144.6 SerialPort.GetBaudRate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.1	Yes	Yes	Yes	No	No

MBS("SerialPort.GetBaudRate"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns baud rate as number or error message.

Description

See also

144.7 SerialPort.GetCTS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.GetCTS"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns current value (0 or 1) or error message.

Description

If enabled, the CTS (clear-to-send) signal is monitored for output flow control. Than if CTS is turned off, output is suspended until CTS is sent again.

144.8 SerialPort.GetDSR

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.GetDSR"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns current value (0 or 1) or error message.

Description

If enabled DSR (data-set-ready) signal is monitored for output flow control.

144.9 SerialPort.GetDTR

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.GetDTR"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns current value (0 or 1) or error message.

Description

144.10 SerialPort.GetDataBits

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.1	Yes	Yes	Yes	No	No

MBS("SerialPort.GetDataBits"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns data size as number or error message.

Description

Value is 5, 6, 7 or 8.

144.11 SerialPort.GetParity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	5.0	Yes	Yes	Yes	No	No

MBS("SerialPort.GetParity"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns value or error.

Description

Can be 0 (off), 1 (odd) or 2 (even)

Examples

Queries parity:

MBS("SerialPort.GetParity"; \$SerialPort)

144.12 SerialPort.GetRTS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.GetRTS"; PortReference)

Parameters**PortReference**

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns current value (0 or 1) or error message.

Description**See also**

- 144.7 SerialPort.GetCTS 6938

144.13 SerialPort.GetStopBits

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	5.0	Yes	Yes	Yes	No	No

MBS("SerialPort.GetStopBits"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns OK or error.

Description

Can be 1 or 2 on Mac and 1, 1.5 or 2 on Windows.

Examples

Queries setting:

MBS("SerialPort.GetStopBits"; \$SerialPort)

See also

144.14 SerialPort.GetXON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.GetXON"; PortReference)

Parameters**PortReference**

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns current value (0 or 1) or error message.

Description**See also**

- 144.7 SerialPort.GetCTS 6938

144.15 SerialPort.HasLine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	7.0	Yes	Yes	Yes	No	No

MBS("SerialPort.HasLine"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns 1, 0 or error.

Description

The plugin checks the input buffer for a newline character.

144.16 SerialPort.IsSuspended

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	7.4	Yes	Yes	No	No	No

MBS("SerialPort.IsSuspended"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns 1, 0 or error.

Description

While suspended, we do not trigger event and clear incoming buffer regularly.

144.17 SerialPort.LastError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.3	Yes	Yes	Yes	No	No

MBS("SerialPort.LastError"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns error code.

Description

The error code is zero for no error.

On Windows you get the windows system error codes and on Mac OS X the unix system error codes.

144.18 SerialPort.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.List")

Result Returns the list of names.

Description

On Windows can list ports with textual name.

Examples

Get device list and pick first one:

```
$list = MBS( "SerialPort.List" )
$firstDevice = LeftValues($list; 1)
```

144.19 SerialPort.Open

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.Open"; PortName { ; Index })

Parameters

PortName

The name of the serial port to open.

"COM1"

Index

Optional

In case you have several ports with same name, you can specify an index here. Zero for first port with given name, 1 for the second port with given name.

0

Result Returns the port reference value which you pass to other SerialPort functions.

Description

You get the names from SerialPort.List function.

The port is opened with default settings.

Serial Port reference numbers are starting at 28000 and counting up for each new port.

Even if port is not showing in list, it may still open here, e.g. virtual COM ports on Windows.

You can open several ports with different connections, e.g. by calling SerialPort.Open once for each connection.

Version 9.2 introduced a workaround to make this work for port numbers >COM9 on Windows.

Examples

Open port and close it:

```
$port = MBS( "SerialPort.Open"; "COM1" )
$r = MBS( "SerialPort.Write"; $port; "Hello" )
$r = MBS( "SerialPort.Close"; $port )
```

A script to measure at a specific scale:

```
# Open port
Set Variable [ $serialPort ; Value: MBS("SerialPort.Open"; Scale::Port) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to open serial port" ; $serialPort ]
Exit Script [ Text Result: ]
End If
# Send reset command
```

```

Set Variable [ $r ; Value: MBS("SerialPort.Write"; $serialPort; "@" ) ]

144.20 SerialPort.Read

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.Read"; PortReference; length { ; Encoding })

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

length

Maximum number of bytes to read.

10

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

UTF8

Result Returns text or error message.

Description

The text returned may be shorter than length bytes.

See also SerialPort.AvailableBytes function.

Examples

Read up to 8 bytes and decode them from Windows text encoding into FileMaker:

```
$value = MBS( "SerialPort.Read"; $port; 8; "windows" )
```

Read in loop as long as data comes in:

```
# read data until end
Set Variable [ $data; Value:"" ]
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
# exit when no more data
Exit Loop If [ not (MBS( "SerialPort.AvailableBytes"; $port ) >0) ]
# read some data
Set Variable [ $newdata; Value:MBS( "SerialPort.Read"; $port; 10000; "windows" ) ]
Set Variable [ $data; Value:$data & $newdata ]
# next
Pause/Resume Script [ Duration (seconds): ,1 ]
End Loop
```

Record weight in predefined field:

```
# Change to reflect actual Layout
Go to Layout [ "MPO201 Input Weight" (MPORawMaterialColourInputs_MPO RM inputs) ]
Set Variable [ $portList; Value:MBS("SerialPort.List") ]

144.21 SerialPort.ReadByte

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.ReadByte"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns the byte value or an error message.

Description

This is very useful for reading control characters which you can't easily put in a text in FileMaker. Like 13 for a LF (line feed) or 10 for CR (carriage return). See also SerialPort.AvailableBytes function.

Examples

Read one byte:

```
$value = MBS( "SerialPort.ReadByte"; $port )
```

144.22 SerialPort.ReadHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.ReadHex"; PortReference; length)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

length

Maximum number of bytes to read.

10

Result Returns text encoded as hex or error message.

Description

The text returned may be shorter than length bytes.

See also SerialPort.AvailableBytes function.

Examples

Read up to 8 bytes and return them as:

```
$value = MBS( "SerialPort.ReadHex"; $port; 8 )
```

144.23 SerialPort.ReadLine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	7.0	Yes	Yes	Yes	No	No

MBS("SerialPort.ReadLine"; PortReference { ; Encoding })

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order. Pass hex or base64 to get text back encoded.
UTF8

Result Returns text or error.

Description

The plugin buffers input and reads text until first newline character. Returns text without that newline character.

144.24 SerialPort.Resume

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	7.4	Yes	Yes	No	No	No

MBS("SerialPort.Resume"; PortReference)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Result Returns OK or error.

Description

While suspended, we do not trigger event and clear incoming buffer regularly.

144.25 SerialPort.SetBaudRate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.1	Yes	Yes	Yes	No	No

MBS("SerialPort.SetBaudRate"; PortReference; BaudRate)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

BaudRate

The new baud rate as number.
9600

Result Returns OK or error message.

Description

Examples

Set the baud rate to 9600:

```
$r = MBS( "SerialPort.SetBaudRate"; $DeviceRef; 9600 )
```

144.26 SerialPort.SetCTS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.SetCTS"; PortReference; Value)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Value

0 to turn off, 1 to turn on.

1

Result Returns OK or error message.

Description

If enabled, the CTS (clear-to-send) signal is monitored for output flow control. Than if CTS is turned off, output is suspended until CTS is sent again.

Examples

Turn CTS mode on:

```
MBS( "SerialPort.SetCTS"; $SerialPort; 1 )
```

144.27 SerialPort.SetDSR

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.SetDSR"; PortReference; Value)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Value

0 to turn off, 1 to turn on.

1

Result Returns OK or error message.

Description

If enabled DSR (data-set-ready) signal is monitored for output flow control.

Examples

Turn DSR mode on:

```
MBS( "SerialPort.SetDSR"; $SerialPort; 1 )
```

144.28 SerialPort.SetDTR

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.SetDTR"; PortReference; Value)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Value

0 to turn off, 1 to turn on.

1

Result Returns OK or error message.

Description

Examples

Turn DTR mode on:

```
MBS( "SerialPort.SetDTR"; $SerialPort; 1 )
```

144.29 SerialPort.SetDataAvailableEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	6.2	Yes	Yes	No	No	No

MBS("SerialPort.SetDataAvailableEvaluate"; PortReference; Expression)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Expression

The expression to evaluate.
"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

When new data arrives, this expression is evaluated, so you can call SerialPort.Read functions. Be aware that script may be called when just a few bytes are in the read buffer. So the data message you wait for may only be available partly. In that case, please read available bytes, check if whole packet/message arrived and if not, store read data for later and wait for next evaluation.

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the serial port reference, so you can pass it to other functions if needed.

144.29.1 Blog Entries

- [MBS FileMaker Plugin, version 6.2pr2](#)

Created 29th March 2016, last changed 29th March 2016.

144.30 SerialPort.SetDataAvailableHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	5.1	Yes	Yes	No	No	No

MBS("SerialPort.SetDataAvailableHandler"; PortReference; FileName; ScriptName)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

FileName

The name of the FileMaker File that contains the script
"MyDatabase.fmp12"

ScriptName

The name of the script to run
"DataAvailable"

Result Returns OK or error.

Description

When new data arrives, this script is called, so you can call SerialPort.Read functions.

Be aware that script may be called when just a few bytes are in the read buffer. So the data message you wait for may only be available partly. In that case, please read available bytes, check if whole packet/message arrived and if not, store read data for later and wait for next script call.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Set data available handler script:

MBS("SerialPort.SetDataAvailableHandler"; \$port; Get(FileName); "SerialPortDataAvailable")

144.31 SerialPort.SetDataBits

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.1	Yes	Yes	Yes	No	No

MBS("SerialPort.SetDataBits"; PortReference; size)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

size

The new setting.
8

Result Returns OK or error message.

Description

Value can only be 5, 6, 7 or 8.

Examples

Set the data bits to 8:

```
$r = MBS( "SerialPort.SetDataBits"; $DeviceRef; 8 )
```

144.32 SerialPort.SetParity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	5.0	Yes	Yes	Yes	No	No

MBS("SerialPort.SetParity"; PortReference; Value)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Value

The new parity setting.

1

Result Returns OK or error.

Description

Can be 0 (off), 1 (odd) or 2 (even)

Examples

Sets partity to odd:

```
MBS("SerialPort.SetParity"; 28001; 1)
```

Sets partity to even:

```
MBS("SerialPort.SetParity"; 28001; 2)
```

Sets partity to none:

```
MBS("SerialPort.SetParity"; 28001; 0)
```

144.33 SerialPort.SetRTS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.SetRTS"; PortReference; Value)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Value

0 to turn off, 1 to turn on.

1

Result Returns OK or error message.

Description

If set to 0, we disable RTS. If set to 1, we use normal handshaking to make sure buffers don't overflow/underflow.

144.34 SerialPort.SetStopBits

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	5.0	Yes	Yes	Yes	No	No

MBS("SerialPort.SetStopBits"; PortReference; Value)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Value

The new setting.

2

Result Returns OK or error.

Description

Can be 1 or 2 on Mac and 1, 1.5 or 2 on Windows.

Examples

Set stop bits to be 1:

```
MBS("SerialPort.SetStopBits"; $SerialPort; 1)
```

Set stop bits to be 2:

```
MBS("SerialPort.SetStopBits"; $SerialPort; 2)
```

144.35 SerialPort.SetXON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.4	Yes	Yes	Yes	No	No

MBS("SerialPort.SetXON"; PortReference; Value)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Value

0 to turn off, 1 to turn on.

1

Result Returns OK or error message.

Description

If set to 1, we use XON/XOFF flow control is used during reception and transmission.

Examples

Turn XON/XOFF mode on:

```
MBS( "SerialPort.SetXON"; $SerialPort; 1 )
```

Turn XON/XOFF mode off:

```
MBS( "SerialPort.SetXON"; $SerialPort; 0 )
```

144.37 SerialPort.Write

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.Write"; PortReference; Text { ; Encoding })

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Text

The text to send.
"Hello World"

Encoding

Optional
The text encoding for text parameter. Default is native.
"UTF8"

Result Returns the number of bytes written or an error message.

Description

Be aware that text encoding conversion may result in different bytes than expected, so please verify on other side the text encoding matches the expectations.

Examples

Write something:

```
MBS( "SerialPort.Write"; $port; "Hello World" )
```

Write something with DOS text encoding:

```
MBS( "SerialPort.Write"; $port; "Umlauts: äöü"; "DOS" )
```

Send set zero command to scale for MT-SICS (METTLER TOLEDO Standard Interface Command Set):

```
MBS( "SerialPort.Write"; $port; "Z" & Char(13) & Char(10) )
```

Send print weight command to scale for MT-SICS (METTLER TOLEDO Standard Interface Command Set):

```
MBS( "SerialPort.Write"; $port; "P" & Char(13) & Char(10) )
```

144.38 SerialPort.WriteByte

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.WriteByte"; PortReference; Value)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Value

The byte value to send. Range from 0 to 255.
13

Result Returns the number of bytes written.

Description

This is very useful for sending control characters which you can't easily put in a text in FileMaker. Like 13 for a LF (line feed) or 10 for CR (carriage return).

Examples

Write a character:

MBS("SerialPort.WriteByte"; \$port; 65)

144.39 SerialPort.WriteHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
144 SerialPort	3.0	Yes	Yes	Yes	No	No

MBS("SerialPort.WriteHex"; PortReference; Text)

Parameters

PortReference

The reference number of the port. You get this number from SerialPort.Open when you open the port.
\$port

Text

The text to send in hex encoding.
"48656C6C6F"

Result Returns the number of bytes written or an error message.

Description

You pass the text hex encoded. For example for "Hello" you pass "48656C6C6F".

Examples

Write some text:

```
MBS( "SerialPort.WriteHex"; $port; "48656C6C6F" )
```

Send CRLF:

```
MBS( "SerialPort.WriteHex"; $port; "0C0A" )
```

Write escape P:

```
MBS("SerialPort.WriteHex"; $port ; "1B50" )
```

Chapter 145

ServerSocket

Allow one FileMaker instance to receive queries from other FileMaker instances.

145.1 ServerSocket.Check

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
145 ServerSocket	3.2	Yes	Yes	Yes	Yes	Yes

MBS("ServerSocket.Check")

Result Returns OK

Description

In a tight loop you can run this to keep sockets working.

For a FileMaker Server, it seems that you need to call this in a script so the plugin has a chance to do something.

See also

- 145.7 ServerSocket.Start 6990
- 145.8 ServerSocket.Stop 6992

Created 18th August 2014, last changed 18th August 2014.

145.2 ServerSocket.GetAllowedScripts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
145 ServerSocket	3.4	Yes	Yes	Yes	Yes	Yes

MBS("ServerSocket.GetAllowedScripts")

Result Returns list of script names.

Description

Examples

Set and query:

```
$r = MBS( "ServerSocket.SetAllowedScripts"; "ServerSocket_PrintReceipt$ServerSocket_Notify" )
```

```
$l = MBS( "ServerSocket.GetAllowedScripts" )
```

See also

- [145.3 ServerSocket.GetAllowedTypes](#) 6985

145.3 ServerSocket.GetAllowedTypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
145 ServerSocket	3.4	Yes	Yes	Yes	Yes	Yes

MBS("ServerSocket.GetAllowedTypes")

Result Returns list of type identifiers.

Description

Examples

Allow two types:

```
$r = MBS( "ServerSocket.SetAllowedTypes"; "SQL$Evaluate" )
```

```
$l = MBS( "ServerSocket.GetAllowedTypes" )
```

145.4 ServerSocket.SendQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
145 ServerSocket	3.2	Yes	Yes	Yes	Yes	Yes

MBS("ServerSocket.SendQuery"; Target; Port; Login; Type; Query)

Parameters

Target

The target IP or name of the server. Can be an IP or a name.
"localhost"

Port

The network port of the server to use.
9000

Login

The login secret. Server will only answer if the logins match.
"Hello"

Type

The type of the query. Can be MBSVersion, SQL, Evaluate or Script.
"Evaluate"

Query

The query to use. Must match the type of query above. For Script calls please use filename:scriptname:parameter to run a script and use full file name with extension.
"Get(AccountName)"

Result Returns result or error.

Description

This has nothing to do with a FileMaker Server. The plugin starts a socket which answers queries, so the current FileMaker instance becomes a kind of server.

See example database for sample queries.

Queries can be SQL queries, expression evaluation or running scripts.

While you can send queries across the internet, we recommend to use a VPN connection to do so.

Version 6.3 now supports passing IPv4, IPv6, or a host name.

Examples

Query a table with SQL:

```
MBS( "ServerSocket.SendQuery"; "FrontDeskMac.local"; 9000; "mysecret"; "SQL"; "SELECT JobID, Status FROM JobTable" )
```

Query the account name of the current user:

```
MBS( "ServerSocket.SendQuery"; "FrontDeskMac.local"; 9000; "mysecret"; "Evaluate"; "Get(AccountName)" )
```

)

Start a script:

```
MBS( "ServerSocket.SendQuery"; "FrontDeskMac.local"; 9000; "mysecret"; "Script"; "OrderDatabase:Print-LastOrder:5" )
```

145.5 ServerSocket.SetAllowedScripts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
145 ServerSocket	3.4	Yes	Yes	Yes	Yes	Yes

MBS("ServerSocket.SetAllowedScripts"; Scripts)

Parameters

Scripts

Pass several texts here for the script names.

"ServerSocket_PrintReceipt"

Result Returns number of scripts.

Description

If this command is used, the plugin will only launch scripts with the names in this list.

We recommend to prefix the script names for use with ServerSockets, so you don't risk of having two scripts with same name.

Examples

Allow two scripts:

MBS("ServerSocket.SetAllowedScripts"; "ServerSocket_PrintReceipt\$ServerSocket_Notify")

See also

145.6 ServerSocket.SetAllowedTypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
145 ServerSocket	3.4	Yes	Yes	Yes	Yes	Yes

MBS("ServerSocket.SetAllowedTypes"; Types)

Parameters

Types

Pass several texts here for the type names.

"SQL"

Result Returns number of allowed types.

Description

Types include: MBSVersion, SQL, Evaluate or Script

If this command is used, the plugin will only perform the allowed query types.

We recommend to disable SQL if you don't need it.

Examples

Allow two types:

MBS("ServerSocket.SetAllowedTypes"; "SQL\$Evaluate")

145.7 ServerSocket.Start

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
145 ServerSocket	3.2	Yes	Yes	Yes	Yes	Yes

MBS("ServerSocket.Start"; Port; Login; Flags)

Parameters

Port

The network port of the server to use.

9000

Login

The login secret. Server will only answer if the logins match.

"Hello"

Flags

Pass sum of flag values.

1+4

Result Returns OK or error.

Description

You can send queries from FileMaker or other development tools. See examples for details.

This has nothing to do with a FileMaker Server. The plugin starts a socket which answers queries, so the current FileMaker instance becomes a kind of server.

On FileMaker Server it looks like you must have a paused script to give time to the plugin for processing requests.

With plugin version 3.3, we added FileMaker Go support. Please use Insert From URL Script Step with an URL like this: "http://" & Server & ":"& Port & "/" & Login & "/" & Type & "/" & Query. Target a text field for the result, disable to show a dialog and use "Select entire contents" option. As browsers cache requests (e.g. Internet Explorer), you may want to add a random value to the request in order to avoid caching due to using same URL.

Possible flag values:

- 1 Listen only for local connections.
- 2 Block HTTP Access from e.g. FileMaker Go or Webviewer.
- 4 Block requests from plugin with ServerSocket.Query.

FileMaker 13 Server does currently not like to execute scripts with 4.0 plugin.

Examples

Listen for local connections on port 12345

145.7. *SERVERSOCKET.START* 6991
MBS("ServerSocket.Start"; 12345; "secret"; 1)

Chapter 146

ServiceProvider

Add service menu entries for Mac which callback to FileMaker.

146.1 ServiceProvider.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
146 ServiceProvider	4.4	Yes	No	No	No	No

MBS("ServiceProvider.Install"; FileName; ScriptName { ; Force })

Parameters

FileName

The name of the FileMaker File that contains the script.

"test.fp7"

ScriptName

The name of the script to run.

"MyScript"

Force

Optional

Asks system to update service menu now.

0

Result Returns OK or error.

Description

If you add right info.plist entries to the info.plist inside the FileMaker app, you register services.

The plugin starts a script when a service request is received.

Best call this function in the script called when solutions opens.

This function has been verified to work well for file and text services. Other types are also implemented, but

not tested.

see also:

<https://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/SysServices/introduction.html>

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

146.2 ServiceProvider.Uninstall

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
146 ServiceProvider	4.4	Yes	No	No	No	No

MBS("ServiceProvider.Uninstall")

Result Returns OK or error.

Description

This call is not required. Cleanup is done automatically when app exits.

See also

- 146.1 ServiceProvider.Install

6993

Created 3th October 2014, last changed 3th October 2014.

146.3 ServiceProvider.Value

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
146 ServiceProvider	4.4	Yes	No	No	No	No

MBS("ServiceProvider.Value"; Selector { ; Filename; DontRenderPreview })

Parameters

Selector

Which value to query. Can be URL, Text, RTF, HTML, Paths, PDF, Image, URL or Path.
"Text"

Filename

Optional

Optionally, the file name to use for the container value when returning image or PDF.
"output.pdf"

DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Result Returns value or error.

Description

If you got a file, you can query file with Paths to get a list of all file paths as a list.
For URLs, you get a list of all URLs when you pass "URLs".

Chapter 147

SharedMemory

Shared memory between several processes.

147.1 SharedMemory.Exists

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
147 SharedMemory	10.1	Yes	Yes	Yes	Yes	No

MBS("SharedMemory.Exists"; Name)

Parameters

Name

The name of the shared memory object.
"test"

Result Returns 1, 0 or error.

Description

Examples

Check if shared memory object named test exists:

```
MBS( "SharedMemory.Exists"; "test" )
```

Example result: 0

Created 2nd February 2020, last changed 2nd February 2020.

147.2 SharedMemory.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
147 SharedMemory	10.1	Yes	Yes	Yes	Yes	No

MBS("SharedMemory.GetValue"; Name)

Parameters

Name

The name of the shared memory object.

"test"

Result Returns text value or error.

Description

MBS Plugin provides SharedMemory functions to store UTF-8 text in shared memory, so one process can set it and other can read it, e.g. two versions of FileMaker Pro or two server processes.

Examples

Query shared memory object:

```
MBS( "SharedMemory.GetValue"; "test")
```

See also

- 147.3 SharedMemory.SetValue

6999

Created 2nd February 2020, last changed 2nd February 2020.

147.3 SharedMemory.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
147 SharedMemory	10.1	Yes	Yes	Yes	Yes	No

MBS("SharedMemory.SetValue"; Name; Value)

Parameters

Name

The name of the shared memory object.

"test"

Value

The text value to store.

"Hello World"

Result Returns OK or error.

Description

MBS Plugin provides SharedMemory functions to store UTF-8 text in shared memory, so one process can set it and other can read it, e.g. two versions of FileMaker Pro or two server processes.

The value is lost when computer restarts, but stays when application quits.

Examples

Store text in shared memory:

```
MBS( "SharedMemory.SetValue"; "test"; "Hello World" )
```

See also

- 147.2 SharedMemory.GetValue

Chapter 148

Shell

Functions to run command line tools.

Run tools in background, send input text and receive output.

148.1 Shell.AddArgument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.AddArgument"; ShellRef; Argument { ; More Arguments })

Parameters

ShellRef

The reference number from the shell.

\$shell

Argument

The new argument.

"-l"

More Arguments

Optional

Available in MBS FileMaker Plugin 8.3 or newer.

Add more parameters to add more arguments.

Result Returns OK or error.

Description

This argument is added to the list of arguments passed first on each call to Shell.Execute.

With version 8.3, you can add several arguments here.

Examples

Adds an argument:

```
MBS( "Shell.AddArgument"; $shell; "-v" )
```

Send email via Outlook.exe with options via command line:

```
Set Variable [ $app ; Value: "C:\Program Files (x86)\Microsoft Office\Office15\OUTLOOK.EXE" ]
Set Variable [ $attachment ; Value: "C:\Users\Administrator\Desktop\test.jpg" ]
Set Variable [ $to ; Value: "to@test.com" ]
Set Variable [ $subject ; Value: "Test Email" ]
Set Variable [ $cc ; Value: "copy@test.com" ]
Set Variable [ $body ; Value: "Hello World" ]
Set Variable [ $shell ; Value: MBS( "Shell.New" ) ]
Set Variable [ $s ; Value: MBS( "Shell.AddArgument"; $shell; "/c" ) ]
Set Variable [ $s ; Value: MBS( "Shell.AddArgument"; $shell; "ipm.note" ) ]
If [ not IsEmpty ( $attachment ) ]
Set Variable [ $s ; Value: MBS( "Shell.AddArgument"; $shell; "/a" ) ]
Set Variable [ $s ; Value: MBS( "Shell.AddArgument"; $shell; $attachment ) ]
End If
Set Variable [ $s ; Value: MBS( "Shell.AddArgument"; $shell; "/m" ) ]
Set Variable [ $a1 ; Value: MBS( "Text.EncodeURLComponent"; $to; "UTF-8" ) ]
Set Variable [ $a2 ; Value: "?subject=" & MBS( "Text.EncodeURLComponent"; $subject; "UTF-8" ) ]
Set Variable [ $a3 ; Value: If ( Length ( $cc ) > 0 ; "& cc=" & MBS( "Text.EncodeURLComponent"; $cc; "UTF-8" ); "" ) ]
Set Variable [ $a4 ; Value: If ( Length ( $body ) > 0 ; "& body=" & MBS( "Text.EncodeURLComponent"; $body; "UTF-8" ); "" ) ]
Set Variable [ $s ; Value: MBS( "Shell.AddArgument"; $shell; $a1 & $a2 & $a3 & $a4 ) ]
Set Variable [ $s ; Value: MBS( "Shell.Execute"; $shell; $app ) ]
Set Variable [ $r ; Value: MBS( "Shell.Release"; $shell ) ]
```

Adds three arguments:

```
MBS( "Shell.AddArgument"; $shell; "-v"; "-r"; "-e" )
```

148.2 Shell.AddEnvironment

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.AddEnvironment"; ShellRef; Name; Value)

Parameters

ShellRef

The reference number from the shell.

\$shell

Name

The name of the variable.

"PATH"

Value

The value of the environment variable.

"C:\test"

Result Returns OK or error.

Description

Examples

Try environment functions:

```
Set Variable [ $shell ; Value: MBS( "Shell.New" ) ]
```

```
# set
```

```
Set Variable [ $s ; Value: MBS( "Shell.AddEnvironment"; $shell; "test"; "Hello" ) ]
```

```
# and query
```

```
Show Custom Dialog [ "Environment" ; MBS( "Shell.GetEnvironment"; $shell ) ]
```

```
Set Variable [ $r ; Value: MBS("Shell.Release"; $shell) ]
```

148.3 Shell.AvailableBytesError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.AvailableBytesError"; ShellRef)

Parameters**ShellRef**

The reference number from the shell.

\$shell

Result Returns number or error.

Description

This allows you to check whether the child process wrote data in the error stream.

See also

- 148.4 Shell.AvailableBytesOutput

7006

Created 11st November 2017, last changed 11st November 2017.

148.4 Shell.AvailableBytesOutput

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.AvailableBytesOutput"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns number or error.

Description

This allows you to check whether the child process wrote data in the output stream.

See also

148.9 Shell.Execute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.Execute"; ShellRef; Executable { ; Additional Arguments })

Parameters

ShellRef

The reference number from the shell.

\$shell

Executable

The path to the executable. Should be full path to executable. On Windows, the system also searches path if you just specify a file name.

"/bin/ls"

Additional Arguments

Optional

Pass additional arguments to send.

"-v"

Result Returns OK or error.

Description

Parameters set by SetArgument* functions are passed first followed by any parameters you pass here.

On macOS, we use NSTask.

<https://developer.apple.com/documentation/foundation/nstask>

On Linux we use execve function.

<https://www.unix.com/man-page/linux/3/execve/>

On Windows we use CreateProcess function and we pass in a command line with the Executable parameter followed by all the arguments. If needed, we put them in quotes.

[https://msdn.microsoft.com/en-us/library/windows/desktop/ms682425\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/ms682425(v=vs.85).aspx)

If username is given for Windows, we use CreateProcessWithLogon function instead to provide login as a local user.

[https://msdn.microsoft.com/en-us/library/windows/desktop/ms682431\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/ms682431(v=vs.85).aspx)

If you just need to launch a file, please use Files.LaunchFile or Files.Launch.

You can run "/usr/bin/whoami" on Mac/Linux or "whoami.exe" on Windows to print the user who executes the shell tool.

For PowerShell scripts on Windows, you may need to check with the execution policy for the user account FileMaker is using or use an admin account. e.g. on FileMaker Server, may need to be installed as Admin user (not fmserver user).

Examples

Run ffmpeg in shell to convert video to mp3 file:

```

Set Variable [ $shell ; Value: MBS( "Shell.New" ) ]
Set Field [ Shell::Output ; "" ]
Set Field [ Shell::Error ; "" ]
Commit Records/Requests [ With dialog: Off ]
# Where the app is:
Set Variable [ $executable ; Value: "/Applications/ffmpegX.app/Contents/Resources/ffmpeg" ]
# option: overwrite file
Set Variable [ $s ; Value: MBS( "Shell.AddArgument"; $shell; "-y" ) ]
# option: input file
Set Variable [ $s ; Value: MBS( "Shell.AddArgument"; $shell; "-i" ) ]
# Path to input file
Set Variable [ $InputFile ; Value: "/Users/cs/Desktop/movie.m4v" ]
# and output file
Set Variable [ $OutputFile ; Value: "/Users/cs/Desktop/sound.mp3" ]
# Run it!
Set Variable [ $s ; Value: MBS( "Shell.Execute"; $shell; $executable; $InputFile; $OutputFile) ]
Set Variable [ $error ; Value: "" ]
Set Variable [ $result ; Value: "" ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to run" ; $s ]
Else
# Loop while app runs and collect messages
Loop
# Wait a second or till it quits
Set Variable [ $s ; Value: MBS( "Shell.Wait"; $shell; 1) ]
# And read output
Set Variable [ $error ; Value: $error & MBS( "Shell.ReadErrorText"; $shell; "UTF-8") ]
Set Variable [ $result ; Value: $result & MBS( "Shell.ReadOutputText"; $shell; "UTF-8") ]
Set Field [ Shell::Error ; MBS( "Text.ReplaceNewline"; $error; 1) ]
Set Field [ Shell::Output ; MBS( "Text.ReplaceNewline"; $result; 1) ]
# exit when done
Exit Loop If [ MBS( "Shell.IsRunning"; $shell) 1 ]
End Loop
# We are done
Commit Records/Requests [ With dialog: Off ]
End If
Set Variable [ $r ; Value: MBS("Shell.Release"; $shell) ]

```

Query python version:

```

Set Variable [ $shell ; Value: MBS( "Shell.New" ) ]

```

```

Set Variable [ $s ; Value: MBS( "Shell.Execute"; $shell; "/usr/bin/python"; "-E"; "-c"; "import sys;print(sys.version_info);") ]
Set Variable [ $s ; Value: MBS( "Shell.Wait"; $shell; 1) ]
Set Variable [ $error ; Value: MBS( "Shell.ReadErrorText"; $shell; "UTF-8") ]
Set Variable [ $result ; Value: MBS( "Shell.ReadOutputText"; $shell; "UTF-8") ]

Set Variable [ $error ; Value: "" ]
Set Variable [ $result ; Value: "" ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to run" ; $s ]
Else
# Loop while app runs and collect messages
Loop
Set Variable [ $s ; Value: MBS( "Shell.Wait"; $shell; 1) ]
Set Variable [ $error ; Value: $error & MBS( "Shell.ReadErrorText"; $shell; "UTF-8") ]
Set Variable [ $result ; Value: $result & MBS( "Shell.ReadOutputText"; $shell; "UTF-8") ]
Set Field [ Shell::Error ; MBS( "Text.ReplaceNewline"; $error; 1) ]
Set Field [ Shell::Output ; MBS( "Text.ReplaceNewline"; $result; 1) ]
Exit Loop If [ MBS( "Shell.IsRunning"; $shell) = 1 ]
End Loop
Commit Records/Requests [ With dialog: Off ]
End If
Set Variable [ $r ; Value: MBS("Shell.Release"; $shell) ]
```

Translate ffmpeg command line:

```
# ffmpeg -i "D:\Test\fmp\1901070400.mp4" -ss 00:00:05.435 -vframes 1 "D:\Test\fmp\1901070400.jpg"
```

```
MBS( "Shell.Execute"; $shell; "C:\ffmpeg\bin\ffmpeg.exe"; "-i"; "D:\Test\fmp\1901070400.mp4"; "-ss";
"00:00:05.435"; "-vframes"; "1"; "D:\Test\fmp\1901070400.jpg")
```

Run fmsadmin via Shell:

```
Set Variable [ $shell ; Value: MBS( "Shell.New" ) ]
Set Variable [ $s ; Value: MBS( "Shell.Execute"; $shell; "C:\Program Files\FileMaker\FileMaker Server\Database
Server\fmsadmin.exe"; "-v"; "-u"; "admin"; "-p"; "xxx" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to run" ; $s ]
Else
```

```
# Loop while app runs and collect messages
Set Variable [ $s ; Value: MBS( "Shell.Wait"; $shell; 5) ]
Set Variable [ $result ; Value: MBS( "Shell.ReadOutputText"; $shell; "UTF-8") ]
Show Custom Dialog [ "Result" ; $result ]
End If
```

```
Set Variable [ $r ; Value: MBS("Shell.Release"; $shell) ]
```

Run shell command with several tools concated:

```
MBS( "Shell.Execute"; $shell; "/bin/sh"; "-c"; "diskutil list | grep /dev | awk ' { print $1 } '")
```

Run command in one Let statement:

```
Let ( [
// new Shell
shell = MBS( "Shell.New" );
// run command with parameters
r = MBS( "Shell.Execute"; shell; "/bin/ls"; "/" );
// wait for a result up to 5 seconds
r = MBS( "Shell.Wait"; shell; 5);
// read output
error = MBS( "Shell.ReadErrorText"; shell; "UTF-8");
output = MBS( "Shell.ReadOutputText"; shell; "UTF-8");
// free shell
r = MBS("Shell.Release"; shell)
]
; output & error )
```

Run bat file with one parameter:

```
MBS( "Shell.Execute"; $shell; "C:\Users\Christian\Desktop\test.bat"; "123")
```

148.10 Shell.ExitCode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.ExitCode"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns number or error.

Description

Not defined while the child process is still running.

Created 11st November 2017, last changed 11st November 2017.

148.11 Shell.GetApplicationName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.GetApplicationName"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns text or error.

Description

See also

- 148.34 Shell.SetApplicationName

7044

Created 11st November 2017, last changed 11st November 2017.

148.12 Shell.GetArgument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.GetArgument"; ShellRef; Index)

Parameters

ShellRef

The reference number from the shell.

\$shell

Index

The index of the argument to query. Range from 0 to Shell.GetArgumentCount-1.

0

Result Returns text or error.

Description

See also

- 148.1 Shell.AddArgument 7001
- 148.5 Shell.ClearArguments 7007

Created 11st November 2017, last changed 11st November 2017.

148.13 Shell.GetArgumentCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.GetArgumentCount"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns number or error.

Description

See also

- 148.12 Shell.GetArgument 7021
- 148.14 Shell.GetArguments 7023
- 148.36 Shell.SetArgumentsList 7046

Created 11st November 2017, last changed 11st November 2017.

148.14 Shell.GetArguments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	9.3	Yes	Yes	Yes	Yes	No

MBS("Shell.GetArguments"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns list or error.

Description

This is intended for debugging to check if you got all arguments.

148.16 Shell.GetCompletedScriptFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	No	No	No

MBS("Shell.GetCompletedScriptFileName"; ShellRef)

(old name: Shell.GetScriptFileName)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns file name or error.

Description

See also

- 148.17 Shell.GetCompletedScriptName

7026

Created 18th November 2017, last changed 17th November 2019.

148.17 Shell.GetCompletedScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	No	No	No

MBS("Shell.GetCompletedScriptName"; ShellRef)

(old name: Shell.GetScriptName)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns script name or error.

Description

- 148.43 Shell.SetPassword

7053

Created 11st November 2017, last changed 11st November 2017.

148.25 Shell.GetUsername

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.GetUsername"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns text or error.

Description

See also

- 148.44 Shell.SetUsername

7054

Created 11st November 2017, last changed 11st November 2017.

148.26 Shell.IsRunning

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.IsRunning"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns 1 or 0 or error.

Description

Returns 1 if running or 0 if not.

Please use 8.2 or newer on FileMaker Cloud as Shell.Wait/Shell.IsRunning was broken there before.

148.28 Shell.PeekErrorText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.PeekErrorText"; ShellRef { ; Encoding })

Parameters

ShellRef

The reference number from the shell.

\$shell

Encoding

Optional

The text encoding for result.

UTF8

Result Returns text or error.

Description

Returns data in buffer without removing it.

You need to call Shell.ReadErrorText later to actually read the data and remove it from the buffer.

MBS("Shell.PeekOutputText"; ShellRef { ; Encoding })

Parameters

ShellRef

The reference number from the shell.

\$shell

Encoding

Optional

The text encoding for result.

UTF8

Result Returns text or error.

Description

Returns data in buffer without removing it.

You need to call Shell.ReadOutputText later to actually read the data and remove it from the buffer.

See also

- 148.32 Shell.ReadOutputText

7041

Created 11st November 2017, last changed 14th September 2018.

148.30 Shell.ProcessIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.ProcessIdentifier"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns number or error.

Description

Created 11st November 2017, last changed 11st November 2017.

148.31 Shell.ReadErrorText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.ReadErrorText"; ShellRef { ; Encoding })

Parameters

ShellRef

The reference number from the shell.

\$shell

Encoding

Optional

The text encoding for result.

UTF8

Result Returns text or error.

Description

When child process writes something to error stream, you can read it here.

148.32 Shell.ReadOutputText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.ReadOutputText"; ShellRef { ; Encoding })

Parameters

ShellRef

The reference number from the shell.

\$shell

Encoding

Optional

The text encoding for result.

UTF8

Result Returns text or error.

Description

When child process writes something to output stream, you can read it here.

Examples

Loop and collect messages:

```
Set Variable [ $error ; Value: "" ]
Set Variable [ $result ; Value: "" ]
# Loop while app runs and collect messages
Loop
# Wait a second or till it quits
Set Variable [ $s ; Value: MBS( "Shell.Wait"; $shell; 1 ) ]
# And read output
Set Variable [ $error ; Value: $error & MBS( "Shell.ReadErrorText"; $shell; "UTF-8" ) ]
Set Variable [ $result ; Value: $result & MBS( "Shell.ReadOutputText"; $shell; "UTF-8" ) ]
Set Field [ Shell::Error ; MBS( "Text.ReplaceNewline"; $error; 1 ) ]
Set Field [ Shell::Output ; MBS( "Text.ReplaceNewline"; $result; 1 ) ]
# exit when done
Exit Loop If [ MBS( "Shell.IsRunning"; $shell) = 1 ]
End Loop
```

148.34 Shell.SetApplicationName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.SetApplicationName"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns OK or error.

Description

Only for Windows.

See also

- 148.11 Shell.GetApplicationName

7020

Created 11st November 2017, last changed 11st November 2017.

148.35 Shell.SetArguments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.SetArguments"; ShellRef { ; Arguments })

Parameters

ShellRef

The reference number from the shell.

\$shell

Arguments

Optional

The first argument. Please pass one parameter per argument to set.

Result Returns OK or error.

Description

Pass as many arguments as needed.

This arguments define the list of arguments passed first on each call to Shell.Execute.

Examples

Pass three arguments

```
MBS( "Shell.SetArguments"; $shell; "-v"; "-l"; "/Users/cs")
```

148.36 Shell.SetArgumentsList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.SetArgumentsList"; ShellRef; List)

Parameters

ShellRef

The reference number from the shell.

\$shell

List

The list of arguments.

"-v\$x\$a"

Result Returns OK or error.

Description

This arguments define the list of arguments passed first on each call to Shell.Execute.

See also

148.37 Shell.SetCompletedEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	No	No	No

MBS("Shell.SetCompletedEvaluate"; ShellRef; Expression)

(old name: Shell.SetEvaluate)

Parameters

ShellRef

The reference number from the shell.

\$shell

Expression

The expression to evaluate.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

See also

- 148.15 Shell.GetCompletedEvaluate 7024

148.37.1 Blog Entries

- [MBS FileMaker Plugin, version 9.6pr1](#)

Created 18th November 2017, last changed 17th November 2019.

148.38 Shell.SetCompletedScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	No	No	No

MBS("Shell.SetCompletedScript"; ShellRef; Filename; ScriptName)

(old name: Shell.SetScript)

Parameters

ShellRef

The reference number from the shell.

\$shell

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

See also

148.39 Shell.SetCurrentDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.SetCurrentDirectory"; ShellRef; Path)

Parameters

ShellRef

The reference number from the shell.

\$shell

Path

The native path to the new directory.

"/Users/cs/Desktop"

Result Returns OK or error.

Description

Keep empty for default, which is current directory of FileMaker.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Sets current directory to tmp:

MBS("Shell.SetCurrentDirectory"; \$shell; "/tmp")

See also

148 Shell	10.0	Yes	Yes	No	No	No

MBS("Shell.SetDataAvailableScript"; ShellRef; Filename; ScriptName)

Parameters

ShellRef

The reference number from the shell.

\$shell

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

148.42 Shell.SetDomain

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.SetDomain"; ShellRef; Domain)

Parameters

ShellRef

The reference number from the shell.

\$shell

Domain

The domain to use.

Result Returns OK or error.

Description

Only for Windows.

See also

- 148.22 Shell.GetDomain

7031

Created 11st November 2017, last changed 11st November 2017.

148.43 Shell.SetPassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.SetPassword"; ShellRef; Password)

Parameters

ShellRef

The reference number from the shell.

\$shell

Password

The password text.

"xxx"

Result Returns OK or error.

Description

Only for Windows.

See also

- 148.24 Shell.GetPassword

148.44 Shell.SetUsername

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.SetUsername"; ShellRef; Username)

Parameters

ShellRef

The reference number from the shell.

\$shell

Username

The user name.

"cs"

Result Returns OK or error.

Description

Only for Windows to run application with different login.

See also

- 148.25 Shell.GetUsername

7034

Created 11st November 2017, last changed 11st November 2017.

148.45 Shell.Terminate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.Terminate"; ShellRef)

Parameters

ShellRef

The reference number from the shell.

\$shell

Result Returns OK or error.

Description

Force quits the process.

Created 11st November 2017, last changed 11st November 2017.

148.46 Shell.TerminationReason

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	No	Yes, macOS only	No	No

MBS("Shell.TerminationReason"; ShellRef)

Parameters**ShellRef**

The reference number from the shell.

\$shell

Result Returns the reason the task was terminated.

Description

Available in OS X v10.6 and later.

Returns 1 for exit and 2 for an uncaught signal.

Created 11st November 2017, last changed 11st November 2017.

148.47 Shell.Wait

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.Wait"; ShellRef; Timeout)

Parameters

ShellRef

The reference number from the shell.

\$shell

Timeout

The timeout in seconds on how long to wait.

3

Result Returns OK or error.

Description

This blocks FileMaker for doing anything till the app is done or timeout happens.

Please use 8.2 or newer on FileMaker Cloud as Shell.Wait/Shell.IsRunning was broken there before.

Examples

Wait 5 seconds or till the tool quit:

```
Set Variable [ $s ; Value: MBS( "Shell.Wait"; $shell; 5) ]
```

148.48 Shell.WriteInputText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
148 Shell	7.5	Yes	Yes	Yes	Yes	No

MBS("Shell.WriteInputText"; ShellRef; Text { ; Encoding })

Parameters

ShellRef

The reference number from the shell.

\$shell

Text

The text to send.

"Hello World"

Encoding

Optional

The text encoding for text parameter.

"UTF-8"

Result Returns OK or error.

Description

The child process and read this from the input stream.

Please make sure you use right line endings and encoding.

You must call Shell.Execute first to start the child process, before you send data.

Examples

Sends text to shell:

MBS("Shell.WriteInputText"; \$shell; "Hello World"; "UTF-8")

Chapter 149

Sign

Sign with Elliptic Curve or RSA.

Generate private and public keys, sign with private key and verify with public key. We can use Elliptic Curve Digital Signature Algorithm or RSA.

149.1 ECKey.BuiltInCurves

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKey.BuiltInCurves")

Result Returns list or error.

Description

Returns a list of curves with ID=Description format.

The list looks like this:

Created 9th October 2015, last changed 9th October 2015.

- 704 SECG/WTLS curve over a 112 bit prime field
- 705 SECG curve over a 112 bit prime field
- 706 SECG curve over a 128 bit prime field
- 707 SECG curve over a 128 bit prime field
- 708 SECG curve over a 160 bit prime field
- 709 SECG curve over a 160 bit prime field
- 710 SECG/WTLS curve over a 160 bit prime field
- 711 SECG curve over a 192 bit prime field
- 712 SECG curve over a 224 bit prime field
- 713 NIST/SECG curve over a 224 bit prime field
- 714 SECG curve over a 256 bit prime field
- 715 NIST/SECG curve over a 384 bit prime field
- 716 NIST/SECG curve over a 521 bit prime field
- 409 NIST/X9.62/SECG curve over a 192 bit prime field
- 410 X9.62 curve over a 192 bit prime field
- 411 X9.62 curve over a 192 bit prime field
- 412 X9.62 curve over a 239 bit prime field
- 413 X9.62 curve over a 239 bit prime field
- 414 X9.62 curve over a 239 bit prime field
- 415 X9.62/SECG curve over a 256 bit prime field
- 717 SECG curve over a 113 bit binary field
- 718 SECG curve over a 113 bit binary field
- 719 SECG/WTLS curve over a 131 bit binary field
- 720 SECG curve over a 131 bit binary field
- 721 NIST/SECG/WTLS curve over a 163 bit binary field
- 722 SECG curve over a 163 bit binary field
- 723 NIST/SECG curve over a 163 bit binary field
- 724 SECG curve over a 193 bit binary field
- 725 SECG curve over a 193 bit binary field
- 726 NIST/SECG/WTLS curve over a 233 bit binary field
- 727 NIST/SECG/WTLS curve over a 233 bit binary field
- 728 SECG curve over a 239 bit binary field
- 729 NIST/SECG curve over a 283 bit binary field

- 732 NIST/SECG curve over a 409 bit binary field
- 733 NIST/SECG curve over a 571 bit binary field
- 734 NIST/SECG curve over a 571 bit binary field
- 684 X9.62 curve over a 163 bit binary field
- 685 X9.62 curve over a 163 bit binary field
- 686 X9.62 curve over a 163 bit binary field
- 687 X9.62 curve over a 176 bit binary field
- 688 X9.62 curve over a 191 bit binary field
- 689 X9.62 curve over a 191 bit binary field
- 690 X9.62 curve over a 191 bit binary field
- 693 X9.62 curve over a 208 bit binary field
- 694 X9.62 curve over a 239 bit binary field
- 695 X9.62 curve over a 239 bit binary field
- 696 X9.62 curve over a 239 bit binary field

149.2 ECKey.Description

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKey.Description"; ECKey)

Parameters

ECKey

The reference number for the key.

