formula used to validate a variety of identification numbers, such as credit card numbers, IMEI numbers, National Provider Identifier numbers in US and Canadian Social Insurance Numbers.

If this function returns 0, you can be sure the number is not valid. But if the function returns 1, you may want to check the number online with some database.

108.14 Math.MillimeterToPixel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	3.4	Yes	Yes	Yes	Yes	Yes

MBS("Math.MillimeterToPixel"; Value; Resolution)

Parameters

Value

The value to convert.

123

Resolution

The resolution used in dpi. Default is 72 dpi.

72

Result Return value or error.

Description

The formula is: $\text{result} = \text{value} / 25.4 * \text{resolution}$.

Examples

Convert 300 millimeter to pixel:

MBS("Math.MillimeterToPixel"; 300)

108.14.1 Blog Entries

Created 18th August 2014, last changed 18th August 2014.

108.15 Math.NumberToText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	2.9	Yes	Yes	Yes	Yes	Yes

MBS("Math.NumberToText"; value)

Parameters

value

Some numerical value you want to convert.

1234

Result Returns text.

Description

This function always uses english system (dot as decimal separator).

See [Math.TextToNumber](#) for the reverse.

See also

108.16 Math.PixelToInch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	3.4	Yes	Yes	Yes	Yes	Yes

MBS("Math.PixelToInch"; Value; Resolution)

Parameters

Value

The value to convert.

123

Resolution

The resolution used in dpi. Default is 72 dpi.

72

Result Return value or error.

Description

The formula is: $\text{result} = \text{value} / \text{resolution}$.

Examples

Convert 300 pixel to inch:

MBS("Math.PixelToInch"; 300)

108.16.1 Blog Entries

- [MBS Filemaker Plugin, version 3.4pr7](#)

108.17 Math.PixelToMillimeter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	3.4	Yes	Yes	Yes	Yes	Yes

MBS("Math.PixelToMillimeter"; Value; Resolution)

Parameters

Value

The value to convert.

123

Resolution

The resolution used in dpi. Default is 72 dpi.

72

Result Return value or error.

Description

The formula is: $\text{result} = \text{value} * 25.4 / \text{resolution}$.

Examples

Convert 300 pixels to millimeter:

```
MBS("Math.PixelToMillimeter"; 300)
```

Convert 72 pixels at 72 dpi resulting in 25.4 millimeter:

```
MBS("Math.PixelToMillimeter"; 72; 72)
```

108.18 Math.PolylineDecode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Math.PolylineDecode"; Text)

Parameters

Text

The coordinate value to decode.

"~ps | U"

Result Returns number or error.

Description

We decode the number stored in the given text and return the numeric value. Precision is just 5 digits after comma.

See

<https://developers.google.com/maps/documentation/utilities/polylinealgorithm>

Examples

Decode a number:

MBS("Math.PolylineDecode"; "~ps | U")

Example result: -120.20

108.19 Math.PolylineEncode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Math.PolylineEncode"; Value)

Parameters

Value

The value to encode.

40,7

Result Returns text or error.

Description

We take a number (latitude or longitude) and encode it as an ASCII text.

See

<https://developers.google.com/maps/documentation/utilities/polylinealgorithm>

Examples

Encode number:

```
MBS("Math.PolylineEncode"; 38.5)
```

Example result: `_p~iF`

Encode another value:

```
MBS("Math.PolylineEncode"; -120.2)
```

Example result: `~ps | U`

Encode a polyline with 3 points:

```
// Points: (38.5, -120.2), (40.7, -120.95), (43.252, -126.453)
```

```
MBS("Math.PolylineEncode"; 38.5) & MBS("Math.PolylineEncode"; -120.20) &
```

```
MBS("Math.PolylineEncode"; 40.7 - 38.5) & MBS("Math.PolylineEncode"; -120.95 - -120.2) &
```

```
MBS("Math.PolylineEncode"; 43.252 - 40.7) & MBS("Math.PolylineEncode"; -126.453 - -120.95)
```

Example result: `_p~iF~ps | U_ulLnnqC_mqNvxq'@`

108.20 Math.TextToNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 Math	2.9	Yes	Yes	Yes	Yes	Yes

MBS("Math.TextToNumber"; text { ; detect })

Parameters

text

Some text value where you want to get the number back.

"123.456"

detect

Optional

Pass 1 to detect comma vs. dot and interpret number right.

1

Result Returns number.

Description

This function always uses english system (dot as decimal separator).

Examples

Detect that number has dot as decimal divider and read number:

```
MBS("Math.TextToNumber"; "123,456.789"; 1)
```

Detect that number has comma as decimal divider and read number:

```
MBS("Math.TextToNumber"; "123.456,789"; 1)
```

Chapter 109

Matrix

Matrix functions

Two dimensionals lists.

109.1 Matrix.AddColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.AddColumn"; MatrixRef)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Result Returns OK or error.

Description

Examples

Add a column and fill it with values:

```
Set Variable [ $r ; Value: MBS( "Matrix.AddColumn"; $matrix) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 3; "2§4§12" ) ]
```

109.2 Matrix.AddColumns

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.AddColumns"; MatrixRef { ; Count })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Count

Optional

The number of columns to add. Default is 1.

2

Result Returns OK or error.

Description

Examples

Add columns and set values:

```
Set Variable [ $r ; Value: MBS( "Matrix.AddColumns"; $matrix ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 3; "2$4$12" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 4; "6$8$39" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.AddRow"; MatrixRef)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Result Returns OK or error.

Description

Examples

Add row and set values:

```
Set Variable [ $r ; Value: MBS( "Matrix.AddRow";$matrix) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.SetRow"; $matrix; 3; "98$43$12$69" ) ]

109.4 Matrix.AddRows

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.AddRows"; MatrixRef { ; Count })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Count

Optional

The number of rows to add. Default is 1.

2

Result Returns OK or error.

Description

Examples

Add rows and set values:

```
Set Variable [ $r ; Value: MBS( "Matrix.AddRows";$matrix; 2 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetRow"; $matrix; 3; "98$43$12$69" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetRow"; $matrix; 4; "89$466$45$8" ) ]
```

109.5 Matrix.Avg

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Avg"; MatrixRef; Column { ; firstRow; lastRow })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Column

The index of the column. Default is 0.

0

firstRow

Optional

The index of first row. Default is 0.

0

lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

Result Returns number or error.

Description

You got a record set in memory and we can walk over a column in a given row range to add the sum value and later divide by number of values.

Examples

Calculate average:

Set Variable [\$r ; Value: MBS("Matrix.Avg"; \$matrix; 1;2;5)]

See also

- 80.35 FM.SQL.RowCount

4157

Created 8th April 2019, last changed 17th December 2019.

109.6 Matrix.CSV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.CSV"; MatrixRef { ; firstRow; lastRow; firstCol; lastCol; rowSeparator; colSeparator })

Parameters

MatrixRef

The matrix reference number.

\$matrix

firstRow

Optional

The index of first row. Default is 0.

0

lastRow

Optional

The index of last row. Default is Matrix.Height-1.

5

firstCol

Optional

The index of first column. Default is 0.

0

lastCol

Optional

The index of last column. Default is Matrix.Width-1.

6

rowSeparator

Optional

The row separator. Default is CR.

Char(13)

colSeparator

Optional

The column separator. Default is semicolon.

”;"

Result Returns text or error.

Description

You can use this method to quickly get all values in a given area as text.

If needed, we put values in quotes and escape quotes and newlines.

Please use Text.WriteTextFile to write to text file if you need CSV export.

Examples

Show matrix in dialog as CSV:

Show Custom Dialog [“The Matrix” ; MBS("Matrix.CSV"; \$matrix; 0; 2; 0; 2; Char(13); " ")]

See also

- 109.16 Matrix.Height 5797

109.7 Matrix.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Clear"; MatrixRef)

Parameters**MatrixRef**

The matrix reference number.

\$matrix

Result Returns OK or error.

Description

Removes all values from it and sets size to 0/0.

Examples

Clear and check:

```
Set Variable [ $r ; Value: MBS("Matrix.Clear"; $matrix) ]
```

```
// After this step the width and height of the matrix are 0
```

```
Show Custom Dialog [ "Matrix Height"; MBS("Matrix.Height";$matrix) & "=" & MBS("Matrix.width";$matrix) ]
```

109.8 Matrix.ClearValues

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.ClearValues"; MatrixRef)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Result Returns OK or error.

Description

Keeps size of the matrix.

Examples

Clear values:

Set Variable [\$r ; Value: MBS("Matrix.ClearValues";\$matrix)]

See also

- 109.7 Matrix.Clear

5787

Created 8th April 2019, last changed 17th December 2019.

109.9 Matrix.Clone

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Clone"; MatrixRef)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Result Returns matrix reference number or error.

Description

Please call Matrix.Free later to free object.

Examples

Clone matrix:

```
Set Variable [ $CloneMatrix ; Value: MBS("Matrix.Clone"; $Matrix) ]
```

109.10 Matrix.DataType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.DataType"; MatrixRef; Row; Column)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Row

The row number from 0 to Archive.Height-1.

\$row

Column

The column number from 0 to Archive.Width-1.

\$col

Result Returns text or error.

Description

Returns text, date, number, time, timestamp, boolean, container or invalid.

Examples

Check data type:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New";3;3) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"Hello$Time$left" ) ]
```

```
Show Custom Dialog [ "Datatypes" ; "Hello: " & MBS("Matrix.Datatype"; $matrix; 0; 0 ) ]
```

109.12 Matrix.GetColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.GetColumn"; MatrixRef; Column)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Column

The zero based column number.

2

Result Returns text or error.

Description

Returns list of values.

Examples

Queries column:

```
Set Variable [ $Column ; Value: MBS("Matrix.getColumn"; $matrix; 0) ]
```

See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.GetRow"; MatrixRef; Row)

Parameters**MatrixRef**

The matrix reference number.

\$matrix

Row

The zero based row number.

2

Result Returns text or error.

Description

Returns list of values.

Examples

Queries row values:

```
Set Variable [ $row ; Value: MBS("Matrix.getRow"; $Matrix;0) ]
```

See also

- 109.3 Matrix.AddRow 5782

109.14 Matrix.GetText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.GetText"; MatrixRef { ; Delimiter })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Delimiter

Optional

The column delimiter. Default is empty text.

Char(9)

Result Returns text or error.

Description

Returns list of row values.

Examples

Queries text of a column:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New";3;3) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"15§07§92" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 1;"17§3§60" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 2;"15§1§87" ) ]
Show Custom Dialog [ "Unser Matrix" ; MBS("Matrix.GetText"; $matrix) ]
```

109.15 Matrix.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.GetValue"; MatrixRef; Row; Column)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Row

The zero based row number.

2

Column

The zero based column number.

2

Result Returns value or error.

Description

Retains original data type.

Examples

Test setting and getting values:

```
Set Variable [ $matrix ; Value: MBS( "Matrix.New"; 3; 4 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetValue"; $matrix; 0; 0; "Hello" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetValue"; $matrix; 1; 0; 123,456 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetValue"; $matrix; 2; 0; Get(CurrentTimestamp) ) ]
Set Variable [ $t ; Value: MBS( "Matrix.GetValue"; $matrix; 0; 0 ) ]
Set Variable [ $v ; Value: MBS( "Matrix.GetValue"; $matrix; 1; 0 ) ]
Set Variable [ $z ; Value: MBS( "Matrix.GetValue"; $matrix; 2; 0 ) ]
Show Custom Dialog [ "Results" ; $t & $v & $z ]

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Height"; MatrixRef)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Result Returns number or error.

Description

Examples

Check size of matrix:

```
If [ MBS("Matrix.Height"; $matrix) = MBS("Matrix.Width"; $Matrix) ]
Show Custom Dialog [ "The matrix is square" ; "number of rows and columns are equal!" ]
End If
```

109.17 Matrix.InsertRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

```
MBS( "Matrix.InsertRecords"; MatrixRef; InsertFileName; InsertTableName; FieldNames { ; StartRow; EndRow } )
```

Parameters

MatrixRef

The matrix reference number.

\$matrix

InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

InsertTableName

The name of the table to insert record into.

"Assets"

FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model"

StartRow

Optional

The index of the start row in the current recordset. First row is 0.

0

EndRow

Optional

The index of the end row in the current recordset. First row is 0. Last Row would be FM.SQL.RowCount-1.

0

Result Returns OK or error.

Description

This function allows to easily copy a lot of records from a query in FileMaker database into a FileMaker table.

Please provide field names in FileMaker. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

Function will fail if data types in source and dest fields do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For insert from SQL Connection into FileMaker database, please use SQL.InsertRecords.

109.18 Matrix.InsertRecordsToSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.InsertRecordsToSQL"; MatrixRef; Connection; InsertTableName; FieldNames { ; StartRow; EndRow; Replace })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

InsertTableName

The name of the table to insert record into.

"Assets"

FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model\$Names"

StartRow

Optional

The index of the start row. First row is 0. Pass -1 or nothing for default which is starting with row 0.

-1

EndRow

Optional

The index of the end row. First row is 0. Last Row would be FM.SQL.RowCount-1. Pass -1 to use all rows and the plugin will internally use RowCount-1.

-1

Replace

Optional

Set to 1 to replace existing entries. Currently available for MySQL and databases with same syntax.

0

Result Returns OK or error.

Description

This function allows to easily copy a lot of records from a query in FileMaker database into a SQL database. Please provide field names in other table. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

109.19 Matrix.JSONRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.JSONRecord"; MatrixRef; Row { ; FieldNames; Flags })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Row

The row you like to get.

1

FieldNames

Optional

A list of field names for the JSON.

"Model\$Names"

Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

Result Returns JSON text or error.

Description

You provide list of field names, which should be in same order as fields in matrix.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

Examples

Query JSON:

```
Set Variable [ $JSON ; Value: MBS( "Matrix.JSONRecord"; $result; 1; "a$b$c" ) ]
```

See also

- 109.20 Matrix.JSONRecords

5803

109.20 Matrix.JSONRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.JSONRecords"; MatrixRef; FieldNames { ; Flags })

Parameters

MatrixRef

The matrix reference number.

\$matrix

FieldNames

A list of field names for the JSON.

"Model\$Names"

Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

Result Returns JSON text or error.

Description

You provide list of field names, which should be in same order as fields in matrix.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

Examples

Query matrix as JSON:

```
# Matrix as JSON object
```

```
Set Variable [ $JSON ; Value: MBS( "Matrix.JSONRecords"; $result; "a$b$c" ) ]
```

```
Show Custom Dialog [ "Matrix as JSON" ; $JSON ]
```

- Ausgabe 4/2019, Seite 30

Created 8th April 2019, last changed 17th December 2019.

109.21 Matrix.Max

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Max"; MatrixRef; Column { ; firstRow; lastRow })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Column

The index of the column. Default is 0.

0

firstRow

Optional

The index of first row. Default is 0.

0

lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

Result Returns number or error.

Description

You got a record set in memory and we can walk over a column in a given row range to find the maximum value.

Examples

Calculate max:

Set Variable [\$Max; Value: MBS("Matrix.Max"; \$matrix; 1)]

See also

- 80.35 FM.SQL.RowCount 4157
- 109.22 Matrix.Min 5805

109.21.1 FileMaker Magazin

- Ausgabe 4/2019, Seite 30

Created 8th April 2019, last changed 17th December 2019.

109.22 Matrix.Min

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Min"; MatrixRef; Column { ; firstRow; lastRow })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Column

The index of the column. Default is 0.

0

firstRow

Optional

The index of first row. Default is 0.

0

lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

Result Returns number or error.

Description

You got a record set in memory and we can walk over a column in a given row range to find the minimum value.

Examples

Calculate minimum:

Set Variable [\$Min; Value: MBS("Matrix.Min"; \$matrix; 5; 4; 8)]

See also

- 80.35 FM.SQL.RowCount 4157

Created 8th April 2019, last changed 17th December 2019.

109.23 Matrix.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.New"; Height; Width)

Parameters

Height

The height of the matrix.

3

Width

The width of the matrix.

4

Result Returns matrix reference number or error.

Description

Please call Matrix.Free later to free the matrix object.

Internally we store all data in FileMaker data types, so times, dates, timestamps, numbers and containers are preserved as they are and not converted to texts.

Examples

Creates a matrix:

```
Set Variable [ $matrix ; Value: MBS( "Matrix.New"; 3; 4 ) ]
Show Custom Dialog [ "Size" ; MBS( "Matrix.Width"; $matrix ) & " x " & MBS( "Matrix.Height"; $matrix ) ]
Set Variable [ $r ; Value: MBS( "Matrix.Free"; $matrix ) ]
```

Create and set columns:

```
Set Variable [ $matrix; Value: MBS("Matrix.New";3;3) ]
# Set the values of the matrix
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"15$07$92" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 1;"17$3$60" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 2;"15$1$87" ) ]
```

109.24 Matrix.NewWithSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.NewWithSQL"; FileName; SQL Statement { ; Params })

Parameters

FileName

The target database name. Can be empty to not limit query to one database.
””

SQL Statement

SQL Statement as a Text string

Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

Result Returns matrix reference number or error.

Description

Returns a matrix reference number, so you can use functions like Matrix.Height, Matrix.Width, Matrix.GetValue and Matrix.DataType to query result. Don't forget to use Matrix.Free to release the result from memory when you are done with it.

See also

- 109.10 Matrix.DataType 5790

Created 8th April 2019, last changed 8th April 2019.

109.25 Matrix.RemoveColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.RemoveColumn"; MatrixRef; Column)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Column

The zero based column number.

2

Result Returns OK or error.

Description

Examples

Remove a column:

```
Set Variable [ $r; Value: MBS( "Matrix.RemoveColumn"; $matrix; 1 ) ]
```

Created 8th April 2019, last changed 17th December 2019.

109.26 Matrix.RemoveRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.RemoveRow"; MatrixRef; Row)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Row

The zero based row number.

2

Result Returns OK or error.

Description

Examples

Remove a row:

```
Set Variable [ $r; Value: MBS( "Matrix.RemoveRow"; $matrix; 2 ) ]
```

Created 8th April 2019, last changed 17th December 2019.

109.27 Matrix.Resize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Resize"; MatrixRef; Height; Width)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Height

The height of the matrix.

3

Width

The width of the matrix.

4

Result Returns OK or error.

Description

Examples

Try resize:

```
Set Variable [ $matrix ; Value: MBS( "Matrix.New"; 3; 4 ) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.Resize"; $matrix; 7; 8 ) ]
```

```
Show Custom Dialog [ "Size" ; MBS( "Matrix.Width"; $matrix ) & " x " & MBS( "Matrix.Height"; $matrix ) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.Free"; $matrix ) ]
```

Resizes a matrix:

```
Set Variable [ $r; Value: MBS( "Matrix.Resize"; $matrix; 3; 4 ) ]
```

109.28 Matrix.SetColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.SetColumn"; MatrixRef; Column { ; Values })

Parameters

MatrixRef

The matrix reference number.
\$matrix

Column

The zero based column number.
2

Values

Optional
The list of values.
"1\$2"

Result Returns OK or error.

Description

If less values are given, the other values in the column are filled with empty values.

Examples

Creates matrix and sets columns:

```
Set Variable [ $matrix; Value: MBS("Matrix.New";3;3) ]
# Set the values of the matrix
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"15$07$92" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 1;"17$3$60" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 2;"15$1$87" ) ]
```

109.29 Matrix.SetRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.SetRow"; MatrixRef; Row { ; Values })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Row

The zero based row number.

2

Values

Optional

The list of values.

"1\$2"

Result Returns OK or error.

Description

If less values are given, the other values in the column are filled with empty values.

Examples

Sets rows:

```
Set Variable [ $r; Value: MBS( "Matrix.SetRow"; $result; 3; "98$43$12$69" ) ]
```

```
Set Variable [ $r; Value: MBS( "Matrix.SetRow"; $result; 4; "89$466$45$8" ) ]
```

109.30 Matrix.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.SetValue"; MatrixRef; Row; Column { ; Value })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Row

The zero based row number.

2

Column

The zero based column number.

2

Value

Optional

The new value.

"Hello"

Result Returns OK or error.

Description

The original data type is retained.

Examples

Test set and get:

```
Set Variable [ $m ; Value: MBS( "Matrix.New"; 2; 2 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetValue"; $m; 0; 0; Contacts::Company ) ]
Set Field [ Contacts::Job Title ; MBS( "Matrix.GetValue"; $m; 0; 0 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.Free"; $m ) ]
```

Sets a value:

```
Set Variable [ $r; Value: MBS("Matrix.SetValue"; $matrix;1;1;40) ]
```

109.31 Matrix.Sum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Sum"; MatrixRef; Column { ; firstRow; lastRow })

Parameters

MatrixRef

The matrix reference number.

\$matrix

Column

The index of the column. Default is 0.

0

firstRow

Optional

The index of first row. Default is 0.

0

lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

Result Returns number or error.

Description

You got a record set in memory and we can walk over a column in a given row range to add the sum value.

Examples

Sums the values in a matrix:

```
Set Variable [ $matrix; Value: MBS("Matrix.New";3;3) ]
# Set the values of the matrix
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"15$07$92" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 1;"17$3$60" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 2;"15$1$87" ) ]
# Add all numbers in the matrix (3x3)
Set Variable [ $a; Value: MBS( "Matrix.Sum"; $matrix; 0 ) ]
Set Variable [ $b; Value: MBS( "Matrix.Sum"; $matrix; 1 ) ]
Set Variable [ $c; Value: MBS( "Matrix.Sum"; $matrix; 2 ) ]
Set Variable [ $sum; Value: $a+$b+$c ]
```

```
Set Variable [ $r; Value: MBS("Matrix.Free"; $matrix) ]
```

109.32 Matrix.Text

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Text"; MatrixRef { ; firstRow; lastRow; firstCol; lastCol; rowSeparator; colSeparator })

Parameters

MatrixRef

The matrix reference number.

\$matrix

firstRow

Optional

The index of first row. Default is 0.

0

lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

firstCol

Optional

The index of first column. Default is 0.

0

lastCol

Optional

The index of last column. Default is FM.SQL.FieldCount-1.

6

rowSeparator

Optional

The row separator. Default is CR.

Char(13)

colSeparator

Optional

The column separator. Default is tab character.

Char(9)

Result Returns text or error.

Description

You can use this method to quickly get all values in a given area as text.

This joins the values and removes text formatting.

109.33 Matrix.Width

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Matrix.Width"; MatrixRef)

Parameters

MatrixRef

The matrix reference number.

\$matrix

Result Returns number or error.

Description

Examples

Check size of matrix:

```
If [ MBS("Matrix.Height"; $matrix) = MBS("Matrix.Width"; $Matrix) ]
Show Custom Dialog [ "The matrix is square" ; "number of rows and columns are equal!" ]
End If
```

Chapter 110

MatrixDongle

Use and work with matrix dongles.

110.1 MatrixDongle.Count

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.Count" { ; PortNumber })

Parameters

PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

Result Returns number or error.

Description

Examples

Count dongles:

```
Set Field [ MatrixDongle::CountResult; MBS( "MatrixDongle.Count" ) ]
```

110.2 MatrixDongle.Find

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.Find")

Result Returns number or error.

Description

The LPT port at which the dongle was found is returned: 1 for LPT1, 2 for LPT 2 or 3 for LPT3 or 85 for USB.

Note: This function only supplies the first port at which a dongle is found, regardless of whether other dongles are available at other LPT or USB interfaces.

Use MatrixDongle.Count function for more details.

Examples

Find dongles:

```
Set Field [ MatrixDongle::FindResult; MBS( "MatrixDongle.Find" ) ]
```

110.3 MatrixDongle.GetDriverFlag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.GetDriverFlag"; UserCode { ; DongleNumber; PortNumber })

Parameters

UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

Result Returns number or error.

Description

Returns value 1 (HID) or 0 (Driver) is the requested USB operating mode of the dongle.

- 110.15 MatrixDongle.SetDriverFlag 5841

Created 1st August 2015, last changed 1st August 2015.

110.4 MatrixDongle.GetVersionAPI

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.GetVersionAPI")

Result Returns version number or error.

Description

Format is x.y using major and minor version number.

Examples

Queries version of API:

Set Field [MatrixDongle::VersionAPI; MBS("MatrixDongle.GetVersionAPI")]

See also

- 110.5 MatrixDongle.GetVersionDRV 5828
- 110.6 MatrixDongle.GetVersionDRV.USB 5829

Example Databases

- [MatrixDongle](#)

110.5 MatrixDongle.GetVersionDRV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.GetVersionDRV")

Result Returns version number or error.

Description

Format is x.y using major and minor version number.

See also

- 110.4 MatrixDongle.GetVersionAPI 5827
- 110.6 MatrixDongle.GetVersionDRV.USB 5829

Created 1st August 2015, last changed 1st August 2015.

110.6 MatrixDongle.GetVersionDRV.USB

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.GetVersionDRV.USB")

Result Returns version number or error.

Description

Format is x.y using major and minor version number.

Examples

Queries driver version:

Set Field [MatrixDongle::DriverVersion; MBS("MatrixDongle.GetVersionDrv.USB")]

See also

- 110.4 MatrixDongle.GetVersionAPI 5827
- 110.5 MatrixDongle.GetVersionDRV 5828

Created 1st August 2015, last changed 1st August 2015.

110.7 MatrixDongle.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.Initialize"; LibraryPath)

Parameters

LibraryPath

The native file path to the matrix library file.

\$path

Result Returns OK or error.

Description

Loads the library files: matrix64.dll, matrix32.dll or libmxmac260.dylib from disk.

You need to pass the path to the dynapdf library and the plugin loads it.

The matrix dll/dylib files are included with the matrix dongle SDK.

Be sure to use right 32-bit/64-bit driver depending on which bit number FileMaker has!

You can pass just the filename of library and the plugin finds it in the Extensions folder or in FileMaker's application folder.

If you get a crash here on MacOS, please check if crash report says Code Signature Invalid. Then you may need to code sign the dylib yourself to match the code signature of your application.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Initialize dongle functions:

```

If [ MBS( "SystemInfo.isMacOSX" ) = 1 ]
Set Variable [ $path; Value:MatrixDongle::LibraryPathMac ]
Else
Set Variable [ $path; Value:MatrixDongle::LibraryPathWin ]
End If
Set Variable [ $r; Value:MBS("MatrixDongle.Initialize"; $path) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to initialize"; $r ]
Else
Show Custom Dialog [ "Initialize OK"; "The dongle functions are ready to use." ]
End If

```

See also

Created 1st August 2015, last changed 14th November 2019.

110.8 MatrixDongle.Initialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.Initialized")

Result Returns 0 to 1.

Description

Returns 1, if MatrixDongle.Initialize was called successfully.

See also

- 110.7 MatrixDongle.Initialize

5830

Created 1st August 2015, last changed 1st August 2015.

110.9 MatrixDongle.MemorySize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.MemorySize" { ; DongleNumber; PortNumber })

Parameters

DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

Result Returns number or error.

Description

The memory size in bytes is returned. For example, if the ML-60 is connected, the return value is 60. With the ML-12, the return value is 12 etc.

To know the number of data fields, divide the result by 4.

Examples

Queries memory size:

```
Set Field [ MatrixDongle::MemorySize; MBS( "MatrixDongle.MemorySize" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.Model" { ; DongleNumber; PortNumber })

Parameters

DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

Result Returns model number or error.

Description

Examples

Queries model:

```
Set Field [ MatrixDongle::Model; MBS( "MatrixDongle.Model" ) ]
```

110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.ReadHex"; UserCode; Pos; Count { ; DongleNumber; PortNumber })

Parameters

UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

Pos

The position to write at. This value is in 4 byte data words, so for 12 bytes offset pass 3.

0

Count

Number of data words to read. 4 bytes per data word.

1

DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

Result Returns hex encoded data or error.

Description

Starts reading at the given position and reads count number of data words.

Parameters

UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

Pos

The position to write at. This value is in 4 byte data words, so for 12 bytes offset pass 3.

0

Count

Number of data words to read. 4 bytes per data word.

1

Encoding

Optional

The text encoding for text parameter. Default is UTF-8.

UTF8

DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

Result Returns text or error.

Description

Starts reading at the given position and reads count number of data words.

110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.SetDriverFlag"; UserCode; Mode { ; DongleNumber; PortNumber })

Parameters

UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

Mode

Can have the value 0 or 1:0 - "Driver-Mode" - with a proprietary USB driver. 1 - "HID-Mode" - without any proprietary USB driver.

1

DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

Result Returns OK or error.

Description

Examples

Sets HID mode:

```
Set Variable [ $r; Value:MBS( "MatrixDongle.SetDriverFlag"; MatrixDongle::UserCode; 1) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS("MatrixDongle.Version" { ; DongleNumber; PortNumber })

Parameters

DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

Result Returns version number or error.

Description

Format is x.y using major and minor version number.

Examples

Queries version:

```
Set Field [ MatrixDongle::Version; MBS( "MatrixDongle.Version" ) ]
```

MBS("MatrixDongle.WriteHex"; UserCode; Text { ; Pos; DongleNumber; PortNumber })

Parameters

UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

Text

The hex text to write.

"48656C6C6F20576F726C64"

Pos

Optional

The position to write at. This value is in 4 byte data words, so for 12 bytes offset pass 3.

0

DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

111.3 MediaLibraryBrowser.setFrame

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 MediaLibraryBrowser	3.5	Yes	No	No	No	No

MBS("MediaLibraryBrowser.setFrame"; x; y; w; h)

Parameters**x**

New X coordinate.

20

y

New Y coordinate.

200

w

New width of panel.

300

h

New height of panel.

200

Result Returns OK or error.

Description

Requires Mac OS X 10.9.

Uses bottom up coordinates, so 0/0 is bottom left of main screen.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 MediaLibraryBrowser	3.5	Yes	No	No	No	No

MBS("MediaLibraryBrowser.togglePanel")

Result Returns OK or error.

Description

Shows or hides the panel depending on current state.

Requires Mac OS X 10.9.

Created 18th August 2014, last changed 18th August 2014.

Chapter 112

Menu

Functions to create menus and show them as popup menu.

112.1 Menu.AddItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

```
MBS( "Menu.AddItem"; menu; item )
```

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Result Returns OK or error.

Description

Thus, the receiver does not accept the menu item if it already belongs to another menu. After adding the menu item, the receiver updates itself.

Examples

Show a context menu based on a table with menu entries:

```
# go to layout with menu entries  
Go to Layout [ "REP" (REP Reports) ]  
# this script can be called with various groups
```

```

Set Variable [ $type ; Value: Get(ScriptParameter) ]
# make a new menu
Set Variable [ $menu ; Value: MBS( "Menu.CreateMenu" ) ]
# loop over records
Go to Record/Request/Page [ First ]
Loop
# if group matches
If [ REP Reports::Group = $type ]
# add new menu item with title from table
Set Variable [ $item ; Value: MBS( "MenuItem.CreateMenuItem"; REP Reports::LabelReport) ]
# define which script to call if menu item is selected
Set Variable [ $r ; Value: MBS( "MenuItem.SetScriptAction"; $item; Get(FileName); REP Reports::Script
) ]
# add item to menu
Set Variable [ $r ; Value: MBS( "Menu.AddItem"; $menu; $item ) ]
End If
# next record?
Go to Record/Request/Page [ Next ; Exit after last ]
End Loop
# switch layout back
Go to Layout [ original layout ]
# Show menu
Set Variable [ $r ; Value: MBS( "Menu.PopUp"; $menu; "mouse" ) ]
# Cleanup memory
Set Variable [ $r ; Value: MBS( "Menu.Release"; $menu) ]

```

112.2 Menu.AddItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("Menu.AddItems"; menu; titles { ; tags })

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

titles

The list of titles for new menu items.

"Hello"

tags

Optional

The tags for the entries.

Result Returns OK or error.

Description

If the list of titles includes a line with "-" the plugin version 4.5 and newer will use a separator for this item.

Examples

Add two items

```
MBS( "Menu.AddItems"; $menu; "Hello$World" )
```

Add two items with tags

```
MBS( "Menu.AddItems"; $menu; "Hello$World"; "11$12" )
```

QuickMenu custom function:

```
/* Parameters: Items */
Let ( [
/* Create a menu */
menu = MBS( "Menu.CreateMenu" );
/* add items from our parameter */
m2 = MBS( "Menu.AddItems"; menu; Items );
/* show menu at mouse position */
m3 = MBS( "Menu.PopUp"; menu; "mouse"; 0; 0 );
/* query selected item */
selectedItem = MBS( "Menu.SelectedItem"; menu );
/* if something is selected, query its text */
result = If( Length(selectedItem) > 0; MBS( "MenuItem.GetTitle"; selectedItem ); "" );
/* Cleanup menu */
```

```
m5 = MBS( "Menu.Release"; menu; 1 )
```

```
];
```

```
/* return selection */
result )
```

QuickMenu custom function with tags

```
/* Parameters: Items, Tags */
```

```
Let ( [
```

```
/* Create a menu */
```

```
menu = MBS( "Menu.CreateMenu" );
```

```
/* add items from our parameter */
```

```
m2 = MBS( "Menu.AddItem"; menu; Items; Tags );
```

```
/* show menu at mouse position */
```

```
m3 = MBS( "Menu.PopUp"; menu; "mouse"; 0; 0 );
```

```
/* query selected item */
```

```
selectedItem = MBS( "Menu.SelectedItem"; menu );
```

```
/* if something is selected, query its text */
```

```
result = If( Length(selectedItem )>0; MBS( "MenuItem.GetTag"; selectedItem ); "" );
```

```
/* Cleanup menu */
```

```
m5 = MBS( "Menu.Release"; menu; 1 )
```

```
];
```

```
/* return selected tag */
result )
```

112.3 Menu.CreateMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("Menu.CreateMenu" { ; title })

Parameters

title

Optional

The title for the menu.

"Hello"

Result Return menu reference or error.

Description

You need to later release it with Menu.Release function.

Menu reference numbers are starting at 10000 and counting up for each new menu.

Examples

Show a context menu based on a table with menu entries:

```
# go to layout with menu entries
Go to Layout [ "REP" (REP Reports) ]
# this script can be called with various groups
Set Variable [ $type ; Value: Get(ScriptParameter) ]

- [Colors for Menus in FileMaker](#)
- [QuickMenu function](#)

Created 18th August 2014, last changed 11st September 2015.

112.4 Menu.DefineQuickMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.1	Yes	Yes	No	No	No

MBS("Menu.DefineQuickMenu"; Name; Definition)

Parameters

Name

The title of the new menu.

"MainMenu"

Definition

The menu definition.

"Red;1\$Blue;2\$Yellow;3"

Result Returns menu reference or error.

Description

This function allows you to easily create a menu with a definition. The first two parameters are required. The "Name" parameter is the name of the menu.

The "Definition" parameter is a return-delimited list of menu items for this menu. Each line represents one item on the menu. You can specify a tag value for a menu item by appending a semi-colon and the value onto the end of the item name. For example, if you had "Blue;0000FF" on a line, your menu would have an item with the title "Blue" and when a user selected that item, the tag value "0000FF" could be used for your script. For sub-menus, specify the name of the sub-menu, followed by a greater-than sign (>) followed by the next sub-menu name or menu item. For example, if you had "Colors>Red" on a line, your menu would have a sub-menu named "Colors" with an item inside named "Red". Every sub-menu and menu item can be preceded with one or more special "meta tags" to specify different styles and marks for the sub-menu or item name as explained below:

You can specify more than one of the above for any item to set multiple attributes at once, with the exception of the check mark, bullet mark, and diamond mark. You can only have one mark defined for a menu item. For example, if you had "!# % Delete Record" on a line, your menu would have an item with the name "Delete Record" that appeared disabled, bold, and italicized. If you need to display a menu item that starts with one of these "meta tags", you can use the equals ("=") meta tag to skip the meta tag processing for the item. For example, if you had "=\$4.00" on a line, your menu would have an item with the name "\$4.00" instead of a menu named "4.00" that required you to press the shift key in order to make the item visible.

Not all features available on Windows!

With 5.2 plugin the name of the menu also defines the identifier to use. You can leave name empty to use reference number provided by plugin.

Examples

Define a menu:

!	The item will appear disabled.
\$	The item will require the shift key to be pressed in order to show up.
^	The item will require the control key to be pressed in order to show up.
~	The item will require the alt/option key to be pressed in order to show up. (this is the tilde character, which is shifted version of the key to the left of the 1 on English keyboards) (only available on Mac)
@	The item will require the command key to be pressed in order to show up. (only available on Mac)
#	The item will appear bold.
%	The item will appear italicized.
_	The item will appear underlined.
' or √	The item will appear with a check mark. (this is the backtick character, which is the key to the left of the 1 on English keyboards) (on Mac, you can also use opt-v to type an actual check mark)
* or •	The item will appear with a bullet mark. (On Mac, you can also use opt-8 to type an actual bullet mark)
+ or	The item will appear with a diamond mark. (On Mac, you can also use shift-opt-v to type an actual diamond mark)
=	disable the meta tag processing for the rest of the sub-menu or item name.
-	The item is a separator.

```
MBS( "Menu.DefineQuickMenu"; "ColorsMenu" ; "Red;1$Blue;2$Yellow;3" )
```

Define a menu with submenus:

```
MBS( "Menu.DefineQuickMenu"; "ColorsMenu"; "Warm colors>Red$Warm colors>Yellow$Warm colors>Orange$Cool colors>Blue$Cool colors>Green$Cool colors>Purple")
```

Define a menu with checkmark:

```
MBS( "Menu.DefineQuickMenu"; "Current Fruit"; "Banana;Cherry;'Grape;Orange" )
```

Choose from menu with one Let statement:

```
// show menu with one let statement
Let ( [
// some list of menu entries
valuelist = "xxx$yyy$zzz" ;
// create menu from definition
menu = MBS ( "Menu.DefineQuickmenu"; "x" ; valuelist ) ;
// show menu near mouse
result = MBS ( "Menu.popup" ; menu ; "mouse" ) ;
```

112.4. MENU.DEFINEQUICKMENU

5863

```
// query selected item number
item = IF ( result = 1 ; MBS("Menu.SelectedItem"; menu) ) ;
// query title for that item
title = IF ( Length ( item >0 ) ; MBS ( "MenuItem.GetTitle" ; item ) ) ;
// release memory
r = MBS ( "Menu.Release"; menu ) ] ;
// return the selected title
title )
```

Created 11st May 2015, last changed 18th June 2016.

112.5 Menu.DefineQuickMenuXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.2	Yes	Yes	No	No	No

MBS("Menu.DefineQuickMenuXML"; XML)

Parameters

XML

The description XML.

Result Returns menu reference or error.

Description

The xml has a root entry called "menu". Each menu entry can have attributes title, tag, groupID, scriptname, filename and modifierkeys. A menu can have subnodes of name menu or item. The item can have attributes title, tag, scriptname, filename, tag, enabled, selectable, Separator, mark, style, GroupID or modifierkeys.

Modifierkeys can include shift, control, option or command.

Mark can include mixed, bullet, diamond or checked.

Style can include bold, italic or underline.

If an item has name "-" or Separator=1 attribute, the plugin will mark it as being a separator.

If the root menu entry has a name, we can use that name as menu reference.

Added FontColor and BackColor in version 9.4.

Examples

Defines a quick menu with XML:

```
MBS( "Menu.DefineQuickMenuXML"; "<menu name=\"menue\">
<menuitem name=\"Red\" value=\"1\" />
<menuitem name=\"Blue\" value=\"2\" />
<menuitem name=\"Yellow\" value=\"3\" />
</menu>" )
```

Define a menu with submenus:

```
MBS( "Menu.DefineQuickMenuXML"; "<menu name=\"menue\">
<submenu name=\"Warm Colors\">
<menuitem name=\"Red\" value=\"1\" />
<menuitem name=\"Blue\" value=\"2\" />
<menuitem name=\"Yellow\" value=\"3\" />
</submenu>
<submenu name=\"Cool Colors\">
<menuitem name=\"Blue\" value=\"4\" />
<menuitem name=\"Green\" value=\"5\" />
<menuitem name=\"Purple\" value=\"6\" />
</submenu>
</menu>" )
```

112.5. MENU.DEFINEQUICKMENUXML

5865

```
</submenu>  
</menu>\”)” )
```

112.6 Menu.FindItemWithTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.1	Yes	Yes	No	No	No

MBS("Menu.FindItemWithTag"; menu; Tag)

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.
\$menu

Tag

The tag text to search.

Result Returns reference number or error.

Description

See also MenuItem.GetTag and MenuItem.SetTag.

Examples

Find an item:

```
MBS("Menu.FindItemWithTag"; $menu; "Test")
```

112.22 Menu.PopUp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("Menu.PopUp"; menu; mode { ; x; y; window; item; objectName })

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

mode

The mode to use. Can be "mouse", "screen" or "window". Default is mouse for leaving away the parameter or passing empty text. Version 8.3 adds mode "content" to make it relative to the content part of the window, below toolbars.

"mouse"

x

Optional

The relative x coordinates for the position relative to the mouse, screen or window.

0

y

Optional

The relative y coordinates for the position relative to the mouse, screen or window.

0

window

Optional

The window reference for the showing menu relative to a window.

\$window

item

Optional

The menu item to be positioned at the specified location in the view.

\$item

objectName

Optional

The object name for mode=object.

"web"

Result Returns 1, 0 or error.

Description

The top left corner of the specified item (if specified, item must be present in the receiver) is positioned at the specified location in the specified view, interpreted in the view's own coordinate system.

If you call this on the server for webdirect, the menu will show on the server, not in the browser.

Returns 1 if item was selected or 0 if not.

If you like to show a context menu only when user did a right mouse click, you can use the EventMonitor.LastMouseClickedButton function to check mouse state.

Examples

Show a context menu based on a table with menu entries:

```
# go to layout with menu entries
Go to Layout [ "REP" (REP Reports) ]
# this script can be called with various groups
Set Variable [ $type ; Value: Get(ScriptParameter) ]
# make a new menu
Set Variable [ $menu ; Value: MBS( "Menu.CreateMenu" ) ]
# loop over records
Go to Record/Request/Page [ First ]
Loop
# if group matches
If [ REP Reports::Group = $type ]
# add new menu item with title from table
Set Variable [ $item ; Value: MBS( "MenuItem.CreateMenuItem"; REP Reports::LabelReport) ]
# define which script to call if menu item is selected
Set Variable [ $r ; Value: MBS( "MenuItem.SetScriptAction"; $item; Get(FileName); REP Reports::Script
) ]
# add item to menu
Set Variable [ $r ; Value: MBS( "Menu.AddItem"; $menu; $item ) ]
End If
# next record?
Go to Record/Request/Page [ Next ; Exit after last ]
End Loop
# switch layout back
Go to Layout [ original layout ]
# Show menu
Set Variable [ $r ; Value: MBS( "Menu.PopUp"; $menu; "mouse" ) ]
# Cleanup memory
Set Variable [ $r ; Value: MBS( "Menu.Release"; $menu) ]
```

Show menu and show selection:

```
Set Variable [ $menu; Value:MBS("Menu.CreateMenu" ) ]
# create menu items...
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World" ) ]
Set Variable [ $r; Value:MBS("MenuItem.SetTag"; $item; "secret value" ) ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
#
# show menu
Set Variable [ $m; Value:MBS("Menu.PopUp"; $Menu; "mouse" ) ]
#
# you selected something?
If [ $m = 1 ]
```

```

Set Variable [ $selectedItem; Value:MBS("Menu.SelectedItem"; $menu) ]
Set Variable [ $selectedTitle; Value:MBS("MenuItem.GetTitle"; $selectedItem) ]
Set Variable [ $selectedTag; Value:MBS("MenuItem.GetTag"; $selectedItem) ]
#
Show Custom Dialog [ "Auswahl"; $selectedItem & §& $selectedTitle & §& $selectedTag ]
End If
Set Variable [ $m; Value:MBS("Menu.Release"; $Menu; 1) ]

```

Choose from menu with one Let statement:

```

// show menu with one let statement
Let ( [
// some list of menu entries
valuelist = "xxx$yyy$zzz" ;
// create menu from definition
menu = MBS ( "Menu.DefineQuickmenu"; "x" ; valuelist ) ;
// show menu near mouse
result = MBS ( "Menu.popup" ; menu ; "mouse" ) ;
// query selected item number
item = IF ( result = 1 ; MBS("Menu.SelectedItem"; menu) ) ;
// query title for that item
title = IF ( Length ( item >0 ) ; MBS ( "MenuItem.GetTitle" ; item ) ) ;
// release memory
r = MBS ( "Menu.Release"; menu ) ] ;
// return the selected title
title )

```

Run menu at logo object:

```
MBS("Menu.PopUp"; $Menu; "object"; 0; 0; Get(WindowName); "" ; "logo")
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	6.1	Yes	Yes	No	No	No

MBS("Menu.SetEvaluate"; menu; Expression)

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the hotkey reference, so you can pass it to other functions if needed.

112.31 Menu.SetMinimumWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	No	No	No	No

MBS("Menu.SetMinimumWidth"; menu; width)

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

width

The minimum width of the menu in screen coordinates.

0

Result Returns OK or error.

Description

The menu will not draw smaller than its minimum width, but may draw larger if it needs more space. The default value is 0.

See also Menu.GetMinimumWidth.

See also

112.32 Menu.SetScriptAction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("Menu.SetScriptAction"; menu; FileName; ScriptName { ; ScriptParameter })

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

FileName

The filename of file which contains the script.

"Menus.fmp12"

ScriptName

The name of the script.

"MenuScript"

ScriptParameter

Optional

If you want a specific script parameter. Default is to leave empty and get the ID fo the menu item.

Result Returns OK or error.

Description

You can use MenuItem.SetScriptAction to associate a script with individual items or use this function for a whole menu.

See also Menu.GetScriptFileName and Menu.GetScriptName.

The script parameter is the MenuItem reference, so you can use functions like MenuItem.GetTitle to get the title or MenuItem.GetTag to get an associated value.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

112.33 Menu.SetShowsStateColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	No	No	No	No

MBS("Menu.SetShowsStateColumn"; menu; value)

Parameters**menu**

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

value

Pass 1 to show or 0 to hide the state column.

1

Result Returns OK or error.

Description

Available in OS X v10.5 and later.

See also Menu.GetShowsStateColumn.

See also

- 112.3 Menu.CreateMenu 5859

112.34 Menu.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("Menu.SetTag"; menu; value)

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

value

The new tag value.

Get(RecordID)

Result Returns OK or error.

Description

See also Menu.GetTag.

With the tag, we allow you to associate a text with the menu item, for example a record ID.

112.35 Menu.SetTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("Menu.SetTitle"; menu; value)

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

value

The new title.

"Hello"

Result Returns OK or error.

Description

See also Menu.GetTitle.

See also

- 112.3 Menu.CreateMenu 5859

Created 18th August 2014, last changed 31st August 2014.

112.36 Menu.SetURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	6.5	Yes	Yes	No	No	No

MBS("Menu.SetURL"; menu; URL)

Parameters

menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

URL

The URL to trigger.

Result Returns OK or error.

Description

\$\$ID\$\$ in the URL is replaced with menu ID.

Queries http/ftp/sftp URLs with CURL, other URLs passed to OS to open.

112.37 MenuItem.CreateMenuItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.CreateMenuItem" { ; Title; keyEquivalent })

Parameters

Title

Optional

The title of the menu item.

"Hello World"

keyEquivalent

Optional

Optional, a string representing a keyboard key to be used as the key equivalent.

"T"

Result Returns menu item reference number or error.

Description

You later need to release it with MenuItem.Release.

Menu item reference numbers are starting at 11000 and counting up for each new menu item.

Examples

Show a context menu based on a table with menu entries:

```
# go to layout with menu entries
Go to Layout [ "REP" (REP Reports) ]
# this script can be called with various groups
Set Variable [ $type ; Value: Get(ScriptParameter) ]
# make a new menu
Set Variable [ $menu ; Value: MBS( "Menu.CreateMenu" ) ]
# loop over records
Go to Record/Request/Page [ First ]
Loop
# if group matches
If [ REP Reports::Group = $type ]
# add new menu item with title from table
Set Variable [ $item ; Value: MBS( "MenuItem.CreateMenuItem"; REP Reports::LabelReport) ]
# define which script to call if menu item is selected
Set Variable [ $r ; Value: MBS( "MenuItem.SetScriptAction"; $item; Get(FileName); REP Reports::Script
) ]
# add item to menu
Set Variable [ $r ; Value: MBS( "Menu.AddItem"; $menu; $item ) ]
End If
# next record?
Go to Record/Request/Page [ Next ; Exit after last ]
End Loop
```

```
# switch layout back
Go to Layout [ original layout ]
# Show menu
Set Variable [ $r ; Value: MBS( "Menu.PopUp"; $menu; "mouse" ) ]
# Cleanup memory
Set Variable [ $r ; Value: MBS( "Menu.Release"; $menu) ]
```

112.38 MenuItem.CreateSeparator

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.CreateSeparator")

Result Returns menu item reference or error.

Description

You later need to release it with MenuItem.Release.

Menu item reference numbers are starting at 11000 and counting up for each new menu item.

Examples

Add a separator to a menu:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateSeparator") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.54 MenuItem.GetMixedStateImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.GetMixedStateImage"; item { ; ImageType; Filename })

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns image or error.

Description

A mixed state is useful for indicating a mix of "off" and "on" attribute values in a group of selected objects, such as a selection of text containing boldface and plain (non-boldface) words. By default this is a horizontal line.

Please call GImage.Release later to free memory for this image.

MBS("MenuItem.GetOffStateImage"; item { ; ImageType; Filename })

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns image or error.

Description

The image used to depict the receiver's off state, or empty if the image has not been set.

Please call GImage.Release later to free memory for this image.

112.70 MenuItem.GetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.GetTag"; item)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Result Returns value or error.

Description

See also Menu.SetTag.

With the tag, we allow you to associate a text with the menu item, for example a record ID.

Examples

Show menu and show selection:

```
Set Variable [ $menu; Value:MBS("Menu.CreateMenu") ]
# create menu items...
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetTag"; $item; "secret value") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
#
# show menu
Set Variable [ $m; Value:MBS("Menu.PopUp"; $Menu; "mouse") ]
#
# you selected something?
If [ $m = 1 ]
Set Variable [ $selectedItem; Value:MBS("Menu.SelectedItem"; $menu) ]
Set Variable [ $selectedTitle; Value:MBS("MenuItem.GetTitle"; $selectedItem) ]
Set Variable [ $selectedTag; Value:MBS("MenuItem.GetTag"; $selectedItem) ]
#
Show Custom Dialog [ "Auswahl"; $selectedItem & §& $selectedTitle & §& $selectedTag ]
End If
Set Variable [ $m; Value:MBS("Menu.Release"; $Menu; 1) ]
```

112.80 MenuItem.SetAlternate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	No	No	No	No

MBS("MenuItem.SetAlternate"; item; value)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

value

1 if the receiver is an alternate to the previous menu item, 0 otherwise.

1

Result Returns OK or error.

Description

If the receiver has the same key equivalent as the previous item, but has different key equivalent modifiers, the items are folded into a single visible item and the appropriate item shows while tracking the menu, depending on what modifier key (if any) is pressed. The menu items may also have no key equivalent as long as the key equivalent modifiers are different.

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 255. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red. "RGB 1 0 0"

Result Returns OK or error.

Description

Currently only used on Windows.

On Mac it would only color the area where the text is and not the whole menu item, so this feature is disabled for Mac.

Examples

Creates a menu item for background color:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Red Color") ]
Set Variable [ $r; Value:MBS("MenuItem.SetBackColor"; $item; "# FF0000") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.83 MenuItem.SetBold

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.1	Yes	Yes	No	No	No

MBS("MenuItem.SetBold"; item; flag)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

flag

The bold state. Pass 1 to use bold font or 0 to disable.

1

Result Returns OK or error.

Description

Examples

Create bold menu item:

```
# create menu
Set Variable [ $menu ; Value: MBS("Menu.CreateMenu") ]
# create menu item...
Set Variable [ $item ; Value: MBS("MenuItem.CreateMenuItem"; "Bold item") ]
Set Variable [ $r ; Value: MBS("MenuItem.SetBold"; $item; 1) ]
Set Variable [ $r ; Value: MBS("Menu.AddItem"; $menu; $item) ]
```

112.84 MenuItem.SetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.SetEnabled"; item; flag)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

flag

The enabled state. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

See also MenuItem.GetEnabled.

Examples

Add a disabled menu item:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetEnabled"; $item; 0) ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.85 MenuItem.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	6.1	Yes	Yes	No	No	No

MBS("MenuItem.SetEvaluate"; item; Expression)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the hotkey reference, so you can pass it to other functions if needed.

112.86 MenuItem.SetFontColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	6.5	Yes	Yes	No	No	No

MBS("MenuItem.SetFontColor"; item; Color)

(old name: MenuItem.ApplyColor)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 255. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red. "RGB 1 0 0"

Result Returns OK or error.

Description

On Windows, a few features are not compatible with having a custom color.

Examples

Create menu item with font color:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Red Color") ]
Set Variable [ $r; Value:MBS("MenuItem.SetFontColor"; $item; "# FF0000") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.87 MenuItem.SetFontName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.1	Yes	Yes	No	No	No

MBS("MenuItem.SetFontName"; item; FontName { ; FontSize })

(old name: MenuItem.ApplyFont)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

FontName

The font name to use.

"Arial"

FontSize

Optional

The font size to use. Use 0 for default system font size.

9

Result Returns OK or error.

Description

Leave empty for system font.

Examples

Create a menu entry with specific font:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With Comic Sans Font") ]
```

```
Set Variable [ $r; Value:MBS("MenuItem.SetFontName"; $item; "Comic Sans MS"; 13) ]
```

```
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.89 MenuItem.SetGroupID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.2	Yes	Yes	No	No	No

MBS("MenuItem.SetGroupID"; item; GroupID)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

GroupID

Any string to identify your groups.

"123"

Result Returns OK or error.

Description

If several menu items have the same group id, the plugin only shows the first one fulfilling all requirements like key modifiers.

112.90 MenuItem.SetHidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.SetHidden"; item; value)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

value

1 if the menu item is to be hidden, otherwise 0.

1

Result Returns OK or error.

Description

Hidden menu items (or items with a hidden superitem) do not appear in a menu and do not participate in command key matching.

See also MenuItem.GetHidden.

MBS("MenuItem.SetImage"; item; Image)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Image

The image to use. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

Result Returns OK or error.

Description

See also MenuItem.GetImage.

Transparency is not supported on Windows.

Examples

Add a menu item with image:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetImage"; $item; MyTable::MyImage ) ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]

112.92 MenuItem.SetItalic

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.1	Yes	Yes	No	No	No

MBS("MenuItem.SetItalic"; item; flag)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

flag

The italic state. Pass 1 to use italic font or 0 to disable.

1

Result Returns OK or error.

Description

Examples

Creates a menu item with italic font:

```
# create menu
Set Variable [ $menu ; Value: MBS("Menu.CreateMenu") ]
# create menu item...
Set Variable [ $item ; Value: MBS("MenuItem.CreateMenuItem"; "Italic item") ]
Set Variable [ $r ; Value: MBS("MenuItem.SetItalic"; $item; 1) ]

112.93 MenuItem.SetKeyEquivalent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	No	No	No	No

MBS("MenuItem.SetKeyEquivalent"; item; text)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

text

A string containing a character code representing a keyboard key. If you want to remove the key equivalent from a menu item, pass an empty string.