\$Key

Result Returns text or error.

Description

For display to user.

See also

- 59.10 CoreML.Description 1721
- 149.4 ECKey.Generate 7065

149.3 ECKey.Duplicate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKey.Duplicate"; ECKey)

Parameters

ECKey

The reference number for the key.

\$Key

Result Returns key reference or error.

Description

Please use ECKey.Release later to free memory.

See also

- 149.9 ECKey.Release

7071

Created 9th October 2015, last changed 9th October 2015.

149.4 ECKEY.Generate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKEY.Generate"; CurveID)

Parameters

CurveID

The curve ID to use.

711

Result Returns reference number or error.

Description

You can use ECKEY.ReadPrivateKey and ECKEY.ReadPublicKey functions to get the keys. Please use ECKEY.Release later to free memory.

Examples

Generate keys and store in fields:

```
Set Variable [ $key; Value:MBS("ECKEY.Generate"; 711) ]
Set Field [ ECKEY Test::KeyInfo; MBS("ECKEY.Description"; $key) ]
Set Field [ ECKEY Test::PrivateKey; MBS("ECKEY.PrivateKey"; $key) ]
Set Field [ ECKEY Test::PublicKey; MBS("ECKEY.PublicKey"; $key) ]
Set Variable [ $r; Value:MBS("ECKEY.Release"; $key) ]
```

149.7 ECKEY.ReadPrivateKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKEY.ReadPrivateKey"; KeyData)

Parameters**KeyData**

The hex encoded key data.

Result Returns reference number or error.

Description

Please use ECKEY.Release later to free memory.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKey.ReadPublicKey"; KeyData; CurveID)

Parameters

KeyData

The hex encoded key data.

CurveID

The curve ID to use.

711

Result Returns reference or error.

Description

Please use ECKey.Release later to free memory.

149.10 ECKey.Sign

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKey.Sign"; ECKey; Data)

Parameters

ECKey

The reference number for the key.

\$Key

Data

The hex encoded data.

\$hash

Result Returns text or error.

Description

We highly recommend to use a hash like SHA-512 to preprocess the data.

Returns the signature as hex text on success.

See also

- 149.11 ECKey.Size

7073

Example Databases

- [Encryption and Hash/ECKey Test](#)

149.11 **ECKKey.Size**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKKey.Size"; ECKKey)

Parameters

ECKKey

The reference number for the key.

\$Key

Result Returns number or error.

Description

See also

- 149.10 ECKKey.Sign

7072

Created 9th October 2015, last changed 9th October 2015.

149.12 ECKey.Verify

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	5.4	Yes	Yes	Yes	Yes	Yes

MBS("ECKey.Verify"; ECKey; Data; SignatureData)

Parameters

ECKey

The reference number for the key.

\$Key

Data

The hex encoded data.

\$hash

SignatureData

The hex encoded signature.

\$sig

Result Returns OK or error.

Description

Returns OK on success. Returns error if data, signature and public key don't belong together.

We highly recommend to use a hashed value for the data parameter, e.g. use Hash.SHA512 function to get a 512bit hash for your data.

149.13 RSA.GeneratePrivateKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	6.2	Yes	Yes	Yes	Yes	Yes

MBS("RSA.GeneratePrivateKey" { ; Bits; Exp; Algorithm; PasswordType; PasswordData; PasswordEncoding })

Parameters**Bits**

Optional

The bit size. e.g. 1024, 2048, 4096, etc. Default is 4096.
4096

Exp

Optional

The exponent to use. Default is 65537.
65537

Algorithm

Optional

Which algorithm to use. Can be for example RC2, blowfish, AES128, AES192, AES256. See Encryption.Cipher.
"AES-128-CFB"

PasswordType

Optional

The type of input for optional password. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.
"Text"

PasswordData

Optional

The actual input data for the password. Text, container or file path.
"Hello World"

PasswordEncoding

Optional

The text encoding for text input. Parameter is ignored for other cases.
"UTF-8"

Result Returns key as text or error.

Description

Returns the PEM formatted key as text.

As the PEM format contains base64 encoded DER data, you can remove header and footer line and use the result as base64 encoded DER key.

If you specify an algorithm and a key, we encrypt the PEM file. (New in 7.5)

Examples

Generate keys:

```
Set Variable [ $privateKey; Value:MBS( "RSA.GeneratePrivateKey" ) ]
Set Variable [ $publickey; Value:MBS( "RSA.GetPublicKey"; "text"; $privateKey; "UTF-8" ) ]
Set Field [ Table::PrivateKey; $privateKey ]
Set Field [ Table::PublicKey; $publicKey ]
```

Generate key with text password:

```
MBS( "RSA.GeneratePrivateKey"; 4096; 65537; "AES-128-CBC"; "text"; "Hello" )
```

149.14 RSA.GetPublicKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	6.2	Yes	Yes	Yes	Yes	Yes

MBS("RSA.GetPublicKey"; KeyType; KeyData { ; KeyEncoding; PasswordType; PasswordData; PasswordEncoding })

Parameters

KeyType

The type of input for private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.
"Path"

KeyData

The actual input data for the key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.
"/Users/cs/desktop/test.pem"

KeyEncoding

Optional

The text encoding for text input for the key. Parameter is ignored for other cases.

PasswordType

Optional

The type of input for the password of the private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.
"Text"

PasswordData

Optional

The actual input data for the password of the private key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.
"Hello World"

PasswordEncoding

Optional

The text encoding for text input. Parameter is ignored for other cases.
"UTF-8"

Result Returns text or error.

Description

You pass in private key and this function returns public key as PEM.
Returns public key in PEM format as text.

You can create a new private key using `RSA.GeneratePrivateKey` function.

149.15 RSA.Sign

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	6.2	Yes	Yes	Yes	Yes	Yes

MBS("RSA.Sign"; Algorithm; InputType; InputData; InputEncoding; KeyType; KeyData; KeyEncoding; PasswordType; PasswordData; PasswordEncoding; OutputType; OutputInfo)

Parameters

Algorithm

Which algorithm to use. Can be MD4, MD5, SHA, SHA1, MDC2, RIPEMD160, SHA224, SHA256, SHA384 or SHA512.

"SHA512"

InputType

The type of input data. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

InputData

The actual input data. Text, container or file path.

"Hello World"

InputEncoding

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

KeyType

The type of input for private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Path"

KeyData

The actual input data for the key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.

"/Users/cs/desktop/test.pem"

KeyEncoding

The text encoding for text input for the key. Parameter is ignored for other cases.

PasswordType

The type of input for the password of the private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

PasswordData

The actual input data for the password of the private key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.

"Hello World"

PasswordEncoding

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

OutputType

The output type. Can be Base64, Hex, Text, File, Path.
"Hex"

OutputInfo

The addition info for output. For text it is the text encoding, for file container the file name and for path the actual native file path.
""

Result Returns signature or error.

Description

Returns signature data in the format specified in OutputType.

Internally we make a hash of the data with given algorithm, open the private RSA key and do a RSA sign operation. We return the signature.

Optional you can pass a password to read password protected keys.

You pass data as triplet of type, data and encoding. For the types use:

Text: Pass text and encoding.

Data or File: Pass a container to read its content as data.

PDF: Pass a container containing a PDF document.

Container: Pass a container, which will be serialized.

Image: Pass a container containing an image, e.g. JPEG, TIFF, PNG, GIF, etc.

GIF: Pass a container containing a GIF document.

JPEG: Pass a container containing a JPEG document.

PNG: Pass a container containing a PNG document.

TIFF: Pass a container containing a TIFF document.

Path: Pass a file name as data. The file is read and it's content is used.

Hex: Pass a hex encoded value as text.

Hash: Pass the hex encoded hash to use instead of hashing data.

Examples

Sign data with private key file:

```
MBS( "RSA.Sign"; "SHA512";
"Text"; "Hello World. This is test data to sign."; "UTF8";
"Path";
"/Users/cs/Desktop/Sign and Verify/test.pem";
"UTF8";
"text"; "", "";
"hex"; "" )
```

How to create keys and test in command line on Mac OS X:

Create private key:

openssl genrsa -out test.pem 4096

Create public key:

openssl rsa -in test.pem -pubout -out test.pub

Sign datafile.txt:

openssl dgst -sha1 -sign test.pem -out signature.sha1 Create\Keys.rtf

Verify signature

openssl dgst -sha1 -verify test.pub -signature signature.sha1 Create\Keys.rtf

To encrypt the private key, use a command like this:

openssl genrsa -des3 -out test.pem 2048

Sign call with private key included as text:

```
MBS( "RSA.Sign"; "SHA512";
"Text"; "Hello World. This is test data to sign."; "UTF8";
"Text";
"—BEGIN RSA PRIVATE KEY—" & $$

149.16 RSA.Verify

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
149 Sign	6.2	Yes	Yes	Yes	Yes	Yes

MBS("RSA.Verify"; Algorithm; InputType; InputData; InputEncoding; KeyType; KeyData; KeyEncoding; SigType; SigData; SigEncoding { ; PasswordType; PasswordData; PasswordEncoding })

Parameters

Algorithm

Which algorithm to use. Can be MD4, MD5, SHA, SHA1, MDC2, RIPEMD160, SHA224, SHA256, SHA384 or SHA512.

"SHA512"

InputType

The type of input data. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

InputData

The actual input data. Text, container or file path.

"Hello World"

InputEncoding

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

KeyType

The type of input for private or public key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

KeyData

The actual input data for the key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.

"Hello World"

KeyEncoding

The text encoding for text input for the key. Parameter is ignored for other cases.

"UTF-8"

SigType

The type of input data for signature. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

SigData

The actual input data for signature. Text, container or file path.

"Hello World"

SigEncoding

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

PasswordType

Optional

The type of input for the password of the private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

PasswordData

Optional

The actual input data for the password of the private key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.

"Hello World"

PasswordEncoding

Optional

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

Result Returns 1, 0 or error.

Description

Returns 1 if signature is valid or 0 if not or an error if parameters are wrong.

Key can be the public or private key, but of course normally you use the public key.

A hash is created with given algorithm and verified with the signature.

Signature must be the string returned like from RSA.Sign function.

Optional you can pass a password to read password protected keys.

Examples

Verify with all data in files:

```
MBS( "RSA.Verify";
"SHA1";
"Path"; "/Users/cs/Desktop/Sign and Verify/Create Keys.rtf"; "";
"Path"; "/Users/cs/Desktop/Sign and Verify/test.pub"; "";
"Path"; "/Users/cs/Desktop/Sign and Verify/signature.sha1"; "";
"Text"; ""; "" )
```

Verify with passing signature as hex text:

```
MBS( "RSA.Verify";
"SHA512";
"Text"; "Hello World. This is test data to sign."; "UTF8";
"Path"; "/Users/cs/Desktop/Sign and Verify/test.pub"; "";
"Hex"; "CD603612768BD33F2C0C0DE1E71658F91914DCE083D96F0CE69490AE53F8711853D1589E08E67956812AA47B41

Chapter 150

SmartCard

PCSC interface to SmartCard readers.

150.1 SmartCard.Available

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Available")

Result Returns 1, 0 or error.

Description

Should always be available on Mac and Windows.

Returns 1 if available or 0 if not.

On a server it would read the smart card attached the to the server, not any client.

See also

- 150.23 SmartCard.Transmit 7117

150.1.1 Blog Entries

- [Talking to a SmartCard in FileMaker Pro](#)

Created 13th June 2016, last changed 19th June 2016.

150.2 SmartCard.BeginTransaction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.BeginTransaction"; SmartCardContext)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Result Returns OK or error.

Description

The function waits for the completion of all other transactions before it begins. After the transaction starts, all other applications are blocked from accessing the smart card while the transaction is in progress.

If a transaction is held on the card for more than five seconds with no operations happening on that card, then the card is reset. Calling any of the Smart Card and Reader Access Functions or Direct Card Access Functions on the card that is transacted results in the timer being reset to continue allowing the transaction to be used.

The BeginTransaction function is a smart card and reader access function. For more information about other access functions, see Smart Card and Reader Access Functions.

See also

- 150.4 SmartCard.CancelTransaction 7090
- 150.8 SmartCard.EndTransaction 7095

Created 13th June 2016, last changed 19th June 2016.

150.3 SmartCard.Cancel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Cancel"; SmartCardContext)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Result Returns OK or error.

Description

The only requests that you can cancel are those that require waiting for external action by the smart card or user. Any such outstanding action requests will terminate with a status indication that the action was canceled. This is especially useful to force outstanding GetStatusChange calls to terminate.

150.4 SmartCard.CancelTransaction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.CancelTransaction"; SmartCardContext)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Result Returns OK or error.

Description

See also

- 150.2 SmartCard.BeginTransaction 7088
- 150.8 SmartCard.EndTransaction 7095

Created 13th June 2016, last changed 19th June 2016.

150.5 SmartCard.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Connect"; SmartCardContext; Reader; ShareMode; PreferredProtocols)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Reader

The name of the reader that contains the target card.

\$reader

ShareMode

A flag that indicates whether other applications may form connections to the card. Can be integer or one of the following texts: Exclusive (1), Shared (2) or Direct (3).

"Exclusive"

PreferredProtocols

A number with bitmask of acceptable protocols for the connection or just the text name of the value for only one protocol. Pass T0 (1), T1 (2), T15 (8, not on Windows), Any (3), RAW (4).

1+2

Result Returns OK or error.

Description

Establishes a connection (using a specific resource manager context) between the calling application and a smart card contained by a specific reader. If no card exists in the specified reader, an error is returned.

On success we have a connection to a smart card.

You can query SmartCard.GetActiveProtocol

Examples

Connect

MBS("SmartCard.Connect"; \$Context; \$Reader; "Shared"; "any")

150.6 SmartCard.Control

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Control"; SmartCardContext; ControlCode; InputData; OutputSize)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

ControlCode

Control code for the operation. This value identifies the specific operation to be performed.

InputData

Hex encoded input data. Contains the data required to perform the operation.

OutputSize

The expected output size. This is the buffer size the plugin will use for receiving.

1024

Result Returns hex encoded data or error.

Description

You can call it any time after a successful call to SmartCard.Connect and before a successful call to SmartCard.Disconnect. The effect on the state of the reader depends on the control code.

Created 13th June 2016, last changed 19th June 2016.

150.7 SmartCard.Disconnect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Disconnect"; SmartCardContext; Disposition)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Disposition

Action to take on the card in the connected reader on close. Can be Leave, Reset, Unpower or Eject. "Eject"

Result Returns OK or error.

Description

Terminates a connection previously opened between the calling application and a smart card in the target reader.

Examples

Close it:

MBS("SmartCard.Disconnect"; \$card; "leave")

150.8 SmartCard.EndTransaction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.EndTransaction"; SmartCardContext; Disposition)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Disposition

Action to take on the card in the connected reader on close. Can be Eject, Leave, Reset or Unpower. "Eject"

Result Returns OK or error.

Description

Completes a previously declared transaction, allowing other applications to resume interactions with the card.

See also

- 150.2 SmartCard.BeginTransaction 7088
- 150.4 SmartCard.CancelTransaction 7090

Created 13th June 2016, last changed 19th June 2016.

150.9 SmartCard.GetActiveProtocol

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.GetActiveProtocol"; SmartCardContext)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Result Returns value or error.

Description

The result is undefined, Raw, T0, T1 or T15.

150.10 SmartCard.GetAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.GetAttribute"; SmartCardContext; AttributeID)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

AttributeID

The ID of the attribute.

Result Returns hex text or error.

Description

It does not affect the state of the reader, driver, or card.

The plugin first queries for size of attribute and on success queries again to get the data and return it as a hex encoded text.

See also

- 150.20 SmartCard.SetAttribute

7113

Created 13th June 2016, last changed 19th June 2016.

Name	ID	Description
AtrString	590595	Answer to reset (ATR) string.
ChannelId	131344	Number encoded as 0xDDDDCCCC, where DDDD = data channel type and CCCC = channel number.
Characteristics	393552	Integer indicating which mechanical characteristics are supported. If zero, no special characteristics are supported.
CurrentBwt	524809	Current block waiting time.
CurrentClk	524802	Current clock rate, in kHz.
CurrentCwt	524810	Current character waiting time.
CurrentD	524804	Bit rate conversion factor.
CurrentEbcEncoding	524811	Current error block control encoding: 0 = longitudinal redundancy check (LRC), 1 = cyclical redundancy check (CRC)
CurrentF	524803	Clock conversion factor.
CurrentIfsc	524807	Current byte size for information field size card.
CurrentIfsd	524808	Current byte size for information field size device.
CurrentIoState	590594	Current IO state
CurrentN	524805	Current guard time.
CurrentProtocolType	524801	Integer encoded as 0xrrrrpppp where rrr is RFU and should be 0x000. pppp encodes the current protocol type. Whichever bit has been set indicates which ISO protocol is currently in use. (For example, if bit zero is set, T=0 protocol is in effect.)
CurrentW	524806	Current work waiting time.
DefaultClk	196897	Default clock rate, in kHz.
DefaultDataRate	196899	Default data rate, in bps.
DeviceFriendlyNameA	2147418115	Reader's display name. Windows ANSI encoding.
DeviceFriendlyNameW	2147418117	Reader's display name. Unicode encoding.
DeviceInUse	2147418114	Reserved for future use.
DeviceSystemNameA	2147418116	Reader's system name. Windows ANSI encoding.
DeviceSystemNameW	2147418118	Reader's system name. Unicode encoding.
DeviceUnit	2147418113	Instance of this vendor's reader attached to the computer. The first instance will be device unit 0, the next will be unit 1 (if it is the same brand of reader) and so on. Two different brands of readers will both have zero for this value.
EscAuthrequest	499717	Esc authentication request
EscCancel	499715	Esc cancel
EscReset	499712	Esc reset
ExtendedBwt	524812	Extended block wait time.
IccInterfaceStatus	590593	Single byte. Zero if smart card electrical contact is not active; nonzero if contact is active.
IccPresence	590592	Single byte indicating smart card presence: 0 = not present, 1 = card present but not swallowed (applies only if reader supports smart card swallowing), 2 = card present (and swallowed if reader supports smart card swallowing), 4 = card confiscated.
IccTypePerAtr	590596	Single byte indicating smart card type: 0 = unknown type, 1 = 7816 Asynchronous, 2 = 7816 Synchronous. Other values RFU.
MaxClk	196898	Maximum clock rate, in kHz.
MaxDataRate	196900	Maximum data rate, in bps.
MaxIfsd	196901	Maximum bytes for information file size device.
Maxinput	499719	Maximum input
PowerMgmtSupport	262449	Zero if device does not support power down while smart card is inserted. Nonzero otherwise.
ProtocolTypes	196896	Integer encoded as 0xrrrrpppp where rrr is RFU and should be 0x000. pppp encodes the supported protocol types. A '1' in a given bit position indicates support for the associated ISO protocol, so if bits zero and one are set, both T=0 and T=1 protocols are supported.
SupressT1IfsRequest	2147418119	Supress T1 information file size request.
UserAuthInputDevice	328002	User authentication input device
UserToCardAuthDevice	328000	User to card authentication device
VendorIfdSerialNo	65795	Vendor-supplied interface device serial number.
VendorIfdType	65793	Vendor-supplied interface device type (model designation of reader).
VendorIfdVersion	65794	Vendor-supplied interface device version (DWORD in the form 0xMMmmbbbb where MM = major version, mm = minor version, and bbbb = build number).
VendorName	65792	Vendor name.

150.11 SmartCard.HeaderTemplate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.4	Yes	Yes	No	No	No

MBS("SmartCard.HeaderTemplate"; Protocol)

Parameters

Protocol

Which protocol you need a header. Can be T0, T1 or RAW.

"T1"

Result Returns OK or error.

Description

Examples

Get T0 header:

MBS("SmartCard.HeaderTemplate"; "T0")

Get T1 header:

MBS("SmartCard.HeaderTemplate"; "T1")

150.12 SmartCard.Init

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Init")

Result Returns SmartCard Context ID or error.

Description

Returns the ID for other SmartCard functions.

Please call SmartCard.Release later.

Examples

List readers:

```
Set Variable [ $c; Value:MBS( "SmartCard.Init" ) ]
Set Variable [ $readers; Value:MBS( "SmartCard.ListReaders"; $c ) ]
Set Variable [ $r; Value:MBS( "SmartCard.Release"; $c ) ]
Show Custom Dialog [ "Readers"; $readers ]
```

Connect and query value:

```
If [ MBS( "SmartCard.Available" ) = 1 ]
# Start a new session
Set Variable [ $SCContext; Value:MBS( "SmartCard.Init" ) ]
If [ MBS( "SmartCard.Valid"; $SCContext ) ]
# Query list of readers and pick first
Set Variable [ $SCReader; Value:GetValue ( MBS( "SmartCard.ListReaders"; $SCContext ) ; 1 ) ]
If [ MBS("IsError") = 0 ]
# Connect to card
Set Variable [ $SCConnect; Value:MBS( "SmartCard.Connect"; $SCContext ; $SCReader ; "Shared"; "any" ) ]
Set Variable [ $PProtocol; Value:MBS( "SmartCard.GetActiveProtocol"; $SCContext ) ]
If [ $SCConnect = "OK" ]
# Run a query
Set Variable [ $Result; Value:MBS( "SmartCard.Transmit"; $SCContext; "0200000008000000"; "00ca018202"; 512 ) ]
# Result is 4 bytes. Starts with C901 for Version 5.0 or C903 for Version 5.3
Show Custom Dialog [ "Version"; $result ]
# Disconnect
Set Variable [ $SCDisconnect; Value:MBS( "SmartCard.Disconnect"; $SCContext; "Leave" ) ]
Else

150.13 SmartCard.ListReaderGroups

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.ListReaderGroups"; SmartCardContext)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Result Returns list or error.

Description

Provides the list of reader groups that have previously been introduced to the system.

The groups may be SCard\$AllReaders, SCard\$DefaultReaders, SCard\$LocalReaders and SCard\$System-Readers.

See also

- 150.14 SmartCard.ListReaders

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.ListReaders"; SmartCardContext { ; Groups })

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Groups

Optional

Optional a list of groups to search.

"SCard\$LocalReaders"

Result Returns OK or error.

Description

Examples

List readers:

```
Set Variable [ $c; Value:MBS( "SmartCard.Init" ) ]
Set Variable [ $readers; Value:MBS( "SmartCard.ListReaders"; $c ) ]
Set Variable [ $r; Value:MBS( "SmartCard.Release"; $c ) ]

150.15 SmartCard.PerformSignature

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	7.0	Yes	Yes	Yes	No	No

MBS("SmartCard.PerformSignature"; SmartCardContext; DeviceType; Hash { ; ReturnType })

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

DeviceType

Which device to handle, so the plugin talks the right dialect. Currently supported cardos and acos.
"cardos"

Hash

The input hash to sign. Length should be 40 hex characters, so it's decoded 20 bytes.

"0011223344556677889900112233445566778899"

ReturnType

Optional

What format to return the certificate. Can be Hex or Base64. Default is hex.

"Hex"

Result Returns result or error.

Description

Convenience function which wraps a few calls to Transmit function.

With plugin version 7.1 the length of hash is variable.

This is function for atos Smartcards CardOS v5.0/5.3, which we needed for point of sales software in Austria. It may not work with your cards unless they have same protocol.

150.16 SmartCard.ReadCertificate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	7.0	Yes	Yes	Yes	No	No

MBS("SmartCard.ReadCertificate"; SmartCardContext; DeviceType { ; ReturnType })

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

DeviceType

Which device to handle, so the plugin talks the right dialect. Currently supported cardos and acos.
"cardos"

ReturnType

Optional

What format to return the certificate. Can be Hex or Base64. Default is hex.

"Hex"

Result Returns result or error.

Description

150.17 SmartCard.ReadFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	8.5	Yes	Yes	Yes	No	No

MBS("SmartCard.ReadFile"; SmartCardContext; FileID; ResultType)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

FileID

The fileID of the file to retrieve. Given as hex string.

"2F07"

ResultType

How to return data. Can be JPEG, Hex or Base64.

"Hex"

Result Returns data or error.

Description

Returns data in desired encoding or error message.

The first two bytes (4 Hex characters) are status code.

For JPEG we remove status code to return only image.

For Swiss health cards, the relevant IDs are 2F06 and 2F07.

For Belgian EID:

```

4031  ID RN
4032  SGN RN
4033  ID Address
4034  SGN Address
4035  ID Photo

```

You find the IDs for files usually in documentation or your card!

For some cards you may first need to move down a hierarchy of folders to get an item via SmartCard.Transmit.

Examples

Read file from smartcard with APDU protocol:

```

Set Variable [ $result ; Value: MBS( "SmartCard.ReadFile"; $$SmartCard; Card::FileID) ]
If [ MBS("IsError") ]
Set Field [ Card::Status ; $result ]

```

```
Show Custom Dialog [ "Error" ; $result ]
Else
Set Field [ Card::FileData ; $result ]
Set Field [ Card::Status ; "OK " & Left ( $result ; 4 ) ]
#
Perform Script [ Specified: From list ; "Split" ; Parameter: ]
End If
```

Query name from Swiss health card:

```
# Initialize smart card:
Set Variable [ $$SmartCard ; Value: MBS( "SmartCard.Init" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to initialize SmartCard" ; $$SmartCard ]
Exit Script [ Text Result: ]
End If
#
# Connect to a reader
Set Variable [ $reader ; Value: "Identiv SCR3310 uTrust 2700 R" ]
Set Variable [ $r ; Value: MBS( "SmartCard.Connect"; $$SmartCard; $reader; "Shared"; "any" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Connect failed" ; $r ]
Exit Script [ Text Result: ]
End If
#
# Read file from smartcard with APDU protocol.
#
# Read record with name
Set Variable [ $result ; Value: MBS( "SmartCard.ReadFile"; $$SmartCard; "2F06" ) ]
If [ MBS("IsError") ]
Set Field [ Card::Status ; $result ]
Show Custom Dialog [ "Error" ; $result ]
Exit Script [ Text Result: ]
End If
# Pick result
Set Variable [ $filedata ; Value: $result ]
#
# Split in values
Set Variable [ $json ; Value: MBS("SmartCard.SplitValues"; $filedata) ]
# Get item 128, which is full name
Set Variable [ $name ; Value: JSONGetElement ( $json ; "128" ) ]
Set Variable [ $nameList ; Value: Substitute($name; ", "; § ) ]
Set Variable [ $lastName ; Value: GetValue($nameList; 1) ]
Set Variable [ $firstName ; Value: GetValue($nameList; 2) ]
#
Show Custom Dialog [ "Name" ; $firstName & " " & $lastName ]
Set Variable [ $r ; Value: MBS( "SmartCard.DisConnect"; $$SmartCard; "Eject" ) ]
```

150.18 SmartCard.Reconnect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Reconnect"; SmartCardContext; ShareMode; PreferredProtocols; Initialization)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

ShareMode

A flag that indicates whether other applications may form connections to the card. Can be integer or one of the following texts: Exclusive (1), Shared (2) or Direct (3).

"Exclusive"

PreferredProtocols

A number with bitmask of acceptable protocols for the connection or just the text name of the value for only one protocol. Pass T0 (1), T1 (2), T15 (8, not on Windows), Any (3), RAW (4).

1+2

Initialization

Type of initialization that should be performed on the card. Can be Leave, Reset, Unpower or Eject.

"Reset"

Result Returns OK or error.

Description

The Reconnect function reestablishes an existing connection between the calling application and a smart card. This function moves a card handle from direct access to general access, or acknowledges and clears an error condition that is preventing further access to the card.

On success we have a connection to a smart card.

You can query SmartCard.GetActiveProtocol

See also

150.19 SmartCard.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Release"; SmartCardContext)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Result Returns OK or error.

Description

Also frees any smart card object.

150.20 SmartCard.SetAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.SetAttribute"; SmartCardContext; AttributeID; Value)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

AttributeID

The ID of the attribute.

Value

The hex encoded data to be set.

Result Returns OK or error.

Description

It does not affect the state of the reader, reader driver, or smart card. Not all attributes are supported by all readers (nor can they be set at all times) as many of the attributes are under direct control of the transport protocol.

See also

- 150.10 SmartCard.GetAttribute

7097

Created 13th June 2016, last changed 19th June 2016.

150.21 SmartCard.SplitValues

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	8.5	Yes	Yes	Yes	No	No

MBS("SmartCard.SplitValues"; Input)

Parameters

Input

The hex encoded input string.

Result Returns JSON or error.

Description

Files on smartcard can contain key/value data.

Returns JSON with an object containing numbers as text (key) and values as text.

Sample for JSON result:

```
{
  "128": "MILLER, JOE",
  "130": "19651201",
  "131": "123456789012",
  "132": "\u0001"
}
```

Starting with version 10.0 we hex encode binary data instead of assuming it's UTF-8.

Examples

Split file data:

```
Set Variable [ $json ; Value: MBS("SmartCard.SplitValues"; Card::FileData) ]
If [ MBS("IsError") ]
Set Field [ Card::JSON ; "" ]
Else
Set Field [ Card::JSON ; MBS("JSON.Colorize"; $json) ]
End If
```

150.22 SmartCard.Status

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Status"; SmartCardContext; Selector)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

Selector

Which value to query. Can be ReaderName, State, Protocol or ATR.

"State"

Result Returns value or error.

Description

You can call it any time after a successful call to SmartCard.Connect and before a successful call to SmartCard.Disconnect. It does not affect the state of the reader or reader driver.

If you ask for State, the result is Absent, Present, Swallowed, Powered, Negotiable or Specific.

Examples

Query reader name:

MBS("SmartCard.Status"; \$SmartCardContext; "ReaderName")

150.23 SmartCard.Transmit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
150 SmartCard	6.3	Yes	Yes	Yes	No	No

MBS("SmartCard.Transmit"; SmartCardContext; SendHeader; SendBuffer; RecvLength)

Parameters

SmartCardContext

The smartcard context reference number.

\$SmartCardContext

SendHeader

The hex encoded protocol header structure for the instruction. This buffer is in the format of an SCARD_IO_REQUEST structure, followed by the specific protocol control information (PCI). For the T=0, T=1, and Raw protocols, the PCI structure is constant. The smart card subsystem supplies a global T=0, T=1, or Raw PCI structure, which you can reference by using the symbols T0, T1, and RAW respectively. With version 7.0 or newer this can be empty to use default header.

"T1"

SendBuffer

The hex encoded data to be sent to the card. For T=0, the data parameters are placed into the address pointed to by pbSendBuffer according to the following structure:

Type name	Description	Byte Cla	The instruction class	Byte Ins	The instruction code	Byte P1	Parameter to the instruction	Byte P2	Parameter to the instruction	Byte P3	Size of I/O transfer

The data sent to the card should immediately follow the send buffer. In the special case where no data is sent to the card and no data is expected in return, P3 is not sent.

RecvLength

The number of bytes for the receiving buffer.

1024

Result Returns Receive Buffer or error.

Description

Returns receive buffer hex encoded.

see also

[https://msdn.microsoft.com/en-us/library/windows/desktop/aa379804\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/aa379804(v=vs.85).aspx)

You can use SmartCard.TransmitReceiveHeader to return last Transmit's receive header.

Examples

Query serial number of card:

MBS("SmartCard.Transmit"; \$Context; "0200000008000000"; "00ca018108"; 8)

Query version:

```
MBS( "SmartCard.Transmit"; $Context; "0200000008000000"; "00ca018202"; 2 )
```

Connect and query value:

```
If [ MBS( "SmartCard.Available" ) = 1 ]
# Start a new session
Set Variable [ $$SCContext; Value:MBS( "SmartCard.Init" ) ]
If [ MBS( "SmartCard.Valid"; $$SCContext ) ]
# Query list of readers and pick first
Set Variable [ $$SCReader; Value:GetValue ( MBS( "SmartCard.ListReaders"; $$SCContext ) ; 1 ) ]
If [ MBS("IsError") = 0 ]
# Connect to card
Set Variable [ $$SCConnect; Value:MBS( "SmartCard.Connect"; $$SCContext ; $$SCReader ; "Shared"; "any" )
]
Set Variable [ $PProtocol; Value:MBS( "SmartCard.GetActiveProtocol"; $$SCContext ) ]
If [ $$SCConnect = "OK" ]
# Run a query
Set Variable [ $Result; Value:MBS( "SmartCard.Transmit"; $$SCContext; "0200000008000000"; "00ca018202";
512 ) ]
# Result is 4 bytes. Starts with C901 for Version 5.0 or C903 for Version 5.3
Show Custom Dialog [ "Version"; $result ]
# Disconnect
Set Variable [ $$SCDisconnect; Value:MBS( "SmartCard.Disconnect"; $$SCContext; "Leave" ) ]
Else
Show Custom Dialog [ "Error"; "No card available." ]
End If
End If
# End Card Session
Set Variable [ $$SCRelease; Value:MBS( "SmartCard.Release" ; $$SCContext ) ]
Else
Show Custom Dialog [ "Error"; "Failed to initialize" ]
End If
Else
Show Custom Dialog [ "Error"; "No SmartCard API on this OS." ]
End If
```

Transmit select file commands to go into folder for EID cards:

```
# select folder 3F00
MBS( "SmartCard.Transmit"; 58001; "T1"; "00A4020C023F0000"; 200 )
# select subfolder DF 01
MBS( "SmartCard.Transmit"; 58001; "T1"; "00A4020C02DF0100"; 200 )
# now do readfile of 4031
```

Chapter 151

SNMP

Functions to query values via SNMP.

151.1 SNMP.Get

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
151 SNMP	3.1	Yes	No	Yes	Yes	No

MBS("SNMP.Get"; Community; Target; ObjectID)

Parameters

Community

The community name to use.

"public"

Target

The IP and port to connect to.

"192.168.2.5:1234"

ObjectID

The object ID to use.

"system.sysUpTime.0"

Result Returns the result or an error.

Description

Using version 1, no authentication and no security options.

Examples

Query uptime of demo server:

```
$r = MBS("SNMP.Get"; "demopublic"; "test.net-snmp.org"; "system.sysUpTime.0")
```

151.2 SNMP.SetRetries

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
151 SNMP	3.1	Yes	Yes	Yes	Yes	Yes

MBS("SNMP.SetRetries"; value)

Parameters

value

The new retries value. Pass -1 to use default.

2

Result Returns OK.

Description

Examples

Set to allow 2 retries and a timeout of 2 seconds:

```
MBS( "SNMP.SetRetries"; 2 )
```

```
MBS( "SNMP.SetTimeout"; 2000000 )
```

See also

151.3 SNMP.SetTimeout

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
151 SNMP	3.1	Yes	Yes	Yes	Yes	Yes

MBS("SNMP.SetTimeout"; value)

Parameters

value

The new timeout value. Pass -1 to use default.
2000000

Result Returns OK.

Description

Value is in microseconds (1 million microseconds per second)

Examples

Set to allow 2 retries and a timeout of 2 seconds:

```
MBS( "SNMP.SetRetries"; 2 )
```

```
MBS( "SNMP.SetTimeout"; 2000000 )
```

Chapter 152

Social

Functions to work with social networks on Mac, e.g. Twitter and Facebook.

152.1 Social.AccountProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("Social.AccountProperty"; accountIdentifier; Selector)

Parameters

accountIdentifier

The ID for the account.

Selector

Which value to return. Can be identifier, accountDescription, username, credential, accountType or accountTypeIdentifier.

"username"

Result Returns value or error.

Description

Please use Social.Accounts function to find account identifiers.

Examples

List Twitter Accounts

```
Go to Layout [ "Accounts" (Accounts) ]
```

```
Delete All Records [ No dialog ]
```

```
Set Variable [ $list; Value:MBS( "Social.Accounts"; "Twitter" ) ]
```

```
If [ MBS("IsError") ]
```

```
Show Custom Dialog [ "Error finding accounts"; $list ]
```

```
Else
Set Variable [ $count; Value:ValueCount ( $list ) ]
If [ $count >0 ]
Set Variable [ $i; Value:1 ]
Loop
Set Variable [ $accountIdentifier; Value:GetValue ( $list ; $i ) ]
New Record/Request
Set Field [ Accounts::Identifier; MBS( "Social.AccountProperty"; $accountIdentifier; "Identifier" ) ]
Set Field [ Accounts::Description; MBS( "Social.AccountProperty"; $accountIdentifier; "Description" ) ]
Set Field [ Accounts::Username; MBS( "Social.AccountProperty"; $accountIdentifier; "username" ) ]
Set Field [ Accounts::Type; MBS( "Social.AccountProperty"; $accountIdentifier; "accountType" ) ]
Commit Records/Requests [ No dialog ]
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i >= $count ]
End Loop
End If
End If
```

- 124.6 IsError 6266
- 152.2 Social.Accounts 7129

Example Databases

- [Mac only/Tweet on Twitter](#)

Created 28th August 2015, last changed 10th February 2016.

152.2 Social.Accounts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("Social.Accounts" { ; Type })

Parameters

Type

Optional

The type of accounts to find. If not provided or empty, all account types are used. Can be Twitter, Facebook, SinaWeibo, TencentWeibo or LinkedIn. LinkedIn is macOS only and not available on iOS.

"Twitter"

Result Returns list of identifiers or error.

Description

Works only on Mac OS X with 64-bit FileMaker.

Added iOS support for plugin version 7.3.

Examples

List Twitter Accounts

```

Go to Layout [ "Accounts" (Accounts) ]
Delete All Records [ No dialog ]
Set Variable [ $list; Value:MBS( "Social.Accounts"; "Twitter" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error finding accounts"; $list ]
Else
Set Variable [ $count; Value:ValueCount ( $list ) ]
If [ $count >0 ]
Set Variable [ $i; Value:1 ]
Loop
Set Variable [ $accountIdentifier; Value:GetValue ( $list ; $i ) ]
New Record/Request
Set Field [ Accounts::Identifier; MBS( "Social.AccountProperty"; $accountIdentifier; "Identifier" ) ]
Set Field [ Accounts::Description; MBS( "Social.AccountProperty"; $accountIdentifier; "Description" ) ]
Set Field [ Accounts::Username; MBS( "Social.AccountProperty"; $accountIdentifier; "username" ) ]
Set Field [ Accounts::Type; MBS( "Social.AccountProperty"; $accountIdentifier; "accountType" ) ]
Commit Records/Requests [ No dialog ]
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i >= $count ]
End Loop
End If
End If

```

Post on Twitter:

```

Set Variable [ $accounts; Value:MBS( "Social.Accounts"; "Twitter" ) ]
Set Variable [ $accountIdentifier; Value:GetValue($accounts; 1) ]
If [ $accountIdentifier = "" ]
Show Custom Dialog [ "No Twitter account allowed?" ]
Else
Set Variable [ $request; Value:MBS( "SocialRequest.New"; "Twitter"; "https://api.twitter.com/1.1/statuses/update.json"; "POST" ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.AddParameter"; $request; "status"; Tweets::Message ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.SetAccount"; $request; $accountIdentifier ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.Perform"; $request; Get(FileName); "TweetCompleted" ) ]
End If

```

- 152.18 SocialRequest.SetAccount 7151

Example Databases

- [Mac only/Tweet on Twitter](#)

Created 28th August 2015, last changed 12nd June 2017.

152.3 Social.HasAccessForAccountType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("Social.HasAccessForAccountType"; Type)

Parameters

Type

The type of accounts to check. Can be Twitter, Facebook, SinaWeibo, TencentWeibo or LinkedIn. "Twitter"

Result Returns 0, 1 or error.

Description

Returns 1 if you have permissions. If it returns 0, please use Social.RequestAccessForAccountType function.

Examples

Check permissions:

```
Set Variable [ $r; Value:MBS( "Social.HasAccessForAccountType"; "Twitter" ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Permissions"; "We do have permissions for Twitter." ]
Else If [ $r = 0 ]
Show Custom Dialog [ "Permissions"; "We don't have permissions for Twitter." ]
Else
Show Custom Dialog [ "Permissions"; "Failed to check: " & $r ]
End If
```

See also

- 152.4 Social.RequestAccessForAccountType

7132

Example Databases

- [Mac only/Tweet on Twitter](#)

Created 28th August 2015, last changed 10th February 2016.

152.4 Social.RequestAccessForAccountType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("Social.RequestAccessForAccountType"; Type { ; Filename; ScriptName })

Parameters

Type

The type of accounts to checks. Can be Twitter, Facebook, SinaWeibo, TencentWeibo or LinkedIn. LinkedIn is macOS only and not available on iOS.

"Twitter"

Filename

Optional

The database file name where the script is located.

"test.fmp12"

ScriptName

Optional

The script to call when access is decided.

"MyScript"

Result Returns OK or error.

Description

Obtains permission, if necessary, from the user to access protected properties, and utilize accounts of a particular type in protected operations, for example OAuth signing.

The provided script is called (if provided) to inform about whether access is granted.

The parameter of the script is a list of values containing first the type of service, second granted or failed as keyword and third an error message.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Request permissions for Twitter:

```
Set Variable [ $r; Value:MBS( "Social.RequestAccessForAccountType"; "Twitter"; Get(Filename); "RequestAccessForAccountTypeCompleted" ) ]
```

See also

- 152.3 Social.HasAccessForAccountType

Example Databases

- [Mac only/Tweet on Twitter](#)

Created 28th August 2015, last changed 11st June 2017.

152.5 SocialRequest.AddParameter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.AddParameter"; Request; Key; Value)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.

\$request

Key

The name of the parameter.

"status"

Value

The value for this parameter.

"Hello World"

Result Returns OK or error.

Description

Examples

Post on Twitter:

```
Set Variable [ $accounts; Value:MBS( "Social.Accounts"; "Twitter" ) ]
Set Variable [ $accountIdentifier; Value:GetValue($accounts; 1) ]
If [ $accountIdentifier = "" ]
Show Custom Dialog [ "No Twitter account allowed?" ]
Else
Set Variable [ $request; Value:MBS( "SocialRequest.New"; "Twitter"; "https://api.twitter.com/1.1/statuses/update.json"; "POST" ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.AddParameter"; $request; "status"; Tweets::Message ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.SetAccount"; $request; $accountIdentifier ) ]

152.11 SocialRequest.GetRequestMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.GetRequestMethod"; Request)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.
\$request

Result Returns method or error.

Description

Returns POST, GET, DELETE or PUT.

Examples

Check request method:

```
Set Variable [ $request ; Value: MBS( "SocialRequest.New"; "Twitter"; "https://api.twitter.com/1.1/statuses/update.json"; "POST" ) ]
```

```
Show Custom Dialog [ "URL" ; MBS( "SocialRequest.GetRequestMethod"; $Request ) ]
```

```

152.12 SocialRequest.GetResponse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.GetResponse"; Request; Selector { ; Encoding })

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.

\$request

Selector

Which value to query. Can be Error, Response, StatusCode, URL, MIMETYPE, expectedContentLength, textEncodingName, suggestedFilename, StatusCodeText, Headers or a HTTP header field.

"Response"

Encoding

Optional

The text encoding for result in case you use "Response" for selector. Default is UTF-8.

UTF8

Result Returns value or error.

Description

You can use this to query if the request was successful.

For a successful request, the error value is empty (no error sending) and StatusCode is 200 (no error in web service). The response text may be xml/json depending on service and have more details. MIMETYPE provides data type for the response, normally text/xml or application/json.

You can use Text.MimeTypeToFileExtension to find the file extension for mime type.

Examples

Script triggered after tweeting finished:

```
Set Variable [ $request; Value:Get(ScriptParameter) ]
Set Field [ Tweets::Status; MBS( "SocialRequest.GetResponse"; $request; "StatusCode" ) ]
Set Field [ Tweets::Response; MBS( "SocialRequest.GetResponse"; $request; "Response" ) ]
Set Field [ Tweets::ErrorMessage; MBS( "SocialRequest.GetResponse"; $request; "Error" ) ]
Set Field [ Tweets::Headers; MBS( "SocialRequest.GetResponse"; $request; "Headers" ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.Release"; $request ) ]
```

152.13 SocialRequest.GetServiceType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.GetServiceType"; Request)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.
\$request

Result Returns type as text or error.

Description

Returns Twitter, Facebook, SinaWeibo, TencentWeibo or LinkedIn.

Examples

Check service type:

```
Set Variable [ $request ; Value: MBS( "SocialRequest.New"; "Twitter"; "https://api.twitter.com/1.1/statuses/update.json"; "POST" ) ]
```

```
Show Custom Dialog [ "URL" ; MBS( "SocialRequest.GetServiceType"; $Request ) ]
```

```
Set Variable [ $r ; Value: MBS( "SocialRequest.Release"; $request ) ]
```

Created 28th August 2015, last changed 10th February 2016.

152.14 SocialRequest.GetURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.GetURL"; Request)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.
\$request

Result Returns URL as text or error.

Description

The URL returns via SocialRequest.GetResponse may be different due to redirection.

Examples

Check URL after creation:

```
Set Variable [ $request ; Value: MBS( "SocialRequest.New"; "Twitter"; "https://api.twitter.com/1.1/statuses/update.json"; "POST" ) ]
```

```
Show Custom Dialog [ "URL" ; MBS( "SocialRequest.GetURL"; $Request ) ]
```

```
Set Variable [ $r ; Value: MBS( "SocialRequest.Release"; $request ) ]
```

152.15 SocialRequest.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.New" { ; ServiceType; URL; RequestMethod })

Parameters

ServiceType

Optional

The service type to use. Can be Twitter, Facebook, SinaWeibo, TencentWeibo or LinkedIn. LinkedIn is macOS only and not available on iOS.

"Twitter"

URL

Optional

The URL to use for this request. Depends on the webservice.

"https://api.twitter.com/1.1/statuses/update.json"

RequestMethod

Optional

What request method to use. Can be DELETE, PUT, POST or GET.

"POST"

Result Returns reference number or error.

Description

This function is for easily query social web services like Twitter or Facebook by using the user account defined in system preferences. So you don't need to implement calling web service yourself and you don't need to ask user for credentials.

Please use SocialRequest.Release later to free request.

Added iOS support for plugin version 7.3.

Examples

Post on Twitter:

```
Set Variable [ $accounts; Value:MBS( "Social.Accounts"; "Twitter" ) ]
Set Variable [ $accountIdentifier; Value:GetValue($accounts; 1) ]
If [ $accountIdentifier = "" ]
Show Custom Dialog [ "No Twitter account allowed?" ]
Else
Set Variable [ $request; Value:MBS( "SocialRequest.New"; "Twitter"; "https://api.twitter.com/1.1/statuses/update.json"; "POST" ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.AddParameter"; $request; "status"; Tweets::Message ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.SetAccount"; $request; $accountIdentifier ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.Perform"; $request; Get(FileName); "TweetCompleted" ) ]
End If
```

Example Databases

- [Mac only/Tweet on Twitter](#)

Created 28th August 2015, last changed 12nd June 2017.

152.16 SocialRequest.Perform

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.Perform"; Request; Filename; ScriptName)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.

\$request

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script to call when access is decided.

"MyScript"

Result Returns OK or error.

Description

Once request is done, you can query the result with SocialRequest.GetResponse function. The plugin calls the given script and passes the request reference number as parameter.

Function requires 64-bit Mac application, so please use FileMaker 14 or newer.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Post on Twitter:

```
Set Variable [ $accounts; Value:MBS( "Social.Accounts"; "Twitter" ) ]
Set Variable [ $accountIdentifier; Value:GetValue($accounts; 1) ]
If [ $accountIdentifier = "" ]
Show Custom Dialog [ "No Twitter account allowed?" ]
Else
Set Variable [ $request; Value:MBS( "SocialRequest.New"; "Twitter"; "https://api.twitter.com/1.1/statuses/update.json"; "POST" ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.AddParameter"; $request; "status"; Tweets::Message ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.SetAccount"; $request; $accountIdentifier ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.Perform"; $request; Get(FileName); "TweetCompleted" ) ]
End If
```

Script triggered after tweeting finished:

152.16. SOCIALREQUEST.PERFORM

7149

```
Set Variable [ $request; Value:Get(ScriptParameter) ]
Set Field [ Tweets::Status; MBS( "SocialRequest.GetResponse"; $request; "StatusCode" ) ]
Set Field [ Tweets::Response; MBS( "SocialRequest.GetResponse"; $request; "Response" ) ]
Set Field [ Tweets::ErrorMessage; MBS( "SocialRequest.GetResponse"; $request; "Error" ) ]
Set Field [ Tweets::Headers; MBS( "SocialRequest.GetResponse"; $request; "Headers" ) ]
Set Variable [ $r; Value:MBS( "SocialRequest.Release"; $request ) ]

152.17 SocialRequest.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.Release"; Request)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.
\$request

Result Returns OK or error.

Description

Frees all memory used for this request.

Examples

Script triggered after tweeting finished:

```
Set Variable [ $request; Value:Get(ScriptParameter) ]
Set Field [ Tweets::Status; MBS( "SocialRequest.GetResponse"; $request; "StatusCode" ) ]
Set Field [ Tweets::Response; MBS( "SocialRequest.GetResponse"; $request; "Response" ) ]

CHAPTER 152. SOCIAL

Created 28th August 2015, last changed 10th February 2016.

152.19 SocialRequest.SetRequestMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.SetRequestMethod"; Request; RequestMethod)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.

\$request

RequestMethod

What request method to use. Can be DELETE, PUT, POST or GET.

"POST"

Result Returns OK or error.

Description

Examples

Sets request:

```
Set Variable [ $request; Value:MBS( "SocialRequest.New"; "Twitter"; "https://api.twitter.com/1.1/statuses/update.json" ) ]
```

```
Set Variable [ $r; Value:MBS( "SocialRequest.SetRequestMethod"; $request; "POST" ) ]
```

152.21 SocialRequest.SetURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.SetURL"; Request; URL)

Parameters**Request**

The reference number for the social request as you got it from SocialRequest.New function.

\$request

URL

The URL to use for this request. Depends on the webservice.

"https://api.twitter.com/1.1/statuses/update.json"

Result Returns OK or error.

Description**See also**

- 152.14 SocialRequest.GetURL 7145

152.22 SocialRequest.addMultipartContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.addMultipartContainer"; Request; Data; Name; MimeType; filename)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.

\$request

Data

The container to get data from.

Name

The name for this parameter.

"image"

MimeType

The MIME type for this data.

"image/jpeg"

filename

The file name for this data.

"image.jpg"

Result Returns OK or error.

Description

Specify a named MIME multi-part value. If you set parameters, the parameters will automatically be added as form data in the multi-part data.

You can use Text.FileExtensionToMimeType to find the mime type for a file extension.

See also

- 152.23 SocialRequest.addMultipartText 7157

152.23 SocialRequest.addMultipartText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
152 Social	5.3	Yes	No	No	No	Yes

MBS("SocialRequest.addMultipartText"; Request; Text; Name; MimeType; filename)

Parameters

Request

The reference number for the social request as you got it from SocialRequest.New function.

\$request

Text

The text to include in request.

"Hello World"

Name

The name for this parameter.

"status"

MimeType

The MIME type for this data.

"text/plain"

filename

The file name for this data.

"Hello.txt"

Result Returns OK or error.

Description

Specify a named MIME multi-part value. If you set parameters, the parameters will automatically be added as form data in the multi-part data.

You can use Text.FileExtensionToMimeType to find the mime type for a file extension.

Chapter 153

SocialComposer

A panel for iOS to edit and post to social media.

You can post with text, URL and images to Facebook, Twitter, SinaWeibo and TencentWeibo.

153.1 SocialComposer.AddImageContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.AddImageContainer"; ImageContainer)

Parameters

ImageContainer

The container value containing the image.
myTable::MyImage

Result Returns OK or error.

Description

Returns error if the additional image will not fit within the character space currently available, or if the sheet has already been presented to the user.

Examples

Adds an image:

```
Set Variable [ $r ; Value: MBS( "SocialComposer.AddImageContainer"; Placeholder::Attachment1) ]
```

See also

- 153.2 SocialComposer.AddImageFile

7161

- 153.13 SocialComposer.Present

Example Databases

- [iOS/iOS Social Posting](#)

Created 11st June 2017, last changed 11st June 2017.

153.2 SocialComposer.AddImageFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.AddImageFile"; Path)

Parameters

Path

The native file path of the image file to add.

Result Returns OK or error.

Description

Returns error if the additional image will not fit within the character space currently available, or if the sheet has already been presented to the user.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

153.3 SocialComposer.AddURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.AddURL"; URL)

Parameters

URL

The URL to add.

"http://www.mbs-plugins.com"

Result Returns OK or error.

Description

Returns error if the additional URL will not fit within the character space currently available, or if the sheet has already been presented to the user.

Examples

Add an URL:

```
Set Variable [ $r ; Value: MBS( "SocialComposer.AddURL"; "http://www.mbs-plugins.com" ) ]
```

7183

Created 11st June 2017, last changed 11st June 2017.

153.10 SocialComposer.IsAvailableForServiceType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.IsAvailableForServiceType"; Type)

Parameters

Type

The social service type. Can be Facebook, Twitter, SinaWeibo or TencentWeibo.
"Facebook"

Result Returns OK or error.

Description

Returns 1 if available or 0.

This function can be called before having a composer initialized.

Examples

Check for availability:

```
Set Variable [ $r ; Value: MBS( "SocialComposer.IsAvailableForServiceType"; Placeholder::Service ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't send message." ; "This iOS device is not configured to post on " & Placeholder::Service & "" ]
Exit Script [ Text Result: "failed" ]
End If
```

153.12 SocialComposer.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.New"; Type)

Parameters

Type

The social service type. Can be Facebook, Twitter, SinaWeibo or TencentWeibo.
"Twitter"

Result Returns OK or error.

Description

Please check with SocialComposer.IsAvailableForServiceType before whether it's available.
Resets last error and clears last post content.
There is only one message composer at all times, so starting a new one will clear last one.

Examples

Post something to Twitter:

```
Set Variable [ $r ; Value: MBS( "SocialComposer.New"; "Twitter" ) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r ; Value: MBS( "SocialComposer.SetInitialText"; "Greetings from FileMaker" ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.AddURL"; "http://www.mbs-plugins.com" ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.Present" ) ]
End If
```

CHAPTER 153. SOCIALCOMPOSER

Created 11st June 2017, last changed 11st June 2017.

153.13 SocialComposer.Present

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.Present")

Result Returns OK or error.

Description

This will show the user interface and start the process.

Your script may call this in a script and then wait for the script trigger.

Examples

Make a posting:

```
Set Variable [ $r ; Value: MBS( "SocialComposer.IsAvailableForServiceType"; Placeholder::Service ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't send message." ; "This iOS device is not configured to post on " & Placeholder::Service & "" ]
Exit Script [ Text Result: "failed" ]
End If
Set Variable [ $r ; Value: MBS( "SocialComposer.New"; Placeholder::Service ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.SetScript"; Get(FileName); "Sent" ) ]
If [ Length ( Placeholder::Text ) > 0 ]
Set Variable [ $r ; Value: MBS( "SocialComposer.SetInitialText"; Placeholder::Text ) ]
End If
If [ Length ( Placeholder::URL ) > 0 ]
Set Variable [ $r ; Value: MBS( "SocialComposer.AddURL"; Placeholder::URL ) ]
End If
If [ not IsEmpty ( Placeholder::Attachment1 ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.AddImageContainer"; Placeholder::Attachment1 ) ]
End If
If [ not IsEmpty ( Placeholder::Attachment2 ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.AddImageContainer"; Placeholder::Attachment2 ) ]
End If
If [ not IsEmpty ( Placeholder::Attachment3 ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.AddImageContainer"; Placeholder::Attachment3 ) ]
End If
Set Variable [ $r ; Value: MBS( "SocialComposer.Present" ) ]
```

Post something to Twitter:

```
Set Variable [ $r ; Value: MBS( "SocialComposer.New"; "Twitter" ) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r ; Value: MBS( "SocialComposer.SetInitialText"; "Greetings from FileMaker" ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.AddURL"; "http://www.mbs-plugins.com" ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.Present" ) ]
```

End If

Created 11st June 2017, last changed 11st June 2017.

153.18 SocialComposer.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.SetEvaluate"; Expression)

Parameters**Expression**

The expression to evaluate.

Result Returns OK or error.

Description

In the script you can check with MailComposer.Result and MailComposer.Error what happened.

See also

- 105.6 MailComposer.Error 5615

Created 11st June 2017, last changed 11st June 2017.

153.19 SocialComposer.SetInitialText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.SetInitialText"; Text)

Parameters

Text

The initial text.
"Hello World"

Result Returns OK or error.

Description

Returns error if the sheet has already been presented to the user.

You may supply text with a length greater than the service supports, and the sheet will allow the user to edit it accordingly.

Examples

Set initial text:

Set Variable [\$r ; Value: MBS("SocialComposer.SetInitialText"; "Hello World")]

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
153 SocialComposer	7.3	No	No	No	No	Yes

MBS("SocialComposer.SetScript"; FileName; ScriptName { ; Parameter })

Parameters

FileName

The file name for the script to trigger.

"test.fmp12"

ScriptName

The script name of the script to launch.

"EmailComposerFinished"

Parameter

Optional

The parameter to pass to the script.

Result Returns OK or error.

Description

In the script you can check with MailComposer.Result and MailComposer.Error what happened.

Examples

Sets the script:

```
Set Variable [ $r ; Value: MBS( "SocialComposer.New"; Placeholder::Service ) ]
Set Variable [ $r ; Value: MBS( "SocialComposer.SetScript"; Get(FileName); "Sent" ) ]
```

Chapter 154

Socket

UDP and TCP sockets.

154.1 Socket.AcceptNewConnection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.AcceptNewConnection"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns new Socket ID or error message.

Description

Examples

In the script triggered for a new connection, connect a new socket:

```
Set Variable [ $sock; Value:Get(ScriptParameter) ]
Set Variable [ $newSock; Value:MBS("Socket.AcceptNewConnection"; $sock) ]
If [ GetAsNumber($newSock)>0 ]
Set Variable [ $r; Value:MBS("Socket.SetErrorHandler"; $newsock; Get(FileName); "SocketError") ]
Set Variable [ $r; Value:MBS("Socket.SetDataAvailableHandler"; $newsock; Get(FileName); "ReadSomething") ]
End If
```

154.2 Socket.AddMembership

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	7.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.AddMembership"; SocketID; MultiAddress; InterfaceAddress)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

MultiAddress

The IPv4 address of the group to join.

InterfaceAddress

The IPv4 address of the network interface to use. Can be empty for any interface.

Result Returns OK or error.

Description

Internally this uses IPPROTO_IP/IP_ADD_MEMBERSHIP option.

Lasterror is set.

See also

- 154.11 Socket.Connect 7197
- 154.12 Socket.DropMembership 7202

154.2.1 Blog Entries

- [MBS FileMaker Plugin, version 7.5pr3](#)

Created 19th October 2017, last changed 19th October 2017.

154.3 Socket.AvailableBytes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Socket.AvailableBytes"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns number or error.

Description

May not work for SSL sockets.

The buffer size of the socket is managed by the OS and can be several megabytes big if needed.

Examples

Query available byte count:

MBS("Socket.AvailableBytes"; \$sock)

154.4 Socket.Check

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	5.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.Check")

Result Returns OK.

Description

The plugin checks regularly if there are new events for the socket and calls the right scripts. In a tight loop you can call this method to check sockets and have events dispatched. Normally you have no need to call this function.

See also

- 154.5 Socket.CheckAll 7190
- 154.30 Socket.Peek 7223

Created 29th March 2015, last changed 29th March 2015.

154.5 Socket.CheckAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	5.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.CheckAll")

Result Returns list or error.

Description

Returns a list of sockets and what to do. The list is always build using a reference number of a socket followed by an entry with the status. Status can be error, read, write, or accept. So when you get a socket with read status, you can read data from it. With write status you can write some data to it. With accept, you can start a new connection with the incoming request. In case of error status, the plugin closes the socket automatically.

Returns empty text if there is nothing to do.

154.9 Socket.Close

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.Close"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns OK or error message.

Description

Examples

Disconnect socket:

```
If [ IsEmpty($$sock) ]
Else
Set Variable [ $r; Value:MBS("Socket.Close"; $$Sock) ]
Set Variable [ $$Sock; Value:"" ]
End If
```

154.11 Socket.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.Connect"; IPorDomain; Port; Timeout { ; ProtocolPreference })

Parameters

IPorDomain

The IP or domain. For a domain name, the DNS server is queried to find an IP address.
"127.0.0.1"

Port

The desired network port to connect to.
80

Timeout

The connection timeout in seconds. Default depends on operation system and can be e.g. 90 seconds.
5

ProtocolPreference

Optional

Pass 4 to connect via IPv4. Pass 6 to connect via IPv6. Default is to try whatever the DNS suggests first.
4

Result Returns socket ID for other functions or error message.

Description

You need to call Socket.Close later to release memory used for this socket.

Version 6.3 now supports passing IPv4, IPv6, or a host name.

Examples

Connect to MonkeybreadSoftware website:

```
$sock = MBS( "Socket.Connect"; "monkeybreadsoftware.de"; 80 )
```

Connect to localhost website:

```
$sock = MBS( "Socket.Connect"; "127.0.0.1"; 80 )
```

Connect if needed and send something:

```
# connect if needed
If [ IsEmpty($$sock) ]
Set Variable [ $$sock; Value:MBS("Socket.Connect"; TCP Sender::TargetIP; TCP Sender::Port) ]
If [ MBS("IsError") ]
Set Field [ TCP Sender::Result; "Failed to create socket: " & $$sock ]
```

```

Exit Script [ ]
End If
Set Variable [ $r; Value:MBS("Socket.SetDataAvailableHandler"; $$sock; Get(FileName); "DataAvailable")
]
Set Variable [ $r; Value:MBS("Socket.SetErrorHandler"; $$sock; Get(FileName); "SocketError") ]
End If
# send some data
Set Variable [ $r; Value:MBS("Socket.Write"; $$sock; TCP Sender::Message; "UTF-8") ]
If [ GetAsNumber($r) = 0 ]
Set Field [ TCP Sender::Result; "Failed to Send: "& $r ]
Else
Set Field [ TCP Sender::Result; "Sent "& $r& " Bytes." ]
End If

```

Connect to IP and send command and wait for answer:

```

Set Variable [ $sock; Value:MBS("Socket.Connect";test::IP; 16128) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to connect" ]
Else
Set Variable [ $write; Value:MBS("Socket.WriteHex"; $sock; test::query) ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Field [ test::response; MBS("Socket.ReadHex"; $sock; 20) ]
Show Custom Dialog [ "Hex: " & test::response & $& "Text: " & MBS( "Text.DecodeFromHex"; test::re-
sponse) ]
Set Variable [ $sock; Value:MBS("Socket.Close"; $sock) ]
End If

```

Measure from a specific scale:

```

# Open port
Set Variable [ $sock ; Value: MBS("Socket.Connect"; Scale::IP, Scale::Port) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to open socket" ; $sock ]
Exit Script [ Text Result: ]
End If
# Send reset command
Set Variable [ $r ; Value: MBS("Socket.Write"; $sock; "@" ) ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 13) ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 10) ]
# Disable keyboard
Set Variable [ $r ; Value: MBS("Socket.Write"; $sock; "K 3" ) ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 13) ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 10) ]
# Set scale to zero
Set Variable [ $r ; Value: MBS("Socket.Write"; $sock; "Z" ) ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 13) ]

```

```

Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 10) ]
# Set to measure in grams
Set Variable [ $r ; Value: MBS("Socket.Write"; $sock; "M21 1 0") ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 13) ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 10) ]
Set Variable [ $r ; Value: MBS("Socket.Write"; $sock; "M21 0 0") ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 13) ]
Set Variable [ $r ; Value: MBS("Socket.WriteByte"; $sock; 10) ]
# Send expected weight and tolerance

154.12 Socket.DropMembership

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	7.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.DropMembership"; SocketID; MultiAddress; InterfaceAddress)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

MultiAddress

The IPv4 address of the group to join.

InterfaceAddress

The IPv4 address of the network interface to use. Can be empty for any interface.

Result Returns OK or error.

Description

Internally this uses IPPROTO_IP/IP_DROP_MEMBERSHIP option.

Lasterror is set.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	5.3	Yes	Yes	Yes	Yes	Yes

MBS("Socket.GetBroadcast"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.
\$sock

Result Returns value or error.

Description

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	7.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.GetMulticastInterface"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.
\$sock

Result Returns IP or error.

Description

May return 0.0.0.0 to indicate all interfaces.

See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	8.3	Yes	Yes	Yes	Yes	Yes

MBS("Socket.GetTag"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns tag value or error.

Description

See also Socket.SetTag.

With the tag, we allow you to associate a text with the socket, for example a record ID.

154.25 Socket.Listen

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.Listen"; SocketID; Port { ; backlog })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Port

The port number to listen at.

8000

backlog

Optional

Available in MBS FileMaker Plugin 9.1 or newer.

The back log for connection. How many pending connections can be accepted on this socket. Once you call Socket.AcceptNewConnection, an entry is removed here. Default is 3.

3

Result Returns OK or error message.

Description

For UDP Socket, the socket starts receiving packets.

For TCP Socket, the socket can accept connections which causes a script to be called. You set the script name with Socket.SetNewConnectionHandler. In the script you call Socket.AcceptNewConnection to get a new socket for the new connection.

Be aware that FileMaker Server does not allow the plugin to operate if no script is running. So if you use sockets there, make sure a script is running or paused while you expect an answer coming in.

Examples

Listen to a given Port:

```
Set Variable [ $r; Value:MBS("Socket.Listen"; $$sock; 12345) ]
```

Create TCP Socket listening on a port:

```
Set Variable [ $$sock; Value:MBS("Socket.NewTCPSocket") ]
```

```
If [ MBS("IsError") ]
```

```
Show Custom Dialog [ "Failed to create Socket"; $$sock ]
```

```
Exit Script [ ]
```

```
End If
```

```
Set Variable [ $r; Value:MBS("Socket.SetNewConnectionHandler"; $$sock; Get(FileName); "NewConnection") ]
```

```

Set Variable [ $r; Value:MBS("Socket.SetErrorHandler"; $$sock; Get(FileName); "SocketError") ]
Set Variable [ $r; Value:MBS("Socket.Listen"; $$sock; TCP Receiver::ListenPort) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to create Socket"; $$sock ]
Exit Script [ ]
End If

```

154.26 Socket.LocalIP

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	8.0	Yes	Yes	Yes	Yes	Yes

MBS("Socket.LocalIP"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns OK or error.

Description

This is usually 0.0.0.0 for a brand new socket.

Can return IPv4 or IPv6 address.

Does not work on Windows 7 or older (requires Vista on Windows).

Examples

Get local port and IP:

```
Set Variable [ $sock ; Value: MBS("Socket.Connect"; "monkeybreadsoftware.de"; 80) ]
```

```
Set Variable [ $$LocalPort ; Value: MBS( "Socket.LocalPort"; $sock ) ]
```

```
Set Variable [ $$LocalIP ; Value: MBS( "Socket.LocalIP"; $sock ) ]
```

```
Set Variable [ $r ; Value: MBS("Socket.Close"; $sock) ]
```

154.27 Socket.LocalPort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	8.0	Yes	Yes	Yes	Yes	Yes

MBS("Socket.LocalPort"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns OK or error.

Description

This is usually 0 for a brand new socket.

Does not work on Windows 7 or older (requires Vista on Windows).

Examples

Get local port and IP:

```
Set Variable [ $sock ; Value: MBS("Socket.Connect"; "monkeybreadsoftware.de"; 80) ]
```

```
Set Variable [ $$LocalPort ; Value: MBS( "Socket.LocalPort"; $sock ) ]

- [MBS FileMaker Plugin, version 8.0pr6](#)

Created 28th December 2017, last changed 28th December 2017.

154.28 Socket.NewTCPSocket

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.NewTCPSocket" { ; PreferIPv6 })

Parameters

PreferIPv6

Optional

Available in MBS FileMaker Plugin 8.4 or newer.

Pass 1 to get IPv6 or if not available IPv4. Pass 0 to get IPv4 or if not available IPv6. Default is 1 for preferring IPv6.

1

Result Returns a new socket ID or error message.

Description

Socket reference numbers are starting at 29000 and counting up for each new socket.

If you call Socket.Connect, you don't need to use this method first as the connect function creates its own socket.

For MBS Plugin 8.3 or newer this may be IPv6 or IPv4 socket.

Examples

Create TCP Socket listening on a port:

```
Set Variable [ $$sock; Value:MBS("Socket.NewTCPSocket") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to create Socket"; $$sock ]
Exit Script [ ]
End If
Set Variable [ $r; Value:MBS("Socket.SetNewConnectionHandler"; $$sock; Get(FileName); "NewConnection") ]
Set Variable [ $r; Value:MBS("Socket.SetErrorHandler"; $$sock; Get(FileName); "SocketError") ]
Set Variable [ $r; Value:MBS("Socket.Listen"; $$sock; TCP Receiver::ListenPort) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to create Socket"; $$sock ]
Exit Script [ ]
End If
```

154.29 Socket.NewUDPSocket

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.NewUDPSocket")

Result Returns a new socket ID or error message.

Description

Socket reference numbers are starting at 29000 and counting up for each new socket. For use with broadcast, we create IPv4 here.

Examples

Create a new UDP Socket:

```
Set Variable [ $$sock; Value:MBS("Socket.NewUDPSocket") ]
```

Create a new UDP socket for broadcast and listen on a port:

```
If [ not (GetAsNumber($$sock) >0) ]
Set Variable [ $$sock; Value:MBS("Socket.NewUDPSocket") ]
If [ GetAsNumber($$sock) = 0 ]
Show Custom Dialog [ "Failed to create Socket"; $$sock ]
Exit Script [ ]
End If
End If

154.30 Socket.Peek

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.Peek"; SocketID; length { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

length

Maximum number of bytes to read.

10

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

UTF8

Result Returns text or error message.

Description

The text returned may be shorter than length bytes.

If you like to look into the whole buffer, please use Socket.PeekAll function.

Examples

Read up to 8 bytes and decode them from Windows text encoding into FileMaker:

```
$value = MBS( "Socket.Read"; $sock; 8; "windows" )
```

Created 18th August 2014, last changed 15th February 2019.

154.31 Socket.PeekAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Socket.PeekAll"; SocketID { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

UTF8

Result Returns text or error message.

Description

This function will look how much is in read buffer and query all bytes inside.

Examples

Read all bytes and decode them from Windows text encoding into FileMaker:

```
$value = MBS( "Socket.PeekAll"; $sock; "windows" )
```

154.32 Socket.PeekAllHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Socket.PeekAllHex"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns text encoded as hex or error message.

Description

This function will look how much is in read buffer and query all bytes inside.

Examples

Read all bytes and return them as:

```
$value = MBS( "Socket.ReadAllHex"; $port )
```

154.33 Socket.PeekHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.PeekHex"; SocketID; length)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

length

Maximum number of bytes to read.

10

Result Returns text encoded as hex or error message.

Description

The text returned may be shorter than length bytes.

If you like to look into the whole buffer, please use Socket.PeekAllHex function.

Examples

Read up to 8 bytes and return them as:

```
$value = MBS( "Socket.ReadHex"; $port; 8 )
```

See also

Created 18th August 2014, last changed 15th February 2019.

154.34 Socket.Read

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.Read"; SocketID; length { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

length

Maximum number of bytes to read.

10

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

UTF8

Result Returns text or error message.

Description

The text returned may be shorter than length bytes.

The buffer size of the socket is managed by the OS and can be several megabytes big if needed.

To read the whole input buffer, use Socket.ReadAll. To look into buffer without removing text, please use Socket.Peek function instead.

Examples

Read up to 8 bytes and decode them from Windows text encoding into FileMaker:

```
$value = MBS( "Socket.Read"; $sock; 8; "windows" )
```

Connect to a HTTP Server and wait for answer:

```
Set Variable [ $r; Value:MBS("Trace") ]
```

```
Set Variable [ $sock; Value:MBS("Socket.Connect"; TCP Socket::DomainOrIP; 80) ]
```

```
If [ MBS("IsError") ]
```

```
Show Custom Dialog [ "Error"; $sock ]
```

```
Exit Script [ ]
```

```
End If
```

```
Set Variable [ $request; Value:"GET "& TCP Socket::Path& " HTTP/1.0$Host: "& TCP Socket::Domain-OrIP& "$$" ]
```

```
Set Variable [ $request; Value:MBS("String.ReplaceNewline"; $request; 2) ]
```

```
Set Field [ TCP Socket::RequestUsed; $request ]
```

```

Set Variable [ $r; Value:MBS("Socket.Write"; $sock; $request) ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $data; Value:MBS("Socket.Read"; $sock; 1000) ]
Set Variable [ $data; Value:MBS("String.ReplaceNewline"; $data; 1) ]
Set Field [ TCP Socket::Result; $data ]
Set Variable [ $r; Value:MBS("Socket.Close"; $sock) ]

```

Read data and put in a new record:

```

Set Variable [ $r; Value:MBS("Socket.Read"; $$sock; 1500; "UTF-8") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error Reading"; $r ]
Else If [ Length($r) = 0 ]
Show Custom Dialog [ "Error Reading"; "No data available." ]
Else
New Record/Request
Set Field [ UDP Broadcast::Message Received; $r ]
Set Field [ UDP Broadcast::Sender; MBS("Socket.LastMessageIP"; $$sock) ]
Commit Records/Requests [ No dialog ]
End If

```

154.35 Socket.ReadAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Socket.ReadAll"; SocketID { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

UTF8

Result Returns OK or error.

Description

This function will look how much is in read buffer and query all bytes inside.
May not work for SSL sockets.

The buffer size of the socket is managed by the OS and can be several megabytes big if needed. To look into buffer without removing text, please use Socket.PeekAll function instead.

Examples

Read all bytes and decode them from Windows text encoding into FileMaker:

```
$value = MBS( "Socket.ReadAll"; $sock; "windows" )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.ReadHex"; SocketID; length)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

length

Maximum number of bytes to read.

10

Result Returns text encoded as hex or error message.

Description

The text returned may be shorter than length bytes.

Examples

Read up to 8 bytes and return them as:

```
$value = MBS( "Socket.ReadHex"; $port; 8 )
```

154.38 Socket.ReadLine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Socket.ReadLine"; SocketID; Delimiter { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Delimiter

Which character to use as delimiter. Pass number from 0 to 255 for the byte to use. e.g. 13 for CR line ending. Special handling is done if you pass 1310 as delimiter to cover CRLF as a 2 byte delimiter.

13

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

UTF8

Result Returns OK or error.

Description

The delimiter allows you to read from the buffer just one line. If two lines are in read buffer, we leave second line there for the next call.

Examples

Read one line and decode them from Windows text encoding into FileMaker:

```
$value = MBS( "Socket.Read"; $sock; 13; "windows" )
```

154.40 Socket.ReadMLLP

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.ReadMLLP"; SocketID; length { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

length

Maximum number of bytes to read.

10

Encoding

Optional

The text encoding for result. Default is native.

UTF8

Result Returns text or error message.

Description

The text returned may be shorter than length bytes.

This function waits until a packet is complete (end byte received) and returns the text in the message.

Examples

Read up to 8 bytes and decode them from Windows text encoding into FileMaker:

```
$value = MBS( "Socket.ReadMLLP"; $sock; 8; "windows" )
```

154.43 Socket.SSL.Accept

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SSL.Accept"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns OK or error.

Description

Calls internally Socket.SSL.Initialize if you did not yet call it.

See also

- 154.11 Socket.Connect 7197
- 154.44 Socket.SSL.Connect 7241
- 154.46 Socket.SSL.Initialize 7243

Created 18th August 2014, last changed 18th August 2014.

154.44 Socket.SSL.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SSL.Connect"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns OK or error.

Description

Calls internally Socket.SSL.Initialize if you did not yet call it.

Instead of using this SSL socket, please consider letting CURL do the job: Use CURL.SetOptionConnectOnly to let CURL connect and then send data using CURL.SendData and CURL.SendText. For receiving, please use CURL.ReceiveData and CURL.ReceiveText. This gives you much more SSL options and proxy support.

154.45 Socket.SSL.GetMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SSL.GetMethod"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.
\$sock

Result Returns OK on success.

Description

See also

- 154.11 Socket.Connect 7197
- 154.48 Socket.SSL.SetMethod 7245

Created 18th August 2014, last changed 18th August 2014.

154.46 Socket.SSL.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SSL.Initialize"; SocketID)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Result Returns OK or error.

Description

First you need to create TCP socket and accept or connect.

Optionally you can call Socket.SSL.Prepare first.

After Socket.SSL.Initialize you can call Socket.SSL.Connect or Socket.SSL.Accept.

Instead of using this SSL socket, please consider letting CURL do the job: Use CURL.SetOptionConnectOnly to let CURL connect and than send data using CURL.SendData and CURL.SendText. For receiving, please use CURL.ReceiveData and CURL.ReceiveText. This gives you much more SSL options and proxy support.

- 154.48 Socket.SSL.SetMethod 7245

Created 18th August 2014, last changed 18th August 2014.

154.48 Socket.SSL.SetMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SSL.SetMethod"; SocketID; Method)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Method

The new SSL method. Can be SSLv2, SSLv3, SSLv23, TLSv1.0, TLSv1.1, TLSv1.2 or DTLSv1.0. "SSLv2"

Result Returns OK or error.

Description

You first need to call Socket.SSL.Prepare to init SSL to the step where you can set method.

See also

- 154.11 Socket.Connect 7197
- 154.45 Socket.SSL.GetMethod 7242

154.49 Socket.SSL.UseCertificateFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SSL.UseCertificateFile"; SocketID; Path; Type)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Path

The path to the certificate file.

\$path

Type

The type of the file. Can be "PEM" or "ASN1".

"PEM"

Result Returns OK on success or error.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

154.50 Socket.SSL.UsePrivateKeyFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SSL.UsePrivateKeyFile"; SocketID; Path; Type)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Path

The path to the certificate file.

\$path

Type

The type of the file. Can be "PEM" or "ASN1".

"PEM"

Result Returns OK on success or error.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Created 18th August 2014, last changed 5th September 2014.

154.51 Socket.SendMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SendMessage"; SocketID; IP; Port; Text { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

IP

The target IP or name.

"192.168.2.10"

Port

The target port to send to.

9000

Text

The text to send.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF8"

Result Returns the number of bytes written or an error message.

Description

Examples

Write something:

```
MBS( "Socket.SendMessage"; $sock; "Hello World" )
```

Write something with DOS text encoding:

```
MBS( "Socket.SendMessage"; $sock; "Umlauts: äöü"; "DOS" )
```

Send UDP Package:

```
Set Variable [ $r; Value:MBS("Socket.SendMessage"; $$sock; UDP Broadcast::BroadcastAddress; UDP Broadcast::Port; UDP Broadcast::Message To Send; "UTF-8") ]
```

```
If [ GetAsNumber($r) = 0 ]
```

```
Set Field [ UDP Broadcast::Send Result; "Failed to Send: "&$r ]
```

```
Else
```

```
Set Field [ UDP Broadcast::Send Result; "Sent "& $r& " Bytes." ]
End If
```

Opens stream to Midi device and plays notes with time offsets:

```
Set Variable [ $DeviceName; Value:"Your device name" ]
If [ $$stream = "" ]
Set Variable [ $$stream; Value:MBS("PortMidi.OpenOutput"; $DeviceName; 100; 10) ]
If [ MBS("ISError") ]
Show Custom Dialog [ "Failed to open Device"; $$stream ]
End If
End If
# Send notes
Set Variable [ $ts; Value:MBS( "PortMidi.TimeStamp" ) ]
Set Variable [ $r; Value:MBS("PortMidi.SendMessage"; $$stream; 144; 48; 95; $ts ) ]
Set Variable [ $r; Value:MBS("PortMidi.SendMessage"; $$stream; 128; 48; 0; $ts + 500 ) ]
Set Variable [ $r; Value:MBS("PortMidi.SendMessage"; $$stream; 144; 50; 95; $ts + 1000 ) ]
Set Variable [ $r; Value:MBS("PortMidi.SendMessage"; $$stream; 128; 50; 0; $ts + 1500 ) ]
Set Variable [ $r; Value:MBS("PortMidi.SendMessage"; $$stream; 144; 52; 95; $ts + 2000 ) ]
Set Variable [ $r; Value:MBS("PortMidi.SendMessage"; $$stream; 128; 52; 0; $ts + 2500 ) ]
```

154.52 Socket.SendMessageHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SendMessageHex"; SocketID; IP; Port; Text)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

IP

The target IP or name.

"192.168.2.10"

Port

The target port to send to.

9000

Text

The text to send in hex encoding.

"48656C6C6F"

Result Returns the number of bytes written or an error message.

Description

Examples

Write some text:

MBS("Socket.SendMessageHex"; \$sock; "48656C6C6F")

154.53 Socket.SetBroadcast

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	5.3	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SetBroadcast"; SocketID; Value)

Parameters

SocketID

The socket ID received by Socket.Connect function.
\$sock

Value

The new setting. 1 to enable to 0 to disable.
1

Result Returns OK or error.

Description

Examples

Enable Broadcast Mode:

```
Set Variable [ $r; Value:MBS("Socket.SetBroadcast"; $$sock; 1) ]
```

154.54 Socket.SetDataAvailableEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	6.2	Yes	Yes	No	No	Yes

MBS("Socket.SetDataAvailableEvaluate"; SocketID; Expression)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

When new data arrives, this expression is evaluated, so you can call Socket.Read function.

Be aware that expression may be evaluated when just a few bytes are in the read buffer. So the data message you wait for may only be available partly. In that case, please read available bytes, check if whole packet/message arrived and if not, store read data for later and wait for next evaluation.

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the socket reference, so you can pass it to other functions if needed.

154.55 Socket.SetDataAvailableHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	No	No	Yes

MBS("Socket.SetDataAvailableHandler"; SocketID; FileName; ScriptName)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

FileName

The name of the FileMaker File that contains the script

"MyDatabase.fp7"

ScriptName

The name of the script to run

"DataAvailable"

Result Returns OK or error message.

Description

When new data arrives, this script is called, so you can call Socket.Read function.

Be aware that script may be called when just a few bytes are in the read buffer. So the data message you wait for may only be available partly. In that case, please read available bytes, check if whole packet/message arrived and if not, store read data for later and wait for next script call.

The script parameter is the ID of the socket. You can associate additional values with Socket.SetTag function to the socket and use them in the script triggered.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Set script to be triggered if data is available:

```
Set Variable [ $r; Value:MBS("Socket.SetDataAvailableHandler"; $$sock; Get(FileName); "ReadMessage") ]
```

154.56 Socket.SetDataAvailableURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	6.5	Yes	Yes	Yes	Yes	Yes

MBS("Socket.SetDataAvailableURL"; SocketID; URL)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

URL

The URL to trigger.

Result Returns OK or error.

Description

\$\$ID\$\$ in the URL is replaced with socket ID.

Queries http/ftp/sftp URLs with CURL, other URLs passed to OS to open.

154 Socket	6.2	Yes	Yes	No	No	Yes

MBS("Socket.SetErrorEvaluate"; SocketID; Expression)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

If the socket has an error, this expression is evaluated and you can react and close the socket.

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the socket reference, so you can pass it to other functions if needed.

154.58 Socket.SetErrorHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	No	No	Yes

MBS("Socket.SetErrorHandler"; SocketID; FileName; ScriptName)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

FileName

The name of the FileMaker File that contains the script

"MyDatabase.fp7"

ScriptName

The name of the script to run

"SocketError"

Result Returns OK or error message.

Description

If the socket has an error, this script is called and you can react and close the socket.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Create TCP Socket listening on a port:

```
Set Variable [ $$sock; Value:MBS("Socket.NewTCPSocket") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to create Socket"; $$sock ]
Exit Script [ ]
End If
Set Variable [ $r; Value:MBS("Socket.SetNewConnectionHandler"; $$sock; Get(FileName); "NewConne-
tion") ]
Set Variable [ $r; Value:MBS("Socket.SetErrorHandler"; $$sock; Get(FileName); "SocketError") ]
Set Variable [ $r; Value:MBS("Socket.Listen"; $$sock; TCP Receiver::ListenPort) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to create Socket"; $$sock ]
Exit Script [ ]
End If
```

154.63 Socket.SetNewConnectionEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	6.2	Yes	Yes	No	No	Yes

MBS("Socket.SetNewConnectionEvaluate"; SocketID; Expression)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let (\$\$Done = 1 ; 1)"

Result Returns OK or error.

Description

This expression is evaluated for listening TCP Socket when new connections arrive so you can call Socket.AcceptNewConnection.

Be aware that FileMaker Server does not allow the plugin to operate if no script is running. So if you use sockets there, make sure a script is running or paused while you expect an answer coming in.

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the socket reference, so you can pass it to other functions if needed.

154.64 Socket.SetNewConnectionHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	No	No	Yes

MBS("Socket.SetNewConnectionHandler"; SocketID; FileName; ScriptName)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

FileName

The name of the FileMaker File that contains the script

"MyDatabase.fp7"

ScriptName

The name of the script to run

"NewConnection"

Result Returns OK or error message.

Description

This script is called for listening TCP Socket when new connections arrive so you can call Socket.AcceptNewConnection.

Be aware that FileMaker Server does not allow the plugin to operate if no script is running. So if you use sockets there, make sure a script is running or paused while you expect an answer coming in.

The script parameter is the ID of the socket. You can associate additional values with Socket.SetTag function to the socket and use them in the script triggered.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

154.68 Socket.Write

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.Write"; SocketID; Text { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Text

The text to send.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF8"

Result Returns the number of bytes written or an error message.

Description

Returns number of bytes sent. It may take a few milliseconds till data arrives on the other socket.

Examples

Write something:

```
MBS( "Socket.Write"; $sock; "Hello World" )
```

Write something with DOS text encoding:

```
MBS( "Socket.Write"; $sock; "Umlauts: äöü"; "DOS" )
```

Connect to a HTTP Server and wait for answer:

```
Set Variable [ $r; Value:MBS("Trace") ]
```

```
Set Variable [ $sock; Value:MBS("Socket.Connect"; TCP Socket::DomainOrIP; 80) ]
```

```
If [ MBS("IsError") ]
```

```
Show Custom Dialog [ "Error"; $sock ]
```

```
Exit Script [ ]
```

```
End If
```

```
Set Variable [ $request; Value:"GET "& TCP Socket::Path& " HTTP/1.0$Host: "& TCP Socket::Domain-OrIP& "$$" ]
```

```
Set Variable [ $request; Value:MBS("String.ReplaceNewline"; $request; 2) ]
```

```
Set Field [ TCP Socket::RequestUsed; $request ]
```

```
Set Variable [ $r; Value:MBS("Socket.Write"; $sock; $request) ]
```

```
Pause/Resume Script [ Duration (seconds): 1 ]
```

```

Set Variable [ $data; Value:MBS("Socket.Read"; $sock; 1000) ]
Set Variable [ $data; Value:MBS("String.ReplaceNewline"; $data; 1) ]
Set Field [ TCP Socket::Result; $data ]
Set Variable [ $r; Value:MBS("Socket.Close"; $sock) ]

```

Send set zero command to scale for MT-SICS (METTLER TOLEDO Standard Interface Command Set):

```
MBS( "Socket.Write"; $sock; "Z" & Char(13) & Char(10) )
```

Send print weight command to scale for MT-SICS (METTLER TOLEDO Standard Interface Command Set):

```
MBS( "Socket.Write"; $sock; "P" & Char(13) & Char(10) )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.WriteByte"; SocketID; Value)

Parameters**SocketID**

The socket ID received by Socket.Connect function.

\$sock

Value

The byte value. Range from 0 to 255.

13

Result Returns OK or error message.

Description

This is useful if you need to send single control bytes like message start or message end.

See also

- 154.11 Socket.Connect 7197
- 154.70 Socket.WriteHex 7272
- 154.71 Socket.WriteMLLP 7274

Created 18th August 2014, last changed 18th August 2014.

154.70 Socket.WriteHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.WriteHex"; SocketID; Text)

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Text

The text to send in hex encoding.

"48656C6C6F"

Result Returns the number of bytes written or an error message.

Description

You pass the text hex encoded. For example for "Hello" you pass "48656C6C6F".

Examples

Write some text:

```
MBS( "Socket.WriteHex"; $sock; "48656C6C6F" )
```

Send some command:

```
// sends
// <STX><6><CMD_ON><channels><CHECKSUM><ETX>
// In Hex : 0x02 0x06 0x4f 0x07 0xa2 0x03
```

```
MBS( "Socket.WriteHex"; $sock; "02064F07A203" )
```

Connect to IP and send command and wait for answer:

```
Set Variable [ $sock; Value:MBS("Socket.Connect";test::IP; 16128) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to connect" ]
Else
Set Variable [ $write; Value:MBS("Socket.WriteHex"; $sock; test::query) ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Field [ test::response; MBS("Socket.ReadHex"; $sock; 20) ]
Show Custom Dialog [ "Hex: " & test::response & $& "Text: " & MBS( "Text.DecodeFromHex"; test::response) ]
Set Variable [ $sock; Value:MBS("Socket.Close"; $sock) ]
End If
```

154.70. *SOCKET.WRITEHEX*

154.71 Socket.WriteMLLP

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
154 Socket	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Socket.WriteMLLP"; SocketID; Text { ; Encoding })

Parameters

SocketID

The socket ID received by Socket.Connect function.

\$sock

Text

The text to send.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF8"

Result Returns the number of bytes written or an error message.

Description

This function wraps the given text into a MLLP packet by adding start and end bytes.

Examples

Write something:

```
MBS( "Socket.WriteMLLP"; $sock; "Hello World" )
```

Write something with DOS text encoding:

```
MBS( "Socket.WriteMLLP"; $sock; "Umlauts: äöü"; "DOS" )
```

Chapter 155

Speech

Speak text on Mac, iOS & Windows.

Use SpeechRecognition functions on MacOS 10.15 or iOS 10 and newer to recognize text from audio files.

155.1 Speech.AvailableVoices

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	6.4	Yes	Yes	No	No	Yes

MBS("Speech.AvailableVoices" { ; Mode })

(old name: Text.Speak.AvailableVoices)

Parameters

Mode

Optional

Pass 1 to get list of identifiers. By default or pass 0 to get list of names.

0

Result Returns list or error.

Description

This returns the identifiers for voices.

Examples

Query voices:

MBS("Speech.AvailableVoices")

Created 2nd August 2016, last changed 13th July 2018.

155.2 Speech.IsPaused

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	8.3	Yes	Yes	No	No	Yes

MBS("Speech.IsPaused")

Result Returns boolean or error.

Description

Returns 1 if paused or 0 if not.

See also

- 155.4 Speech.Pause

7278

155.2.1 Blog Entries

- [MBS FileMaker Plugin, version 8.3pr6](#)

155.3 Speech.IsSpeaking

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	7.5	Yes	Yes	No	No	Yes

MBS("Speech.IsSpeaking")

(old name: Text.IsSpeaking)

Result Returns 1, 0 or error.

Description

Returns 1 if voice is speaking or 0 if not.

Created 17th October 2017, last changed 13th July 2018.

155.4 Speech.Pause

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	8.3	Yes	Yes	No	No	Yes

MBS("Speech.Pause")

Result Returns OK or error.

Description

Examples

Test pausing:

```
Variable setzen [ $r ; Wert: MBS( "Speech.Speak"; "Hello World, just a test" ) ]
Scriptpause setzen [ Dauer (Sekunden): 1 ]
Variable setzen [ $r ; Wert: MBS( "Speech.Pause" ) ]
Scriptpause setzen [ Dauer (Sekunden): 1 ]
Variable setzen [ $r ; Wert: MBS( "Speech.IsPaused" ) ]
Variable setzen [ $r ; Wert: MBS( "Speech.Resume" ) ]
```

155.6 Speech.Speak

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	6.3	Yes	Yes	No	No	Yes

MBS("Speech.Speak"; Text { ; Voice; Wait; Volume; Rate })

(old name: Text.Speak)

Parameters

Text

The text to speak

"Hello World"

Voice

Optional

The voice to use. Can be empty to use default voice.

"Agnes"

Wait

Optional

Whether to wait for completion. Pass 1 to wait or 0 to speak while your script continues. Default is 0.

1

Volume

Optional

Available in MBS FileMaker Plugin 7.2 or newer.

The volume to use. Default is full volume. Range from 0.0 (silent) to 1.0 (full).

1.0

Rate

Optional

Available in MBS FileMaker Plugin 7.2 or newer.

The speak rate. Default 1.0 for normal speed. Range from 0.0 to 2.0. 2.0 would be double speed while 0.5 is half speed. If the voice doesn't support rate, you hear no difference!

1.0

Result Returns OK or error.

Description

This is a function doing similar work as the speak script step in FileMaker.

If called with empty text, you can pass voice to test if voice exists. You get back OK if voice exists or an error if not.

If called without text, you stop existing speech.

Due to a bug in FM 13/14/15, the speak script step may freeze. This function is a suitable workaround until FileMaker fixes the issue.

You can use `Text.IsSpeaking` to check if asynchronously speaking is in use.

Examples

Say Hello

```
MBS( "Speech.Speak"; "Hello World")
```

Count to 100:

```
Set Variable [ $i; Value:0 ]
Loop
Set Variable [ $i; Value:$i + 1 ]
Set Field [ Speak Test::Counter; $i ]
Set Variable [ $r; Value:MBS( "Speech.Speak"; $i; ""; 1) ]
Commit Records/Requests [ ]
Exit Loop If [ $i >100 ]
End Loop
```

Speak with Windows voice:

```
MBS( "Speech.Speak"; "Hello World"; "Microsoft Hedda Desktop - German"; 1)
```

Speak with half volume:

```
MBS( "Speech.Speak"; "Hallo Leute"; ""; 0; 0,5 )
```

Using embedded text commands on Mac:

```
# literal speaking
MBS( "Speech.Speak"; "Hello [ [ char LTRL ] ] cat [ [ char NORM ] ] cat."; ""; 1)
# use emphasis:
MBS( "Speech.Speak"; "Do [ [ emph + ] ] not [ [ emph - ] ] over tighten the screw.")