"T"

Result Returns OK or error.

Description

This method considers the case of the letter passed to determine if it has a Shift modifier added. That is, "w" sets the key equivalent to Command-w, while "W" is Command-Shift-w. You use MenuItem.SetKeyEquivalentModifierMask to set the appropriate mask for the modifier keys for the key equivalent.

Examples

Add menu item with key T:

```
# set useful constants:
```

```
Set Variable [ $ShiftKeyMask; Value:131072 ]
```

```
Set Variable [ $ControlKeyMask; Value:262144 ]
```

```
Set Variable [ $AlternateKeyMask; Value:524288 ]
```

```
Set Variable [ $CommandKeyMask; Value:1048576 ]
```

```
# now make menu entry
```

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With Key Equivalent") ]
```

```
Set Variable [ $r; Value:MBS("MenuItem.SetKeyEquivalent"; $item; "T") ]
```

```
Set Variable [ $r; Value:MBS("MenuItem.SetKeyEquivalentModifierMask"; $item; $ShiftKeyMask + $CommandKeyMask) ]
```

```
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

• 112.52 MenuItem.GetKeyEquivalent	5919
• 112.75 MenuItem.GetUserKeyEquivalent	5943
• 112.94 MenuItem.SetKeyEquivalentModifierMask	5970

Example Databases

- [Menu/Popup Menu](#)

Created 18th August 2014, last changed 15th April 2015.

112.94 MenuItem.SetKeyEquivalentModifierMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	No	No	No	No

MBS("MenuItem.SetKeyEquivalentModifierMask"; item; mask)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

mask

The key masks indicate modifiers such as the Shift or Option keys. mask is a number and you can add the constants below.

524288

Result Returns OK or error.

Description

In general, you are strongly encouraged to always set NSCommandKeyMask in mask, although there may be some conventions where this is not required. For example, in an application that plays media, the Play command may be mapped to just " " (space), without the command key.

NSShiftKeyMask is a valid modifier for any key equivalent in mask. This allows you to specify key-equivalents such as Command-Shift-1 that are consistent across all keyboards. However, with a few exceptions (such as the German "ß" character), a lowercase character with NSShiftKeyMask is interpreted the same as the uppercase character without that mask. For example, Command-Shift-c and Command-C are considered to be identical key equivalents.

NSShiftKeyMask	131072	Shift Key
NSControlKeyMask	262144	Control Key
NSAlternateKeyMask	524288	Alternate/Option Key
NSCommandKeyMask	1048576	Command Key

Examples

Add menu item with key T:

```
# set useful constants:
```

```
Set Variable [ $ShiftKeyMask; Value:131072 ]
```

```
Set Variable [ $ControlKeyMask; Value:262144 ]
```

```
Set Variable [ $AlternateKeyMask; Value:524288 ]
```

```
Set Variable [ $CommandKeyMask; Value:1048576 ]
```

```
# now make menu entry
```

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With Key Equivalent") ]
```

112.94. *MENUITEM.SETKEYEQUIVALENTMODIFIERMASK* 5971

Set Variable [\$r; Value:MBS("MenuItem.SetKeyEquivalent"; \$item; "T")]

Set Variable [\$r; Value:MBS("MenuItem.SetKeyEquivalentModifierMask"; \$item; \$ShiftKeyMask + \$CommandKeyMask)]

Set Variable [\$r; Value:MBS("Menu.AddItem"; \$menu; \$item)]

112.100 MenuItem.SetRequireOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.1	Yes	Yes	No	No	No

MBS("MenuItem.SetRequireOption"; item; Value)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Value

The new setting. Pass 1 to require option/alt key or 0 to not require it.

1

Result Returns OK or error.

112.102 MenuItem.SetScriptAction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.SetScriptAction"; item; FileName; ScriptName { ; ScriptParameter })

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

FileName

The filename of file which contains the script.

"Menus.fmp12"

ScriptName

The name of the script.

"MenuScript"

ScriptParameter

Optional

If you want a specific script parameter. Default is to leave empty and get the ID fo the menu item. You can store a value with the menu item via MenuItem.SetTag.

Result Returns OK or error.

Description

You can use MenuItem.SetScriptAction to associate a script with individual items or use this function for a whole menu.

See also MenuItem.GetScriptFileName and MenuItem.GetScriptName.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Add menu item with script to be called:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetScriptAction"; $item; Get(FileName); "MenuScript") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.103 MenuItem.SetSelectable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	6.3	Yes	Yes	No	No	No

MBS("MenuItem.SetSelectable"; item; Value)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Value

The new setting. Pass 1 to make menu item selectable or 0 to disable selection.

0

Result Returns OK or error.

Description

By default on Mac you can select submenu's parent menu item. This function can be used to disable this behavior.

For the plugin all menu items are created selectable = true by default.

Currently this flag has no effect on Windows.

Examples

Disable selecting menuitem:

```
MBS("MenuItem.SetSelectable"; $item; 0)
```

112.104 MenuItem.SetState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.SetState"; item; itemState)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

itemState

The new state; it should be one of Off, on or mixed.

"mixed"

Result Returns OK or error.

Description

The image associated with the new state is displayed to the left of the menu item.

See also MenuItem.GetState.

Mixed state is not supported on Windows.

On Mac the special values "bullet" and "diamond" sets state to on and switch to use bullet/diamond images.

Examples

Create menu item with mixed state:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With State Mixed") ]
Set Variable [ $r; Value:MBS("MenuItem.SetState"; $item; "mixed") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

Create menu item with on state:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With State On") ]
Set Variable [ $r; Value:MBS("MenuItem.SetState"; $item; "on") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.105 MenuItem.SetStrikeOut

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	6.5	Yes	Yes	No	No	No

MBS("MenuItem.SetStrikeOut"; item; Value)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

Value

The new setting.

1

Result Returns OK or error.

Description

The text will be down stroked out.

Examples

Creates a menu item with stroked out text:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Striked out") ]
Set Variable [ $r; Value:MBS("MenuItem.SetStrikeOut"; $item; 1) ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.106 MenuItem.SetSubMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.SetSubMenu"; item; submenu)

Parameters**item**

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

submenu

The reference to the menu. Please create one with Menu.CreateMenu.

\$submenu

Result Returns OK or error.

Description

See also MenuItem.GetSubMenu.

112.107 MenuItem.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.SetTag"; item; value)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

value

The new tag value.

Get(RecordID)

Result Returns OK or error.

Description

See also Menu.GetTag.

With the tag, we allow you to associate a text with the menu item, for example a record ID.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	Yes	No	No	No

MBS("MenuItem.SetTitle"; item; text)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

text

The new title of the menu item. If you do not want a title, use an empty string.
"Hello"

Result Returns OK or error.

Description

See also See also MenuItem.GetTitle.

112.109 MenuItem.SetToolTip

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	4.1	Yes	No	No	No	No

MBS("MenuItem.SetToolTip"; item { ; text })

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

text

Optional

Optional, a short string that describes the menu item.

"Print document"

Result Returns OK or error.

Description

See also MenuItem.GetToolTip.

Examples

Add a menu item with tooltip:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetToolTip"; $item; "This is sample tooltip.") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.110 MenuItem.SetURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	6.5	Yes	Yes	No	No	No

MBS("MenuItem.SetURL"; item; URL)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

URL

The URL to trigger.

Result Returns OK or error.

Description

\$\$ID\$\$ in the URL is replaced with menu ID.

Queries http/ftp/sftp URLs with CURL, other URLs passed to OS to open.

Examples

Create menu to open email application:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Send Email to Support") ]
Set Variable [ $r; Value:MBS("MenuItem.SetURL"; $item; "mailto:support@monkeybreadsoftware.test") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

112.111 MenuItem.SetUnderline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 Menu	5.1	Yes	Yes	No	No	No

MBS("MenuItem.SetUnderline"; item; flag)

Parameters

item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

flag

The underline state. Pass 1 to use underline font or 0 to disable.

1

Result Returns OK or error.

Description

Examples

Creates a menu item with underlined font:

```
# create menu
Set Variable [ $menu ; Value: MBS("Menu.CreateMenu") ]
# create menu item...
Set Variable [ $item ; Value: MBS("MenuItem.CreateMenuItem"; "Italic item") ]
Set Variable [ $r ; Value: MBS("MenuItem.SetUnderline"; $item; 1) ]
Set Variable [ $r ; Value: MBS("Menu.AddItem"; $menu; $item) ]
```

Chapter 113

Menubar

Functions to modify the FileMaker menu.

113.1 Menubar.HasMenuCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 Menubar	5.0	Yes	Yes	No	No	No

MBS("Menubar.HasMenuCommand"; Path)

Parameters

Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.
49297

Result Returns 1 or error.

Description

Examples

Check if select all command is there in German:

```
MBS("FM.HasMenuCommand"; "Bearbeiten§Alles auswählen")
```

Do we have the New Database command?

```
MBS("Menubar.HasMenuCommand"; 57600)
```

113.1.1 Blog Entries

- [Tip of the day: Show debugger in FileMaker from within a script](#)

Created 15th November 2014, last changed 15th November 2014.

113.2 Menubar.IsMenuCommandChecked

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 Menubar	6.3	Yes	Yes	No	No	No

MBS("Menubar.IsMenuCommandChecked"; Path)

Parameters

Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.
49297

Result Returns 0, 1 or error.

Description

Returns 1 if the menubar has a checkmark.

Examples

Checks if debugger is visible:

```
MBS( "Menubar.IsMenuCommandChecked"; 49260)
```

Show debugger from within a script:

```
# The menu command as we got it from Menubar.ListMenuCommands
Set Variable [ $DebuggerMenuID; Value:49260 ]
If [ MBS( "Menubar.HasMenuCommand"; $DebuggerMenuID ) = 1 ]
If [ MBS( "Menubar.IsMenuCommandChecked"; $DebuggerMenuID ) = 1 ]
# debugger already visible
Else
# show debugger
Set Variable [ $r; Value:MBS( "Menubar.RunMenuCommand"; $DebuggerMenuID ) ]
Pause/Resume Script [ Duration (seconds): ,1 ]
End If
Else
Show Custom Dialog [ "Debugger missing in Menubar?" ]
End If
# now follows your script that should always run in debugger
```

Created 17th June 2016, last changed 17th June 2016.

113.3 Menubar.ListMenuCommands

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 Menubar	5.0	Yes	Yes	No	No	No

MBS("Menubar.ListMenuCommands")

Result Returns list or error.

Description

The result is a list with a line for each menu entry. The data is separated with tab character. First in each row is the command ID followed by the menu item names for the path to the item.

Works well in FileMaker 12 or newer, but not in FileMaker 11.

Examples

List menu commands:

```
MBS("Menubar.ListMenuCommands")
```

Write commands to disk:

```
MBS("Text.WriteTextFile"; MBS( "Menubar.ListMenuCommands" ); "/Users/cs/Desktop/menu.txt")
```

113.4 Menubar.RemoveMenuCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 Menubar	6.2	Yes	Yes	No	No	No

MBS("Menubar.RemoveMenuCommand"; Path)

Parameters

Path

The ID or path to the menu entry. Use Menubar.ListMenuCommands to find out the IDs and names.
49297

Result Returns OK or error.

Description

FileMaker may restore menu later.

Examples

Remove tools menu:

```
MBS("Menubar.RemoveMenuCommand"; "Tools")
```

See also

113.5 Menubar.RunMenuCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 Menubar	5.0	Yes	Yes	No	No	No

MBS("Menubar.RunMenuCommand"; Path)

Parameters

Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.
49297

Result Returns OK or error.

Description

The plugin searches menu command and invokes it.

For Windows, the command is run asynchronously, so the function returns before the command runs. You may need to make a script pause to run the command.

Examples

Run command to select all:

```
MBS("FM.RunMenuCommand"; "Bearbeiten$Alles auswählen")
```

Show debugger:

```
MBS("Menubar.RunMenuCommand"; "Werkzeuge$Script-Debugger")
```

Show debugger from within a script:

```
# The menu command as we got it from Menubar.ListMenuCommands
Set Variable [ $DebuggerMenuID; Value:49260 ]
If [ MBS( "Menubar.HasMenuCommand"; $DebuggerMenuID ) = 1 ]
If [ MBS( "Menubar.IsMenuCommandChecked"; $DebuggerMenuID ) = 1 ]
# debugger already visible
Else
# show debugger
Set Variable [ $r; Value:MBS( "Menubar.RunMenuCommand"; $DebuggerMenuID ) ]
Pause/Resume Script [ Duration (seconds): ,1 ]
End If
Else
Show Custom Dialog [ "Debugger missing in Menubar?" ]
End If
# now follows your script that should always run in debugger
```

Show/Hide format bar in German:

```
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; ,1; "MBS( \"Menubar.RunMenuCom-
```

```
mand\"; Liste(\ "Ansicht\"; \ "Formatierungsleiste\" )" ) ]
```

Make snapshot link with F5 hotkey:

```
Set Variable [ $$Hotkey ; Value: MBS("Hotkey.Register"; "F5"; "") ]
Set Variable [ $r ; Value: MBS( "HotKey.SetEvaluate"; $$Hotkey; "MBS( \ "Menubar.RunMenuCommand\";
50285 )" ) ]
```

113.6 Menubar.SetMenuCommandShortcut

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 Menubar	5.0	Yes	No	No	No	No

MBS("Menubar.SetMenuCommandShortcut"; Path; Key; Modifiers)

Parameters

Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.
49297

Key

Which key to use.
"D"

Modifiers

Which modifiers to use. can include command, option, shift or control.
"command shift"

Result Returns OK or error.

Description

Examples

Set Shortcut to "D" for the Data Viewer by ID:

```
MBS("Menubar.SetMenuCommandShortcut"; 49297; "D"; "shift command")
```

Set Shortcut to "D" for the Data Viewer by name in German:

```
MBS("FM.SetMenuCommandShortcut"; "Werkzeuge$Datenanzeige"; "D"; "command shift")
```

MBS("Menubar.SetMenuCommandTitle"; Path; Title)

Parameters

Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.
49297

Title

The new menu item title.
"Hello"

Result Returns OK or error.

Description

Examples

Rename menu entry on Mac:

```
MBS("Menubar.SetMenuCommandTitle"; "FileMaker Pro Advanced$FileMaker Pro Advanced ausblenden";
"Hello")
```

Sets a menu entry on Windows:

```
MBS("Menubar.SetMenuCommandTitle"; "Datei$Verwalten"; "Hello")
```

113.8 Menubar.SetMenuCommandVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 Menubar	5.0	Yes	Yes	No	No	No

MBS("Menubar.SetMenuCommandVisible"; Path; Visible)

Parameters

Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.
49297

Visible

The new visible state. Pass 1 to make visible and 0 to hide.

1

Result Returns OK or error.

Description

This allows you to remove menu entries by path/ID from the FileMaker menu, so user cannot longer use it. The change is not permanent and whenever FileMaker rebuilds the menu, all menu entries are back.

Examples

Hide preferences menu command:

```
MBS("Menubar.SetMenuCommandVisible"; 49153; 0)
```

Hide service menu in FileMaker Pro Advanced in German:

```
MBS("Menubar.SetMenuCommandVisible"; "FileMaker Pro Advanced$Dienste"; 0)
```

Chapter 114

MessageComposer

A panel for iOS to edit and send an messages.

You can send text messages or iMessage with text and attachments.

114.1 MessageComposer.AddAttachmentContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.AddAttachmentContainer"; Container; Name { ; MimeType })

Parameters

Container

The container to attach to email.

Attachment::Container

Name

The name for the attachment.

"sample.pdf"

MimeType

Optional

The UTI, file extension or mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".

"application/octet-stream"

Result Returns OK or error.

Description

You can use Text.FileExtensionToMimeType to find the mime type for a file extension.

You can use AddAttachment several times to add several attachments.

Examples

Adds an attachment:

```

Set Variable [ $FieldName ; Value: Get(ScriptParameter) ]
Set Variable [ $Container ; Value: GetField ( $FieldName) ]
If [ IsEmpty ( $container ) = 0 ]
Set Variable [ $path ; Value: GetAsText ( $Container ) ]
Set Variable [ $name ; Value: MBS( "Path.LastPathComponent"; $path) ]
Set Variable [ $extension ; Value: MBS( "Files.FileExtension"; $name ) ]
Set Variable [ $mimeType ; Value: MBS( "Text.FileExtensionToMimeType"; $extension ) ]
#
Set Variable [ $r ; Value: MBS( "MessageComposer.AddAttachmentContainer"; $container; $name; $mime-
Type) ]
End If

```

Created 10th June 2017, last changed 10th June 2017.

114.2 MessageComposer.AddAttachmentFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.AddAttachmentFile"; Path; Name { ; MimeType })

Parameters

Path

The native file path to the file to include as attachment.

"/Users/cs/Desktop/sample.pdf"

Name

The name for the attachment.

"sample.pdf"

MimeType

Optional

The UTI, file extension or mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".

"application/octet-stream"

Result Returns OK or error.

Description

Attachments over 100 MB are not supported.

You can use Text.FileExtensionToMimeType to find the mime type for a file extension.

You can use AddAttachment several times to add several attachments.

Created 10th June 2017, last changed 10th June 2017.

114.3 MessageComposer.AttachmentCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.AttachmentCount")

Result Returns count or error.

Description

See also

- 114.1 MessageComposer.AddAttachmentContainer 6005
- 114.2 MessageComposer.AddAttachmentFile 6007

Created 11st June 2017, last changed 11st June 2017.

114.4 MessageComposer.CanSendAttachments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.CanSendAttachments")

Result Returns 1, 0 or error.

Description

Returns 1 if the user has set up the device for including attachments in messages.

This function can be called before having a composer initialized.

See also

- 114.23 MessageComposer.disableUserAttachments

6030

Created 10th June 2017, last changed 17th June 2018.

114.5 MessageComposer.CanSendSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.CanSendSubject")

Result Returns 1, 0 or error.

Description

Returns 1 if the user has set up the device for including subjects in messages.

This function can be called before having a composer initialized.

See also

- 114.6 MessageComposer.CanSendText 6011
- 114.13 MessageComposer.GetSubject 6018
- 114.22 MessageComposer.SetSubject 6029

Created 10th June 2017, last changed 17th June 2018.

114.6 MessageComposer.CanSendText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.CanSendText")

Result Returns 1, 0 or error.

Description

Returns 1 if the user has set up the device for sending text only messages.

If the return value is 1, the client can set the recipients and body of the message.

If the return value is 0, the client may notify the user of the failure, or the client may open an SMS URL via open URL command.

This function can be called before having a composer initialized.

Examples

Check whether message can be send:

```
Set Variable [ $r ; Value: MBS( "MessageComposer.CanSendText" ) ]
```

```
If [ $r = 1 ]
```

```
Show Custom Dialog [ "Can't send emails." ; "This iOS device is not configured to send text messages." ]
```

```
Exit Script [ Text Result: "failed" ]
```

```
End If
```

114.15 MessageComposer.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.New")

Result Returns OK or error.

Description

Resets last error and clears last message content.

There is only one message composer at all times, so starting a new one will clear last one.

Examples

Starts a new message:

```
Set Variable [ $r ; Value: MBS( "MessageComposer.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MessageComposer.SetSubject"; Placeholder::Subject ) ]
```

114.16 MessageComposer.Present

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.Present")

Result Returns OK or error.

Description

This will show the user interface and start the process.

Your script may call this in a script and than wait for the script trigger.

Examples

Send a message with options:

```
Set Variable [ $r ; Value: MBS( "MessageComposer.CanSendText" ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't send emails." ; "This iOS device is not configured to send text messages." ]
Exit Script [ Text Result: "failed" ]
End If
Set Variable [ $r ; Value: MBS( "MessageComposer.New" ) ]
If [ Length ( Placeholder::Subject ) >0 ]
Set Variable [ $r ; Value: MBS( "MessageComposer.SetSubject"; Placeholder::Subject ) ]
End If
Set Variable [ $r ; Value: MBS( "MessageComposer.SetScript"; Get(FileName); "Sent" ) ]
If [ Length ( Placeholder::Body ) >0 ]
Set Variable [ $r ; Value: MBS( "MessageComposer.SetMessageBody"; Placeholder::Body ) ]
End If
If [ Length ( Placeholder::Recipients ) >0 ]
Set Variable [ $r ; Value: MBS( "MessageComposer.SetRecipients"; Placeholder::Recipients ) ]
End If
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment1 ) ]
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment2 ) ]
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment3 ) ]
Set Variable [ $r ; Value: MBS( "MessageComposer.Present" ) ]
```

114.17 MessageComposer.Result

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.Result")

Result Returns value or error.

Description

If email composer is not yet finished, the result is empty.
Status can be Cancelled, Sent, Failed.

Examples

Check status:

```
Set Variable [ $result ; Value: MBS( "MessageComposer.Result" ) ]
Set Field [ Placeholder::Result ; $result ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.SetEvaluate"; Expression)

Parameters

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

Result Returns OK or error.

Description

In the script you can check with MessageComposer.Result what happened.

114.19 MessageComposer.SetMessageBody

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.SetMessageBody"; Body)

Parameters

Body

The text containing the body contents of the email message.

Result Returns OK or error.

Description

This method will set the body of the email message. This should be called prior to display. The user's signature, if specified, will be added after the body content.

Examples

Set the message text:

MBS("MessageComposer.SetMessageBody"; "Hello World")

See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.SetRecipients"; Recipients)

Parameters

Recipients

List of recipients.

Result Returns OK or error.

Description

Sets the initial value of the To field for the message to the specified addresses.

Examples

Send to two emails:

MBS("MessageComposer.SetRecipients"; \$Email1 & \$& \$Email2)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.SetScript"; FileName; ScriptName { ; Parameter })

Parameters

FileName

The file name for the script to trigger.

"test.fmp12"

ScriptName

The script name of the script to launch.

"EmailComposerFinished"

Parameter

Optional

The parameter to pass to the script.

Result Returns OK or error.

Description

In the script you can check with MessageComposer.Result what happened.

Examples

Sets script:

```
Set Variable [ $r ; Value: MBS( "MessageComposer.SetScript"; Get(FileName); "Sent" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 MessageComposer	7.3	No	No	No	No	Yes

MBS("MessageComposer.SetSubject"; Subject)

Parameters

Subject

The new subject.
"Hello World"

Result Returns OK or error.

Description

This method will set the Subject header for the message. This should be called prior to display. Newlines are removed from the parameter. After the view has been presented to the user, this method will no longer change the value.

Chapter 115

MetaDataQuery

Spotlight search for macOS and iOS.

Find files & folders on the computer based on metadata properties, content or file names.

115.1 MetaDataQuery.AttributesForFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	No

MBS("MetaDataQuery.AttributesForFile"; Path)

Parameters

Path

The native file path to the file to check.

"/Users/cs/Desktop/sample.pdf"

Result Returns JSON or error.

Description

Returns JSON block with attributes.

This provides information Spotlight knows about the file.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Query download URL of file:

```
Set Variable [ $path ; Value: "/Users/cs/Downloads/test.html" ]
```

```
Set Variable [ $json ; Value: MBS( "MetaDataQuery.AttributesForFile"; $path) ]  
Set Variable [ $link ; Value: MBS("JSON.GetPathItem"; $json; "kMDItemWhereFroms$0") ]  
Show Custom Dialog [ "Link" ; $link ]
```

Query song details:

```
MBS( "MetaDataQuery.AttributesForFile"; "/Users/cs/Music/iTunes/iTunes Music/ABBA/ABBA_ Gold  
- Greatest Hits/16 One of Us.m4p" )
```

115.4 MetaDataQuery.GetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.GetEvaluate"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns text or error.

Description

See also

- 115.17 MetaDataQuery.SetEvaluate

6049

Created 16th December 2017, last changed 16th December 2017.

115.5 MetaDataQuery.GetScriptFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.GetScriptFileName"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns file name or error.

Description

See also

- 115.6 MetaDataQuery.GetScriptName

6037

Created 16th December 2017, last changed 16th December 2017.

115.6 MetaDataQuery.GetScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.GetScriptName"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns script name or error.

Description

See also

- 115.5 MetaDataQuery.GetScriptFileName 6036
- 115.19 MetaDataQuery.SetScript 6052

Created 16th December 2017, last changed 16th December 2017.

115.7 MetaDataQuery.IsGathering

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.IsGathering"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns 1, 0 or error.

Description

A Boolean value that indicates whether the receiver is in the initial gathering phase of the query.

Examples

Wait for the search to finish:

Loop

Pause/Resume Script [Duration (seconds): ,2]

Exit Loop If [MBS("MetaDataQuery.IsGathering"; \$Query) = 0]

End Loop

115.8 MetaDataQuery.IsStarted

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.IsStarted"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns 1, 0 or error.

Description

A Boolean value that indicates whether the query has started.

See also

- 115.9 MetaDataQuery.IsStopped 6040

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.IsStopped"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns 1, 0 or error.

Description

A Boolean value that indicates whether the query has stopped.

See also

- 115.8 MetaDataQuery.IsStarted 6039

115.10 MetaDataQuery.PathAtIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.PathAtIndex"; Query; Index)

Parameters

Query

The reference number of the query.

\$query

Index

The index of the item. Range from 0 to MetaDataQuery.ResultCount-1.

0

Result Returns OK or error.

Description

Examples

Put paths in records:

```
Set Variable [ $index ; Value: 0 ]
```

```
Loop
```

```
New Record/Request
```

```
Set Variable [ $path ; Value: MBS( "MetaDataQuery.PathAtIndex"; $Query; $Index ) ]
```

```
Set Field [ Search Applications::FilePath ; $path ]
```

```
Commit Records/Requests [ With dialog: Off ]
```

```
# next
```

```
Set Variable [ $index ; Value: $index + 1 ]
```

```
Exit Loop If [ $index = $count ]
```

```
End Loop
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.Paths"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns list or error.

Description

The plugin will check results and return a list of all file paths.

MBS("MetaDataQuery.ResultCount"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns number or error.

Description

Examples

Store result count:

```
Set Variable [ $Count ; Value: MBS( "MetaDataQuery.ResultCount"; $Query ) ]
```

```
Set Field [ Search Applications::ResultCount ; $Count ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.Results"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns JSON Text or error.

Description

Returns all items with all attributes as one big JSON block.

Examples

Save all results as JSON in field:

Set Field [Search Applications::All Results JSON ; MBS("MetaDataQuery.Results"; \$Query)]

See also

115.16 MetaDataQuery.SearchScopes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.SearchScopes"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns OK or error.

Description

Returns a list with file paths and special keywords used to specify specific locations:

Key	Description
UserHomeScope	Search the user's home directory.
LocalComputerScope	Search all local mounted volumes, including the user home directory. The user's home directory is searched even if it is a remote volume.
NetworkScope	Search all user-mounted remote volumes.
UbiquitousDocumentsScope	Search all files in the Documents directories of the app's iCloud container directories.
UbiquitousDataScope	Search all files not in the Documents directories of the app's iCloud container directories.
AccessibleUbiquitousExternalDocumentsScope	Search for documents outside the app's container. This search can locate iCloud documents that the user previously opened using a document picker view controller. This lets your app access the documents again without requiring direct user interaction.
IndexedLocalComputerScope	Search all indexed local mounted volumes including the current user's home directory (even if the home directory is remote).
IndexedNetworkScope	Search all indexed user-mounted remote volumes.

- 115.20 MetaDataQuery.SetSearchScopes

6053

Created 16th December 2017, last changed 16th December 2017.

115.17 MetaDataQuery.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.SetEvaluate"; ShellRef; Expression)

Parameters**ShellRef**

The reference number from the shell.

\$shell

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description**See also**

- 115.4 MetaDataQuery.GetEvaluate

6035

Created 16th December 2017, last changed 4th April 2018.

115.18 MetadataQuery.SetQueryString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetadataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetadataQuery.SetQueryString"; Query; QueryString)

Parameters

Query

The reference number of the query.

\$query

QueryString

The query string.

"kMDItemContentType=\"com.apple.application-bundle\""

Result Returns OK or error.

Description

The plugin will build the predicate with the given query string.

Setting this property while a query is running stops the query and discards the current results. The receiver immediately starts a new query.

See list of metadata keys here:

https://developer.apple.com/documentation/coreservices/file_metadata/mditem/common_metadata_attribute_keys

Examples

Search for applications

MBS("MetadataQuery.SetQueryString"; \$Query; "kMDItemContentType=\"com.apple.application-bundle\"")

Start a query:

Set Variable [\$query ; Value: MBS("MetadataQuery.Create")]

Set Variable [\$r ; Value: MBS("MetadataQuery.SetQueryString"; \$Query; "kMDItemContentType=\"com.apple.application-bundle\"")]

Set Variable [\$r ; Value: MBS("MetadataQuery.StartQuery"; \$Query)]

115.19 MetaDataQuery.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.SetScript"; ShellRef; Filename; ScriptName)

Parameters

ShellRef

The reference number from the shell.

\$shell

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

See also

115.20 MetadataQuery.SetSearchScopes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetadataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetadataQuery.SetSearchScopes"; Query; SearchScopes)

Parameters

Query

The reference number of the query.

\$query

SearchScopes

The list of search scopes.

"LocalComputerScope"

Result Returns OK or error.

Description

Please pass a list with file paths and special keywords used to specify specific locations:

Key	Description
UserHomeScope	Search the user's home directory.
LocalComputerScope	Search all local mounted volumes, including the user home directory. The user's home directory is searched even if it is a remote volume.
NetworkScope	Search all user-mounted remote volumes.
UbiquitousDocumentsScope	Search all files in the Documents directories of the app's iCloud container directories.
UbiquitousDataScope	Search all files not in the Documents directories of the app's iCloud container directories.
AccessibleUbiquitousExternalDocumentsScope	Search for documents outside the app's container. This search can locate iCloud documents that the user previously opened using a document picker view controller. This lets your app access the documents again without requiring direct user interaction.
IndexedLocalComputerScope	Search all indexed local mounted volumes including the current user's home directory (even if the home directory is remote).
IndexedNetworkScope	Search all indexed user-mounted remote volumes.

Examples

Search home folder:

MBS("MetadataQuery.SetSearchScopes"; \$Query; "UserHomeScope")

Search application folder:

MBS("MetadataQuery.SetSearchScopes"; \$Query; "/"Applications")

See also

- 115.16 MetaDataQuery.SearchScopes

Created 16th December 2017, last changed 16th December 2017.

115.21 MetadataQuery.StartQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetadataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetadataQuery.StartQuery"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns OK or error.

Description

Returns OK when successful; otherwise, Failed.

A query may fail to start if it does not specify a predicate, or if the query has already been started.

Examples

Start a query:

```
Set Variable [ $query ; Value: MBS( "MetadataQuery.Create" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MetadataQuery.SetQueryString"; $Query; "kMDItemContentType=\"com.apple.application-bundle\"" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MetadataQuery.StartQuery"; $Query ) ]
```

115.22 MetaDataQuery.StopQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS("MetaDataQuery.StopQuery"; Query)

Parameters

Query

The reference number of the query.

\$query

Result Returns OK or error.

Description

The receiver first completes gathering any unprocessed results.

You call this function to stop a query that is generating too many results to be useful but you still want to access the available results. If the receiver is sent a startQuery message after performing this method, the existing results are discarded.

Chapter 116

MovieView

Control the movieplayer for playing video in a container on Mac. (FileMaker 11 to 13 only)

See AVPlayer for newer FileMaker versions.

116.1 MovieView.AreStepButtonsVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MovieView	3.0	Yes	No	No	No	No

MBS("MovieView.AreStepButtonsVisible"; MovieViewReference)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

MovieViewReference

The name of the container where to look for a movie view.
"movie"

Result Returns 1 if visible and 0 if not.

Description

See also

Created 18th August 2014, last changed 18th August 2014.

116.3 `MovieView.CurrentFrameImage`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 <code>MovieView</code>	3.0	Yes	No	No	No	No

MBS("MovieView.CurrentFrameImage"; `MovieViewReference` { ; `ImageType`; `Filename` })

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

MovieViewReference

The name of the container where to look for a movie view.

"movie"

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns container value with image or error.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MovieView	4.0	Yes	No	No	No	No

MBS("MovieView.Duration"; MovieViewReference)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

MovieViewReference

The name of the container where to look for a movie view.
"movie"

Result Returns value or error.

Description

Value is in seconds.

Created 18th August 2014, last changed 18th August 2014.

116.6 MovieView.GotoBeginning

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MovieView	3.0	Yes	No	No	No	No

MBS("MovieView.GotoBeginning"; MovieViewReference)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

MovieViewReference

The name of the container where to look for a movie view.
"movie"

Result Returns OK on success.

Description

This action method sets the current movie time to the beginning of the movie. If the movie is playing, the movie continues playing from the new position.

See also

- 116.24 `MovieView.SetStepButtonsVisible` 6081
- 116.27 `MovieView.SetZoomButtonsVisible` 6084

Created 18th August 2014, last changed 18th August 2014.

116.10 MovieView.IsControllerVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MovieView	3.0	Yes	No	No	No	No

MBS("MovieView.IsControllerVisible"; MovieViewReference)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

MovieViewReference

The name of the container where to look for a movie view.
"movie"

Result Returns 1 if visible and 0 if not.

Description

Using the MovieView.setControllerVisible method, the client tells QTMovieView whether or not to display a user interface for controlling the movie within its bounds. Using the isControllerVisible method, the client can determine whether a QTMovieView has been configured to display such an interface. By using the controllerBarHeight method, you can determine the height of the portion of the QTMovieView that is required to display that interface. Note that some types of QuickTime content are authored to display their own user interface; for those types of content it is possible for the ControllerBarHeight method to return 0 even when the MovieView.IsControllerVisible method returns 1.

- 116.28 `MovieView.StepBackward`

6085

Created 18th August 2014, last changed 18th August 2014.

116.30 MovieView.Valid

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MovieView	3.0	Yes	No	No	No	No

MBS("MovieView.Valid"; MovieViewReference)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

MovieViewReference

The name of the container where to look for a movie view.
"movie"

Result Returns 1 on success and 0 or error on failure.

Description

With FileMaker 11, 12 and 13, you need to click on a container first to have it load a movie view with the movie. And only if container is set to picture (not the newer interactive mode). FileMaker 14 uses different control (a webviewer), so this function doesn't work.

Chapter 117

NetworkInterfaces

Query Network interfaces on Mac.

117.1 NetworkInterfaces.Count

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 NetworkInterfaces	4.3	Yes	No	Yes	Yes	Yes

MBS("NetworkInterfaces.Count")

Result Returns number or error.

Description

If called first without a call to NetworkInterfaces.Update, the plugin will internally call NetworkInterfaces.Update.

See also

- 117.2 NetworkInterfaces.Default 6090
- 117.3 NetworkInterfaces.JSON 6091
- 117.4 NetworkInterfaces.Update 6092

Example Databases

- [Mac only/Network Interfaces](#)

Created 18th August 2014, last changed 19th March 2017.

117.2 NetworkInterfaces.Default

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 NetworkInterfaces	5.2	Yes	No	Yes	Yes	Yes

MBS("NetworkInterfaces.Default"; Selector)

Parameters

Selector

What value to return. Default is name. Mode can be IP, IPv4, IPv6, Index, InterfaceIndex, Name or MAC. "IP"

Result Returns value or error.

Description

Can be used to find IP, name or MAC of the default interface. Default is the first connected interface.

Examples

Queries name of default network interface:

```
MBS( "NetworkInterfaces.Default"; "Name" )
```

Queries IP of default connection:

```
MBS( "NetworkInterfaces.Default"; "IP" )
```

117.5 NetworkInterfaces.Value

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 NetworkInterfaces	4.3	Yes	No	Yes	Yes	Yes

MBS("NetworkInterfaces.Value"; Index; Selector)

Parameters

Index

The index from 0 to NetworkInterfaces.Count-1.

0

Selector

Which value to query: Name, IPv4, IPv6, IP, MAC, Destination, Broadcast, Netmask, NetmaskIPv4, NetmaskIPv6, InterfaceIndex, Multicast, HasBroadcast, HasDestination, Up, Loopback, IPv4s, IPv6s, IPv4Count or IPv6Count.

"Name"

Result Returns value or error.

Chapter 118

Notification

Send or receive notifications.

118.1 Notification.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 Notification	3.3	Yes	Yes	Yes	No	No

MBS("Notification.List")

Result Returns list of names.

Description

See also

- [118.2 Notification.Listen](#) 6096
- [118.3 Notification.Send](#) 6098
- [118.5 Notification.Unlisten](#) 6100

118.1.1 Blog Entries

- [MBS Filemaker Plugin, version 3.3pr1](#)

Created 18th August 2014, last changed 21st September 2015.

118.2 Notification.Listen

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 Notification	2.6	Yes	Yes	No	No	No

MBS("Notification.Listen"; NotificationName; FileName; ScriptName)

Parameters

NotificationName

The name of the notification.

"de.mbsplugins.MyTestNotification"

FileName

The name of the FileMaker File that contains the script

ScriptName

The name of the script to run

Result Returns "OK" or error message.

Description

Specify a filename and script name to have this script being called when a notification is received. The script parameter will be the notification name plus parameters.

Although the notification name can be any text, you probably want to use reverse dns notation to avoid conflicts.

This is implemented with Distributed Notifications on Mac and named messages on Windows. You can use our NSDistributedNotificationCenterMBS and WinNotificationMBS classes in the Real Studio plugins to send/receive this notifications.

Version 7.2 and newer pass parameters to the script call. On Windows you get both parameters (WParam and LParam).

For version 7.3 you can receive a payload in json as script parameter to the script call after the name of notification.

If you need to trigger scripts on other computers, please check UDPsocket or ServerSocket functions.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers script event:

```
MBS( "Notification.Listen"; "de.mbsplugins.MyTestNotification"; Get ( FileName ); "GotTestNotification")
```

Listen for device change event on Windows:

MBS("Notification.Listen"; 537; Get (FileName); "DeviceChanged")

Created 18th August 2014, last changed 18th July 2018.

118.3 Notification.Send

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 Notification	2.6	Yes	Yes	Yes	No	No

MBS("Notification.Send"; NotificationName { ; Param1; Param2 })

Parameters

NotificationName

The name of the notification.

"de.mbsplugins.MyTestNotification"

Param1

Optional

Available in MBS FileMaker Plugin 7.2 or newer.

A number to pass on Windows. For Mac in 7.3 plugins you can pass JSON here.

Param2

Optional

A number to pass on Windows.

Result Returns "OK" or error message.

Description

This notification is delivered to all applications on the computer which register for receiving it.

Examples

Send notification on Mac with JSON payload:

```
MBS("Notification.Send"; "MyNotification"; " { \"recordID\":5 } ")
```

118.4 Notification.SendDirect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 Notification	5.2	Yes	Yes	Yes	No	No

MBS("Notification.SendDirect"; NotificationName { ; Parameter })

Parameters

NotificationName

The name of the notification.

"de.mbsplugins.MyTestNotification"

Parameter

Optional

The script parameter. If you don't specify, we pass name of notification as usual. By passing your own parameter, you can include several values like a list of values including record IDs or reference numbers.

Result Returns number or error.

Description

This notification is delivered to all listening scripts within the FileMaker instance. For debugging.

Chapter 119

NSEventFilter

Filter Cocoa events to block e.g. scrollwheel on Mac.

119.1 NSEventFilter.DisableEvents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 NSEventFilter	2.9	Yes	No	No	No	No

MBS("NSEventFilter.DisableEvents"; eventMask)

Parameters

eventMask

Which events to disable.

0

Result Returns OK on success.

Description

Event filtering requires Mac OS X 10.6 or newer.

Examples

Disable scroll wheel events:

MBS("NSEventFilter.DisableEvents"; 4194304)

Disable all right mouse events:

MBS("NSEventFilter.DisableEvents"; 8+16+128)

See also

- 119.2 NSEventFilter.EnableAllEvents 6105

119.3 NSEventFilter.EnableEvents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 NSEventFilter	2.9	Yes	No	No	No	No

MBS("NSEventFilter.EnableEvents"; eventMask)

Parameters

eventMask

Which events to enable.

0

Result Returns OK on success.

Description

Event filtering requires Mac OS X 10.6 or newer.

Possible values for the events:

NSLeftMouseDownMask	2
NSLeftMouseUpMask	4
NSRightMouseDownMask	8
NSRightMouseUpMask	16
NSMouseMovedMask	32
NSLeftMouseDraggedMask	64
NSRightMouseDraggedMask	128
NSKeyDownMask	1024
NSKeyUpMask	2048
NSFlagsChangedMask	4096
NSScrollWheelMask	4194304
NSTabletPointMask	8388608
NSTabletProximityMask	16777216
NSOtherMouseDownMask	33554432
NSOtherMouseUpMask	67108864
NSOtherMouseDraggedMask	134217728

You can add several mask values.

Examples

Enable scroll wheel events:

MBS("NSEventFilter.DisableEvents"; 4194304)

Enable all right mouse events:

MBS("NSEventFilter.DisableEvents"; 8+16+128)

Chapter 120

OCR

Recognize text on images.

120.1 OCR.Cleanup

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.Cleanup")

Result Returns OK on success.

Description

This is optional. You can initialize the engine when your solution starts and keep it running all time.

Examples

Cleanup:

MBS("OCR.Cleanup")

See also

- 61.9 CURL.Cleanup 1772
- 120.6 OCR.GetText 6114
- 120.7 OCR.GetTextWithCoordinates 6116

Created 18th August 2014, last changed 18th August 2014.

120.2 OCR.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.Clear")

Result Returns OK on success.

Description

Afterwards, you must call SetImage or TesseractRect before doing any Recognize or Get* operation.

Examples

Clear:

MBS("OCR.Clear")

Created 18th August 2014, last changed 18th August 2014.

120.3 OCR.GetBoxText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

```
MBS( "OCR.GetBoxText" { ; page } )
```

Parameters**page**

Optional

The page index you want to use in html. Default value is 0.

0

Result Returns the text.**Description**

Constructs coordinates in the original image - not just the rectangle. Page is a 0-based page index that will appear in the box file.

Examples

Queries text of first page:

```
$text = MBS( "OCR.GetBoxText"; 0 )
```

See also

- 120.4 OCR.GetHOCText 6112
- 120.6 OCR.GetText 6114

Created 18th August 2014, last changed 2nd November 2017.

120.4 OCR.GetHOCText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

```
MBS( "OCR.GetHOCText" { ; page } )
```

Parameters

page

Optional

The page index you want to use in html. Default value is 0.

0

Result Returns the text.

Description

Page is 0-based but will appear in the output as 1-based.

Examples

Queries text of first page:

```
$text = MBS( "OCR.GetHOCText"; 0 )
```

See also

- 120.3 OCR.GetBoxText

6111

Created 18th August 2014, last changed 18th August 2014.

120.5 OCR.GetPageSegMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.GetPageSegMode")

Result Returns the page set mode.

Description

See also OCR.SetPageSegMode.

Examples

Set single block mode and query value:

```
$r = MBS( "OCR.SetPageSegMode"; "SingleBlock" )
$pageMode = MBS( "OCR.GetPageSegMode" )
```

See also

- 120.15 OCR.SetPageSegMode

6127

120.6 OCR.GetText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.GetText")

Result Returns the text.

Description

Calls Recognize if needed internally.

Examples

Query text:

```
$text = MBS( "OCR.GetText" )
```

Custom function to read image and return text:

```
/*
MBS-OCR ( language; Image)
```

Requires tessdata resources [MIT ©]

language: deu ('deu.traineddata'), fra, eng, etc.

Image: Container Fieldname ('MyTable::MyField') in Quotes

path: FM/Extensions - put 'tessdata' Folder into FM Extensions Folder

Benjamin Fehr, EfficientBizz GmbH

Example Databases

- [OCR/OCR with DynaPDF](#)

Created 18th August 2014, last changed 21st December 2018.

120.7 OCR.GetTextWithCoordinates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	6.5	Yes	Yes	Yes	Yes	Yes

MBS("OCR.GetTextWithCoordinates")

Result Returns list or error.

Description

Please call OCR.Recognize or OCR.GetText or another function first to trigger recognition.

Returns a list with tab separated values. First 4 values define the pixel coordinates. Than followed by style and font size. Finally the word.

Columns: left, top, right, bottom, isBold, isItalic, isUnderlined, isMonospace, isSerif, isSmallCaps, Pointsize, Text.

e.g.

left	top	right	bottom	isBold	isItalic	isUnderlined	isMonospace	isSerif	isSmallCaps	Pointsize	Text
36	194	91	218	0	0	0	0	0	0	7	The
102	194	177	224	0	0	0	0	0	0	7	quick
189	194	274	218	0	0	0	0	0	0	7	brown
287	194	339	225	0	0	0	0	0	0	7	dog
348	194	456	225	0	0	0	0	0	0	7	jumped
468	200	531	218	0	0	0	0	0	0	7	over
540	194	585	218	0	0	0	0	0	0	7	the
37	228	92	259	0	0	0	0	0	0	7	lazy
103	228	153	252	0	0	0	0	0	0	7	fox.

Examples

Recognize:

```
# Init OCR
Set Variable [ $r; Value:MBS( "OCR.Initialize"; "/Users/cs/Documents"; "eng" ) ]
Set Variable [ $rr; Value:MBS( "OCR.SetPageSegMode"; "Auto" ) ]
# Process Image
Set Variable [ $img; Value:MBS("GMImage.NewFromContainer"; OCR::Image) ]
Set Variable [ $r; Value:MBS( "OCR.SetImage"; $img ) ]
Set Variable [ $rr; Value:MBS( "OCR.Recognize" ) ]
Set Field [ OCR::Text; MBS("OCR.GetTextWithCoordinates" ) ]
# Cleanup
Set Variable [ $r; Value:MBS( "OCR.CleanUp" ) ]
Set Variable [ $r; Value:MBS( "GMImage.Release"; $img ) ]
```

120.8 OCR.GetVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	7.5	Yes	Yes	Yes	Yes	Yes

MBS("OCR.GetVariable"; Name)

Parameters

Name

The name of the variable.

"test"

Result Returns value or error.

Description

See also

- [120.18 OCR.SetVariable](#) 6131
- [123.5 PHP.GetVariable](#) 6252
- [123.10 PHP.SetVariable](#) 6258

Created 2nd November 2017, last changed 2nd November 2017.

120.9 OCR.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.Initialize"; Path; Lang)

Parameters

Path

The path to the folder where to find tessdata folder.

\$path

Lang

The language to use.

"eng"

Result Returns OK on success.

Description

Pass path to parent folder of tessdata folder and language you need.

The language is (usually) an ISO 639-3 string.

To use multiple languages, please concat them with plus sign: e.g. "eng+deu"

You find our language files archive here:

<http://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/Tesseract/>

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Initialize with tessdata folder in same folder as database for english:

```
set variable $databasePath to Get(FilePath)
set variable $databasePath to MBS("Path.FilemakerPathToNativePath"; $databasePath)
set variable $databasePath to Substitute ( $databasePath ; ".fp7" ; ".fmp12")
set variable $databaseName to Get(FileName) & ".fmp12"
set variable $path to Substitute ( $databasePath ; $databaseName ; "" )
set variable $r to MBS( "OCR.Initialize"; $path; "eng")
```

Initialize on Server with tessdata in Server folder:

```
MBS( "OCR.Initialize"; "/Library/FileMaker Server/"; "eng")
```

Initialize on demand:

```
If [ MBS("OCR.IsInitialized") = 1 ]
```

```
Set Variable [ $r; Value:MBS( "OCR.Initialize"; "/Library/FileMaker Server/"; "eng") ]  
End If
```

- 163.21 TAPI.Initialize 7748
- 181.12 WIA.Initialize 8511
- 190.115 XL.Initialize 9005

Example Databases

- [OCR/OCR with DynaPDF](#)
- [OCR/OCR](#)

Created 18th August 2014, last changed 10th May 2018.

120.10 OCR.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	4.2	Yes	Yes	Yes	Yes	Yes

MBS("OCR.IsInitialized")

Result Returns 1 or 0.

Description

If value is 1, everything is okay.

If value is zero, the library is not initialized and you need to call OCR.Initialize function.

On a hosted database this function is better than using a global variable, as the variable can't see if initialization was made on server or client side.

Examples

Initialize on demand:

```
If [ MBS("OCR.IsInitialized") 1 ]
Set Variable [ $r; Value:MBS( "OCR.Initialize"; "/Library/FileMaker Server/"; "eng") ]
End If
```

120.11 OCR.Language

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.Language")

Result Returns the language name. e.g. "eng"

Description

Examples

Queries language:

```
$lang = MBS( "OCR.Language" )
```

Created 18th August 2014, last changed 18th August 2014.

120.12 OCR.MeanTextConf

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.MeanTextConf")

Result Returns mean confidence.

Description

Examples

Query mean text confidence:

```
$r = MBS( "OCR.MeanTextConf" )
```

Created 18th August 2014, last changed 18th August 2014.

120.13 OCR.Recognize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.Recognize")

Result Returns OK on success.

Description

Optional. The Get*Text functions will call Recognize if needed. After Recognize, the output is kept internally until the next SetImage.

Examples

Start recognition process:

```
$r = MBS( "OCR.Recognize" )
```

Created 18th August 2014, last changed 18th August 2014.

120.14 OCR.SetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.SetImage"; imageRef)

Parameters

imageRef

The image reference. Use functions like `GUIImage.NewFromContainer` to get an image reference.
\$img

Result Returns OK on success.

Description

The plugin makes a copy of the image.

Please do not pass PDF files. For PDF you either need to extract image (for scans) or raster PDF pages as images. Our functions `PDFKit.GetPDFPageImage` or `DynaPDF.RenderPage` can help here. If the PDF file contains real text, please use `PDFKit.GetPDFText`, `PDFKit.GetPDFPageText`, `DynaPDF.ExtractText`, `DynaPDF.ExtractPageText` or `DynaPDF.ExtractPageRectText`. This will not do OCR, but extract the text directly.

Examples

Set image reference:

```
MBS( "OCR.SetImage"; $img )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.SetPageSegMode"; mode)

Parameters

mode

The new page segmentation mode.

"auto"

Result Returns OK on success.

Description

Possible values:

OSDOnly	Orientation and script detection only.
AutoOSD	Automatic page segmentation with orientation and script detection. (OSD)
AutoOnly	Automatic page segmentation, but no OSD, or OCR.
Auto	Fully automatic page segmentation, but no OSD.
SingleColumn	Assume a single column of text of variable sizes.
SingleBlockVertText	Assume a single uniform block of vertically.
SingleBlock	Assume a single uniform block of text. (Default)
SingleLine	Treat the image as a single text line.
SingleWord	Treat the image as a single word.
CircleWord	Treat the image as a single word in a circle.
SingleChar	Treat the image as a single character.

Examples

Set auto detection mode:

```
MBS( "OCR.SetPageSegMode"; "AutoOSD" )
```

Set single block mode:

```
MBS( "OCR.SetPageSegMode"; "SingleBlock" )
```

120.16 OCR.SetRectangle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS("OCR.SetRectangle"; x; y; width; height)

Parameters

x

The x coordinate.

0

y

The y coordinate.

0

width

The width of the rectangle.

100

height

The height of the rectangle.

100

Result Returns OK on success.

Description

Call after SetImage. Each SetRectangle clears the recognition results so multiple rectangles can be recognized with the same image.

Examples

Set Rectangle to 800x600:

MBS("OCR.SetRectangle"; 0; 0; 800; 600)

Created 18th August 2014, last changed 20th January 2020.

120.17 OCR.SetResolution

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	5.1	Yes	Yes	Yes	Yes	Yes

MBS("OCR.SetResolution"; Resolution)

Parameters

Resolution

The new resolution value in pixel per inch.

72

Result Returns OK or error.

Description

This helps to calculate font size information in results.

Call this after OCR.SetImage.

120.18 OCR.SetVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	7.5	Yes	Yes	Yes	Yes	Yes

MBS("OCR.SetVariable"; Name; Value)

Parameters

Name

The name of the variable.

"test"

Value

The text value for this variable.

"123"

Result Returns OK or error.

Description

Examples

Set variable for white list characters:

```
MBS( "OCR.SetVariable"; "tessedit_char_whitelist"; "0123456789" )
```

Set variable for black list characters:

```
MBS( "OCR.SetVariable"; "tessedit_char_blacklist"; "xyz" )
```

Created 2nd November 2017, last changed 2nd November 2017.

120.19 OCR.WriteToPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 OCR	3.1	Yes	Yes	Yes	Yes	Yes

MBS("OCR.WriteToPDF"; PosX; PosY; Width; Height)

Parameters

PosX

X-Coordinate of image.

\$x

PosY

Y-Coordinate of image.

\$y

Width

Width of the image.

\$w

Height

Height of the image.

\$h

Result Returns OK or error message.

Description

This function is good to overlay an OCR'd image with text, so you can copy/search the text. Please set a default font before calling this function.

Be aware that if the font loaded in pdf page is wider than scanned font, the words can overlap. Plugin version 7.5 or newer will reduce font size if needed to fit word length to fix this.

Examples

Insert image and write text over it:

```
MBS("DynaPDF.InsertImage"; OCR::Image; $x; $y; $w; $h)
```

```
MBS( "OCR.WriteToPDF"; $x; $y; $w; $h)
```

Chapter 121

Path

Convert paths from native to FileMaker and back.

121.1 Path.AddPathComponent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	6.0	Yes	Yes	Yes	Yes	Yes

MBS("Path.AddPathComponent"; Path; Component { ; More Components })

Parameters

Path

The native file path.

"/Users/cs/Desktop"

Component

The new path component.

"Hello"

More Components

Optional

Pass more components, each in its own parameter.

Result Returns path or error.

Description

The path provided as parameter does not need to end with a slash or backslash.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Adds a path component to a path:

```
MBS( "Path.AddPathComponent"; "/Users/cs/Desktop"; "Hello" )
```

Adds a file name:

```
MBS( "Path.AddPathComponent"; "/Users/cs/Desktop/"; "test.txt" )
```

Adds a file path on Windows:

```
MBS( "Path.AddPathComponent"; "c:\\Test"; "test.txt" )
```

Get file name from container and add to folder path:

```
Set Variable [ $name; Value:GetAsText ( Container Batch Export::Test1 ) ]
Set Variable [ $name; Value:GetValue($name; 1) ]
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; $name ) ]
Set Variable [ $dpath; Value:MBS( "Path.AddPathComponent"; $FolderPath; $name ) ]
```

Create folder on Desktop:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDesktop" ) ]
If [ IsEmpty(Container Export::Name) ]
Set Field [ Container Export::Name; "Record " & Get(RecordID) ]
End If
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; Container Export::Name ) ]
Set Variable [ $r; Value:MBS("Files.CreateDirectory"; $path) ]
```

Write container to temp file and launch:

```
# get temp folder
Set Variable [ $TempFolder; Value:MBS( "Folders.SystemTemporary" ) ]
# and file name from container
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; test::myContainer ) ]
# add name to folder path
Set Variable [ $TempPath; Value:MBS( "Path.AddPathComponent"; $TempFolder; $name ) ]
# now write temp file
Set Variable [ $r; Value:MBS( "Files.WriteFile"; test::myContainer; $TempPath) ]
# and launch file
Set Variable [ $r; Value:MBS( "Files.LaunchFile"; $TempPath) ]
```

Add multiple path componennts:

```
MBS( "Path.AddPathComponent"; "/Users/cs/Desktop"; "Hello"; "World"; "test" )
```

Example result: /Users/cs/Desktop/Hello/World/test

Export a container to desktop:

```
# get path stored in the container field
Set Variable [ $ContainerPath ; Value: GetAsText ( Contacts::Photo Container ) ]
# get the file name portion
Set Variable [ $ContainerName ; Value: MBS( "Path.LastPathComponent"; $ContainerPath ) ]
# take a folder on the computer, e.g. desktop
Set Variable [ $DesktopFolder ; Value: MBS( "Folders.UserDesktop" ) ]
# build path with file name on that folder
Set Variable [ $FilePath ; Value: MBS( "Path.AddPathComponent"; $DesktopFolder; $ContainerName ) ]
# and export the content of container to that path
Set Variable [ $r ; Value: MBS( "Container.WriteFile"; Contacts::Photo Container; $FilePath ) ]
```

121.2 Path.FileMakerPathToNativePath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Path.FileMakerPathToNativePath"; path)

Parameters

path

The FileMaker file path.

"/Macintosh HD/Users/test/Desktop/picture.jpg"

Result Returns the native path.

Description

The difference between a native path and a FileMaker path on Mac is, that FileMaker expects to have the Disk Name in front followed by the rest of the path. Mac OS X functions require paths from the root disk to start without volume name. Other disks have paths starting with "/Volumes/name".

This function does not work for relative paths.

Examples

Convert path to native path:

MBS("Path.FilemakerPathToNativePath"; "/Macintosh HD/Users/test/Desktop/picture.jpg")

121.3 Path.FilePathToFileURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	5.0	Yes	Yes	Yes	Yes	Yes

MBS("Path.FilePathToFileURL"; Path)

Parameters

Path

The absolute file path to convert to URL.

"/Users/cs/Desktop/test.html"

Result Returns URL or error.

Description

Examples

Converts a path to a file URL

```
/* shows: file://localhost/Users/cs/Desktop/test.html */
MBS( "Path.FilePathToFileURL"; "/Users/cs/Desktop/test.html" )
```

Converts a Windows path to file URL:

```
MBS( "Path.FilePathToFileURL"; "C:\Users\Christian\Desktop\test.html" )
```

Write a HTML file and an image file to load in web viewer:

```
Set Variable [ $folder ; Value: MBS( "Folders.UserTemporary" ) ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "test.jpg" ) ]
Set Variable [ $r ; Value: MBS( "Container.WriteFile"; Images::Image; $path ) ]
#
Set Variable [ $html ; Value: "<html><body><p>Hello World</p><img src=test.jpg width=300></body></html>" ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "test.html" ) ]
Set Variable [ $r ; Value: MBS( "Text.WriteTextFile"; $html; $path ) ]
#
Set Variable [ $URL ; Value: MBS( "Path.FilePathToFileURL"; $Path ) ]
Set Web Viewer [ Object Name: "web" ; URL: $URL ]
```

121.4 Path.FileURLToFilePath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	5.0	Yes	Yes	Yes	Yes	Yes

MBS("Path.FileURLToFilePath"; URL)

Parameters

URL

The file URL to convert.

"file://localhost/Users/cs/Desktop/test.html"

Result Returns path or error.

Description

Examples

Converts a path URL:

```
/* returns /Users/cs/Desktop/test.html */
MBS( "Path.FileURLToFilePath"; "file://localhost/Users/cs/Desktop/test.html" )
```

Example result: "/Users/cs/Desktop/test.html"

Converts file URL on Windows to path:

```
MBS( "Path.FileURLToFilePath"; "file://C:/Users/Christian/Desktop/test.html" )
```

Example result: "/Users/Christian/Desktop/test.html"

121.5 Path.LastPathComponent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	6.0	Yes	Yes	Yes	Yes	Yes

MBS("Path.LastPathComponent"; Path)

Parameters

Path

The native file path.
"/Users/cs/Desktop"

Result Returns path or error.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Queries file name:

```
MBS( "Path.LastPathComponent"; "c:\\test.txt" )
```

Get file name from container and add to folder path:

```
Set Variable [ $name; Value:GetAsText ( Container Batch Export::Test1 ) ]
Set Variable [ $name; Value:GetValue($name; 1) ]
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; $name ) ]
Set Variable [ $dpath; Value:MBS( "Path.AddPathComponent"; $FolderPath; $name ) ]
```

Write container to temp file and launch:

```
# get temp folder
Set Variable [ $TempFolder; Value:MBS( "Folders.SystemTemporary" ) ]
# and file name from container
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; test::myContainer ) ]
# add name to folder path
Set Variable [ $TempPath; Value:MBS( "Path.AddPathComponent"; $TempFolder; $name ) ]
# now write temp file
Set Variable [ $r; Value:MBS( "Files.WriteFile"; test::myContainer; $TempPath) ]
# and launch file
Set Variable [ $r; Value:MBS( "Files.LaunchFile"; $TempPath) ]
```

121.6 Path.LongPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	9.0	Yes	Yes	Yes	Yes	Yes

MBS("Path.LongPath"; Path)

Parameters

Path

The native file path.

"C:\Users\Christian Schmitz\Dokumente"

Result Returns OK or error.

Description

For your convenience this function returns same path on iOS, Mac and Linux.

If the specified path is already in its long form and conversion is not needed, the function simply returns the input path.

Examples

Convert to long path:

MBS("Path.LongPath"; "C:\PROGRA~1\FILEMA~1\FILEMA~1")

Example result: "C:\Program Files\FileMaker\FileMaker Pro 17 Advanced"

121.7 Path.NativePathToFileMakerPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Path.NativePathToFileMakerPath"; path)

Parameters

path

The native file path.

"/Users/test/Desktop/picture.jpg"

Result Returns the FileMaker path.

Description

The difference between a native path and a FileMaker path on Mac is, that FileMaker expects to have the Disk Name in front followed by the rest of the path. Mac OS X functions require paths from the root disk to start without volume name. Other disks have paths starting with "/Volumes/name".

This function does not work for relative paths.

Examples

Convert path to FileMaker path:

```
MBS( "Path.NativePathToFilemakerPath"; "/Users/test/Desktop/picture.jpg")
```

Build temp path:

```
"imagemac:" & MBS( "Path.NativePathToFileMakerPath"; MBS("Path.AddPathComponent"; MBS("Folders.UserTemporary"; "test.jpg")) )
```

121.8 Path.RemoveLastPathComponent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	6.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "Path.RemoveLastPathComponent"; Path )
```

Parameters

Path

The native file path.
 ”/Users/cs/Desktop”

Result Returns path or error.

Description

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Removes last path component on Windows:

```
MBS( "Path.RemoveLastPathComponent"; "c:\\test.txt" )
```

Get app folder path:

```
MBS( "Path.RemoveLastPathComponent"; MBS( "App.GetProcessPath" ) )
```

Query plugin folder:

```
MBS( "Path.RemoveLastPathComponent"; MBS( "Plugin.Path" ) )
```

Example result: ”/Applications/FileMaker Pro 18 Advanced/Extensions”

121.9 Path.ShortPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Path	9.0	Yes	Yes	Yes	Yes	Yes

MBS("Path.ShortPath"; Path)

Parameters

Path

The native file path.

"C:\Users\Christian Schmitz\Dokumente"

Result Returns OK or error.

Description

For your convenience this function returns same path on iOS, Mac and Linux.

If the specified path is already in its short form and conversion is not needed, the function simply returns the input path.

Use Path.LongPath function to reverse to long path.

Examples

Convert FileMaker path:

MBS("Path.ShortPath"; "C:\Program Files\FileMaker\FileMaker Pro 17 Advanced")

Example result: "C:\PROGRA~1\FILEMA~1\FILEMA~1"

Chapter 122

PDFKit

PDF functions for Mac.

122.1 PDFKit.AddEmptyPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	5.0	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.AddEmptyPage"; PDF { ; Width; Height })

Parameters

PDF

A PDF reference number from PDFKit.Open.

\$ref

Width

Optional

The width for the new PDF page.

600

Height

Optional

The height of the new PDF page.

800

Result Returns OK or error.

Description

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

Examples

Create PDF from images:

```
# Start new document
Set Variable [ $doc; Value:MBS("PDFKit.NewPDFDocument") ]
# Add image in full size as new page
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image) ]
# Add empty page in default size
Set Variable [ $r; Value:MBS("PDFKit.AddEmptyPage"; $doc) ]
# Add image in given size as new page:
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image; 400; 300) ]
# get PDF document and store in container:
Set Field [ test::test; MBS("PDFKit.GetPDFDocument"; $doc) ]
# release memory
Set Variable [ $r; Value:MBS("PDFKit.Release"; $doc) ]
```

122.1.1 Blog Entries

- [MBS FileMaker Plugin, version 5.0pr12](#)

Created 16th February 2015, last changed 25th April 2016.

122.2 PDFKit.AddImageFilePage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	7.2	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.AddImageFilePage"; PDF; FilePath { ; Width; Height })

Parameters

PDF

A PDF reference number from PDFKit.Open.

\$ref

FilePath

The file path to the image file to use.

"/Users/cs/Desktop/test.png"

Width

Optional

The width for the new PDF page.

600

Height

Optional

The height of the new PDF page.

800

Result Returns OK or error.

Description

If you need more control about details, you may want to check DynaPDF functions.

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Create PDF from image file:

```
Set Variable [ $ref; Value:MBS("PDFKit.NewPDFDocument") ]
```

```
Set Variable [ $r; Value:MBS("PDFKit.AddImageFilePage"; $ref; "/Users/cs/Desktop/test.jpg"; 640; 480) ]
```

```
Set Variable [ $r; Value:MBS("PDFKit.WriteToPath"; $ref; "/Users/cs/Desktop/test.pdf") ]
```

```
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]
```

122.3 PDFKit.AddImagePage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	5.0	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.AddImagePage"; PDF; Image { ; Width; Height })

Parameters

PDF

A PDF reference number from PDFKit.Open.

\$ref

Image

The image to use. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

Width

Optional

The width for the new PDF page.

600

Height

Optional

The height of the new PDF page.

800

Result Returns OK or error.

Description

If you need more control about details, you may want to check DynaPDF functions.

Please use PDFKit.AddImageFilePage to add image file on disk.

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

Examples

Create PDF from images:

```
# Start new document
Set Variable [ $doc; Value:MBS("PDFKit.NewPDFDocument") ]
# Add image in full size as new page
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image) ]
# Add empty page in default size
Set Variable [ $r; Value:MBS("PDFKit.AddEmptyPage"; $doc) ]
# Add image in given size as new page:
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image; 400; 300) ]
# get PDF document and store in container:
Set Field [ test::test; MBS("PDFKit.GetPDFDocument"; $doc) ]
# release memory
```

Set Variable [\$r; Value:MBS("PDFKit.Release"; \$doc)]

122.4 PDFKit.AppendPages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	3.1	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.AppendPages"; PDFRef; OtherPDFs)

Parameters

PDFRef

The PDF Reference where pages are added.

\$ref

OtherPDFs

Several PDF references. A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

\$PDF

Result Returns OK on success or error on failure.

Description

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

Examples

Merge two PDFs:

```
Set Variable [ $pdf ; Value: MBS("PDFKit.OpenContainer"; MyTable::InputPDF) ]
Set Variable [ $r ; Value: MBS( "PDFKit.AppendPages"; $pdf; MyTable::OtherPDF ) ]
Set Field [ MyTable::OutputPDF ; MBS( "PDFKit.GetPDFDocument"; $PDF) ]
Set Variable [ $r ; Value: MBS( "PDFKit.Release"; $pdf) ]
```

122.5 PDFKit.Combine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.Combine"; Name; PDFs)

Parameters

Name

A text with the file name to include with the PDF.

"test.pdf"

PDFs

Several PDF references. A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open. The function will fail if one of those is an image file.

Result Returns the PDF container value.

Description

You can pass container values, URLs or PDF references. You can pass one PDF reference to save to a new PDF.

Please note the difference between PDFKit.Combine and PDFKit.CombineRef. Combine returns a new container value with the new PDF. CombineRef returns the new PDF reference for further processing.

If on combining one of the PDF parameters is not a valid PDF, the function returns an error. You can use PDFKit.SetIgnoreCombineErrors to disable that and ignore all PDFs which fail to open. For example if you write code which takes 4 container values and not all of them contain PDF files.

Starting with version 6.0, the PDFs parameters can also be lists of paths or reference numbers.

Examples

Combine two PDF files form two media fields into a new PDF

```
MBS("PDFKit.Combine"; "test.pdf"; mytable::test1; mytable::test2)
```

Merge PDFs:

```
# Start with blank list
Set Variable [ $list; Value:"" ]
# Load PDF from container
Go to Record/Request/Page [ First ]
Set Variable [ $destPage; Value:1 ]
Loop
Set Variable [ $r; Value:MBS("PDFKit.OpenContainer"; Merge PDFs::InputPDF) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $list; Value:$list & $r & $]
End If
Go to Record/Request/Page [ Next; Exit after last ]
End Loop
```

122.5. PDFKIT.COMBINE

6161

Set Field [Merge PDFs::FinalPDF; MBS("PDFKit.Combine"; "merge.pdf"; \$list)]

Set Variable [\$r; Value:MBS("PDFKit.Release"; \$list)]

122.6 PDFKit.CombineRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.CombineRef"; Name; PDFs)

Parameters

Name

A text with the file name to include with the PDF.
"test.pdf"

PDFs

Several PDF references. A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Result Returns the PDF reference.

Description

You can pass container values, URLs or PDF references. You can pass one PDF reference to save to a new PDF.

Please note the difference between PDFKit.Combine and PDFKit.CombineRef. Combine returns a new container value with the new PDF. CombineRef returns the new PDF reference for further processing.

If on combining one of the PDF parameters is not a valid PDF, the function returns an error. You can use PDFKit.SetIgnoreCombineErrors to disable that and ignore all PDFs which fail to open. For example if you write code which takes 4 container values and not all of them contain PDF files.

Starting with version 6.0, the PDFs parameters can also be lists of paths or reference numbers.

Examples

Combine the PDF files in the three PDF references into a new PDF reference:

```
MBS("PDFKit.CombineRef"; "" ; $ref1; $ref2; $ref3)
```

122.7 PDFKit.GeneratePreview

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	7.5	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GeneratePreview"; Container)

Parameters

Container

A media value containing PDF data.

Result Returns OK or error.

Description

For Windows or Linux, please use DynaPDF.GeneratePreview.

Examples

Generate preview:

```
Set Field [ Merge PDFs::FinalPDF ; MBS("PDFKit.GeneratePreview"; Merge PDFs::InputPDF) ]
```

Add a preview to PDF container if needed:

```
# get a PDF somewhere
Set Variable [ $PDF ; Value: MBS( "Files.ReadFile"; "C:\Users\Christian\Desktop\test.pdf"; "auto") ]
# Does have PDF and no image?
Set Variable [ $types ; Value: MBS( "Container.GetTypes"; $PDF) ]
# PDF included?
If [ Position ( $types ; "PDF " ; 1 ; 1 ) >0 ]
# Image preview missing?
If [ Position ( $types ; "JPEG" ; 1 ; 1 ) <1 and Position ( $types ; "PNGf" ; 1 ; 1 ) <1 ]
# Use DynaPDF if initialized, we can use it
If [ MBS( "DynaPDF.IsInitialized" ) ]
Set Variable [ $PDF2 ; Value: MBS( "DynaPDF.GeneratePreview"; $PDF) ]
If [ MBS("IsError") = 0 ]
# Success, so use the new PDF
Set Variable [ $PDF ; Value: $PDF2 ]
End If
Else If [ MBS( "IsMacOSX" ) = 1 ]
# On Mac use PDFKit
Set Variable [ $PDF2 ; Value: MBS( "PDFKit.GeneratePreview"; $PDF) ]
If [ MBS("IsError") = 0 ]
# Success, so use the new PDF
Set Variable [ $PDF ; Value: $PDF2 ]
End If
End If
End If
End If
```

122.7. PDFKIT.GENERATEPREVIEW

6165

```
# Store PDF with preview  
Set Field [ test::Image ; $PDF ]
```

122.10 PDFKit.GetPDFAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFAttribute"; PDF; Key)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Key

Which information to query. This can be one of the following: Title, Subject, Author, Creator, Producer, Keywords, CreationDate or ModificationDate.

"Title"

Result Returns the text or date value requested.

Description

New keys in v5.4: OwnerPassword, UserPassword, EncryptionKeyLength, AllowsPrinting and AllowsCopying.

If you need more control about encryption, restrictions or metadata, you may want to checkout our DynaPDF functions in the plugin.

Examples

Get all the information values for a PDF in a container:

```
"Title: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Title") & "§" &
"Subject: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Subject") & "§" &
"Author: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Author") & "§" &
"Creator: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Creator") & "§" &
"Producer: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Producer") & "§" &
"Keywords: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Keywords") & "§" &
"CreationDate: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "CreationDate") & "§" &
"ModificationDate: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "ModificationDate")
```

Created 18th August 2014, last changed 17th December 2018.

Key	Description
Title	The document's title. Optional; if present, the value of this key must be a text.
Author	The name of the person who created this document. Optional; if present, the value of this key must be a text.
Subject	The subject of a document. Optional; if present, the value of this key must be a text.
Keywords	The keywords for this document. This key is optional. Must be the keywords with comma separated.
Creator	The name of the application that created the original data used to create this document. Optional; if present, the value of this key must be a text.
OwnerPassword	The "owner password" of the PDF document. If this key is specified, the document will be encrypted using the value as the owner password; otherwise, the document will not be encrypted. The value of this key must be a text which can be represented in ASCII encoding; only the first 32 bytes will be used for the password. There is no default value for this key. If the value of this key cannot be represented in ASCII, the document will not be created and the creation function will fail.
UserPassword	The "user password" of the PDF document. If the document is encrypted, then the value of this key will be the user password for the document; if unspecified, the user password will be the empty string. The value of this key must be a text which can be represented in ASCII encoding; only the first 32 bytes will be used for the password. If the value of this key cannot be represented in ASCII, the document will not be created and the creation function will fail.
EncryptionKeyLength	Specifies the encryption key length in bits; see Table 3.18 "Entries common to all encryption dictionaries", PDF Reference: Adobe PDF version 1.5 (4th ed.) for more info. Optional; if present, the value of this key must be a number with value which is a multiple of 8 between 40 and 128, inclusive. If this key is absent or invalid, the encryption key length defaults to 40 bits.
AllowsPrinting	Used to specify whether the document allows printing when unlocked with the user password. The value of this key must be a boolean. The default value of this key is 1 (true).
AllowsCopying	Used to specify whether the document allows copying when unlocked with the user password. The value of this key must be a boolean. The default value of this key is 1 (true).
CreationDate	The creation date of PDF.
ModificationDate	The modification date of PDF.

122.11 PDFKit.GetPDFDocument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.2	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFDocument"; PDF { ; Filename })

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Filename

Optional

Optionally, the file name to use for the container value.

"output.pdf"

Result Returns a container with a PDF document. The plugin adds a JPEG picture for preview as well as a file name. You can store it in a media field.

Description

Filename is optional. When you use an URL for the PDF, you can basicly load a new PDF from a server.

Examples

Save a PDF in a PDF reference into a container value:

```
MBS( "PDFKit.GetPDFDocument"; $ref; "test.pdf" )
```

Create PDF from images:

```
# Start new document
Set Variable [ $doc; Value:MBS("PDFKit.NewPDFDocument") ]
# Add image in full size as new page
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image) ]
# Add empty page in default size
Set Variable [ $r; Value:MBS("PDFKit.AddEmptyPage"; $doc) ]
# Add image in given size as new page:
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image; 400; 300) ]
# get PDF document and store in container:
Set Field [ test::test; MBS("PDFKit.GetPDFDocument"; $doc) ]
# release memory
Set Variable [ $r; Value:MBS("PDFKit.Release"; $doc) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPageCount"; PDF)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Result The number of the page count.

Description

Examples

Query the page count from this PDF file:

MBS("PDFKit.GetPDFPageCount"; mytable::pdfField)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	6.0	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPageDisplayAnnotation"; PDF; index)

Parameters**PDF**

The PDF reference number.

\$pdf

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

Result Returns OK or error.

Description**See also**

- 122.12 PDFKit.GetPDFPageCount 6173
- 122.41 PDFKit.SetPDFPageDisplayAnnotation 6220

Created 30th November 2015, last changed 30th November 2015.

122.14 PDFKit.GetPDFPageFormattedText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.7	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPageFormattedText"; PDF; index)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

5

Result The styled text of the PDF page as far as PDFKit knows it and the plugin can translate it.

Description

Our plugin translates the styled text from PDFKit to FileMaker. It should work with font size and styles like bold, underline and italic.

Examples

Extract styled text of page 6 in this PDF

MBS("PDFKit.GetPDFPageFormattedText"; \$ref; 5)

122.15 PDFKit.GetPDFPageImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

```
MBS( "PDFKit.GetPDFPageImage"; PDF; index { ; ImageType; Filename; DPI; box; ClearBackground }
)
```

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

DPI

Optional

The DPI to use for the resolution of the image. Default is 72.

72

box

Optional

The PDF box to use. Can be Media Box = 0, Crop Box = 1, Bleed Box = 2, TrimBox = 3 or ArtBox = 4. If the box is not defined, we fall back to the media box. Default is 0.

1

ClearBackground

Optional

Optionally, whether to have a transparent background (1) vs. a white background (0). Default is 0 for white. For JPEG, you can't pass 1.

0

Result Returns a container with a JPEG picture of the PDF page. You can store it in a media field.

Description

With plugin version 2.4 you can specify format with ImageType parameter.

Due to bugs in Apple's PDFKit you may see memory leaks with JPEG data from PDF pages (seen in macOS 10.12).

For Windows, Linux or iOS, please check `DynaPDF.RenderPage` or `DynaPDF.GeneratePreview` function.

Examples

Render page 2 of a PDF into a picture

```
MBS( "PDFKit.GetPDFPageImage"; $ref; 1; "jpeg"; "test.jpg"; 300; 1 )
```

Render first page of a PDF in a container:

```
MBS( "PDFKit.GetPDFPageImage"; TableName::ContainerFieldName; 0; "jpeg"; "image.jpg" )
```

122.16 PDFKit.GetPDFPagePDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.2	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPagePDF"; PDF; index { ; Filename; DontRenderPreview })

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

Filename

Optional

Optionally, the file name to use for the container value.

"output.pdf"

DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Result Returns a container with a PDF document. The plugin adds a JPEG picture for preview as well as a file name. You can store it in a media field.

Description

Filename is optional.

Examples

Extract page 6 into a new PDF:

MBS("PDFKit.GetPDFPagePDF"; \$ref; 5; "newpdf.pdf")

122.17 PDFKit.GetPDFPagePDFRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPagePDFRef"; PDF; index)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

myTable::myMedia

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

Result Returns a PDF reference for the new PDF document.

Description

Examples

Extract the PDF page with the given number:

MBS("PDFKit.GetPDFPagePDFRef"; \$ref; 5)

122.18 PDFKit.GetPDFPageRotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPageRotation"; PDF; index)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

Result Returns rotation in degrees.

Description

The rotation is a positive multiple of 90: 0, 90, 180, or 270. The rotation of pages with negative rotation is converted to a corresponding positive rotation.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPageText"; PDF; index)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

5

Result The text of the PDF page as far as PDFKit knows it.

Description

If you need text from all pages, please use PDFKit.GetPDFText.

For solutions on Windows, Linux or iOS, please use DynaPDF.ExtractPageText.

You may need to use Text.ConvertUnicodeToCharacterComposition if text is coming back in decomposed unicode characters.

Examples

Extract text of page 6 in this PDF

MBS("PDFKit.GetPDFPageText"; \$ref; 5)

122.20 PDFKit.GetPDFPageValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	5.0	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPageValue"; PDF; index; Selector; Parameter { ; DontRenderPreview })

Parameters

PDF

A PDF reference number from PDFKit.Open.

\$ref

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

Selector

Which value to pick.

"label"

Parameter

For dataRepresentation the filename. For width/height/x/y the index of the box: 0 = media box, 1 = crop box, 2 = bleed box, 3 = trim box, 4 = art box.

DontRenderPreview

Optional

Optional for dataRepresentation. Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Result Returns OK or error.

Description

label	The page label. Usually "1" for the first page, "2" for the second, etc.
rotation	Rotation on a page.
numberOfCharacters	Number of characters on the page (including linefeeds and spaces inserted).
string	String (with linefeeds and in some cases spaces inserted) representing the text on the page.
attributedString	Same as string, but with formatting.
displaysAnnotations	Whether to display annotations if page is drawn.
dataRepresentation	The page as a PDF document. Pass as parameter the file name to use for the container value.
width	The width of page.
height	The height of page.
X	The x offset of page bounds.
Y	The y offset of page bounds.

For X/Y/Width/Height you can specify which box to use in the parameter.

122 PDFKit	2.2	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.GetPDFPagesPDF"; PDF; Indexes { ; Filename; DontRenderPreview })

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Indexes

The index of the page. From zero to PDFKit.GetPDFPageCount-1. You can use several numbers separated with comma and ranges with minus.

"0-2,4,6-9,19"

Filename

Optional

Optionally, the file name to use for the container value.

"output.pdf"

DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Result Returns a container with a PDF document. The plugin adds a JPEG picture of the first page for preview as well as a file name. You can store it in a media field.

Description

Filename is optional.

Examples

Extract a few pages into a new PDF

MBS("PDFKit.GetPDFPagesPDF"; \$ref; "1,2,5,6"; "newpdf.pdf")

122.24 PDFKit.GetPrintLastSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	9.2	Yes	No	No	No	No

MBS("PDFKit.GetPrintLastSettings")

Result Returns text or error.

Description

For user to read. To save settings, you can use PDFKit.SetPrintSetting and PDFKit.GetPrintLastSettings.

Since version 10.1 we return settings as JSON instead of XML and includes print parameter.

Examples

Queries last print settings:

```
Set Variable [ $v ; Value: MBS( "PDFKit.GetPrintLastSettings" ) ]
If [ MBS("IsError") ]
Set Field [ PDFKit Print::Result ; $v ]
Else
Set Field [ PDFKit Print::Settings ; $v ]
Set Field [ PDFKit Print::Result ; "OK" ]
End If
```

122.26 PDFKit.GetPrintSetting

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS("PDFKit.GetPrintSetting"; Selector)

Parameters

Selector

Which value to query.
"FaxNumber"

Result Returns value or error.

Description

See also PDFKit.Print function.
See also PDFKit.SetPrintSetting where options are described.

You can query default printer name using "DefaultPrinter" as selector.
New in 8.1 you can use selector LastSettings to query last settings as XML and discover what options are set by using the dialog, e.g. the tray names.

Examples

Query printer:

```
MBS( "PDFKit.GetPrintSetting"; "printer" )
```

Query default printer:

```
MBS( "PDFKit.GetPrintSetting"; "DefaultPrinter" )
```

Query last settings as xml:

```
MBS( "PDFKit.GetPrintSetting"; "LastSettings" )
```

122.27 PDFKit.NewPDFDocument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	5.0	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.NewPDFDocument")

Result Returns a number for the PDF. Use PDFKit.Release later to free the memory.

Description

This value can be used in other PDFKit calls to work on the same PDF.

See also PDFKit.Open.

PDF Document reference numbers are starting at 30000 and counting up for each new document.

Examples

Create PDF from images:

```
# Start new document
Set Variable [ $doc; Value:MBS("PDFKit.NewPDFDocument") ]
# Add image in full size as new page
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image) ]
# Add empty page in default size
Set Variable [ $r; Value:MBS("PDFKit.AddEmptyPage"; $doc) ]
# Add image in given size as new page:
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image; 400; 300) ]
# get PDF document and store in container:
Set Field [ test::test; MBS("PDFKit.GetPDFDocument"; $doc) ]
# release memory
Set Variable [ $r; Value:MBS("PDFKit.Release"; $doc) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.2	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.Open"; PDF)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL.

Result Returns a number for the PDF. Use PDFKit.Release later to free the memory.

Description

This value can be used in other PDFKit calls to work on the same PDF.

See also PDFKit.OpenContainer, PDFKit.OpenPath and PDFKit.OpenURL.

PDF Document reference numbers are starting at 30000 and counting up for each new document.

If you need to open a PDF file in the PDF Viewer, please use Files.LaunchFile with the path to the PDF file instead.

Examples

Open the PDF from the container value:

```
MBS("PDFKit.Open"; myTable::myMediaField)
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.OpenContainer"; Container)

Parameters

Container

A media value containing PDF data.

Result Returns a number for the PDF.

Description

This value can be used in other PDFKit calls to work on the same PDF.

See also PDFKit.OpenPath and PDFKit.OpenURL.

PDF Document reference numbers are starting at 30000 and counting up for each new document.

Use PDFKit.Release later to free the memory.

Examples

Open the PDF in the container:

```
MBS("PDFKit.OpenContainer"; myTable::myMediaField)
```

Rotate page and set title:

```
# open PDF from container
Set Variable [ $ref; Value:MBS("PDFKit.OpenContainer"; combine pdf::result) ]
# Set title for PDF
Set Variable [ $result; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "Title"; combine pdf::title) ]
# Rotate first page by 90°
Set Variable [ $result; Value:MBS("PDFKit.SetPDFPageRotation"; $ref; 0; 90) ]
# save document to container
Set Field [ combine pdf::result; MBS("PDFKit.GetPDFDocument"; $ref; "result.pdf") ]
# free memory
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]
```

122.31 PDFKit.OpenURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.OpenURL"; URL)

Parameters

URL

A text with an URL.

Result Returns a number for the PDF.

Description

This value can be used in other PDFKit calls to work on the same PDF.

See also PDFKit.OpenPath and PDFKit.OpenContainer.

PDF Document reference numbers are starting at 30000 and counting up for each new document.

Use PDFKit.Release later to free the memory.

Seems to work for HTTP protocol, too. The Apple frameworks transparently handle this out of the control of the plugin. With HTTPS after redirect from HTTP is also possible. For more control, please use CURL functions.

Examples

Open the PDF with the given URL:

```
MBS("PDFKit.OpenURL"; "http://www.somedomain.invalid/somepath/test.pdf")
```

- 122.45 PDFKit.Watermark 6230

Created 18th August 2014, last changed 9th February 2018.

122.32 PDFKit.PageBounds

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.PageBounds"; PDF; index { ; box; mm })

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

box

Optional

Optionally, the PDF box to use. Can be Media Box = 0, Crop Box = 1, Bleed Box = 2, TrimBox = 3 or ArtBox = 4. If the box is not defined, we fall back to the media box. Default is 0.

1

mm

Optional

Optionally. If you pass 1, we convert the rectangle to millimeters. Else we return points where 72 points are one inch. Default is 0.

0

Result Returns four values separated with new line containing x, y, width and height.

Description

Note that only the media box is required for a PDF. If you request the bounds for the crop box, but the PDF does not include a crop box, the bounds for the media box are returned instead. If you request the bounds for other box types, and the PDF does not includes these types, the bounds for the crop box are returned instead.

The coordinates for the box are in page space, so you might need to transform the points if the page has a rotation on it. Also, note that the bounds boundsForBox returns are intersected with the page's media box.

Examples

Get media box of third page in a PDF in a container field:

```
MBS("PDFKit.PageBounds"; test::data; 2; 0)
```

Get crop box of sixth page in millimeters in a PDF with reference:

```
MBS("PDFKit.PageBounds"; $ref; 5; 1; 1)
```

122.33 PDFKit.Print

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

```
MBS( "PDFKit.Print"; PDF )
```

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Result Returns OK or error.

Description

Optionally if you have a fax printer, you can also pass fax number to send a fax.

Please use PDFKit.ResetPrintSettings and then call PDFKit.SetPrintSetting for all the settings you need.

Please use DynaPDF.Print for Windows.

Printing may fail on Server if no printer selected or printer is not turned on.

Examples

Print a PDF container:

```
MBS( "PDFKit.Print"; MyTable::MyDocumentContainer )
```

Fax a PDF container:

```
MBS( "PDFKit.ResetPrintSettings" )
MBS( "PDFKit.SetPrintSetting"; "FaxNumber"; "+123456" )
MBS( "PDFKit.Print"; MyTable::MyDocumentContainer )
```

Print page 2 to 10 and make 3 copies:

```
MBS( "PDFKit.ResetPrintSettings" )
MBS( "PDFKit.SetPrintSetting"; "FirstPage"; 2 )
MBS( "PDFKit.SetPrintSetting"; "LastPage"; 10 )
MBS( "PDFKit.SetPrintSetting"; "Copies"; 3 )
MBS( "PDFKit.Print" )
```

Print with options:

```
# print pdf
Set Variable [ $print3; Value:MBS( "PDFKit.ResetPrintSettings" ) ]
Set Variable [ $print4; Value:MBS( "PDFKit.SetPrintSetting"; "Printer"; "Cliques Xerox" ) ]
Set Variable [ $print5; Value:MBS( "PDFKit.SetPrintSetting"; "FirstPage"; PDF::PrintPageFrom ) ]
Set Variable [ $print6; Value:MBS( "PDFKit.SetPrintSetting"; "LastPage"; PDF::PrintPageTo ) ]
```

```
Set Variable [ $print7; Value:MBS( "PDFKit.SetPrintSetting"; "Copies"; 1 ) ]  
Set Variable [ $print8; Value:MBS( "PDFKit.SetPrintSetting"; "scalingMode"; "DownToFit" ) ]  
Set Variable [ $print8; Value:MBS( "PDFKit.SetPrintSetting"; "DuplexMode"; "DuplexNoTumble" ) ]  
Set Variable [ $print9; Value:MBS( "PDFKit.Print"; PDF::Annotated PDF ) ]
```

122.34 PDFKit.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.Release"; PDFReference)

Parameters

PDFReference

A number referencing a PDF you opened before.

Result Returns OK on success. Do no longer use the reference number after this call as the object has been freed and accessing it again can crash your application.

Description

Examples

Release the PDF reference in variable ref

```
MBS("PDFKit.Release"; $ref)
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS("PDFKit.ResetPrintSettings")

Result Returns OK or error.

Description

Default is what is setup in the shared print settings for the application.

122.36 PDFKit.RestorePrintSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS("PDFKit.RestorePrintSettings"; Container)

Parameters

Container

The container value with printer settings.
MyTable::PrinterSettingsContainer

Result Returns OK or error.

Description

122.37 PDFKit.SavePrintSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS("PDFKit.SavePrintSettings" { ; FileName })

Parameters

FileName

Optional

The filename to use in the container value.

"Printer Settings.dat"

Result Returns container value with print settings or error.

Description

Print settings are wrapped in a container value.

You can store them in a container and later restore them with PDFKit.RestorePrintSettings or PrintDialog.SetConfiguration function.

122.38 PDFKit.SetCurrentFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.3	Yes	No	Yes, macOS only	No	No

MBS("PDFKit.SetCurrentFilter"; name)

Parameters

name

The name of the filter. Use QuartzFilterManager.Filters to get list of filters. If Filter name is empty or missing, the filter is removed.

"Compress Pictures"

Result Returns OK or error.

Description

You can use the Quartz Filter Manager panel to create a panel.

This is for all PDF saving in MBS Plugin with PDFKit functions.

Applied to PDF in PDFKit.GetPDFPagesPDF, PDFKit.GetPDFPagePDF, PDFKit.Combine, PDFKit.WriteToPath and other functions writing PDFs.