# see
# https://developer.apple.com/library/content/documentation/UserExperience/Conceptual/SpeechSynthesisProgrammingGuide/FineTuning/FineTuning.html
```

155.7 SpeechRecognition.AuthorizationStatus

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("SpeechRecognition.AuthorizationStatus")

Result Returns status or error.

Description

Returns your app's current authorization to perform speech recognition.

The user can reject your app's request to perform speech recognition, but your request can also be denied if speech recognition is not supported on the device. The app can also change your app's authorization status at any time from the Settings app.

Value	Description
NotDetermined	The app's authorization status has not yet been determined.
Denied	The user denied your app's request to perform speech recognition.
Restricted	The device prevents your app from performing speech recognition.
Authorized	The user granted your app's request to perform speech recognition.

Example Databases

- [Mac and iOS/Speech Recognition](#)

Created 22nd August 2019, last changed 22nd August 2019.

155.8 SpeechRecognition.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("SpeechRecognition.Initialize")

Result Returns OK or error.

Description

Returns OK on success for MacOS 10.15 and iOS 10 or newer.

See also

- 155.9 SpeechRecognition.IsInitialized 7284
- 155.10 SpeechRecognition.Recognize 7285

155.9 SpeechRecognition.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("SpeechRecognition.IsInitialized")

Result Returns 1, 0 or error.

Description

Returns 1 if initialized.

See also

- 155.8 SpeechRecognition.Initialize

7283

Example Databases

- [Mac and iOS/Speech Recognition](#)

Created 22nd August 2019, last changed 22nd August 2019.

155.10 SpeechRecognition.Recognize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("SpeechRecognition.Recognize"; FilePath { ; Locale; Hint; requiresOnDeviceRecognition; contextualStrings })

Parameters

FilePath

The file path to the audio file to analyze.

"/Users/cs/Desktop/test.m4a"

Locale

Optional

The locale to use. Leave empty to use user's current locale.

"en-US"

Hint

Optional

The hint on what kind of speech recognition being performed Can be Search, Dictation, Confirmation or Unspecified. Default is Unspecified.

"Dictation"

requiresOnDeviceRecognition

Optional

Whether you require on device recognition. Pass 1 to require on device recognition or 0 for the case it doesn't matter.

1

contextualStrings

Optional

Phrases which should be recognized even if they are not in the system vocabulary.

"Monkeybread Software\$Plugin"

Result Returns text or error.

Description

The plugin creates a new speech recognition request based on the given audio file. Then we let the system recognize the text and return it to you.

This may take a while and the plugin returns after a few seconds when work is done.

Requires MacOS 10.15 or iOS 10 or newer.

See also

- 155.8 SpeechRecognition.Initialize

7283

Example Databases

- [Mac and iOS/Speech Recognition](#)

Created 22nd August 2019, last changed 22nd August 2019.

155.11 SpeechRecognition.RequestAuthorization

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("SpeechRecognition.RequestAuthorization")

Result Returns OK or error.

Description

Asks the user to allow your app to perform speech recognition.

Call this method before performing any other tasks associated with speech recognition. This method executes asynchronously, returning shortly after you call it.

This may show a dialog and user may confirm later.

When your app's authorization status is NotDetermined, this method causes the system to prompt the user to grant or deny permission for your app to use speech recognition. The prompt includes the custom message you specify in the NSSpeechRecognitionUsageDescription key of your app's Info.plist file. The user's response is saved so that future calls to this method do not prompt the user again.

Examples

Request authorization:

```
Set Variable [ $r; MBS( "SpeechRecognition.RequestAuthorization" ) ]
```

Example Databases

- [Mac and iOS/Speech Recognition](#)

Created 22nd August 2019, last changed 22nd August 2019.

155.12 SpeechRecognition.SupportedLocales

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
155 Speech	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("SpeechRecognition.SupportedLocales")

Result Returns list of locale identifiers or error.

Description

Returns the set of locales that are supported by the speech recognizer.

This method returns the locales for which speech recognition is supported. Support for a locale does not guarantee that speech recognition is currently possible for that locale. For some locales, the speech recognizer requires an active Internet connection to communicate with Apple's servers. If the speech recognizer is currently unable to process requests, available returns false.

Speech recognition supports the same locales that are supported by the keyboard's dictation feature.

Examples

Query locales

```
Set Variable [ $list; Value: MBS( "SpeechRecognition.SupportedLocales" ) ]
```

Example result: nl-NL

```

Chapter 156

SQL

Connect to SQL databases and query data or run SQL commands.

Use this functions to connect to foreign databases. You can run queries, execute SQL statements and work with stored procedures. We support this database types: CubeSQL, Centura SQLBase, DB2, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.

If you look for SQL functions within FileMaker database, please check our FM SQL functions.

156.1 FM.SQL.InsertRecordsToSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 80 FMSQL 156 SQL	6.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "FM.SQL.InsertRecordsToSQL"; SQLref; Connection; InsertTableName; FieldNames { ; StartRow; EndRow; Replace } )
```

Parameters

SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

InsertTableName

The name of the table to insert record into.

"Assets"

FieldNames

A list of field names for the insert. Empty entries in the list are ignored.
 "Model\$Names"

StartRow

Optional

The index of the start row. First row is 0. Pass -1 or nothing for default which is starting with row 0.
 -1

EndRow

Optional

The index of the end row. First row is 0. Last Row would be FM.SQL.RowCount-1. Pass -1 to use all rows and the plugin will internally use RowCount-1.
 -1

Replace

Optional

Available in MBS FileMaker Plugin 7.1 or newer.

Set to 1 to replace existing entries. Currently available for MySQL and databases with same syntax.
 0

Result Returns OK or error.

Description

This function allows to easily copy a lot of records from a query in FileMaker database into a SQL database. Please provide field names in other table. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Reports an error if field name list doesn't match column count of the query result.

Function will fail if data types in source and dest fields do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For insert within FileMaker, please use FM.SQL.InsertRecords.

Examples

Insert Records to SQL database:

```
Set Variable [ $InsertResult; Value:MBS( "FM.SQL.InsertRecordsToSQL"; $Records; $connection; $BaseTableName; $FieldNames) ]
```

Copy records to SQLite:

```
Set Variable [ $Connection ; Value: MBS("SQL.NewConnection") ]
# Tell plugin where SQLite library is
Set Variable [ $result ; Value: MBS("SQL.InternalSQLiteLibrary.Activate") ]
# Tell plugin we want to use SQLite
Set Variable [ $result ; Value: MBS("SQL.SetClient"; $Connection; "SQLite") ]
# Connect to database in read/write/create mode. Creates new file if none exists.
Set Variable [ $result ; Value: MBS("SQL.Connect"; $Connection; "/Users/cs/Desktop/mydatabase.sqlite") ]
```

```

If [ $result = "OK" ]
# Query records in FileMaker
Set Variable [ $Records ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT FirstName, Last-
Name, Birthday FROM People" ) ]
# Transfer to other database
Set Variable [ $Records ; Value: MBS( "FM.SQL.InsertRecordsToSQL"; $Records; $Connection; "People";
"FirstName$LastName$Birthday" ) ]
# Cleanup
Set Variable [ $result2 ; Value: MBS("SQL.Commit"; $Connection) ]
Set Variable [ $result2 ; Value: MBS( "FM.SQL.Release"; $Records ) ]
If [ $result = "OK" ]
Show Custom Dialog [ "Error: " & $result ]
Else
Show Custom Dialog [ "Record exported." ]
End If
End If
Set Variable [ $result2 ; Value: MBS("SQL.FreeConnection"; $Connection) ]

```

156.3 SQL.ClientVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.ClientVersion"; Connection)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

Result Returns client version number or error.

Description

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method return an error.

See also

- 156.80 SQL.NewConnection

156.6 SQL.CommandType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.CommandType"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns command type or error message.

Description

Returns one of the following values:

CmdUnknown	Command type is not defined. Library will detect command type automatically when needed.
CmdSQLStmt	Command is an SQL statement.
CmdSQLStmtRaw	Command is an SQL statement that mustn't be interpreted by SQLAPI++.
CmdStoredProc	Command is a stored procedure or a function.

156.7 SQL.Commit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.Commit"; Connection)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

Result Returns "OK" or error message.

Description

Use Commit method to write transaction changes permanently to a database. It commits the work of all commands that associated with that connection.

All changes to the database since the last commit are made permanent and cannot be undone. Before a commit, all changes made since the start of the transaction can be rolled back using SQL.Rollback method.

Examples

Run something in transaction:

```
$Command = MBS("SQL.NewCommand"; $Connection; "BEGIN TRANSACTION"
// run it
$result2 = MBS("SQL.Execute"; $Command)
// and free command
$result4 = MBS("SQL.FreeCommand"; $Command)

// create command
$Command = MBS("SQL.NewCommand"; $Connection; "some other SQL command here"
// run it
$result2 = MBS("SQL.Execute"; $Command)
// and free command
$result4 = MBS("SQL.FreeCommand"; $Command)

// create command
$Command = MBS("SQL.NewCommand"; $Connection; "some other SQL command here"
// run it

156.7.1 FileMaker Magazin

- Ausgabe 1/2016, Seite 30
- Ausgabe 4/2015, Seite 16

Created 18th August 2014, last changed 25th October 2018.

156.8 SQL.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.Connect"; Connection; DBString { ; Username; Password; Client })

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

DBString

Database connection string. Please specify port with comma after IP, not double colon.

"/test/database.db"

Username

Optional

The user name to use when establishing the connection.

""

Password

Optional

The password to use when establishing the connection.

""

Client

Optional

Optional, one of the following client values: CubeSQL, SQLAnywhere, ODBC, Oracle, SQLServer, Firebird, InterBase, SQLBase, DB2, Informix, Sybase, MySQL, PostgreSQL or SQLite.

"SQLite"

Result Returns "OK" or error message.

Description

Be aware that for most database servers, you need to specify client library with SQL.SetConnectionOption.

For server scripting, please use one connection for each script running on server, so multiple scripts running at the same data don't access the same connection or command objects in memory. And each connection has its own transaction and error state.

see also

https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

If you get a crash here on MacOS, please check if crash report says Code Signature Invalid. Then you may need to code sign the dylib yourself to match the code signature of your runtime application.

Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

Examples

Connect to an Oracle Database:

```
MBS("SQL.Connect"; $Connection; "MyDatabase"; "MyName"; "MyPass"; "Oracle")
```

Connect to a Microsoft SQL Server Database:

```
MBS("SQL.Connect"; $Connection; "MyServer\SQLEXPRESS@pubs"; ""; ""; "SQLServer")
```

Connect to a Sybase Database:

```
MBS("SQL.Connect"; $Connection; "MyServer@MyDatabase"; $name; $pass; "Sybase")
```

Connect to a DB2 Database:

```
MBS("SQL.Connect"; $Connection; "Server=myAddress:myPortNumber;Database=myDataBase;UID=myUser-  
name;PWD=myPassword; CurrentSchema=mySchema;"; ""; ""; "DB2")
```

Connect to a Informix Database:

```
MBS("SQL.Connect"; $Connection; "Database=myDataBase;Host=192.168.10.10;Server=db_engine_tcp;Ser-  
vice=1492;"; $user; $pass; "Informix")
```

Connect to a InterBase Database:

```
MBS("SQL.Connect"; $Connection; "MyServer:MyDatabase"; $name; $pass; "InterBase")
```

Connect to a SQLBase Database:

```
MBS("SQL.Connect"; $Connection; "MyDatabase"; $name; $pass; "SQLBase")
```

Connect to a MySQL Database:

```
MBS("SQL.Connect"; $Connection; "MyServer@MyDatabase"; $name; $pass; "MySQL")
```

Connect to a PostgreSQL Database:

```
MBS("SQL.Connect"; $Connection; "MyServer@MyDatabase"; $name; $pass; "PostgreSQL")
```

Connect to a ODBC Database (e.g. Microsoft Access):

```
MBS("SQL.Connect"; $Connection; "Driver= { Microsoft Access Driver (*.mdb, *.accdb) } ;Dbq=C:\my-  
database.accdb;Uid=Admin;Pwd=;"; $name; $pass; "ODBC")
```

Connect to a local SQLite Database:

```
MBS("SQL.Connect"; $Connection; "/Users/cs/Desktop/test.db"; ""; ""; "SQLite")
```

Connect to Visual FoxPro via ODBC:

```
MBS("SQL.Connect"; $Connection; "Driver= { Microsoft Visual FoxPro Driver } ;SourceType=DBC;SourceDB=c:\myvf-  
pdb.dbc;Exclusive=No;NULL=NO;Collate=Machine;BACKGROUNDFETCH=NO;DELETED=NO;"; "";  
""; "ODBC")
```

Connect to a new in memory SQLite Database:

```
MBS("SQL.Connect"; $Connection; ":memory:"; ""; ""; "SQLite")
```

Connect to a MySQL Database via path:

```
MBS("SQL.Connect"; $Connection; "/Applications/MAMP/tmp/mysql/mysql.sock@MyDatabase"; $name;  
$pass; "MySQL")
```

Connect to Firebird Database:

```
# start a new connection  
Set Variable [ $Connection; Value:MBS( "SQL.NewConnection" ) ]  
# if you like set where to find the libraries  
Set Variable [ $r; Value:MBS( "SQL.SetConnectionOption"; $Connection; "IBASE.LIBS"; "c:\Firebird\fb-  
client.dll" ) ]  
# connect to database  
Set Variable [ $r; Value:MBS("SQL.Connect"; $Connection; "MyDatabase"; "MyName"; "MyPass"; "Fire-  
bird") ]
```

Connect to PostgreSQL with timeout and ssl:

```
MBS("SQL.Connect"; $Connection; "127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=re-  
quire"; $name; $pass; "PostgreSQL")
```

Connect to Microsoft SQL Server from Mac via FreeTDS library:

```
Set Variable [ $Connection; Value:MBS("SQL.NewConnection" ) ]  
# Tell plugin we want to use Microsoft SQL Server via ODBC  
Set Variable [ $result; Value:MBS("SQL.SetClient"; $Connection; "ODBC" ) ]  
# Tell plugin where freetds library is  
Set Variable [ $result; Value:MBS( "SQL.SetConnectionOption"; $Connection; "ODBC.LIBS"; "/Users/cs/Desk-  
top/libtdsodbc.dylib" ) ]  
# Connect to database  
Set Variable [ $result; Value:MBS("SQL.Connect"; $Connection; "DRIVER= { FREETDS } ;Server=192.168.2.32;UID=SA;P-  
SION=7.2;Port=1433" ) ]  
If [ $result "OK" ]
```

```
Show Custom Dialog [ "Error: " & $result ]
Set Variable [ $result; Value:MBS("SQL.FreeConnection"; $Connection) ]
Halt Script
End If
```

Connect to ODBC via data source name:

```
MBS("SQL.Connect"; $Connection; "DSN"; $name; $pass; "ODBC")
```

Connect to MySQL and run a query:

```
# Start a new connection
Set Variable [ $Connection; Value:MBS("SQL.NewConnection") ]
# Tell plugin where MySQL library is (put it where you like)
Set Variable [ $result; Value:MBS("SQL.SetConnectionOption"; $Connection; "MYSQL.LIBS"; "/Users/cs/Desktop/libmysqlclient.dylib") ]
# Connect to a mysql database:
Set Variable [ $result; Value:MBS("SQL.Connect"; $Connection; "192.168.11.51@Server_Config"; "user"; "password"; "MySQL") ]
If [ $result "OK" ]
# Connection failed
Show Custom Dialog [ "Error: " & $result ]
Set Variable [ $result; Value:MBS("SQL.FreeConnection"; $Connection) ]
Halt Script
Else
# Create a query:
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "SELECT * FROM Server_Config where ServerName=:Name") ]
# If you use parameters, you can fill them here
Set Variable [ $r; Value:MBS("SQL.SetParamAsText"; $Command; "Name"; "MacMini") ]
# Execute it
Set Variable [ $result; Value:MBS("SQL.Execute"; $Command) ]
If [ $result "OK" ]
Set Field [ MySQL Query::Result; $result ]
Show Custom Dialog [ "Error: " & $result ]
Else
Set Variable [ $lines; Value:"" ]
Set Variable [ $fieldcount; Value:MBS("SQL.FieldCount"; $command) ]
Loop
# call FetchNext to get the next record
Set Variable [ $result; Value:MBS("SQL.FetchNext"; $Command) ]
Exit Loop If [ $result 1 ]
Set Variable [ $line; Value:"" ]
Set Variable [ $i; Value:1 ]
Loop
# We query field names and values to show them later
Set Variable [ $v; Value:MBS("SQL.GetFieldAsText"; $command; $i) ]
```

```

Set Variable [ $n; Value:MBS("SQL.GetFieldName"; $command; $i) ]
Set Variable [ $line; Value:$line & $n & ": " & $v & $]
Set Variable [ $i; Value:$i+1 ]
Exit Loop If [ $i >$fieldCount ]
End Loop
Set Variable [ $lines; Value:$lines & ($line & $) ]
End Loop
Set Variable [ $lines; Value:$lines & $]
Show Custom Dialog [ "Result from Query:"; $lines ]
End If
# Cleanup
Set Variable [ $result2; Value:MBS("SQL.FreeCommand"; $Command) ]
End If
Set Variable [ $result2; Value:MBS("SQL.FreeConnection"; $Connection) ]

```

Connect to Microsoft SQL Server from Mac via FreeTDS library and point to library in connection string:

```

MBS("SQL.Connect"; $connection; "DRIVER=/Applications/FileMaker Pro 16 Advanced/libtdsodbc.dylib;Server=135.68.6
vorShip;PWD=xxx;Database=myDB;TDS_VERSION=7.2;Port=1433"; "ODBC")

```

156.10 SQL.Execute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.Execute"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns "OK" or error message.

Description

Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by param object. To bind input variables, use the SetParam commands.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use SQL.isResultSet method. If result set exists, a set of Field objects is created after command execution. Rows from the result set can be fetched one by one using SQL.FetchNext method. To get field description or value use Field method.

Output parameters represented by param objects. They are available after command execution.

Examples

Executes a command:

```
MBS("SQL.Execute"; $Command)
```

Create a table:

```
// create comand
$Command = MBS("SQL.NewCommand"; $Connection; "CREATE TABLE Test(FirstName VARCHAR,
LastName VARCHAR, Birthday date, NumberOfOrders integer, TotalSales double)"
// run it
$result2 = MBS("SQL.Execute"; $Command)
// commit changed
$result3 = MBS("SQL.Commit"; $Connection)
// and free command
$result4 = MBS("SQL.FreeCommand"; $Command)
```

Run something in transaction:

```
$Command = MBS("SQL.NewCommand"; $Connection; "BEGIN TRANSACTION"
// run it
```

```

$result2 = MBS("SQL.Execute"; $Command)
// and free command
$result4 = MBS("SQL.FreeCommand"; $Command)

// create command
$Command = MBS("SQL.NewCommand"; $Connection; "some other SQL command here"
// run it
$result2 = MBS("SQL.Execute"; $Command)
// and free command
$result4 = MBS("SQL.FreeCommand"; $Command)

// create command
$Command = MBS("SQL.NewCommand"; $Connection; "some other SQL command here"
// run it
$result2 = MBS("SQL.Execute"; $Command)
// and free command
$result4 = MBS("SQL.FreeCommand"; $Command)

// commit changed
$result3 = MBS("SQL.Commit"; $Connection)

```

Call stored procedure sys.sp_setapprole via ODBC connection to Microsoft SQL Server:

```

# connect via SQL to a Microsoft SQL Server
Set Variable [ $$Connection ; Value: MBS ( "SQL.NewConnection" ) ]
Set Variable [ $$SetToODBC ; Value: MBS ( "SQL.SetClient" ; $$Connection ; "ODBC" ) ]
Set Variable [ $ConnectResult ; Value: MBS ( "SQL.Connect" ; $$Connection ; "connection string" ; "user"
; "password" ; "ODBC" ) ]
If [ MBS("IsError") = 0 ]
# make a new command for the stored procedure
Set Variable [ $StoredProcedure ; Value: MBS ( "SQL.NewCommand" ; $$Connection ; "sys.sp_setapprole"
) ]
If [ MBS("IsError") = 0 ]
# for debugging query list of parameters
Set Variable [ $Params ; Value: MBS( "SQL.GetParamNameList"; $StoredProcedure) ]
# set parameters
Set Variable [ $RoleName ; Value: MBS ( "SQL.SetParamAsText" ; $StoredProcedure ; "@rolename" ;
"xxx" ) ]
Set Variable [ $Password ; Value: MBS ( "SQL.SetParamAsText" ; $StoredProcedure ; "@password" ; "yyy"
) ]
Set Variable [ $Cookie ; Value: MBS ( "SQL.SetParamAsBoolean" ; $StoredProcedure ; "@fCreateCookie"
; 1) ]
Set Variable [ $Encrypt ; Value: MBS ( "SQL.SetParamAsText" ; $StoredProcedure ; "@encrypt"; "none" )
]
Set Variable [ $Execute ; Value: MBS ( "SQL.Execute" ; $StoredProcedure ) ]
// #
If [ MBS("IsError") = 0 ]

```

```

# query results on success
Set Variable [ $ReturnValue ; Value: MBS ( "SQL.GetParamAsNumber" ; $StoredProcedure ; "@RETURN_VALUE" ) ]
Set Variable [ $cookie ; Value: MBS ( "SQL.GetParamAsText" ; $StoredProcedure ; "@cookie" ) ]
End If
Set Variable [ $FreeStoredProcedure ; Value: MBS ( "SQL.FreeCommand" ; $StoredProcedure ) ]
End If
Set Variable [ $FreeConnection ; Value: MBS ( "SQL.FreeConnection" ; $$Connection ) ]
End If

```

156.11 SQL.FetchFirst

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.FetchFirst"; Command)

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns 0, 1 or error message.

Description

Use SQL.FetchPrior, SQL.FetchFirst, SQL.FetchLast method to fetch rows from the scrollable result set. The scrollable result set option should be set before Command executed (SQLite and InterBase don't support this feature). See server specific notes to discover how SQLAPI supports the scrollable result set for certain DBMS.

To check whether a result set exists use SQL.isResultSet method.

Scrolling only works if enabled, so please call SQL.SetCommandOption function to enable it if needed.

Result is 1 on success or 0 on failure.

Examples

Fetch first record:

```
MBS("SQL.FetchFirst"; $Command)
```

Requests a scrollable record set:

```
MBS( "SQL.SetCommandOption"; $Command; "Scrollable"; "True" )
```

156.12 SQL.FetchLast

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.FetchLast"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Result Returns 0, 1 or error message.

Description

Use SQL.FetchPrior, SQL.FetchFirst, SQL.FetchLast method to fetch rows from the scrollable result set. The scrollable result set option should be set before Command executed (SQLite and InterBase don't support this feature). See server specific notes to discover how SQLAPI++ supports the scrollable result set for certain DBMS.

To check whether a result set exists use SQL.isResultSet method.

Scrolling only works if enabled, so please call SQL.SetCommandOption function to enable it if needed. Result is 1 on success or 0 on failure.

Examples

Fetch last record:

```
MBS("SQL.FetchLast"; $Command)
```

Requests a scrollable record set:

```
MBS( "SQL.SetCommandOption"; $Command; "Scrollable"; "True" )
```

156.12. *SQL.FETCHLAST*

7315

- 156.98 *SQL.SetCommandOption*

7436

Created 18th August 2014, last changed 24th April 2016.

156.13 SQL.FetchNext

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.FetchNext"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns 0, 1 or error message.

Description

Use FetchNext method to fetch row by row from the result set. You need to call it a first time to get to first row after you made a query.

To check whether a result set exists use SQL.isResultSet method.

Result is 1 on success or 0 on failure.

Examples

Fetch next record:

```
MBS("SQL.FetchNext"; $Command)
```

Run command and fetch first record

```
// create command
$Command = MBS("SQL.NewCommand"; $Connection; "SELECT * FROM Test")
// run select
$result2 = MBS("SQL.Execute"; $Command)
// go to first row
$result3 = MBS("SQL.FetchNext"; $Command)
// result 3 is 1 if we got a record
// read first name field from result:
$firstname = MBS("SQL.GetFieldAsText"; $command; "FirstName")
// later release command
MBS("SQL.FreeCommand"; $Command)
```

Run a stored procedure:

```
# new command for calling our test procedure on a Microsoft SQL Server
Set Variable [ $command; MBS( "SQL.NewCommand"; $Connection; "dbo.Test" ) ]
# set a parameter
Set Variable [ $r; MBS( "SQL.SetParamAsNumber"; $Command; "Param1"; 7 ) ]
# execute query
```

156.13. *SQL.FETCHNEXT*

7317

```
Set Variable [ $r; MBS( "SQL.Execute"; $Command ) ]  
# fetch first record  
Set Variable [ $r; MBS( "SQL.FetchNext"; $Command ) ]  
# get result field  
Set Variable [ $result; MBS( "SQL.GetFieldAsText"; $Command; 1 ) ]
```

156.14 SQL.FetchPos

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("SQL.FetchPos"; Command; Offset { ; Relative })

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Offset

The index/offset of the row. Zero based.
1

Relative

Optional
Pass 1 for relative movement.
0

Result Returns 0, 1 or error message.

Description

You may need to request recordset to be scrollable to have this work. For that, please call MBS("SQL.Set-CommandOption"; \$Command; "Scrollable"; "True") before doing the query.

Result is 1 on success or 0 on failure.

156.15 SQL.FetchPrior

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.FetchPrior"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns 0, 1 or error message.

Description

Use SQL.FetchPrior, SQL.FetchFirst, SQL.FetchLast method to fetch rows from the scrollable result set. The scrollable result set option should be set before Command executed (SQLite and InterBase don't support this feature). See server specific notes to discover how SQLAPI++ supports the scrollable result set for certain DBMS.

To check whether a result set exists use SQL.isResultSet method.

Scrolling only works if enabled, so please call SQL.SetCommandOption function to enable it if needed.

Result is 1 on success or 0 on failure.

Examples

Fetch previous record:

```
MBS("SQL.FetchPrior"; $Command)
```

Requests a scrollable record set:

```
MBS( "SQL.SetCommandOption"; $Command; "Scrollable"; "True" )
```

156.16 SQL.FieldCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.FieldCount"; Command)

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns field count or error message.

Description

FieldCount method returns the number of fields created implicitly after the command execution if a result set exists.

156.19 SQL.FreeConnection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.FreeConnection"; Connection)

Parameters

Connection

The command reference number gained with SQL.NewConnection.

\$Connection

Result Returns "OK" or error message.

Description

This closes the connection and frees all memory allocated for it.

Examples

Free connection object:

MBS("SQL.FreeConnection"; \$Connection)

156.20 SQL.GetAutoCommit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetAutoCommit"; Connection)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

Result Returns text "Unknown", "On", "Off" or error message.

Description

Function returns autocommit option state that was previously set by SQL.SetAutoCommit. Returns "Unknown" if no autocommit mode was set. In that case see DBMS specific documentation for default autocommit option used.

156.21 SQL.GetCommandOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetCommandOption"; Command; Key)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Key

A string key of the command option.
""

Result Returns value or error message.

Description

Call this method to get value(s) of server specific command options. See Server specific notes.

A command related option may be specified in either connection object or SACommand object. If it is specified in connection object it affects all the commands on that connection.

If an option is not specially assigned to the command object the Library takes this option from related connection object (see SQL.GetConnectionOption method). If an option is not specified in neither command nor connection objects, the Library takes the default option value.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetConnectionOption"; Connection; Key)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

Key

A string key of the connection or command option.

””

Result Returns the value or error message.

Description

Call this method to get value(s) of server specific connection or command options. See Server specific notes. If an option is not specified in connection objects, the Library takes the default option value.

156.27 SQL.GetFieldAsBoolean

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsBoolean"; Command; Field)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

Result Returns value or error message.

Description

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_field.html

156.28 SQL.GetFieldAsContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	6.2	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsContainer"; Command; Field; FileName)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

FileName

The filename for the container. This will determinate the type of data to FileMaker.
"test.jpg"

Result Returns container value or error.

Description

If you can provide a file name, we can use it to auto detect the type of data and import it in the right format, e.g. add a preview for PDF or the image size for JPEG.

Examples

Query image field value:

```
MBS( "SQL.GetFieldAsContainer"; $Command; "MyBlob"; $FileName )
```

156.30 SQL.GetFieldAsDateTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsDateTime"; Command; Field)

(old name: SQL.GetFieldAsTimestamp)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

Result Returns date and time value or error message.

Description

Converts if needed.

see also:

156.31 SQL.GetFieldAsFloat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsFloat"; Command; Field)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

Result Returns number or error message.

Description

For integer values, you can use SQL.GetFieldAsNumber.

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_field.html

For some databases, you get better precision, if you cast/convert to float data type in the SQL statement.

Examples

Reads floating point value from field TotalSales into variable:

```
$x = MBS("SQL.GetFieldAsFloat"; $command; "TotalSales")
```

Reads floating point value from 2nd field into variable:

```
$x = MBS("SQL.GetFieldAsFloat"; $command; 2)
```

156.32 SQL.GetFieldAsJPEG

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	3.0	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsJPEG"; Command; Field)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

Result Returns container value or error message.

Description

Field must be a BLOB field. The plugin does not verify if the BLOB contains a valid JPEG image. See also SQL.GetFieldAsPDF and SQL.GetFieldAsPNG.

Examples

Read field value of field "JPEGData" into variable:

```
$firstname = MBS("SQL.GetFieldAsJPEG"; $command; "JPEGData")
```

156.33 SQL.GetFieldAsNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsNumber"; Command; Field)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

Result Returns number or error message.

Description

For float values, you can use SQL.GetFieldAsFloat.

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_field.html

Examples

Reads floating point value from field Count into variable:

```
$x = MBS("SQL.GetFieldAsNumber"; $command; "Count")
```

Reads floating point value from 2nd field into variable:

```
$x = MBS("SQL.GetFieldAsNumber"; $command; 2)
```

156.34 SQL.GetFieldAsPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsPDF"; Command; Field { ; DontRenderPreview })

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Field

The name or one based index of the field.

\$Field

DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Result Returns container value or error message.

Description

Field must be a BLOB field. The plugin does not verify if the BLOB contains a valid PDF document.

See also SQL.GetFieldAsJPEG and SQL.GetFieldAsPNG.

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

Examples

Read field value of field "PDFData" into variable:

```
$firstname = MBS("SQL.GetFieldAsPDF"; $command; "PDFData")
```

156.36 SQL.GetFieldAsText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsText"; Command; Field)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Field

The name or one based index of the field.

\$Field

Result Returns text or error message.

Description

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_field.html

Examples

Read field value of field "FirstName" into variable:

```
$firstname = MBS("SQL.GetFieldAsText"; $command; "FirstName")
```

Run a stored procedure:

```
# new command for calling our test procedure on a Microsoft SQL Server
Set Variable [ $command; MBS( "SQL.NewCommand"; $Connection; "dbo.Test" ) ]
# set a parameter
Set Variable [ $r; MBS( "SQL.SetParamAsNumber"; $Command; "Param1"; 7 ) ]
# execute query
Set Variable [ $r; MBS( "SQL.Execute"; $Command ) ]
# fetch first record
Set Variable [ $r; MBS( "SQL.FetchNext"; $Command ) ]
# get result field
Set Variable [ $result; MBS( "SQL.GetFieldAsText"; $Command; 1 ) ]

156.37 SQL.GetFieldAsTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldAsTime"; Command; Field)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Field

The name or one based index of the field.

\$Field

Result Returns time or error message.

Description

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldDataType"; Command; Field)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

Result The field type or error message.

Description

The field data type can be: Bool, Short, UShort, Long, ULong, Double, Numeric, DateTime, Interval, String, Bytes, LongBinary, LongChar, BLOB, CLOB, Cursor, SpecificToDBMS or unknown

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldNameList"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns list or error.

Description

Examples

Create a command, fill parameters and query names and values list:

```
# Create select
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "SELECT * FROM Test") ]
# Run it
Set Variable [ $result; Value:MBS("SQL.Execute"; $Command) ]
# get first row of result
Set Variable [ $result; Value:MBS("SQL.FetchNext"; $Command) ]
# Now query field names
Set Variable [ $FieldNames; Value:MBS("SQL.GetFieldNameList"; $Command) ]
# and field values of first row
Set Variable [ $FieldValues; Value:MBS("SQL.GetFieldValueList"; $Command) ]
```

156.42 SQL.GetFieldOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldOption"; Command; Field; Key)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

Key

A string key of the command option.
""

Result Returns "OK" or error message.

Description

Call this method to get value(s) of server specific field options. See Server specific notes.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldValue"; Command; Field)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Field

The name or one based index of the field.
\$Field

Result Returns value or error.

Description

The value is converted to a FileMaker value with matching type.
BLOBs are returned as hex strings and not as container values (could be changed).
NULL values are returned as empty container values.

156.45 SQL.GetFieldValueList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetFieldValueList"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns list or error.

Description

If value contains a new line or return character, we replace it with \n or \r.

Examples

Create a command, fill parameters and query names and values list:

```
# Create select
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "SELECT * FROM Test") ]
# Run it
Set Variable [ $result; Value:MBS("SQL.Execute"; $Command) ]
# get first row of result
Set Variable [ $result; Value:MBS("SQL.FetchNext"; $Command) ]
# Now query field names
Set Variable [ $FieldNames; Value:MBS("SQL.GetFieldNameList"; $Command) ]
# and field values of first row
Set Variable [ $FieldValues; Value:MBS("SQL.GetFieldValueList"; $Command) ]
```

156.46 SQL.GetIsolationLevel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetIsolationLevel"; Connection)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

Result Returns level name or error message.

Description

Function returns isolation level that was previously set by SQL.SetIsolationLevel. Returns "Unknown" if no isolation level was set. In that case see DBMS specific documentation for default isolation level used.

Returns one of the following strings: ReadUncommitted, ReadCommitted, RepeatableRead, Serializable or Unknown.

See also

- 156.80 SQL.NewConnection 7412
- 156.104 SQL.SetIsolationLevel 7448

Created 18th August 2014, last changed 18th August 2014.

156.47 SQL.GetParamAsBoolean

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsBoolean"; Command; Param)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix.
e.g. "# 0" for first parameter.

"1"

Result Returns the value or error message.

Description

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_param.html

Examples

Query value of first parameter:

MBS("SQL.GetParamAsBoolean"; \$Command; "# 0")

See also

- 156.27 SQL.GetFieldAsBoolean 7335
- 156.51 SQL.GetParamAsFloat 7369
- 156.79 SQL.NewCommand 7408

156.48 SQL.GetParamAsContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	6.2	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsContainer"; Command; Param; FileName)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

FileName

The filename for the container. This will determinate the type of data to FileMaker.

"test.jpg"

Result Returns container value or error.

Description

If you can provide a file name, we can use it to auto detect the type of data and import it in the right format, e.g. add a preview for PDF or the image size for JPEG.

Examples

Query image param value:

MBS("SQL.GetParamAsContainer"; \$Command; "MyBlob"; \$FileName)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsDate"; Command; Param)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Result Returns the value or error message.

Description

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_param.html

Examples

Query value of first parameter:

MBS("SQL.GetParamAsDate"; \$Command; "# 0")

156.50 SQL.GetParamAsDateTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsDateTime"; Command; Param)

(old name: SQL.GetParamAsTimestamp)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix.
e.g. "# 0" for first parameter.
"1"

Result Returns the value or error message.

Description

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_param.html

Examples

Query value of first parameter:

MBS("SQL.GetParamAsDateTime"; \$Command; "# 0")

Created 18th August 2014, last changed 10th January 2020.

156.51 SQL.GetParamAsFloat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsFloat"; Command; Param)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix.
e.g. "# 0" for first parameter.
"1"

Result Returns the value or error message.

Description

For integer values, you can use SQL.GetParamAsNumber.

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_param.html

Examples

Query value of first parameter:

MBS("SQL.GetParamAsFloat"; \$Command; "# 0")

- 156.111 SQL.SetParamAsText

Created 18th August 2014, last changed 10th January 2020.

156.52 SQL.GetParamAsJPEG

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	3.0	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsJPEG"; Command; Param)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix.
e.g. "# 0" for first parameter.
"1"

Result Returns container value or error message.

Description

Field must be a BLOB parameter. The plugin does not verify if the BLOB contains a valid JPEG image.
See also SQL.GetParamAsPDF and SQL.GetParamAsPNG.

Examples

Read field value of field "JPEGData" into variable:

```
$firstname = MBS("SQL.GetParamAsJPEG"; $command; "JPEGData")
```

Query value of first parameter:

```
MBS( "SQL.GetParamAsJPEG"; $Command; "# 0" )
```

156.54 SQL.GetParamAsPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	4.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsPDF"; Command; Param { ; DontRenderPreview })

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Result Returns container value or error message.

Description

Field must be a BLOB parameter. The plugin does not verify if the BLOB contains a valid PDF document. See also SQL.GetParamAsJPEG and SQL.GetParamAsPNG.

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

Examples

Read field value of field "PDFData" into variable:

```
$firstname = MBS("SQL.GetParamAsPDF"; $command; "PDFData")
```

Query value of first parameter:

```
MBS( "SQL.GetParamAsPDF"; $Command; "# 0" )
```

156.55 SQL.GetParamAsPNG

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	3.0	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsPNG"; Command; Param)

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Result Returns container value or error message.

Description

Field must be a BLOB parameter. The plugin does not verify if the BLOB contains a valid PNG image.

See also SQL.GetParamAsJPEG and SQL.GetParamAsPDF.

Examples

Read field value of field "PNGData" into variable:

```
$firstname = MBS("SQL.GetParamAsPNG"; $command; "PNGData")
```

Query value of first parameter:

```
MBS( "SQL.GetParamAsPNG"; $Command; "# 0" )
```

156.56 SQL.GetParamAsText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsText"; Command; Param)

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Result Returns the value or error message.

Description

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_param.html

Examples

Query value of first parameter:

MBS("SQL.GetParamAsText"; \$Command; "# 0")

156.57 SQL.GetParamAsTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamAsTime"; Command; Param)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Result Returns the value or error message.

Description

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_param.html

Examples

Query value of first parameter:

MBS("SQL.GetParamAsTime"; \$Command; "# 0")

156.58 SQL.GetParamDataType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamDataType"; Command; Param)

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Result The parameter type or error message.

Description

The parameter data type can be: Bool, Short, UShort, Long, ULong, Double, Numeric, DateTime, Interval, String, Bytes, LongBinary, LongChar, Blob, Clob, Cursor, SpecificToDBMS or unknown.

Examples

Query data type of first parameter:

MBS("SQL.GetParamDataType"; \$Command; "# 0")

156.59 SQL.GetParamIsDefault

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamIsDefault"; Command; Param)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Result Returns 1 if you called SQL.setParamDefault function; 0 otherwise.

Description

156.60 SQL.GetParamIsNull

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamIsNull"; Command; Param)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix.
e.g. "# 0" for first parameter.
"1"

Result Returns 1 if the value of current object is NULL; otherwise 0.

156.61 SQL.GetParamName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamName"; Command; Param)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix.
e.g. "# 0" for first parameter.
"1"

Result The name of the parameter or error message.

Description

Examples

Query name of first parameter:

MBS("SQL.GetParamName"; \$Command; "# 0")

156.62 SQL.GetParamNameList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamNameList"; Command)

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns list or error.

Description**Examples**

Create a command, fill parameters and query names and values list:

```
# Create command for insert
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "INSERT INTO 'Test' (First-
Name, LastName, Birthday, NumberOfOrders, TotalSales) VALUES (:1,:2,:3,:4,:5)") ]
# now fill some parameters
Set Variable [ $result; Value:MBS("SQL.SetParamAsText"; $Command; 1; SQLite fun::FirstName) ]
Set Variable [ $result; Value:MBS("SQL.SetParamAsText"; $Command; 2; SQLite fun::LastName) ]
Set Variable [ $result; Value:MBS("SQL.SetParamAsDate"; $Command; 3; SQLite fun::Birthday) ]
Set Variable [ $result; Value:MBS("SQL.SetParamAsNumber"; $Command; 4; SQLite fun::NumberOfOrders)
]
Set Variable [ $result; Value:MBS("SQL.SetParamAsFloat"; $Command; 5; SQLite fun::TotalSales) ]
# query list of parameter names:
Set Variable [ $ParameterNames; Value:MBS("SQL.GetParamNameList"; $Command) ]
# query list of parameter values:
Set Variable [ $ParameterValues; Value:MBS("SQL.GetParamValueList"; $Command) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	8.4	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamOption"; Command; Param; Key)

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Key

A string key of the command option.

""

Result Returns OK or error.

156.65 SQL.GetParamValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamValue"; Command; Param)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Result Returns value or error.

Description

The value is converted to a FileMaker value with matching type.

BLOBs are returned as hex strings and not as container values (could be changed).

NULL values are returned as empty container values.

156.66 SQL.GetParamValueList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetParamValueList"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns list or error.

Description

If value contains a new line or return character, we replace it with \n or \r.

Examples

Create a command, fill parameters and query names and values list:

```
# Create command for insert
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "INSERT INTO 'Test' (First-
Name, LastName, Birthday, NumberOfOrders, TotalSales) VALUES (:1,:2,:3,:4,:5)") ]
# now fill some parameters
Set Variable [ $result; Value:MBS("SQL.SetParamAsText"; $Command; 1; SQLite fun::FirstName) ]
Set Variable [ $result; Value:MBS("SQL.SetParamAsText"; $Command; 2; SQLite fun::LastName) ]
Set Variable [ $result; Value:MBS("SQL.SetParamAsDate"; $Command; 3; SQLite fun::Birthday) ]
Set Variable [ $result; Value:MBS("SQL.SetParamAsNumber"; $Command; 4; SQLite fun::NumberOfOrders)
]
Set Variable [ $result; Value:MBS("SQL.SetParamAsFloat"; $Command; 5; SQLite fun::TotalSales) ]
# query list of parameter names:
Set Variable [ $ParameterNames; Value:MBS("SQL.GetParamNameList"; $Command) ]
# query list of parameter values:
Set Variable [ $ParameterValues; Value:MBS("SQL.GetParamValueList"; $Command) ]

156.67 SQL.GetRecordsAsText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.GetRecordsAsText"; Command { ; FieldDelimiter; RowDelimiter })

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

FieldDelimiter

Optional

The delimiter for between fields. Default is a tab character.

RowDelimiter

Optional

The delimiter between records. Default is newline character.

Result Returns text or error.

Description

Don't call SQL.FetchNext before as this function will call it for you to loop over records.

Converts all field content to text.

If you just want one field, maybe you just select the required field with your select statement.

Examples

Run and query result as text:

```
# Create select and run it
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "SELECT * FROM Test") ]
# Run it
Set Variable [ $result; Value:MBS("SQL.Execute"; $Command) ]
If [ $result "OK" ]
Show Custom Dialog [ "Error: " & $result ]
Else
Show Custom Dialog [ "Inhalt"; MBS("SQL.GetRecordsAsText"; $command) ]
End If
# Cleanup
Set Variable [ $result2; Value:MBS("SQL.FreeCommand"; $Command) ]
```

156.68 SQL.InsertOrUpdateRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	7.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "SQL.InsertOrUpdateRecords"; Command; InsertFileName; InsertTableName; FieldNames; PrimaryKeyDB1; PrimaryKeyFM1 { ; SecondaryKeyDB2; SecondaryKeyFM2; TertariyKeyDB3; TertariyKeyFM3 } )
```

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.
Get(FileName)

InsertTableName

The name of the table to insert record into.
"Assets"

FieldNames

A list of field names for the insert. Empty entries in the list are ignored.
"Model"

PrimaryKeyDB1

The name of the primary key in the record set. Must be one of the columns in the record from SQL. If empty, we use primaryKeyFM1 here.
"RowID"

PrimaryKeyFM1

The name of the primary key for the update statements. Must be one of the columns in the FileMaker table. If empty, we use primaryKeyDB1 here.
"RowID"

SecondaryKeyDB2

Optional

Available in MBS FileMaker Plugin 8.1 or newer.

The name of the secondary key in the record set. Must be one of the columns in the record from SQL. If empty, we use primaryKeyFM2 here.
"ClientID"

SecondaryKeyFM2

Optional

Available in MBS FileMaker Plugin 8.1 or newer.

The name of the secondary key for the update statements. Must be one of the columns in the FileMaker table. If empty, we use primaryKeyDB2 here.
"ClientID"

TertiaryKeyDB3

Optional

Available in MBS FileMaker Plugin 8.1 or newer.

The name of the tertiary key in the record set. Must be one of the columns in the record from SQL. If empty, we use primaryKeyFM3 here.

"CompanyID"

TertiaryKeyFM3

Optional

Available in MBS FileMaker Plugin 8.1 or newer.

The name of the tertiary key for the update statements. Must be one of the columns in the FileMaker table. If empty, we use primaryKeyDB3 here.

"CompanyID"

Result Returns list or error.**Description**

This function allows to easily copy a lot of records from SQL database into FileMaker table.

Please provide field names in FileMaker. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

This will not work for BLOBs as they are stored currently as hex encoded text only.

Function will fail if data types in FileMaker and other SQL database do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For copying record within FileMaker, please use FM.InsertRecordQuery or FM.SQL.InsertRecords functions.