Examples

Set a filter:

```
MBS("PDFKit.SetCurrentFilter"; "Compress Pictures")
```

122.39 PDFKit.SetIgnoreCombineErrors

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.4	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.SetIgnoreCombineErrors")

Result Returns "OK" or error message.

Description

If you call PDFKit.Combine or PDFKit.CombineRef and you pass several container values, those functions normally stop if one of the parameters is not a PDF reference of any kind. If you set errors to be ignored, you can still combine other PDFs.

Examples

Ignore errors on Combine

```
MBS( "PDFKit.SetIgnoreCombineErrors"; 1 )
```

122.40 PDFKit.SetPDFAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.SetPDFAttribute"; PDF; Key; Value)

Parameters

PDF

A PDF reference from PDFKit.Open or other functions.

\$ref

Key

Which information to set. This can be one of the following: Title, Subject, Author, Creator, Producer, Keywords, CreationDate or ModificationDate.

"Title"

Value

The new value for this key. Either a text for text value or a timestamp for a date.

"new value"

Result Returns "OK" on success or an error message.

Description

While you can pass here a container value or an URL to a PDF file, you should really pass a reference value. Because once you changed the PDF attribute, you want to save the PDF with a call to PDFKit.GetDocument.

New keys in v5.4: OwnerPassword, UserPassword, EncryptionKeyLength, AllowsPrinting and AllowsCopying.

If you need more control about encryption, restrictions or metadata, you may want to checkout our DynaPDF functions in the plugin.

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

Examples

Set title to a PDF:

```
MBS("PDFKit.SetPDFAttribute"; $ref; "title"; "The new title for this PDF file." )
```

Rotate page and set title:

```
# open PDF from container
Set Variable [ $ref; Value:MBS("PDFKit.OpenContainer"; combine pdf::result) ]
# Set title for PDF
Set Variable [ $result; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "Title"; combine pdf::title) ]
# Rotate first page by 90°
```

```

Set Variable [ $result; Value:MBS("PDFKit.SetPDFPageRotation"; $ref; 0; 90) ]
# save document to container
Set Field [ combine pdf::result; MBS("PDFKit.GetPDFDocument"; $ref; "result.pdf") ]
# free memory
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]

```

Create PDF with passwords:

```

Set Variable [ $ref; Value:MBS("PDFKit.OpenContainer"; combine pdf::test1) ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "OwnerPassword"; "owner") ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "UserPassword"; "test") ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "EncryptionKeyLength"; 128) ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "AllowsPrinting"; 0) ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "AllowsCopying"; 0) ]
Set Field [ combine pdf::result; MBS("PDFKit.GetPDFDocument"; $ref; "result.pdf") ]
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]

```

122.40.1 Blog Entries

- [MBS FileMaker Plugin, version 5.4pr2](#)

Created 18th August 2014, last changed 17th December 2018.

Key	Description
Title	The document's title. Optional; if present, the value of this key must be a text.
Author	The name of the person who created this document. Optional; if present, the value of this key must be a text.
Subject	The subject of a document. Optional; if present, the value of this key must be a text.
Keywords	The keywords for this document. This key is optional. Must be the keywords with comma separated.
Creator	The name of the application that created the original data used to create this document. Optional; if present, the value of this key must be a text.
OwnerPassword	The "owner password" of the PDF document. If this key is specified, the document will be encrypted using the value as the owner password; otherwise, the document will not be encrypted. The value of this key must be a text which can be represented in ASCII encoding; only the first 32 bytes will be used for the password. There is no default value for this key. If the value of this key cannot be represented in ASCII, the document will not be created and the creation function will fail.
UserPassword	The "user password" of the PDF document. If the document is encrypted, then the value of this key will be the user password for the document; if unspecified, the user password will be the empty string. The value of this key must be a text which can be represented in ASCII encoding; only the first 32 bytes will be used for the password. If the value of this key cannot be represented in ASCII, the document will not be created and the creation function will fail.
EncryptionKeyLength	Specifies the encryption key length in bits; see Table 3.18 "Entries common to all encryption dictionaries", PDF Reference: Adobe PDF version 1.5 (4th ed.) for more info. Optional; if present, the value of this key must be a number with value which is a multiple of 8 between 40 and 128, inclusive. If this key is absent or invalid, the encryption key length defaults to 40 bits.
AllowsPrinting	Used to specify whether the document allows printing when unlocked with the user password. The value of this key must be a boolean. The default value of this key is 1 (true).
AllowsCopying	Used to specify whether the document allows copying when unlocked with the user password. The value of this key must be a boolean. The default value of this key is 1 (true).
CreationDate	The creation date of PDF.
ModificationDate	The modification date of PDF.

122.41 PDFKit.SetPDFPageDisplayAnnotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	6.0	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.SetPDFPageDisplayAnnotation"; PDF; index; Value)

Parameters

PDF

The PDF reference number.

\$pdf

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

Value

The new value for whether to display annotations. Can be 0 or 1.

1

Result Returns OK or error.

Description

Function to turn on or off the display of annotations when the page is drawn.

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

Examples

Render with or without image:

```
Set Variable [ $pdf; Value:MBS( "PDFKit.OpenContainer"; PDFKit Rendering::PDF ) ]
Set Variable [ $r; Value:MBS( "PDFKit.SetPDFPageDisplayAnnotation"; $pdf; 0; 0 ) ]
Set Field [ PDFKit Rendering::Image1; MBS( "PDFKit.GetPDFPageImage"; $pdf; 0 ) ]
Set Variable [ $r; Value:MBS( "PDFKit.SetPDFPageDisplayAnnotation"; $pdf; 0; 1 ) ]
Set Field [ PDFKit Rendering::Image2; MBS( "PDFKit.GetPDFPageImage"; $pdf; 0 ) ]
Set Variable [ $r; Value:MBS("PDFKit.release"; $pdf) ]
```

122.42 PDFKit.SetPDFPageRotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.SetPDFPageRotation"; PDF; index; rotation)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

rotation

The new rotation value.

90

Result Returns OK on success.

Description

The rotation must be a positive or negative multiple of 90 (negative angles are converted to their positive equivalents; for example, -90 is changed to 270).

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

Examples

Rotate page and set title:

```
# open PDF from container
Set Variable [ $ref; Value:MBS("PDFKit.OpenContainer"; combine pdf::result) ]
# Set title for PDF
Set Variable [ $result; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "Title"; combine pdf::title) ]
# Rotate first page by 90°
Set Variable [ $result; Value:MBS("PDFKit.SetPDFPageRotation"; $ref; 0; 90) ]
# save document to container
Set Field [ combine pdf::result; MBS("PDFKit.GetPDFDocument"; $ref; "result.pdf") ]
# free memory
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]
```

122.43 PDFKit.SetPrintOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	9.2	Yes	No	No	No	No

MBS("PDFKit.SetPrintOption"; Key; Value { ; Type })

Parameters

Key

The key to use.

"com_apple_print_PrintSettings_PMCopies"

Value

The value to use. Depending on data type, the plugin will pass a number or a text.

3

Type

Optional

Available in MBS FileMaker Plugin 9.2 or newer.

The type of data to add. Default is empty to use type of value passed. So text or number type would be picked automatically. Valid values for type are boolean, text, number, integer and text. Integer is for integer numbers while number is for floating numbers.

Result Returns OK or error.

Description

For regular options, please use PDFKit.SetPrintSetting.

Examples

Sets a custom option:

```
MBS( "PDFKit.SetPrintOption"; "xxx"; 123 )
```

Sets a custom boolean option:

```
MBS( "PDFKit.SetPrintOption"; "xxx"; 1; "boolean" )
```

Asks for 4 pages per page:

```
Set Variable [ $r ; Value: MBS( "PDFKit.SetPrintOption"; "NSPagesAcross"; 2; "Integer" ) ]
```

```
Set Variable [ $r ; Value: MBS( "PDFKit.SetPrintOption"; "NSPagesDown"; 2; "Integer" ) ]
```

Created 12nd March 2019, last changed 14th December 2019.

122.44 PDFKit.SetPrintSetting

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS("PDFKit.SetPrintSetting"; Selector; Value)

Parameters

Selector

Which value to set.

"FaxNumber"

Value

The value for the setting.

"+123456"

Result Returns OK or error.

Description

See also PDFKit.Print function.

All settings are optional and if not set will use default setting.

Possible settings:

You can use PDFKit.SetPrintOption to set custom print options like with PrintDialog.SetOption function.

Examples

Set a fax number:

```
MBS( "PDFKit.SetPrintSetting"; "FaxNumber"; "+123456" )
```

Print page 2 to 10 and make 3 copies:

```
MBS( "PDFKit.ResetPrintSettings" )
MBS( "PDFKit.SetPrintSetting"; "FirstPage"; 2 )
MBS( "PDFKit.SetPrintSetting"; "LastPage"; 10 )
MBS( "PDFKit.SetPrintSetting"; "Copies"; 3 )
MBS( "PDFKit.Print" )
```

Set a duplex:

```
MBS( "PDFKit.SetPrintSetting"; "DuplexMode"; "DuplexNoTumble" )
```

Horizontal and vertical fit:

```
$r = MBS( "PDFKit.SetPrintSetting"; "HorizontalPagination"; "fit" )
$r = MBS( "PDFKit.SetPrintSetting"; "VerticalPagination"; "fit" )
```

Set paper tray:

```
MBS("PDFKit.SetPrintSetting"; "Tray"; "Tray-2")
```

Enable print dialog:

```
MBS( "PDFKit.SetPrintSetting"; "ShowsPrintPanel"; 1 )
```

Enable progress dialog:

```
MBS( "PDFKit.SetPrintSetting"; "ShowsProgressPanel"; 1 )
```

122.44.2 FileMaker Magazin

- Ausgabe 6/2017, Seite 26

Created 18th August 2014, last changed 28th November 2019.

jobTitle	The title of the printing job.
faxNumber	A fax number for fax printers. This text is passed through and must match the format your driver expects.
PaperName	The name of the paper to use.
Printer	The name of the printer to use.
FirstPage	The number of the first page to print.
LastPage	The number of the last page to print.
Copies	The number of copies to print. Default is 1.
ReversePageOrder	Whether to reverse the page order. Pass 1 to reverse or 0 to not reverse. Default is not reverse.
MustCollate	Whether to collate or not. Pass 1 to collate or 0 to not collate. Default is 0.
AutoRotate	Whether to automatically rotate to match the PDF page format. Default is 1 (on).
ShowsPrintPanel	Whether to show the print panel. Default is 0 to not show it. Pass 1 for value to show dialog.
ShowsProgressPanel	Whether to show the progress panel. Default is 0 to not show it. Pass 1 for value to show progress.
DuplexMode	Whether to use duplex mode. Can be None (Print only on one side of sheet of paper), DuplexNoTumble (Print on both sides of the paper, with no tumbling), DuplexTumble (Print on both sides of the paper, tumbling on) or SimplexTumble (Print on only one side of the paper, but tumble the images while printing).
DetailedErrorReporting	Whether to enable detailed error reporting. If 1, produce detailed reports when an error occurs.
PagesAcross	Number of logical pages to be placed across a physical sheet.
PagesDown	Number of logical pages to be placed down a physical sheet.
TopMargin	The top margin. Default 0.
BottomMargin	The bottom margin. Default 0.
LeftMargin	The left margin. Default 0.
RightMargin	The right margin. Default 0.
HorizontalPagination	The horizontal pagination. Can be auto, clip or fit. Default is fit.
VerticalPagination	The vertical pagination. Can be auto, clip or fit. Default is fit.
scalingMode	The scaling mode to use. Default is None, but can also be DownToFit or ToFit.
Tray	The name of the paper tray. See <code>PrintDialog.GetTray</code> to find the name of the tray. (New in 8.0)

122.45 PDFKit.Watermark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.7	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.Watermark"; PDF; PageNumber; Image; Transparency; X; Y { ; W; H; Background; DeltaX; DeltaY })

Parameters

PDF

A PDF reference from PDFKit.Open.

\$pdf

PageNumber

The page number of the page to modify.

0

Image

The image to be used for watermark. Should be a PNG with mask for best results. Pass a container value.

\$image

Transparency

The transparency level. From 0.0 (opaque) to 1.0 (full transparency).

0.5

X

X coordinate. If zero, the plugin will center the image. If negative, this value is the distance from right side.

0

Y

Y coordinate. As with all PDF coordinates, the 0 coordinate is on the bottom of the page. If zero, the plugin will center the image. If negative, this value is the distance from top side.

0

W

Optional

Desired width. If value is zero or not provided, the plugin will use the image width.

0

H

Optional

Desired height. If value is zero or not provided, the plugin will use the image height.

0

Background

Optional

Whether to put image in foreground or background. Default is foreground. Can be 1 for background or 0 for foreground. Does not work if existing page clears background with background color!

0

DeltaX

Optional

Additional positioning offset to be added after the calculations for above are done.

0

DeltaY

Optional

Additional positioning offset to be added after the calculations for above are done.

0

Result Returns OK or error message.

Description

This modifies an in memory PDF Document which you can create by opening one using PDFKit.Open, PDFKit.OpenContainer, PDFKit.OpenPath or PDFKit.OpenURL.

You can watermark several pages by calling this function in a loop.

Don't forget to use PDFKit.Release to later release memory.

You can do similar with DynaPDF with insert image command (DynaPDF.InsertImage) and alpha set (DynaPDF.SetAlpha).

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

Examples

Watermark with an image over full page:

```
MBS("PDFKit.Watermark"; $pdf; 0; Watermark PDF Page::WatermarkImage; 0; 0; 0; 0; 0)
```

122.46 PDFKit.WriteToPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	3.1	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.WriteToPath"; PDF; Path)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Path

A valid native file path.

"/Users/test/Desktop/test.pdf"

Result Returns OK or error message.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Load PDF, Write PDF and release it.

```
$h = MBS("PDFKit.OpenPath"; "/Users/cs/Desktop/test.pdf")
$r = MBS("PDFKit.WriteToPath"; $h; "/Users/cs/Desktop/output.pdf")
$r = MBS("PDFKit.Release"; $h)
```

Created 18th August 2014, last changed 5th September 2014.

122.47 PDFKit.allowsCopying

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.allowsCopying"; PDF)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Result Returns 1 if copying is allowed and 0 else.

Description

The ability to copy content from a PDF document is an attribute unrelated to whether the document is locked or unlocked. It depends on the PDF permissions set by the document's author.

This method only determines the desired permissions setting in the PDF document; it is up to the application to enforce (or ignore) the permissions.

This method always returns 1 if the document is not encrypted. Note that in many cases an encrypted document may still be readable by all users due to the standard empty string password. For more details about user and owner passwords, see the Adobe PDF specification.

Examples

Check directly if a PDF in a container allows copying:

```
MBS( "PDFKit.allowsCopying"; Test::Document )
```

Shows some properties:

```
# Load PDF from container
Set Variable [ $pdf ; Value: MBS( "PDFKit.OpenContainer"; Popup Menu::logo ) ]
# Check some properties
Set Variable [ $allowsCopying ; Value: MBS( "PDFKit.allowsCopying"; $PDF ) ]
Set Variable [ $allowsPrinting ; Value: MBS( "PDFKit.allowsPrinting"; $PDF ) ]
Set Variable [ $isEncrypted ; Value: MBS( "PDFKit.isEncrypted"; $PDF ) ]
Set Variable [ $isLocked ; Value: MBS( "PDFKit.isLocked"; $PDF ) ]
# show in dialog
Show Custom Dialog [ "PDF Details" ; "allows copying: " & If($allowsCopying; "yes"; "no") & $&
"allows printing: " & If($allowsPrinting; "yes"; "no") & $&
"is encrypted: " & If($isEncrypted; "yes"; "no") & $&
"is locked: " & If($isLocked; "yes"; "no") ]
# release PDF
Set Variable [ $r ; Value: MBS("PDFKit.Release"; $pdf) ]
```

- 122.28 PDFKit.Open 6198
- 122.29 PDFKit.OpenContainer 6200
- 122.34 PDFKit.Release 6209

Created 18th August 2014, last changed 25th November 2019.

122.48 PDFKit.allowsPrinting

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.allowsPrinting"; PDF)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Result Returns 1 if printing is allowed and 0 else.

Description

The ability to print a PDF document is an attribute unrelated to whether the document is locked or unlocked. It depends on the PDF permissions set by the document's author.

This method only determines the desired permissions setting in the PDF document; it is up to the application to enforce (or ignore) the permissions.

This method always returns 1 if the document is not encrypted. Note that in many cases an encrypted document may still be readable by all users due to the standard empty string password. For more details about user and owner passwords, see the Adobe PDF specification.

Examples

Shows some properties:

```
# Load PDF from container
Set Variable [ $pdf ; Value: MBS( "PDFKit.OpenContainer"; Popup Menu::logo ) ]
# Check some properties
Set Variable [ $allowsCopying ; Value: MBS( "PDFKit.allowsCopying"; $PDF ) ]
Set Variable [ $allowsPrinting ; Value: MBS( "PDFKit.allowsPrinting"; $PDF ) ]
Set Variable [ $isEncrypted ; Value: MBS( "PDFKit.isEncrypted"; $PDF ) ]
Set Variable [ $isLocked ; Value: MBS( "PDFKit.isLocked"; $PDF ) ]
# show in dialog
Show Custom Dialog [ "PDF Details" ; "allows copying: " & If($allowsCopying; "yes"; "no") & §&
"allows printing: " & If($allowsPrinting; "yes"; "no") & §&
"is encrypted: " & If($isEncrypted; "yes"; "no") & §&
"is locked: " & If($isLocked; "yes"; "no") ]
# release PDF
Set Variable [ $r ; Value: MBS("PDFKit.Release"; $pdf) ]
```

- 122.28 PDFKit.Open 6198
- 122.29 PDFKit.OpenContainer 6200
- 122.34 PDFKit.Release 6209

Created 18th August 2014, last changed 25th November 2019.

122.49 PDFKit.isEncrypted

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.isEncrypted"; PDF)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Result Returns 1 if encrypted.

Description

If encrypted, reading the document requires a password.

Encrypted documents whose password is the empty string are unlocked automatically upon opening, because PDF Kit tries the empty string as a password if none is supplied.

Examples

Shows some properties:

```
# Load PDF from container
Set Variable [ $pdf ; Value: MBS( "PDFKit.OpenContainer"; Popup Menu::logo ) ]
# Check some properties
Set Variable [ $allowsCopying ; Value: MBS( "PDFKit.allowsCopying"; $PDF ) ]
Set Variable [ $allowsPrinting ; Value: MBS( "PDFKit.allowsPrinting"; $PDF ) ]
Set Variable [ $isEncrypted ; Value: MBS( "PDFKit.isEncrypted"; $PDF ) ]
Set Variable [ $isLocked ; Value: MBS( "PDFKit.isLocked"; $PDF ) ]
# show in dialog
Show Custom Dialog [ "PDF Details" ; "allows copying: " & If($allowsCopying; "yes"; "no") & $&
"allows printing: " & If($allowsPrinting; "yes"; "no") & $&
"is encrypted: " & If($isEncrypted; "yes"; "no") & $&
"is locked: " & If($isLocked; "yes"; "no") ]
# release PDF
Set Variable [ $r ; Value: MBS("PDFKit.Release"; $pdf) ]
```

- 122.34 PDFKit.Release

Created 18th August 2014, last changed 25th November 2019.

122.50 PDFKit.isLocked

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS("PDFKit.isLocked"; PDF)

Parameters

PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Result Returns 1 if PDF is locked.

Description

Only encrypted documents can be locked. Encrypted documents whose password is the empty string are unlocked automatically upon opening, because PDF Kit tries the empty string as a password if none is supplied.

Examples

Shows some properties:

```
# Load PDF from container
Set Variable [ $pdf ; Value: MBS( "PDFKit.OpenContainer"; Popup Menu::logo ) ]
# Check some properties
Set Variable [ $allowsCopying ; Value: MBS( "PDFKit.allowsCopying"; $PDF ) ]
Set Variable [ $allowsPrinting ; Value: MBS( "PDFKit.allowsPrinting"; $PDF ) ]
Set Variable [ $isEncrypted ; Value: MBS( "PDFKit.isEncrypted"; $PDF ) ]
Set Variable [ $isLocked ; Value: MBS( "PDFKit.isLocked"; $PDF ) ]
# show in dialog
Show Custom Dialog [ "PDF Details" ; "allows copying: " & If($allowsCopying; "yes"; "no") & $&
"allows printing: " & If($allowsPrinting; "yes"; "no") & $&
"is encrypted: " & If($isEncrypted; "yes"; "no") & $&
"is locked: " & If($isLocked; "yes"; "no") ]
# release PDF
Set Variable [ $r ; Value: MBS("PDFKit.Release"; $pdf) ]
```

Created 18th August 2014, last changed 25th November 2019.

122.51 QuartzFilterManager.Filters

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.3	Yes	No	No	No	No

MBS("QuartzFilterManager.Filters")

Result Returns list or error.

Description

This gives list of filters as localized names.

This includes by default: Black & White, Blue Tone, Create Generic PDFX-3 Document, Gray Tone, Lightness Decrease, Lightness Increase, Reduce File Size and Sepia Tone.

Examples

Queries list of filters:

MBS("QuartzFilterManager.Filters")

122.53 QuartzFilterManager.ShowPanel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 PDFKit	4.3	Yes	No	No	No	No

MBS("QuartzFilterManager.ShowPanel")

Result Returns OK or error.

Description

This gives your users the possibility to create a filter and later use it with PDFKit functions. e.g. if you create a filter to compress images as JPEG, you can get smaller PDFs.

Examples

Show the panel:

MBS("QuartzFilterManager.ShowPanel")

Hide the panel:

MBS("QuartzFilterManager.HidePanel")

Chapter 123

PHP

Run PHP scripts and get/set variables.

123.1 PHP.Execute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS("PHP.Execute"; phpCode)

Parameters

phpCode

the source code of the script you are executing

\$code

Result The string returned from the PHP function or error message.

Description

Same as calling PHP.Run and PHP.GetResultString, but returns the result directly.

Examples

Run test code and get result:

```
$r = MBS( "PHP.Execute"; "echo 'ok';" )
```

See also

- 123.3 PHP.GetResultContainer 6250
- 123.4 PHP.GetResultString 6251

123.2 PHP.ExistsVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

```
MBS( "PHP.ExistsVariable"; VariableName )
```

Parameters

VariableName

the name of the variable.

\$name

Result Returns true if the variable exists, false if it does not.

Description

Examples

Check if variable FilePath exists:

```
$r = MBS( "PHP.ExistsVariable"; "FilePath" )
```

Check if the PHP variable with the name in the FileMaker variable FilePath exists:

```
$r = MBS( "PHP.ExistsVariable"; $FilePath )
```

Created 18th August 2014, last changed 18th August 2014.

123.3 PHP.GetResultContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	6.4	Yes	Yes	Yes	Yes	No

MBS("PHP.GetResultContainer"; FileName)

Parameters

FileName

The file name for the container.

"test.jpg"

Result Returns container or error.

Description

Used to retrieve the results back into to FileMaker after script is run with PHP.Run or PHP.Execute. Please provide a file name to auto detect the content type.

See also

- 61.112 CURL.GetResultAsContainer 1907

123.4 PHP.GetResultString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS("PHP.GetResultString")

Result Returns the result text.

Description

Used to retrieve the results back into to FileMaker after script is run with PHP.Run or PHP.Execute.

Examples

Run test code and get result:

```
$r = MBS( "PHP.Run"; "echo 'ok';" )
$t = MBS( "PHP.GetResultString" )
```

123.5 PHP.GetVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS("PHP.GetVariable"; VariableName)

Parameters

VariableName

the name of the variable to return

\$name

Description

Examples

Set and query variable:

```
Set Variable [ $result ; Value: MBS( "PHP.SetVariable"; "c"; 5 ) ]
```

```
Set Variable [ $result ; Value: MBS("PHP.Run"; "$c = $c + 1; echo $c;") ]
```

```
Show Custom Dialog [ "c: " & MBS( "PHP.GetVariable";... ; "Result: " & MBS("PHP.GetResultString") ]
```

- 123.10 PHP.SetVariable 6258

Created 18th August 2014, last changed 1st April 2019.

123.6 PHP.Init

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS("PHP.Init")

Result Returns Ok on success.

Description

This must be called at least once before you execute any PHP code. You must call this after PHP.Load.

May work on server. Be sure to use right bit number to match server, not client!

Windows error 193 means that 64-bit FileMaker tried to load 32-bit library or 32-bit FileMaker tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.

You can set PHP runtime configuration path via shell variable on Windows, e.g. like this:

```
MBS( "EnvironmentVariables.SetValue"; "PHPRC"; "C:\Users\Christian\Desktop\php-5.6.12-Win32-VC11-x64\" )
```

Examples

Init PHP on Windows:

```
Set Variable [ $r; Value:MBS( "EnvironmentVariables.SetValue"; "PHPRC"; "C:\Users\Christian\Desktop\php-5.6.12-Win32-VC11-x64\" ) ]
Set Variable [ $result; Value:MBS("PHP.Load"; "C:\Users\Christian\Desktop\php-5.6.12-Win32-VC11-x64\php5ts.dll") ]
If [ $result <>"OK" ]
Show Custom Dialog [ "php DLL was not found!"; "Please enter the path the php DLL in the field provided and try again." ]
Exit Script [ ]
End If
Set Variable [ $result; Value:MBS("PHP.Init") ]
If [ $result = "OK" ]
Show Custom Dialog [ "Success!"; "php is ready to go." ]
Else
Show Custom Dialog [ "Error!"; "php couldn't be started" ]
End If
```

123.7 PHP.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	7.3	Yes	Yes	Yes	Yes	No

MBS("PHP.IsInitialized")

Result Returns 0, 1 or error.

Description

Returns 1 if initialized.

123.8 PHP.Load

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS("PHP.Load"; Path)

Parameters

Path

The path to the dll (Windows) or dynamic library (Mac OS X)
\$path

Result Returns OK on success.

Description

Pass the path to the php5ts.dll file on windows or the libphp5.dylib file on Mac OS X.

If you get a crash here on MacOS, please check if crash report says Code Signature Invalid. Then you may need to code sign the dylib yourself to match the code signature of your runtime application.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Load PHP:

```
MBS( "PHP.Load"; "/Library/FileMaker Server/PHP/libphp5.dylib" )
```

123.9 PHP.Run

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS("PHP.Run"; PHPCode)

Parameters

PHPCode

The source code of the script you are executing
\$code

Result Returns OK on success.

Description

The result can be obtained with "PHP.GetResultString"

Examples

Run test code:

```
MBS( "PHP.Run"; "echo 'ok';" )
```

123.10 PHP.SetVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS("PHP.SetVariable"; VariableName; TextValue)

Parameters

VariableName

the name of the variable

Text Value

the value of the variable

Result Returns OK on success.

Description

This is one way to get data into php from FileMaker.

Examples

Set varibale and output it:

```
Set Variable [ $result ; Value: MBS( "PHP.SetVariable"; "c"; 5 ) ]
Set Variable [ $result ; Value: MBS("PHP.Run"; "echo $c;") ]
Set Field [ Simple_php::result ; MBS("PHP.GetResultString") ]
```

123.11 PHP.ShutDown

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS("PHP.ShutDown")

Description

You can't execute any PHP script once this function has been called. If you want to start php again use PHP.Init.

Chapter 124

Plugin

Central plugin management functions.

124.1 ClearRegistration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	3.0	Yes	Yes	Yes	Yes	Yes

MBS("ClearRegistration")

Result Returns OK on success.

Description

Added Windows support in plugin version 4.4.

Examples

Clears registration:

```
$r = MBS( "ClearRegistration" )
```

124.2 CompileDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS("CompileDate")

Result The date as text.

Description

Useful for determining if when the currently installed plug-in was released.
See Plugin.CompileDate to get a FileMaker date instead of a text.

Format of this text is "mmm DD YYYY" with month as three letter text in English.

Examples

Get the Compile Date

```
$r = MBS("CompileDate")
```

124.3 CompileTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS("CompileTime")

Description

Examples

Get the time of day that the plug-in was compiled

```
$r = MBS("CompileTime")
```

See also

- 124.2 CompileDate

6262

Created 18th August 2014, last changed 21st October 2017.

124.4 Is64bit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	5.0	Yes	Yes	Yes	Yes	Yes

MBS("Is64bit")

Result Returns 1 or 0.

Description

Returns 1 for 64bit (e.g. FileMaker Server 13) or 0 for 32 bit (FileMaker Pro 13)

Returns 1 on FileMaker Cloud as this uses a 64-bit Linux.

See SystemInfo.Is64bitWindows to check if you are 32-bit Windows app on a 64-bit Windows OS.

See also

- 161.11 SystemInfo.Is64bitWindows

124.5 IsClient

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	4.3	Yes	Yes	Yes	Yes	Yes

MBS("IsClient")

Result Returns 1 on client or 0 elsewhere.

Description

Returns 0 if running on a server.

See also IsRegistered, IsRuntime and IsServer.

Examples

Run on client:

```
If [ MBS( "IsClient" ) ]
# runs on client
Else
# runs on server or where no plugin is installed
End If
```

124.6 IsError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	3.4	Yes	Yes	Yes	Yes	Yes

MBS("IsError")

Result Returns 1 or 0.

Description

Returns 1 if last function returned an error.

Or returns 0 if no error happened.

This makes it easier to detect if the result text is an error message vs. a real result.

Examples

Cause an error and handle it:

```
Set Variable [ $r; Value:MBS( "ZipFile.Open"; "" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ Title: "Error"; Message: $r; Buttons: "OK", "Abbrechen" ]
Exit Script [ ]
End If
```

124.7 IsIOS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	6.1	Yes	Yes	Yes	Yes	Yes

MBS("IsIOS")

Result Returns 1, 0 or error.

Description

Returns 1 if running on iOS and 0 if not.
For FileMaker 14 and older this is definitive always 0.

If someday we get a plugin SDK for iOS, we can already have the function to return this.

124.8 IsIOSDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	8.0	Yes	Yes	Yes	Yes	Yes

MBS("IsIOSDevice")

Result Returns 1 or 0.

Description

Returns 0 in simulator or on macOS, Windows and Linux.

Examples

Distinguish between device and simulator:

```
If [ MBS( "IsIOSDevice" ) = 1 ]
# iOS specific things for device
Else If [ MBS("IsIOSSimulator") = 1 ]
# iOS specific things for simulator
Else
# other cases
End If

124.12 IsMobile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	7.2	Yes	Yes	Yes	Yes	Yes

MBS("IsMobile")

Result Returns 0 or 1.

Description

Value is 1 if running in iOS SDK app.

See also

- 124.13 IsRegistered 6274
- 124.49 Register 6320

Created 18th March 2017, last changed 21st October 2017.

124.13 IsRegistered

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	3.0	Yes	Yes	Yes	Yes	Yes

MBS("IsRegistered" { ; Component })

Parameters

Component

Optional

Which part you want to check.

"webview"

Result Returns 1 if the plugin is registered or 0 if not.

Description

See also Register, IsRuntime, IsServer and isClient.

Examples

Check if plugin is registered:

```
$v = MBS("IsRegistered")
```

Register only when needed:

```
If [ MBS("IsRegistered") = 1 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Runtime"; 123; 123) ]
Else If [ MBS("IsMobile") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "iOS"; 123; 123) ]
Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Server"; 123; 123) ]
Else
Set Variable [ $r; Value:MBS("Register"; "test"; "5 seats"; 123; 123) ]
End If
End If
```

Register with Startup script for server and client:

Startup Script:

```
# Register for client
Perform Script [ "InitMBS" ]
# Register for server. Will be ignored if no server or no plugin installed on server
Perform Script on Server [ "InitMBS" ]
```

InitMBS script:

```

# Enable debug logging. Shows messages in DebugView/Console.app
Set Variable [ $r; Value:MBS("Trace") ]
# Register if needed for right platform
If [ MBS("IsRegistered") = 0 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Runtime"; 123; 123) ]
Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Server"; 123; 123) ]
Else If [ MBS("IsClient") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "5 Seats"; 123; 123) ]
Else

124.14 IsRuntime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	4.3	Yes	Yes	Yes	Yes	Yes

MBS("IsRuntime")

Result Returns 1 on runtime or 0 elsewhere.

Description

Returns 0 if running on FileMaker Pro or Server.

See also IsRegistered, IsServer and isClient functions.

Examples

Run something only in runtime:

```
If [ MBS( "IsRuntime" ) ]
# runs on runtime
Else
# runs on non runtime or where no plugin is installed
End If
```

124.15 IsServer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	4.3	Yes	Yes	Yes	Yes	Yes

MBS("IsServer")

Result Returns 1 on server or 0 elsewhere.

Description

So if you see 0 returned, your script or calculation is not performed on a server, but on a client. Should return 1 always for scheduled server scripts or web direct scripts.

See also IsRegistered, IsClient and IsRuntime.

Examples

Run a script on server:

```

If [ MBS("IsServer") ]
# We run on server already
Else
# Call this script on server
Perform Script on Server [ Wait for completion; "Your Script"; Parameter: Get(ScriptParameter) ]
If [ Get(LastError) = 0 ]
# Can't run on server, e.g. too many connections.
End If
End If

```

Perform Script on Server:

```

# are we on Server?
If [ MBS("IsServer") = 0 ]
# perform same script on server and pass parameter
Perform Script on Server [ Wait for completion; "Do Something on Server"; Parameter: Get ( ScriptParameter ) ]
# check error and result
Set Variable [ $LastError; Value:Get ( LastError ) ]
# Maybe handle here error code if server is too busy and decide what to do, e.g. run script locally?
If [ $LastError = 0 ]
# run locally by fall through
# alternative: Exit script here and return error to caller
Else
Set Variable [ $ScriptResult; Value:Get ( ScriptResult ) ]
# Return result back to caller
Exit Script [ Result: $ScriptResult ]
End If
End If
# This now performs on Server or on Client if Server is too busy

```

124.15. *ISSERVER*

6279

```
Go to Layout [ "Test" ]  
New Record/Request  
Set Field [ perform::First; 1 ]  
Set Field [ perform::Last; 2 ]  
Commit Records/Requests [ No dialog ]  
# end of script
```

124.17 Platform

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	3.0	Yes	Yes	Yes	Yes	Yes

MBS("Platform")

(old name: Plattform)

Result Returns platform name.

Description

Value can be FileMaker Pro Advanced, FileMaker Pro, Runtime, Server, Web Direct, Mobile, XDBC, Server-Scripting or InstantWebPublishing.

Older versions may return "Developer" or "Pro" for FileMaker Pro.

For FileMaker 17 or newer, MBS Plugin detects the status of whether Advanced Tools are enabled. Returns Developer if enabled and Pro if not enabled.

Examples

Query the current platform:

```
$r = MBS( "Platform" )
```

Script to report back status of MBS Plugin:

```
# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]
Set Variable [ $path ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $IsRegistered ; Value: MBS( "IsRegistered" ) ]
Set Variable [ $Name ; Value: MBS( "Plugin.LicenseeName" ) ]
Set Variable [ $Debug ; Value: MBS( "Plugin.isDebug" ) ]
If [ $version = "?" ]
Set Variable [ $text ; Value: "MBS Plugin not installed. " & Get ( ApplicationVersion ) ]
Else
Set Variable [ $l1 ; Value: "MBS Plugin " & $version & ", build " & $buildNumber & " installed in " & Get ( ApplicationVersion ) ]
Set Variable [ $l2 ; Value: "$Platform: " & $Platform & "$Path: " & $path ]
Set Variable [ $l3 ; Value: If($IsRegistered; "$Licensed for: " & $Name ; "$No license set.") ]
Set Variable [ $l4 ; Value: "$Debug: " & If($debug; "yes"; "no") ]
Set Variable [ $text ; Value: $l1 & $l2 & $l3 ]
End If
Exit Script [ Text Result: $text ]
```

Check for WebDirect:

```
$r = (MBS("Platform") = "Web")
```

124.18 Plugin.BuildNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	5.0	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.BuildNumber")

(old name: BuildNumber)

Result Returns build number or error.

Description

Sometimes you may have two plugins with same version number, but one is newer as it has a higher build number.

Version 5.0 returns 1139.

Examples

Show build number:

Show Custom Dialog [MBS("BuildNumber")]

124.19 Plugin.CallCounter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	9.3	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.CallCounter")

Result Returns number.

Description

The MBS Plugin counts how often it is called and this function returns the current value. Calling this function increments the value.

124.19.1 Blog Entries

124.20 Plugin.CallErrorScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	8.5	Yes	Yes	No	No	Yes

MBS("Plugin.CallErrorScriptTrigger")

Result Returns OK or error.

Description

To test your script trigger for error, you can call this method to test.

Created 24th October 2018, last changed 24th October 2018.

124.21 Plugin.CompileDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	10.0	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.CompileDate")

Result Returns date or error.

Description

Allows you to compare current time to compile date to check how old the plugin is.

Examples

Check age of plugin:

```
get(CurrentDate) - MBS( "Plugin.CompileDate" )
```

Check and ask user to install newer version than the prerelease they have:

```
If [ MBS("Plugin.IsPrerelease") ]
If [ Get(CurrentDate) - MBS( "Plugin.CompileDate" ) >= 14 ]
Show Custom Dialog [ "Update" ; "Please install newer version of MBS Plugin." & §& MBS("Version") ]
End If
End If
```

Created 24th December 2019, last changed 24th December 2019.

124.22 Plugin.DisableFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	2.8	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.DisableFunction"; name)

(old name: DisableFunction)

Parameters

name

A function name like RemoteControl.ClickMouse.
"RemoteControl.ClickMouse"

Result Returns OK on success.

Description

This can be useful with security when you want to be sure your script does not use certain methods. The plugin removes the function from the global function list so it can't be called until you restart FileMaker.

Examples

Disable a function:

```
$r = MBS( "Plugin.DisableFunction"; "RemoteControl.ClickMouse" )
```

Created 18th August 2014, last changed 21st October 2017.

124.23 Plugin.FunctionCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	7.2	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.FunctionCount")

Result Returns number or error.

Description

As some functions are not available, this number is usually lower than our total number.
e.g. Windows only functions are not included on Mac count.

124.23.1 Blog Entries

- [MBS FileMaker Plugin, version 7.2pr1](#)

124.26 Plugin.InstallSignalHandlers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	9.3	Yes	No	Yes	Yes	Yes

MBS("Plugin.InstallSignalHandlers")

Result Returns OK or error.

Description

When something happens like a segmentation fault (a crash in C code), the plugin can print the backtrace (list of functions called) to help to debug the problem.

Usually you call this function only if we ask you to help on debugging a crash on Linux or MacOS.

124.27 Plugin.IsPrerelease

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	10.0	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.IsPrerelease")

Result Returns 1 or 0.

Description

We set to 1 for prerelease versions and 0 for final version.

Examples

Check and ask user to install newer version than the prerelease they have:

```

If [ MBS("Plugin.IsPrerelease") ]
If [ Get(CurrentDate) - MBS( "Plugin.CompileDate" ) >= 14 ]
Show Custom Dialog [ "Update" ; "Please install newer version of MBS Plugin." & §& MBS("Version") ]

124.30 Plugin.LicenseeName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	8.3	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.LicenseeName")

Result Returns name or error.

Description

Returns the name used in Register function.

Examples

Script to report back status of MBS Plugin:

```
# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]

Created 19th June 2018, last changed 26th June 2018.

124.31 Plugin.LimitFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	5.4	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.LimitFunction"; name { ; privilegeSets; AccountNames; ScriptNames })

Parameters

name

A function name like RemoteControl.ClickMouse.

"RemoteControl.ClickMouse"

privilegeSets

Optional

List of privilege set names.

AccountNames

Optional

List of account names.

"admin"

ScriptNames

Optional

List of script names. Each entry contains the name fo the file followed with ":" and the script name.

"MyFile.fmp12:TestScript"

Result Returns OK or error.

Description

Once limited, the function can only be called if current privilege set, account name and script name match those in the list. Lists can be empty if not needed.

For FileMaker hosting of several clients with one server, we highly recommend to limit the available plugin functions via Plugin.SetFunctions function. You also should limit some functions like Files.Delete or System.Shutdown to be only called by certain user accounts and/or script.

Examples

Limit a function to be called only from a certain script:

```
MBS("Plugin.LimitFunction"; "Version"; ""; ""; "test.fmp12:test")
```

Limit a function to be called only from a certain account name:

```
MBS("Plugin.LimitFunction"; "Text.WriteTextFile"; "Backup"; ""; "")
```

124.32 Plugin.LockFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	5.4	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.LockFunction"; name; password)

Parameters

name

A function name like RemoteControl.ClickMouse.
"RemoteControl.ClickMouse"

password

The password to use.
"secure"

Result Returns OK or error.

Description

The function can no longer be called until unlocked.

Examples

Locks version function:

```
MBS("Plugin.LockFunction"; "Version"; "test")
```

124.35 Plugin.Path

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	3.3	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.Path")

Result Returns path or error.

Description

On FileMaker Cloud this returns a path like `"/opt/FileMaker/FileMaker Server/Database Server/Extensions/MBS.fmx"`.

On Mac OS X this points usually to the application folder, e.g. `"/Applications/FileMaker Pro 16 Advanced/Extensions/MBS.fmplugin"`

Examples

Write DynaPDF library to same folder as plugin:

```
Goto Layout [ "MBS Update" (MBS Update) ; Animation: None ]
Go to Record/Query/Page [ First ]
Set Variable [ $folder ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $folder ; Value: MBS( "Path.RemoveLastPathComponent"; $folder ) ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "dynapdf.dylib" ) ]
Set Variable [ $Plat ; Value: MBS("Files.MoveToTrash"; $path) ]
Set Variable [ $Plat ; Value: MBS("Files.WriteFile"; MBS Update::dynaPdfMac; $path) ]
```

Script to report back status of MBS Plugin:

```
# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]
Set Variable [ $path ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $IsRegistered ; Value: MBS( "IsRegistered" ) ]
Set Variable [ $Name ; Value: MBS( "Plugin.LicenseName" ) ]
Set Variable [ $Debug ; Value: MBS( "Plugin.isDebug" ) ]
If [ $version = "?" ]
Set Variable [ $text ; Value: "MBS Plugin not installed. " & Get ( ApplicationVersion ) ]
Else
Set Variable [ $l1 ; Value: "MBS Plugin " & $version & ", build " & $buildNumber & " installed in " & Get ( ApplicationVersion ) ]
Set Variable [ $l2 ; Value: "$Platform: " & $Platform & "$Path: " & $path ]
Set Variable [ $l3 ; Value: If($IsRegistered; "$Licensed for: " & $Name ; "$No license set.") ]
Set Variable [ $l4 ; Value: "$Debug: " & If($debug; "yes"; "no") ]
Set Variable [ $text ; Value: $l1 & $l2 & $l3 ]
End If
Exit Script [ Text Result: $text ]
```

124.35. *PLUGIN.PATH* 6303

124.39 Plugin.SetErrorScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	8.5	Yes	Yes	No	No	Yes

MBS("Plugin.SetErrorScriptTrigger"; FileName; ScriptName)

Parameters

FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

ScriptName

The name of the script to run.

"MyScript"

Result Returns OK or error.

Description

You can call Plugin.CallErrorScriptTrigger to test this.

The script is called with JSON block as parameter and this JSON includes entries for Function, Parameters, Result, UserName, FileName, ScriptName, AccountName, HostName, RecordID, CurrentTimeStamp, LayoutTableName, LayoutName, WindowName and TraceID.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

124.40 Plugin.SetFunctions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	5.1	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.SetFunctions"; FunctionList)

(old name: SetFunctions)

Parameters

FunctionList

The new function list.

"Version\$Functions"

Result Returns OK or error.

Description

By default plugin allows use of 3000 and more functions.

You can use this command to limit what functions are available to your solution. This avoids some calling a function you don't want to have, e.g. not allow Files.Delete call.

For FileMaker hosting of several clients with one server, we highly recommend to limit the available plugin functions via Plugin.SetFunctions function. You also should limit some functions like Files.Delete or System.Shutdown to be only called by certain user accounts and/or script. See Plugin.LimitFunction for this.

Examples

Allow only two functions:

```
MBS( "Plugin.SetFunctions"; "Version$Functions" )
```

A typical MBS Init script for server usage:

```
If [ MBS("IsRegistered") 1 ]
If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Server"; 123; 123) ]
# limit to the commands you need
Set Variable [ $r; MBS( "Plugin.SetFunctions"; "IsRegistered$CURL.New$CURL.Perform..." ) ]
# enable trace for errors
Set Variable [ $r; MBS( "Trace.ErrorsOnly"; 1 ) ]
Set Variable [ $r; MBS( "Trace"; "/Library/FileMaker Server/Logs/MBS.txt" ) ]
Else
# register on client
Set Variable [ $r; Value:MBS("Register"; "test"; "5 seats"; 123; 123) ]
End If
End If
```

124.45 Plugin.UnlockFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	5.4	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.UnlockFunction"; name; password)

Parameters

name

A function name like RemoteControl.ClickMouse.
"RemoteControl.ClickMouse"

password

The password to use.
"secure"

Result Returns OK or error.

Description

After unlocking you can use this function.

Examples

Unlocks version function:

```
MBS("Plugin.UnlockFunction"; "Version"; "test")
```

124.48 Plugin.isDebug

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	7.1	Yes	Yes	Yes	Yes	Yes

MBS("Plugin.isDebug")

Result Returns 1, 0 or error.

Description

The debug version is available on request and given to users to find the roots of a bug.

Examples

Query debug status

```
MBS("Plugin.IsDebug")
```

Example result: 0

Script to report back status of MBS Plugin:

```
# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]
Set Variable [ $path ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $IsRegistered ; Value: MBS( "IsRegistered" ) ]
Set Variable [ $Name ; Value: MBS( "Plugin.LicenseeName" ) ]
Set Variable [ $Debug ; Value: MBS( "Plugin.isDebug" ) ]
If [ $version = "?" ]
Set Variable [ $text ; Value: "MBS Plugin not installed. " & Get ( ApplicationVersion ) ]
Else
Set Variable [ $I1 ; Value: "MBS Plugin " & $version & ", build " & $buildNumber & " installed in " & Get
( ApplicationVersion ) ]
Set Variable [ $I2 ; Value: "$Platform: " & $Platform & "$Path: " & $path ]

124.49 Register

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS("Register"; Licensee Name; component; License Type; Expire Month; Serial number)

Parameters

Licensee Name

This is the name of the person or organization that holds the license for the plug-in
Your Name

component

The component that was licensed. For example "Complete"

License Type

Seats purchased. For example, "1 seat", "10 seats", "Developer"
1 Seat

Expire Month

This is the month in which the serial will expire for new versions of the plug-in in YYYYMM format. Plug-in released before the end of that month will continue to work forever. New Releases after that date will require a renewal
200708

Serial number

The license number
your serial number

Result Returns OK on success.

Description

If you use Server and Client licenses, be sure to register the right license for the right type.
e.g. in your script detect if you are on the server or not.
Before you register, you may want to check if already is registered.

See also StoreRegistration, IsRegistration, IsRuntime, IsServer and IsClient functions.

Newer plugins since 8.4 call StoreRegistration for iOS and Server automatically, so plugin registers automatically on loading and avoid problems with process is relaunched.

Examples

Register only when needed:

```
If [ MBS("IsRegistered") 1 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Runtime"; 123; 123) ]
Else If [ MBS("IsMobile") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "iOS"; 123; 123) ]
```

```

Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Server"; 123; 123) ]
Else
Set Variable [ $r; Value:MBS("Register"; "test"; "5 seats"; 123; 123) ]
End If
End If

```

Register with license values in a text field:

```

Set Variable [ $result ; Valeu: Evaluation("MBS(\\"Register\\"; " & Register::License & ")") ]

```

Register with Startup script for server and client:

Startup Script:

```

# Register for client
Perform Script [ "InitMBS" ]
# Register for server. Will be ignored if no server or no plugin installed on server
Perform Script on Server [ "InitMBS" ]

```

InitMBS script:

```

# Enable debug logging. Shows messages in DebugView/Console.app
Set Variable [ $r; Value:MBS("Trace") ]
# Register if needed for right platform
If [ MBS("IsRegistered") = 0 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Runtime"; 123; 123) ]
Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Server"; 123; 123) ]
Else If [ MBS("IsClient") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "5 Seats"; 123; 123) ]
Else
Set Variable [ $r; Value:"Unknown platform: " & MBS("Platform") ]
End If
# Show errors, so developer can fix them
If [ $r "OK" ]
Show Custom Dialog [ "InitMBS failed."; $r ]
End If
End If
# May initialize other stuff
# like dynapdf with library in extensions folder
If [ MBS("DynaPDF.IsInitialized") = 0 ]
Set Variable [ $DynaPDFLicense; Value:"1003637-16022016-3-8-12-685C57F..." ]
If [ MBS("IsWindows") ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; "dynapdf.dll"; $DynaPDFLicense) ]

```

```

Else If [ MBS("IsMacOSX") ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; "dynapdf.dylib"; $DynaPDFLicense) ]
Else
Set Variable [ $r; Value:"Unknown platform: " & MBS("Platform") ]
End If
# Show errors, so developer can fix them
If [ $r "OK" ]
Show Custom Dialog [ "InitMBS failed."; $r ]
End If
End If

```

124.50 Registration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS("Registration")

Result Returns "Registered." or "Not registered."

Description

Examples

Check Registration:

```
$r = MBS("Registration")
```

Created 18th August 2014, last changed 31st January 2016.

124.51 StoreRegistration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	3.0	Yes	Yes	Yes	Yes	Yes

MBS("StoreRegistration"; Licensee Name; component; License Type; Expire Month; Serial number)

Parameters

Licensee Name

This is the name of the person or organization that holds the license for the plug-in

Your Name

component

The component that was licensed. For example "Complete"

License Type

Seats purchased. For example, "1 seat", "10 seats", "Developer"

1 Seat

Expire Month

This is the month in which the serial will expire for new versions of the plug-in in YYYYMM format. Plug-in released before the end of that month will continue to work forever. New Releases after that date will require a renewal

200708

Serial number

The license number

your serial number

Result Returns OK on success.

Description

This is very useful for trainings where you want to preinstall license on FileMaker installations.

Added Windows support in plugin version 4.4.

You can clear the license with ClearRegistration function.

Added Linux support for 7.5.

Saves in preferences file on Mac and Linux, saves to registry on Windows.

Examples

Stores registration:

```
$r = MBS( "StoreRegistration"; $name; "Complete"; "5 seat"; $date; $code)
```

124.52 Trace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	2.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "Trace" { ; path; Append } )
```

Parameters

path

Optional

The native file path to the log file.

"/Users/name/Desktop/debug.txt"

Append

Optional

Whether to append or create new file. Pass 1 to append or 0 (default) for new file.

1

Result Returns "OK" on success.

Description

If you pass a path, debug messages are written to the file. Else the plugin writes to debug console. See Console.app on Mac or DebugView on Windows.

See also Trace.Off and Trace.ErrorsOnly.

On Windows with a FileMaker Server, you can see debug messages in DebugView if you run DebugView application as admin and enable global Win32 listening.

For FileMaker Server on Mac OS X you can see messages in /Library/FileMaker Server/Logs/stderr file.

On Windows the log file is UTF-16 with BOM and CRLF as line endings. On Mac, Linux and iOS, you get an UTF-8 file with BOM and LF line endings.

See Trace.GetErrorsOnly, Trace.GetWithTimes, Trace.SetErrorsOnly and Trace.SetWithTimes to set options.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Log plugin calls to console:

```
MBS( "Trace" )
```

Log plugin calls to desktop on Windows:

```
MBS( "Trace"; "C:\Documents\Christian\Desktop\plugin.txt")
```

Log plugin calls to temp folder on MAC:

```
MBS( "Trace"; "/tmp/MBS Plugin Log.txt")
```

Log to log file on desktop:

```
Set Variable [ $TracePath; Value:MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "trace.txt" ) ]  
Set Variable [ $r; Value:MBS("Trace"; $TracePath) ]
```

124.55 Trace.EnableErrorNotifications

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	5.0	Yes	No	No	No	No

MBS("Trace.EnableErrorNotifications")

Result Returns OK or error.

Description

The plugin presents errors returned by plugin calls as notifications, so you more easier notice them. Notifications are only presented at most one per 30 seconds. They are not shown if last error is same as new error or if you run plugin on server or runtime. The plugin will close error notifications after 5 seconds. See also Trace.DisableErrorNotifications or Trace.AreErrorNotificationsEnabled.

124.62 Version

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS("Version")

Description

Examples

Get the Plugin Version

```
$r = MBS("Version")
```

Query Plugin version on Server from Client with two scripts:

First a script called "Query MBS Version on Server" which you can run:

```
Perform Script on Server [ Wait for completion; "Query MBS Version Helper" ]
Set Variable [ $e; Value:Get(LastError) ]
Set Variable [ $r; Value:Get(ScriptResult) ]
If [ $e = 0 ]
Show Custom Dialog [ "MBS Version on Server"; "Failed to run script on server: " & $e ]
Else
Show Custom Dialog [ "MBS Version on Server"; $r ]
End If
```

Second, the helper script called "Query MBS Version Helper" which will run on the server:

```
Set Variable [ $r; Value:MBS("Version") & " " & MBS("Platform") ]
Exit Script [ Result: $r ]
```

Check and ask user to install newer version than the prerelease they have:

```
If [ MBS("Plugin.IsPrerelease") ]
If [ Get(CurrentDate) - MBS( "Plugin.CompileDate" ) >= 14 ]
Show Custom Dialog [ "Update" ; "Please install newer version of MBS Plugin." & $r & MBS("Version") ]
End If
End If
```

124.63 VersionAutoUpdate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Plugin	2.4	Yes	Yes	Yes	Yes	Yes

MBS("VersionAutoUpdate")

Result the version as an 8 digit number.

Description

Examples

Queries version for auto update:

```
MBS("VersionAutoUpdate")
```

Convert from display format to auto update format:

```
Let ( [
v = Substitute ( MBS Update::VersionDisplayText ; "" ; §);
v1 = GetAsNumber ( GetValue ( v ; 1 ) );
v2 = GetAsNumber ( GetValue ( v ; 2 ) );
v3 = GetAsNumber ( GetValue ( v ; 3 ) );
v4 = GetAsNumber ( GetValue ( v ; 4 ) )
]; v4+v3*100+v2*10000+v1*1000000)

Chapter 125

PortMidi

Access Midi devices and send/receive midi notes.

125.1 PortMidi.Abort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.Abort"; StreamRef)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Result Returns OK or error.

Description

The caller should immediately close the output port; this call may result in transmission of a partial midi message.

There is no abort for Midi input because the user can simply ignore messages in the buffer and close an input device at any time.

See also

- 125.4 PortMidi.Close 6344

- 125.15 PortMidi.OpenOutput 6356

Created 18th August 2014, last changed 18th August 2014.

125.2 PortMidi.CheckHostError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.CheckHostError"; StreamRef)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Result Returns any pending host error text or nothing.

Description

125.3 PortMidi.ClearDataAvailableHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	8.5	Yes	Yes	No	No	No

MBS("PortMidi.ClearDataAvailableHandler"; StreamRef)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Result Returns OK or error.

Description

See also

- 125.4 PortMidi.Close 6344

125.4 PortMidi.Close

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.Close"; StreamRef)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Result Returns OK or error.

Description

Don't use the StreamRef after this call as stream is gone.

125.5 PortMidi.CurrentEvent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	7.1	Yes	Yes	No	No	No

MBS("PortMidi.CurrentEvent")

Result Returns list of values or error.

Description

Returns several values: status, data1, data2 and timestamp.

You can use this to show current note playing.

Examples

Queries current event:

MBS("PortMidi.CurrentEvent")

Example result: 128

125.6 PortMidi.DeviceCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.DeviceCount")

Result Returns number.

Description

Examples

Check before and after a scan:

```
$CountBefore = MBS( "PortMidi.DeviceCount" )
```

```
$r = MBS("PortMidi.Rescan")
```

```
$CountAfter = MBS( "PortMidi.DeviceCount" )
```

125.11 PortMidi.GetDeviceInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.GetDeviceInfo"; index; selector)

Parameters

index

The device ID to query. From 0 to PortMidi.DeviceCount-1.

0

selector

Which detail to query. Can be Name, Interface, Input, Output or Opened.

"name"

Result Returns value or error.

Description

Information to query are the name of the device, the name of the interface, whether it's an input or output device and the open status.

Examples

Query if first device is open:

```
MBS( "PortMidi.GetDeviceInfo"; 0; "opened" )
```

Query name of third device

```
MBS( "PortMidi.GetDeviceInfo"; 2; "Name" )
```

Created 18th August 2014, last changed 18th August 2014.

125.14 PortMidi.OpenInput

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.OpenInput"; DeviceID { ; BufferSize; Latency })

Parameters

DeviceID

The device ID, a number from 0 to PortMidi.DeviceCount-1.

0

BufferSize

Optional

Optional, number of events to buffer. Default is 100 if you don't pass this parameter.

0

Latency

Optional

The desired latency. By default 0 is used which means no latency.

0

Result Returns StreamRef or error.

Description

Midi reference numbers are starting at 17000 and counting up for each new midi stream.

See also

125.15 PortMidi.OpenOutput

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.OpenOutput"; DeviceID { ; BufferSize; Latency })

Parameters

DeviceID

The device ID, a number from 0 to PortMidi.DeviceCount-1.

0

BufferSize

Optional

Optional, Specifies the number of output events to be buffered waiting for output. Default is 100 if you don't pass this parameter.

0

Latency

Optional

The latency you want. Default is zero. Latency is the delay in milliseconds applied to timestamps to determine when the output should actually occur. (If latency is <0, 0 is assumed.) If latency is zero, timestamps are ignored and all output is delivered immediately. If latency is greater than zero, output is delayed until the message timestamp plus the latency. In some cases, PortMidi can obtain better timing than your application by passing timestamps along to the device driver or hardware. Latency may also help you to synchronize midi data to audio data by matching midi latency to the audio buffer latency.

10

Result Returns StreamRef or error.

Description

Midi reference numbers are starting at 17000 and counting up for each new midi stream.

125.16 PortMidi.Poll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.Poll"; StreamRef)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Result Returns 1, 0 or error.

Description

Returns 1 if data is available and zero if not.

See also

- 125.4 PortMidi.Close 6344

125.17 PortMidi.ReadMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.ReadMessage"; StreamRef)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Result Returns message, empty or error.

Description

Format of result is a list containing: Status, Data1, Data2, Timestamp and raw message first as decimal number and than also as hex number. Hex notation makes reading easier for debugging.

125.18 PortMidi.Rescan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.Rescan")

Result Returns OK or error.

Description

Than on next call midi devices are searched.

Examples

Check before and after a scan:

```
$CountBefore = MBS( "PortMidi.DeviceCount" )
```

```
$r = MBS("PortMidi.Rescan")
```

```
$CountAfter = MBS( "PortMidi.DeviceCount" )
```

125.19 PortMidi.SendMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.SendMessage"; StreamRef; Status; Data1; Data2 { ; Timestamp })

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Status

The Midi status code.

144

Data1

The first data byte.

4*12+0

Data2

The second data bytes.

127

Timestamp

Optional

The timestamp. If zero or not provided, note is sent immediately.

0

Result Returns OK or error.

Description

The Status is the command code. 144 is note on and 128 is note off. For those note commands Data1 is the number of the note. 48 (4*12) is C2 and then you can count over all notes till you get to next octave with C3 (5*12).

Examples

Press down a C note:

```
MBS( "PortMidi.SendMessage"; $StreamRef; 144; 4*12+0; 127 )
```

Release a C note:

```
MBS( "PortMidi.SendMessage"; $StreamRef; 128; 4*12+0; 127 )
```

Created 18th August 2014, last changed 18th August 2014.

125.20 PortMidi.SendMessageRaw

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.SendMessageRaw"; StreamRef; Message { ; timestamp })

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Message

The message encoded as a 32bit integer number.

\$msg

timestamp

Optional

The timestamp.

Result Returns OK or error.

Description

This allows you to encode your own message data like this: status + data1 * 256 + data2 * 65536 + data3 * 16777216.

You can send this way also 4 byte messages by including a third data item.

125.21 PortMidi.SendSysExHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

```
MBS( "PortMidi.SendSysExHex"; StreamRef; Message { ; TimeStamp } )
```

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Message

The message to send.

TimeStamp

Optional

The timestamp.

0

Result Returns OK or error.

Description

The input text must be hex encoded and is decoded before sending.

Examples

Send SysEx:

```
MBS( "PortMidi.SendSysExHex"; $out; "F000200D681020002BF7" )
```

125.22 PortMidi.SetChannelMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.SetChannelMask"; StreamRef; Mask)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Mask

The new mask.

1

Result Returns OK or error.

Description

The mask is a 16-bit bitfield corresponding to appropriate channels.

Pass sum of the channel mask values you need:

Channel	Mask Value
0	1
1	2
2	4
3	8
4	16
5	32
6	64
7	128
8	256
9	512
10	1024
11	2048
12	4096
13	8192
14	16384
15	32767

See also

125.23 PortMidi.SetDataAvailableEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	8.5	Yes	Yes	No	No	No

MBS("PortMidi.SetDataAvailableEvaluate"; StreamRef; Expression)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

When new data arrives, this expression is evaluated, so you can call PortMidi.ReadMessage function.

Be aware that expression may be evaluated when just a few notes are in the read buffer. So the data message you wait for may only be available partly.

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the port midi reference, so you can pass it to other functions if needed.

- [MBS FileMaker Plugin, version 8.5pr9](#)

Created 24th November 2018, last changed 24th November 2018.

125.24 PortMidi.SetDataAvailableHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	8.5	Yes	Yes	No	No	No

MBS("PortMidi.SetDataAvailableHandler"; StreamRef; FileName; ScriptName)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

FileName

The name of the FileMaker File that contains the script
"MyDatabase.fp7"

ScriptName

The name of the script to run
"DataAvailable"

Result Returns OK or error.

Description

When new data arrives, this script is called, so you can call PortMidi.ReadMessage function. Be aware that script may be called when just a few notes are in the read buffer.

Examples

Set script to be triggered if data is available:

```
Set Variable [ $r; Value:MBS("PortMidi.SetDataAvailableHandler"; $$port; Get(FileName); "ReadMessage") ]
```

Created 24th November 2018, last changed 26th November 2018.

125.25 PortMidi.SetFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	4.2	Yes	Yes	No	No	No

MBS("PortMidi.SetFilter"; StreamRef; Filter)

Parameters

StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

Filter

The new filter value.

0

Result Returns OK or error.

Description

By default, only active sensing messages are filtered.

Filtering is useful when midi routing or midi thru functionality is being provided by the user application. For example, you may want to exclude timing messages (clock, MTC, start/stop/continue), while allowing note-related messages to pass. Or you may be using a sequencer or drum-machine for MIDI clock information but want to exclude any notes it may play.

Filter values (can be ORed):

Filter active sensing messages (0xFE)	PM_FILT_ACTIVE	16384
Filter system exclusive messages (0xF0)	PM_FILT_SYSEX	1
Filter clock messages (CLOCK 0xF8, START 0xFA, STOP 0xFC, and CONTINUE 0xFB)	PM_FILT_CLOCK	7424
Filter play messages (start 0xFA, stop 0xFC, continue 0xFB)	PM_FILT_PLAY	1024
Filter tick messages (0xF9)	PM_FILT_TICK	512
Filter undefined FD messages	PM_FILT_FD	8192
Filter undefined real-time messages	PM_FILT_UNDEFINED	8192
Filter reset messages (0xFF)	PM_FILT_RESET	32768
Filter all real-time messages	PM_FILT_REALTIME	65281
Filter note-on and note-off (0x90-0x9F and 0x80-0x8F)	PM_FILT_NOTE	50331648

125.26 PortMidi.TimeStamp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PortMidi	7.0	Yes	Yes	No	No	No

MBS("PortMidi.TimeStamp")

Result Returns number or error.

Description

On Mac this is the time since booting in milliseconds.

Chapter 126

Preferences

Get or set preferences.

126.1 Preferences.ClearRecentFiles

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 Preferences	6.5	Yes	No	No	No	No

MBS("Preferences.ClearRecentFiles")

Result Returns OK or error.

Description

After calling this, you should restart FileMaker to see effect.

126.1.1 Blog Entries

- [MBS FileMaker Plugin, version 6.5pr9](#)

Created 23th November 2016, last changed 17th June 2018.

126.2 Preferences.DeleteValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 Preferences	6.0	Yes	Yes	Yes	No	Yes

MBS("Preferences.DeleteValue"; Domain; Key)

Parameters

Domain

The domain name for your preferences. Leave empty for default one.
"de.mbsplugins.MyApp"

Key

The key for the value lookup.
"Username"

Result Returns OK or error.

Description

Examples

Delete username value

MBS("Preferences.DeleteValue"; "de.mbsplugins.MyApp"; "Username")

126.3 Preferences.GetTextSelectionWithDragAndDrop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 Preferences	2.8	Yes	No	Yes, macOS only	No	No

MBS("Preferences.GetTextSelectionWithDragAndDrop")

Result Returns current value 0 or 1 or an error.

Description

This function queries the preference setting from FileMaker (or Runtime) about allowing text selection by drag and drop.

Due to the way the preferences work, we can read the value which the setting has, but we can only set the value for the next launch of the application.

126.4 Preferences.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 Preferences	2.7	Yes	Yes	Yes	No	Yes

MBS("Preferences.GetValue"; Domain; Key)

Parameters

Domain

The domain name for your preferences. Leave empty for default one.

"de.mbsplugins.MyApp"

Key

The key for the value lookup.

"Username"

Result Returns the text for the preference value.

Description

Domain should be an unique name for your app, like with reverse domain name notation. An example: "de.monkeybreadsoftware.filemaker.runtimes.MyApp". If you use no domain, the default one is used.

If no value exists for the value, an empty text is returned.

Values are read from registry on Windows and preference files on Mac.

Key must not be an empty string.

Examples

Gets preferences:

```
$username = MBS( "Preferences.GetValue"; "de.mbsplugins.MyApp"; "Username" )
```

Query file cache size:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:FileCacheSize")
# Mac only!
```

Query file name of user:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:UserName")
# Mac only!
```

Query whether quick start window shows:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:ShowQuickStart")
# Mac only!
```

Query network name:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:NetworkName")
```

Mac only!

Query memory cache size:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:CacheSize")  
# Mac only!
```

Query user name for FileMaker preferences:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:UserName" )
```

Query advanced tools flag for FileMaker Pro Advanced 17 (mac):

```
MBS( "Preferences.GetValue"; ""; "Preferences:UseAdvancedTools" )
```

Check flag for whether system or custom user name is used:

e.g. for FileMaker Pro 17 on MacOS:

```
MBS("Math.BitWiseAnd"; MBS( "Preferences.GetValue"; "com.filemaker.client.pro12"; "Preferences:AppGenOptions"); 8)
```

Value is 8 for custom name.

Value is 0 for system name.

126.5 Preferences.GetValueType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 Preferences	9.3	Yes	Yes	Yes	No	Yes

MBS("Preferences.GetValueType"; Domain; Key)

Parameters

Domain

The domain name for your preferences. Leave empty for default one.
"de.mbsplugins.MyApp"

Key

The key for the value lookup.
"Username"

Result Returns text or error.

Description

Types may be Text, Data, Integer, Double, Boolean, Array or Dictionary.

Examples

Query type of an entry on Mac:

```
MBS( "Preferences.GetValueType"; "com.filemaker.client.advanced12"; "Preferences:FileCacheSize")
```

126.6 Preferences.HasValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 Preferences	6.0	Yes	Yes	Yes	No	Yes

MBS("Preferences.HasValue"; Domain; Key)

Parameters

Domain

The domain name for your preferences. Leave empty for default one.
"de.mbsplugins.MyApp"

Key

The key for the value lookup.
"Username"

Result Returns 0, 1 or error.

Description

126.7 Preferences.SetTextSelectionWithDragAndDrop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 Preferences	2.8	Yes	No	Yes, macOS only	No	No

MBS("Preferences.SetTextSelectionWithDragAndDrop"; value)

Parameters

value

The new value: 0 for off and 1 for on.

1

Result Returns OK or error.

Description

Due to the way the preferences work, we can read the value which the setting has, but we can only set the value for the next launch of the application.

126.8 Preferences.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 Preferences	2.7	Yes	Yes	Yes	No	Yes

MBS("Preferences.SetValue"; Domain; Key { ; Value; Type })

Parameters

Domain

The domain name for your preferences. Leave empty for default one.

"de.mbsplugins.MyApp"

Key

The key for the value lookup.

"Username"

Value

Optional

The new value text.

"Christian"

Type

Optional

The data type to use. (Mac only) Can be integer, double, boolean or text.

"text"

Result Returns OK or error message.

Description

Domain should be an unique name for your app, like with reverse domain name notation. An example: "de.monkeybreadsoftware.filemaker.runtimes.MyApp". If you use no domain, the default one is used.

Values are stored in registry on Windows and preference files on Mac.

Key must not be an empty string.

This is the location where you can store global settings like the last used username for login.

Changing preferences of FileMaker only works, if you restart FileMaker for changes take effect. Going to the preferences dialog (even with cancel on exit), can cause FileMaker to write it's settings over what you just changed.

To change windows preferences for Windows, you may better go with Registry functions.

Examples

Sets preferences:

```
MBS( "Preferences.SetValue"; "de.mbsplugins.MyApp"; "Username"; $username )
```

Set flag to not allow plugins to update:

```
MBS( "Preferences.SetValue"; "com.filemaker.client.advanced12"; "Preferences:AllowToUpdatePlugins"; 0; "integer")
```

Set file cache to 1 GB:

```
MBS( "Preferences.SetValue"; "com.filemaker.client.advanced12"; "Preferences:FileCacheSize"; 1048576; "integer")
```

Set user name in FileMaker preferences:

```
MBS( "Preferences.SetValue"; "com.filemaker.client.advanced12"; "Preferences:UserName"; "Chris" )
```

Chapter 127

PrintDialog

Control the Mac printer dialog. Select printer on Mac.

See `Printer.Print` and `Printer.SetPrinter` for similar features on Windows.

127.1 PageSetupDialog.ClearOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.ClearOption"; Key)

Parameters

Key

The key to use.

Result Returns OK or error.

Description

See also

- 127.2 PageSetupDialog.ClearOptions 6384

127.3.1 Blog Entries

- [Page Setup Dialog example](#)

Created 20th April 2019, last changed 20th April 2019.

127.4 PageSetupDialog.Enable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.Enable")

Result Returns OK or error.

Description

Your page setup commands in FileMaker should show a dialog, so the plugin can intercept it.

Use Printer.SetPrinter for similar features on Windows.

Examples

Enable:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Disable") ]
```

Run dialog with plugin:

```
Allow User Abort [ Off ]
```

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Install") ]
```

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Enable") ]
```

```
# set options here
```

```
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; ,1; "MBS( \"MenuBar.RunMenuCommand\"; 57606 )" ) // run Page Setup Dialog in 0.1 seconds ]
```

```
Pause/Resume Script [ Duration (seconds): 1 ]
```

127.5 PageSetupDialog.GetLastSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.GetLastSettings")

Result Returns text or error.

Description

Please print once with enabled page setup dialog functions. After printing with dialog, you can query last settings and see what OS X or your driver uses.

Since version 10.1 we return settings as JSON instead of XML and includes print parameter.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.GetScalingFactor")

Result Returns value or error.

Description

See also

- 127.18 PageSetupDialog.SetScalingFactor

6402

Created 20th April 2019, last changed 20th April 2019.

127.12 PageSetupDialog.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.Install")

Result Returns OK or error.

Description

Only after PageSetupDialog.Install was called, you can use PageSetupDialog.Enable. You only call this function once.

This is Mac only. For Windows, please check Printer.SetPrinter and Printer.Print.

Examples

Initialize paper setup dialog:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Install") ]
```

Run dialog with plugin:

```
Allow User Abort [ Off ]
Set Variable [ $r ; Value: MBS("PageSetupDialog.Install") ]
Set Variable [ $r ; Value: MBS("PageSetupDialog.Enable") ]
# set options here
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; ,1; "MBS( \ "Menubar.RunMenuCommand\"; 57606 )" ) // run Page Setup Dialog in 0.1 seconds ]
Pause/Resume Script [ Duration (seconds): 1 ]
```

127.13 PageSetupDialog.SetNoDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.SetNoDialog"; Flag)

Parameters

Flag

Whether to show page setup dialog.

1

Result Returns OK or error.

Description

In FileMaker script step you need to use page setup with dialog. Than the plugin can control the dialog and either close it right away (with setting 1) or let it open (setting 0).

Examples

Set to show dialog:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetNoDialog"; 0) ]
```

No dialog, please:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetNoDialog"; 1) ]
```

127.14 PageSetupDialog.SetOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.SetOption"; Key; Value; Type)

Parameters

Key

The key to use.

Value

The value to use. Depending on data type, the plugin will pass a number or a text.

3

Type

The type of data to add. Default is empty to use type of value passed. So text or number type would be picked automatically. Valid values for type are text, number, integer and text. Integer is for integer numbers while number is for floating numbers.

Result Returns OK or error.

Description

You can use PrintDialog.GetLastSettings after printing to query XML with all settings and pick keys and values.

127.15 PageSetupDialog.SetPaperName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.SetPaperName"; name)

Parameters

name

The paper name.

"A4"

Result Returns OK or error.

Description

You need to run paper setup dialog to let the plugin change values.

We found paper sizes for our printer in PPD files in /private/etc/cups/ppd folder. e.g. "Env10" for Envelope # 10.

Examples

Set paper to be A5:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetPaperName"; "A5") ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.SetPaperOrientation"; PaperFormat)

Parameters

PaperFormat

The new paper orientation. Value should be landscape, portrait or default.
"landscape"

Result Returns OK or error.

Description

You need to run paper setup dialog to let the plugin change values.

Examples

Set paper orientation to portrait:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetPaperOrientation"; "portrait") ]
```

Set paper orientation to landscape:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetPaperOrientation"; "landscape") ]

127.18 PageSetupDialog.SetScalingFactor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	9.2	Yes	No	No	No	No

MBS("PageSetupDialog.SetScalingFactor"; Value)

Parameters

Value

The new scale factor.

1.0

Result Returns OK or error.

Description

If zero, we don't change it.

Value is 1.0 for 100% .

You need to run paper setup dialog to let the plugin change values.

Examples

Set scaling to 150% :

Set Variable [\$r ; Value: MBS("PageSetupDialog.SetScalingFactor"; 1,5)]

127.21.1 FileMaker Magazin

- Ausgabe 5/2017, Seite 22

Created 18th August 2014, last changed 18th August 2014.

127.22 PrintDialog.Enable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	3.5	Yes	No	No	No	No

MBS("PrintDialog.Enable")

Result Returns OK or error.

Description

Your print commands in FileMaker should show a dialog, so the plugin can intercept it.

Examples

Install and print to PDF:

```
Set Variable [ $r; MBS( "PrintDialog.Install" ) ]
Set Variable [ $r; MBS( "PrintDialog.Enable" ) ]
Set Variable [ $r; MBS( "PrintDialog.SetPrintToPDF"; 1 ) ]
Set Variable [ $r; MBS( "PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test.pdf" ) ]
Set Variable [ $r; MBS( "PrintDialog.SetNoDialog"; 1 ) ]
Print [ ]
```

127.24 PrintDialog.GetConfiguration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	8.0	Yes	No	No	No	No

MBS("PrintDialog.GetConfiguration")

Result Returns OK or error.

Description

You can run with dialog, select all settings you like and than store the configuration.

Configuration is the serialized and base64 encoded setup data.

Just store as it is in a text field for later restoration with PrintDialog.SetConfiguration or PDFKit.SavePrintSettings.

Returns empty result if no print configuration was yet created.

See PrintDialog.GetLastSettings for a xml you can read.

Examples

Query configuration after printing:

```
Set Variable [ $r ; Value: MBS("PrintDialog.Enable") ]
```

```
Print [ With dialog: On ]
```

```
Set Field [ Printer Dialog on Mac::Data ; MBS("PrintDialog.GetConfiguration") ]
```

127.30 PrintDialog.GetLastSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	6.2	Yes	No	No	No	No

MBS("PrintDialog.GetLastSettings")

Result Returns text or error.

Description

Please print once with enabled print dialog functions. After printing with dialog, you can query last settings and see what OS X or your driver uses.

Since version 10.1 we return settings as JSON instead of XML and includes print parameter.

Examples

Get last settings:

```
MBS("PrintDialog.GetLastSettings")
```

Query settings after using dialog:

```
Set Variable [ $r ; Value: MBS("PrintDialog.Install") ]
Set Variable [ $r ; Value: MBS("PrintDialog.Enable") ]
Print [ With dialog: On ]
Set Variable [ $r ; Value: MBS("PrintDialog.Disable") ]
Set Variable [ $r ; Value: MBS("PrintDialog.GetLastSettings") ]
Set Field [ Printer Dialog on Mac::Path ; $r ]
```

127.42 PrintDialog.SetConfiguration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	8.0	Yes	No	No	No	No

MBS("PrintDialog.SetConfiguration"; Configuration)

Parameters

Configuration

The configuration data you got from PrintDialog.GetConfiguration.

Result Returns OK or error.

Description

The given configuration will be applied after reset of settings (if enabled) and before other settings are applied. This way you can still customize the saved configuration.

Examples

Restore configuration:

Allow User Abort [Off]

Set Variable [\$r ; Value: MBS("PrintDialog.Enable")]

Set Variable [\$r ; Value: MBS("PrintDialog.SetConfiguration"; Printer Dialog on Mac::Data)]

Print [With dialog: On]

Created 17th March 2016, last changed 17th March 2016.

127.44 PrintDialog.SetDestinationPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	3.5	Yes	No	No	No	No

MBS("PrintDialog.SetDestinationPath"; Path)

Parameters

Path

Native file path for PDF file.

\$path

Result Returns error or OK.

Description

If you want the user to select a path, please use FileDialog functions.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Set print to PDF:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetPrintToPDF"; 1 ) ]
```

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test.pdf" ) ]
```

127.45 PrintDialog.SetDuplex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	4.1	Yes	No	No	No	No

MBS("PrintDialog.SetDuplex"; value)

Parameters

value

The new duplex setting.

1

Result Returns OK or error.

Description

Pass 0 for no duplex, 1 to enable duplex and -1 to not change it.

Version 6.5 adds 2 for duplex with tumble.

Version 7.5 changes value: 0 = off, 1 = long edge, 2 = short edge

Examples

Enable duplex:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetDuplex"; 1 ) ]
```

127.46 PrintDialog.SetFirstPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	6.2	Yes	No	No	No	No

MBS("PrintDialog.SetFirstPage"; Page)

Parameters

Page

The first page to print.

2

Result Returns OK or error.

Description

This property containing the one-based index of the first page in the job to print.

Value is -1 if not defined.

Examples

Print page 2 to 3 copies:

```
Set Variable [ $r; Value:MBS("PrintDialog.Enable") ]
Set Variable [ $r; Value:MBS("PrintDialog.SetFirstPage"; 2) ]
Set Variable [ $r; Value:MBS("PrintDialog.SetLastPage"; 3) ]
Print [ ]
Set Variable [ $r; Value:MBS("PrintDialog.Disable") ]
```

127.47 PrintDialog.SetLastPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	6.2	Yes	No	No	No	No

MBS("PrintDialog.SetLastPage"; Page)

Parameters

Page

The last page to print.

2

Result Returns OK or error.

Description

This property containing the one-based index of the last page in the job to print.

Value is -1 if not defined.

Examples

Print page 2 to 3 copies:

```
Set Variable [ $r; Value:MBS("PrintDialog.Enable") ]
Set Variable [ $r; Value:MBS("PrintDialog.SetFirstPage"; 2) ]
Set Variable [ $r; Value:MBS("PrintDialog.SetLastPage"; 3) ]
Print [ ]
Set Variable [ $r; Value:MBS("PrintDialog.Disable") ]
```

127.48 PrintDialog.SetNoDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	3.5	Yes	No	No	No	No

MBS("PrintDialog.SetNoDialog"; Flag)

Parameters

Flag

Whether to show print dialog.

1

Result Returns OK or error.

Description

In FileMaker script step you need to use print with dialog. Than the plugin can control the dialog and either close it right away (with setting 1) or let it open (setting 0).

Examples

Disable dialog:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetNoDialog"; 1 ) ]
```

Enable dialog:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetNoDialog"; 0 ) ]
```

127.48.1 FileMaker Magazin

- Ausgabe 5/2017, Seite 22

Created 18th August 2014, last changed 25th November 2017.

127.49 PrintDialog.SetOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	6.2	Yes	No	No	No	No

MBS("PrintDialog.SetOption"; Key; Value { ; Type })

Parameters

Key

The key to use.

"com_apple_print_PrintSettings_PMCopies"

Value

The value to use. Depending on data type, the plugin will pass a number or a text.

3

Type

Optional

Available in MBS FileMaker Plugin 9.2 or newer.

The type of data to add. Default is empty to use type of value passed. So text or number type would be picked automatically. Valid values for type are text, number, integer and text. Integer is for integer numbers while number is for floating numbers.

Result Returns OK or error.

Description

You can use PrintDialog.GetLastSettings after printing to query XML with all settings and pick keys and values.

Examples

Set copies to 3 via options:

```
MBS("PrintDialog.SetOption"; "com_apple_print_PrintSettings_PMCopies"; 3)
```

Set border to double hairline:

```
MBS("PrintDialog.SetOption"; "com_apple_print_PrintSettings_PMBorderType"; 2)
```

Set border to single hairline:

```
MBS("PrintDialog.SetOption"; "com_apple_print_PrintSettings_PMBorderType"; 1)
```

Set duplex binding:

```
MBS("PrintDialog.SetOption"; "com_apple_print_PrintSettings_PMDuplexing"; 2) &
```

```
MBS("PrintDialog.SetOption"; "DuplexBindingEdge"; 2)
```

Set input slot and output bin:

127.49. *PRINTDIALOG.SETOPTION* 6439

MBS("PrintDialog.SetOption"; "InputSlot"; "4Tray") &
MBS("PrintDialog.SetOption"; "OutputBin"; "MailBoxBin7")
those keys and values are print driver dependent and hand picked from configuration XML.

127.50 PrintDialog.SetPageNumberingOffset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	7.0	Yes	No	No	No	No

MBS("PrintDialog.SetPageNumberingOffset"; Value)

Parameters

Value

The new offset to use.

1

Result Returns OK or error.

Description

Value -1 means to not change it. Value 0 is for no offset. Other values to start page numbering at given number.

Showing print dialog may reset this!

Examples

Set offset to 5:

MBS("PrintDialog.SetPageNumberingOffset"; 5)

127.51 PrintDialog.SetPaperName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	5.0	Yes	No	No	No	No

MBS("PrintDialog.SetPaperName"; name)

Parameters

name

The paper name.

"A4"

Result Returns OK or error.

Description

Examples

Set paper to A4:

Set Variable [\$r ; Value: MBS("PrintDialog.SetPaperName"; "A4")]

127.52 PrintDialog.SetPrintToPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	3.5	Yes	No	No	No	No

MBS("PrintDialog.SetPrintToPDF"; flag)

Parameters

flag

The new setting. Can be 0 to disable PDF creation or 1 to enable it.

1

Result Returns OK or error.

Description

Please also use PrintDialog.SetDestinationPath to print to PDF.

Examples

Set print to PDF:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetPrintToPDF"; 1 ) ]
```

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test.pdf" ) ]
```

127.53 PrintDialog.SetPrintType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	5.0	Yes	No	No	No	No

MBS("PrintDialog.SetPrintType"; Type { ; BlankOption })

Parameters

Type

What to print. Can be 0 for records being browsed, 1 for current record or 2 for blank record.

1

BlankOption

Optional

Optional, which option to select for blank. Can be 0 for "as formatted", 1 for "with boxes" or 2 for "with underline".

0

Result Returns OK or error.

Description

Works only if dialog is not shown currently.

Examples

Test all variants:

```
Allow User Abort [ Off ]
```

```
Set Variable [ $r; Value:MBS("PrintDialog.Enable") ]
```

```
Set Variable [ $r; Value:MBS("PrintDialog.SetPrinterName"; "" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	3.5	Yes	No	No	No	No

MBS("PrintDialog.SetPrinterName"; name)

Parameters

name

The printer name.

"My Printer"

Result Returns OK or error.

Description

The plugin will try to find a printer with the given name and assigns it for the printing.

Examples

Sets printer name:

MBS("PrintDialog.SetPrinterName"; "Test Printer")

127.56 PrintDialog.SetResetDestination

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	6.5	Yes	No	No	No	No

MBS("PrintDialog.SetResetDestination"; Value)

Parameters

Value

The new setting. Pass 1 to enable reset of destination. Pass 0 to disable.

1

Result Returns OK or error.

Description

FileMaker 15 and older on macOS Sierra show a problem with printing.

If you once print to PDF, the print dialog in FileMaker will remember the PDF printing and even print to PDF if no PDF printing is selected.

If you set this option to 1, the plugin will reset the print destination to the printer before the dialog is shown or other options are applied.

Examples

Initialize to fix printing issues with FileMaker and macOS Sierra:

```
Set Variable [ $r; Value: MBS( "PrintDialog.Install" ) ]
Set Variable [ $r; Value: MBS( "PrintDialog.Enable" ) ]
Set Variable [ $r; Value: MBS( "PrintDialog.SetResetDestination"; 1 ) ]
```

127.57 PrintDialog.SetTray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 PrintDialog	6.1	Yes	No	No	No	No

MBS("PrintDialog.SetTray"; Value)

Parameters

Value

The name of the tray to use.

"Tray1"

Result Returns OK or error.

Description

Value may be Tray1, Tray2, tray-1, tray-2, auto, Left, Right, Lower, Middle, Upper and depends on the printer driver. This is not the name displayed in dialog, but the internal value which is the same for all localization.

Same as using PrintDialog.SetOption with "InputSlot" as key and tray name as value.

Examples

Set Tray-2 as the tray for paper:

```
MBS("PrintDialog.SetTray"; "Tray-2")
```

Chapter 128

Printer

List printers and set/get default printer. Select printer on Windows.

See `PrintDialog` functions for Mac, too.

128.1 `Printer.CurrentNumberOfCopies`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 Printer	9.2	No	Yes	No	No	No

MBS("Printer.CurrentNumberOfCopies")

Result Returns number or error.

Description

This is queried when dialog opens after setting number of copies.

So it may be useful to use `Printer.Print` with mode 2 to just read current values.

Value is -1 if unknown.

See also

- 128.10 `Printer.Print`

128.2 Printer.CurrentPaperFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 Printer	6.5	No	Yes	No	No	No

MBS("Printer.CurrentPaperFormat" { ; ReturnIndex })

Parameters

ReturnIndex

Optional

Pass 1 to return index or 0 to return name. Default is zero to return name.

0

Result Returns value or error.

Description

This value is only available after Printer.Print or Printer.SetPrinter run.

Examples

Show current settings:

```
Show Custom Dialog [ "Current Settings" ; "PrinterName: " & MBS( "Printer.CurrentPrinterName" ) &
&&
"PaperSource: " & MBS( "Printer.CurrentPaperSource" ) & &&
"PaperFormat: " & MBS( "Printer.CurrentPaperFormat" ) & &&

128.5 Printer.CurrentPrinterName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 Printer	6.5	No	Yes	No	No	No

MBS("Printer.CurrentPrinterName" { ; ReturnIndex })

Parameters

ReturnIndex

Optional

Pass 1 to return index or 0 to return name. Default is zero to return name.

0

Result Returns value or error.

Description

This value is only available after Printer.Print or Printer.SetPrinter run.

Examples

Show current settings:

```
Show Custom Dialog [ "Current Settings" ; "PrinterName: " & MBS( "Printer.CurrentPrinterName" ) &
§&
"PaperSource: " & MBS( "Printer.CurrentPaperSource" ) & §&
"PaperFormat: " & MBS( "Printer.CurrentPaperFormat" ) & §&
"PrintWhat: " & MBS( "Printer.CurrentPrintWhat" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 Printer	6.5	No	Yes	No	No	No

MBS("Printer.PaperFormats")

Result Returns list or error.

Description

The plugin will store the paper formats it sees in the dialog, so you can later query them. This value is only available after Printer.Print or Printer.SetPrinter run.

Examples

Query formats:

```
# we run Print dialog
# as there is no printer or paper format with ?, this will not change it
# and 2 means cancel
#
Set Variable [ $r; Value:MBS("Printer.Print"; "?"; 2; ""; "?") ]
#
Pause/Resume Script [ Duration (seconds): 2 ]
#
Set Field [ Printer Dialog::PaperFormats; MBS( "Printer.PaperFormats" ) ]
Set Field [ Printer Dialog::Printers; MBS( "Printer.PrinterNames" ) ]
Set Field [ Printer Dialog::PaperSources; MBS( "Printer.PaperSources" ) ]
```

128.10 Printer.Print

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 Printer	6.5	No	Yes	No	No	No

MBS("Printer.Print"; Printer { ; CloseDialog; Number of Copies; Paper Format; Paper Orientation; Paper Source; Pages From; Pages To; Collate Pages; What })

Parameters

Printer

The printer name to set. Must not match exactly, just the first letters. If empty, we use current. "Brother"

CloseDialog

Optional

Whether to close print dialog. Pass 1 to close or 0 to not close. Pass 2 to press cancel button in case you just want to learn the options. Pass 3 to leave dialog open.

1

Number of Copies

Optional

The number of copies. Leave empty to not change.

1

Paper Format

Optional

The name of the paper format. Leave empty to not change.

"A4"

Paper Orientation

Optional

The paper orientation. Pass portrait or landscape. Empty value leaves setting as is.

"landscape"

Paper Source

Optional

The paper source. Pass name of setting. Name doesn't need to match exactly, just first letters. So you can pass "Man" für Manual (English) and Manuell (German).

"Man"

Pages From

Optional

The start number of page range. Pass empty text for Pages From and To to select all pages.

1

Pages To

Optional

The end number of page range. Pass empty text for Pages From and To to select all pages.

1

Collate Pages

Optional

Whether to collate pages. Pass 1 to enable or 0 to disable. Other values are ignored, so pass -1 to leave existing value.

1

What

Optional

What to print: Pass 0 for records being browsed. Pass 1 for current record. Pass 2 for Blank Record showing fields. Default is empty (or -1) to keep current setting.

0

Result Returns OK or error.

Description

The plugin will show the print dialog from FileMaker, automatically set options and close dialog if requested. Sub dialog for paper is opened if paper format, paper orientation or source is passed. The function returns before the dialog shows, so please do a script pause after calling this.

You can later call `Print.ErrorLog` to detect errors. If Windows ever change dialogs, features may no longer work. FileMaker may not show the print dialog if there is no record available or when debugger is open.

For Mac, please check `PrintDialog.Install` function.

After calling this method, you can call `Printer.PaperFormats`, `Printer.PaperSources` or `Printer.PrinterNames` to learn what was available.

Version 9.1 or newer allows you to pass 3 for `CloseDialog` parameter to leave dialog open while sub dialog is closed.

128.12 Printer.PrinterInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 Printer	6.5	Yes	Yes	Yes	No	No

MBS("Printer.PrinterInfo"; Name; Selector)

Parameters

Name

The name of the printer.

"LaserPrinter"

Selector

The selector for the value to query.

"Name"

Result Returns value or error.

Description

Selectors on Mac: Name, Type, languageLevel (PostScript language level or zero). If you ask for deviceDescriptionKeys, you get a list of other keys available.

Selectors on Windows: ServerName, PrinterName, ShareName, PortName, DriverName, Comment, Location, SepFile, PrintProcessor, Datatype, Parameters, SepFile, Priority, DefaultPriority, StartTime, UntilTime, Status, Jobs, AveragePPM, Status, Attributes.

Attributes and Status are returned as numbers.

If you pass "Keys" for selector, we return list of all available keys.

Examples

Queries type of Mac printer:

```
MBS("Printer.PrinterInfo"; "Brother DCP-8085DN"; "type")
```

128.13 Printer.PrinterName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 Printer	3.0	Yes	Yes	Yes	No	No

MBS("Printer.PrinterName"; index)

Parameters

index

The index of the printer. From 0 to PrinterCount-1.
0

Result Returns name of printer or error.

Description

Examples

Queries name of first printer:

```
$name = MBS( "Printer.PrinterName"; 0 )
```

128.15 Printer.SetPrinter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 Printer	6.5	No	Yes	No	No	No

MBS("Printer.SetPrinter"; Printer { ; CloseDialog; Paper Format; Paper Orientation; Paper Source })

Parameters

Printer

The printer name to set. Must not match exactly, just the first letters. Leave empty to not change printer. "Brother"

CloseDialog

Optional

Whether to close print dialog. Pass 1 to close or 0 to not close. Pass 2 to press cancel button in case you just want to learn the options.

1

Paper Format

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

The name of the paper format. Leave empty to not change.

"A4"

Paper Orientation

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

The paper orientation. Pass portrait or landscape. Empty value leaves setting as is.

"landscape"

Paper Source

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

The paper source. Pass name of setting. Name doesn't need to match exactly, just first letters. So you can pass "Man" für Manual (English) and Manuell (German).

"Man"

Result Returns OK or error.

Description

Shows the printer setup dialog and switches target printer or paper settings.

Please use a script pause of at least a second after calling this function to let Windows show the dialogs.

You can later call Print.ErrorLog to detect errors. If Windows ever change dialogs, features may no longer work.

For Mac, please check PrintDialog.Install function.

Version 10.0 of MBS Plugin adds three new parameters paper format, orientation and source. And the plugin fills the internal lists for paper sources, formats and printers.

Chapter 129

Process

Query process details.

129.1 Process.FrontProcessBundleID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	4.2	Yes	No	No	No	No

MBS("Process.FrontProcessBundleID")

Result Returns error or app bundle ID.

Description

Examples

Show bundle ID of front process:

Show Custom Dialog ["Front Process" ; MBS("Process.FrontProcessBundleID")]

See also

- 129.2 Process.FrontProcessName

6478

129.2 Process.FrontProcessName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	4.2	Yes	Yes	No	No	No

MBS("Process.FrontProcessName")

Result Returns app name.

Description

On Windows the app name is just the name of the exe file.

Returns empty string or error in case of errors.

Examples

Show name of current process in front:

Show Custom Dialog ["Front Process" ; MBS("Process.FrontProcessName")]

See also

- [129.1 Process.FrontProcessBundleID](#)

Created 18th August 2014, last changed 25th November 2017.

129.3 Process.FrontWindowTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	4.2	Yes	Yes	No	No	No

MBS("Process.FrontWindowTitle" { ; index })

Parameters

index

Optional

Optional for Mac. Pass -1 to return number of windows. Else pass index from 0 to count-1 to query title of nth window.

””

Result Returns window title.

Description

On Mac OS X requires you to allow FileMaker accessibility functions. In System Preferences check privacy control panel and add FileMaker there to the list allowed for assistive input.

Examples

Query title of focused window:

```
MBS( "Process.FrontWindowTitle"
```

Query on Mac number of Windows.

```
MBS( "Process.FrontWindowTitle"; -1 )
```

Query on Mac the second window:

```
MBS( "Process.FrontWindowTitle"; 1 )
```

129.4 Process.GetCurrentDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	6.5	Yes	Yes	Yes	Yes	Yes

MBS("Process.GetCurrentDirectory")

Result Returns path or error.

Description

Some OS functions look for files relative to this folder.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Query current directory:

MBS("Process.GetCurrentDirectory")

See also

- 121.2 `Path.FileMakerPathToNativePath` 6139

129.5 Process.IsFrontMost

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	2.9	Yes	Yes	No	No	No

MBS("Process.IsFrontMost")

Result Returns 1 if FileMaker is frontmost and 0 if not.

Description

If the function returns zero, you can call Process.SetFrontMost to move FileMaker to the front. Added support for Windows in plugin version 4.2.

Examples

Check if we are in background and move us to front:

```
If [ MBS( "Process.IsFrontMost" ) = 0 ]
Set Variable [ $r ; Value: MBS( "Process.SetFrontMost" ) ]
End If
```

129.6 Process.IsRunning

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	4.0	Yes	No	Yes, macOS only	No	No

MBS("Process.IsRunning"; Process)

Parameters

Process

Either a number with process ID or a process name or a bundle ID.

123

Result Returns 0, 1 or error.

Description

Returns 1 if process is found in process list or 0 if not.

Examples

Check if Safari is running by name:

```
MBS( "Process.IsRunning"; "Safari" )
```

Check if Safari is running by bundle ID:

```
MBS( "Process.IsRunning"; "com.apple.safari" )
```

129.7 Process.KeepFrontMost

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	7.1	Yes	No	No	No	No

MBS("Process.KeepFrontMost"; Enabled)

Parameters

Enabled

Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Can be enabled/disabled at any time.

If enabled, the plugin will bring FileMaker to front whenever it goes to background.

Examples

Enable in script:

```
Variable setzen [ $$ref ; Wert: MBS( "Process.KeepFrontMost"; 1 ) ]
```

Disable in script:

```
Variable setzen [ $$ref ; Wert: MBS( "Process.KeepFrontMost"; 0 ) ]
```

129.8 Process.LoadLibrary

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	6.5	Yes	Yes	Yes	Yes	Yes

MBS("Process.LoadLibrary"; Path)

Parameters

Path

The native path to the library.