Returns list with three values: Number of records inserted, number of records updated and number of errors. Primary key in FM must be defined as unique and validate always, so FileMaker properly reports a duplicate.

We first do a select to count how many we have and than do either insert or update. If insert returns duplicate error, we try update, too. Up to ten pairs of DB and FM keys are possible.

Examples

Insert or update records:

```
# get connection before.
# Create select and run it
Set Variable [ $Command ; Value: MBS("SQL.NewCommand"; $Connection; "SELECT RowID, FirstName,
LastName, TotalSales, NumberOfOrders FROM Test") ]
# Run it
Set Variable [ $result ; Value: MBS("SQL.Execute"; $Command) ]
If [ $result "OK" ]
Show Custom Dialog [ "Error: " & $result ]
Else
```

```

Set Variable [ $result ; Value: MBS("SQL.InsertOrUpdateRecords"; $Command; Get(FileName); "SQLite
fun"; "PKey$FirstName$LastName$TotalSales$NumberOfOrders"; "RowID"; "PKey") ]
Show Custom Dialog [ "Records imported." & $& $& $result ]
End If
# Cleanup
Set Variable [ $result2 ; Value: MBS("SQL.FreeCommand"; $Command) ]
Set Variable [ $result2 ; Value: MBS("SQL.Commit"; $Connection) ]
Set Variable [ $result2 ; Value: MBS("SQL.FreeConnection"; $Connection) ]

```

156.69 SQL.InsertRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.2	Yes	Yes	Yes	Yes	Yes

MBS("SQL.InsertRecords"; Command; InsertFileName; InsertTableName; FieldNames { ; IgnoreDuplicates })

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

InsertTableName

The name of the table to insert record into.

"Assets"

FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model"

IgnoreDuplicates

Optional

Available in MBS FileMaker Plugin 7.3 or newer.

If 1, ignores duplicates or with 0 or by default reports error for duplicates. If duplicates are found, the function returns number of duplicates instead of OK.

0

Result Returns number of duplicates, OK or error.

Description

This function allows to easily copy a lot of records from SQL database into FileMaker table.

Please provide field names in FileMaker. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

This will not work for BLOBs as they are stored currently as hex encoded text only.

Function will fail if data types in FileMaker and other SQL database do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For copying record within FileMaker, please use FM.InsertRecordQuery or FM.SQL.InsertRecords functions.

Examples

Insert records to FileMaker from SQL database:

```

# Create select command and run it
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "SELECT FirstName, Last-
Name, Birthday, NumberOfOrders, TotalSales FROM Test") ]
# Run it
Set Variable [ $result; Value:MBS("SQL.Execute"; $Command) ]
If [ $result = "OK" ]
Show Custom Dialog [ "Error: " & $result ]
Else
Set Variable [ $result; Value:MBS("SQL.InsertRecords"; $Command; Get(FileName) ;"SQLite fun"; "First-
Name$LastName$Birthday$NumberOfOrders$TotalSales") ]
Show Custom Dialog [ "Records imported."; $result ]
End If
# Cleanup
Set Variable [ $result2; Value:MBS("SQL.FreeCommand"; $Command) ]

```

Created 29th July 2015, last changed 18th May 2017.

156.70 SQL.InternalSQLiteLibrary.Activate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.InternalSQLiteLibrary.Activate")

Result Returns OK or error.

Description

If you use this command, you don't need to provide sqlite3.dll or sqlite3.dylib yourself.

Examples

Activate the internal SQLite library if not already activated:

```
If [ MBS( "SQL.InternalSQLiteLibrary.Activated" ) = 1 ]
Set Variable [ $r; Value:MBS( "SQL.InternalSQLiteLibrary.Activate" ) ]
End If
```

156.71 SQL.InternalSQLiteLibrary.Activated

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.InternalSQLiteLibrary.Activated")

Result Returns 0 or 1.

Description

Returns 1 if used and 0 if not.

Examples

Activate the internal SQLite library if not already activated:

```
If [ MBS( "SQL.InternalSQLiteLibrary.Activated" ) = 1 ]
Set Variable [ $r; Value:MBS( "SQL.InternalSQLiteLibrary.Activate" ) ]
End If
```

Created 23th September 2015, last changed 23th September 2015.

156.72 **SQL.InternalSQLiteLibrary.Deactivate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.InternalSQLiteLibrary.Deactivate")

Result Returns OK or error.

Description

You should normally never need to call this.

See also

156.73 SQL.InternalSQLiteLibrary.SourceID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.InternalSQLiteLibrary.SourceID")

Result Returns text.

Description

Examples

Check the source ID:

MBS("SQL.InternalSQLiteLibrary.SourceID")

e.g. 2015-07-29 20:00:57 cf538e2783e468bbc25e7cb2a9ee64d3e0e80b2f

See also

156.74 SQL.InternalSQLiteLibrary.Version

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.InternalSQLiteLibrary.Version")

Result Returns version as text.

Description**Examples**

Checks version:

MBS("SQL.InternalSQLiteLibrary.Version")

e.g. "3.8.11.1"

Created 23th September 2015, last changed 23th September 2015.

156.75 SQL.InternalSQLiteLibrary.VersionNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.InternalSQLiteLibrary.VersionNumber")

Result Returns number.

Description

Examples

Checks version:

```
MBS( "SQL.InternalSQLiteLibrary.VersionNumber" )
# e.g. 3008011
```

156.76 SQL.ListCommands

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	6.4	Yes	Yes	Yes	Yes	Yes

MBS("SQL.ListCommands")

Result Returns list or error.

Description

This can help to see if there are any open commands left to close.

Examples

List commands:

```
Set Variable [ $list; Value:MBS("SQL.ListCommands") ]
```

See also

156.77 SQL.ListConnections

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	6.4	Yes	Yes	Yes	Yes	Yes

MBS("SQL.ListConnections")

Result Returns list or error.

Description

This can help to see if there are any open connections left to close.

Examples

List connections:

```
Set Variable [ $list; Value:MBS("SQL.ListConnections") ]
```

156.78 SQL.MySQL.InsertID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.9	Yes	Yes	Yes	Yes	Yes

MBS("SQL.MySQL.InsertID"; Connection)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.
\$Connection

Result Returns the ID or error message.

Description

see also

<http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html>

156.79 SQL.NewCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.NewCommand"; Connection { ; Command; CommandType; ID })

Parameters

Connection

The command reference number gained with SQL.NewConnection.

\$Connection

Command

Optional

This represents command text string (an SQL statement or a stored procedure name). If it is empty string, no command text is associated with the command, and you have to call SQL.SetCommandText method later.

"SELECT * FROM Test"

CommandType

Optional

Type of a command. Can be CmdSQLStmt, CmdSQLStmtRaw or CmdStoredProc.

"CmdSQLStmt"

ID

Optional

The ID to use instead of default one. Must be unique. If none is provided, the plugin will create one.

Result Returns command reference number or error message.

Description

Don't forget to free command with SQL.FreeCommand.

SQL command reference numbers are starting at 23000 and counting up for each new command.

For server scripting, please use one connection for each script running on server, so multiple scripts running at the same data don't access the same connection or command objects in memory. And each connection has its own transaction and error state.

Examples

Creates a new command to create table:

```
MBS("SQL.NewCommand"; $Connection; "CREATE TABLE Test(FirstName VARCHAR, LastName VARCHAR, Birthday date, NumberOfOrders integer, TotalSales double)")
```

Run a stored procedure:

```
# new command for calling our test procedure on a Microsoft SQL Server
Set Variable [ $command; MBS( "SQL.NewCommand"; $Connection; "dbo.Test" ) ]
# set a parameter
```

```

Set Variable [ $r; MBS( "SQL.SetParamAsNumber"; $Command; "Param1"; 7 ) ]
# execute query
Set Variable [ $r; MBS( "SQL.Execute"; $Command ) ]
# fetch first record
Set Variable [ $r; MBS( "SQL.FetchNext"; $Command ) ]
# get result field
Set Variable [ $result; MBS( "SQL.GetFieldAsText"; $Command; 1 ) ]

```

New command with named parameters:

```

MBS("SQL.NewCommand"; $Connection; "update Documents set ProductNumber=:ProductNumber, Pub-
OptionNo=:PubOptionNo, DueInStock=:DueInStock, ProductTypeID=:ProductTypeID where DocID=:Do-
cID" )

```

Call stored procedure sys.sp_setapprole via ODBC connection to Microsoft SQL Server:

```

# connect via SQL to a Microsoft SQL Server
Set Variable [ $$Connection ; Value: MBS ( "SQL.NewConnection" ) ]
Set Variable [ $$SetToODBC ; Value: MBS ( "SQL.SetClient" ; $$Connection ; "ODBC" ) ]
Set Variable [ $ConnectResult ; Value: MBS ( "SQL.Connect" ; $$Connection ; "connection string" ; "user"
; "password" ; "ODBC" ) ]
If [ MBS("IsError") = 0 ]
# make a new command for the stored procedure
Set Variable [ $StoredProcedure ; Value: MBS ( "SQL.NewCommand" ; $$Connection ; "sys.sp_setapprole"
) ]
If [ MBS("IsError") = 0 ]
# for debugging query list of parameters
Set Variable [ $Params ; Value: MBS( "SQL.GetParamNameList"; $StoredProcedure) ]
# set parameters
Set Variable [ $RoleName ; Value: MBS ( "SQL.SetParamAsText" ; $StoredProcedure ; "@rolename" ;
"xxx" ) ]
Set Variable [ $Password ; Value: MBS ( "SQL.SetParamAsText" ; $StoredProcedure ; "@password" ; "yyy"
) ]
Set Variable [ $Cookie ; Value: MBS ( "SQL.SetParamAsBoolean" ; $StoredProcedure ; "@fCreateCookie"
; 1 ) ]
Set Variable [ $Encrypt ; Value: MBS ( "SQL.SetParamAsText" ; $StoredProcedure ; "@encrypt"; "none" )
]
Set Variable [ $Execute ; Value: MBS ( "SQL.Execute" ; $StoredProcedure ) ]
// #
If [ MBS("IsError") = 0 ]
# query results on success
Set Variable [ $ReturnValue ; Value: MBS ( "SQL.GetParamAsNumber" ; $StoredProcedure ; "@RE-
TURN_VALUE" ) ]
Set Variable [ $cookie ; Value: MBS ( "SQL.GetParamAsText" ; $StoredProcedure ; "@cookie" ) ]
End If
Set Variable [ $FreeStoredProcedure ; Value: MBS ( "SQL.FreeCommand" ; $StoredProcedure ) ]
End If

```

```
Set Variable [ $FreeConnection ; Value: MBS ( "SQL.FreeConnection" ; $$Connection ) ]
End If
```

156.80 SQL.NewConnection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.NewConnection" { ; ID })

Parameters

ID

Optional

The ID to use instead of default one. Must be unique. If none is provided, the plugin will create one.

Result An error or a connection reference number.

Description

The Connection represents a database connection. You must have a connection before you can operate on the database - furthermore the connection needs to be connected. It is important to note that connection objects are not connected during construction - it is up to the user to explicitly call Connect method for the object after it is created and before it is used. Once connected, a connection object is normally shared by the other objects that require a connection (e.g. commands).

Use SQL.FreeConnection to release connection after you finished.

read also:

https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

SQL connection reference numbers are starting at 22000 and counting up for each new connection.

Examples

Create new connection

```
$Connection = MBS("SQL.NewConnection")
```

Connect to MySQL and run a query:

```
# Start a new connection
Set Variable [ $Connection; Value:MBS("SQL.NewConnection") ]
# Tell plugin where MySQL library is (put it where you like)
Set Variable [ $result; Value:MBS("SQL.SetConnectionOption"; $Connection; "MYSQL.LIBS"; "/Users/cs/Desktop/libmysqlclient.dylib") ]
# Connect to a mysql database:
Set Variable [ $result; Value:MBS("SQL.Connect"; $Connection; "192.168.11.51@Server_Config"; "user"; "password"; "MySQL") ]
If [ $result = "OK" ]
# Connection failed
Show Custom Dialog [ "Error: " & $result ]
```

```

Set Variable [ $result; Value:MBS("SQL.FreeConnection"; $Connection) ]
Halt Script
Else
# Create a query:
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "SELECT * FROM Server_Con-
fig where ServerName=:Name" ) ]
# If you use parameters, you can fill them here
Set Variable [ $r; Value:MBS("SQL.SetParamAsText"; $Command; "Name"; "MacMini" ) ]
# Execute it
Set Variable [ $result; Value:MBS("SQL.Execute"; $Command) ]
If [ $result "OK" ]
Set Field [ MySQL Query::Result; $result ]
Show Custom Dialog [ "Error: " & $result ]
Else
Set Variable [ $lines; Value:"" ]
Set Variable [ $fieldcount; Value:MBS("SQL.FieldCount"; $command) ]
Loop
# call FetchNext to get the next record
Set Variable [ $result; Value:MBS("SQL.FetchNext"; $Command) ]
Exit Loop If [ $result 1 ]
Set Variable [ $line; Value:"" ]
Set Variable [ $i; Value:1 ]
Loop
# We query field names and values to show them later
Set Variable [ $v; Value:MBS("SQL.GetFieldAsText"; $command; $i) ]
Set Variable [ $n; Value:MBS("SQL.GetFieldName"; $command; $i) ]
Set Variable [ $line; Value:$line & $n & ": " & $v & $]
Set Variable [ $i; Value:$i+1 ]
Exit Loop If [ $i >$fieldCount ]
End Loop
Set Variable [ $lines; Value:$lines & ($line & $) ]
End Loop
Set Variable [ $lines; Value:$lines & $]
Show Custom Dialog [ "Result from Query: "; $lines ]
End If
# Cleanup
Set Variable [ $result2; Value:MBS("SQL.FreeCommand"; $Command) ]
End If
Set Variable [ $result2; Value:MBS("SQL.FreeConnection"; $Connection) ]

```

156.81 SQL.Open

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.Open"; Command)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Result Returns "OK" or error message.

Description

Use the Open method to open the command explicitly.

A command will be implicitly opened by any method that needs an open command, therefore you don't have to call it explicitly.

To test whether a command is opened use isOpened method.

156.82 SQL.ParamCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.ParamCount"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Result Returns number of Parameters or error message.

Description

- 156.79 SQL.NewCommand

7408

Created 18th August 2014, last changed 13th January 2015.

156.83 SQL.Prepare

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.Prepare"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Result Returns "OK" or error message.

Description

Prepare method compiles the command, but does not execute it. The method detects syntax errors in command text and verifies the existence of database objects.

Execute method calls Prepare method implicitly if needed, therefore you don't have to call it explicitly.

156.86 SQL.Rollback

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.Rollback"; Connection)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

Result Returns "OK" or error message.

Description

Rollback method rolls back the database to the state it was in at the completion of the last commit operation.

All uncommitted work is undone.

Rollback method rolls back the work of all commands that associated with that connection.

To commit all changes made since the start of the transaction use SQL.Commit method.

156.87 SQL.RowsAffected

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.RowsAffected"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Result Returns number of rows or error message.

Description

Returns the number of rows affected by the last insert/update/delete command execution.
This normally only works if enabled, so please call SQL.SetCommandOption function to enable it if needed.

You may need to define cursor to be scrollable or cached in order to get number of rows in a recordset (For SELECT).

Examples

Requests a scrollable record set:

```
MBS( "SQL.SetCommandOption"; $Command; "Scrollable"; "True" )
```

Query number of records found:

```
Set Variable [ $query ; Value: "SELECT ID, Name, ChangedTS FROM Trainings WHERE ChangedTS  
>=:1 " ]
Set Variable [ $command ; Value: MBS("SQL.NewCommand"; $connection; $query ) ]
Set Variable [ $r; Value: MBS("SQL.SetParamAsDatetime"; $command; 1; $search_date ) ]
Set Variable [ $r; Value: MBS("SQL.SetCommandOption"; $Command; "Scrollable"; "True" ) ]
Set Variable [ $r ; Value: MBS("SQL.Execute"; $command ) ]
Set Variable [ $count ; MBS( "SQL.RowsAffected"; $Command ) ]
# read records
Set Variable [ $r ; Value: MBS("SQL.FreeCommand"; $command ) ]
```

156.92 SQL.SQLite3.ReKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SQLite3.ReKey"; Connection; Key { ; Encoding })

Parameters

Connection

The connection reference number gained with SQL.NewConnection.
\$Connection

Key

The new encryption key.
"Hello World"

Encoding

Optional
The text encoding for the key. Default is UTF-8.
"UTF-8"

Result Returns OK or error.

Description

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attack. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Examples

Change key to AES-256:

```
MBS( "SQL.SQLite3.ReKey"; $Connection; "aes256:" & $Key; "UTF-8" )
```

CHAPTER 156. SQL

- 156.80 SQL.NewConnection
- 156.93 SQL.SQLite3.SetKey

7412

7429

Created 23th September 2015, last changed 12nd November 2015.

156.93 SQL.SQLite3.SetKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SQLite3.SetKey"; Connection; Key { ; Encoding })

Parameters

Connection

The connection reference number gained with SQL.NewConnection.
\$Connection

Key

The new encryption key.
"Hello World"

Encoding

Optional
The text encoding for the key. Default is UTF-8.
"UTF-8"

Result Returns OK or error.

Description

This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo (Real Studio), you can use AES128.

Make sure you pass right text encoding (or none for UTF-8). e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

Examples

Use an encryption key:

```
MBS( "SQL.SQLite3.SetKey"; $Connection; "xxx" )
```

Clear encryption key:

```
MBS( "SQL.SQLite3.SetKey"; $Connection; "" )
```

Use an encryption key with UTF-8 and AES-256:

```
MBS( "SQL.SQLite3.SetKey"; $Connection; "aes256:" & $key; "UTF-8" )
```

156.94 SQL.ServerVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.ServerVersion"; Connection)

Parameters

Connection

The connection reference number gained with `SQL.NewConnection`.

\$Connection

Result Returns version number or error.

Description

The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).

See also

- 156.80 `SQL.NewConnection`

7412

Created 18th August 2014, last changed 18th August 2014.

156.95 SQL.ServerVersionString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.ServerVersionString"; Connection)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

Result Returns version string or error.

Description

A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.

See also

- 156.80 SQL.NewConnection

7412

Created 18th August 2014, last changed 18th August 2014.

156.96 SQL.SetAutoCommit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetAutoCommit"; Connection; AutoCommit)

Parameters**Connection**

The connection reference number gained with SQL.NewConnection.
\$Connection

AutoCommit

Whether to turn auto commit on or off. Can be "On" or "Off".
"On"

Result Returns "OK" or error message.

Description

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.

Examples

Turn auto commit off:

MBS("SQL.SetAutoCommit"; \$Connection; "off")

Created 18th August 2014, last changed 25th October 2018.

156.97 SQL.SetClient

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetClient"; Connection; Client)

Parameters

Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

Client

The name of the database client to use.

"SQLite"

Result Returns "OK" on success.

Description

You can set a client in Connect method, in this case you don't need to use setClient method. The main destination of this method is to connect to a server with no connection to a database (for example, to check a client availability and version). But if you are calling Connect method with no specified client you have to use setClient method before.

If you are calling setClient method when the connection is set to another client the previous connection will be disconnected and new client will be set.

Pass one of this values: CubeSQL, SQLAnywhere, ODBC, Oracle, SQLServer, Firebird, InterBase, SQLBase, DB2, Informix, Sybase, MySQL, PostgreSQL or SQLite. Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

Be aware that for most database servers, you need to specify client library with SQL.SetConnectionOption first.

Examples

Sets client to be SQLite:

```
MBS( "SQL.SetClient"; $Connection; "SQLite" )
```

Sets client to be Oracle:

```
MBS( "SQL.SetClient"; $Connection; "Oracle" )
```

Created 18th August 2014, last changed 29th December 2019.

156.98 SQL.SetCommandOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetCommandOption"; Command; Key; Value)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Key

A string key of the command option.

""

Value

The new value.

""

Result Returns "OK" or error message.

Description

Call this method to set value(s) of server specific command options. See Server specific notes.

A command related option may be specified in either connection object or command object. If it is specified in connection object it affects all the commands on that connection.

If an option is not specially assigned to the command object the Library takes this option from related connection object (see SQL.GetCommandOption function). If an option is not specified in neither command nor connection objects, the Library takes the default option value.

SQL.SetCommandOption method is safe to use in cross-server applications. An option related to a particular server does not affect others.

see also

https://www.sqlapi.com/ApiDoc/class_s_a_command.html

Examples

Requests a scrollable record set:

```
MBS( "SQL.SetCommandOption"; $Command; "Scrollable"; "True" )
```

Store MySQL RecordSet locally:

```
MBS( "SQL.SetCommandOption"; $Command; "HandleResult"; "Store" )
```

Requests 100 rows to be prefetched:

```
MBS( "SQL.SetCommandOption"; $Command; "PreFetchRows"; "100" )
```

Set an option we may for ODBC to FileMaker:

```
MBS( "SQL.SetCommandOption"; $Command; "ODBCAddLongTextBufferSpace"; "false" )
// newer plugins automatically set it right when connecting to FileMaker
```

Allow multiple connections for Microsoft SQL Server:

```
MBS( "SQL.SetCommandOption"; $Command; "SQL_ATTR_CURSOR_TYPE"; "SQL_CURSOR_DYNAMIC" )
```

Set option for concurrency on MS SQL Server:

```
MBS( "SQL.SetCommandOption"; $Command; "SQL_ATTR_CONCURRENCY"; "SQL_CONCUR_READ-
ONLY" )
# Sets the statement concurrency attribute. See SQNCLI documentation for an additional information.
# Valid values: "SQL_CONCUR_READONLY", "SQL_CONCUR_VALUES", "SQL_CONCUR_ROWVER",
"SQL_CONCUR_LOCK".
```

Created 11st September 2016, last changed 11st September 2016.

156.100 SQL.SetCommandText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetCommandText"; Command; CommandText { ; CommandType })

Parameters**Command**

The command reference number gained with `SQL.NewCommand`.

`$Command`

CommandText

A string that represents command text string (an SQL statement or a stored procedure name).

"SELECT * FROM MyTable"

CommandType

Optional

Type of command. Can be `CmdUnknown`, `CmdSQLStmt`, `CmdSQLStmtRaw` or `CmdStoredProc`. `CmdUnknown` is default.

"CmdSQLStmtRaw"

Result Returns "OK" or error message.

Description

Use `SQL.setCommandText` method to set the command text. Command text can also be set in `SQL.NewCommand`.

It's not necessary to set a command type explicitly, because it is defined automatically in terms of command text string. But if you still have any reason to do it, use one of the following values:

<code>CmdUnknown</code>	Command type is not defined. Library will detect command type automatically when needed.
<code>CmdSQLStmt</code>	Command is an SQL statement.
<code>CmdSQLStmtRaw</code>	Command is an SQL statement that mustn't be interpreted by <code>SQLAPI++</code> .
<code>CmdStoredProc</code>	Command is a stored procedure or a function.

To get command type use `SQL.CommandType` method.

If the command is an SQL statement and it has parameters, a set of parameter objects creates implicitly.

Created 18th August 2014, last changed 13th January 2015.

156.101 SQL.SetConnectionOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetConnectionOption"; Connection; Key; Value)

Parameters**Connection**

The connection reference number gained with SQL.NewConnection.
\$Connection

Key

A string key of the connection or command option.
""

Value

The new option value.
""

Result Returns "OK" or error message.

Description

Call this method to set value(s) of server specific connection or command options. See Server specific notes. SetOption method is safe to use in cross-server applications. An option related to a particular server does not affect others.

see also:

https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

Examples

Set Oracle client library path:

```
MBS( "SQL.SetConnectionOption"; $Connection; "OCI8.LIBS"; "c:\Oracle\oci.dll" )
```

Set Microsoft SQL Server client database provider:

```
MBS( "SQL.SetConnectionOption"; $Connection; "UseAPI"; "OLEDB" )
```

```
MBS( "SQL.SetConnectionOption"; $Connection; "SQLNCLI.LIBS"; "sqlsrv32.dll" )
```

Set Sybase Database libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "SYBINTL.LIBS"; "/sybase/libsybintl.so" )
```

```
MBS( "SQL.SetConnectionOption"; $Connection; "SYBCOMN.LIBS"; "/sybase/libsybcomn.so" )
```

```
MBS( "SQL.SetConnectionOption"; $Connection; "SYBTCL.LIBS"; "/sybase/libsybtcl.so" )
```

```
MBS( "SQL.SetConnectionOption"; $Connection; "SYBCT.LIBS"; "/sybase/libsybct.so" )
```

```
MBS( "SQL.SetConnectionOption"; $Connection; "SYBCS.LIBSS"; "/sybase/libsybcs.so" )
```

Set MySQL library:

```
# Windows
Set Variable [ $r; MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL.LIBS"; "c:\MySQL\libmysql.dll"
) ]
# Mac OS X
Set Variable [ $r; MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL.LIBS"; "/test/libmysqlclient.16.dylib"
) ]
```

Set DB2 libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "DB2CLI.LIBS"; "c:\DB2\db2cli.dll" )
```

Set Informix libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "INFCLI.LIBS"; "c:\Informix\ICLIT09B.DLL" )
```

Set InterBase/Firebird libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "IBASE.LIBS"; "c:\Firebird\fbclient.dll" )
```

Set SQLBase libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "SQLBASE.LIBS"; "c:\SQLBase\sqlwntm.dll" )
```

Set PostgreSQL libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "LIBPQ.LIBS"; "/usr/lib/libpq.dylib" )
```

Set ODBC libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "ODBC.LIBS"; "odbc32.dll" )
```

Set SQLite libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "SQLITE.LIBS"; "/usr/lib/libsqlite3.dylib" )
```

For SQLite, set flag to open database file read only:

```
MBS( "SQL.SetConnectionOption"; $Connection; "SQLiteVFSFlags"; "1" )
```

Set MySQL Timeouts:

```
MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_OPT_CONNECT_TIMEOUT"; 10 )
```

```
MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_OPT_READ_TIMEOUT"; 10 )
```

```
MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_OPT_WRITE_TIMEOUT"; 10 )
```

Connect to Microsoft SQL Server from Mac via FreeTDS library:

```
Set Variable [ $Connection; Value:MBS("SQL.NewConnection") ]
# Tell plugin we want to use Microsoft SQL Server via ODBC
Set Variable [ $result; Value:MBS("SQL.SetClient"; $Connection; "ODBC") ]
# Tell plugin where freetds library is
Set Variable [ $result; Value:MBS("SQL.SetConnectionOption"; $Connection; "ODBC.LIBS"; "/Users/cs/Desktop/libtdsodbc.dylib") ]
# Connect to database
Set Variable [ $result; Value:MBS("SQL.Connect"; $Connection; "DRIVER= { FREETDS } ;Server=192.168.2.32;Uid=SA;P
SION=7.2;Port=1433" ) ]
# or TDS_VERSION=8.0;
If [ $result      "OK" ]
Show Custom Dialog [ "Error: " & $result ]
Set Variable [ $result; Value:MBS("SQL.FreeConnection"; $Connection) ]
Halt Script
End If
```

Set an option we need for ODBC to FileMaker:

```
MBS( "SQL.SetConnectionOption"; $Connection; "ODBCAddLongTextBufferSpace"; "false" )
```

// newer plugins automatically set it right when connecting to FileMaker

The MySQL SSL Cipher:

```
MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_SSL_CIPHER"; "DHE-RSA-AES256-SHA" )
```

Requests 100 rows to be prefetched:

```
MBS( "SQL.SetConnectionOption"; $Connection; "PreFetchRows"; "100" )
# will propagate down to all commands on that connection.
```

Store MySQL RecordSet locally:

```
MBS( "SQL.SetConnectionOption"; $Connection; "HandleResult"; "Store" )
```

Set ODBC timeout property:

```
MBS( "SQL.SetConnectionOption"; $Connection; "SQL_ATTR_CONNECTION_TIMEOUT"; "10" )
```

Enable SSL for MySQL:

all options optional, but you need at least one set to activate SSL.

```
MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_SSL_KEY"; "/Users/cs/Desktop/key.pem" )
```

```

MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_SSL_CERT"; "/Users/cs/Desktop/cert.pem"
)
MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_SSL_CA"; "/Users/cs/Desktop/cacert.pem"
)
MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_SSL_CAPATH"; "" )
MBS( "SQL.SetConnectionOption"; $Connection; "MYSQL_SSL_CIPHER"; "DHE-RSA-AES256-SHA" )

```

Set connection timeout for CubeSQL:

```
MBS( "SQL.SetConnectionOption"; $Connection; "ConnectionTimeout"; "30" )
```

Set CubeSQL libraries:

```
MBS( "SQL.SetConnectionOption"; $Connection; "CUBESQL_LIBS"; "c:\CubeSQL\cubesql.dll" )
```

Set ODBC libraries on MacOS:

```
MBS( "SQL.SetConnectionOption"; $Connection; "ODBC_LIBS"; "/usr/lib/libiodbc.dylib" )
```

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Value

The new value

\$image

Result Returns "OK" or error message.

Description

Examples

Set parameter with ID = 1 to image

```
MBS("SQL.SetParamAsText"; $Command; 1; $image)
```

Set parameter JPEGData with image:

```
MBS("SQL.SetParamAsText"; $Command; "JPEGData"; $image)
```

Update BLOB field:

```
# Create update command to fill blob field:
```

```
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "UPDATE 'Test' SET My-Blob=:image WHERE ID=:id") ]
```

```
Set Variable [ $result; Value:MBS("SQL.SetParamAsText"; $Command; "id"; 123 ) ]
```

```
Set Variable [ $result; Value:MBS("SQL.SetParamAsContainer"; $Command; "image"; MyTable::MyImage) ]
```

```
# Run it
```

```
Set Variable [ $result; Value:MBS("SQL.Execute"; $Command) ]
```

```
# Cleanup
```

```
Set Variable [ $result2; Value:MBS("SQL.Commit"; $Connection) ]
```

```
Set Variable [ $result2; Value:MBS("SQL.FreeCommand"; $Command) ]
```

156.107 SQL.SetParamAsDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetParamAsDate"; Command; Param; Value)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Value

The new value

Result Returns "OK" or error message.

Description

Reports an error for invalid date. Version 8.0 and newer set parameter to NULL if you pass empty value.

Examples

Set parameter with ID 3 to a date value:

```
MBS("SQL.SetParamAsDate"; $Command; 3; $Birthday)
```

Set parameter with name "Date" to a date value:

```
MBS("SQL.SetParamAsDate"; $Command; "Date"; $Birthday)
```

7455

Created 18th August 2014, last changed 31st January 2019.

156.109 SQL.SetParamAsFloat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetParamAsFloat"; Command; Param; Value)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix.
e.g. "# 0" for first parameter.

"1"

Value

The new value
123.456

Result Returns "OK" or error message.

Description

For integer numbers, please use SQL.SetParamAsNumber.

Examples

Set value for parameter with ID 5 to a floating point number:

```
MBS("SQL.SetParamAsFloat"; $Command; 5; $TotalSales)
```

Set value for parameter with name "Sales" to a floating point number:

```
MBS("SQL.SetParamAsFloat"; $Command; "Sales"; $TotalSales)
```

156.110 SQL.SetParamAsNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetParamAsNumber"; Command; Param; Value)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Value

The new value

123

Result Returns "OK" or error message.

Description

For floating point numbers, please use SQL.SetParamAsFloat.

Examples

Sets an integer value for parameter with ID 4:

```
MBS("SQL.SetParamAsNumber"; $Command; 4; $NumberOfOrders)
```

Sets an integer value for parameter with name "NumberOfOrders":

```
MBS("SQL.SetParamAsNumber"; $Command; "NumberOfOrders"; $NumberOfOrders)
```

Run a stored procedure:

```
# new command for calling our test procedure on a Microsoft SQL Server
Set Variable [ $command; MBS( "SQL.NewCommand"; $Connection; "dbo.Test" ) ]
# set a parameter
Set Variable [ $r; MBS( "SQL.SetParamAsNumber"; $Command; "Param1"; 7 ) ]
# execute query
Set Variable [ $r; MBS( "SQL.Execute"; $Command ) ]
# fetch first record
Set Variable [ $r; MBS( "SQL.FetchNext"; $Command ) ]
# get result field
Set Variable [ $result; MBS( "SQL.GetFieldAsText"; $Command; 1 ) ]
```

156.113 SQL.SetParamDataType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetParamDataType"; Command; Param; Datatype)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix.
e.g. "# 0" for first parameter.
"1"

Datatype

The new data type.
"Short"

Result Returns "OK" or error message.

Description

The parameter data type can be: Bool, Short, UShort, Long, ULong, Double, Numeric, DateTime, Interval, String, Bytes, LongBinary, LongChar, Blob, CLob, Cursor, SpecificToDBMS or unknown.

See also

156.114 SQL.SetParamDefault

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetParamDefault"; Command; Param)

Parameters

Command

The command reference number gained with SQL.NewCommand.

\$Command

Param

The parameter name or ID. Pass number for ID, a text with parameter name or the index with # prefix. e.g. "# 0" for first parameter.

"1"

Result Returns "OK" or error message.

Description

Forces DBMS API to use the default parameter value as the input value for an input or input/output parameter in a procedure.

If DBMS API does not support the concept of "default parameter values" in stored procedures, this setting will be ignored.

If you set this flag for the parameter that doesn't have a default value, the effect is DBMS defined (e.g. an error can be returned or NULL can be bound).

To cancel using the default parameter value you should call any other SetParam* function to bind a parameter value.

To check whether this flag is set or not use SQL.GetParamIsDefault method.

156.117 SQL.SetParamTypesValues

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("SQL.SetParamTypesValues"; Command; Type; Value)

Parameters**Command**

The command reference number gained with SQL.NewCommand.

\$Command

Type

Pass one type parameter for each value. Type can be Default, Null, Unknown, Integer, Double, Text, Container, Boolean, Short, UShort, Long, ULong, Date, Time or TimeStamp.

"Integer"

Value

Pass one parameter for each parameter.

"Hello"

Result Returns OK or error.

Description

Please pass a type and a value for each parameter.

Please match the number of parameters in your SQL query and their order.

If value is the result of FM.Null function in this plugin, the value is passed as NULL to the database.

Examples

Set 4 parameters:

```
MBS( "SQL.SetParamTypesValues"; $Command; "Text"; "Bob"; "Text"; "Miller"; "Date"; $BirthDay;
"BLOB"; MyTable::PersonPicture )
```

Export row

```
# create command
```

```
Set Variable [ $Command; Value:MBS("SQL.NewCommand"; $Connection; "INSERT INTO 'Test' (First-
Name, LastName, Birthday, NumberOfOrders, TotalSales) VALUES (:1,:2,:3,:4,:5)") ]
```

```
# fill all parameters
```

```
Set Variable [ $result; Value:MBS("SQL.SetParamTypesValues"; $Command; "Text"; SQLite fun::First-
Name; "Text"; SQLite fun::LastName; "Date"; SQLite fun::Birthday; "Integer"; SQLite fun::NumberO-
fOrders; "Double"; SQLite fun::TotalSales) ]
```

```
# Run it
```

```
Set Variable [ $result; Value:MBS("SQL.Execute"; $Command) ]
```

```
# Cleanup
```

```
Set Variable [ $result2; Value:MBS("SQL.Commit"; $Connection) ]
```

```
Set Variable [ $result2; Value:MBS("SQL.FreeCommand"; $Command) ]
```

Created 18th April 2015, last changed 21st April 2015.

156.121 SQL.isAlive

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.isAlive"; Connection)

Parameters**Connection**

The connection reference number gained with SQL.NewConnection.

\$Connection

Result Returns 1 if the database server is active and accessible; otherwise 0.

Description

This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.

Examples

Check alive status:

```
Set Variable [ $r; Value:MBS( "SQL.isAlive"; $Connection ) ]
```

156.123 SQL.isExecuted

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.isExecuted"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Result Returns 1 if command was executed, else 0.

Description

Examples

Check execution status:

```
Set Variable [ $r; Value:MBS( "SQL.isExecuted"; $Connection ) ]
```

156.124 SQL.isOpened

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.isOpened"; Command)

Parameters**Command**

The command reference number gained with SQL.NewCommand.
\$Command

Result Returns 1 if the command object is opened; otherwise 0.

Description**Examples**

Check open status:

Set Variable [\$r; Value:MBS("SQL.isOpen"; \$Connection)]

See also

- 156.79 SQL.NewCommand

156.125 SQL.isResultSet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
156 SQL	2.6	Yes	Yes	Yes	Yes	Yes

MBS("SQL.isResultSet"; Command)

Parameters

Command

The command reference number gained with SQL.NewCommand.
\$Command

Result Returns 1 if the result set exists; otherwise 0.

Description

Examples

Check result status:

```
Set Variable [ $r; Value:MBS( "SQL.isResultSet"; $Command ) ]
```

Chapter 157

SSH

Secure Shell connection to server.

Can be used to login remotely into a Linux or Mac OS X (or Windows) machine if there is a SSH server running and run various commands.

157.1 SSH.CloseChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "SSH.CloseChannel"; SSH { ; Wait } )
```

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Wait

Optional

Whether to wait if it takes longer. Default is 0.

1

Result Returns OK or error.

Description

This closes it now. Normally all channels are closed automatically when you release connection with SSH.Release.

Examples

Close channel:

Set Variable [\$r; Value:MBS("SSH.CloseChannel"; \$ssh)]

See also

- 157.5 SSH.Execute 7487
- 157.7 SSH.FreeChannel 7491

Created 29th May 2016, last changed 12nd November 2017.

157.2 SSH.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Connect"; SSH; IP { ; Port; Timeout; ProtocolPreference })

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

IP

The IP to connect to.

"192.168.1.123"

Port

Optional

The port number to connect to. Default is 22 which is standard port for ssh.

22

Timeout

Optional

The connection timeout in seconds for the TCP/IP connection. Default is 30 seconds.

30

ProtocolPreference

Optional

Pass 4 to connect via IPv4. Pass 6 to connect via IPv6. Default is to try whatever the DNS suggests first.

4

Result Returns OK or error.

Description

Timeout defines timeout for connection in seconds. While waiting, the plugin yields time to other threads.

Version 6.3 now supports passing IPv4, IPv6, or a host name.

Examples

Connect to IP:

```
Set Variable [ $r; Value:MBS( "SSH.Connect"; $ssh; "192.168.2.1" ) ]
```

Full example:

```
# Start a new SSH session
Set Variable [ $ssh; Value:MBS( "SSH.New" ) ]
# Connect to an IP
Set Variable [ $r; Value:MBS( "SSH.Connect"; $ssh; SSH::Host; SSH::Port ) ]
```

```

If [ MBS("IsError") ]
Show Custom Dialog [ "Connect error"; $r ]
Else
# Run the session handshake.

157.3 SSH.Disconnect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Disconnect"; SSH; Description { ; Reason; Lang })

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Description

Human readable reason for disconnection.

Reason

Optional

One of the Disconnect Reason values.

Lang

Optional

Localization string describing the language/encoding of the description provided.

Result Returns OK or error.

Description

Examples

Disconnect:

```
Set Variable [ $r; Value:MBS( "SSH.Disconnect"; $ssh ) ]
```

157.4 SSH.EOF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.EOF"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns state or error.

Description

Check if the remote host has sent an EOF status for the selected stream.

Returns 1 if the remote host has sent EOF, otherwise 0.

Created 29th May 2016, last changed 29th May 2016.

157.5 SSH.Execute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Execute"; SSH; Command)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Command

The command to execute.

"ls"

Result Returns OK or error.

Description

Examples

Run a command:

```
Set Variable [ $r; Value:MBS( "SSH.Execute"; $ssh; "whoami" ) ]
```

Full example:

```
# Start a new SSH session
Set Variable [ $ssh; Value:MBS( "SSH.New" ) ]
# Connect to an IP
Set Variable [ $r; Value:MBS( "SSH.Connect"; $ssh; SSH::Host; SSH::Port ) ]

157.6 SSH.Flush

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Flush"; SSH { ; Mode })

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Mode

Optional

What to flush. Can be empty, "stdout", "stderr", "all" or "ExtendedData".

"stdout"

Result Returns OK or error.

Description

Created 29th May 2016, last changed 29th May 2016.

157.7 SSH.FreeChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.FreeChannel"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

This is done automatically when you release the connection with SSH.Release or you start a new channel with SSH.OpenSession.

See also

- 157.1 SSH.CloseChannel 7479
- 157.18 SSH.OpenSession 7504
- 157.21 SSH.Release 7508

Created 29th May 2016, last changed 7th June 2016.

157.8 SSH.GetExitState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.GetExitState"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns state or error.

Description

Returns the exit code raised by the process running on the remote host at the other end of the named channel. Note that the exit status may not be available if the remote end has not yet set its status to closed. Returns 0 on failure, otherwise the Exit Status reported by remote host.

Created 29th May 2016, last changed 29th May 2016.

157.9 SSH.GetIP

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.GetIP"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns IP or error.

Description

Created 29th May 2016, last changed 29th May 2016.

157.10 SSH.GetPort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.GetPort"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns number or error.

Description

Created 29th May 2016, last changed 29th May 2016.

157.11 SSH.GetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.GetTag"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns value or error.

Description

There is only a tag if set one with SSH.SetTag before.

See also

- 157.26 SSH.SetTag

7513

Created 29th May 2016, last changed 7th June 2016.

157.12 SSH.GetTimeout

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.GetTimeout"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns value or error.

Description

See also

- 151.3 SNMP.SetTimeout 7126
- 157.27 SSH.SetTimeout 7514

Created 29th May 2016, last changed 29th May 2016.

157.13 SSH.GetUserName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.GetUserName"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns user name or error.

Description

Created 29th May 2016, last changed 29th May 2016.

157.14 SSH.HostKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.HostKey"; SSH { ; Selector })

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Selector

Optional

What value to return. Default is hex. hex: Return the key hex encoded. base64: Return key as base 64 encoded. length: Length of key in bytes. type: RSA or DSS or unknown.

"type"

Result Returns text or error.

Description

Examples

Query length of key:

```
MBS( "SSH.HostKey"; $SSH; "length")
```

Query type of key:

```
MBS( "SSH.HostKey"; $SSH; "type")
```

157.15 SSH.HostKeyHash

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.HostKeyHash"; SSH { ; Type })

Parameters**SSH**

The SSH session reference number from the plugin.

\$ssh

Type

Optional

Which type to return. Can be MD5 or SHA1. SHA1 is default if empty or not provided.

"SHA1"

Result Returns text or error.

Description

MD5 is 16 bytes, so 32 hex characters. SHA1 is 20 bytes, so 40 hex characters.

Added SHA256 for MBS Plugin 9.5 with 32 bytes.

Created 7th June 2016, last changed 18th September 2019.

157.16 SSH.IsAuthenticated

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.IsAuthenticated"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns state or error.

Description

Returns 1 if authenticated or 0 if not.

157.17 SSH.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.New")

Result Returns reference number or error.

Description

Please use SSH.Release later to free memory.

If you just need SSH file transfers, please use CURL functions.

Examples

New session and later free it:

```
Set Variable [ $ssh; Value:MBS( "SSH.New" ) ]
# later
Set Variable [ $r; Value:MBS( "SSH.Release"; $ssh ) ]
```

Full example:

```
# Start a new SSH session

157.18 SSH.OpenSession

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.OpenSession"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

You need to be connected with your session.

Examples

Open Session:

Set Variable [\$r; Value:MBS("SSH.OpenSession"; \$ssh)]

See also

- 157.2 SSH.Connect 7481
- 157.5 SSH.Execute 7487

157.19 SSH.ReadHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.ReadHex"; SSH; length { ; Stream })

Parameters**SSH**

The SSH session reference number from the plugin.

\$ssh

length

Maximum number of bytes to read.

10

Stream

Optional

Which stream to read. Can be stdout or stderr. Stdout is default if parameter is empty or missing.

"StdOut"

Result Returns text encoded as hex or error message.

Description

The text returned may be shorter than length bytes.

See also

- 157.20 SSH.ReadText

157.20 SSH.ReadText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.ReadText"; SSH { ; length; Encoding; Stream })

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

length

Optional

Maximum number of bytes to read.

10

Encoding

Optional

The text encoding for result. Default is UTF-8.

UTF8

Stream

Optional

Which stream to read. Can be stdout or stderr. Stdout is default if parameter is empty or missing.

"StdOut"

Result Returns text or error message.

Description

The text returned may be shorter than length bytes.

Examples

Read all text:

```
# We read text in several chunks until no new text is coming any more:
Set Variable [ $text; Value:"" ]
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
# Read some text:
Set Variable [ $newtext; Value:MBS( "SSH.ReadText"; $ssh; 10000; "UTF8" ) ]
If [ MBS("iserror") = 0 ]
If [ Length($newText) >0 ]
Set Variable [ $text; Value:$text & $newText ]
End If
Exit Loop If [ Length($newText) = 0 ]
End If
End Loop
Set Field [ SSH::Result; $text ]
```

157.21 SSH.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Release"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.
\$ssh

Result Returns OK or error.

Description

If needed the channel, session and socket is closed.

See also

157.22 SSH.RequestPTY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.RequestPTY"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

Note that this does not make sense for all channel types and may be ignored by the server despite returning success.

Created 29th May 2016, last changed 29th May 2016.

157.23 SSH.SendEOF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.SendEOF"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

Tell the remote host that no further data will be sent on the specified channel. Processes typically interpret this as a closed stdin descriptor.

Created 29th May 2016, last changed 29th May 2016.

157.24 SSH.SessionHandshake

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.SessionHandshake"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

You may want to set timeout with SSH.SetTimeout function.

Examples

Do session handshake:

```
Set Variable [ $r; Value:MBS( "SSH.SessionHandshake"; $ssh ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Connect error"; $r ]
End if
```

157.25 SSH.SetEnv

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.SetEnv"; SSH; Name; Value)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Name

The name of the variable.

"test"

Value

The value for the variable.

"test"

Result Returns OK or error.

Description

Created 29th May 2016, last changed 29th May 2016.

157.26 SSH.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.SetTag"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

The tag value allows you to associate any value with the session, e.g. a record ID.

See also

- 157.11 SSH.GetTag

157.28 SSH.Shell

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Shell"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

Created 29th May 2016, last changed 29th May 2016.

157.29 SSH.Tunnel.BytesReceived

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	8.5	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Tunnel.BytesReceived"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns number or error.

Description

Created 22nd October 2018, last changed 22nd October 2018.

157.30 SSH.Tunnel.BytesSent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	8.5	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Tunnel.BytesSent"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns number or error.

Description

Created 22nd October 2018, last changed 22nd October 2018.

157.31 SSH.Tunnel.Cancel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	8.5	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Tunnel.Cancel"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

This sets cancel flag, but cancelling happens asynchronous, so please check running flag later.