"C:\Users\Christian\Desktop\dynapdf64.dll"

Result Returns OK or error.

Description

This can be used to resolve dependencies with libraries in various places.

This should work with .dll files on Windows, .dylib files on macOS and .so files on Linux.

Windows error 193 means that 64-bit FileMaker tried to load 32-bit library or 32-bit FileMaker tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

129.9 Process.SetCurrentDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	6.5	Yes	Yes	Yes	Yes	Yes

MBS("Process.SetCurrentDirectory"; Path)

Parameters

Path

The new native path.

"C:\Test"

Result Returns OK or error.

Description

Some OS functions look for files relative to this folder.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Set current directory:

MBS("Process.SetCurrentDirectory"; "/Users/cs/Desktop")

Set current path on Windows:

MBS("Process.SetCurrentDirectory"; "C:\Test")

129.10 Process.SetFrontMost

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	2.9	Yes	Yes	Yes	No	No

MBS("Process.SetFrontMost")

Result Returns OK or error.

Description

You can use Process.IsFrontMost to check the status.

You can use Window.Activate for Windows.

Implemented Process.SetFrontMost for Windows in version 9.2. The plugin builds a list of all FileMaker windows. Then we activate the top most of them and move all other windows in z order behind.

Examples

Bring FileMaker to front:

```
Set Variable [ $r; Value:MBS("Process.SetFrontMost") ]
```

129.11 ProcessActivity.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	5.2	Yes	No	Yes, macOS only	No	Yes

MBS("ProcessActivity.List")

Result Returns list of IDs or error.

Description

This helps debugging, especially finding scripts which do not release their objects properly.

Examples

List all activities:

MBS("ProcessActivity.List")

See also

- 129.13 ProcessActivity.Reason

6489

Created 2nd June 2015, last changed 21st September 2015.

129.12 ProcessActivity.Options

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	5.2	Yes	No	Yes, macOS only	No	Yes

MBS("ProcessActivity.Options"; ProcessActivityID)

Parameters

ProcessActivityID

The process activity reference number as returned by ProcessActivity.beginActivity function.

\$ref

Result Returns number or error.

Description

Examples

Query options of first activity:

MBS("ProcessActivity.Options"; "39001")

See also

- 129.14 ProcessActivity.beginActivity 6490
- 129.13 ProcessActivity.Reason 6489

Created 2nd June 2015, last changed 2nd June 2015.

129.13 ProcessActivity.Reason

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	5.2	Yes	No	Yes, macOS only	No	Yes

MBS("ProcessActivity.Reason"; ProcessActivityID)

Parameters**ProcessActivityID**

The process activity reference number as returned by ProcessActivity.beginActivity function.

\$ref

Result Returns text or error.

Description**Examples**

Query reason of first activity:

MBS("ProcessActivity.Reason"; "39001")

See also

- 129.14 ProcessActivity.beginActivity 6490

129.14 ProcessActivity.beginActivity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Process	5.2	Yes	No	Yes, macOS only	No	Yes

MBS("ProcessActivity.beginActivity"; activity; Reason)

Parameters

activity

The activity as a number or a text. The plugin allows you to pass texts like IdleDisplaySleepDisabled, IdleSystemSleepDisabled, UserInitiated, UserInitiatedAllowingIdleSystemSleep, Background and Latency-Critical. Those texts can be combined.

"IdleDisplaySleepDisabled"

Reason

The reason text.

"Doing backup"

Result Returns reference number or error.

Description

Pass in an activity to this function, and a non-empty reason string. Indicate completion of the activity by calling the corresponding ProcessActivity.endActivity function with the result of this function. The reason string is used for debugging.

Requires Mac OS X 10.9 and newer.

This function allows to deactivate App Nap for FileMaker. So when a script has to do some work, you can disable system/display sleep here which also disables app nap.

Examples

Start an activity:

```
MBS( "ProcessActivity.beginActivity"; "IdleSystemSleepDisabled UserInitiated"; "Doing Backup in File-Maker" )
```

Avoid display sleep:

```
MBS( "ProcessActivity.beginActivity"; "IdleDisplaySleepDisabled UserInitiated"; "Showing animation" )
```

Chapter 130

ProgressDialog

Show progress dialog.

130.1 ProgressDialog.ClearImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.ClearImage")

Result Returns "OK" on success.

Description

If there is no image, there is more room for your text in the dialog.

Examples

Clear Image

MBS("ProgressDialog.ClearImage")

130.4 ProgressDialog.GetCancel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.GetCancel")

Result The current state. 1 = cancel pressed, 0 = cancel not pressed.

Description

Cancel property is set when the user clicks the cancel button. It is reset when you call ProgressDialog.Show. You can also set it with ProgressDialog.SetCancel.

Examples

Query cancel state

MBS("ProgressDialog.GetCancel")

130.14 ProgressDialog.Hide

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.Hide")

Result Returns "OK" on success.

Description

You may want to call ProgressDialog.Reset before reusing the progress dialog. Or later call ProgressDialog.Show again to show progress dialog with same settings.

Resets parent and enables parent window to make sure it is not disabled.

Examples

Show the progress dialog:

MBS("ProgressDialog.Show")

Hide the progress dialog:

MBS("ProgressDialog.Hide")

130.16 ProgressDialog.SetBottomText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetBottomText"; text)

Parameters

text

The new bottom text.

"Hello"

Result Returns "OK" on success.

Description

Below the progress bar most applications shows some data like "x of y files processed" or "123 KB of 456 KB copied."

Please do not call this function more than one time per second to avoid the progress window redraw to slow down your process.

Examples

Report progress:

MBS("ProgressDialog.SetBottomText"; \$index & " of " & \$total & " files")

130.17 ProgressDialog.SetButtonCaption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetButtonCaption"; text)

Parameters

text

The new button text.

"Annuler"

Result Returns "OK" on success.

Description

Default is "Cancel" if you don't call this method. If your solution supports multiple languages, it may be worth putting those texts into an extra table and picking the right text at runtime.

Examples

Set button text for Germany:

MBS("ProgressDialog.SetButtonCaption"; "Abbrechen")

130.18 ProgressDialog.SetCancel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetCancel"; Flag)

Parameters

Flag

the new cancel state.

1

Result Returns "OK" on success.

Description

You can query in your loop whether user clicked cancel so you can exit your loop.

If your script does not make a pause or a long running plugin functions runs, there may be no reaction on the cancel button.

Examples

Set cancel state

MBS("ProgressDialog.SetCancel"; 1)

Reset Cancel state:

MBS("ProgressDialog.SetCancel"; 0)

130.19 ProgressDialog.SetFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.9	Yes	Yes	No	No	No

MBS("ProgressDialog.SetFont" { ; fontname; fontsize })

Parameters

fontname

Optional

The font name. If this is empty, the system font is used.

"Arial"

fontsize

Optional

The font size. If this value is 0, the system font size is used.

12

Result Returns OK on success.

Description

Examples

Set font:

MBS("ProgressDialog.SetFont"; "Comic Sans MS"; 12)

130.20 ProgressDialog.SetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetImage"; image)

Parameters

image

A container value with some picture. Can be JPEG, GIF, BMP, PNG or TIFF.

preftable::ProgressIcon

Result Returns "OK" on success.

Description

For best results use a PNG with alpha channel, so you don't see a border. Size should be 64 x 64 Pixels (72 dpi). If the picture does not fit, the plugin tries to scale it.

Alpha Channel is not supported on Windows 2000, but works on Windows XP and newer.

Internally we use GraphicsMagick, so all the image formats supported by GraphicsMagick should work.

If there is no image, there is more room for your text in the dialog.

Examples

Set Image:

MBS("ProgressDialog.SetImage"; Globals::ProgressLogo)

130.21 ProgressDialog.SetImageHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	9.2	Yes	Yes	No	No	No

MBS("ProgressDialog.SetImageHeight"; Height)

Parameters

Height

The new height.

64

Result Returns OK or error.

Description

Sets the height for the image view showing the image.

Default is 64 points.

Image is stretched to this size on MacOS.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	9.2	Yes	Yes	No	No	No

MBS("ProgressDialog.SetImageWidth"; Width)

Parameters

Width

The new width.

64

Result Returns OK or error.

Description

Sets the width for the image view showing the image.

Default is 64 points.

Image is stretched to this size on MacOS.

130.23 ProgressDialog.SetPosition

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetPosition"; X; Y)

Parameters

X

Relative x coordinate.

100

Y

Relative y coordinate.

100

Result Returns "OK" on success.

Description

With X and Y you can move the dialog relative to the top left corner of the main screen. Use functions like Screen.Height to learn about screen height.

130.24 ProgressDialog.SetPositionCentered

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

```
MBS( "ProgressDialog.SetPositionCentered" { ; X; Y } )
```

Parameters

X

Optional

Optional, Relative x coordinate.

0

Y

Optional

Optional, Relative y coordinate.

0

Result Returns "OK" on success.

Description

With X and Y you can move the dialog relative to the center of the main screen. Use functions like Screen.Height to learn about screen height.

Examples

Center dialog:

```
MBS( "ProgressDialog.SetPositionCentered" )
```

Center dialog a little bit lower on screen:

```
MBS( "ProgressDialog.SetPositionCentered"; 0; 200 )
```

130.25 ProgressDialog.SetProgress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetProgress"; value)

Parameters

value

New value. Range from 0 to 100 for a normal progress bar or negative value for indeterminated progress bar.

50

Result Returns "OK" on success.

Description

Depending on your range, you need to multiply/divide to get into range from 0 to 100. Typically you can simply do math like this: $\$index * 100 / \$total$. That calculates the percentage of files processed if you have $\$total$ files and current file index is $\$index$.

If you process more than 100 items, please consider only updating progress if you actually moved forward 1% . You can do this by keeping variable with last progress you set and update only if new progress value is bigger.

Please do not call this function more than one time per second to avoid the progress window redraw to slow down your process.

Examples

Set progress bar to indeterminate while preparing operations:

```
MBS( "ProgressDialog.SetProgress"; -1 )
```

Set later progress bar to current value:

```
MBS( "ProgressDialog.SetProgress"; $index * 100 / $total )
```

Update only when changed by one percent:

```
Set Variable [ $percent; Value:Round(100 * $current / $total; 0) ]
If [ $percent > $lastpercent ]
Set Variable [ $lastpercent; Value:$percent ]
Set Variable [ $r; Value:MBS( "ProgressDialog.SetProgress"; $percent ) ]
End If
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetShowButton"; Flag)

Parameters

Flag

Whether to show or hide the show button.

1

Result Returns "OK" on success.

Description

Examples

Hide button:

MBS("ProgressDialog.SetShowButton"; 0)

Show button:

MBS("ProgressDialog.SetShowButton"; 1)

130.27 ProgressDialog.SetTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetTitle"; title)

Parameters**title**

The new text for the title.

"Please wait."

Result Returns "OK" on success.

Description**Examples**

Sets new title text:

MBS("ProgressDialog.SetTitle"; "Please wait.")

130.28 ProgressDialog.SetTopMost

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.6	Yes	Yes	No	No	No

MBS("ProgressDialog.SetTopMost"; value)

Parameters**value**

The new topmost state.

1

Result Returns "OK" or error message.

Description

Default is to have topmost enabled.

Top most means that dialog floats over other windows.

Examples

Enable top most:

```
MBS( "ProgressDialog.SetTopMost"; 1 )
```

Disable top most:

```
MBS( "ProgressDialog.SetTopMost"; 0 )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.SetTopText"; text)

Parameters

text

The new top text.

"Generating thumbnails..."

Result Returns "OK" on success.

Description

Here you can show what your solution is doing.

Please do not call this function more than one time per second to avoid the progress window redraw to slow down your process.

Examples

Report activity in dialog:

MBS("ProgressDialog.SetTopText"; "Downloading images...")

130.30 ProgressDialog.Show

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS("ProgressDialog.Show" { ; NoActivate })

Parameters

NoActivate

Optional

Available in MBS FileMaker Plugin 8.0 or newer.

Whether to activate the window (0) or not to activate (1). By default we move window to front to show user. But if you prefer being in background, you can simply show without activation.

0

Result Returns "OK" on success.

Description

Examples

Show the progress dialog:

```
MBS( "ProgressDialog.Show" )
```

Hide the progress dialog:

```
MBS( "ProgressDialog.Hide" )
```

Setup a progress window before an upload:

```
Set Variable [ $result; Value:MBS("ProgressDialog.Reset") ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetCancel"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetProgress"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetTopText"; "Uploading text...") ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetShowButton"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.Show") ]
```

130.31 ProgressDialog.Update

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 ProgressDialog	2.6	Yes	Yes	No	No	No

MBS("ProgressDialog.Update")

Result Returns "OK" on success.

Description

When you change something on the dialog, it's marked for needing a redraw and this redraw is normally performed when there is some free CPU time like in a script pause. You can call this function to redraw now.

Please do not call this function more than 10 times a second in your script. Else you may see a slowdown in script performance as redrawing the dialog takes time.

Examples

Updates dialog with new button caption:

```
MBS( "ProgressDialog.SetButtonCaption"; "Abbrechen" )
MBS( "ProgressDialog.Update" )
```

MBS("Progressdialog.SetScript"; FileName; ScriptName { ; Parameter })

Parameters

FileName

The file name for the script.

Get(FileName)

ScriptName

The script name to run. An empty name will disable the script calling.

"CancelScript"

Parameter

Optional

The script parameter to pass.

Result Returns OK or error.

Description

Examples

Set script to run

```
MBS("ProgressDialog.SetScript"; Get(FileName); "CancelScript"; "optional parameter")
```

Created 14th February 2017, last changed 14th February 2017.

Chapter 131

Proj

Transform geo coordinate between projections with PROJ library.

Learn more about this open source library here: <https://proj.org>

131.1 Proj.BatchTransform

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Proj	10.1	Yes	Yes	Yes	Yes	Yes

MBS("Proj.BatchTransform"; Source Projection; Output Projection)

Parameters

Source Projection

The definition string for the source projection.

"+proj=longlat +datum=WGS84"

Output Projection

The definition for the output projection.

"+proj=utm +zone=31 +datum=WGS84"

Result Returns JSON or error.

Description

Reads x/y/z from JSON array and returns new JSON array with results.

Example Databases

- [Proj/PROJ Library](#)

Created 22nd January 2020, last changed 22nd January 2020.

131.2 Proj.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Proj	10.1	Yes	Yes	Yes	Yes	Yes

MBS("Proj.Initialize"; Path)

Parameters

Path

The file path to the framework or library.
 ”/Library/Frameworks/PROJ.framework”

Result Returns OK or error.

Description

Please pass file path to DLL for Windows, framework for iOS/macOS and path to shared object for Linux. The plugin does not care where you install it or whether you just copy the library with your solution.

Examples

Load framework on Mac from default location:

MBS("Proj.Initialize"; ”/Library/Frameworks/PROJ.framework”)

131.3 Proj.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Proj	10.1	Yes	Yes	Yes	Yes	Yes

MBS("Proj.IsInitialized")

Result Returns 1, 0 or error.

Description

Returns 1 if initialized or 0 if not.

See also

- 120.10 OCR.IsInitialized 6121

131.4 Proj.Transform

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Proj	10.1	Yes	Yes	Yes	Yes	Yes

MBS("Proj.Transform"; Source Projection; Output Projection { ; X; Y; Z })

Parameters

Source Projection

The definition string for the source projection.

"+proj=longlat +datum=WGS84"

Output Projection

The definition for the output projection.

"+proj=utm +zone=31 +datum=WGS84"

X

Optional

The x coordinate to transform.

Y

Optional

The y coordinate to transform.

Z

Optional

The z coordinate to transform. Not used by all transformations.

Result Returns JSON or error.

Description

Created 22nd January 2020, last changed 22nd January 2020.

Chapter 132

QTExport

Older QuickTime based functions on OS X and Windows to transcode videos.

Can be used to compress videos as MPEG 4 video file. Or with LAME encoder component to create MP3 files.

Deprecated and only for 32-bit available. Will be removed someday.

132.1 QTExport.CloseMovie

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTExport	6.1	Yes	Yes	No	No	No

MBS("QTExport.CloseMovie"; QTExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTExporter

The exporter reference number.

\$\$QTExporter

Result Returns OK or error.

Description

Please close movie before you load a new one.

Examples

Close Exporter:

```
If [ not IsEmpty($$QT) ]
```

6550

CHAPTER 132. QTEXTPORT

```
Set Variable [ $r; Value:MBS("QTEExport.Release"; $$QT) ]  
Set Variable [ $$QT; Value:"" ]  
End If
```

See also

- 132.14 QTEExport.OpenMovie 6565
- 132.15 QTEExport.Release 6566

Created 1st March 2016, last changed 1st March 2016.

132.2 QTEExport.Duration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.Duration"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns number or error.

Description

Returns duration in seconds.

Examples

Query duration:

```
Set Field [ QTMovieExporter::Duration; MBS("QTEExport.Duration"; $$QT) ]
```

See also

- 39.3 AVEExport.Duration

1030

Example Databases

- [Mac only/Movies/QTMovieExporter](#)

Created 1st March 2016, last changed 1st March 2016.

132.3 QTExport.Export

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTExport	6.1	Yes	Yes	No	No	No

MBS("QTExport.Export"; QTExporter; Path; FileType; Creator Code { ; Flags })

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTExporter

The exporter reference number.

\$\$QTExporter

Path

The native path for the destination file.

"/Users/cs/Desktop/test.mp3"

FileType

The file type code.

"MP3 "

Creator Code

The creator code. We normally use TVOD for the QuickTime Player.

"TVOD"

Flags

Optional

The flags.

0

Result Returns OK or error.

Description

The export is running modal and may show a progress dialog.

Deprecated. Please move to use AVExport functions for new projects.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Run exporter:

```
Set Variable [ $r; Value:MBS("QTExport.Export"; $$QT; QTMovieExporter::Output File Path; "MP3 "; "TVOD") ]
```

132.3. *QTEXTORT.EXPORT*

132.4 QTEExport.GetHighResolution

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.GetHighResolution"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns setting or error.

Description

Returns 1 if enabled or 0 if disabled.

See also

- 132.16 QTEExport.SetHighResolution

6567

Created 1st March 2016, last changed 1st March 2016.

132.5 QTEExport.GetMovieHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.GetMovieHeight"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns value or error.

Description

See also

- 132.6 QTEExport.GetMovieWidth 6556
- 132.17 QTEExport.SetMovieHeight 6568
- 132.18 QTEExport.SetMovieWidth 6569

Created 1st March 2016, last changed 1st March 2016.

132.6 QTEExport.GetMovieWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.GetMovieWidth"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns value or error.

Description

See also

- 132.5 QTEExport.GetMovieHeight 6555
- 132.17 QTEExport.SetMovieHeight 6568

Created 1st March 2016, last changed 1st March 2016.

132.7 QTEExport.GetSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.GetSettings"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns text or error.

Description

The plugin encoded settings as base64 text, so you can store it in a global preferences field. Please use QTEExport.SetSettings to restore those settings for another export.

Examples

Query settings:

```
MBS("QTEExport.GetSettings"; $$QT)
```

See also

132.8 QTEExport.GetShowProgress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.GetShowProgress"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns value or error.

Description

Default is to 1 (on).

See also

- 132.20 QTEExport.SetShowProgress

6571

Created 1st March 2016, last changed 1st March 2016.

132.9 QTExport.GetSoundChannelCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTExport	6.1	Yes	Yes	No	No	No

MBS("QTExport.GetSoundChannelCount"; QTExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTExporter

The exporter reference number.

\$\$QTExporter

Result Returns value or error.

Description

Examples

Query channel count:

MBS("QTExport.GetSoundChannelCount"; \$\$QT)

See also

- 132.21 QTExport.SetSoundChannelCount

6572

Created 1st March 2016, last changed 1st March 2016.

132.10 QTextExport.GetSoundSampleRate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTextExport	6.1	Yes	Yes	No	No	No

MBS("QTextExport.GetSoundSampleRate"; QTextExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTextExporter

The exporter reference number.

\$\$QTextExporter

Result Returns value or error.

Description

Examples

Query sample rate:

MBS("QTextExport.GetSoundSampleRate"; \$\$QT)

See also

- 132.11 QTextExport.GetSoundSampleSize 6561
- 132.22 QTextExport.SetSoundSampleRate 6573
- 132.23 QTextExport.SetSoundSampleSize 6574

Created 1st March 2016, last changed 1st March 2016.

132.11 QTEExport.GetSoundSampleSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.GetSoundSampleSize"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns value or error.

Description

Examples

Query sample size:

MBS("QTEExport.GetSoundSampleSize"; \$\$QT)

See also

- 132.10 QTEExport.GetSoundSampleRate 6560
- 132.22 QTEExport.SetSoundSampleRate 6573
- 132.23 QTEExport.SetSoundSampleSize 6574

Created 1st March 2016, last changed 1st March 2016.

132.12 QTEExport.ListExporters

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.ListExporters" { ; Type })

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Type

Optional

The component type. Default is "spit" for movie exporters.

Result Returns list or error.

Description

The list returned is tab separated: Type, SubType, Manufacturer, Name and Info texts. If no entry is found for the given type, an empty list is returned.

Examples

List exporters:

```
MBS("QTEExport.ListExporters")
```

132.13 QTEExport.OpenExporter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.OpenExporter"; SubType; Manufacturer)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

SubType

The exporter component subtype to identify the exporter to open.

"mp3 "

Manufacturer

The manufacturer of the exporter component.

"PYEh"

Result Returns reference number or error.

Description

This function is only available for 32-bit. It may work on FileMaker Mac and Windows. For Windows please install QuickTime Player 7 for Windows.

Please use QTEExport.ListExporters to get a list of installed exporter components.

Please call AVExport.Release later to free the exporter.

Examples

Open Exporter:

```
Set Variable [ $$QT; Value:MBS("QTEExport.OpenExporter"; QTMovieExporter::ExporterSubType; QT-
MovieExporter::ExporterManufacturer) ]
```

```
If [ MBS("IsError") ]
```

```
Show Custom Dialog [ "Failed to create export sessio..."; MBS("Text.RemovePrefix"; $$AVExport; " [ MBS
] ") ]
```

```
Exit Script [ ]
```

```
Else
```

```
Set Variable [ $r; Value:MBS("QTEExport.SetShowProgress"; $$QT; 1) ]
```

```
Set Variable [ $r; Value:MBS("QTEExport.SetHighResolution"; $$QT; 1) ]
```

```
End If
```

132.14 QTextort.OpenMovie

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTextort	6.1	Yes	Yes	No	No	No

MBS("QTextort.OpenMovie"; QTextorter; Path)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTextorter

The exporter reference number.

\$\$QTextorter

Path

The native file path to the movie file.

"/Users/cs/Desktop/test.mov"

Result Returns OK or error.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Open Movie:

```
Set Variable [ $r; Value:MBS("QTextort.OpenMovie"; $$QT; QTMovieExporter::Input File Path) ]
```

132.16 QTExport.SetHighResolution

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTExport	6.1	Yes	Yes	No	No	No

MBS("QTExport.SetHighResolution"; QTExporter; Value)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTExporter

The exporter reference number.

\$\$QTExporter

Value

The new setting. 1 to enable, 0 to disable.

1

Result Returns OK or error.

Description

If you set it to 1 and you have QuickTime 7 on your Mac OS X copy, you can e.g. export a movie with 96000 HZ audio.

132.19 QTextExport.SetSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTextExport	6.1	Yes	Yes	No	No	No

MBS("QTextExport.SetSettings"; QTextExporter; Settings)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTextExporter

The exporter reference number.

\$\$QTextExporter

Settings

The settings as base64 encoded text as returned by QTextExport.GetSettings.

MyPreferences::ExportSettings

Result Returns OK or error.

Description

You can save the settings text you got from QTextExport.GetSettings and restore it with this function. Please make sure you use the same settings for the same exporter component.

Examples

Load Settings from field:

```
MBS("QTextExport.SetSettings"; $$QT; QTMovieExporter::Settings)
```

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Value

The new setting. Can be 1 to show progress dialog or 0 to hide it.

1

Result Returns OK or error.

Description

Pass 1 to show progress dialog automatically or 0 to hide it.

Examples

Enable progress dialog:

MBS("QTEExport.SetShowProgress"; \$QTEExport; 1)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTextExport	6.1	Yes	Yes	No	No	No

MBS("QTextExport.SetSoundChannelCount"; QTextExporter; Value)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTextExporter

The exporter reference number.

\$\$QTextExporter

Value

The new channel count.

2

Result Returns OK or error.

Description

Examples

Sets sound settings:

```
Set Variable [ $r; Value:MBS("QTextExport.SetSoundChannelCount"; $$QT; 1) ]
```

```
Set Variable [ $r; Value:MBS("QTextExport.SetSoundSampleSize"; $$QT; 8) ]
```

```
Set Variable [ $r; Value:MBS("QTextExport.SetSoundSampleRate"; $$QT; 22050) ]

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTExporter

The exporter reference number.

\$\$QTExporter

Value

The new sample rate.

44100

Result Returns OK or error.

Description

Examples

Sets sound settings:

```
Set Variable [ $r; Value:MBS("QTExport.SetSoundChannelCount"; $$QT; 1) ]
```

```
Set Variable [ $r; Value:MBS("QTExport.SetSoundSampleSize"; $$QT; 8) ]
```

132.23 QTextport.SetSoundSampleSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTextport	6.1	Yes	Yes	No	No	No

MBS("QTextport.SetSoundSampleSize"; QTextporter; Value)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTextporter

The exporter reference number.

\$\$QTextporter

Value

The new sample size in bits.

16

Result Returns OK or error.

Description

Examples

Sets sound settings:

```
Set Variable [ $r; Value:MBS("QTextport.SetSoundChannelCount"; $$QT; 1) ]
Set Variable [ $r; Value:MBS("QTextport.SetSoundSampleSize"; $$QT; 8) ]
Set Variable [ $r; Value:MBS("QTextport.SetSoundSampleRate"; $$QT; 22050) ]

132.24 QTEExport.SetupDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.SetupDialog"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns OK or error.

Description

The user can define the settings and you can store those in your preferences.

This way the user doesn't need to select settings each time.

If the user presses cancel button the text "Cancel" is returned.

Examples

Show setup dialog:

```
MBS("QTEExport.SetupDialog"; $$QT)
```

Example Databases

- [Mac only/Movies/QTMovieExporter](#)

Created 1st March 2016, last changed 1st March 2016.

132.25 QTEExport.Validate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 QTEExport	6.1	Yes	Yes	No	No	No

MBS("QTEExport.Validate"; QTEExporter)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

QTEExporter

The exporter reference number.

\$\$QTEExporter

Result Returns OK or error.

Description

Returns "Valid" in case of success.

Examples

Validate settings:

```
MBS("QTEExport.Validate"; $$QT)
```

Created 1st March 2016, last changed 1st March 2016.

Chapter 133

QTMovie

QuickTime Movie access.

Deprecated. Please move to AVPlayer functions for playing sound.

133.1 QTMovie.Autoplay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS("QTMovie.Autoplay"; Movie)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Movie

The reference number of the movie. Please use QTMovie.OpenContainer, QTMovie.OpenFile or QTMovie.OpenURL function to get movie reference.

\$mov

Result Returns OK or error.

Description

The autoplay method configures a QTMovie object to begin playing as soon as enough data is available that the playback can continue uninterrupted to the end of the movie. This is most useful for movies being loaded from a remote URL or from an extremely slow local device. For movies stored on most local devices, this method has the same effect as the QTMovie.play method.

Examples

Play now

MBS("QTMovie.Autoplay"; \$Movie)

Play when enough data is loaded:

MBS("QTMovie.Autoplay"; \$Movie)

133.2 QTMovie.CurrentFrameImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS("QTMovie.CurrentFrameImage"; Movie { ; ImageType; Filename })

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters**Movie**

The reference number of the movie. Please use QTMovie.OpenContainer, QTMovie.OpenFile or QTMovie.OpenURL function to get movie reference.

\$mov

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns an image as container value or error.

Description**See also**

133.3 QTMovie.FormatTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	5.0	Yes	No	No	No	No

MBS("QTMovie.FormatTime"; Seconds)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Seconds

The number of seconds to format.

123

Result Returns text or error.

Description

Examples

Format one second:

```
MBS("QTMovie.FormatTime"; 1)
```

Format 3 hours, 2 minutes, 1 second and one millisecond

```
MBS("QTMovie.FormatTime"; 3600*3 + 60*2 + 1 + 1/1000)
```

Created 18th August 2014, last changed 18th August 2014.

133.18 QTMovie.OpenContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS("QTMovie.OpenContainer"; Container)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Container

The container with the movie file.

MyTable::MovieContainer

Result Returns Movie Reference or error.

Description

This loads the movie in RAM.

Returns the movie reference which must be released with QTMovie.Release function.

See also QTMovie.OpenFile or QTMovie.OpenURL.

Works with normal container, compressed container and referenced container file.

For interactive containers it may be better to use MovieView.Movie as FileMaker already loaded the video and we can reference it instead of loading it again.

Examples

Open Movie

```
$Movie = MBS( "QTMovie.OpenContainer"; MyTable::MovieContainer )
```

Close it later

```
MBS( "QTMovie.Release"; $Movie )
```

Load and play:

```
# Open Container
```

```
Set Variable [ $$Movie; Value:MBS("QTMovie.OpenContainer"; QTMovie::MovieContainer) ]
```

```
# Play it
```

```
Set Variable [ $r; Value:MBS("QTMovie.Play"; $$Movie) ]
```

```
# later you should release movie to free memory
```

133.19 QTMovie.OpenFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS("QTMovie.OpenFile"; Path)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Path

The native file path to the movie file.

"/Test.mov"

Result Returns Movie Reference or error.

Description

Returns the movie reference which must be released with QTMovie.Release function.

See also QTMovie.OpenContainer or QTMovie.OpenURL.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Open Movie

```
$Movie = MBS( "QTMovie.OpenFile"; "/Test.mov" )
```

Close it later

```
MBS( "QTMovie.Release"; $Movie )
```

133.21 QTMovie.ParseTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	5.0	Yes	No	No	No	No

MBS("QTMovie.ParseTime"; Time value)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Time value

The time text to parse.

"04:03:02:01.12/60"

Result Returns seconds or error.

Description

May return zero if wrong format.

Examples

Parses a time value:

MBS("QTMovie.ParseTime"; "04:03:02:01.12/60")

133.22 QTMovie.Play

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS("QTMovie.Play"; Movie)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Movie

The reference number of the movie. Please use QTMovie.OpenContainer, QTMovie.OpenFile or QTMovie.OpenURL function to get movie reference.

\$mov

Result Returns OK or error.

Description

Without an actual movie view, this will only play sound.

Examples

Play movie:

```
MBS( "QTMovie.Play"; $Movie )
```

Stop movie:

```
MBS( "QTMovie.Stop"; $Movie )
```

Load and play:

```
# Open Container
Set Variable [ $$Movie; Value:MBS("QTMovie.OpenContainer"; QTMovie::MovieContainer) ]
# Play it
Set Variable [ $r; Value:MBS("QTMovie.Play"; $$Movie) ]
# later you should release movie to free memory

133.23 QTMovie.PosterImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS("QTMovie.PosterImage"; Movie { ; ImageType; Filename })

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Movie

The reference number of the movie. Please use QTMovie.OpenContainer, QTMovie.OpenFile or QTMovie.OpenURL function to get movie reference.

\$mov

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns an image as container value or error.

Description

133.24 QTMovie.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS("QTMovie.Release"; Movie)

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

Parameters

Movie

The reference number of the movie. Please use QTMovie.OpenContainer, QTMovie.OpenFile or QTMovie.OpenURL function to get movie reference.

\$mov

Result Returns OK or error.

Description

If you forget to release a movie, the movie object stays in memory and if memory is low, FileMaker will crash.

To avoid this the plugin will only open up to 50 movies simultaneously.

Chapter 134

QuickLook

Query file icons and previews.

134.1 Icon.ClearIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 QuickLook 78 Files	2.7	Yes	No	Yes, macOS only	No	No

MBS("Icon.ClearIcon"; Path)

Parameters

Path

The path to the file or folder.

"/Applications"

Result Returns OK on success.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Clears icon of a file on the desktop:

```
MBS("Icon.ClearIcon"; "/Users/Christian/Desktop/test.pdf")
```

134.2 Icon.GetIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 QuickLook 78 Files	2.3	Yes	Yes	Yes	No	No

MBS("Icon.GetIcon"; Path; Size)

Parameters

Path

The path to the file or folder.

"/Applications"

Size

The size of the icon picture you'd like to have. Suggested range is from 16 to 512 pixel.

512

Result Container value.

Description

Size specifies the icon size from 16 to 512 pixel. The container value returned includes PNG data with alpha, JPEG preview, filename and size.

Added Windows support in plugin version 4.2.

On Mac Server this may not work well as the Server user account has no icon database.

See also [Icon.GetIconWithQuickLook](#).

Examples

Queries icon of iPhoto app:

MBS("Icon.GetIcon"; "/Applications/iPhoto.app"; 512)

See also

134.3 Icon.GetIconWithQuickLook

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 QuickLook 78 Files	2.3	Yes	Yes	Yes	No	No

MBS("Icon.GetIconWithQuickLook"; Path; Size)

Parameters

Path

The path to the file or folder.
"/Applications"

Size

The size of the icon picture you'd like to have. Suggested range is from 16 to 512 pixel.
512

Result Container value.

Description

This method tries first to get QuickLook preview for the file, before it tries the icon. QuickLook requires Mac OS X 10.5. Size specifies the icon size from 16 to 512 pixel. The container value returned includes PNG data with alpha, JPEG preview, filename and size.

Version 4.3 adds support for Windows. We now query same thumbnail as explorer uses.
See also Icon.GetIcon.

Examples

Queries preview on iPhoto app:

MBS("Icon.GetIconWithQuickLook"; "/Applications/iPhoto.app"; 512)

134.4 Icon.SetIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 QuickLook 78 Files	2.7	Yes	No	Yes, macOS only	No	No

MBS("Icon.SetIcon"; Path; image)

Parameters

Path

The path to the file or folder.

"/Applications"

image

A container value with some picture. Can be JPEG, GIF, BMP, PNG or TIFF.

\$image

Result Returns OK on success.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Sets icon of a file on the desktop:

```
MBS("Icon.SetIcon"; "/Users/Christian/Desktop/test.pdf"; Data::image)
```

134.5 QLPreviewPanel.AddContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 QuickLook	8.4	Yes	No	No	No	Yes

MBS("QLPreviewPanel.AddContainer"; Container { ; Title })

Parameters

Container

the container to show.

MyTable::MyField

Title

Optional

The title for the container.

"My Holiday"

Result Returns OK or error.

Description

If you have an existing file, better use QLPreviewPanel.AddFile function.

The container can contain a file supported by QuickLook for previewing.

Either we use file path from FileMaker's external container storage directly or we write a temporary file, which is cleared later when app quits or panel is cleared.

Examples

Show containers:

```
# Prepare
If [ MBS("QLPreviewPanel.IsVisible") ]
Set Variable [ $r ; Value: MBS("QLPreviewPanel.Hide") ]
End If
Set Variable [ $r ; Value: MBS("QLPreviewPanel.Clear") ]
#
# Add all containers you have
Set Variable [ $r ; Value: MBS("QLPreviewPanel.AddContainer"; Placeholder::Container; "Stratocaster") ]
#
# Run it!
Set Variable [ $r ; Value: MBS("QLPreviewPanel.Show") ]
```

134.17 QLPreviewPanel.Hide

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 QuickLook	4.3	Yes	No	No	No	Yes

MBS("QLPreviewPanel.Hide")

Result Returns OK or error.

Description

Added iOS support for version 8.4.

134.19 QLPreviewPanel.Move

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 QuickLook	4.3	Yes	No	No	No	No

MBS("QLPreviewPanel.Move"; X; Y { ; Duration })

Parameters

X

The new screen position. Distance from top/left edge of main screen in points.

10

Y

The new screen position. Distance from top/Left edge of main screen in points.

50

Duration

Optional

Optional the duration. Can be a value between 0.1 and 5.0. Use zero to disable.

0.5

Result Returns OK or error.

Description

You can use this method to have the panel side by side to your FileMaker layout window.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 QuickLook	4.3	Yes	No	No	No	No

MBS("QLPreviewPanel.Resize"; Width; Height { ; NoAnimation; Duration })

Parameters

Width

The new width of the panel.

600

Height

The new height of the panel.

500

NoAnimation

Optional

Whether to avoid animation. Pass 1 to disable animation. Default is 0 to allow animation.

0

Duration

Optional

Only for Mac: the duration. Can be a value between 0.1 and 5.0.

0.5

Result Returns OK or error.

Chapter 135

RegEx

Regular expressions like in Perl.

135.1 RegEx.CaptureCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.CaptureCount"; RegExRef)

Parameters

RegExRef

The reference number for the regular expression returned from RegEx.Compile.

\$regex

Result Returns number or error.

Description

Examples

Run query:

```
Set Variable [ $Pattern ; Value: "H(.*?)o (.)or(..)" ]
```

```
Set Variable [ $Text ; Value: "Hello World Test" ]
```

```
# Compile
```

```
Set Variable [ $Regex ; Value: MBS("RegEx.Compile"; $Pattern; "CaseLess") ]
```

```
If [ MBS("isError") ]
```

```
Show Custom Dialog [ $Regex ]
```

```
Exit Script [ Text Result: ]
```

```
End If
```

```
Set Variable [ $ExecuteResult ; Value: MBS("RegEx.Execute"; $Regex; $Text; "") ]
```

```
If [ MBS("IsError") = 0 ]  
Show Custom Dialog [ "Captures" ; MBS("Regex.CaptureCount"; $Regex) & " captures" ]  
End If  
# free last  
Set Variable [ $r ; Value: MBS("Regex.Free"; $Regex) ]
```

Created 26th October 2014, last changed 25th November 2017.

135.2 RegEx.Compile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.Compile"; Pattern; CompilerOptions)

Parameters

Pattern

The pattern to use.

"H(*)"

CompilerOptions

A number for the options to use. e.g. 1 for case insensitive or 512 for ungreedy. Add 2 for multiline. Can be given as text or number.

"multiline\$ungreedy"

Result Returns reference number or error.

Description

Returns the regular expression reference which you can then pass to other functions.

Remember to use RegEx.Free to free memory later.

You compile a pattern once. If you use RegEx.Execute several times on it, it may be worth using RegEx.Study for better performance.

Please use \r instead of \n for the pattern as FileMaker uses Mac line endings.

RegEx reference numbers are starting at 13000 and counting up for each new expression.

Compile option	Number	Description
Caseless	1	Do caseless matching
Multiline	2	^ and \$ match newlines within data
Dot All	4	. matches anything including NL
Extended	8	Ignore white space and # comments
Anchored	16	Force pattern anchoring
Dollar End Only	32	\$ not to match newline at end
Ungreedy	512	Invert greediness of quantifiers
No Auto Capture	4096	Disable numbered capturing parentheses (named ones available)
Auto Callout	16384	Compile automatic callouts
FirstLine	262144	Force matching to be before newline
Dup Names	524288	Allow duplicate names for subpatterns
Newline CR	1048576	Set CR as the newline sequence
Newline LF	2097152	Set LF as the newline sequence
Newline CRLF	3145728	Set CRLF as the newline sequence
Newline Any	4194304	Recognize any Unicode newline sequence
Newline Any CRLF	5242880	Recognize CR, LF, and CRLF as newline sequences
BSR Any CRLF	8388608	\R matches only CR, LF, or CRLF
BSR Unicode	16777216	\R matches all Unicode line endings
JavaScript Compatible	33554432	JavaScript compatibility
No start optimize	67108864	Disable match-time start optimizations

Please pass sum of the numbers to select options.

Examples

Compile with double escapement:

```
Set Variable [ $regex ; Value: MBS("RegEx.Compile"; "\\\""; 512+1) ]
```

Find matches in multiline text:

```
Let ( [
pattern = "^GR.";
text = "GR1§GR2 §GR3 ";
CompileOptions = 2 /* multiline */ + 1 /* caseless */ + 4194304 /* newline any */;
ExecuteOptions = 4194304 /* newline any */;
regex = MBS("RegEx.Compile"; pattern; CompileOptions );
result = MBS( "RegEx.FindMatches"; regex; text; ExecuteOptions ; 0 );
r = MBS("RegEx.Free"; regex)
] ; result )
```

Loop and find all matches for pattern:

```
Set Variable [ $pattern ; Value: "(USt\-ID:? | USt\-IDNR\.:? | Umsatzsteuer\-ID:? | VAT\-ID:?) [ \s ] ?(DE) [ \s ] ?( [ 0-9 ] { 9 } )" ]
Set Variable [ $ExecuteOptions ; Value: 0 ]
Set Variable [ $CompileOptions ; Value: "caseless" ]
Set Variable [ $regex ; Value: MBS("RegEx.Compile"; $Pattern; $CompileOptions) ]
Set Variable [ $offset ; Value: 0 ]
```

Loop

```
Set Variable [ $r ; Value: MBS("RegEx.Execute"; $regex; RegEx::Text; $ExecuteOptions; $offset) ]
Exit Loop If [ $r < 4 ]
Set Variable [ $s1 ; Value: MBS("RegEx.Substring"; $RegEx; 1) ]
Set Variable [ $s2 ; Value: MBS("RegEx.Substring"; $RegEx; 2) ]
Set Variable [ $s3 ; Value: MBS("RegEx.Substring"; $RegEx; 3) ]
Show Custom Dialog [ $s1 & $s2 & $s3 ]
Exit Loop If [ MBS("IsError") ]
Set Variable [ $offset ; $offset + Value: GetAsNumber(GetValue(MBS("RegEx.Results"; $regex); 2)) ]
End Loop
Set Variable [ $r ; Value: MBS("RegEx.Free"; $RegEx) ]
```

135.3 RegEx.Execute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.Execute"; RegExRef; Text; ExecuteOptions { ; Offset })

Parameters

RegExRef

The reference number for the regular expression returned from RegEx.Compile.

\$regex

Text

The text to search.

"Hello"

ExecuteOptions

The options for executing. Can be given as text or number.

0

Offset

Optional

Optional the offset in the text to start. Can be in range from 0 to length(text).

0

Result Returns result or error.

Description

You need to compile pattern before with RegEx.Compile function.

Returns the number of results.

Use RegEx.Results function to get list of results.

Please pass sum of the numbers to select options.

Examples

Run query and show substrings:

```
Set Variable [ $Pattern ; Value: "H(.*?)o (.)or(.)" ]
```

```
Set Variable [ $Text ; Value: "Hello World Test" ]
```

```
# Compile
```

```
Set Variable [ $Regex ; Value: MBS("RegEx.Compile"; $Pattern; "CaseLess") ]
```

```
If [ MBS("isError") ]
```

```
Show Custom Dialog [ $Regex ]
```

```
Exit Script [ Text Result: ]
```

```
End If
```

```
Set Variable [ $ExecuteResult ; Value: MBS("RegEx.Execute"; $Regex; $Text; "" ) ]
```

```
If [ MBS("IsError") = 0 ]
```

```
Show Custom Dialog [ "Captures" ; MBS("RegEx.CaptureCount"; $Regex) ]
```

```
Show Custom Dialog [ "Substrings" ; MBS("RegEx.Substring"; $Regex) & $&
```

Execute option	Number	Description
Anchored	16	Force pattern anchoring
Not BOL	128	Subject string is not the beginning of a line
Not EOL	256	Subject string is not the end of a line
Not Empty	1024	An empty string is not a valid match
Partial	32768	Allow partial results.
Newline CR	1048576	Set CR as the newline sequence

135.4 RegEx.FindMatches

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	5.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "RegEx.FindMatches"; RegExRef; Text; ExecuteOptions { ; ReturnWholeMatch; NoReturnEnding } )
```

Parameters

RegExRef

The reference number for the regular expression returned from RegEx.Compile.

\$regex

Text

The text to search.

"Hello"

ExecuteOptions

The options for executing. Can be given as text or number.

0

ReturnWholeMatch

Optional

Pass 1 to return whole match including text you have in the pattern. Else pass 0 to get only the text from your captures.

1

NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

Result Returns list or error.

Description

Can be used for example to find tokens or placeholders in a text.

If your search pattern has no captures, please pass 1 for ReturnWholeMatch or you won't see anything in result.

Please pass sum of the numbers to select options.

Examples

Search for numbers in text:

```
Set Variable [ $regex; Value:MBS("RegEx.Compile"; "(\\d+)\\D"; 512+1) ]
```

```
Set Variable [ $result; MBS("RegEx.FindMatches"; $regex; "aa 123 abc"; 0; 0) ]
```

```
Set Variable [ $r; Value:MBS("RegEx.Free"; $regex) ]
```

Execute option	Number	Description
Anchored	16	Force pattern anchoring
Not BOL	128	Subject string is not the beginning of a line
Not EOL	256	Subject string is not the end of a line
Not Empty	1024	An empty string is not a valid match
Partial	32768	Allow partial results.
Newline CR	1048576	Set CR as the newline sequence
Newline LF	2097152	Set LF as the newline sequence
Newline CRLF	3145728	Set CRLF as the newline sequence
Newline Any	4194304	Recognize any Unicode newline sequence
Newline Any CRLF	5242880	Recognize CR, LF, and CRLF as newline sequences
BSR Any CRLF	8388608	\R matches only CR, LF, or CRLF
BSR Unicode	16777216	\R matches all Unicode line endings
No start optimize	67108864	Disable match-time start optimizations
Partial Hard	134217728	Return partial result if found before .
Not Empty At Start	268435456	An empty string at the start of the subject is not a valid match
UCP	536870912	Use Unicode properties for \d, \w, etc.

Find cd and 34 in the following text:

```
Set Variable [ $regex; Value:MBS("RegEx.Compile"; "<code>..(..)</code>"; 512+1) ]
Set Variable [ $result; Value:MBS("RegEx.FindMatches"; $regex; "<code>abcdef</code>§<code>123456</code>";
0; 0) ]
Set Variable [ $r; Value:MBS("RegEx.Free"; $regex) ]
```

Find matches in multiline text:

```
Let ( [
pattern = "^GR.";
text = "GR1$GR2 $GR3 ";
CompileOptions = 2 /* multiline */ + 1 /* caseless */ + 4194304 /* newline any */;
ExecuteOptions = 4194304 /* newline any */;
regex = MBS("RegEx.Compile"; pattern; CompileOptions );
result = MBS( "RegEx.FindMatches"; regex; text; ExecuteOptions ; 0 );
r = MBS("RegEx.Free"; regex)
]; result )
```

135.6 RegEx.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	5.3	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.List")

Result Returns list or error.

Description

This helps debugging, especially finding scripts which do not release their objects properly.

135.6.1 Blog Entries

- [MBS FileMaker Plugin, version 5.3pr4](#)

Created 21st September 2015, last changed 21st September 2015.

135.7 RegEx.Match

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.Match"; Pattern; Text; CompilerOptions; ExecuteOptions)

Parameters

Pattern

The pattern to use.

"H(.*)"

Text

The text to search.

"Hello"

CompilerOptions

A number for the options to use. e.g. 1 for case insensitive or 512 for ungreedy. Can be given as text or number.

512+1

ExecuteOptions

The options for executing. Can be given as text or number.

0

Result Returns 0, 1 or error.

Description

This compiles the pattern, executes it and looks if we have a match or not.

Returns 1 if matches and 0 if not.

Please pass sum of the numbers to select options.

Examples

Match Hello with pattern:

```
MBS( "RegEx.Match"; "H(.*)o"; "Hello")
```

Match case less:

```
MBS( "RegEx.Match"; "H(.*)o"; "hello"; 1)
```

135.8 RegEx.MatchList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.MatchList"; Pattern; List; CompilerOptions; ExecuteOptions)

Parameters

Pattern

The pattern to use.

"H(*)"

List

The list of texts to search.

"Hello"

CompilerOptions

A number for the options to use. e.g. 1 for case insensitive or 512 for ungreedy. Can be given as text or number.

512+1

ExecuteOptions

The options for executing. Can be given as text or number.

0

Result Returns list or error.

Description

This compiles the pattern, executes it and looks if we have a match or not for each list item. Returns the list items which match.

Please pass sum of the numbers to select options.

Examples

Match Hello with pattern:

MBS("RegEx.MatchList"; "H(*)o"; "Hello\$Test\$World\$House\$Test")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.NamedSubstring"; RegExRef; Name)

Parameters

RegExRef

The reference number for the regular expression returned from RegEx.Compile.

\$regex

Name

The name of the substring to find.

"test"

Result Returns OK or error.

Description

Examples

Query text of named substring

```
$regex = MBS("RegEx.Compile"; "H(?P<name>.*); 0)
```

```
$r = MBS("RegEx.Execute"; "Hello")
```

```
$text = MBS("RegEx.NamedSubstring"; $regex; "name")
```

135.13 RegEx.Pattern

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.Pattern"; RegExRef)

Parameters

RegExRef

The reference number for the regular expression returned from RegEx.Compile.
\$regex

Result Returns OK or error.

Description

Examples

Query pattern:

```
Set Variable [ $Pattern ; Value: "H(.*?)o (.)or(.)" ]
```

```
Set Variable [ $Regex ; Value: MBS("RegEx.Compile"; $Pattern; "CaseLess") ]
```

```
Show Custom Dialog [ "Pattern used" ; MBS( "RegEx.Pattern"; $RegEx ) ]
```

```

Created 26th October 2014, last changed 25th November 2017.

135.14 RegEx.Quote

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	7.5	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.Quote"; Text)

Parameters

Text

The text to quote.

"Hello."

Result Returns text or error.

Description

Escapes all potentially meaningful regexp characters in text. The returned string, used as a regular expression, will exactly match the original string. For example, "1.5-2.0?" may become: "1\.5\-2\.0\?".

Note QuoteMeta behaves the same as perl's QuoteMeta function, **except** that it escapes the NUL character (`\0`) as backslash + 0, rather than backslash + NUL.

Examples

Escape a test string:

Show Custom Dialog ["RegEx escaped" ; MBS("RegEx.Quote"; "Hello? *test* 123")]

Example result: "Hello\?*\test*\123"

135.14.1 Blog Entries

Created 17th October 2017, last changed 25th November 2017.

135.15 RegEx.Replace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	7.5	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.Replace"; Text; Pattern; Rewrite { ; Options; All })

Parameters

Text

The text to use.

"hello world"

Pattern

The pattern to use.

"1+"

Rewrite

The output pattern.

"\1\1"

Options

Optional

The PCRE options. Can be given as text or number.

0

All

Optional

Whether to replace all occurrences. Pass 1 to replace all or 0 to replace once. Default 0.

0

Result Returns new text or error.

Description

You can replace the first match of pattern in text with rewrite pattern. Within rewrite pattern, backslash-escaped digits (\1 to \9) can be used to insert text matching corresponding parenthesized group from the pattern. \0 in rewrite refers to the entire matching text.

Examples

Replace:

```
MBS( "RegEx.Replace"; "yabba dabba doo"; "b+"; "d" )
```

Example result: "yadba dabba doo"

135.16 RegEx.ReplaceAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	7.5	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.ReplaceAll"; Text; Pattern; Rewrite { ; Options })

Parameters

Text

The text to use.

"hello world"

Pattern

The pattern to use.

"1+"

Rewrite

The output pattern.

"\1\1"

Options

Optional

The PCRE options. Can be given as text or number.

0

Result Returns new text or error.

Description

You can replace the all occurrences of pattern in text with rewrite pattern. Within rewrite pattern, backslash-escaped digits (\1 to \9) can be used to insert text matching corresponding parenthesized group from the pattern. \0 in rewrite refers to the entire matching text.

Replacements are not subject to re-matching.

Examples

Replace all:

MBS("RegEx.ReplaceAll"; "yabba dabba doo"; "b+"; "d")

Example result: "yadda dadda doo"

Replace all greedy:

MBS("RegEx.ReplaceAll"; "yabba dabba doo"; "b+"; "d"; "greedy")

Example result: "yada dada doo"

Replace links with html:

MBS("RegEx.ReplaceAll"; "This is a link to the Monkeybread Software site: <http://www.mbsplugins.eu/>

where Filemaker solutions can be found.”; ”(https?:// [\w./] +)”; ”\1”; ”case-less\$greedy”)

Example result: This is a link to the Monkeybread Software site: http://www.mbsplugins.eu/where Filemaker solutions can be found.

Replace all with in greek texts:

MBS(”Regex.ReplaceAll”; ”I test test”; ”([\p { Greek } \p { Latin }] +)(\W*)”; ”\1\2”)

135.17 RegEx.Results

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.Results"; RegExRef)

Parameters

RegExRef

The reference number for the regular expression returned from RegEx.Compile.

\$regex

Result Returns OK or error.

Description

The result are offsets into the text to search. Two for the whole match followed by 2 for each sub pattern.

Examples

Loop and find all matches for pattern:

```
Set Variable [ $pattern ; Value: "(USt\-ID:? | USt\-IdNR\.:? | Umsatzsteuer\-ID:? | VAT\-ID:?) [ \s ] ?(DE) [ \s ] ?( [ 0-9 ] { 9 } )" ]
Set Variable [ $ExecuteOptions ; Value: 0 ]
Set Variable [ $CompileOptions ; Value: "caseless" ]
Set Variable [ $regex ; Value: MBS("RegEx.Compile"; $Pattern; $CompileOptions) ]
Set Variable [ $offset ; Value: 0 ]
```

Loop

```
Set Variable [ $r ; Value: MBS("RegEx.Execute"; $regex; RegEx::Text; $ExecuteOptions; $offset) ]
Exit Loop If [ $r < 4 ]
Set Variable [ $s1 ; Value: MBS("RegEx.Substring"; $RegEx; 1) ]
Set Variable [ $s2 ; Value: MBS("RegEx.Substring"; $RegEx; 2) ]
Set Variable [ $s3 ; Value: MBS("RegEx.Substring"; $RegEx; 3) ]
Show Custom Dialog [ $s1 & $s2 & $s3 ]
Exit Loop If [ MBS("IsError") ]
Set Variable [ $offset ; $offset + Value: GetAsNumber(GetValue(MBS("RegEx.Results"; $regex); 2)) ]
End Loop
Set Variable [ $r ; Value: MBS("RegEx.Free"; $RegEx) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 RegEx	4.4	Yes	Yes	Yes	Yes	Yes

MBS("RegEx.Version")

Result Returns version.

Description

e.g. "8.33 2013-05-28"

Examples

Query version:

MBS("RegEx.Version")

Created 26th October 2014, last changed 26th October 2014.

Chapter 136

Registry

Windows Registry functions.

136.1 Registry.CreateKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.CreateKey"; Path; Name)

Parameters

Path

The path to the parent registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.

"Users\test"

Name

The name of the new key.

"test"

Result Returns OK or error.

Description

Does not return an error, if such a key exists already, so you can

Examples

Creates a key:

MBS("Registry.CreateKey"; "CurrentUser"; "Test")

6680

Creates key and intermediate ones:

```
MBS( "Registry.CreateKey"; "CurrentUser"; "Test\MyApp\MyPref" )
```

6681

Created 20th March 2017, last changed 20th March 2017.

136.2 Registry.DeleteKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.DeleteKey"; Path; Name)

Parameters

Path

The path to the parent registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.

"Users\test"

Name

The name of the key to delete.

"test"

Result Returns OK or error.

Description

Examples

Delete test key:

```
MBS( "Registry.DeleteKey"; "CurrentUser"; "Test")
```

Delete a key in a path:

```
MBS( "Registry.DeleteKey"; "CurrentUser\Test\MyApp"; "MyPref")
```

See also

- 136.5 Registry.FlushKey 6684

Created 20th March 2017, last changed 20th March 2017.

136.3 Registry.DeleteTree

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.DeleteTree"; Path)

Parameters

Path

The path to the registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.
"Users\test"

Result Returns OK or error.

Description

Not available on Windows XP. Works on Windows Vista or newer and Windows Server 2008 or newer.

Examples

Deletes a tree:

```
MBS( "Registry.DeleteTree"; "CurrentUser\Test")
```

See also

- 136.2 Registry.DeleteKey 6681

136.4 Registry.DeleteValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.DeleteValue"; Path; Name)

Parameters

Path

The path to the parent registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.

"Users\test"

Name

The name of the value to delete.

"Hello"

Result Returns OK or error.

Description

Examples

Delete a value:

MBS("Registry.DeleteValue"; "CurrentUser\Test"; "Hello")

Created 20th March 2017, last changed 20th March 2017.

136.5 Registry.FlushKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.FlushKey"; Path)

Parameters

Path

The path to the registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.
"Users\test"

Result Returns OK or error.

Description

See also

- 136.2 Registry.DeleteKey 6681

Created 20th March 2017, last changed 20th March 2017.

136.6 Registry.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.GetValue"; Path; Name)

Parameters

Path

The path to the parent registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.

"Users\test"

Name

The name of the value.

"Hello"

Result Returns value or error.

Description

We return Text, Link or ExpandText as text.

Binary is returned hex encoded.

DWORD or QWORD is returned as numbers.

Lists are converted to FileMaker list.

Examples

Query value:

```
MBS( "Registry.GetValue"; "CurrentUser\Test"; "Hello")
```

Query FileMaker's printer settings:

```
MBS( "Registry.GetValue"; "HKEY_CURRENT_USER\SOFTWARE\FileMaker\FileMaker Pro Advanced\16.0\Preferences"; "Printer")
```

Query Windows product name:

```
MBS( "Registry.GetValue"; "HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion"; "ProductName")
```

Query user name:

```
MBS( "Registry.GetValue"; "HKEY_CURRENT_USER\SOFTWARE\FileMaker\FileMaker Pro Advanced\16.0\Preferences"; "User Name")
```

Query FileMaker Cache Size:

```
MBS( "Registry.GetValue"; "HKEY_CURRENT_USER\SOFTWARE\FileMaker\FileMaker Pro Advanced\16.0\Preferences"; "Cache Size")
```

Query whether we have FileMaker Pro Advanced 17:

```
MBS( "Registry.GetValue"; "HKEY_CURRENT_USER\SOFTWARE\FileMaker\FileMaker Pro Advanced\17.0\Preferences"; "Use Advanced Tools")
```

- 136.9 Registry.ListValues 6689
- 136.10 Registry.SetValue 6690

Created 20th March 2017, last changed 28th November 2019.

136.7 Registry.GetValueType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.GetValueType"; Path; Name)

Parameters**Path**

The path to the parent registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.

"Users\test"

Name

The name of the value.

"Hello"

Result Returns value or error.

Description

Value can be none, text, ExpandText, Binary, DWORD, DWORD BigEndian, Link, List, ResourceList, FullResourceDescriptor, ResourceRequirementsList or QWORD.

DWORD is a 32-bit number and QWORD a 64-bit number.

Examples

Queries the value type:

MBS("Registry.GetValueType"; "CurrentUser\Test"; "Hello")

136.8 Registry.ListKeys

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.ListKeys"; Path)

Parameters

Path

The path to the registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.
"Users\test"

Result Returns list or error.

Description

Examples

Lists all keys in CurrentUser:

MBS("Registry.ListKeys"; "CurrentUser")

See also

- 136.5 Registry.FlushKey 6684
- 136.9 Registry.ListValues 6689

Created 20th March 2017, last changed 20th March 2017.

136.9 Registry.ListValues

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.ListValues"; Path)

Parameters

Path

The path to the registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.
"Users\test"

Result Returns list or error.

Description

Examples

Query list of values:

```
MBS( "Registry.ListValues"; "CurrentUser\Test")
```

See also

- 136.6 Registry.GetValue 6685
- 136.8 Registry.ListKeys 6688
- 136.10 Registry.SetValue 6690

Created 20th March 2017, last changed 20th March 2017.

136.10 Registry.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 Registry	7.2	No	Yes	Yes, Windows only	No	No

MBS("Registry.SetValue"; Path; Name; Value; Type)

Parameters

Path

The path to the parent registry key. Separated by \you specify the path to the key you want. Root can be Classes, CurrentUser, LocalMachine, Users, PerformanceData, CurrentConfig, DynData or the HKEY names.

"Users\test"

Name

The name of the value.

"Hello"

Value

The value to set.

"World"

Type

The data type to store.

"text"

Result Returns OK or error.

Description

Type can be Text, ExpandText, DWORD, BinaryHex, None, QWORD or List.

Use DWORD to save 32-bit integer number or QWORD to save 64-bit number.

For list, please pass a normal \$separated list and we translate it.

For BinaryHex type, please pass hex encoded data and we decode it before saving.

Examples

Set user name for FileMaker:

MBS("Registry.SetValue"; "HKEY_CURRENT_USER\SOFTWARE\FileMaker\FileMaker Pro Advanced\16.0\Pref-erences"; "User Name"; "Mr. Miller"; "text")

Chapter 137

RemoteControl

Press keys or move/click mouse.

137.1 RemoteControl.ClickMouse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	2.8	Yes	Yes	No	No	No

MBS("RemoteControl.ClickMouse"; x; y { ; down; ButtonIndex })

Parameters

x

New x position of the mouse.

500

y

New y position of the mouse.

500

down

Optional

Pass 1 to press mouse button and 0 to release it. If this parameter is missing, the plugin will click and release in one step.

1

ButtonIndex

Optional

Optional, pass 2 for the right mouse instead of left mouse. Or 3 for the third button.

1

Result Returns OK on success.

Description

If x and y are both zero, the mouse is not moved.
May fail due to limited permissions.

You can use RemoteControl.MouseX and RemoteControl.MouseY to find current mouse position.

137.2 RemoteControl.FindWindow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	2.8	No	Yes	No	No	No

MBS("RemoteControl.FindWindow"; WindowClassName; WindowTitle)

Parameters

WindowClassName

The internal class name of a window.

CalcFrame

WindowTitle

The title of the window.

"Calculator"

Result Returns the window handle for use with other window functions.

Description

One of both parameters can be an empty string.

Example Databases

- [RemoteControl/Control Windows Calculator](#)

Created 18th August 2014, last changed 18th August 2014.

137.3 RemoteControl.GetWindowsList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	2.8	No	Yes	No	No	No

MBS("RemoteControl.GetWindowsList")

Result Returns list of window references separated by newline character.

Description

You can separate this list and pass the window reference values as number to our other Window functions.

See also

137.4 RemoteControl.HideCursor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	3.4	Yes	Yes	No	No	No

MBS("RemoteControl.HideCursor")

Result Returns OK.

Description

As FileMaker may reset the cursor to be visible when scripts end, you may not see the mouse actually hide.

Examples

Hide the mouse:

MBS("RemoteControl.HideCursor")

Show the mouse:

MBS("RemoteControl.ShowCursor")

137.7 RemoteControl.MoveMouse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	2.8	Yes	Yes	No	No	No

MBS("RemoteControl.MoveMouse"; x; y)

Parameters

x

New x position of the mouse.

500

y

New y position of the mouse.

500

Result Returns OK on success.

Description

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	2.8	Yes	Yes	No	No	No

MBS("RemoteControl.PressControlKey"; down)

Parameters

down

Pass 1 to press key down or 0 to release it.

1

Result Returns OK on success.

Description

Examples

Press Control-V:

```
MBS( "RemoteControl.PressControlKey"; 1 )
```

```
MBS( "RemoteControl.PressKey"; "V" )
```

```
MBS( "RemoteControl.PressControlKey"; 0 )
```

137.10 RemoteControl.PressDialogButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	6.2	Yes	No	No	No	No

MBS("RemoteControl.PressDialogButton"; ButtonName)

Parameters

ButtonName

The name of the button.

"OK"

Result Returns OK or error.

Description

The plugin takes the button name and waits in background.

If a dialog shows up with the right button name, the plugin presses it.

Please call RemoteControl.PressDialogButton.clear to stop this after you needed it.

Examples

Press OK on the custom dialog:

```
Set Variable [ $r; Value:MBS( "RemoteControl.PressDialogButton"; "OK" ) ]
```

```
Show Custom Dialog [ "Hello" ]
```

```
Set Variable [ $r; Value:MBS( "RemoteControl.PressDialogButton.Clear" ) ]
```

Created 18th March 2016, last changed 17th June 2018.

137.12 RemoteControl.PressKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	2.8	Yes	Yes	No	No	No

```
MBS( "RemoteControl.PressKey"; VirtualKey; ScanCode { ; down } )
```

Parameters

VirtualKey

The platform dependent virtual key code. Pass a number for a virtual key code or pass a string to let the plugin try to lookup the virtual key code.

"a"

ScanCode

The platform dependent scan code. Pass a number for a scan code or pass a string to let the plugin try to lookup the virtual key code. If this parameter is missing, the virtual key code is used to lookup the scan code.

"a"

down

Optional

Whether to press key down or release it. If parameter is missing the plugin will do both.

Result Returns OK on success.

Description

Codes are platform dependent. As a help we allow you to pass the character for the key as text and the plugin looks up virtual key code and scan code. But this lookup can fail. So please try all keys for your keyboard.

Common key codes for MacOS:

Examples

Press a key

```
MBS( "RemoteControl.PressKey"; "a")
```

Press return key on Mac:

```
MBS( "RemoteControl.PressKey"; 36; 13)
```

Press cursor right key on Mac:

```
MBS( "RemoteControl.PressKey"; 124; 0 )
```

Write Hello

```

Set Variable [ $r ; Value: MBS("RemoteControl.PressShiftKey"; 1) ]
Set Variable [ $r ; Value: MBS("RemoteControl.PressKey"; "H") ]
Set Variable [ $r ; Value: MBS("RemoteControl.PressShiftKey"; 0) ]
Set Variable [ $r ; Value: MBS("RemoteControl.PressKey"; "e") ]
Set Variable [ $r ; Value: MBS("RemoteControl.PressKey"; "l") ]
Set Variable [ $r ; Value: MBS("RemoteControl.PressKey"; "l") ]
Set Variable [ $r ; Value: MBS("RemoteControl.PressKey"; "o") ]

```

Press return with plugin looking up codes:

```
Set Variable [ $r ; Value: MBS("RemoteControl.PressKey"; §) ]
```

Press space key:

```
Set Variable [ $r ; Value: MBS("RemoteControl.PressKey"; " ") ]
```

137.13 RemoteControl.PressKeyLater

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 RemoteControl	6.2	Yes	Yes	No	No	No

MBS("RemoteControl.PressKeyLater"; VirtualKey; ScanCode; Delay)

Parameters

VirtualKey

The platform dependent virtual key code. Pass a number for a virtual key code or pass a string to let the plugin try to lookup the virtual key code.

"a"

ScanCode

The platform dependent scan code. Pass a number for a scan code or pass a string to let the plugin try to lookup the virtual key code. If this parameter is missing, the virtual key code is used to lookup the scan code.

"a"

Delay

the delay in seconds.

2

Result Returns OK or error.

Description

Codes are platform dependent. As a help we allow you to pass the character for the key as text and the plugin looks up virtual key code and scan code. But this lookup can fail. So please try all keys for your keyboard.

Examples

Press enter in 2 seconds on Mac:

```
MBS( "RemoteControl.PressKeyLater"; 36; 13; 2)
```

Chapter 138

RichText

Read and write Word/OpenOffice/RTF files on Mac.

138.1 RichText.AppendFormattedText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	10.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.AppendFormattedText"; text)

Parameters

text

The new text to use. Can have style information.
"Hello World"

Result Returns OK or error.

Description

You may need to append a line break first.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	10.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.AppendText"; text)

Parameters

text

The new text to use.

"Hello World"

Result Returns OK or error.

Description

You may need to append a line break first.

Examples

Append some text in one expression:

```
Let( [
r = MBS( "RichText.SetText"; "Hello " );
r = MBS( "RichText.AppendText"; "World!" );
r = MBS( "RichText.Text" )
]; r)
```

Example result: Hello World!

MBS("RichText.Attribute"; AttributeSelector)

Parameters

AttributeSelector

The name of the attribute to query. Can be Title, Company, Copyright, Subject, Author, Keywords, Comment, Editor, ModificationTime, Manager, Category or Type.
"title"

Result Returns attribute value or error.

Description

Added selector PaperSize in v9.2 to return two values with width and height of paper size.

Examples

Get title:

```
$title = MBS( "RichText.Attribute"; "Title"
```

Get type of document:

```
$title = MBS( "RichText.Attribute"; "Type"
```

138.5 RichText.FormattedText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.FormattedText")

Result Returns text or error.

Description

Examples

Read formatted text from container field:

```
$r = MBS( "RichText.ReadContainer"; Test::ContainerField )
$text = MBS( "RichText.FormattedText" )
```

Read container in one formula:

```
Let ( [
r = MBS( "RichText.ReadContainer"; MyContainer );
text = MBS( "RichText.FormattedText" )
]; text )
```

138.6 RichText.GeneratePDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	5.1	Yes	No	Yes, macOS only	No	No

MBS("RichText.GeneratePDF" { ; Filename })

Parameters

Filename

Optional

The desired file name.

test.png

Result Returns PDF container or error.

Description

Examples

Convert HTML to PDF:

```
Set Variable [ $r ; Value: MBS( "RichText.ReadHTML"; "<html><body><p><b>Schokoladenplätzchen</b></p></body></html>" ) ]
```

```
Set Variable [ $r ; Value: MBS( "RichText.GeneratePDF"; "test.pdf" ) ]
```

```
Set Field [ RegEx::test ; $r ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	6.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.HTMLText")

Result Returns html or error.

Description

This does not handle all, but most attributes.

Examples

Read in HTML and output it:

```
Set Variable [ $r ; Value: MBS( "RichText.ReadHTML"; "<html><body><p><b>Schokoladenplätzchen</b></p></body>" ) ]
```

```
Show Custom Dialog [ "HTML" ; MBS( "RichText.HTMLText" ) ]
```

138.8 RichText.RTF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	6.5	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.RTF")

Result Returns text or error.

Description

Examples

From Styled text to RTF:

```
// Custom function with pFormattedText as parameter
Let ( [
  r = MBS( "RichText.Clear" );
  vOK = MBS( "RichText.SetFormattedText"; pFormattedText );
  vResult = MBS( "RichText.RTF" );
  vOK = MBS( "RichText.Release" )
];
vResult
)
```

138.9 RichText.ReadContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.ReadContainer"; Container)

Parameters

Container

The container value to read from.

\$data

Result Returns OK or error message.

Description

The plugin uses Mac system functions to read text files including plain text files, RTF files, Word files in doc or xml format, webkit archives or OpenOffice documents.

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework.

Examples

Read container field:

```
MBS( "RichText.ReadContainer"; Test::ContainerField )
```

Read container in one formula:

```
Let ( [
r = MBS( "RichText.ReadContainer"; MyContainer );
text = MBS( "RichText.FormattedText" )
]; text )
```

Convert doc/docx/rtf file in container to PDF:

```
Set Variable [ $temppath; Value:MBS( "Path.AddPathComponent"; MBS( "Folders.UserTemporary" );
"temp.pdf" ) ]
Set Variable [ $r; Value:MBS( "RichText.ReadContainer"; test::MyContainerDoc ) ]
Set Variable [ $r; Value:MBS( "RichText.WritePDF"; $temppath ) ]
Set Variable [ $r; Value:MBS( "RichText.Release" ) ]
Set Field [ test::MyContainerPDF; MBS("Files.ReadFile"; $temppath; "PDF"; "test.pdf" ) ]
```

138.10 RichText.ReadFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.ReadFile"; Path)

Parameters

Path

The native file path to the file.

\$path

Result Returns OK or error message.

Description

The plugin uses Mac system functions to read text files including plain text files, RTF files, Word files in doc or xml format, webkit archives or OpenOffice documents.

If you want the user to select a path, please use FileDialog functions.

See also Files.ReadJPEG, Files.ReadPDF, Files.ReadPNG, Text.ReadTextFile and Files.ReadFile.

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Read formatted text from container field:

```
$r = MBS( "RichText.ReadFile"; "/Users/Desktop/test.txt" )
```

```
$text = MBS( "RichText.FormattedText" )
```

Created 18th August 2014, last changed 14th August 2017.

138.11 RichText.ReadHTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	5.2	Yes	No	No	No	Yes

MBS("RichText.ReadHTML"; HTML { ; Encoding; BaseURL })

Parameters

HTML

The html text to load.

"<p>Hello</p>"

Encoding

Optional

The text encoding for text parameter. Default is native.

UTF8

BaseURL

Optional

The base URL for relative links.

"http://www.mbsplugins.de"

Result Returns OK or error.

Description

Does not work on server due to missing main thread support for Cocoa.

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework.

Looks like font OpenSans will be converted to Times. You can avoid it by replacing 'OpenSans' with e.g. 'Helvetica' before reading HTML.

Examples

Read HTML:

```
MBS( "RichText.ReadHTML"; "<p>Schokoladenplätzchen</P>" )
```

Convert HTML to formatted text:

```
Let ( [
r = MBS( "RichText.ReadHTML"; "<p>Schokoladenplätzchen</P>"; "UTF-8" );
o = MBS("RichText.FormattedText");
r = MBS( "RichText.Release" )
]; o )
```

138.12 RichText.ReadRTF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	5.2	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.ReadRTF"; RTF { ; Encoding })

Parameters

RTF

The rtf text to load.

Encoding

Optional

The text encoding for text parameter. Default is native.

UTF8

Result Returns OK or error.

Description

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework.

Examples

Convert RTF to formatted text:

```
Let ( [
r = MBS( "RichText.ReadRTF"; $rtf );
o = MBS("RichText.FormattedText");
r = MBS( "RichText.Release" )
]; o )
```

138.13 RichText.ReadText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	4.4	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.ReadText"; text { ; Encoding })

Parameters

text

The text for the text file.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is native.

UTF8

Result Returns OK or error.

Description

This is for reading RTF text. Be sure to have right text encoding to preserve special characters.

To read styled text into RichText functions, please use RichText.SetFormattedText.

138.14 RichText.ReadURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.ReadURL"; URL)

Parameters**URL**

The URL to the text file.

\$URL

Result Returns OK or error message.

Description

The plugin uses Mac system functions to read text files including plain text files, RTF files, Word files in doc or xml format, webkit archives or OpenOffice documents.

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework.

Examples

Read formatted text from container field:

```
$r = MBS( "RichText.ReadURL"; "file:///Users/Desktop/test.txt" )
```

```
$text = MBS( "RichText.FormattedText" )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	5.4	Yes	No	No	No	Yes

MBS("RichText.ReadWebviewer"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework. Added iOS and FileMaker 16 support for version 8.2.

138.16 RichText.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.Release")

Result Returns OK on success.

Description

When loading a new file, the old file is automatically released.

Examples

Read formatted text from container field and release memory:

```
$r = MBS( "RichText.ReadContainer"; Test::ContainerField )
$text = MBS( "RichText.FormattedText" )
$r = MBS( "RichText.Release" )
```

138.17 RichText.ReplaceText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	4.4	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.ReplaceText"; SearchText; NewText { ; Multiple })

Parameters

SearchText

The text to search. Search is case insensitive.

"\$FirstName"

NewText

The new text to use as replacement. Can be empty.

"Christian"

Multiple

Optional

Optional, Pass 1 to replace all occurrences. Default is 0 to replace the first one found.

0

Result Returns Count or error.

Description

This can be used to load Word file (DOC, RTF, DOCX), replace place holders with values for client and save a personalized copy.

Version 6.0 and newer returns number of replaces. Older versions just returned OK on success.

Examples

Replace chocolate with vanilla:

```
Set Variable [ $r ; Value: MBS( "RichText.ReadHTML"; "<html><body><p><b>Schokoladenplätzchen</b></p></body>" ) ]
```

```
Set Variable [ $r ; Value: MBS("RichText.ReplaceText"; "Schokoladen"; "Vanille") ]
```

```
Show Custom Dialog [ "HTML" ; MBS( "RichText.HTMLText" ) ]
```

138.18 RichText.ReplaceTexts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	6.4	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.ReplaceTexts"; SearchTextList; NewTextList { ; Multiple })

Parameters

SearchTextList

The list of texts to search. Search is case insensitive.

"\$FirstName"

NewTextList

The list of new text to use as replacement. Can be empty.

"Christian"

Multiple

Optional

Optional, Pass 1 to replace all occurrences. Default is 0 to replace the first one found.

0

Result Returns OK or error.

Description

While RichText.ReplaceText replaces just one value, this function can replace a list of value.

This can be used to load Word file (DOC, RTF, DOCX), replace place holders with values for client and save a personalized copy.

Examples

Replaces text to test function:

```
Let ( [
r1 = MBS( "RichText.ReadText"; "Hello World. Greetings from FileMaker."; "UTF-8" );
r2 = MBS( "RichText.ReplaceTexts"; "Hello$World$from$FileMaker$Greetings"; "Hallo$Leute$aus$File-
Maker!$Grüße"; 0 );
r = MBS( "RichText.Text" );
r3 = MBS( "RichText.Clear" )
];r)
```

138.19 RichText.SetAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.5	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.SetAttribute"; Key; Value)

Parameters

Key

The new attribute key. Can be Title, Company, Copyright, Subject, Author, Keywords, Comment, Editor, ModificationTime, Manager or Category.

"Title"

Value

The value of the attribute. Most are text parameters except for the timestamp of ModificationTime.

"My title"

Result Returns OK or error.

Description

See RichText.Attribute for details.

Examples

Set title:

```
MBS( "RichText.SetAttribute"; "Title"; "Hello World")
```

Set paper size:

```
MBS( "RichText.SetAttribute"; "PaperSize"; 595; 842) // A4
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.5	Yes	No	Yes, macOS only	No	Yes

```
MBS( "RichText.SetFormattedText"; text )
```

Parameters

text

The new text to use. Can have style information.

```
"Hello World"
```

Result Returns OK or error.

Description

Examples

From Styled text to RTF:

```
// Custom function with pFormattedText as parameter
Let ( [
r = MBS( "RichText.Clear" );
vOK = MBS( "RichText.SetFormattedText"; pFormattedText );
vResult = MBS("RichText.RTF" );
vOK = MBS( "RichText.Release" )
];
vResult
)

Created 18th August 2014, last changed 11st April 2017.

138.23 RichText.TextLength

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.0	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.TextLength")

Result Returns the length of the text in characters.

Description

Examples

Read plain text from container field:

```
$r = MBS( "RichText.ReadContainer"; Test::ContainerField )
$length = MBS( "RichText.TextLength" )
```

138.24 RichText.WriteContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	4.4	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.WriteContainer"; Format { ; FileName })

Parameters

Format

The file format to use. Can be DOC, DOCX or RTF.

"DOC"

FileName

Optional

The file name to use for the container.

"test.doc"

Result Returns OK or error.

Description

Please pass format type:

- doc: creates old style Word document
- rtf: created rich text file.
- docx: creates newer Word document.
- html: creates html file.
- webarchive: creates html and renders web archive.
- opendocument: creates open office document.

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework.

Examples

Read a file, apply replaces and save it:

```
# load from container
Set Variable [ $r; Value:MBS("RichText.ReadContainer"; Replace Text in Word File::InputContainer) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; "Failed to read file." ]
Exit Script [ ]
End If
# now loop through records to do replaces
Go to Record/Request/Page [ First ]
Loop
Set Variable [ $r; Value:MBS("RichText.ReplaceText"; Replace Text in Word File::Old Text; Replace Text
```

```
in Word File::New Text) ]
Go to Record/Request/Page [ Next; Exit after last ]
End Loop
# write file
Set Field [ Replace Text in Word File::OutputContainer; MBS("RichText.WriteContainer"; Replace Text in
Word File::format) ]
# cleanup
Set Variable [ $r; Value:MBS("RichText.Release") ]
```

- [MBS Filemaker Plugin, version 4.4pr6](#)

Created 16th October 2014, last changed 14th August 2017.

138.25 RichText.WriteDOC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	3.5	Yes	No	Yes, macOS only	No	No

MBS("RichText.WriteDOC"; Path)

Parameters

Path

The native file path to the file.

\$path

Result Returns OK or error.

Description

Please set text with RichText.SetFormattedText or RichText.SetText.

And use RichText.SetAttribute to set properties for document.

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Convert html to Word file:

```
Set Variable [ $r ; Value: MBS( "RichText.ReadHTML"; "<html><body><p><b>Schokoladenplätzchen</b></p></body></html>" ) ]
```

```
Set Variable [ $r ; Value: MBS( "RichText.WriteDOC"; "/Users/cs/Desktop/test.doc" ) ]
```

Created 18th August 2014, last changed 25th November 2017.

138.26 RichText.WriteFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	4.4	Yes	No	Yes, macOS only	No	Yes

MBS("RichText.WriteFile"; Path; Format)

Parameters

Path

The native file path.

"/Users/cs/Desktop/test.doc"

Format

The file format to use. Can be DOC, DOCX or RTF.

"DOC"

Result Returns OK or error.

Description

Please pass format type:

- doc: creates old style Word document
- rtf: created rich text file.
- docx: creates newer Word document.
- html: creates html file.
- webarchive: creates html and renders web archive.
- opendocument: creates open office document.

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework. If the styles don't come through to Word formats, maybe try RTF instead and let Word open that?

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Read a file, apply replaces and save it:

```
# load from container
Set Variable [ $r; Value:MBS("RichText.ReadContainer"; Replace Text in Word File::InputContainer) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; "Failed to read file." ]
Exit Script [ ]
```

```

End If
# now loop through records to do replaces
Go to Record/Request/Page [ First ]
Loop
Set Variable [ $r; Value:MBS("RichText.ReplaceText"; Replace Text in Word File::Old Text; Replace Text
in Word File::New Text) ]
Go to Record/Request/Page [ Next; Exit after last ]
End Loop
# write file
Set Variable [ $r; MBS("RichText.WriteFile"; Replace Text in Word File::path; Replace Text in Word
File::format) ]
# cleanup
Set Variable [ $r; Value:MBS("RichText.Release") ]

```

Save as docx, the newer XML based Word file format:

```

# Word, new format
Set Variable [ $path ; Value: $folder & "/test.docx" ]
Set Variable [ $r ; Value: MBS( "RichText.WriteFile"; $path; "docx" ) ]

```

Save an old doc:

```

# Word, old format
Set Variable [ $path ; Value: $folder & "/test.doc" ]
Set Variable [ $r ; Value: MBS( "RichText.WriteFile"; $path; "doc" ) ]

```

Save as RTF:

```

# RTF
Set Variable [ $path ; Value: $folder & "/test.rtf" ]
Set Variable [ $r ; Value: MBS( "RichText.WriteFile"; $path; "rtf" ) ]

```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
138 RichText	5.1	Yes	No	Yes, macOS only	No	No

MBS("RichText.WritePDF"; Path)

Parameters

Path

A valid native file path.

"/Users/test/Desktop/test.pdf"

Result Returns OK or error.

Description

Warning: The plugin can only read/write the styles/formats which Apple supports for their cocoa framework.

Examples

Convert doc/docx/rtf file in container to PDF:

```
Set Variable [ $tempPath; Value:MBS( "Path.AddPathComponent"; MBS( "Folders.UserTemporary" );
"temp.pdf" ) ]
```

```
Set Variable [ $r; Value:MBS( "RichText.ReadContainer"; test::MyContainerDoc ) ]

Chapter 139

RunTask

Launch applications and command line tools with parameters and query their status.

Deprecated. Please use newer Shell functions.

139.1 RunTask.AddArgument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	4.1	Yes	Yes	Yes	No	No

```
MBS( "RunTask.AddArgument"; argument )
```

Parameters

argument

Pass one argument here.

"-v"

Result Returns OK or error.

Description

Be aware that shell expansion does not happen and shell variables are not expanded.

Examples

Set three arguments

```
MBS( "RunTask.AddArgument"; "-v" )
```

```
MBS( "RunTask.AddArgument"; "-s" )
```

```
MBS( "RunTask.AddArgument"; "test.txt" )
```

See also

- 139.2 RunTask.GetArgument 6757

Example Databases

- [RunTask/Run Shell Script on Mac](#)

Created 18th August 2014, last changed 18th August 2014.

139.2 RunTask.GetArgument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.GetArgument"; Index)

Parameters

Index

The index of the argument to query. Range from 0 to RunTask.GetArgumentCount-1.

\$index

Result Returns argument text or error message.

Description

On Windows we have only one argument string, so index is ignored and you receive all arguments.

See also

- 139.1 RunTask.AddArgument 6755
- 139.3 RunTask.GetArgumentCount 6758
- 139.13 RunTask.SetArguments 6771

Created 18th August 2014, last changed 18th August 2014.

139.3 RunTask.GetArgumentCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.GetArgumentCount")

Result Returns the number of arguments or error message.

Description

One Windows all arguments are stored in one string with spaces separated, so this function returns 0 or 1 depending on whether an argument is set.

See also

- 139.2 RunTask.GetArgument

6757

Created 18th August 2014, last changed 18th August 2014.

139.4 RunTask.GetCurrentDirectoryPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.GetCurrentDirectoryPath")

Result Returns the task's current directory.

Description

See also

- 139.14 RunTask.SetCurrentDirectoryPath

6774

Created 18th August 2014, last changed 18th August 2014.

139.5 RunTask.GetLaunchPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.GetLaunchPath")

Result Returns the path of the executable.

Description

See also

- 139.15 RunTask.SetLaunchPath

6775

Created 18th August 2014, last changed 18th August 2014.

139.6 RunTask.GetVerb

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.2	No	Yes	Yes, Windows only	No	No

MBS("RunTask.GetVerb")

Result Returns the verb string.

Description

See also

- 139.16 RunTask.SetVerb

6777

Created 18th August 2014, last changed 18th August 2014.

139.7 RunTask.IsRunning

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.IsRunning")

Result Returns whether the receiver is still running.

Description

1 if the receiver is still running, otherwise 0. 0 means either the receiver could not run or it has terminated.

Examples

Wait for app ending:

```
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
Exit Loop If [ MBS( "RunTask.IsRunning" ) = 1 ]
End Loop
```

- [Tip of the day: Query connected clients on FileMaker Server by script](#)

Created 18th August 2014, last changed 29th January 2016.

139.8 RunTask.Launch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.Launch")

Result Returns OK or error.

Description

If you get back an error with `posix_spawn` and error 13, that's a permission denied.

Please use `Shell.Execute` if you need more features.

For PowerShell scripts on Windows, you may need to check with the execution policy for the user account FileMaker is using or use an admin account. e.g. on FileMaker Server, may need to be installed as Admin user (not `fmserver` user).

Examples

Run ls on Mac:

```
# new task
Set Variable [ $r; Value:MBS( "RunTask.NewTask" ) ]
# set launch path and arguments
Set Variable [ $r; Value:MBS( "RunTask.SetLaunchPath"; "/bin/ls" ) ]
Set Variable [ $r; Value:MBS( "RunTask.SetArguments"; "/bin" ) ]
# run
Set Variable [ $r; Value:MBS( "RunTask.Launch" ) ]
# wait
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
Exit Loop If [ MBS( "RunTask.IsRunning" ) = 1 ]
End Loop
# read result
Set Variable [ $data; Value:MBS( "RunTask.ReadOutputText"; "UTF-8" ) ]
Show Custom Dialog [ "Result"; $data ]
```

List connected clients on FileMaker Server:

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	4.1	Yes	No	Yes, macOS only	No	No

MBS("RunTask.ReadOutputText" { ; Encoding })

Parameters

Encoding

Optional

The text encoding for result. Default is native.

"UTF-8"

Result Returns text or error.

Description

For Windows this is not available, but you can start a .bat file and redirect output to a text file.

Version 7.5 introduces shell functions which offer this feature for macOS, Windows and Linux.

139.13 RunTask.SetArguments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.SetArguments"; arguments)

Parameters

arguments

Pass one argument for each argument.

"-v"

Result Returns OK or error.

Description

Be aware that shell expansion does not happen and shell variables are not expanded.

Examples

Set three arguments

```
MBS( "RunTask.SetArguments"; "-v"; "-s"; "test.txt" )
```

Set a lot of arguments:

```
MBS("RunTask.SetArguments"; "-i"; "/test/tmp/filetmp% d.jpg"; "-b:v"; "320k"; "-vcodec"; "prores"; "-profile"; "2"; "-qscale"; "5"; "/test/tmp/IM_0001.mov")
```

List connected clients on FileMaker Server:

```
# © 30.07.2016 Patrick Weh | Team Nifty GmbH (17:40 Uhr)
# List connected Clients
# -----
# Script checks for connected clients at the FileMaker Server.
# Copy this File to your Server and run this Script on your FileMaker Server.
# -----
#
Set Error Capture [ On ]
Allow User Abort [ Off ]
#
Set Variable [ $r; Value:MBS( "RunTask.NewTask" ) ]
Set Variable [ $r; Value:MBS( "RunTask.SetLaunchPath"; "/Library/FileMaker Server/Database Server/bin/fm-
sadmin" ) ]
# please put your admin password here
Set Variable [ $r; Value:MBS( "RunTask.SetArguments"; "-u" ; "fmsserveradmin" ; "-p" ; "fmsserveradmin-
password" ; "list" ; "clients" ; "-s" ) ]
Set Variable [ $r; Value:MBS( "RunTask.Launch" ) ]
# now wait for task to finish:
Set Variable [ $result; Value:"" ]
```

Loop

```
Pause/Resume Script [ Duration (seconds): 2 ]
Set Variable [ $result; Value:$result & MBS("RunTask.ReadOutputText") ]
Exit Loop If [ MBS("RunTask.IsRunning") 1 ]
End Loop
#
# write into a field:
Set Field [ Check clients::Clients; $result ]
Commit Records/Requests [ No dialog ]
#
```

Set parameters for -p "Hello World":

```
MBS( "RunTask.SetArguments"; "-p"; "Hello World" )
```

please notice that we just have quotes around Hello World

Show quicklook preview window for PDF file:

```
Set Variable [ $r ; Value: MBS( "RunTask.NewTask" ) ]
Set Variable [ $r ; Value: MBS( "RunTask.SetLaunchPath"; "/usr/bin/qlmanage" ) ]
Set Variable [ $r ; Value: MBS( "RunTask.SetArguments"; "-p"; "/Users/cs/Desktop/Hello World.pdf" ) ]
Set Variable [ $r ; Value: MBS( "RunTask.Launch" ) ]
```

139.13.1 **Blog Entries**

- [Tip of the day: Query connected clients on FileMaker Server by script](#)

Created 18th August 2014, last changed 22nd August 2017.

139.14 RunTask.SetCurrentDirectoryPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.SetCurrentDirectoryPath"; Path)

Parameters

Path

The new path for current working directory.

"/Users/cs/Desktop"

Result Returns OK or error.

Description

If this method isn't used, the current directory is inherited from the process that created the receiver.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

See also

- 121.2 Path.FileMakerPathToNativePath 6139

Created 18th August 2014, last changed 5th September 2014.

139.15 RunTask.SetLaunchPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.SetLaunchPath"; Path)

Parameters

Path

The new path for current working directory.
"notepad.exe"

Result Returns OK or error.

Description

Examples

Launch a Java application on Mac:

```
MBS( "RunTask.NewTask" )
# you launch java
MBS( "RunTask.SetLaunchPath"; "/usr/bin/java" )
# and pass jar file as arguments followed by other arguments
MBS( "RunTask.SetArguments"; "-jar" ; "/Applications/test/java.jar"; "Hello" )
MBS( "RunTask.Launch"
```

139.16 RunTask.SetVerb

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.2	No	Yes	Yes, Windows only	No	No

MBS("RunTask.SetVerb"; Verb)

Parameters

Verb

The new verb.

"open"

Result Returns OK or error.

Description

The set of available verbs depends on the particular file or folder. Generally, the actions available from an object's shortcut menu are available verbs. This parameter can be "", in which case the default verb is used if available. If not, the "open" verb is used. If neither verb is available, the system uses the first verb listed in the registry. The following verbs are commonly used:

edit	Launches an editor and opens the document for editing. If lpFile is not a document file, the RunTask.Launch function will fail.
explore	Explores the folder specified by lpFile.
find	Initiates a search starting from the specified directory.
open	Opens the file specified by the lpFile parameter. The file can be an executable file, a document file, or a folder.
print	Prints the document file specified by lpFile. If File is not a document file, the RunTask.Launch function will fail.
properties	Displays the file or folder's properties.

See also

- 139.6 RunTask.GetVerb 6761

Example Databases

- [RunTask/RunTask Windows](#)

Created 18th August 2014, last changed 18th August 2014.

139.17 RunTask.Terminate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	Yes	Yes	No	No

MBS("RunTask.Terminate"; ExitCode)

Parameters

ExitCode

Only for Windows the exit code for the application.

1

Result Returns OK or error.

Description

This method has no effect if the receiver was already launched and has already finished executing. If the receiver has not been launched yet, this method raises an `NSInvalidArgumentException`.

It is not always possible to terminate the receiver because it might be ignoring the terminate signal. `terminate` sends `SIGTERM`.

Example Databases

- [RunTask/Run Shell Script on Mac](#)
- [RunTask/RunTask Windows](#)

Created 18th August 2014, last changed 18th August 2014.

139.18 RunTask.TerminationReason

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	No	Yes, macOS only	No	No

MBS("RunTask.TerminationReason")

Result Returns the reason the task was terminated.

Description

Available in OS X v10.6 and later.

Returns 1 for exit and 2 for an uncaught signal.

See also

- 139.19 RunTask.TerminationStatus

6780

Created 18th August 2014, last changed 13th April 2016.

139.19 RunTask.TerminationStatus

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	3.1	Yes	No	Yes, macOS only	No	No

MBS("RunTask.TerminationStatus")

Result Returns the exit status returned by the receiver's executable.

Description

Each task defines and documents how its return value should be interpreted. For example, many commands return 0 if they complete successfully or an error code if they don't. You'll need to look at the documentation for that task to learn what values it returns under what circumstances.

See also

- 139.18 RunTask.TerminationReason

6779

Created 18th August 2014, last changed 18th August 2014.

139.20 RunTask.Wait

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
139 RunTask	6.4	Yes	No	Yes, macOS only	No	No

MBS("RunTask.Wait"; Timeout)

Parameters

Timeout

The maximum time to wait.

30

Result Returns 1, 0 or error.

Description

Returns 0 if task terminated or 1 if task is still running.

Examples

Run a shell tool and wait for ending:

```
Let ( [
r = MBS( "RunTask.NewTask" );
r = MBS( "RunTask.SetLaunchPath"; "/bin/sh" );
r = MBS( "RunTask.SetArguments"; "-c"; "date;sleep 5;date" );
r = MBS( "RunTask.Launch");
r = MBS( "RunTask.Wait"; "30");
output = MBS( "RunTask.ReadOutputText"; "utf8")
]
; output )
```

Chapter 140

Schedule

Scheduled script calls and sql queries.

140.1 Schedule.Check

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.Check")

Result Returns OK or error.

Description

This is intended for server where you need to call this regularly (e.g. in scheduled script every minute) to process scheduled script calls or sql executes.

See also

- 140.8 Schedule.ExecuteSQLAfterDelay 6795
- 140.9 Schedule.ExecuteSQLAtTime 6797
- 140.10 Schedule.ExecuteSQLAtTimeStamp 6799
- 140.11 Schedule.ExecuteSQLOnIdle 6801

Created 20th May 2015, last changed 21st May 2015.

140.2 Schedule.ClearEvaluateResult

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.ClearEvaluateResult"; ScheduleRef)

Parameters

ScheduleRef

The reference for a scheduled script call or sql query as returned by Schedule.StartScript* functions or Schedule.ExecuteSQL* functions.

\$ref

Result Returns OK or error.

Description

See also

- 140.14 Schedule.GetEvaluateResult

6805

Created 21st May 2015, last changed 21st May 2015.

140.3 Schedule.ClearSQLResult

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.ClearSQLResult"; ScheduleRef)

Parameters**ScheduleRef**

The reference for a scheduled script call or sql query as returned by Schedule.StartScript* functions or Schedule.ExecuteSQL* functions.

\$ref

Result Returns OK or error.

Description**See also**

- 140.20 Schedule.GetSQLResult

6811

Created 21st May 2015, last changed 21st May 2015.

140.4 Schedule.EvaluateAfterDelay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.EvaluateAfterDelay"; DelaySeconds; Expression { ; ScriptFileName; ScriptName; RepeatDelay })

Parameters

DelaySeconds

The Number of Seconds to wait before running the script.

10

Expression

The expression to evaluate.

"Get(CurrentTimeStamp)"

ScriptFileName

Optional

The name of the file that contains the script to be run.

Get(Filename)

ScriptName

Optional

The exact name of the script to run.

"TestScript"

RepeatDelay

Optional

The number of seconds after which to repeat the script call.

30

Result Returns reference number or error.

Description

Optional, we can start a script with the result of the query.

Please use Schedule.Release later to remove schedule from list. Non repeating scheduled items are free automatically for you.

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

Examples

Try it:

```
Set Variable [ $expression; Value:"MBS(\Log\; \Evaluate works\)" ]
```

```
Set Variable [ $ref; Value:MBS( "Schedule.EvaluateAfterDelay"; 5; $expression ) ]
```

Show/Hide format bar in German:

```
Variable setzen [ $r ; Wert: MBS( "Schedule.EvaluateAfterDelay"; ,1; "MBS( \MenuBar.RunMenuCom-
```

```
mand\"; Liste(\ "Ansicht\"; \ "Formatierungsleiste\" )") ]
```

Set scrollbar elasticity after delay of 0.1 seconds:

```
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; 0.1; "MBS(\ "Window.Scrollbar.SetScrollElasticity\"; 0; \ "none\"")" ) ]
```

Open Scriptworkspace:

```
# won't work directly in script as we need to delay, let the script end and then the menu command can run:
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; 0.1; "MBS( \ "Menubar.RunMenuCommand\"; 51319 )" ) ]
```

140.5 Schedule.EvaluateAtTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.EvaluateAtTime"; Hours; Minutes; Seconds; Expression { ; ScriptFileName; ScriptName; RepeatHour; RepeatMinute; RepeatSecond })

Parameters

Hours

The hour of the day at which to call the script.

12

Minutes

The minute of the day at which to call the script.

10

Seconds

The seconds of the day at which to call the script.

0

Expression

The expression to evaluate.

"Get(CurrentTimeStamp)"

ScriptFileName

Optional

The name of the file that contains the script to be run.

Get(Filename)

ScriptName

Optional

The exact name of the script to run.

"TestScript"

RepeatHour

Optional

The number of hours to wait between script calls.

1

RepeatMinute

Optional

The number of minutes to wait between script calls.

0

RepeatSecond

Optional

The number of seconds to wait between script calls.

0

Result Returns reference number or error.

Description

Optional, we can start a script with the result of the query.

Please use Schedule.Release later to remove schedule from list. Non repeating scheduled items are free automatically for you.

You define the timestamp with hours, minutes and seconds parameter at which to call the script. Plugin checks regularly if time stamp is reaches and calls as soon as current time is greater or equal the given timestamp. So calls can be delayed if FileMaker is busy!

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

See also

140.6 Schedule.EvaluateAtTimeStamp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.EvaluateAtTimeStamp"; TimeStamp; Expression { ; ScriptFileName; ScriptName; Repeat-Delay })

Parameters

TimeStamp

The timestamp at which to call the script. Plugin checks regularly if time stamp is reaches and calls as soon as current time is greater or equal the given timestamp. So calls can be delayed if FileMaker is busy!

Get(CurrentTimeStamp)+60

Expression

The expression to evaluate.

"Get(CurrentTimeStamp)"

ScriptFileName

Optional

The name of the file that contains the script to be run.

Get(Filename)

ScriptName

Optional

The exact name of the script to run

"TestScript"

RepeatDelay

Optional

The number of seconds after which to repeat the script call.

30

Result Returns reference number or error.

Description

Optional, we can start a script with the result of the query.

Please use Schedule.Release later to remove schedule from list. Non repeating scheduled items are free automatically for you.

You define the timestamp at which to call the script. Plugin checks regularly if time stamp is reaches and calls as soon as current time is greater or equal the given timestamp. So calls can be delayed if FileMaker is busy!

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

<i>140.6. SCHEDULE.EVALUATEATTIMESTAMP</i>	6793
• 140.10 Schedule.ExecuteSQLAtTimeStamp	6799
• 140.26 Schedule.Release	6817

Created 21st May 2015, last changed 12nd July 2015.

140.7 Schedule.EvaluateOnIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	No

MBS("Schedule.EvaluateOnIdle"; DelaySeconds; Expression { ; ScriptFileName; ScriptName })

Parameters

DelaySeconds

The Number of Seconds to wait before running the script. Moving the mouse or using keyboard will reset the counter.

10

Expression

The expression to evaluate.

"Get(CurrentTimeStamp)"

ScriptFileName

Optional

The name of the file that contains the script to be run.

Get(Filename)

ScriptName

Optional

The exact name of the script to run.

"TestScript"

Result Returns reference number or error.

Description

This SQL query is performed in FileMaker whenever no user activity has been for the given amount of time. If script is called, the user is idle the given time period. Than once user starts working again, the count is reset and next time the user is idle again, the script can be called. So our idle schedules repeat automatically. Please use Schedule.Release later to remove schedule from list.

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

See also

- 140.5 Schedule.EvaluateAtTime 6790
- 140.26 Schedule.Release 6817

Created 21st May 2015, last changed 9th January 2020.

140.8 Schedule.ExecuteSQLAfterDelay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.ExecuteSQLAfterDelay"; DelaySeconds; FileName; SQL Statement { ; ScriptFileName; ScriptName; Column Delimiter; Record Delimiter; Params })

Parameters

DelaySeconds

The Number of Seconds to wait before running the script.

10

FileName

The target database name. Can be empty to not limit query to one database.

""

SQL Statement

SQL Statement as a Text string

ScriptFileName

Optional

The name of the file that contains the script to be run.

Get(Filename)

ScriptName

Optional

The exact name of the script to run.

"TestScript"

Column Delimiter

Optional

Columns Separator, only used with SELECT statement. Default is TAB.

9

Record Delimiter

Optional

Record Separator, only used with SELECT statement, Default is Return

13

Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

Result Returns reference number or error.

Description

Optional, we can start a script with the result of the query.

Please use `Schedule.Release` later to remove schedule from list. Non repeating scheduled items are free automatically for you.

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

Unless you call `Schedule.Check` to perform due schedules now, the schedules are performed at idle time, so all the SQL commands are available including `INSERT`, `DELETE`, `UPDATE` and even `ALTER TABLE`.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.ExecuteSQLAtTimeStamp"; TimeStamp; FileName; SQL Statement { ; ScriptFileName; ScriptName; RepeatDelay; Params })

Parameters

TimeStamp

The timestamp at which to call the script. Plugin checks regularly if time stamp is reaches and calls as soon as current time is greater or equal the given timestamp. So calls can be delayed if FileMaker is busy!

Get(CurrentTimeStamp)+60

FileName

The target database name. Can be empty to not limit query to one database.

""

SQL Statement

SQL Statement as a Text string

ScriptFileName

Optional

The name of the file that contains the script to be run.

Get(Filename)

ScriptName

Optional

The exact name of the script to run

"TestScript"

RepeatDelay

Optional

The number of seconds after which to repeat the script call.

30

Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

Result Returns reference number or error.

Description

Optional, we can start a script with the result of the query.

Please use Schedule.Release later to remove schedule from list. Non repeating scheduled items are free automatically for you.

You define the timestamp at which to call the script. Plugin checks regularly if time stamp is reaches and calls as soon as current time is greater or equal the given timestamp. So calls can be delayed if FileMaker

is busy!

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

Unless you call `Schedule.Check` to perform due schedules now, the schedules are performed at idle time, so all the SQL commands are available including `INSERT`, `DELETE`, `UPDATE` and even `ALTER TABLE`.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

140.11 Schedule.ExecuteSQLOnIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	No

MBS("Schedule.ExecuteSQLOnIdle"; DelaySeconds; FileName; SQL Statement { ; ScriptFileName; ScriptName; Column Delimiter; Record Delimiter; RepeatDelay; Params })

Parameters

DelaySeconds

The Number of Seconds to wait before running the script. Moving the mouse or using keyboard will reset the counter.

10

FileName

The target database name. Can be empty to not limit query to one database.
""

SQL Statement

SQL Statement as a Text string

ScriptFileName

Optional

The name of the file that contains the script to be run.

Get(Filename)

ScriptName

Optional

The exact name of the script to run.

"TestScript"

Column Delimiter

Optional

Columns Separator, only used with SELECT statement. Default is TAB.

9

Record Delimiter

Optional

Record Separator, only used with SELECT statement, Default is Return

13

RepeatDelay

Optional

The number of seconds after which to repeat the script call.

30

Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

Result Returns reference number or error.

Description

This SQL query is performed in FileMaker whenever no user activity has been for the given amount of time. If script is called, the user is idle the given time period. Than once user starts working again, the count is reset and next time the user is idle again, the script can be called. So our idle schedules repeat automatically. Please use Schedule.Release later to remove schedule from list.

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

Unless you call Schedule.Check to perform due schedules now, the schedules are performed at idle time, so all the SQL commands are available including INSERT, DELETE, UPDATE and even ALTER TABLE.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

140.12 Schedule.GetAutoRelease

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.GetAutoRelease"; ScheduleRef)

Parameters

ScheduleRef

The reference for a scheduled script call or sql query as returned by Schedule.StartScript* functions or Schedule.ExecuteSQL* functions.

\$ref

Result Returns value or error.

Description

Value is 1 to auto remove from list of schedules or 0 if not.

See also

140.14 Schedule.GetEvaluateResult

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.GetEvaluateResult"; ScheduleRef)

Parameters

ScheduleRef

The reference for a scheduled script call or sql query as returned by Schedule.StartScript* functions or Schedule.ExecuteSQL* functions.

\$ref

Result Returns OK or error.

Description

Please use Schedule.SetAutoRelease with parameter 0 to avoid the target schedule to be released before you can query result.

Examples

Try it:

```
# evaluate that in a second
Set Variable [ $ref; Value:MBS( "Schedule.EvaluateAfterDelay"; 1; "1+2" ) ]
# stop plugin from removing schedule after it was evaluated
Set Variable [ $r; Value:MBS( "Schedule.SetFreeAfterRun"; $ref; 0 ) ]
# check what is inside?
Set Variable [ $r; Value:MBS( "Schedule.GetEvaluate"; $ref ) ]
# make a pause
Pause/Resume Script [ Duration (seconds): 2 ]
# now check result. Shows 3
Show Custom Dialog [ "Result"; MBS( "Schedule.GetEvaluateResult"; $ref ) ]
# and free memory
Set Variable [ $r; Value:MBS( "Schedule.Release"; $ref ) ]
```

140.26 Schedule.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.Release"; ScheduleRef)

Parameters

ScheduleRef

The reference for a scheduled script call or sql query as returned by Schedule.StartScript* functions or Schedule.ExecuteSQL* functions.

\$ref

Result Returns OK or error.

Description

This will free all memory used and stops the schedule.

Examples

Release now:

```
MBS( "Schedule.Release"; $ScheduleRef )
```

Start a script once in 10 seconds and release:

```
Set Variable [ $ref; MBS( "Schedule.StartScriptAfterDelay"; 10; Get(FileName); "testScript"; "Hello World" ) ]
Set Variable [ $r; MBS("Schedule.Release"; $ref) ]
# script will never be called as schedule was destroyed!

140.34 Schedule.SetScriptParameter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.SetScriptParameter"; ScheduleRef; Parameter)

Parameters

ScheduleRef

The reference for a scheduled script call or sql query as returned by Schedule.StartScript* functions or Schedule.ExecuteSQL* functions.

\$ref

Parameter

The new parameter value. If empty or not provided, the plugin passes the schedule reference number.
””

Result Returns OK or error.

Description

If the script parameter is empty, the plugin passes the timer reference number as parameter.

Examples

Change Script Parameter:

```
MBS( "Schedule.SetScriptParameter"; $ScheduleRef; "Hello World" )
```

- [MBS FileMaker Plugin, version 6.5pr3](#)

Created 11st October 2016, last changed 11st October 2016.

140.37 Schedule.StartScriptAfterDelay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.StartScriptAfterDelay"; DelaySeconds; FileName; ScriptName { ; ScriptParameter; RepeatDelay })

Parameters

DelaySeconds

The Number of Seconds to wait before running the script.

10

FileName

The name of the file that contains the script to be run

Get(FileName)

ScriptName

The exact name of the script to run

"TestScript"

ScriptParameter

Optional

Optional, the Script Parameter to pass to the script

RepeatDelay

Optional

The number of seconds after which to repeat the script call.

30

Result Returns reference number or error.

Description

You can also pass a text string to the Script as a Parameter. The parameter can be retrieved by using Get(ScriptParameter) in the script that plug-in is calling.

Please use Schedule.Release later to remove schedule from list. Non repeating scheduled items are free automatically for you.

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Start a script once in 10 seconds:

```
MBS( "Schedule.StartScriptAfterDelay"; 10; Get(FileName); "testScript"; "Hello World" )
```

Start a script once in 10 seconds and repeat every 20 seconds:

```
MBS( "Schedule.StartScriptAfterDelay"; 10; Get(FileName); "testScript"; "Hello World"; 20 )
```

MBS("Schedule.StartScriptAtTime"; Hours; Minutes; Seconds; FileName; ScriptName { ; ScriptParameter; RepeatHour; RepeatMinute; RepeatSecond })

Parameters

Hours

The hour of the day at which to call the script.

12

Minutes

The minute of the day at which to call the script.

10

Seconds

The seconds of the day at which to call the script.

0

FileName

The name of the file that contains the script to be run

Get(FileName)

ScriptName

The exact name of the script to run

"TestScript"

ScriptParameter

Optional

Optional, the Script Parameter to pass to the script

RepeatHour

Optional

The number of hours to wait between script calls.

1

RepeatMinute

Optional

The number of minutes to wait between script calls.

0

RepeatSecond

Optional

The number of seconds to wait between script calls.

0

Result Returns reference number or error.

Description

You can also pass a text string to the Script as a Parameter. The parameter can be retrieved by using `Get(ScriptParameter)` in the script that plug-in is calling.

Please use `Schedule.Release` later to remove schedule from list. Non repeating scheduled items are free automatically for you.

You define the timestamp with hours, minutes and seconds parameter at which to call the script. Plugin checks regularly if time stamp is reaches and calls as soon as current time is greater or equal the given timestamp. So calls can be delayed if FileMaker is busy!

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Run at 10:30 and repeat every 2 hour:

```
MBS( "Schedule.StartScriptAtTime"; 10; 30; 0; Get(FileName); "testScript"; ""; 2; 0; 0 )
```

Run daily at 6:10 in morning

```
MBS( "Schedule.StartScriptAtTime"; 6;10; 0; Get(FileName); "Send Jobs"; ""; 24; 0; 0 )
```

- 140.40 `Schedule.StartScriptOnIdle` 6835

Created 20th May 2015, last changed 20th April 2017.

140.39 Schedule.StartScriptAtTimeStamp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	Yes

MBS("Schedule.StartScriptAtTimeStamp"; TimeStamp; FileName; ScriptName { ; ScriptParameter; RepeatDelay })

Parameters

TimeStamp

The timestamp at which to call the script. Plugin checks regularly if time stamp is reaches and calls as soon as current time is greater or equal the given timestamp. So calls can be delayed if FileMaker is busy!

Get(CurrentTimeStamp)+60

FileName

The name of the file that contains the script to be run

Get(FileName)

ScriptName

The exact name of the script to run

"TestScript"

ScriptParameter

Optional

Optional, the Script Parameter to pass to the script

RepeatDelay

Optional

The number of seconds after which to repeat the script call.

30

Result Returns reference number or error.

Description

You can also pass a text string to the Script as a Parameter. The parameter can be retrieved by using Get(ScriptParameter) in the script that plug-in is calling.

Please use Schedule.Release later to remove schedule from list. Non repeating scheduled items are free automatically for you.

You define the timestamp at which to call the script. Plugin checks regularly if time stamp is reaches and calls as soon as current time is greater or equal the given timestamp. So calls can be delayed if FileMaker is busy!

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Run script in 10 seconds and then repeat every 10 seconds:

```
MBS( "Schedule.StartScriptAtTimeStamp"; Get(CurrentTimeStamp)+10; Get(FileName); "testScript"; "time passed"; 10 )
```

140.40 Schedule.StartScriptOnIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
140 Schedule	5.2	Yes	Yes	No	No	No

MBS("Schedule.StartScriptOnIdle"; DelaySeconds; FileName; ScriptName { ; ScriptParameter })

Parameters

DelaySeconds

The Number of Seconds to wait before running the script. Moving the mouse or using keyboard will reset the counter.

10

FileName

The name of the file that contains the script to be run

Get(FileName)

ScriptName

The exact name of the script to run

"TestScript"

ScriptParameter

Optional

The Script Parameter to pass to the script

Result Returns reference number or error.

Description

This script is called in FileMaker whenever no user activity has been for the given amount of time.

You can also pass a text string to the Script as a Parameter. The parameter can be retrieved by using Get(ScriptParameter) in the script that plug-in is calling.

If script is called, the user is idle the given time period. Than once user starts working again, the count is reset and next time the user is idle again, the script can be called. So our idle schedules repeat automatically. Please use Schedule.Release later to remove schedule from list.

Our plugin does not provide persistence. You need to schedule things in your scripts if you need them. When FileMaker quits, the plugin forgets the list of schedules.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Run a script 10 seconds after idle is detected:

```
MBS("Schedule.StartScriptOnIdle"; 10; Get(FileName); "testScript"; "don't work?")
```

Chapter 141

Screenshot

Create screenshots.

141.1 Screen.Count

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	1.0	Yes	Yes	Yes	No	No

MBS("Screen.Count")

Description

Unlimited monitors are supported on Macs. Only one monitor is supported on PCs. Therefore on the PC this function will always return 1.

For version 7.1 we added support for multiple monitors for Windows.

Examples

Count Screens

MBS("Screen.Count")

Created 18th August 2014, last changed 26th January 2017.

141.2 Screen.DockHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	8.3	Yes	No	No	No	No

MBS("Screen.DockHeight")

Result Returns number or error.

Description

The plugin checks screen height compared to usable screen height, which gives the dock height on the main screen.

Examples

Query dock size:

```
Show Custom Dialog [ "Dock Size" ; MBS( "Screen.DockWidth" ) & " x " & MBS( "Screen.DockHeight" ) ]
```

141.3 Screen.DockWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	8.3	Yes	No	Yes, macOS only	No	No

MBS("Screen.DockWidth")

Result Returns number or error.

Description

The plugin checks screen width compared to usable screen width, which gives the dock width on the main screen.

Examples

Query dock size:

```
Show Custom Dialog [ "Dock Size" ; MBS( "Screen.DockWidth" ) & " x " & MBS( "Screen.DockHeight" ) ]
```

141.4 Screen.Height

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	1.0	Yes	Yes	Yes	No	Yes

MBS("Screen.Height"; ScreenID)

Parameters

ScreenID

The zero based index of the screen to target.

0

Description

FileMaker's built in functions for returning related information only works for the "desktop" and may include more than one screen in a Multiple monitor situation. Also Get(WindowDesktopHeight) returns the height of the desktop not the height of the monitor. The desktop height does not include the height of the menu. Unlimited monitors are supported on Macs. Only one monitor is supported on PCs.

For version 7.1 we added support for multiple monitors for Windows.

Examples

Get the first screen's co-ordinates

```
MBS( "Screen.Left" ; 0 ) & " " &
MBS( "Screen.Top" ; 0 ) & " " &
MBS( "Screen.Width" ; 0 ) & " " &
MBS( "Screen.Height" ; 0 )
```

141.5 Screen.Left

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	1.0	Yes	Yes	Yes	No	Yes

MBS("Screen.Left"; ScreenID)

Parameters

ScreenID

The zero based index of the screen to to target.

0

Description

FileMaker's built in functions for returning screen related information only works for the "desktop" and may include more than one screen in a Multiple monitor situation. Unlimited monitors are supported on Macs. Only one monitor is supported on PCs.

For version 7.1 we added support for multiple monitors for Windows.

Examples

Get the first screen's co-ordinates

```
MBS( "Screen.Left" ; 0 ) & " " &
```

```

141.6 Screen.Scale

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	9.2	Yes	Yes	Yes	No	Yes

MBS("Screen.Scale" { ; Screen ID })

Parameters

Screen ID

Optional

The zero based index of the screen to to target. Default is main screen.

0

Result Returns number or error.

Description

Normal screens have 1, retina screens have 2 and on iPhone some have even 3. Windows has same scale factor for all screens, which can be fractions like 1.5.

141.7 Screen.Top

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	1.0	Yes	Yes	Yes	No	Yes

MBS("Screen.Top"; Screen ID)

Parameters

Screen ID

The zero based index of the screen to to target.

0

Description

Returns the Top coordinate of the screen indicated by the Screen ID parameter Also Get(WindowDesktopHeight) returns the height of the desktop not the height of the monitor. The desktop height does not include the height of the menu. Unlimited monitors are supported on Macs. Only one monitor is supported on PCs.

For version 7.1 we added support for multiple monitors for Windows.

Examples

Get the first screen's co-ordinates

```
MBS( "Screen.Left" ; 0 ) & " " &
MBS( "Screen.Top" ; 0 ) & " " &
MBS( "Screen.Width" ; 0 ) & " " &

141.9 Screenshot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	1.0	Yes	Yes	Yes	No	No

MBS("Screenshot"; ScreenID; Format; Quality; Filename)

Parameters

ScreenID

Zero Based index of the screens. If blank "0" is assumed

0

Format

The format of the file (currently only JPEG is supported)

JPEG

Quality

The quality of the image. From 0 to 100.

80

Filename

The desired file name. The image is not written to disk. This file name is just added to the container for later export.

MyCoolFile

Result Returns the image as a container value so you can assign it to a container.

Description

Use "Set Field" to set the result of this function into any container field. On PCs only the main monitor is supported, screen id 0.

Updated for Mac OS X 10.7 in plugin version 2.5.

Returns the image as container value, so you can assign it to a container field or save to disk with Container.WriteFile function.

Examples

Capture screen as JPEG:

```
Let(
[
/*-----PARAMETERS-----*/
ScreenID = 0;
Format = "JPEG";
Quality = 512;
Filename = "MyCoolFile"
];
/*-----FUNCTION-----*/
MBS(
"Screenshot";
```

6846

CHAPTER 141. SCREENSHOT

```
ScreenID ;  
Format ;  
Quality ;  
Filename  
)  
)
```

Put screenshot in field:

```
Set Variable [ $screenshot ; Value: MBS("Screenshot"; 0; "jpeg"; 90) ]  
Set Field [ Contacts::Photo Container ; $screenshot ]
```

141.10 ScreenshotRect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
141 Screenshot	1.0	Yes	Yes	Yes	No	No

MBS("ScreenshotRect"; Left; Top; Width; Height; Format; Quality; File Name)

Parameters**Left**

Left
100

Top

Top
100

Width

Width of the rectangle
200

Height

Height of Rectangle
200

Format

File Format
JPEG

Quality

The quality of the image
100

File Name

The desired file name. The image is not written to disk. This file name is just added to the container for later export.
Test File.jpg

Result Returns the image as a container value so you can assign it to a container.

Description

Updated for Mac OS X 10.7 in plugin version 2.5.

Returns the image as container value, so you can assign it to a container field or save to disk with Container.WriteFile function.

Examples

Capture a portion of the screen to a JPEG

```
Let(
[
```

```

/*-----PARAMETERS-----*/
Left = 100;
Top = 100;
Width = 200;
Height = 200;
Format = "JPEG";
Quality = 1024;
File Name = "Test File.jpg"
];
/*-----FUNCTION-----*/
MBS(
"ScreenshotRect";
Left ;
Top ;
Width ;
Height ;
Format ;
Quality ;
File Name
)
)

```

Capture an area of screen as picture:

```
Set Field [ test::test ; MBS( "ScreenshotRect"; 100; 100; 400; 300; "JPEG"; 1024; "screenshot.jpg" ) ]
```

Chapter 142

ScriptWorkspace

Control FileMaker's Script Workspace on macOS.

142.1 ScriptWorkspace.BringToFront

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	7.4	Yes	No	No	No	No

MBS("ScriptWorkspace.BringToFront")

Result Returns OK or error.

Description

See also

- 142.8 ScriptWorkspace.LineCount

6856

Created 13th August 2017, last changed 13th August 2017.

142.2 ScriptWorkspace.CopyScriptText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	10.1	Yes	No	No	No	No

MBS("ScriptWorkspace.CopyScriptText")

Result Returns OK or error.

Description

Includes colors for script steps.

Maybe useful for automation workflows where you like to evaluate an expression by hotkey which puts current script on clipboard and then pastes it in your CMS for the website.

142.9 ScriptWorkspace.OpenScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	7.4	Yes	No	No	No	No

MBS("ScriptWorkspace.OpenScript"; ScriptName)

Parameters

ScriptName

The name of the script to select. Must be visible in the left list of scripts in script workspace.

"Test"

Result Returns OK or error.

Description

The script list does not need to be visible.

Examples

Open a script in a second:

```
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; 1; "MBS( \"ScriptWorkspace.OpenScript\"; \"Test Script\" )" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	9.0	Yes	No	No	No	No

MBS("ScriptWorkspace.ScriptText" { ; SelectedOnly })

Parameters

SelectedOnly

Optional

Available in MBS FileMaker Plugin 9.5 or newer.

Return only selected text lines. Default is 0.

1

Result Returns text or error.

Description

Same as copy button in script workspace.

142.15 ScriptWorkspace.SelectLine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	7.4	Yes	No	No	No	No

MBS("ScriptWorkspace.SelectLine"; Line { ; Scroll })

Parameters

Line

The new line number. If negative, will be relative to end.

10

Scroll

Optional

Whether to scroll to move row visible.

1

Result Returns OK or error.

Description

Line number can be be negative to select a line relative to end of script.

142.16 ScriptWorkspace.SelectLines

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	9.0	Yes	No	No	No	No

MBS("ScriptWorkspace.SelectLines"; Line1; Line2)

Parameters

Line1

The first line number. If negative, will be relative to end.
10

Line2

The last line number. If negative, will be relative to end.
15

Result Returns OK or error.

Description

Line number can be be negative to select a line relative to end of script.

Examples

Select rows 5 to 10:

MBS("ScriptWorkspace.SelectLines"; 5; 10)

Select last two lines:

MBS("ScriptWorkspace.SelectLines"; -2; -1)

Created 14th August 2017, last changed 14th August 2017.

142.18 ScriptWorkspace.SelectedLines

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	10.0	Yes	No	No	No	No

MBS("ScriptWorkspace.SelectedLines" { ; Ranges })

Parameters

Ranges

Optional

Whether to return list with ranges. Pass 1 for ranges or 0 for just line numbers.

1

Result Returns list or error.

Description

If ranges is 1, we return ranges like "3-5§7§10-12", otherwise we return "3§4§5§7§10§11§12".

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	10.0	Yes	No	No	No	No

MBS("ScriptWorkspace.SetScriptListSearch" { ; SearchText })

Parameters

SearchText

Optional

The text to put in the search field.

"Import"

Result Returns OK or error.

Description

Performs also search after changing text.

See also

142.21 ScriptWorkspace.StyledScriptText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
142 ScriptWorkspace	10.1	Yes	No	No	No	No

MBS("ScriptWorkspace.StyledScriptText" { ; Mode })

Parameters

Mode

Optional

The mode to use. Can be HTML, RTF, StyledText or Text. Default is StyledText.

"StyledText"

Result Returns text or error.

Description

Can return text as styled text, plain text, html or rtf.

Maybe useful for automation workflows where you like to evaluate an expression by hotkey which puts current scripttext into a CMS for your website or writes to it to a text file to compare differences later.

Examples

Query text as styled text:

```
MBS( "ScriptWorkspace.StyledScriptText"; "StyledText")
```

Chapter 143

SendMail

Create emails and send them.

You can send or receive emails with our CURL functions. For sending the SendMail functions help to build an email and send it, while EmailParser functions help to parse an email.

143.1 SendMail.AddAttachmentContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "SendMail.AddAttachmentContainer"; EmailID; Container { ; Name; MimeType; InlineID } )
```

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Container

The container to attach to email.

Attachment::Container

Name

Optional

The name for the attachment. If empty, version 6.2 or newer uses file name from container.

"sample.pdf"

MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream". Version 6.2 or newer detects mime type from file extension if needed.

"application/octet-stream"

InlineID

Optional

The content ID for inline images (CID). Empty text or no parameter gives regular attachment.

```
"test.png@3C111B0E.81ED.478A.912C.4B64F538003C"
```

Result Returns OK or error.

Description

Version 5 of MBS Plugin can encode file name for preserving non ASCII characters. Still for compatibility it is recommended to use simply ASCII names.

You can use `Text.FileExtensionToMimeType` to find the mime type for a file extension.

You can use `AddAttachment` functions several times to add several attachments.

If your Container is already Base64 encoded text, you can use the `SendMail.AddAttachmentText` function with 1 for `IsBase64` parameter.

For `InlineID`:

If you like to use inline images, please check your html for references to image files. Please add all the image files as attachments with an `InlineID`, e.g. pass the file name as `InlineID`.

e.g. in you html you may reference `background-3.jpg` in the body tag:

```
<body background="background-3.jpg">
```

Add an attachment named `background-3.jpg` (name doesn't matter) with `InlineID background-3.jpg` and replace the `background-3.jpg` in the html with `cid:background-3.jpg` so the email viewer will lookup the attachment with that id to display it there.

Examples

Add attachment:

```
Set Variable [ $r; Value:MBS("SendMail.AddAttachmentContainer"; $EmailID; Attachment::Container; Attachment::Name; Attachment::Type) ]
```

143.2 SendMail.AddAttachmentFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.AddAttachmentFile"; EmailID; Path { ; Name; MimeType; InlineID })

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Path

The native file path to the file to include as attachment.

"/Users/cs/Desktop/sample.pdf"

Name

Optional

The name for the attachment. If empty, version 6.2 or newer uses file name from file path.

"sample.pdf"

MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".

Version 6.2 or newer detects mime type from file extension if needed.

"application/octet-stream"

InlineID

Optional

The content ID for inline images (CID). Empty text or no parameter gives regular attachment.

"test.png@3C111B0E.81ED.478A.912C.4B64F538003C"

Result Returns OK or error.

Description

Attachments over 100 MB are not supported.

Version 5 of MBS Plugin can encode file name for preserving non ASCII characters. Still for compatibility it is recommended to use simply ASCII names.

You can use Text.FileExtensionToMimeType to find the mime type for a file extension.

You can use AddAttachment several times to add several attachments.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Add attachment:

```
Set Variable [ $r; Value:MBS("SendMail.AddAttachmentFile"; $EmailID; Attachment::Path; Attachment::Name;
```

```
Attachment::Type) ]
```

Recursive custom function to add a list of files:

```
MBSAttachment(EmailID, FilePathList, Flag_inline)

// e.g. $r=MBSattachment ( $EmailID ; MyTable::FilePathList; 1 ) ;

Case(
ValueCount (FilePathList ) >0;
Let(
[
$element =
ValueCount (FilePathList ) ;
$Line =
GetValue( FilePathList; $element );
$InlineID=
MBS( "Path.LastPathComponent"; $line ) ;
$r=
MBS(
"SendMail.AddAttachmentFile";
EmailID;
$Line;
""; /* file name from path automatically */
""; /* mime name from file name automatically */
Case(
Flag_inline = 1;
$InlineID ;
""
)
)
];

// call recursive for next file:
MBSAttachment(
EmailID;
Trim(
Substitute(
"$" & FilePathList;
"$" & $Line ;
""
));
Flag_inline
)
);
""
)
```

143.3 SendMail.AddAttachmentText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	6.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "SendMail.AddAttachmentText"; EmailID; Text; Encoding { ; Name; MimeType; InlineID; IsBase64 } )
```

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Text

The text to use for the attachment.

"Hello World"

Encoding

The text encoding for text parameter. Default is UTF-8.

"UTF8"

Name

Optional

The name for the attachment. If empty, version 6.2 or newer uses file name from file path.

"sample.txt"

MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream". Version 6.2 or newer detects mime type from file extension if needed.

"application/octet-stream"

InlineID

Optional

Available in MBS FileMaker Plugin 7.3 or newer.

The content ID for inline images (CID). Empty text or no parameter gives regular attachment.

IsBase64

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

Whether text is already base64 encoded. Default is 0, so we encode it. Pass 1 if you already encoded the text yourself.

0

Result Returns OK or error.

Description

Attachments over 100 MB are not supported.

You can use Text.FileExtensionToMimeType to find the mime type for a file extension.

You can use AddAttachment several times to add several attachments.

Broken in 8.1 or older where you need to do Base64 encoding and fixed in 8.2 to work correctly.

Examples

Adds a text attachment:

```
MBS( "SendMail.AddAttachmentText"; $email; "Hello World"; "UTF-8"; "test.txt"; "text/plain" )
```

143.4 SendMail.AddBCC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.AddBCC"; EmailID; Email { ; Name })

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Email

The email address of the recipient.

"test@mbsplugins.de"

Name

Optional

Optional the name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

"John Miller"

Result Returns OK or error.

Description

See also SendMail.AddRecipient.

You can call this in a loop several times to add as many recipients as needed.

Please make sure the email addresses are syntactically correct.

Examples

Start new email and add recipients:

```
Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
Set Variable [ $r; Value:MBS("SendMail.AddTO"; $EmailID; "Jens@mbsplugins.test"; "Jens Müller") ]
Set Variable [ $r; Value:MBS("SendMail.AddCC"; $EmailID; "John@mbsplugins.test"; "John Miller") ]
Set Variable [ $r; Value:MBS("SendMail.AddBCC"; $EmailID; "Bob@mbsplugins.test"; "Bob Jones") ]
```

143.5 SendMail.AddCC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.AddCC"; EmailID; Email { ; Name })

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Email

The email address of the recipient.

"test@mbsplugins.de"

Name

Optional

Optional the name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

"John Miller"

Result Returns OK or error.

Description

143.6 SendMail.AddHeader

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.AddHeader"; EmailID; Header)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Header

The new header entry. Passed to CURL later without modification. Since version 6.4 this can be a list of headers.

"X-Company: Test Inc"

Result Returns OK or error.

Description

This header is passed as is and not preprocessed.

You can use this function to pass custom headers for "X-Universally-Unique-Identifier:", "Date:", "X-Mailer:", "Message-Id:" and "Mime-Version:".

If you pass header without text following ":", the header is not included.

Examples

Add company name:

```
MBS("SendMail.AddHeader"; $EmailID; "X-Company: Your Company Name")
```

Add X-URL header:

```
MBS("SendMail.AddHeader"; $EmailID; "X-URL: http://www.myurl.com")
```

Add high priority:

```
MBS("SendMail.AddHeader"; $EmailID; "X-Priority: 1")
```

Add low priority:

```
MBS("SendMail.AddHeader"; $EmailID; "X-Priority: 5")
```

Add language

```
MBS("SendMail.AddHeader"; $EmailID; "Content-Language: de")
```

Request read receipt:

```
MBS("SendMail.AddHeader"; $EMailID; "Disposition-Notification-To: email@server.de")
```

Set email app:

```
MBS("SendMail.AddHeader"; $EMailID; "X-Mailer: FMCompanyManagerX")
```

Request return receipt:

```
MBS("SendMail.AddHeader"; $EMailID; "Return-Receipt-To: \"Test Software\" <admin@testsoft.com>")
```

- 143.14 SendMail.CreateEmail 6898

143.6.1 FileMaker Magazin

- Ausgabe 5/2014, Seite 26

Created 3th September 2014, last changed 26th February 2020.

143.7 SendMail.AddRecipient

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.AddRecipient"; EmailID; Type; Email { ; Name })

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.
\$EmailID

Type

The type of recipient. Can be TO, BCC, CC or ReplyTo.
"CC"

Email

The email address of the recipient.
"test@mbsplugins.de"

Name

Optional
Optional the name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.
"John Miller"

Result Returns OK or error.

Description

This function can be used easily if the type is also a field in your database.
As an alternative you can of course also use SendMail.AddTo, SendMail.AddReplyTo, SendMail.AddCC or SendMail.AddBCC.

You can call this in a loop several times to add as many recipients as needed.
Please make sure the email addresses are syntactically correct.

Examples

Add email address for a carbon copy:

```
MBS( "SendMail.AddRecipient"; $email; "CC"; "test@mbsplugins.de"; "Bob Miller")
```

143.8 SendMail.AddReplyTo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.AddReplyTo"; EmailID; Email { ; Name })

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Email

The email address of the recipient.

"test@mbsplugins.de"

Name

Optional

Optional the name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

"John Miller"

Result Returns OK or error.

Description

See also SendMail.AddRecipient.

Examples

Adds a reply to:

MBS("SendMail.AddReplyTo"; \$EmailID; "test@test.test"; "Bob Miller")

See also

- 143.7 SendMail.AddRecipient 6889
- 143.14 SendMail.CreateEmail 6898

Created 5th September 2014, last changed 5th September 2014.

143.9 SendMail.AddTo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.AddTo"; EmailID; Email { ; Name })

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Email

The email address of the recipient.

"test@mbsplugins.de"

Name

Optional

Optional the name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

"John Miller"

Result Returns OK or error.

Description

See also SendMail.AddRecipient.

You can call this in a loop several times to add as many recipients as needed.

Please make sure the email addresses are syntactically correct.

Examples

Start new email and add recipients:

```
Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
Set Variable [ $r; Value:MBS("SendMail.AddTO"; $EmailID; "Jens@mbsplugins.test"; "Jens Müller") ]
Set Variable [ $r; Value:MBS("SendMail.AddCC"; $EmailID; "John@mbsplugins.test"; "John Miller") ]
Set Variable [ $r; Value:MBS("SendMail.AddBCC"; $EmailID; "Bob@mbsplugins.test"; "Bob Jones") ]
```

143.14 SendMail.CreateEmail

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.CreateEmail" { ; Encoding })

Parameters

Encoding

Optional

The text encoding to use for the email. If unspecified we use "UTF-8". Can be UTF-8, macintosh, windows-1250, windows-1251, windows-1252, windows-1253, windows-1254, windows-1255, windows-1256, windows-1257, ISO-8859-1, ISO-8859-2, ISO-8859-3, ISO-8859-5, ISO-8859-6, ISO-8859-7, ISO-8859-8, ISO-8859-9 or ISO-8859-15.

"UTF-8"

Result Returns Email ID or error.

Description

The reference number returned by this function can be passed to other plugin functions for setting up the email.

Later use SendMail.Release to free memory.

SendMail reference numbers are starting at 14000 and counting up for each new email.

143.25 SendMail.PrepareCURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.PrepareCURL"; EmailID; CURLID)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

CURLID

The CURL session handle.

\$curl

Result Returns OK or error.

Description

You can set your own settings like proxy after this function call.

If you like you can reuse the email and curl objects after you sent an email, change values and send another email.

Examples

Setup and send email with all options:

```

Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
Set Variable [ $r; Value:MBS("SendMail.SetFrom"; $EmailID; EMail::FromEmail; EMail::FromName) ]
Set Variable [ $r; Value:MBS("SendMail.SetHTMLText"; $EmailID; EMail::HTMLText) ]
Set Variable [ $r; Value:MBS("SendMail.SetPlainText"; $EmailID; EMail::PlainText) ]
Set Variable [ $r; Value:MBS("SendMail.SetSubject"; $EmailID; EMail::Subject) ]
Set Variable [ $r; Value:MBS("SendMail.SetSMTPServer"; $EmailID; EMail::SMTP Server; EMail::SMTP
SSL) ]
Set Variable [ $r; Value:MBS("SendMail.SetSMTPUsername"; $EmailID; EMail::SMTP Username) ]
Set Variable [ $r; Value:MBS("SendMail.SetSMTPPassword"; $EmailID; EMail::SMTP Password) ]
Set Variable [ $r; Value:MBS("SendMail.AddTO"; $EmailID; Recipient::Email; Recipient::Name) ]
Set Variable [ $r; Value:MBS("SendMail.AddCC"; $EmailID; Recipient::Email; Recipient::Name) ]
Set Variable [ $r; Value:MBS("SendMail.AddBCC"; $EmailID; Recipient::Email; Recipient::Name) ]
Set Variable [ $r; Value:MBS("SendMail.AddAttachmentContainer"; $EmailID; Attachment::Container; At-
tachment::Name; Attachment::Type) ]

143.27 SendMail.SetFrom

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetFrom"; EmailID; Email { ; Name })

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.
\$EmailID

Email

The email address of the sender.
"test@mbsplugins.de"

Name

Optional
Optional the name of the sender. If this name contains special characters, it will be automatically encoded with UTF-8. Do not put an email address here!
"John Miller"

Result Returns OK or error.

Description

Examples

Create email and set sender:

```
Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
Set Variable [ $r; Value:MBS("SendMail.SetFrom"; $EmailID; "Jens@mbsplugins.test"; "Jens Müller") ]
```

143.28 SendMail.SetHTMLText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetHTMLText"; EmailID; Text)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.
\$EmailID

Text

The HTML text for the email. Will be encoded by the plugin to quoted printable UTF-8.
Email::HTMLText

Result Returns OK or error.

Description

See also SendMail.SetPlainText and SendMail.SetRichText.

If you need to encode text yourself to html, you can use the Text.EncodeToHTML function.
You can read html content from file using the Text.ReplaceNewline function.

You can use Text.MergeFields to replace placeholders with values from variables, fields and expressions.

Examples

Create email and set content:

```
Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
Set Variable [ $r; Value:MBS("SendMail.SetHTMLText"; $EmailID; $html) ]
```

Sets the text as plain text and as html:

```
Set Variable [ $r; Value: MBS("SendMail.SetHTMLText"; $EmailID; "<html><body>" & GetAsCSS(EMail::Plain-
Text) & "</body></html>") ]
Set Variable [ $r; Value: MBS("SendMail.SetPlainText"; $EmailID; EMail::PlainText) ]
```

Add inline graphics with placeholder in HTML:

```
Set Variable [ $EmailID ; Value: MBS("SendMail.CreateEmail") ]
# prepare HTML from field in FileMaker
Set Variable [ $html ; Value: "<html><body>" & GetAsCSS(EMail::PlainText) & "</body></html>" ]
# Replace $$img$$ in text with image.
Set Variable [ $html ; Value: Substitute($html; "$$img$$"; "<img src=\"cid:image1.png\">") ]
Set Variable [ $r ; Value: MBS("SendMail.SetHTMLText"; $EmailID; $html) ]
# now add a container
Set Variable [ $r ; Value: MBS("SendMail.AddAttachmentContainer"; $EmailID; EMail::ImageContainer;
EMail::ImageName; "image/png"; "image1.png") ]
```

- Ausgabe 5/2014, Seite 26

Created 5th September 2014, last changed 5th September 2014.

143.30 SendMail.SetMessageID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.4	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetMessageID"; EmailID; MessageID)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

MessageID

The new id for the email message.

"6345767890@monkeybreadsoftware.de"

Result Returns OK or error.

Description

This is normally set via SendMail.SetFrom.

143.31 SendMail.SetPlainText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetPlainText"; EmailID; Text)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Text

The plain text for the email. Will be encoded by the plugin to quoted printable UTF-8.

Email::PlainText

Result Returns OK or error.

Description

See also SendMail.SetHTMLText and SendMail.SetRichText.

You can read text content from file using the Text.ReadTextFile function.

You can use Text.MergeFields to replace placeholders with values from variables, fields and expressions.

Examples

Create email and set content:

```
Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
```

```
Set Variable [ $r; Value:MBS("SendMail.SetPlainText"; $EmailID; "Hello World") ]
```

Sets the text as plain text and as html:

```
Set Variable [ $r ; Value: MBS("SendMail.SetHTMLText"; $EmailID; "<html><body>" & GetAsCSS(EMail::Plain-Text) & "</body></html>") ]
```

```
Set Variable [ $r ; Value: MBS("SendMail.SetPlainText"; $EmailID; EMail::PlainText) ]
```

143.32 SendMail.SetRichText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetRichText"; EmailID; Text)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Text

The rich text for the email. Will be encoded by the plugin to quoted printable UTF-8.

Email::RichText

Result Returns OK or error.

Description

See also SendMail.SetPlainText and SendMail.SetHTMLText.

You can read text content from file using the Text.ReadTextFile function.

This is not to be confused with RTF file format. Enriched text is described here:

http://en.wikipedia.org/wiki/Enriched_text

Please note that most email clients do not support this nowadays.

Examples

Sets rich text:

```
MBS("SendMail.SetRichText"; $EmailID; "<bold><italic>Hello, world!</italic></bold>")
```

143.33 SendMail.SetSMTPPassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetSMTPPassword"; EmailID; password)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.
\$EmailID

password

Sets the password for SMTP server.
"This is a password"

Result Returns OK or error.

Description

Alternative to this method you can set CURL.SetOptionPassword yourself later.

Examples

Start new email and setup SMTP login:

```
Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
Set Variable [ $r; Value:MBS("SendMail.SetSMTPServer"; $EmailID; EMail::SMTP Server; EMail::SMTP
SSL) ]
Set Variable [ $r; Value:MBS("SendMail.SetSMTPUsername"; $EmailID; EMail::SMTP Username) ]
Set Variable [ $r; Value:MBS("SendMail.SetSMTPPassword"; $EmailID; EMail::SMTP Password) ]
```

143.34 SendMail.SetSMTPServer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetSMTPServer"; EmailID; Server { ; SSL })

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Server

The new SMTP Server address.

"smtp.mac.com"

SSL

Optional

Optional, pass 1 to use SSL, else 0. Pass 0 for TLS and later configure CURL for TLS.

Pass 1 if you use port 465 to enable SSL.

1

Result Returns OK or error.

Description

There are a few combinations possible.

First you can use SendMail.SetSMTPServer with SSL and pass 1 there.

Or you pass 0 for no SSL. Still you can use CURL.SetOptionFTPSSL set to 3 to allow TLS for an upgrade of the unencrypted connection to SSL later.

Some servers don't support unencrypted, SSL or TLS, so only one may work.

And ports can be difficult, too. You can use CURL.SetOptionPort to set a port explicit or include it in the server with double colon on the end. Common ports are 25, 587 or 465.

Alternative to this method you can set CURL.SetOptionURL directly.

Examples

Start new email and setup SMTP login:

```
Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
```

```
Set Variable [ $r; Value:MBS("SendMail.SetSMTPServer"; $EmailID; EMail::SMTP Server; EMail::SMTP SSL) ]
```

```
Set Variable [ $r; Value:MBS("SendMail.SetSMTPUsername"; $EmailID; EMail::SMTP Username) ]
```

```
Set Variable [ $r; Value:MBS("SendMail.SetSMTPPassword"; $EmailID; EMail::SMTP Password) ]
```

143.35 SendMail.SetSMTPUserName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetSMTPUserName"; EmailID; Username)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Username

Sets the username for SMTP server.

"user@mbsplugins.de"

Result Returns OK or error.

Description

Alternative to this method you can set CURL.SetOptionUsername yourself later.

Examples

Start new email and setup SMTP login:

```
Set Variable [ $EmailID; Value:MBS("SendMail.CreateEmail") ]
```

```
Set Variable [ $r; Value:MBS("SendMail.SetSMTPServer"; $EmailID; EMail::SMTP Server; EMail::SMTP SSL) ]
```

```
Set Variable [ $r; Value:MBS("SendMail.SetSMTPUsername"; $EmailID; EMail::SMTP Username) ]
```

```
Set Variable [ $r; Value:MBS("SendMail.SetSMTPPassword"; $EmailID; EMail::SMTP Password) ]
```

143.36 SendMail.SetSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
143 SendMail	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SendMail.SetSubject"; EmailID; Text)

Parameters

EmailID

The email reference number obtained using SendMail.CreateEmail function.

\$EmailID

Text

The new subject line.

"Hello World"

Result Returns OK or error.

Description

If subject lines contains special characters, it is automatically encoded as UTF-8.

Examples

Set subject line:

MBS("SendMail.SetSubject"; \$Email; "Hello World")

Chapter 144

SerialPort

Enumerate serial ports and send/receive data.

144.1 SerialPort.AvailableBytes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	4.4	Yes	Yes	Yes	No	No

MBS("SerialPort.AvailableBytes"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns number or error.

Description

Examples

Queries bytes and reads them:

```
$count = MBS( "SerialPort.AvailableBytes"; $PortReference )  
$text = MBS( "SerialPort.Read"; $PortReference; $count; "windows" )
```

Read in loop as long as data comes in:

```
# read data until end  
Set Variable [ $data; Value:"" ]  
Loop  
Pause/Resume Script [ Duration (seconds): ,1 ]
```

```
# exit when no more data
Exit Loop If [ not (MBS( "SerialPort.AvailableBytes"; $port ) >0) ]
# read some data
Set Variable [ $newdata; Value:MBS( "SerialPort.Read"; $port; 10000; "windows" ) ]
Set Variable [ $data; Value:$data & $newdata ]
# next
Pause/Resume Script [ Duration (seconds): ,1 ]
End Loop
```

144.2 SerialPort.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	7.4	Yes	Yes	No	No	No

MBS("SerialPort.Clear"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns OK or error.

Description

Reads all data from serial port.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	5.1	Yes	Yes	No	No	No

MBS("SerialPort.ClearDataAvailableHandler"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns OK or error.

Description

144.4 SerialPort.Close

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.Close"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns OK on success.

Description

Examples

Open port and close it:

```
$port = MBS( "SerialPort.Open"; "COM1" )
$r = MBS( "SerialPort.Write"; $port; "Hello" )
$r = MBS( "SerialPort.Close"; $port )
```