Tunnel is automatically cancelled when session is closed.

See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	8.5	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Tunnel.Messages"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns text or error.

Description

We log messages so you can see what is going on and check the messages if things are not working well.

157.33.1 Blog Entries

- [SSH tunnel in FileMaker](#)

Created 22nd October 2018, last changed 22nd October 2018.

157.34 SSH.Tunnel.Run

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	8.5	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Tunnel.Run"; SSH; RemoteHost; RemotePort; LocalHost; LocalPort)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

RemoteHost

The remote host to forward to. Can be IP or domain name.

"monkeybreadsoftware.de"

RemotePort

The destination port to connect to.

80

LocalHost

The local interface to listen on.

"127.0.0.1"

LocalPort

The local port to listen on.

8000

Result Returns OK or error.

Description

Please create, connect and authenticate a session for use as a tunnel.

For best result, please don't use the same session for other things while tunnel is running.

The tunnel allows currently one connection through it, e.g. run one tunnel per MySQL connection to go through the tunnel. If you need multiple tunnels, please create multiple SSH connections.

The MBS Plugin can spin of a new preemptive thread to run a tunnel to forward a SSH connection from local socket to remote server via SSH tunnel.

This works well e.g. for database access with MySQL.

By using our own thread, we are not blocking or blocked by your FileMaker scripts.

157.35 SSH.Tunnel.Running

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	8.5	Yes	Yes	Yes	Yes	Yes

MBS("SSH.Tunnel.Running"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns boolean or error.

Description

Returns 1 if running or 0 if not.

See also

- 157.34 SSH.Tunnel.Run

Created 22nd October 2018, last changed 22nd October 2018.

157.36 SSH.UserAuthKeyboardInteractive

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.UserAuthKeyboardInteractive"; SSH; Username; Password)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Username

Name of user to attempt plain password authentication for.

"cs"

Password

Password to use for authenticating username.

"test"

Result Returns OK or error.

Description

The server will send question to plugin and plugin answers with the given password.

Examples

Login interactively:

```
Set Variable [ $r; Value:MBS( "SSH.UserAuthKeyboardInteractive"; $ssh; SSH::Username; SSH::Password ) ]
```

See also

157.37 SSH.UserAuthList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.UserAuthList"; SSH; Username)

Parameters**SSH**

The SSH session reference number from the plugin.

\$ssh

Username

Username which will be used while authenticating. Note that most server implementations do not permit attempting authentication with different usernames between requests. Therefore this must be the same username you will use on later userauth calls.

"cs"

Result Returns OK or error.

Description

Send a SSH_USERAUTH_NONE request to the remote host. Unless the remote host is configured to accept none as a viable authentication scheme (unlikely), it will return SSH_USERAUTH_FAILURE along with a listing of what authentication schemes it does support. In the unlikely event that none authentication succeeds, this method will return "". This case may be distinguished from a failing case by examining Authenticated.

Examples

Query authentication list:

Set Variable [\$authuserlist; Value:MBS("SSH.userauthlist"; \$ssh; SSH::Username)]

See also

- 157.2 SSH.Connect 7481

157.38 SSH.UserAuthPassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.UserAuthPassword"; SSH; Username; Password)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Username

Name of user to attempt plain password authentication for.

"cs"

Password

Password to use for authenticating username.

"test"

Result Returns OK or error.

Description

Attempt basic password authentication. Note that many SSH servers which appear to support ordinary password authentication actually have it disabled and use Keyboard Interactive authentication (routed via PAM or another authentication backed) instead.

Examples

Login with password:

```
Set Variable [ $r; Value:MBS( "SSH.UserAuthPassword"; $ssh; SSH::Username; SSH::Password ) ]
```

157.39 SSH.UserAuthPublicKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.UserAuthPublicKey"; SSH; Username; PublicKey; PrivateKey; Passphrase)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Username

user name to authenticate as.

"cs"

PublicKey

The public key. Optional. Pass empty text if you only have private key.

""

PrivateKey

The private key. A PEM encoded private key file stored in memory.

Passphrase

Passphrase to use when decoding privatekey.

Result Returns OK or error.

Description

Attempt public key authentication using a PEM encoded private key file stored in text variable or field.

Examples

Login with keys:

```
Set Variable [ $r; Value: MBS( "SSH.UserAuthPublicKey"; $ssh; "cs"; "";  
"—BEGIN RSA PRIVATE KEY—"  
MIIEpQIBAAKCAQEAzXhH+HE2k8bpRvm4q9TlbD7B7/p2I0NXmVDz1CULU1FqN2OC$

157.40 SSH.UserAuthPublicKeyFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.UserAuthPublicKeyFile"; SSH; Username; PublicKey; PrivateKey { ; Passphrase })

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Username

user name to authenticate as.

"cs"

PublicKey

Path of the public key file. (e.g. /etc/ssh/hostkey.pub). Optional. Pass empty text if you only have private key.

"/Users/cs/Desktop/id_rsa.pub"

PrivateKey

Path of the private key file. (e.g. /etc/ssh/hostkey)

"/Users/cs/Desktop/id_rsa"

Passphrase

Optional

Passphrase to use when decoding privatekey. Can be empty.

""

Result Returns OK or error.

Description

Attempt public key authentication using a PEM encoded private key file stored on disk.

Examples

Login with public key:

```
Set Variable [ $r; Value:MBS( "SSH.UserAuthPublicKeyFile"; $ssh; SSH::Username; "your key path"; "your key path"; SSH::Password ) ]
```

Login with keys:

```
Set Variable [ $r; Value: MBS( "SSH.UserAuthPublicKeyFile"; $ssh; SSH::Username; "/Users/cs/Desktop/id_rsa.pub"; "/Users/cs/Desktop/id_rsa"; SSH::Password ) ]
```

157.41 SSH.WaitClosed

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.WaitClosed"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

Enter a temporary blocking state until the remote host closes the named channel. Typically sent after Close in order to examine the exit status.

Created 29th May 2016, last changed 29th May 2016.

157.42 SSH.WaitEOF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.WaitEOF"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

157.43 SSH.WaitSocket

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.WaitSocket"; SSH)

Parameters

SSH

The SSH session reference number from the plugin.

\$ssh

Result Returns OK or error.

Description

Created 29th May 2016, last changed 29th May 2016.

157.44 SSH.WriteHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.WriteHex"; SSH; Text { ; Stream })

Parameters**SSH**

The SSH session reference number from the plugin.

\$ssh

Text

The text to send in hex encoding.

"48656C6C66"

Stream

Optional

Which stream to write. Can be stdout or stderr. Stdout is default if parameter is empty or missing.

"StdOut"

Result Returns the number of bytes written or an error message.

Description

You pass the text hex encoded. For example for "Hello" you pass "48656C6C66".

157 SSH	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SSH.WriteText"; SSH; Text { ; Encoding; Stream })

Parameters**SSH**

The SSH session reference number from the plugin.

\$ssh

Text

The text to send.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

Stream

Optional

Which stream to write. Can be stdout or stderr. Stdout is default if parameter is empty or missing.

"StdOut"

Result Returns the number of bytes written or an error message.

Description**See also**

Chapter 158

StoreKit

In-app purchases in the Mac/iOS App Store

158.1 StoreKit.AddPayment

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	Yes	No	No	No	Yes

MBS("StoreKit.AddPayment"; productIdentifier { ; quantity })

Parameters

productIdentifier

The product identifier.

1234

quantity

Optional

The quantity of the product. Default is 1.

1

Result Returns OK or error.

Description

When a payment request is added to the queue, the payment queue processes that request with the Apple App Store and arranges for payment from the user. When that transaction is complete or if a failure occurs, the payment queue sends the payment transaction object that encapsulates the request to all transaction observers.

Use StoreKit.Transactions later to query status.

Examples

Start order of item:

Set Variable [\$r ; Value: MBS("StoreKit.AddPayment"; "123"; 1)]

See also

- 158.15 StoreKit.Transactions 7552

158.1.1 Blog Entries

- [Working on new Store Kit functions](#)

Created 22nd April 2018, last changed 22nd April 2018.

158.2 StoreKit.CanMakePayments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	Yes	No	No	No	Yes

MBS("StoreKit.CanMakePayments")

Result Returns 1 or 0.

Description

Returns 1 if the user is allowed to authorize payment. 0 if they do not have permission.

An iPhone can be restricted from accessing the Apple App Store. For example, parents can restrict their children's ability to purchase additional content. Your application should confirm that the user is allowed to authorize payments before adding a payment to the queue. Your application may also want to alter its behavior or appearance when the user is not allowed to authorize payments.

Examples

Check status:

Set Variable [\$r ; Value: MBS("StoreKit.CanMakePayments")]

Created 22nd April 2018, last changed 22nd April 2018.

158.3 StoreKit.FinishTransaction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	Yes	No	No	No	Yes

MBS("StoreKit.FinishTransaction"; TransactionID)

Parameters

TransactionID

The ID of the transaction.

Result Returns OK or error.

Description

Your application should call this method on pending transaction to finish them. Calling StoreKit.FinishTransaction on a transaction removes it from the queue. Your application should call finishTransaction only after it has successfully processed the transaction and unlocked the functionality purchased by the user. Calling StoreKit.FinishTransaction on a transaction that is in the Purchasing state returns an error.

Result Returns JSON or error.

Description

Please call StoreKit.QueryProducts first to query products and wait for StoreKit.ProductRequestRunning returning 0.

The JSON contains an array of products and each product has the following values: localizedDescription, localizedTitle, priceLocale, price, productIdentifier, downloadable and formattedPrice.

Examples

Queries list of products:

```
Set Variable [ $products ; Value: MBS( "StoreKit.Products" ) ]
```

Created 22nd April 2018, last changed 22nd April 2018.

158.8 StoreKit.QueryProducts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	Yes	No	No	No	Yes

MBS("StoreKit.QueryProducts")

Result Returns OK or error.

Description

Your app uses an StoreKit.QueryProducts and StoreKit.Products to present localized prices and other information to the user without having to maintain that list of product information itself.

Please call in start script of solution, so a few seconds later when you want to call StoreKit.Products the information is available.

Examples

Query for two products:

Set Variable [\$r ; Value: MBS("StoreKit.QueryProducts"; "123\$456")]

158.9 StoreKit.RequestReview

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	No	No	No	No	Yes

MBS("StoreKit.RequestReview")

Result Returns OK or error.

Description

Tells StoreKit to ask the user to rate or review your app, if appropriate. Works asynchronously, so function returns immediately and starts dialog later.

Although you should call this method when it makes sense in the user experience flow of your app, the actual display of a rating/review request view is governed by App Store policy. Because this method may or may not present an alert, it's not appropriate to call it in response to a button tap or other user action.

Note

When you call this method while your app is still in development mode, a rating/review request view is always displayed so that you can test the user interface and experience. However, this method has no effect when you call it in an app that you distribute using TestFlight.

When you call this method in your shipping app and a rating/review request view is displayed, the system handles the entire process for you. In addition, you can continue to include a persistent link in the settings or configuration screens of your app that deep-links to your App Store product page. To automatically open a page on which users can write a review in the App Store, append the query parameter `action=write-review` to your product URL.

158.10 StoreKit.RestoreCompletedTransactions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	Yes	No	No	No	Yes

MBS("StoreKit.RestoreCompletedTransactions" { ; Username })

Parameters

Username

Optional

An opaque identifier for the user's account on your system.

Result Returns OK or error.

Description

Your application calls this method to restore transactions that were previously finished so that you can process them again. For example, your application would use this to allow a user to unlock previously purchased content onto a new device.

When you create a new product to be sold in your store, you choose whether that product can be restored or not. See the In-App Purchase Programming Guide for more information.

The payment queue will deliver a new transaction for each previously completed transaction that can be restored. Each transaction includes a copy of the original transaction.

158.11 StoreKit.SetProductViewFinishedTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	No	No	No	No	Yes

MBS("StoreKit.SetProductViewFinishedTrigger"; Filename; ScriptName { ; Parameter })

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Parameter

Optional

Parameter to pass.

Result Returns OK or error.

Description

Script is triggered when the dialog showed via StoreKit.ShowProductView finished.

See also

- 158.14 StoreKit.ShowProductView

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	Yes	No	No	No	Yes

MBS("StoreKit.SetRestoreCompletedTransactionsTrigger"; Filename; ScriptName)

Parameters**Filename**

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

Parameter is either OK or the error from restoring.

See also

- 158.10 StoreKit.RestoreCompletedTransactions

7547

Created 22nd April 2018, last changed 22nd April 2018.

158.13 StoreKit.SetUpdatedTransactionsTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	Yes	No	No	No	Yes

MBS("StoreKit.SetUpdatedTransactionsTrigger"; Filename; ScriptName { ; Parameter })

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Parameter

Optional

Parameter to pass.

Result Returns OK or error.

Description

This method may be called often when something changes on the transactions. So you can check if they still match your state and process changes.

Created 22nd April 2018, last changed 22nd April 2018.

158.14 StoreKit.ShowProductView

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	No	No	No	No	Yes

MBS("StoreKit.ShowProductView"; iTunesItemIdentifier)

Parameters

iTunesItemIdentifier

The ID of the product to show. Must be a number.
1234

Result Returns OK or error.

Description

Be aware that this works asynchronously and the functions returns directly while the dialog shows later. It App Store doesn't return information, nothing happens.

Examples

Show product page for FileMaker Go 16:

```
Set Variable [ $r ; Value: MBS( "StoreKit.ShowProductView"; 1097917885 ) ]
```

See also

- 158.11 StoreKit.SetProductViewFinishedTrigger

158.15 StoreKit.Transactions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
158 StoreKit	8.2	Yes	No	No	No	Yes

MBS("StoreKit.Transactions")

Result Returns JSON or error.

Description

For each transaction, you find values for transactionState, error, payment, originalTransaction, transactionDate and transactionIdentifier. State can be Purchasing, Purchased, Failed, Restored or Deferred.

Examples

Queries list of transactions:

Set Variable [\$transactions; Value: MBS("StoreKit.Transactions")]

Chapter 159

SyntaxColoring

Control the syntax coloring in script and calculation editor.

159.1 SyntaxColoring.AddContextMenuCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	9.5	Yes	No	No	No	No

```
MBS( "SyntaxColoring.AddContextMenuCommand"; Title; Expression; InstallWhen { ; keyEquivalent; KeyEquivalentModifierMask } )
```

Parameters

Title

The title for the menu command. If multi line, we build submenus based on the path described. If title is just "-", we add a separator.

"MyCommands\$Hello"

Expression

The expression to evaluate in FileMaker when menu command is choosen.

InstallWhen

Whether to enable only if selection is present. 0: always on 1: need no row selected 2: need exactly one row selected 3: need one or more rows selected 4: need all rows selected

Add 8 to allow for discontinuous selections (in version 10.0 or later).

0

keyEquivalent

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

The key equivalent. Is shown right in the menu and can be pressed while menu is open.

"T"

KeyEquivalentModifierMask

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

The menu items's keyboard equivalent modifiers. NSShiftKeyMask is a valid modifier for any key equivalent in mask. This allows you to specify key-equivalents such as Command-Shift-1 that are consistent across all keyboards. However, with a few exceptions (such as the German "ß" character), a lowercase character with NSShiftKeyMask is interpreted the same as the uppercase character without that mask. For example, Command-Shift-c and Command-C are considered to be identical key equivalents.

NSShiftKeyMask 131072 Shift Key NSControlKeyMask 262144 Control Key NSAlternateKeyMask 524288 Alternate/Option Key NSCommandKeyMask 1048576 Command Key
524288 + 131072

Result Returns OK or error.

Description

Given commands are added to contextual menu in Script Workspace when right clicking on script steps. Commands are stored in preferences file and can be removed via SyntaxColoring.ClearContextMenuCommands function.

If you use Clipboard.GetFileMakerData and Clipboard.SetFileMakerData functions, you can get the XML for the current step. You may want to use Menubar.RunMenuCommand to run cut/copy/paste/delete commands from the FileMaker menu with the respective command IDs: 57635 for cut, 57634 for copy, 57637 for paste, 57632 for delete and 57642 for select all.

Possible uses include commands

- to add new script steps.
- to check scripts for errors.
- to search and replace things
- to add common snippets, possibly using SQL or text file functions to read the XML for them.
- to pass script steps as XML to external tools.

Use SyntaxColoring.RemoveContextMenuCommand to remove one or SyntaxColoring.ClearContextMenuCommands to clear all.

Examples

Add a greeting command:

```
MBS( "SyntaxColoring.AddContextMenuCommand"; "Greeting"; "MBS(\\"Msgbox\\"; \\"Hello World\\")";
0 )
```

Add a rename command for variable:

```
MBS( "SyntaxColoring.AddContextMenuCommand";
"Rename $I to $counter";
"Let ( [ r = MBS( \"Menubar.RunMenuCommand\"; 57634 /* copy */ ); xml = MBS( \"Clipboard.GetFile-
MakerData\"; \"ScriptStep\" ); xml = Substitute ( xml; \"$i\"; \"$counter\" ); r = MBS( \"Clipboard.Set-
FileMakerData\"; \"ScriptStep\"; xml ); r = MBS( \"Menubar.RunMenuCommand\"; 57637 /* paste */ )
]; \"\" ); 0 )
```

Add an insert loop command:

```
MBS( "SyntaxColoring.AddContextMenuCommand";
"Insert For Loop";
"Let ( [
xml = \"<fmxmlsnippet type=\\\"FMObjectList\\\"><Step enable=\\\"True\\\" id=\\\"89\\\" name=\\\"#
(comment)\\\"><Text>loop counting up from 1 to $count</Text></Step><Step enable=\\\"True\\\"
id=\\\"141\\\" name=\\\"Set Variable\\\"><Value><Calculation><! [ CDATA [ \\\"/* add count
here */\\\" ] ] ></Calculation></Value><Repetition><Calculation><! [ CDATA [ 1 ] ] ></Calcula-
tion></Repetition><Name>$count</Name></Step><Step enable=\\\"True\\\" id=\\\"141\\\" name=\\\"Set
Variable\\\"><Value><Calculation><! [ CDATA [ 1 ] ] ></Calculation></Value><Repetition><Cal-
culation><! [ CDATA [ 1 ] ] ></Calculation></Repetition><Name>$index</Name></Step><Step
enable=\\\"True\\\" id=\\\"68\\\" name=\\\"If\\\"><Calculation><! [ CDATA [ $index $count ] ]
></Calculation></Step><Step enable=\\\"True\\\" id=\\\"71\\\" name=\\\"Loop\\\"></Step><Step
enable=\\\"True\\\" id=\\\"89\\\" name=\\\"# (comment)\\\"><Text>your script steps here</Text></Step><Step
enable=\\\"True\\\" id=\\\"89\\\" name=\\\"# (comment)\\\"></Step><Step enable=\\\"True\\\"
id=\\\"89\\\" name=\\\"# (comment)\\\"><Text>next</Text></Step><Step enable=\\\"True\\\"
id=\\\"141\\\" name=\\\"Set Variable\\\"><Value><Calculation><! [ CDATA [ $index + 1 ] ] ></Cal-
culation></Value><Repetition><Calculation><! [ CDATA [ 1 ] ] ></Calculation></Repetition><Name>$in-
dex</Name></Step><Step enable=\\\"True\\\" id=\\\"72\\\" name=\\\"Exit Loop If\\\"><Calcu-
lation><! [ CDATA [ $index >$count ] ] ></Calculation></Step><Step enable=\\\"True\\\" id=\\\"73\\\"
name=\\\"End Loop\\\"></Step><Step enable=\\\"True\\\" id=\\\"70\\\" name=\\\"End If\\\"></Step></fmxml-
snippet>\";
r = MBS( \"Clipboard.SetFileMakerData\"; \"ScriptStep\"; xml );
r = MBS( \"Menubar.RunMenuCommand\"; 57637 /* paste */ )
]; \"\" ); 0 )
```

Add a search and replace command:

```
MBS( "SyntaxColoring.AddContextMenuCommand";
"Search and Replace";
"Let ( [
/* ask for search text via dialog */
ResetResult = MBS( \"Dialog.Reset\" );
ClearResult = MBS( \"Dialog.ClearFields\" );
MessageResult = MBS( \"Dialog.SetMessage\"; \"Search and replace in script:\" );
InfoResult = MBS( \"Dialog.SetInformativeText\"; \"Search text can include XML tags.\" );
Field1Result = MBS( \"Dialog.AddField\"; \"Search for:\" );
Field2Result = MBS( \"Dialog.AddField\"; \"Replace with:\" );
Button1Result = MBS( \"Dialog.SetDefaultButton\"; \"Replace\");
```

```
\”UTF-8\”
); 0 )
```

Add separator item:

```
MBS( ”SyntaxColoring.AddContextMenuCommand”; ”-”; ”-”; 0 )
```

// needs version 10.0 of the plugin.

Add function header:

```
MBS( ”SyntaxColoring.AddContextMenuCommand”;
”Insert function header”;
”Let ( [
xml = \”<fmxmlsnippet type=\\”FMObjectList\\”><Step enable=\\”True\\” id=\\”89\\” name=\\”#
(comment)\\”><Text>Description</Text></Step><Step enable=\\”True\\” id=\\”89\\” name=\\”#
(comment)\\”><Text>Author</Text></Step><Step enable=\\”True\\” id=\\”89\\” name=\\”#
(comment)\\”><Text>Modifications</Text></Step><Step enable=\\”True\\” id=\\”89\\” name=\\”#
(comment)\\”></Step><Step enable=\\”True\\” id=\\”85\\” name=\\”Allow User Abort\\”><Set
state=\\”False\\”></Set></Step><Step enable=\\”True\\” id=\\”86\\” name=\\”Set Error
Capture\\”><Set state=\\”True\\”></Set></Step><Step enable=\\”True\\” id=\\”89\\” name=\\”#
(comment)\\”></Step><Step enable=\\”True\\” id=\\”141\\” name=\\”Set Variable\\”><Value><Cal-
culation><! [ CDATA [ Get(ScriptParameter) ] ] ></Calculation></Value><Repetition><Calculation><!
[ CDATA [ 1 ] ] ></Calculation></Repetition><Name>$param</Name></Step><Step enable=\\”True\\”
id=\\”89\\” name=\\”# (comment)\\”></Step><Step enable=\\”True\\” id=\\”89\\” name=\\”#
(comment)\\”></Step><Step enable=\\”True\\” id=\\”89\\” name=\\”# (comment)\\”></Step><Step
enable=\\”True\\” id=\\”141\\” name=\\”Set Variable\\”><Value><Calculation><! [ CDATA
[ \\”\\” ] ] ></Calculation></Value><Repetition><Calculation><! [ CDATA [ 1 ] ] ></Calcula-
tion></Repetition><Name>$result</Name></Step><Step enable=\\”True\\” id=\\”103\\” name=\\”Exit
Script\\”><Calculation><! [ CDATA [ $result ] ] ></Calculation></Step></fmxmlsnippet>\””;
r = MBS( \”Clipboard.SetFileMakerData\”; \”ScriptStep\”; xml );
r = MBS( \”MenuBar.RunMenuCommand\”; 57637 /* paste */ )
]; \”\” ); 0 )
```

Add command to paste snippet from folder picked by dialog:

// put snippets as xml files into ~/Library/Application Support/FileMaker/Snippets folder.

```
MBS( ”SyntaxColoring.AddContextMenuCommand”;
”Insert snippet from snippet folder”;
”Let( [
Path = MBS( \”Path.AddPathComponent\”; MBS( \”Folders.UserHome\” ); \”Library\”; \”Application
Support\”; \”FileMaker\”; \”Snippets\”);
Files = MBS( \”Files.List\”; Path; 1+4);
Names = MBS( \”List.RemovePostfix\”; Files; \”.xml\”; 1);
r = MBS( \”ListDialog.Reset\” ) & MBS( \”ListDialog.AddItemToList\”; Names; Files ) & MBS( \”List-
Dialog.SetPrompt\”; \”Choose snippet to insert:\” );
```

```
answer = MBS( \”ListDialog.ShowDialog\” );
r = If(answer = \”OK\”; MBS( \”Clipboard.SetFileMakerData\”; \”ScriptStep\”; MBS( \”Text.Read-
TextFile\”; MBS( \”Path.AddPathComponent\”; Path; MBS( \”ListDialog.GetSelectedTag\” )); \”UTF-
8\” ) ) & MBS( \”Menuubar.RunMenuCommand\”; 57637 /* paste */ ) ] ; 0” ; 0 )
```

Add duplicate context menu entry:

```
MBS( ”SyntaxColoring.AddContextMenuCommand”; ”Duplicate”;
”Let ( [ r = MBS( \”Menuubar.RunMenuCommand\”; 49182 /* duplicate */ ) ] ; \”\” ); 3 )
```

159.2 SyntaxColoring.AddTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.0	Yes	No	No	No	No

MBS("SyntaxColoring.AddTag"; Selector; Text; Color)

Parameters

Selector

What item to color with this tag. Can be ScriptStep, Function, Variable or Formula.
"Formula"

Text

The name of the item. Up to five words from the left name of the command.
"If"

Color

The color value. Can be one of a few english color names or "# 123456" notation like in html.
"red"

Result Returns OK on success.

Description

Settings are saved in preferences files and you can use different settings in different FileMaker versions.
Works with FileMaker 11 or newer.

Default tags defined for script steps:

Possible tag names for syntax coloring in calculations:

Some color names you can use for syntax coloring:

Black, Gray, DarkGray, LightGray, Blue, Brown, Cyan, Green, Magenta, Orange, Purple, Red, Yellow, White, alternateSelectedControlColor, alternateSelectedControlTextColor, controlBackgroundColor, controlColor, controlDarkShadowColor, controlHighlightColor, controlLightHighlightColor, controlShadowColor, controlTextColor, disabledControlTextColor, gridColor, headerColor, headerTextColor, highlightColor, keyboardFocusIndicatorColor, knobColor, scrollBarColor, secondarySelectedControlColor, selectedControlColor, selectedControlTextColor, selectedKnobColor, selectedMenuItemColor, selectedMenuItemTextColor, selectedTextBackgroundColor, selectedTextColor, shadowColor, textBackgroundColor, textColor, windowBackgroundColor, windowFrameColor, windowFrameTextColor, Cantaloupe, Honeydew, Spindrift, Sky, Lavender, Carnation, Licorice, Snow, Salmon, Banana, Flora, Ice, Orchid, Bubblegum, Lead, Mercury, Tangerine, Lime, "Sea Foam", Aqua, Grape, Strawberry, Tungsten, Silver, Maraschino, Lemon, Spring, Turquoise, Blueberry, Magenta, Iron, Magnesium, Mocha, Fern, Moss, Ocean, Eggplant, Maroon, Steel, Aluminum, Cayenne, Asparagus, Clover, Teal, Midnight, Plum, Tin and Nickel.

Examples

Enable coloring for set variable script step in German:

Sonst	blue
Sonst,	blue
Wenn	blue
Ende	blue
Schleife	teal
Verlasse	teal
If	blue
Else	blue
End If	blue
Loop	teal
End Loop	teal
Exit Loop	teal
Si	blue
Simon	blue
Fin de si	blue
Boucle	teal
Fin de Boucle	teal
commented formula	red

```
MBS( "SyntaxColoring.AddTag"; "ScriptStep"; "Variable setzen"; "# FF0000" )
```

Set blue color for round bracket:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "round bracket color"; "blue" )
```

Set green color for equal sign:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "equal bracket color"; "green" )
```

Set green color for plus sign:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "plus sign color"; "# 00FF00" )
```

Enable coloring for set variable script step for missing field:

```
MBS( "SyntaxColoring.AddTag"; "ScriptStep"; "*<Missing Field>*"; "# FF0000" )
```

Color Hole() function blue in formulas:

```
MBS( "SyntaxColoring.AddTag"; "Function"; "Hole"; "blue" )
```

Color variable \$\$UserID blue in formulas:

```
MBS( "SyntaxColoring.AddTag"; "Variable"; "$$UserID"; "blue" )
```

Name	Default
round bracket color	blue
square bracket color	purple
curly bracket color	purple
wrong bracket color	red
text color	teal
variable color	plum
tilde variable color	-
underscore variable color	-
cent variable color	-
plus sign color	-
minus sign color	-
function color	-
and sign color	-
slash sign color	-
star sign color	-
paragraph sign color	-
caret sign color	-
equal sign color	-
not equal sign color	-
bigger sign color	-
smaller sign color	-
bigger equal sign color	-
smaller equal sign color	-
number color	-
comment color	-
function color	-
and color	-
or color	-
not color	-
xor color	-
field color	-

Color all other functions in light red:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "function color"; "Salmon" )
```

Set comment color to gray:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "comment color"; "gray" )
```

Set color for undefined variables in script to red:

```
MBS( "SyntaxColoring.AddTag"; "ScriptStep"; "undefined variable color"; "red" )
```

Set color for tilde variable names:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "tilde variable color"; "green" )
```

Set color for underscore variable names:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "underscore variable color"; "red" )
```

Set color for cent variable names:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "cent variable color"; "green" )
```

Set color for field names:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "field color"; "blue" )
```

Set color for and:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "and color"; "red" )
```

Set comment script steps to be dark green:

```
MBS( "SyntaxColoring.AddTag"; "ScriptStep"; "# "; "# 007700" )
```

Color red all values starting with comment:

```
MBS( "SyntaxColoring.AddTag"; "ScriptStep"; "**Value: /**"; "red" )
```

Set color for global variables:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "global variable color"; "# ff69b4" )
```

Set color for <>in formula:

```
MBS( "SyntaxColoring.AddTag"; "Formula"; "smaller bigger sign color"; "# 0000FF" )
```

159.3 SyntaxColoring.CheckVariableDeclaration.Disable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.5	Yes	No	No	No	No

MBS("SyntaxColoring.CheckVariableDeclaration.Disable")

Result Returns OK on success.

Description

Settings are saved in preferences files and you can use different settings in different FileMaker versions.

Works with FileMaker 11 or newer.

Checking variable declarations can only be enabled in FileMaker Pro, not in server or runtime versions.

This setting can be set via the preferences dialog, too.

Examples

Enable or disable checking variable declarations:

If (Enable)

```
Set Variable [ $r; MBS( "SyntaxColoring.CheckVariableDeclaration.Enable" ) ]
```

else

```
Set Variable [ $r; MBS( "SyntaxColoring.CheckVariableDeclaration.Disable" ) ]
```

end if

Declare variable via comment:

```
# Declare variables via comment as plugin has no way to know easily that $test is defined here
```

```
# @parameter $param1
```

```
# @parameter $param2
```

```
Set Variable [ $r ; Value: Let ( [ parameters = Get(ScriptParameter); $param1 = GetValue(parameters; 1);  
$param2 = GetValue(parameters; 2) ] ; 1 ) ]
```

159.4 SyntaxColoring.CheckVariableDeclaration.Enable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.5	Yes	No	No	No	No

MBS("SyntaxColoring.CheckVariableDeclaration.Enable")

Result Returns OK on success.

Description

Settings are saved in preferences files and you can use different settings in different FileMaker versions.

Works with FileMaker 11 or newer.

Checking variable declarations can only be enabled in FileMaker Pro, not in server or runtime versions.

By default this is off. It takes some additional CPU time for drawing the script and not everyone may want to have it on. Of course the extra work for the CPU should not be noticeable to the developer. Variable names declared inside Let commands are not recognized.

May only work in Advanced version of FileMaker.

You can declare variables in comment when writing @param, @variable or @constant in the comment followed by variable name.

Examples

Enable or disable checking variable declarations:

If (Enable)

```
Set Variable [ $r; MBS( "SyntaxColoring.CheckVariableDeclaration.Enable" ) ]
```

else

```
Set Variable [ $r; MBS( "SyntaxColoring.CheckVariableDeclaration.Disable" ) ]
```

end if

Use @variable to declare variable:

```
# Declare variable via comment as plugin has no way to know easily that $test is defined here
```

```
# @variable $test
```

```
Insert Current Time [ Select ; Target: $test ]
```

Declare variable via comment:

```
# Declare variables via comment as plugin has no way to know easily that $test is defined here
```

```
# @parameter $param1
```

```
# @parameter $param2
```

```
Set Variable [ $r ; Value: Let ( [ parameters = Get(ScriptParameter); $param1 = GetValue(parameters; 1); $param2 = GetValue(parameters; 2) ] ; 1 ) ]
```

159.5 SyntaxColoring.CheckVariableDeclaration.Enabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.5	Yes	No	No	No	No

MBS("SyntaxColoring.CheckVariableDeclaration.Enabled")

Result Returns 1 if checking variable declarations are enabled and 0 if not.

Description

Examples

Check if enabled:

```
Set Variable [ $emab; MBS( "SyntaxColoring.CheckVariableDeclaration.Enabled" ) ]
```

Enable all the plugin enhancements for FileMaker:

```
MBS("SyntaxColoring.CopyButton.SetEnabled"; 1)
MBS("SyntaxColoring.ScriptSearchBox.SetEnabled"; 1)
MBS("SyntaxColoring.ScriptGoTOBox.SetEnabled"; 1)
MBS("SyntaxColoring.RelationGraphSearchBox.SetEnabled"; 1)
MBS( "SyntaxColoring.CheckVariableDeclaration.Enable" )
MBS( "SyntaxColoring.LineNumbers.Enable" )
MBS( "SyntaxColoring.SetScriptHighlightColor"; "# CCCCFF" )
```

Use @variable to declare variable:

```
# Declare variable via comment as plugin has no way to know easily that $test is defined here
# @variable $test
Insert Current Time [ Select ; Target: $test ]
```

Declare variable via comment:

```
# Declare variables via comment as plugin has no way to know easily that $test is defined here
# @parameter $param1
# @parameter $param2
Set Variable [ $r ; Value: Let ( [ parameters = Get(ScriptParameter); $param1 = GetValue(parameters; 1);
$param2 = GetValue(parameters; 2) ] ; 1 ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	6.0	Yes	No	No	No	No

MBS("SyntaxColoring.ContextualMenuEnabled.SetEnabled"; Value)

Parameters

Value

The new setting: 1 to enable or 0 to disable.

Result Returns OK or error.

Description

The plugin provides a Copy Table Content command for all FileMaker tables.

Unless FileMaker has it's own contextual menu.

This setting can be set via the preferences dialog, too.

159.14 SyntaxColoring.CopyButton.SetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	5.2	Yes	No	No	No	No

MBS("SyntaxColoring.CopyButton.SetEnabled"; Value)

Parameters

Value

The new setting. Pass 1 to show button or 0 to disable.

1

Result Returns OK or error.

Description

MBS Plugin offers to add a script button on Mac OS X and this function sets the preferences on whether it's visible or not.

This setting can be set via the preferences dialog, too.

Examples

Enable button:

```
MBS( "SyntaxColoring.CopyButton.SetEnabled"; 1 )
```

Disable copy button:

```
MBS("SyntaxColoring.CopyButton.SetEnabled"; 0)
```

Enable all the plugin enhancements for FileMaker:

```
MBS("SyntaxColoring.CopyButton.SetEnabled"; 1)
MBS("SyntaxColoring.ScriptSearchBox.SetEnabled"; 1)
MBS("SyntaxColoring.ScriptGoToBox.SetEnabled"; 1)
MBS("SyntaxColoring.RelationGraphSearchBox.SetEnabled"; 1)
MBS( "SyntaxColoring.CheckVariableDeclaration.Enable" )
MBS( "SyntaxColoring.LineNumbers.Enable" )
MBS( "SyntaxColoring.SetScriptHighlightColor"; "# CCCCFF" )
```

159.15 SyntaxColoring.Disable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.0	Yes	No	No	No	No

MBS("SyntaxColoring.Disable")

Result Returns OK on success.

Description

Settings are saved in preferences files and you can use different settings in different FileMaker versions. Works with FileMaker 11 or newer.

Syntax color can only be enabled in FileMaker Pro, not in server or runtime versions. See also SyntaxColoring.Enable.

Disabling colors also disables line numbers and script search.

Examples

Enable or disable syntax coloring:

```
If (Enable)
Set Variable [ $r; MBS( "SyntaxColoring.Enable" ) ]
else
Set Variable [ $r; MBS( "SyntaxColoring.Disable" ) ]
end if
```

159.15.1 Blog Entries

- [MBS FileMaker Plugin, version 5.2pr1](#)

Created 18th August 2014, last changed 15th June 2016.

159.16 SyntaxColoring.Enable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.0	Yes	No	No	No	No

MBS("SyntaxColoring.Enable")

Result Returns OK on success.

Description

Our color syntax code is very careful. It registers a callback to change the color just before FileMaker draws a text in the table in script editor. If future FileMaker versions, change something there, it's most likely the plugin will simply stop coloring and FileMaker works as before.

Settings are saved in preferences files and you can use different settings in different FileMaker versions.

Works with FileMaker 11 or newer.

Syntax color can only be enabled in FileMaker Pro, not in server or runtime versions.

See also [SyntaxColoring.Disable](#).

This setting can be set via the preferences dialog, too.

Examples

Enable or disable syntax coloring:

```
If (Enable)
Set Variable [ $r; MBS( "SyntaxColoring.Enable" ) ]
else
Set Variable [ $r; MBS( "SyntaxColoring.Disable" ) ]
end if
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.0	Yes	No	No	No	No

MBS("SyntaxColoring.Format"; Text; Copy)

Parameters

Text

The formula text to format.

"5+6+cos(\$test)"

Copy

Pass 1 to copy result to clipboard. This preserves links and all formatting.

Result Returns formatted text.

Description

Examples

Format a line:

```
$r = MBS( "SyntaxColoring.Format"; "5+6+cos($test)" )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.0	Yes	No	No	No	No

MBS("SyntaxColoring.GetTag"; Text)

Parameters

Text

The name of the item. Up to five words from the left name of the command.
"If"

Result Returns the color in hex style (e.g. # FF0000 for red)

Description

Examples

Queries the color for plus sign:

MBS("SyntaxColoring.GetTag"; "+")

159.38 SyntaxColoring.GetUseBoldFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	6.1	Yes	No	No	No	No

MBS("SyntaxColoring.GetUseBoldFont")

Result Returns 1, 0 or error.

Description

The MBS Plugin uses bold font for brackets in syntax coloring, so you see it better.

You can disable that as some people have problems with brackets being invisible due to font problems.

See also

- 159.73 SyntaxColoring.SetUseBoldFont

Created 29th January 2016, last changed 29th January 2016.

159.39 SyntaxColoring.LineNumbers.Disable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.5	Yes	No	No	No	No

MBS("SyntaxColoring.LineNumbers.Disable")

Result Returns OK on success.

Description

Settings are saved in preferences files and you can use different settings in different FileMaker versions.

Works with FileMaker 11 or newer.

Line numbers can only be enabled in FileMaker Pro, not in server or runtime versions.

This setting can be set via the preferences dialog, too.

Examples

Enable or disable Line Numbers:

If (Enable)

Set Variable [\$r; MBS("SyntaxColoring.LineNumbers.Enable")]

else

Set Variable [\$r; MBS("SyntaxColoring.LineNumbers.Disable")]

end if

159.42 SyntaxColoring.LineNumbers.GetColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	3.5	Yes	No	No	No	No

MBS("SyntaxColoring.LineNumbers.GetColor" { ; ReturnAsNumbers })

Parameters

ReturnAsNumbers

Optional

Available in MBS FileMaker Plugin 8.3 or newer.

Pass 1 to return color as list of red, green and blue, e.g. "123§234§56" Pass 0 (default) for return as hex value, e.g. "7788FF".

0

Result Returns color or error.

Description

Color is returned in hex notation like with HTML. e.g. "# 123456"

Created 12nd November 2017, last changed 12nd November 2017.

159.57 SyntaxColoring.SetAddFindbars

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	8.0	Yes	No	No	No	No

MBS("SyntaxColoring.SetAddFindbars"; Value)

Parameters

Value

The new setting. Can be 1 or 0.

1

Result Returns OK or error.

Description

The plugin watches Command-F and if you are focussed on a scrollable text view, we can show the find bar from macOS. That's a standard feature of macOS and we just enable it.

It can be that FileMaker does not draw everything perfectly as we add a control to the view hierarchy. Also the find bar is probably not designed to be running in a modal dialog. Still it is helpful.

This option also enables to copy the content of the field with formatting using Command-Option-C.

This setting can be set via the preferences dialog, too.

159.58 SyntaxColoring.SetBlackFieldPicker

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	7.4	Yes	No	No	No	No

MBS("SyntaxColoring.SetBlackFieldPicker"; Value)

Parameters

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Our plugin can on macOS optionally make the field picker black to better read text.

Also applied for settings panel for buttons, popover and button bar.

This setting can be set via the preferences dialog, too.

- [MBS FileMaker Plugin, version 7.4pr7](#)

Created 20th September 2017, last changed 11st November 2019.

159.59 SyntaxColoring.SetFontName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	10.1	Yes	No	No	No	No

MBS("SyntaxColoring.SetFontName"; FontName)

Parameters

FontName

The new font name to use. Pass empty text to disable feature.
"JetBrains Mono"

Result Returns OK or error.

Description

Our plugin replaces the font used in script workspace and calculation dialog with the given font. After setting font you may need to restart FileMaker before script workspace applies the new font.

Works for FileMaker 16 and newer.

You may need to restart FileMaker to see the change!

159.60 SyntaxColoring.SetFontSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	10.1	Yes	No	No	No	No

MBS("SyntaxColoring.SetFontSize"; FontSize)

Parameters

FontSize

The new font size.

12

Result Returns OK or error.

Description

Size is zero for default. Range should be 11 to 18.

Works for FileMaker 16 and newer.

You may need to restart FileMaker to see the change!

159.62 SyntaxColoring.SetMinCalcFontSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	7.2	Yes	No	No	No	No

MBS("SyntaxColoring.SetMinCalcFontSize"; FontSize)

Parameters

FontSize

The new minimum font size. Range 0 (off) to 30.
16

Result Returns OK or error.

Description

The plugin will apply this font size setting when formatting the text in the formula fields. You may need to actually click in the field and press a key to activate it. This setting can be set via the preferences dialog, too.

Examples

Use 14 point big font:

MBS("SyntaxColoring.SetMinCalcFontSize"; 14)

Turn off by using 0:

MBS("SyntaxColoring.SetMinCalcFontSize"; 0)

159.63 SyntaxColoring.SetRelationGraphSearchBoxPreferredSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	6.3	Yes	No	Yes, macOS only	No	No

MBS("SyntaxColoring.SetRelationGraphSearchBoxPreferredSize"; Size)

Parameters

Size

The preferred size of the search box.

200

Result Returns OK or error.

Description

This setting can be set via the preferences dialog, too.

Examples

Request 500 pixel width:

MBS("SyntaxColoring.SetRelationGraphPreferredSize"; 500)

159.64 SyntaxColoring.SetRememberColumnWidths

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	8.5	Yes	No	No	No	No

MBS("SyntaxColoring.SetRememberColumnWidths"; Value)

Parameters

Value

The new setting. Pass 1 to enable or 0 to disable. Default is 1 to enable.

1

Result Returns OK or error.

Description

This setting can be set via the preferences dialog, too.

Examples

Disable column width saving:

```
MBS( "SyntaxColoring.SetRememberColumnWidths"; 0 )
```

Enable column width saving:

```
MBS( "SyntaxColoring.SetRememberColumnWidths"; 1 )
```

159.66 SyntaxColoring.SetScriptHighlightColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	5.4	Yes	No	No	No	No

MBS("SyntaxColoring.SetScriptHighlightColor"; Color)

Parameters

Color

The color value. Can be one of a few english color names or "# 123456" notation like in html.
"red"

Result Returns OK or error.

Description

If a color is set, the MBS Plugin overlays the selections in FileMaker script editor with this color.

Set to nothing to clear color.

Only for FileMaker 14 and newer.

Does not work if Syntax Highlighting is off.

Examples

Set to red with hex color:

```
MBS("SyntaxColoring.SetScriptHighlightColor"; "# FF0000")
```

Set to dark blue:

```
MBS("SyntaxColoring.SetScriptHighlightColor"; "blue")
```

Set to red:

```
MBS( "SyntaxColoring.SetScriptHighlightColor"; "# FF8888" )
```

Set to blue:

```
MBS( "SyntaxColoring.SetScriptHighlightColor"; "# CCCCFF" )
```

Enable all the plugin enhancements for FileMaker:

```
MBS("SyntaxColoring.CopyButton.SetEnabled"; 1)
MBS("SyntaxColoring.ScriptSearchBox.SetEnabled"; 1)
MBS("SyntaxColoring.ScriptGoTOBox.SetEnabled"; 1)
MBS("SyntaxColoring.RelationGraphSearchBox.SetEnabled"; 1)
MBS( "SyntaxColoring.CheckVariableDeclaration.Enable" )
MBS( "SyntaxColoring.LineNumbers.Enable" )
MBS( "SyntaxColoring.SetScriptHighlightColor"; "# CCCCFF" )
```

159.67 SyntaxColoring.SetScriptIfColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	6.1	Yes	No	No	No	No

MBS("SyntaxColoring.SetScriptIfColor"; Color)

Parameters

Color

The color value. Can be one of a few english color names or "# 123456" notation like in html.
"red"

Result Returns OK or error.

Description

Uses to highlight the script lines (if, endif and else) for the current if block if one of those steps is selected.
Set to nothing to use default color.

Does not work if Syntax Highlighting is off.

Examples

Set to red:

MBS("SyntaxColoring.SetScriptIfColor"; "# FF8888")

159.68 SyntaxColoring.SetScriptLoopColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	6.1	Yes	No	No	No	No

MBS("SyntaxColoring.SetScriptLoopColor"; Color)

Parameters

Color

The color value. Can be one of a few english color names or "# 123456" notation like in html.
"red"

Result Returns OK or error.

Description

Uses to highlight the script lines (loop, end loop and exif loop if) for the current loop if one of those steps is selected.

Set to nothing to use default color.

Does not work if Syntax Highlighting is off.

Examples

Set to red:

MBS("SyntaxColoring.SetScriptLoopColor"; "# FF8888")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	6.1	Yes	No	No	No	No

MBS("SyntaxColoring.SetScriptSearchColor"; Color)

Parameters

Color

The color value. Can be one of a few english color names or "# 123456" notation like in html. "red"

Result Returns OK or error.

Description

Uses to highlight the script lines matching the current search terms.

Set to nothing to use default color.

Does not work if Syntax Highlighting is off.

Examples

Set to red:

MBS("SyntaxColoring.SetScriptSearchColor"; "# FF8888")

159.70 SyntaxColoring.SetShowFieldAndTableIDs

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	7.4	Yes	No	No	No	No

MBS("SyntaxColoring.SetShowFieldAndTableIDs"; Value)

Parameters

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Our plugin can optionally show checkboxes for field and table IDs in database design dialog.

You can check them to show a column with IDs. As querying IDs can take a while, we make those checkboxes and have them off by default.

If IDs can not be found, we show a question mark.

If between two IDs one is missing, we add a star.

Please report sample databases which do not show them so we can fix issues.

This setting can be set via the preferences dialog, too.

159.72 SyntaxColoring.SetShowScriptIDs

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	7.4	Yes	No	No	No	No

MBS("SyntaxColoring.SetShowScriptIDs"; Value)

Parameters

Value

The new setting. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Our plugin can optionally show script IDs in the script workspace.

The plugin adds an extra column with ID. If the ID can't be queried for any reason, you should see a question mark.

This setting can be set via the preferences dialog, too.

See also

- 159.34 SyntaxColoring.GetShowLayoutIDs 7598

159.73 SyntaxColoring.SetUseBoldFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	6.1	Yes	No	No	No	No

MBS("SyntaxColoring.SetUseBoldFont"; Value)

Parameters

Value

The new setting. Pass 1 to use bold or 0 to keep normal font.

1

Result Returns OK or error.

Description

The MBS Plugin uses bold font for brackets in syntax coloring, so you see it better.

You can disable that as some people have problems with brackets being invisible due to font problems.

This may happen more often on asian character sets like Japanese where OS X uses different fonts.

Examples

Disable bold font:

MBS("SyntaxColoring.SetUseBoldFont"; 0)

Enable bold font:

MBS("SyntaxColoring.SetUseBoldFont"; 1)

159.75 SyntaxColoring.ShowTextPositions.SetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
159 SyntaxColoring	9.5	Yes	No	No	No	No

MBS("SyntaxColoring.ShowTextPositions.SetEnabled"; Value)

Parameters

Value

The new value. Pass 1 to enable or 0 to disable.

Result Returns OK or error.

Description

The MBS Plugin can show text position and selection length for calculation dialog or custom functions dialog.

Can be enabled/disabled in preferences dialog, too.

Text positions are only enabled by the plugin if the advanced tools in FileMaker preferences are enabled, so they don't show up for ordinary people just installing FileMaker Pro.

Chapter 161

SystemInfo

Query system information details.

161.1 SystemInfo.ADSystemInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo 102 LDAP	9.3	No	Yes	No	No	No

MBS("SystemInfo.ADSystemInfo")

Result Returns JSON or error.

Description

This call may take a second if a query needs to be sent to server.

Returns JSON with details including UserName, ComputerName, SiteName, DomainShortName, DomainDNSName, ForestDNSName, PDCRoleOwner, SchemaRoleOwner, IsNativeMode, DCName and DCSiteName.

The result is an empty JSON object in case of no Active Directory in use.

Examples

Query Active Directory details on Windows:

MBS("SystemInfo.ADSystemInfo")

Example result: {

"UserName": "CN=John Doe,OU=2SH User,DC=2SXXX,DC=2S",

"ComputerName": "CN=2SMBP16W10,CN=Computers,DC=2SXXX,DC=2S",

"SiteName": "Default-First-Site-Name",

"DomainShortName": "2SXXX",

"DomainDNSName": "2SXXX.2S",

"ForestDNSName": "2SXXX.2S",

"PDCRoleOwner": "CN=NTDS Settings,CN=2SDCERP,CN=Servers,CN=Default-First-Site-Name,CN=Sites,CN=Configuration,DC=2SXXX,DC=2S"

```
"SchemaRoleOwner": "CN=NTDS Settings,CN=2SDCERP,CN=Servers,CN=Default-First-Site-Name,CN=Sites,CN=Configuration,DC=example,DC=com",
"IsNativeMode": true,
"DCName": "2SDCSTORAGE.2SXXX.2S",
"DCSiteName": "Default-First-Site-Name"
}
```

161.2 SystemInfo.AvailableRAM

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	1.5	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.AvailableRAM")

Result Returns byte count.

Description

See also SystemInfo.AvailableRAM and App.MemoryUsed.

Examples

Show RAM available:

```
Set Variable [ $a; Round(MBS("SystemInfo.AvailableRAM") / 1024 / 1024 / 1024; 1) ]
```

```
Set Variable [ $b; Round(MBS("SystemInfo.PhysicalRAM") / 1024 / 1024 / 1024; 1) ]
```

```
Show Custom Dialog [ $a & " of " & $b & " GB free." ]
```

See also

- 34.9 App.MemoryUsed 917

161.2.1 FileMaker Magazin

- Ausgabe 6/2018, Seite 23

Created 18th August 2014, last changed 18th January 2018.

161.3 SystemInfo.CPUBrandString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.CPUBrandString")

Result Returns brand or empty text.

Description

If it is an Intel x86 Chip or something compatible, you get strings like this: "Intel(R) Core(TM) i7 CPU M 620 @ 2.67GHz".

on FileMaker Cloud with a small EC2 instance, e.g. "Intel(R) Xeon(R) CPU E5-2676 v3 @ 2.40GHz"

Examples

Shows CPU Brand String:

Show Custom Dialog ["Info"; MBS("SystemInfo.CPUBrandString")]

Created 18th August 2014, last changed 3th October 2016.

161.4 SystemInfo.ComputerName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	1.5	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.ComputerName")

Result Returns name or error.

Description

Examples

Shows computer name:

Show Custom Dialog [MBS("SystemInfo.ComputerName")]

See also

- [161.5 SystemInfo.DomainName](#)

161.4.1 Blog Entries

- [MBS FileMaker Plugin, version 8.5pr5](#)
- [Filemaker Notes](#)

Created 18th August 2014, last changed 18th August 2014.

161.5 SystemInfo.DomainName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.DomainName")

Result Returns error or text.

Description

Mac supported added in plugin version 4.5.

The name may not be set for a computer.

See also SystemInfo.HostDNSName and SystemInfo.HostName.

Examples

Shows Domainname:

```
Show Custom Dialog [ "Info"; MBS( "SystemInfo.DomainName" ) ]
```

See also

- 161.4 SystemInfo.ComputerName 7655
- 161.8 SystemInfo.HostDNSName 7659
- 161.9 SystemInfo.HostName 7660

Created 18th August 2014, last changed 24th February 2016.

161.6 SystemInfo.DoubleClickTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	3.1	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.DoubleClickTime")

Result Returns number with double click time.

Description

You can use that value to determine if two mouse clicks should be handled as a double click or as two single clicks.

Examples

Queries double click time:

```
$r = MBS( "SystemInfo.DoubleClickTime" )
```

161.6.1 Blog Entries

- [MBS Filemaker Plugin, version 3.1pr4](#)

Created 18th August 2014, last changed 18th August 2014.

161.7 SystemInfo.HardDiscSerial

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.HardDiscSerial")

Result Returns text with serial number or empty text.

Description

Can be empty if no serial number exists, the plugin fails to query it, e.g. due to missing permissions.

Examples

Shows hard disk serial:

```
Show Custom Dialog [ "Info"; MBS( "SystemInfo.HardDiscSerial" ) ]
```

161.8 SystemInfo.HostDNSName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	5.0	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.HostDNSName")

Result Returns name or error.

Description

See also SystemInfo.DomainName and SystemInfo.HostName.

See also

- 161.5 SystemInfo.DomainName 7656
- 161.9 SystemInfo.HostName 7660

161.8.1 Blog Entries

161.9 SystemInfo.HostName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.HostName")

Result Returns name or error.

Description

See also SystemInfo.HostDNSName and SystemInfo.DomainName.

With FileMaker Cloud (Linux) the result may be just the IP if no hostname is configured, e.g. "ip-172-31-21-142"

Examples

Shows host name:

```
Show Custom Dialog [ MBS("SystemInfo.HostName") ]
```

161.10 SystemInfo.IdleTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	3.3	Yes	Yes	No	No	No

MBS("SystemInfo.IdleTime")

(old name: SystemInfo.MacGlobalIdleTime)

Result Returns value or error.

Description

This time comes from HID system and informs you how long no mouse or keyboard has been used. You can check this regularly in a timer script and do things like an auto logout.

If you use EventMonitor.Install function, this function may be better with remote control. With remote controlled PC, the local mouse and keyboard devices are not used, so the HID idle time is high. But with event monitor we see events from user and can reset idle counter.

Examples

Shows idle time:

```
Pause/Resume Script [ Duration (seconds): 2 ]
Show Custom Dialog [ "Info"; MBS( "SystemInfo.IdleTime" ) ]
```

See also

- [75.4 EventMonitor.Install](#) 3496

161.11 SystemInfo.Is64bitWindows

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.Is64bitWindows")

Result Returns 1 or 0.

Description

Returns 1 if you are in a 32-bit app running on a 64-bit windows.
Returns 0 otherwise, e.g. 64-bit app on 64-bit Windows.

See also Is64bit function to know if you are in a 64-bit application.

Examples

Shows 64-bit Windows:

```
Show Custom Dialog [ "Info"; MBS( "SystemInfo.Is64bitWindows" ) ]
```

See also

- 124.4 Is64bit

6264

Created 18th August 2014, last changed 12nd May 2017.

161.12 SystemInfo.IsAdminUser

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	5.2	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.IsAdminUser")

Result Returns 0 or 1.

Description

Returns 1 for admin or 0 for non admin.

Normally you should not need to know, because you try what you plan to do and see if you get a permission error. Than you can report that error.

Examples

Checks for admin account:

```
$r = MBS( "SystemInfo.IsAdminUser" )
```

161.12.1 Blog Entries

161.14 SystemInfo.MacAppDarkMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	9.5	Yes	No	No	No	No

MBS("SystemInfo.MacAppDarkMode")

Result Returns 1, 0 or error.

Description

Returns 1 if application runs in dark mode.

Examples

Query dark mode values:

```
MBS( "SystemInfo.MacSystemDarkMode" ) & §& MBS( "SystemInfo.MacAppDarkMode" )
```

See also

161.16 SystemInfo.MacBugFixVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.MacBugFixVersion")

Result The minor version number.

Description

In Mac OS X 10.4.17 this would be the decimal value 17.

Examples

Shows Mac OS Version:

```
Show Custom Dialog [ "OS Version"; MBS( "SystemInfo.MacMajorVersion" ) & "." & MBS( "System-Info.MacMinorVersion" ) & "." & MBS( "SystemInfo.MacBugfixVersion" ) ]
```

See also

161.17 SystemInfo.MacHasHardwareAcceleratedCoreImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	1.5	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.MacHasHardwareAcceleratedCoreImage")

Description

Created 18th August 2014, last changed 18th August 2014.

161.18 SystemInfo.MacMajorVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.MacMajorVersion")

Result The major version number.

Description

In Mac OS X 10.4.17 this would be the decimal value 10.

Examples

Shows Mac OS Version:

```
Show Custom Dialog [ "OS Version"; MBS( "SystemInfo.MacMajorVersion" ) & "." & MBS( "System-Info.MacMinorVersion" ) & "." & MBS( "SystemInfo.MacBugfixVersion" ) ]
```

- 161.37 SystemInfo.WinMajorVersion 7690
- 161.38 SystemInfo.WinMinorVersion 7691

Created 18th August 2014, last changed 24th February 2016.

161.19 SystemInfo.MacMinorVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.MacMinorVersion")

Result The minor version number.

Description

In Mac OS X 10.4.17 this would be the decimal value 4.

Examples

Shows Mac OS Version:

```
Show Custom Dialog [ "OS Version"; MBS( "SystemInfo.MacMajorVersion" ) & "." & MBS( "System-Info.MacMinorVersion" ) & "." & MBS( "SystemInfo.MacBugfixVersion" ) ]
```

161.22 SystemInfo.MacSerialNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	1.5	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.MacSerialNumber")

Description

This is a unique ID for each Mac. You can see this number by choosing "About this Mac" from the Apple menu, and then selecting more information.

Examples

Check for serial number:

```
Show Custom Dialog [ "Mac SerialNumber?" ; MBS( "SystemInfo.MacSerialNumber" ) ]
```

Created 18th August 2014, last changed 25th November 2019.

161.23 SystemInfo.MacSystemDarkMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	9.5	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.MacSystemDarkMode")

Result Returns OK or error.

Description

Returns 1 if system runs in dark mode.

The application may not run in dark mode, even if system has dark mode.

Examples

Query dark mode values:

```
MBS( "SystemInfo.MacSystemDarkMode" ) & §& MBS( "SystemInfo.MacAppDarkMode" )
```

161.24 SystemInfo.MacUUID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	1.5	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.MacUUID")

Description

This is a unique ID for a the Mac system. In its canonical form, a UUID consists of 32 hexadecimal digits, displayed in 5 groups separated by hyphens, in the form 8-4-4-4-12 for a total of 36 characters. For example: 550e8400-e29b-41d4-a716-446655440000

Examples

Shows Mac UUID:

Show Custom Dialog ["Mac UUID"; MBS("SystemInfo.MacUUID")]

See also

161.25 SystemInfo.MacVRAMSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	1.5	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.MacVRAMSize")

Description

Created 18th August 2014, last changed 18th August 2014.

161.26 SystemInfo.NetworkStats

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	10.0	Yes	No	Yes, macOS only	No	No

MBS("SystemInfo.NetworkStats"; Name)

Parameters

Name

The name of the interface to query. Can be empty for array of all interfaces. Pass "sum" to sum up all counters.

"en0"

Result Returns OK or error.

Description

Returns JSON array of objects, each with the following keys:

Name, PhysicalType, Type, MTU, Baudrate, InputPackets, InputErrors, OutputPackets, OutputErrors, Collisions, InputBytes, OutputBytes, InputMulticasts, OutputMulticasts.

Type is the type of device which includes 1 for ethernet and 6 for Wifi.

Baudrate	The linespeed.
Collisions	The number of collisions on csma interfaces.
InputBytes	Total number of octets received.
InputErrors	The number of input errors on interface.
InputMulticasts	The number of packets received via multicast.
InputPackets	The number of packets received.
MTU	The maximum transmission unit.
Name	The name of the interface.
OutputBytes	Total number of octets sent.
OutputErrors	The number of output errors.
OutputMulticasts	The number of packets sent via multicast.
OutputPackets	The number of packets sent.
PhysicalType	The physical network type. e.g., AUI, Thinnet, 10base-T, etc
Type	The network type.

Examples

Query statistics for all interfaces:

MBS("SystemInfo.NetworkStats")

Example result: [

```
{
  "Name": "lo0",
  "PhysicalType": 24,
  "Type": 24,
  "MTU": 16384,
  "Baudrate": 0,
  "InputPackets": 1211504,
  "InputErrors": 0,
  "OutputPackets": 1211504,
  "OutputErrors": 0,
  "Collisions": 0,
  "InputBytes": 424215552,
  "OutputBytes": 424215552,
  "InputMulticasts": 866700,
  "OutputMulticasts": 0
},
...
]
```

Query statistics for en0, first ethernet card:

```
MBS( "SystemInfo.NetworkStats"; "en0" )
```

Example result: {

```
"Name": "en0",
"PhysicalType": 6,
"Type": 6,
"MTU": 1500,
"Baudrate": 112050000,
"InputPackets": 3349997,
"InputErrors": 0,
"OutputPackets": 9122258,
"OutputErrors": 28815,
"Collisions": 0,
"InputBytes": 2294099968,
"OutputBytes": 9673651200,
"InputMulticasts": 67811,
"OutputMulticasts": 0
}
```

Query sum of statistics:

```
MBS( "SystemInfo.NetworkStats"; "sum" )
```

Example result: {

```
"Name": "sum",
"InputPackets": 3393156,
"InputErrors": 0,
```

```
"OutputPackets": 9154972,  
"OutputErrors": 29387,  
"Collisions": 0,  
"InputBytes": 2303736832,  
"OutputBytes": 9682581504,  
"InputMulticasts": 88721,  
"OutputMulticasts": 0  
}
```

Created 18th August 2014, last changed 24th February 2016.

161.34 SystemInfo.UserName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	1.5	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.UserName")

Description

Examples

Shows user name:

Show Custom Dialog [MBS("SystemInfo.UserName") & §& MBS("SystemInfo.UserName")]

See also

- 161.33 SystemInfo.UserName

7686

Created 18th August 2014, last changed 24th February 2016.

161.35 SystemInfo.WinBuildNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes	Yes	No

MBS("SystemInfo.WinBuildNumber")

Result The build number.

Description

For example returns 2600 on Windows XP Build 2600.
Created 18th August 2014, last changed 17th June 2018.

161.36 SystemInfo.WinCSDVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinCSDVersion")

Result The service pack version string.

Description

Shows "Service Pack 3" on a Windows XP SP3 installation.

If no Service Pack has been installed, the string is empty.

See also

- 161.19 SystemInfo.MacMinorVersion 7670

161.37 SystemInfo.WinMajorVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinMajorVersion")

Result Returns the major version number.

Description

Returns 5 on Windows 2000/XP and 6 on Windows Vista/7/8.

See also

- 161.18 SystemInfo.MacMajorVersion 7669
- 161.19 SystemInfo.MacMinorVersion 7670
- 161.36 SystemInfo.WinCSDVersion 7689
- 161.38 SystemInfo.WinMinorVersion 7691

Created 18th August 2014, last changed 18th August 2014.

161.38 SystemInfo.WinMinorVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinMinorVersion")

Result Returns the minor version number.

Description

Returns 0 on Windows 2000/Vista and 1 on Windows XP/7 and 2 on Windows 8.
Windows 8.1 is MajorVersion = 6 and MinorVersion = 3.

See also

- 161.18 SystemInfo.MacMajorVersion 7669

Created 18th August 2014, last changed 26th September 2015.

161.39 SystemInfo.WinPlatformId

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinPlatformId")

Result Returns the platform ID as number.

Description

For example 2 for NT kernels.

Created 18th August 2014, last changed 18th August 2014.

161.40 SystemInfo.WinProductKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinProductKey")

Result Returns product key or empty string.

Description

See also

- [161.41 SystemInfo.WinProductType](#)

Created 18th August 2014, last changed 14th May 2017.

161.41 SystemInfo.WinProductType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinProductType")

Result Returns product type as number.

Description

e.g. 1 on Windows XP.

This member can be one of the following values:

VER_NT_DOMAIN_CONTROLLER	2	The system is a domain controller and the operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server.
VER_NT_SERVER	3	The operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server. Note that a server that is also a domain controller is reported as VER_NT_DOMAIN_CONTROLLER, not VER_NT_SERVER.
VER_NT_WORKSTATION	1	The operating system is Windows Vista, Windows XP Professional, Windows XP Home Edition, or Windows 2000 Professional.

161.42 SystemInfo.WinServicePackMajor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinServicePackMajor")

Result The version number.

Description

For example, for Service Pack 3, the major version number is 3. If no Service Pack has been installed, the value is zero.

See also

- 161.43 SystemInfo.WinServicePackMinor

7696

Created 18th August 2014, last changed 18th August 2014.

161.43 SystemInfo.WinServicePackMinor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinServicePackMinor")

Result The version number.

Description

For example, for Service Pack 3, the minor version number is 0.

See also

- 161.42 SystemInfo.WinServicePackMajor

7695

Created 18th August 2014, last changed 18th August 2014.

161.44 SystemInfo.WinSuiteMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	2.8	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinSuiteMask")

Result The mask as number.

Description

for example 256 on Windows XP.

This member can be a combination of the following values.

VER_SUITE_BACKOFFICE	4	Microsoft BackOffice components are installed.
VER_SUITE_BLADE	& h0400	Windows Server 2003, Web Edition is installed.
VER_SUITE_COMPUTE_SERVER	& h4000	Windows Server 2003, Compute Cluster Edition is installed.
VER_SUITE_DATACENTER	& h0080	Windows Server 2008 Datacenter, Windows Server 2003, Datacenter Edition, or Windows 2000 Datacenter Server is installed.
VER_SUITE_ENTERPRISE	2	Windows Server 2008 Enterprise, Windows Server 2003, Enterprise Edition, or Windows 2000 Advanced Server is installed. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_EMBEDDEDNT	& h0040	Windows XP Embedded is installed.
VER_SUITE_PERSONAL	& h0200	Windows Vista Home Premium, Windows Vista Home Basic, or Windows XP Home Edition is installed.
VER_SUITE_SINGLEUSERTS	& h0100	Remote Desktop is supported, but only one interactive session is supported. This value is set unless the system is running in application server mode.
VER_SUITE_SMALLBUSINESS	1	Microsoft Small Business Server was once installed on the system, but may have been upgraded to another version of Windows. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_SMALLBUSINESS_RESTRICTED	& h0020	Microsoft Small Business Server is installed with the restrictive client license in force. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_STORAGE_SERVER	& h2000	Windows Storage Server 2003 R2 or Windows Storage Server 2003 is installed.
VER_SUITE_TERMINAL	& h0010	Terminal Services is installed. This value is always set. If VER_SUITE_TERMINAL is set but VER_SUITE_SINGLEUSERTS is not set, the system is running in application server mode.
VER_SUITE_WH_SERVER	& h8000	Windows Home Server is installed.

Created 18th August 2014, last changed 18th August 2014.

161.45 SystemInfo.WinSystemMetrics

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	6.3	No	Yes	Yes, Windows only	No	No

MBS("SystemInfo.WinSystemMetrics"; ID)

Parameters

ID

The ID of the value to query. Can be the name of the value without SM_ prefix like "CMONITORS" or the numeric value like 80.

"CMONITORS"

Result Returns value or error.

Description

Note that all dimensions retrieved by GetSystemMetrics are in pixels.

Please see Microsoft website for all the possible parameters and return values:

[https://msdn.microsoft.com/en-us/library/windows/desktop/ms724385\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/ms724385(v=vs.85).aspx)

Values for Digitizer query:

Name	Value	Meaning
NID_INTEGRATED_TOUCH	1	The device has an integrated touch digitizer.
NID_EXTERNAL_TOUCH	2	The device has an external touch digitizer.
NID_INTEGRATED_PEN	4	The device has an integrated pen digitizer.
NID_EXTERNAL_PEN	8	The device has an external pen digitizer.
NID_MULTI_INPUT	64	The device supports multiple sources of digitizer input.
NID_READY	128	The device is ready to receive digitizer input.

Examples

Query number of display monitors on a desktop.

```
MBS( "SystemInfo.WinSystemMetrics"; "CMONITORS")
```

Example result: 1

Query size of screen:

```
MBS( "SystemInfo.WinSystemMetrics"; "CXScreen")
& " x " &
MBS( "SystemInfo.WinSystemMetrics"; "CYScreen")
```

Example result: 1280 x 768

Query whether we are shutton down:

```
# Returns 1 if FileMaker Window Close Script Trigger was called due to shutdown  
MBS( "SystemInfo.WinSystemMetrics"; "SHUTTINGDOWN")
```

Example result: 0

Query whether system is a Tablet PC:

```
MBS( "SystemInfo.WinSystemMetrics"; "TabletPC")
```

Example result: 1

Query whether we are in slate mode:

```
# Returns 0 for slate mode, else non-zero  
MBS( "SystemInfo.WinSystemMetrics"; "ConvertibleSlateMode")
```

Example result: 0

Query whether mouse is installed:

```
MBS( "SystemInfo.WinSystemMetrics"; "MousePresent")
```

Example result: 1

Query whether a mouse wheel is present:

```
MBS( "SystemInfo.WinSystemMetrics"; "MouseWheelPresent")
```

Example result: 1

Query whether we have a digitizer

```
# Nonzero if the current operating system is Windows 7 or Windows Server 2008 R2 and the Tablet PC  
Input service is started; otherwise, 0.
```

```
# The return value is a bitmask that specifies the type of digitizer input supported by the device.
```

```
# e.g. 193 for a ready touch device with multi touch.
```

```
MBS( "SystemInfo.WinSystemMetrics"; "Digitizer")
```

Example result: 193

Query whether we have a remote session:

```
MBS( "SystemInfo.WinSystemMetrics"; 4096 )
```

Created 18th August 2014, last changed 25th November 2019.

161.64 SystemInfo.isYosemite

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
161 SystemInfo	6.3	Yes	Yes	Yes	Yes	Yes

MBS("SystemInfo.isYosemite")

Result Returns 1 or 0.

Description

Examples

Check for MacOS Yosemite:

```
Show Custom Dialog [ "MacOS Yosemite?" ; If(MBS( "SystemInfo.isYosemite" ); "yes"; "no" ) ]
```

Created 4th July 2016, last changed 25th November 2019.

Chapter 162

SystemUIMode

Kiosk mode for Mac.

162.1 GetSystemUIMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
162 SystemUIMode	2.1	Yes	No	No	No	No

MBS("GetSystemUIMode")

Result The current mode value.

Description

See also

- 162.3 SetSystemUIMode

7721

Created 18th August 2014, last changed 18th August 2014.

162.2 GetSystemUIModeOptions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
162 SystemUIMode	2.1	Yes	No	No	No	No

MBS("GetSystemUIModeOptions")

Result The current options value.

Description

Created 18th August 2014, last changed 18th August 2014.

162.3 SetSystemUIMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
162 SystemUIMode	2.1	Yes	No	No	No	No

MBS("SetSystemUIMode"; Mode; Options)

Parameters

Mode

The mode you want.

1

Options

The options you want.

0

Description

The System UI Mode controls the presentation of system-provided user interface elements.

Note that the system UI mode is a per-process state. Switching from a process that is suppressing system UI to another process that is not will cause system UI elements to become visible automatically. Switching back to the first process will suppress system UI elements again.

In this mode, all standard system UI elements are visible.

kUIModeNormal = 0

In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. However, these elements may automatically show themselves in response to mouse movements or other user activity; specifically, the Dock will still show itself automatically when the mouse moves into the Dock's auto-show region.

kUIModeContentSuppressed = 1

In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. Unlike kUIModeContentSuppressed, most UI elements will not automatically show themselves in this mode.

kUIModeContentHidden = 2,

In this mode, all system UI elements, including the menubar, are hidden. However, these elements may automatically show themselves in response to mouse movements or other user activity; specifically, the Dock and menubar will still show themselves automatically when the mouse moves into the Dock's

auto-show region. Available in Mac OS X 10.3 and later.

kUIModeAllSuppressed = 4,

In this mode, all system UI elements, including the menubar, are hidden. Most system UI elements will not automatically show themselves in this mode. The application may request that the menubar automatically show itself while in this mode by passing the kUIOptionAutoShowMenuBar flag to SetSystemUIMode.

kUIModeAllHidden = 3

Options which you can combine by adding them together:

Requests that the menubar automatically show itself when the user moves the mouse into the screen area that would ordinarily be occupied by the menubar. Only valid with kUIModeAllHidden.

kUIOptionAutoShowMenuBar = 1

Disables all items in the Apple menu. Valid for all modes.

kUIOptionAnimateMenuBar = 2

Requests that the menubar animate on or offscreen, if the UIMode is also being changed such that the menubar will change visibility. Unlike other UI options, this option is not stored and only affects the behavior of this call to SetSystemUIMode. Valid for all modes. Available in Mac OS X 10.7 and later.

kUIOptionDisableAppleMenu = 4

The active application may not be changed while this process is active. Currently disables the Command-Tab and Command-Shift-Tab key sequences to switch the active process, and the global window rotation key sequence selected by the user in the Keyboard preference pane. SetFrontProcess may still be used to explicitly switch the active process. Only valid with modes other than kUIModeNormal.

kUIOptionDisableProcessSwitch = 8

The Force Quit window may not be displayed while this process is active. Currently disables the Command-Option-Escape key sequence to open the Force Quit window and the Force Quit menu item in the Apple menu. Only valid with modes other than kUIModeNormal.

kUIOptionDisableForceQuit = 16

The current login session may not be terminated while this process is active. Currently disables the Power key and the Restart, Shut Down, and Log Out menu items in the Apple menu. Only valid with modes other than kUIModeNormal.

kUIOptionDisableSessionTerminate = 32

The Hide menu item in the Application menu is disabled. Note that this option does not prevent this application from being hidden if Hide Others is selected in some other application. Available in Mac OS X 10.3 and later.

kUIOptionDisableHide = 64

Provides the ability to specify whether the menu bar will disable its adaptive transparency. Note this should be used in conjunction with a full-screen window using kUIModeContentSuppressed or kUIModeContentHidden. Available in Mac OS X 10.6 and later. This constant was published in the Mac OS X 10.5 version of MacApplication.h, but had the wrong value (7) and should not be used in Mac OS X 10.5.

kUIOptionDisableMenuBarTransparency = 512

Examples

Sets mode with hidden content:

```
MBS("SetSystemUIMode"; 1; 0)
```

Chapter 163

TAPI

Telephone functions for Windows

163.1 TAPI.AddressCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.AddressCount")

Result Returns number or error.

Description

The local computer may have several TAPI adapters with different addresses. This function counts them.

See also

- [163.2 TAPI.AddressValue](#) 7727

Example Databases

- [Win Only/TAPI/Tapi](#)

163.2 TAPI.AddressValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.AddressValue"; Index; Selector)

Parameters

Index

The index of the address. Must be in range from 0 to TAPI.AddressCount-1.

0

Selector

Which value to return.

"AddressName"

Result Returns OK or error.

Description

Properties include: AddressName, DialableAddress, ServiceProviderName, State, DoNotDisturb and MessageWaiting. State can be InService or OutOfService.

See also

Created 22nd October 2014, last changed 1st November 2014.

163.3 TAPI.Answer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Answer"; Call)

Parameters

Call

The call reference number.

\$Call

Result Returns OK or error.

Description

This function can succeed only if the call state is offering.

Created 22nd October 2014, last changed 1st December 2014.

163.4 TAPI.BlindTransfer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.BlindTransfer"; Call; DestAddress)

Parameters

Call

The call reference number.

\$Call

DestAddress

Destination address for the transfer.

Result Returns OK or error.

Description

The application must be the owner of the call. After a successful transfer, the call state transitions to disconnected.

Created 22nd October 2014, last changed 1st December 2014.

163.5 TAPI.CallInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.CallInfo"; Call; Selector)

Parameters

Call

The call reference number.

\$Call

Selector

Which value to query.

"CalledIDName"

Result Returns OK or error.

Description

Possible properties to query:

- CallerIDName: The name of the caller.
- CallerIDNumber: The number of the caller.
- CalledIDName: The name of the called location.
- CalledIDNumber: The number of the called location.
- ConnectedIDName: The name of the connected location.
- ConnectedIDNumber: The number of the connected location.
- RedirectionIDName: The name of the location to which a call has been redirected.
- RedirectionIDNumber: The number of the location to which a call has been redirected.
- RedirectingIDName: The name of the location that redirected the call.
- RedirectingIDNumber: The number of the location that redirected the call.
- CalledPartyFriendlyName: The called party friendly name.
- Comment: A comment about the call provided by the application that originated the call.
- DisplayableAddress: A displayable version of the called or calling address.
- CallingPartyID: The identifier of the calling party.
- State: The state of the call: Idle, InProgress, Connected, Disconnected, Offering, Hold or Queued.
- CountryCode: Country or region code.

- CallID: Call identifier. Some service providers assign a unique code to each call.
- Ref: Unique number of the call info object.
- Privilege: The privilege level. Either Owner or Monitor.
- Origin: Where the call is from. Can be Conference, External, InBound, Internal, OutBound, Unavailable or Unknown.
- Reason: Why the call was coming. Can be CallCompletion, CampedOn, Direct, ForwardedBudy, ForwardedNoAnswer, ForwardedUnconditionally, Intrude, Parked, Pickup, Redirect, Reminder, Router-Request, Transfer, Unavailable, Unknown or Unpark.
- CallerIDAddressType: What type the caller ID has.
- CalledIDAddressType: What type the called ID has.
- ConnectedIDAddressType: What type the connected ID has.
- RedirectionAddressType: What type the redirection ID has.
- RedirectedAddressType: What type the redirected ID has.

The address type properties on bottom define what the number properties above specify. Can be Phone Number, SDP, E-Mail Name, Domain Name or IP Address.

163.6 TAPI.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Connect"; Call; Sync)

Parameters

Call

The call reference number.

\$Call

Sync

Boolean indicating whether connection is to be performed synchronously (1) or asynchronously (0).

0

Result Returns OK or error.

Description

Examples

Creates a call and connects:

```
$Call = MBS( "TAPI.CreateCall"; "MyPhone"; "1234567899"; 1; 8)
```

```
$r = MBS( "TAPI.Connect"; $Call; 1 )
```

163.6.1 Blog Entries

- [Use of TAPI functions in MBS FileMaker Plugin](#)

163.6.2 FileMaker Magazin

- Ausgabe 1/2019, Seite 36

Created 22nd October 2014, last changed 7th December 2015.

163.7 TAPI.CreateCall

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.CreateCall"; AddressNameIndex; DestAddress; AddressType; MediaTypes)

Parameters

AddressNameIndex

The index of the address or the name of the address to identify which device to use.

0

DestAddress

This text contains a destination address. The format is provider-specific. This can be "" for non-dialed addresses (such as with a hot phone) or when all dialing is performed using TAPI.Dial. "" in combination with a "" GroupID in TAPI.Pickup results in a group pickup. Service providers that have inverse multiplexing capabilities can allow an application to specify multiple addresses at once.

"123456789"

AddressType

Contains an address type constant, such as phone number (1), which describes the format of the address. Phone Number is 1, Session Description Protocol (SDP) conference is 2, an e-mail name is 4, a domain name is 8, an IP address is 16.

1

MediaTypes

Identifies the media type or types that will be involved in the call session. Can be 8 for audio.

8

Result Returns Call Reference ID or error.

Description

The new call will be the new current call, so the TAPI.Dial function (and others) should work on it.

See for media types:

[http://msdn.microsoft.com/de-de/library/windows/desktop/ms734210\(v=vs.85\).aspx](http://msdn.microsoft.com/de-de/library/windows/desktop/ms734210(v=vs.85).aspx)

See for line address constants:

[http://msdn.microsoft.com/de-de/library/windows/desktop/ms733291\(v=vs.85\).aspx](http://msdn.microsoft.com/de-de/library/windows/desktop/ms733291(v=vs.85).aspx)

If your TAPI drivers are 32-bit only, it may or may not work in 64-bit.

Examples

Creates a call and connects:

```
$Call = MBS( "TAPI.CreateCall"; "MyPhone"; "1234567899"; 1; 8)
```

```
$r = MBS( "TAPI.Connect"; $Call; 1 )
```

163.8 TAPI.Dial

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Dial"; Call; DestAddress)

Parameters

Call

The call reference number.

\$Call

DestAddress

Representation of address to be dialed. The format must conform to a standard dialable address.

123456789

Result Returns OK or error.

Description

You can dial on calls made with TAPI.CreateCall.

See also

- 163.7 TAPI.CreateCall

163.9 TAPI.Disconnect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Disconnect"; Call; DisconnectCode)

Parameters

Call

The call reference number.

\$Call

DisconnectCode

Can be Normal, NoAnswer or Rejected.

"Normal"

Result Returns OK or error.

Description

The call state will transition to Disconnected after the method completes successfully.

Disconnect codes:

Normal: The call is being disconnected as part of the normal cycle of the call.

NoAnswer: The call is being disconnected because it has not been answered. (For example, an application may set a certain amount of time for the user to answer the call. If the user does not answer, the application can call Disconnect with the NoAnswer code.)

Rejected: The user rejected the offered call.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.HandoffDirect"; Call; MediaType)

Parameters**Call**

The call reference number.

\$Call

MediaType

Media type to transfer to.

Result Returns OK or error.

Description

If multiple applications have registered as able to handle the types involved, TAPI will hand off to the highest-priority application, which is usually the one that registered first.

This indicates that the application no longer requires ownership of the call.

for media types, please take a look here:

[http://msdn.microsoft.com/en-us/library/windows/desktop/ms734210\(v=vs.85\).aspx](http://msdn.microsoft.com/en-us/library/windows/desktop/ms734210(v=vs.85).aspx)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Hold"; Call; Hold)

Parameters

Call

The call reference number.

\$Call

Hold

Whether to put call on hold. Pass 1 for hold and 0 for unhold.

1

Result Returns OK or error.

Description

Created 22nd October 2014, last changed 1st December 2014.

163.21 TAPI.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Initialize")

Result Returns OK or error.

Description

Must be called once before any other TAPI function.

If your TAPI drivers are 32-bit only, it may or may not work in 64-bit.

163.25 TAPI.ParkDirect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.ParkDirect"; Call; Park)

Parameters

Call

The call reference number.

\$Call

Park

The address where the call is to be parked.

Result Returns OK or error.

Description

With directed park, the application determines the address at which it wants to park the call. With TAPI.ParkIndirect the switch determines the address and provides this to the application. In either case, a parked call can be unparked by specifying this address.

The parked call enters the disconnected state after it has been successfully parked.

Some switches can remind the user after a call has been parked for some long amount of time. The application sees an offering call with a call reason set to reminder.

163.26 TAPI.ParkIndirect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.ParkIndirect"; Call)

Parameters**Call**

The call reference number.

\$Call

Result Returns address or error.

Description

With TAPI.ParkDirect, the application determines the address at which it wants to park the call. With nondirected park, the switch determines the address and provides this to the application. In either case, a parked call can be unparked by specifying this address.

The parked call enters the disconnected state after it has been successfully parked.

Some switches can remind the user after a call has been parked for some long amount of time. The application sees an offering call with a call reason set to reminder.

Created 22nd October 2014, last changed 1st December 2014.

163.27 TAPI.Pickup

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Pickup"; Call; GroupID)

Parameters

Call

The call reference number.

\$Call

GroupID

The group identifier to which the alerting station belongs.

Result Returns OK or error.

Description

Created 22nd October 2014, last changed 1st December 2014.

163.28 TAPI.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	5.0	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Release"; Call)

Parameters

Call

The call reference number.

\$Call

Result Returns OK or error.

Description

See also

- 102.16 LDAP.Release 5393

163.30 TAPI.RemoveFromConference

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.RemoveFromConference"; Call)

Parameters

Call

The call reference number.

\$Call

Result Returns OK or error.

Description

Created 22nd October 2014, last changed 1st December 2014.

163.31 TAPI.SetCallStateEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	6.5	No	Yes	Yes, Windows only	No	No

MBS("TAPI.SetCallStateEvaluate"; Expression)

Parameters

Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

Result Returns OK or error.

Description

The \$\$ID\$\$ in evaluate is replaced with the reference number of the call as defined by our plugin. You can than use TAPI.CallInfo and other functions to query information.

163.32 TAPI.SetCallStateScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	5.0	No	Yes	No	No	No

MBS("TAPI.SetCallStateScript"; Filename; ScriptName)

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

The script is called when an existing call changes state.

The parameter to your script will be the reference number of the call as defined by our plugin. You can than use TAPI.CallInfo and other functions to query information like the state of the call.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

163.33 TAPI.SetCallStateURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	6.5	No	Yes	Yes, Windows only	No	No

MBS("TAPI.SetCallStateURL"; URL)

Parameters

URL

The URL to trigger.

Result Returns OK or error.

Description

\$\$ID\$\$ in the URL is replaced with call ID.

Queries http/ftp/sftp URLs with CURL, other URLs passed to OS to open.

163.35 TAPI.SetNewCallScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	5.0	No	Yes	No	No	No

MBS("TAPI.SetNewCallScript"; Filename; ScriptName)

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

The parameter to your script will be the reference number of the call as defined by our plugin. You can than use TAPI.CallInfo and other functions to query information.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Set the script to trigger for new calls:

```
Set Variable [ $r; Value:MBS("TAPI.SetNewCallScript"; Get(Filename); "NewCallScript") ]
```

163.37 TAPI.Shutdown

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Shutdown")

Result Returns OK or error.

Description

This function frees all system resources allocated for TAPI.
Created 22nd October 2014, last changed 22nd October 2014.

163.38 TAPI.Transfer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	5.0	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Transfer"; Call; OtherCall; Sync)

Parameters

Call

The call reference number.

\$Call

OtherCall

The other call reference number. This is the consultation call created for the transfer.

\$Call2

Sync

Indicates whether the method should be completed synchronously (1) or asynchronously (0).

1

Result Returns OK or error.

Description

Call transfer involves setting up a consultation call in preparation for the transfer. Call2 is the identifier returned TAPI.CreateCall following the creation of a consultation call. TAPI.Finish (with AsTransfer) completes the transfer.

If the consultation call is not in the Connected state when Transfer is called, TAPI will use the destination address (as specified when the consultation call was first created via TAPI.CreateCall and try to connect at that time. If the original call had an empty destination address, Transfer will fail with error (invalid argument).

163.39 TAPI.Unpark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
163 TAPI	4.4	No	Yes	Yes, Windows only	No	No

MBS("TAPI.Unpark"; Call)

Parameters

Call

The call reference number.

\$Call

Result Returns OK or error.

Description

Created 22nd October 2014, last changed 1st December 2014.

Chapter 164

Text

Functions for working with text.

164.1 Text.AddLineNumbers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	8.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.AddLineNumbers"; Text { ; StyleTemplate; Delimiter })

Parameters

Text

The text to process.

"Hello World"

StyleTemplate

Optional

The styled text to use as template for line numbers. We only use style for the nubers and text is ignored. If empty, this parameter is ignored.

TextFont("test"; "Courier"; "")

Delimiter

Optional

The optional delimiter. Default are two space characters.

": "

Result Returns text or error.

Description

Preserves the styles in the text and adds line numbers as prefix.

Depending on how many lines we have, we may use 2 to 6 digits for numbers.

Works fine for JSON, XML, JavaScript, HTML or any other text.

See also XML.Format & JSON.Format to format and XML.Colorize & JSON.Colorize for colors.

Examples

Format, colorize and apply line numbers:

```
MBS( "Text.AddLineNumbers";
// colorize it
MBS("JSON.Colorize";
// format before colorize
MBS( "JSON.Format"; JSON Input)
);
// define which style to use for numbers
TextColor (
TextFont ( " "; "Courier" );
RGB ( 0 ; 0 ; 255 )
)
)
```

164.2 Text.AppendTextFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.8	Yes	Yes	Yes	Yes	Yes

MBS("Text.AppendTextFile"; Text; FilePath { ; encoding })

(old name: String.AppendTextFile)

Parameters

Text

The text to save.

"Hello World"

FilePath

The native file path. Something like `"/Users/cs/desktop/test.txt"` on Mac and `"C:\Programs\Data\test.txt"` on Windows. Files without path end in the root directory on Mac.

"test.txt"

encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

Result Returns "OK" or an error message.

Description

If the file does not exist, it will be created. You can use this function for logging to a text file.

Please use `Text.ReplaceNewline` to define which line endings the file has.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Write UTF-8 file with some text:

```
MBS("Text.AppendTextFile"; $Text; $Path; "utf8" )
```

Write a test text file:

```
MBS("Text.AppendTextFile"; "Hello World. Some umlauts: äöü"; "/Users/cs/Desktop/testfile.txt"; "native")
```

164.3 Text.CapitalCase

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.CapitalCase"; Text)

Parameters

Text

The text to process.

"hello WORLD"

Result Returns text or error.

Description

First letter of a word is made upper case, all others to lower case.

Often people enter in forms all kinds of upper/lower case letters and you may want to normalize using this function.

See also Text.UpperCase, Text.LowerCase and Text.RemoveAccents.

Examples

Fix HAMBURG:

MBS("Text.CapitalCase"; "HAMBURG")

MBS("Text.CapitalCase"; "HAMBurg")

Example result: Hamburg

Fix Schleswig-Holstein:

MBS("Text.CapitalCase"; "SCHLESWIG-HOLSTEIN")

Example result: Schleswig-Holstein

164.4 Text.Character

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.Character"; Character Number)

Parameters

Character Number

The unicode codepoint.

65

Result Returns OK or error.

Description

The FileMaker Char() function works only for unicode values up to 65535. This function works with higher values up to 2 billion.

See also Text.Code.

Examples

Test the function:

```
"Shows a musical symbol: " & char(119070) & " " & MBS("Text.Character"; 119070)
```

Example result: Shows a musical symbol:

Get smiley:

```
MBS("Text.Character"; 128512)
```

Example result:

Build country flag from country code:

```
MBS( "Text.Character"; 127397 + Code ( "D" )) & MBS( "Text.Character"; 127397 + Code ( "E" ))
```

Example result:

164.5 Text.Characters

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.Characters"; Text)

Parameters

Text

The text to process.

"Hello"

Result Returns text or error.

Description

Similar to walking over all characters, getting the unicode code point for the character and return its number.

Examples

Get characters from Hello:

MBS("Text.Characters"; "Hello")

Example result: 72 101 108 108 111

See also

- 164.4 Text.Character 7773

164.6 Text.Code

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.Code"; Char)

Parameters

Char

The text character to look at.
 ""

Result Returns OK or error.

Description

Returns the unicode code point. Compared to FileMaker's Code() function, this function does handle codes over 65535.

See also Text.Character.

Examples

Query code for a smiley:

```
MBS( "Text.Code"; "" )
```

Example result: 128512

164.7 Text.ConvertFromTextEncoding

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	9.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.ConvertFromTextEncoding"; Text; Encoding)

Parameters

Text

The hex encoded text to convert.
"48656C6C6F209B9D"

Encoding

The source encoding.
"CP465"

Result Returns text or error.

Description

Returns text in unicode as FileMaker needs it.

As we use iconv library here, we can handle many more encodings than the standard FileMaker text functions used within the plugin.

Encoding list with alternative names:

- ANSI_X3.4-1968,ANSI_X3.4-1986,ASCII,CP367,IBM367,ISO-IR-6,ISO646-US,ISO_646.IRV:1991,US,US-ASCII,CSASCII

See also `Text.ConvertToTextEncoding` function.

Examples

Convert from nordic:

```
MBS( "Text.ConvertFromTextEncoding"; "48656C6C6F209B9D"; "CP865" )
```

Example result: "Hello øØ"

164.8 Text.ConvertToTextEncoding

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	9.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.ConvertToTextEncoding"; Text; Encoding)

Parameters

Text

The text to convert.

"Hello World"

Encoding

The desired encoding. Maybe appended by //TRANSLIT or //IGNORE to reduce number of errors.

"UTF8//TRANSLIT"

Result Returns hex text or error.

Description

Returns text in hex encoded bytes.

As we use iconv library here, we can handle many more encodings than the standard FileMaker text functions used within the plugin.

If the string //IGNORE is appended to to-encoding, characters that cannot be converted are discarded and an error is printed after conversion.

If the string //TRANSLIT is appended to to-encoding, characters being converted are transliterated when needed and possible. This means that when a character cannot be represented in the target character set, it can be approximated through one or several similar looking characters. Characters that are outside of the target character set and cannot be transliterated are replaced with a question mark (?) in the output.

Encoding list with alternative names:

See also `Text.ConvertFromTextEncoding` function.

Examples

Encode and decode to check:

```
HexDecode( MBS( "Text.ConvertToTextEncoding"; "Hello World äöü"; "UTF-8" ))
```

Example result: "Hello World äöü"

Convert to CP1252 and back:

```
MBS( "Text.DecodeFromHex"; MBS( "Text.ConvertToTextEncoding"; "Hello World äöü"; "CP1252" );  
"Windows")
```

Example result: "Hello World äöü"

Convert to PC865 (Nordic):

MBS("Text.ConvertToTextEncoding"; "Hello øØ"; "CP865")

Example result: "48656C6C6F209B9D"

164.9 Text.ConvertUnicodeToCharacterComposition

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.ConvertUnicodeToCharacterComposition"; Text)

Parameters

Text

The text to process.

"Hello"

Result Returns text or error.

Description

This function replaces character represented by decomposed representation with the composed representation.

see also

https://en.wikipedia.org/wiki/Unicode_equivalence

Examples

Test function:

```
# some text
Set Variable [ $text; Value:"ä ö ü" ]
# now make decomposed
Set Variable [ $decomposedText; Value:MBS("Text.ConvertUnicodeToCharacterDecomposition"; $text) ]
# and composed again
Set Variable [ $composedText; Value:MBS("Text.ConvertUnicodeToCharacterComposition"; $decomposed-
Text) ]
# Now show results. See the 776 for the Diaeresis?
Show Custom Dialog [ "Result"; $text & " " & MBS("Text.Characters"; $text) & $& $decomposedText &
" " & MBS("Text.Characters..." ]
```

Test character composition with ä and Char function:

```
MBS("Text.Characters"; MBS( "Text.ConvertUnicodeToCharacterComposition"; Char(97) & Char(776) ))
```

Example result: 228

Created 3th August 2015, last changed 14th February 2020.

164.10 Text.ConvertUnicodeToCharacterDecomposition

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.ConvertUnicodeToCharacterDecomposition"; Text)

Parameters

Text

The text to process.

"Hello"

Result Returns text or error.

Description

This function replaces character represented by one unicode character by the decomposed variant.

see also

https://en.wikipedia.org/wiki/Unicode_equivalence

Examples

Test function with ä:

```
MBS("Text.Characters"; MBS( "Text.ConvertUnicodeToCharacterComposition"; "ä" ))
```

Test with ä as 228:

```
MBS("Text.Characters"; MBS( "Text.ConvertUnicodeToCharacterDecomposition"; Char(228) ))
```

Example result: 97 776

164.11 Text.CountWords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	8.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.CountWords"; Text)

Parameters

Text

The text to count words.

"Hello World Hello"

Result Returns list or error.

Description

We split the text into words and then count for each how often it happens.

The result contains count, tab and the word and is not sorted.

Examples

Count words:

MBS("Text.CountWords"; "Hello World Hello")

Example result: 1 World

2 Hello

Works with umlauts:

MBS("Text.CountWords"; "ä ö ü ä ö ö ö ß ß")

Example result: 2 ß

2 ä

5 ö

1 ü

164.12 Text.DecodeBytesFromBase64

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	3.0	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeBytesFromBase64"; text)

(old name: String.DecodeBytesFromBase64)

Parameters

text

The text to process.

"QUJD"

Result Returns byte values text.

Description

See also

- 164.13 Text.DecodeFromBase64 7795
- 164.21 Text.DecodeHexFromBase64 7806
- 164.25 Text.EncodeBytesToBase64 7810

Created 18th August 2014, last changed 18th April 2016.

164.13 Text.DecodeFromBase64

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	3.0	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeFromBase64"; text { ; encoding })

(old name: String.DecodeFromBase64)

Parameters

text

The text to process.

"R3LDvMOfEdvdHQulFRlc3Qg4pi6"

encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

"UTF-8"

Result Returns decoded text.

Description

This is for text only. Data encoded as base64 would probably be truncated as FileMaker texts do not contain NULL bytes.

Examples

Decode Base64 as UTF-8:

MBS("Text.DecodeFromBase64"; "R3LDvMOfEdvdHQulFRlc3Qg4pi6"; "utf8")

Example result: "Grüß Gott. Test "

Created 18th August 2014, last changed 11st December 2016.

164.14 Text.DecodeFromBase64URL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	7.5	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeFromBase64URL"; text { ; encoding })

Parameters

text

The text to process.

"R3LDvMOflEdvdHQulFRlc3Qg4pi6"

encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

"UTF-8"

Result Returns decoded text.

Description

This is for text only. Data encoded as base64 would probably be truncated as FileMaker texts do not contain NULL bytes.

Examples

Decode Base64 as UTF-8:

MBS("Text.DecodeFromBase64"; "SGVsbG8gV29ybGQ"; "utf8")

See also

- 164.13 Text.DecodeFromBase64 7795
- 164.21 Text.DecodeHexFromBase64 7806

Created 21st October 2017, last changed 21st October 2017.

164.15 Text.DecodeFromBytes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	3.0	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeFromBytes"; text { ; Encoding })

(old name: String.DecodeFromBytes)

Parameters

text

The text to process.

"65 66 67"

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

"UTF-8"

Result Returns decoded text.

Description

A byte string here is a text string with byte numbers like this: "65 66 67" which as text would be "ABC".

Examples

Decode Hex as UTF-8:

MBS("Text.DecodeFromBytes"; "65 66 67"; "utf8")

Example result: "ABC"

Created 18th August 2014, last changed 11st December 2016.

164.16 Text.DecodeFromHTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeFromHTML"; text { ; Options })

(old name: String.DecodeFromHTML)

Parameters

text

The text you want to decode.

"Gr& uuml;& szlig;e"

Options

Optional

Pass 1 to leave XML escapes unchanged.

0

Result The decoded text.

Description

Removes escaping for special characters. e.g. converts "& uuml;" to "ü".

Examples

Decode html text

MBS("Text.DecodeFromHTML"; "Gr& uuml;& szlig;e")

Example result: GrüÙe

Decode html entities, but leave xml entities unchanged:

MBS("Text.DecodeFromHTML"; "<test>& auml;& amp;& lt;</test>"; 1)

Example result: "<test>ä& amp;& lt;</test>"

164.17 Text.DecodeFromHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeFromHex"; text { ; Encoding })

(old name: String.DecodeFromHex)

Parameters

text

The text to process.

"48656C6C6F20576F726C64"

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

"UTF-8"

Result Returns decoded text.

Description

Examples

Decode Hex as UTF-8:

MBS("Text.DecodeFromHex"; "48656C6C6F20576F726C64"; "utf8")

Example result: Hello World

Fix encoding of a string:

MBS("Text.DecodeFromHex"; MBS("Text.EncodeToHex"; "<string>Eine M/|bel-Handelsgesellschaft m.b.H</string>"; "Native"); "UTF-8")

Example result: <string>Eine Möbel-Handelsgesellschaft m.b.H</string>

164.18 Text.DecodeFromQuotedPrintable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeFromQuotedPrintable"; Text { ; Encoding })

(old name: String.DecodeFromQuotedPrintable)

Parameters

Text

The text to decode.

Encoding

Optional

The text encoding for result. Default is native.

"UTF-8"

Result Returns OK or error.

Description

Examples

Decode Wünsche:

```
MBS( "Text.DecodeFromQuotedPrintable"; "W=C3=BCnsche"; "UTF8")
```

Example result: Wünsche

164.19 Text.DecodeFromURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.6	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeFromURL"; text { ; Encoding })

(old name: String.DecodeFromURL)

Parameters

text

The text to process.

"Hello+% C3% B6% C3% A4% C3% BC"

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

"UTF-8"

Result Returns decoded text.

Description

This function should work the same as PHP's urldecode function.

Examples

Decode URL as UTF-8:

```
MBS( "Text.DecodeFromURL"; "Hello+World"; "utf8" )
```

Example result: Hello World

Encode and Decode with umlauts and UTF-8:

```
$v = "Hello öäü"
```

```
$e = MBS( "Text.EncodeToURL"; "$v; "utf8" )
```

```
# e has now value "Hello+% C3% B6% C3% A4% C3% BC"
```

```
$d = MBS( "Text.DecodeFromURL"; $e; "utf8" )
```

```
# d has now value "Hello öäü"
```

164.20 Text.DecodeFromXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeFromXML"; text)

(old name: String.DecodeFromXML)

Parameters

text

The text you want to decode.

"test & lt; this"

Result The decoded text.

Description

Removes escaping for special characters.

Examples

Decode xml text

MBS("Text.DecodeFromXML"; "test & lt; this")

Example result: test <this

164.22 Text.DecodeIMAPFolderName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	9.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.DecodeIMAPFolderName"; Text)

Parameters

Text

The text in IMAP's modified UTF-7 encoding.
"Test& AOk-"

Result Returns OK or error.

Description

Use this for IMAP folder names to decode the name and show to user.

Examples

Decode Entwürfe:

MBS("Text.DecodeIMAPFolder"; "Entw& APw-rfe")

Example result: "Entwürfe"

Decode Testé&

MBS("Text.DecodeIMAPFolder"; "Test& AOk-& -")

Example result: "Testé& "

Decode path with chinese characters:

MBS("Text.DecodeIMAPFolder"; "~peter/mail/& ZeVnLIqe-/& U,BTFw-")

Example result: "~peter/mail//"

164.26 Text.EncodeEmailSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeEmailSubject"; Text)

(old name: String.EncodeEmailSubject)

Parameters

Text

The text to encode.

"Hello World äöü"

Result Returns email subject text.

Description

Text is encoded with UTF-8 Quoted Printable encoding.

If text does not need to be encoded (pure ASCII), we return the input text.

Examples

Encode a text which does not need encoding:

MBS("Text.EncodeEmailSubject"; "Hello World")

Example result: Hello World

Encodes a text with umlauts:

MBS("Text.EncodeEmailSubject"; "Hello äöü")

Example result: "=?UTF-8?Q?Hello_=C3=A4=C3=B6=C3=BC?="

Created 18th August 2014, last changed 16th February 2018.

164.28 Text.EncodeToBase64

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	3.0	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeToBase64"; text { ; encoding })

(old name: String.EncodeToBase64)

Parameters

text

The text to process.

"Hello World"

encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

Result Returns encoded text.

Description

Please check what text encoding you want to use. Especially what the software processing the base64 string expects.

Examples

Encode Base64 as UTF-8:

MBS("Text.EncodeToBase64"; "Hello World"; "utf8")

Example result: "SGVsbG8gV29ybGQ="

164.29 Text.EncodeToBase64URL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	7.5	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeToBase64URL"; text { ; encoding })

Parameters

text

The text to process.

"Hello World"

encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

Result Returns encoded text.

Description

Please check what text encoding you want to use. Especially what the software processing the base64 string expects.

Similar to normal Base64, but + replaced by - and / by _ and the = on the end are omitted.

Examples

Encode Base64 as UTF-8:

```
MBS( "Text.EncodeToBase64URL"; "Hello World"; "utf8" )
```

Example result: "SGVsbG8gV29ybGQ"

Encode with/without URL option:

```
MBS( "Text.EncodeToBase64URL"; "Hello World? öäü"; "UTF-8" ) & §&
```

```
MBS( "Text.EncodeToBase64"; "Hello World? öäü"; "UTF-8" )
```

Calculate a JSON Web Token (JWT) in FileMaker:

```
// Header: { \alg\":"HS256\","typ\":"JWT\ " }
// Payload: { "iss":"scotch.io","exp":1300819380,"name":"Chris Sevilleja","admin":true }
```

```
// expected result: eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJsb2dnZWV29ybGQ"
raSYS8EXBxLN_oWnFSRgCzcm.JmMjLiuy5CSpyHI
```

```
Let ( [
```

```
secret = "secretkey";
```

```
header = " { \alg\":"HS256\","typ\":"JWT\ " } ";
```

```
payload = " { \loggedInAs\":"admin\","iat\":"1422779638 } ";
```

```
encodedString = MBS( "Text.EncodeToBase64URL"; header; "UTF-8") & " " & MBS( "Text.EncodeTo-
```

```
Base64URL"; payload; "UTF-8");  
// calculate hash  
hash = MBS( "Hash.SHA256.HMAC"; secret; encodedString; 1 );  
// transcode from Base64 to Base64 URL:  
hash = MBS( "Text.EncodeToBase64URL"; MBS( "Text.DecodeFromBase64"; hash; "Windows" ); "Win-  
dows" );  
// and built final result:  
result = MBS( "Text.EncodeToBase64URL"; header; "UTF-8" ) & "." & MBS( "Text.EncodeToBase64URL";  
payload; "UTF-8" ) & "." & hash  
]; result )
```

- 164.27 Text.EncodeHexToBase64 7812
- 164.28 Text.EncodeToBase64 7813

Created 21st October 2017, last changed 1st February 2020.

164.30 Text.EncodeToBytes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	3.0	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeToBytes"; text { ; Encoding })

(old name: String.EncodeToBytes)

Parameters

text

The text to process.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

Result Returns encoded text.

Description

Please check what text encoding you want to use. Especially what the software processing the hex string expects.

A byte string here is a text string with byte numbers like this: "65 66 67" which as text would be "ABC".

Examples

Encode bytes as UTF-8:

MBS("Text.EncodeToBytes"; "Hello World"; "utf8")

Example result: "72 101 108 108 111 32 87 111 114 108 100"

See also

- 164.15 Text.DecodeFromBytes 7797

- 164.32 Text.EncodeToHex 7819
- 164.31 Text.EncodeToHTML 7817

Created 18th August 2014, last changed 11st December 2016.

164.31 Text.EncodeToHTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeToHTML"; text { ; mode })

(old name: String.EncodeToHTML)

Parameters

text

The text you want to encode.

"Grüße"

mode

Optional

Default 0 for using named entities. Pass 1 for decimal and 2 for hex encoded numbers instead. Add 8 to encode all characters (new in plugin version 8.4)

0

Result The encoded text.

Description

All special and unicode characters are escaped.

Lower ASCII control characters are ignored.

You may want to use Text.ReplaceNewline after this function to replace new line characters with
(mode 4) or
(mode 5).

Examples

Encode text as html

MBS("Text.EncodeToHTML"; "Grüße")

Example result: "Gr& uuml;& szlig;e"

Encode smileys:

MBS("Text.EncodeToHTML"; "")

Example result: "& # 128512;& # 128513;& # 128514;& # 128515;"

Encode ä three ways:

MBS("Text.EncodeToHTML"; "ä"; 0) & §&

MBS("Text.EncodeToHTML"; "ä"; 1) & §&

MBS("Text.EncodeToHTML"; "ä"; 2)

Encode normal and all with decimal or hexadecimal:

```
MBS("Text.EncodeToHTML"; "Hello World ä"; 0) & §&
MBS("Text.EncodeToHTML"; "Hello World ä"; 8) & §&
MBS("Text.EncodeToHTML"; "Hello World ä"; 8+2)
```

Example result: "Hello World & auml;

```
& # 72;& # 101;& # 108;& # 108;& # 111;& # 32;& # 87;& # 111;& # 114;& # 108;& # 100;& # 32;& auml;
& # x48;& # x65;& # x6c;& # x6c;& # x6f;& # x20;& # x57;& # x6f;& # x72;& # x6c;& # x64;& # x20;& #
xe4;"
```

164.32 Text.EncodeToHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeToHex"; text { ; Encoding })

(old name: String.EncodeToHex)

Parameters

text

The text to process.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

Result Returns encoded text.

Description

Please check what text encoding you want to use. Especially what the software processing the hex string expects.

Similar to HexEncode function in FileMaker 16, but we can specify text encoding. For containers see Container.GetHex and Container.DecodeFromHex.

Examples

Encode Hex as UTF-8:

MBS("Text.EncodeToHex"; "Hello World"; "utf8")

Example result: 48656C6C6F20576F726C64

Check for hex encoding:

Length(MBS("Text.EncodeToHex"; MBS("Text.DecodeFromHex"; "41004200")))

Example result: Returns 8 in FileMaker 16 and 6 in FileMaker 15 due to different text handling.

164.33 Text.EncodeToQuotedPrintable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeToQuotedPrintable"; Text { ; Encoding; LineLen })

(old name: String.EncodeToQuotedPrintable)

Parameters**Text**

The text to use.

"Wünsche"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

LineLen

Optional

The line length to use. Default is 72

72

Result Returns OK or error.

Description

Line wrap is per default at 72 characters but you can pass some other positive value here.

Examples

Encode Wünsche:

```
MBS( "Text.EncodeToQuotedPrintable"; "Wünsche"; "UTF8")
```

Example result: W=C3=BCnsche

See also

Created 3th September 2014, last changed 11st December 2016.

164.34 Text.EncodeToURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.6	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeToURL"; text { ; Encoding })

(old name: String.EncodeToURL)

Parameters

text

The text to process.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

Result Returns encoded text.

Description

Please check what text encoding you want to use. Especially what the software processing the hex string expects.

This function should work the same as PHP's `urlencode` function.

Examples

Encode URL as UTF-8:

```
MBS( "Text.EncodeToURL"; "Hello World"; "utf8" )
```

Example result: Hello+World

Encode and Decode with umlauts and UTF-8:

```
$v = "Hello öäü"
```

```
$e = MBS( "Text.EncodeToURL"; "$v"; "utf8" )
```

```
# e has now value "Hello+% C3% B6% C3% A4% C3% BC"
```

```
$d = MBS( "Text.DecodeFromURL"; $e; "utf8" )
```

```
# d has now value "Hello öäü"
```

164.35 Text.EncodeToXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeToXML"; text)

(old name: String.EncodeToXML)

Parameters

text

The text you want to encode.

"Grüße"

Result The encoded text.

Description

Only escapes quotes, ampersand, smaller and greater characters.

If you need all html entities to be encoded, please use Text.EncodeToHTML instead.

Lower ASCII control characters are ignored (removed).

Examples

Encode text as xml:

MBS("Text.EncodeToXML"; "Grüße <test>")

Example result: "Grüße & lt;test& gt;"

164.36 Text.EncodeURLComponent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.EncodeURLComponent"; text { ; encoding })

(old name: String.EncodeURLComponent)

Parameters

text

The text to encode.

\$URL

encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

Result Returns encoded string.

Description

Please check what text encoding you want to use. Especially what the software processing the hex string expects.

Examples

Encode blog URL:

```
MBS("Text.EncodeURLComponent"; "http://www.mbsplugins.de")
```

Example result: "http% 3A% 2F% 2Fwww% 2Embsplugins% 2Ede"

164.37 Text.FileExtensionToMimeType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.FileExtensionToMimeType"; FileExtension)

Parameters

FileExtension

The file extension to lookup. Anything before a dot is ignored, so you can pass whole file name or path. "test.pdf"

Result Returns OK or error.

Description

Please report any missing mime type in our lookup table, so we can add more. See also Text.MimeTypeToFileExtension.

Examples

Find mime type for PDF:

```
MBS("Text.FileExtensionToMimeType"; "pdf")
```

Example result: application/pdf

Find mime type for whole file name:

```
MBS("Text.FileExtensionToMimeType"; "my.test.pdf")
```

Example result: application/pdf

164.38 Text.FilterUTF16

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	9.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.FilterUTF16"; Text { ; Replacement })

Parameters

Text

The text to process.

"Hello World"

Replacement

Optional

Replacement text for invalid characters. Default is empty.

" [emoji] "

Result Returns text or error.

Description

Removes all UTF-32 characters which can't fit into UTF-16.

Normally UTF-32 range characters exceeding the UTF-16 range are stored as two characters in UTF-16.

This function removes those for software, which may not handle them correctly.

Examples

Remove emojis:

MBS("Text.FilterUTF16"; "Hello World"; " [emoji] ")

Example result: "Hello [emoji] World"

164.38.1 Blog Entries

164.39 Text.FindBetween

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	3.0	Yes	Yes	Yes	Yes	Yes

MBS("Text.FindBetween"; Text; StartTag; EndTag { ; IgnoreCase; NthItem })

(old name: String.FindBetween)

Parameters**Text**

The text to search inside.

"<x>Hello</x>"

StartTag

The first search text, e.g. start tag.

"<x>"

EndTag

The end tag to search, e.g. second search text.

"</x>"

IgnoreCase

Optional

Optional, whether to ignore case in search. Default is 0 for case sensitive search.

0

NthItem

Optional

How many items to ignore before doing real search. Pass 1 to get second item.

0

Result Returns found text.

Description

This function is useful for quickly scanning XML documents.

For more complex XML queries, please use XML.Query function.

Examples

Find CountryCode value in some XML:

```
MBS("Text.FindBetween"; $result; "<v6:CountryCode>"; "</v6:CountryCode>")
```

Find second value tag text:

```
MBS("Text.FindBetween"; $result; "<v6:Value>"; "</v6:Value>";0; 1)
```

Find second item:

MBS("Text.FindBetween"; "<1><2><3>"; "<"; ">"; 0; 1)

Example result: 2

164.40 Text.InvalidCharactersForEncoding

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.InvalidCharactersForEncoding"; text; Encoding)

Parameters

text

The text to process.

"Hello World"

Encoding

The text encoding for the resulting string. Default is native.

"Latin1"

Result Returns text or error.

Description

Returns an empty text if all characters are supported in given encoding. The returned text should have no duplicates, so each character shows only once in the order of first appearance.

Some characters may not be directly supported, but still convert to similar looking characters.

Examples

Check if checkmark is allowed in Latin1:

```
MBS("Text.InvalidCharactersForEncoding"; "Hello äöü"; "Latin1" )
```

Example result:

Checks for characters:

```
MBS("Text.InvalidCharactersForEncoding"; ""; "Latin1" )
```

Example result:

164.41 Text.JaroWinklerDistance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.9	Yes	Yes	Yes	Yes	Yes

MBS("Text.JaroWinklerDistance"; a; b)

(old name: String.JaroWinklerDistance)

Parameters

a

First text string.

"Hello"

b

Second text string.

"Hallo"

Result Returns difference.

Description

Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

see also

http://en.wikipedia.org/wiki/Jaro-Winkler_distance

Examples

Calculate difference between two strings:

MBS("Text.JaroWinklerDistance"; "Hello"; "Hallo")

See also

164.42 Text.Length

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	7.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.Length"; Text)

Parameters

Text

The text to check.

"Hello"

Result Returns number or error.

Description

This is number of UTF16 code points.

Some characters need 2 code points.

Created 25th April 2017, last changed 25th April 2017.

164.43 Text.LevenshteinDistance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.9	Yes	Yes	Yes	Yes	Yes

MBS("Text.LevenshteinDistance"; a; b)

(old name: String.LevenshteinDistance)

Parameters

a

First text string.

"Hello"

b

Second text string.

"Hallo"

Result Returns difference.

Description

Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

see also

http://en.wikipedia.org/wiki/Levenshtein_distance

Examples

Calculate difference between two strings:

MBS("Text.LevenshteinDistance"; "Hello"; "Hallo")

Example result: 0.2

164.44 Text.ListWords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	8.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.ListWords"; Text)

Parameters

Text

The text to split.

"Hello World"

Result Returns list or error.

Description

Words are listed in same order.

We find words based on alpha and numeric characters and use all others as separator.

You can use List.CountValues to count the values in the list or directly use Text.CountWords.

Examples

Split words:

MBS("Text.ListWords"; "Hello World,äöü.")

Example result: Hello

World

äöü

164.45 Text.LowerCase

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.LowerCase"; Text)

Parameters

Text

The text to process.

"hello WORLD"

Result Returns text or error.

Description

See also Text.UpperCase, Text.CapitalCase and Text.RemoveAccents.

Examples

Lower case of Hamburg:

MBS("Text.LowerCase"; "HAMBurg")

Example result: hamburg

Test accented characters:

MBS("Text.LowerCase"; "ÄÖÜÉÁÓÚÍÂÊÎÔÛ")

Example result: äöüéáóúíâêîôû

164.46 Text.MergeFields

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	8.5	Yes	Yes	Yes	Yes	Yes

MBS("Text.MergeFields"; Text; Flags)

Parameters

Text

The input text.

"Hello «\$name»"

Flags

The various flags. 1 to allow field names. 2 to allow variables. 4 to allow expressions to evaluate. 16 to output XML 32 to output HTML.

1+2+4+32

Result Returns OK or error.

Description

This functions look for items between «and »to replace those with real values from fields, variables or expressions. This function does not preserve formatting.

For use in XML or HTML, we can encode all replacement values for you.

If you allow expressions, that may include plugins calls, so user could do anything via MBS calls!

Examples

Use function with Variable:

```
Set Variable [ $FirstName ; Value: "Christian" ]
Set Variable [ $text ; Value: "Hello «$FirstName»" ]
Set Variable [ $text ; Value: MBS( "Text.MergeFields"; $text; 1+2 ) ]
Show Custom Dialog [ $text ]
```

164.47 Text.MimeTypeToFileExtension

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.MimeTypeToFileExtension"; MimeType)

Parameters

MimeType

The mime type to lookup.

"application/pdf"

Result Returns text or error.

Description

Extension is returned with dot prefix.

Please report any missing file extensions in our lookup table, so we can add more.

See also [Text.FileExtensionToMimeType](#).

Examples

Checks for PDF:

MBS("Text.MimeTypeToFileExtension"; "application/pdf")

Example result: .pdf

164.48 Text.ReadEMLXFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.ReadEMLXFile"; FilePath { ; Encoding })

Parameters

FilePath

The native file path. Something like `"/Users/cs/desktop/test.txt"` on Mac and `"C:\Programs\Data\test.txt"` on Windows. Files without path end in the root directory on Mac. `"test.txt"`

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

UTF8

Result Returns text on success and error on failure.

Description

This function provides the raw text from an eml file as Apple Mail uses them to store emails. You may need to use `Text.ReplaceNewline` function to change new line characters.

You have to decide which encoding to use (if not native). We support a few encodings, but we can add more if you need something special.

See also `Text.ReadTextFile` for normal text files and eml files.

164.48.1 Blog Entries

- [MBS FileMaker Plugin, version 5.3pr3](#)

Created 14th September 2015, last changed 12nd November 2015.

164.49 Text.ReadTextFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.ReadTextFile"; FilePath { ; Encoding })

(old name: String.ReadTextFile)

Parameters

FilePath

The native file path. Something like `"/Users/cs/desktop/test.txt"` on Mac and `"C:\Programs\Data\test.txt"` on Windows. Files without path end in the root directory on Mac.
`"test.txt"`

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

`"UTF8"`

Result Returns text on success and error on failure.

Description

You have to decide which encoding to use (if not native). We support a few encodings, but we can add more if you need something special. Some characters will be wrong if the encoding is not correct.

See also `Files.ReadJPEG`, `Files.ReadPDF`, `Files.ReadPNG`, `Files.ReadFile` and `RichText.ReadFile`.

This function reads only up to 1 GB of text. And even than a 32-bit FileMaker may fail to allocate enough memory to handle the text.

When passing UTF-16 as encoding, we can detect byte order if there is a Byte Order Mark.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Read system.log file:

```
MBS("Text.ReadTextFile"; "/var/log/system.log"; "utf8")
```

Read Windows ANSI XML:

```
# read and convert to from Windows ANSI to unicode
Set Variable [ $text; Value:MBS("Text.ReadTextFile"; "/Users/cs/Desktop/test.xml"; "Windows") ]
# remove the encoding hint:
```

```
Set Variable [ $text; Value:Substitute($text; "<?xml version=\\"1.0\\" encoding=\\"WINDOWS-1252\\"?>";
"" ) ]
# now xml is unicode text and can be passed to XML functions.
```

Read file on Windows from desktop folder:

```
MBS( "Text.ReadTextFile"; "C:\Users\Christian\Desktop\test.txt"
```

Read file with UTF-16 Big Endian:

```
MBS( "Text.ReadTextFile"; "/Users/cs/Desktop/test.txt" ; "UTF-16BE" )
```

Parse in VCard with MBS functions:

```
# Loop over files on desktop
Set Variable [ $folder ; Value: MBS( "Folders.UserDesktop" ) ]
Set Variable [ $files ; Value: MBS( "Files.List"; $folder; 1+4; ".vcf" ) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $count ; Value: ValueCount ( $files ) ]
Set Variable [ $index ; Value: 1 ]
If [ $count >0 ]
Loop
# Read in vcard
Set Variable [ $filename ; Value: GetValue($files; $index) ]
Set Variable [ $filepath ; Value: MBS( "Path.AddPathComponent"; $folder; $filename ) ]
Set Variable [ $text ; Value: MBS( "Text.ReadTextFile"; $FilePath; "UTF-8" ) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $text ; Value: MBS( "Text.ReplaceNewline"; $text; 1) ]
# Process all text lines
Set Variable [ $LineCount ; Value: ValueCount ( $text ) ]
Set Variable [ $LineIndex ; Value: 1 ]
# TODO: Create new record here
Loop
Set Variable [ $Line ; Value: GetValue($text; $lineindex) ]
If [ Left ( $line ; 2 ) = "N:" ]
# Name
Set Variable [ $z ; Value: Middle ( $line ; 3; Length ( $line ) ) ]
Set Variable [ $list ; Value: MBS( "List.CSVSplit"; $z ) ]
Set Variable [ $FirstName ; Value: GetValue($list; 1) ]
Set Variable [ $SureName ; Value: GetValue($list; 2) ]
Set Field [ CON::nameGiven ; $firstName ]
Set Field [ CON::nameFamily ; $sureName ]
Else If [ Left($line; 6) = "EMAIL;" ]
# TODO
Else If [ Left($line; 27) = "PHOTO;ENCODING=b;TYPE=JPEG:" ]
# Photo as base64 coded JPEG:
Set Variable [ $data ; Value: Middle ( $line ; 28; Length ( $line ) ) ]
```

```

Set Variable [ $LineIndex ; Value: $LineIndex + 1 ]
Loop
Set Variable [ $Line ; Value: GetValue($text; $lineindex) ]
Exit Loop If [ Left ( $line ; 1 ) = " " ]
Set Variable [ $data ; Value: $data & $& $line ]
# next
Set Variable [ $LineIndex ; Value: $LineIndex + 1 ]
Exit Loop If [ $LineIndex >$LineCount ]
End Loop
Set Variable [ $LineIndex ; Value: $LineIndex - 1 ]
Set Variable [ $image ; Value: Base64Decode ( $data; "image.jpg" ) ]
Set Field [ CON::imageOrLogo ; $image ]
End If
# next
Set Variable [ $LineIndex ; Value: $LineIndex + 1 ]
Exit Loop If [ $LineIndex >$LineCount ]
End Loop
# TODO: Commit record
End If
# next
Set Variable [ $index ; Value: $index + 1 ]
Exit Loop If [ $index >$count ]
End Loop
End If
End If

```

164.50 Text.ReadTextFromContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	4.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.ReadTextFromContainer"; Container { ; Encoding })

Parameters

Container

The container field or variable containing container value.

\$myData

Encoding

Optional

The text encoding for result. Default is native. This function can also handle UTF-16 as well as UTF-16LE and UTF-16BE for little/big endian byte order.

UTF8

Result Returns text or error.

Description

You need to be sure it is text and the text encoding. Else you may get garbage.

Examples

Reads text from container:

```
MBS( "Text.ReadTextFromContainer"; test::test; "UTF8" )
```

164.51 Text.RedefineEncoding

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.RedefineEncoding"; text; InputEncoding; OutputEncoding)

Parameters

text

The text to process.

"Hello World"

InputEncoding

The text encoding for the input text.

"native"

OutputEncoding

The text encoding for the resulting string.

"UTF-8"

Result Returns text or error.

Description

This can be used to fix bad imported texts.

Examples

Fix umlaut in Mac encoded UTF-8 text:

```
MBS( "Text.RedefineEncoding" ; "M√bel"; "mac" ; "UTF8" )
```

Fix umlaut in Latin1 encoded UTF-8 text:

```
MBS( "Text.RedefineEncoding" ; "MÃ\§bel"; "Latin1"; "UTF-8" )
# needs a backslash so FileMaker doesn't evaluate §to be a new line.
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.RemoveAccents"; Text)

(old name: String.RemoveAccents)

Parameters

Text

The input string.
"Müller"

Result Returns the string without accents.

Description

for example é to e

If you miss a certain character in our substitution list, please email us.

Examples

Removes umlaut:

MBS("Text.RemoveAccents"; "Müller")

Example result: Muller

Removes Polish L with stroke:

MBS("Text.RemoveAccents"; "Łużica")

Example result: Luzica

Created 22nd April 2015, last changed 27th April 2017.

164.55 Text.RemoveNewLine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.RemoveNewLine"; Text)

(old name: String.RemoveNewLine)

Parameters

Text

The text to process.

"Hello World"

Result Text without newline characters.

Description

FileMaker has a text replace command, but can't process all combinations of newline characters with it. As this function removes all newlines independent of whether you have CR, LF or CRLF in any combination. We needed this for a client in combination with `WebView.RunJavaScriptReturnTitle`. An older version of Internet Explorer made trouble with newline characters inside javascript text, so we removed them.

Examples

Remove newlines from field

MBS("Text.RemoveNewLine"; Test Database::TextField)

See also

- 164.59 Text.ReplaceNewline 7857

164.56 Text.RemovePostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	6.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.RemovePostfix"; Text; Prefix { ; CaseSensitive })

Parameters

Text

The text to check.

">Hello World"

Prefix

The prefix to remove.

">"

CaseSensitive

Optional

Pass 1 to check case sensitive. Default is 0 for case insensitive.

0

Result Returns text.

Description

Examples

Removes postfix:

MBS("Text.RemovePostfix"; "Hello World>"; ">")

Example result: Hello World

164.57 Text.RemovePrefix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	6.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.RemovePrefix"; Text; Prefix { ; CaseSensitive })

Parameters

Text

The text to check.

">Hello World"

Prefix

The prefix to remove.

">"

CaseSensitive

Optional

Pass 1 to check case sensitive. Default is 0 for case insensitive.

0

Result Returns text.

Description

Examples

Removes prefix:

```
MBS( "Text.RemovePrefix"; ">Hello World"; ">" )
```

Creates directory and shows error:

```
Set Variable [ $r; Value:MBS("Files.CreateDirectory"; $path) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to create directory"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ ]
End If
```

164.58 Text.ReplaceAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	7.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.ReplaceAll"; Text; Find; ReplaceWithText)

Parameters

Text

The text to search.

"Hello World"

Find

The text to find.

"o"

ReplaceWithText

The new text.

"a"

Result Returns text or error.

Description

Quickly looks for all occurrences of a given text in another text and replaces it with a new text.

Optimized code for extra speed if you replace one character with another character.

Examples

Simple replace:

```
MBS( "Text.ReplaceAll"; "Hello"; "e"; "a" )
```

Example result: "Hallo"

164.59 Text.ReplaceNewline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.ReplaceNewline"; Text; Mode { ; Wrap })

(old name: String.ReplaceNewline)

Parameters

Text

The text to process.

"Hello World"

Mode

The operation mode. First a value for the output newline type: 0 = nothing, 1 = CR (Mac), 2 = LF (Unix), 3 = CRLF (Windows), 4 =
for html, 5 =
for xml. Second you can add 8 to remove duplicate newlines.

Wrap

Optional

Optional whether to wrap lines longer than given number of characters. Default is 0 for no wrap.

80

Result Text with modified newline characters.

Description

Can remove, convert to Mac, Windows and Linux specific end of line characters. Also can remove duplicates. FileMaker uses Mac line endings on all platforms.

Examples

Remove newlines from field:

```
MBS( "Text.ReplaceNewline"; Test Database::TextField; 0 )
```

Replaces newlines from field with Mac newlines:

```
MBS( "Text.ReplaceNewline"; Test Database::TextField; 1 )
```

Replaces newlines from field with Mac newlines and remove duplicates:

```
MBS( "Text.ReplaceNewline"; Test Database::TextField; 1+8 )
```

Write UTF-8 CRLF file:

```
Set Variable [ $text ; Value: "Joe,1234 Main St.$John Glen,3132 Elm$Johnson,5233 Wreybird$Ray,263 Birch$äöü" ]
```

```
Set Variable [ $path ; Value: "/Users/cs/Desktop/test.txt" ]
```

```
Set Variable [ $text ; Value: MBS( "Text.ReplaceNewline"; $text; 3) // CRLF ]
```

Set Variable [\$r ; Value: MBS("Text.WriteTextFile"; \$text; \$path; "UTF8")]

164.60 Text.Serialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.Serialize"; Text)

Parameters

Text

The styled text to serialize.
"Hello World"

Result Returns text or error.

Description

The styled text content is stored in a base64 encoded string which the plugin function Text.Deserialize can read.

Using this function allows to store a styled text in a text field or transmit it with Socket functions, SerialPort functions or by writing it to a file.

See also

164.61 Text.SoundEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.SoundEx"; Text)

(old name: String.SoundEx)

Parameters**Text**

The input string.

"Müller"

Result Returns soundex string.

Description

Similar names like Mayer, Maier, Meyer and Meier return the same SoundEx so you can have searches which match all of those names.

This is the english version while String.SoundExGerman is optimized for German.

Examples

SoundEx of Müller:

MBS("Text.SoundEx"; "Müller")

See also

- 164.62 Text.SoundExGerman

7862

Created 18th August 2014, last changed 18th April 2016.

164.62 Text.SoundExGerman

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	3.5	Yes	Yes	Yes	Yes	Yes

MBS("Text.SoundExGerman"; Text)

(old name: String.SoundExGerman)

Parameters

Text

The input string.

"Müller"

Result Returns soundex string.

Description

Similar names like Mayer, Maier, Meyer and Meier return the same SoundEx so you can have searches which match all of those names.

This is the german version while String.SoundEx was created for english mainly.

Examples

SoundEx of Müller:

MBS("Text.SoundExGerman"; "Müller")

See also

164.63 Text.Styles

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	9.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.Styles"; Text)

Parameters

Text

The styled text to check.

"Hello World"

Result Returns JSON or error.

Description

Returns a JSON array with objects containing details.

Includes booleans hasColor, hasFont, hasSize and hasFace to inform you which features are available for text block.

If hasColor is true, you can get color (numeric), colorHex (string) and values in range 0 to 255 for red, blue, green and alpha.

If hasFont is true, you can get fontID, fontScript and font with the name.

If hasSize is true, the size field contains the size of the font in points.

If hasFace is true, you get the face as integer. We also provide bold, italic, underline, outline, shadow, condense, extend, strikethrough, smallCaps, superscript, subscript, wordUnderline and doubleUnderline as booleans.

Examples

Check some text:

```
MBS("Text.Styles"; TextColor ( "Hello" ; RGB ( 255 ; 0 ; 0 ) ))
```

```
Example result: [ {
  "hasColor": true,
  "color": 16711680,
  "colorHex": "FF0000",
  "red": 255,
  "green": 0,
  "blue": 0,
  "alpha": 255,
  "hasFont": false,
  "hasSize": false,
  "hasFace": false
} ]
```

164.64 Text.TextToHTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	4.3	Yes	Yes	Yes	Yes	Yes

MBS("Text.TextToHTML"; Text { ; Options })

Parameters**Text**

Formatted text to convert.

"Hello World"

Options

Optional

Available in MBS FileMaker Plugin 6.5 or newer.

The options number for html creation. Add 1 for having no body around. Add 2 to have no font names. Add 4 to have no font sizes. Add 8 to use strong instead of b tag for bold. Add 16 to keep links in HTML to pass through <a.>tags. (new in 7.4).

1+2+4+8

Result Returns OK or error.

Description

Supports styles like bold, italic, underline, font size and text color. Other style features may be added in the future on demand.

See also Text.EncodeToHTML and GetAsCSS in FileMaker.

Examples

Convert some text to HTML

MBS("Text.TextToHTML"; "Hello World")

```
Example result: <!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose
<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="de">
<head>
<meta http-equiv="content-type" content="application/xhtml+xml; charset=utf-8" />
</head>
<body>
<p>Hello World</p></body>
</html>
```

Convert some text to RTF

MBS("Text.TextToRTF"; "Hello World")

```
Example result: { \rtf1\ansi\ansicpg1252
Hello World
}
```

Convert without body/header:

```
MBS( "Text.TextToHTML"; "Hello World"; 1 )
```

Example result: <p>Hello World</p>

164.65 Text.TextToRTF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.TextToRTF"; Text)

(old name: TextToRTF)

Parameters**Text**

Formatted text to convert.

"Hello World"

Result some text you could put into rtf file.

Description

Currently only ANSI text encoding. Supports styles like bold, italic, underline, font size and text color. Other style features may be added in the future on demand.

Can be used with Clipboard.SetRTFText to bring styled text to the clipboard.

Examples

Convert some text to RTF

MBS("Text.TextToRTF"; "Hello World")

Example result: { \rtf1\ansi\ansicpg1252

Hello World

}

Convert some text to HTML

MBS("Text.TextToHTML"; "Hello World")

Example result: <!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose

<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="de">

<head>

<meta http-equiv="content-type" content="application/xhtml+xml; charset=utf-8" />

</head>

<body>

<p>Hello World</p></body>

</html>

Write RTF file:

Set Variable [\$rtf; Value:MBS("Text.TextToRTF"; "Hello World äöü ß")]

Set Variable [\$r; Value:MBS("Text.WriteTextFile"; \$rtf; "/Users/cs/Desktop/test.rtf"; "Windows")]

164.66 Text.Trim

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	8.2	Yes	Yes	Yes	Yes	Yes

MBS("Text.Trim"; Text)

Parameters

Text

The text to trim.

" Hello "

Result Returns OK or error.

Description

May remove low ASCII characters like tab, CR, LF and space.

Examples

Trim hello:

MBS("Text.Trim"; " \$Hello \$")

Example result: Hello

164.67 Text.UpperCase

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	5.1	Yes	Yes	Yes	Yes	Yes

MBS("Text.UpperCase"; Text)

Parameters

Text

The text to process.

"hello WORLD"

Result Returns text or error.

Description

See also Text.LowerCase, Text.CapitalCase and Text.RemoveAccents.

Examples

Upper case of Hamburg:

MBS("Text.LowerCase"; "HAMBurg")

Example result: HAMBURG

See also

164.68 Text.WriteTextFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	2.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.WriteTextFile"; Text; FilePath { ; Encoding })

(old name: String.WriteTextFile)

Parameters

Text

The text to save.

"Hello World"

FilePath

The native file path. Something like "/Users/cs/desktop/test.txt" on Mac and "C:\Programs\Data\test.txt" on Windows. Files without path end in the root directory on Mac.

"test.txt"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

Result Returns "OK" or an error message.

Description

You have to decide which encoding to use (if not native). We support a few encodings, but we can add more if you need something special.

Please use Text.ReplaceNewline to define which line endings the file has.

In order to append to a text file, you can use Text.AppendTextFile instead.

If text encoding doesn't support given characters, they are converted to close match if possible or replaced by question marks.

Existing file is overwritten if permissions allow it.

Added support for UTF-16 in plugin version 7.2. You can pass UTF-16, UTF-16LE or UTF-16BE for encoding.

See Text.ReadTextFile for reading text files.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Write UTF-8 file with some text:

```
MBS("Text.WriteTextFile"; $Text; $Path; "utf8" )
```

Write a test text file on Mac:

```
MBS("Text.WriteTextFile"; "Hello World. Some umlauts: äöü"; "/Users/cs/Desktop/testfile.txt"; "native")
```

Write text in UTF-8 with Byte Order Mark (BOM):

```
MBS("Text.WriteTextFile"; Char(65279) & "Hello World"; $Path; "utf8")
```

Write a test text file on Win:

```
MBS("Text.WriteTextFile"; "Hello World. Some umlauts: äöü"; "c:\test\testfile.txt"; "native")
```

Write RTF file:

```
Set Variable [ $rtf; Value:MBS( "Text.TextToRTF"; "Hello World äöü ß" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $rtf; "/Users/cs/Desktop/test.rtf"; "Windows") ]
```

Export data via SQL to text file:

```
Set Variable [ $sql; Value:"SELECT \"Item\", \"Model\", \"Serial Number\" FROM \"Assets\"" ]
Set Variable [ $text; Value:MBS( "FM.ExecuteSQL"; $sql; 9; 13 ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; "/tmp/test.txt"; "UTF-8" ) ]
```

Write UTF-16 with LE, BE or default with BOM:

```
MBS("Text.WriteTextFile"; Char(65279) & "Hello World"; "/Users/cs/Desktop/test UTF-16LE.txt"; "UTF-16LE")
```

```
MBS("Text.WriteTextFile"; Char(65279) & "Hello World"; "/Users/cs/Desktop/test UTF-16BE.txt"; "UTF-16BE")
```

```
MBS("Text.WriteTextFile"; Char(65279) & "Hello World"; "/Users/cs/Desktop/test UTF-16.txt"; "UTF-16")
```

Write UTF-8 CRLF file:

```
Set Variable [ $text ; Value: "Joe,1234 Main St.§John Glen,3132 Elm§Johnson,5233 Wreybird§Ray,263 Birch§äöü" ]
Set Variable [ $path ; Value: "/Users/cs/Desktop/test.txt" ]
Set Variable [ $text ; Value: MBS( "Text.ReplaceNewline"; $text; 3) // CRLF ]
Set Variable [ $r ; Value: MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
```

Write a HTML file and an image file to load in web viewer:

```

Set Variable [ $folder ; Value: MBS( "Folders.UserTemporary" ) ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "test.jpg" ) ]
Set Variable [ $r ; Value: MBS( "Container.WriteFile"; Images::Image; $path ) ]
#
Set Variable [ $html ; Value: "<html><body><p>Hello World</p><img src=test.jpg width=300></body></html>" ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "test.html" ) ]
Set Variable [ $r ; Value: MBS( "Text.WriteTextFile"; $html; $path ) ]
#
Set Variable [ $URL ; Value: MBS( "Path.FilePathToFileURL"; $Path ) ]
Set Web Viewer [ Object Name: "web" ; URL: $URL ]

```

164.69 Text.WriteToContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 Text	4.4	Yes	Yes	Yes	Yes	Yes

MBS("Text.WriteToContainer"; Text { ; Encoding; FilePath })

(old name: String.WriteToContainer)

Parameters

Text

The text to save.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is native.

"UTF-8"

FilePath

Optional

The file name to include in the container value.

"test.txt"

Result Returns OK or error.

Description

The result can be assigned to a container field and later be exported.

Examples

Writes some text to container:

```
MBS("Text.WriteToContainer"; "Hello World"; "UTF-8"; "test.txt")
```

Chapter 165

TextView

Functions for an independent text field.

Our plugin can place an independent text view on the layout to show or edit text. Offers OS provided spell checking and RTF support.

165.1 TextView.CanUndo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

MBS("TextView.CanUndo"; TextView)

Parameters

TextView

The reference number to the text view.

\$textview

Result Returns 1, 0 or error.

Description

Returns 1 if undo is possible or 0 if not.

See also

- 165.44 TextView.Undo

7923

Created 15th April 2019, last changed 15th April 2019.

165.2 TextView.Copy

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

MBS("TextView.Copy"; TextView)

Parameters

TextView

The reference number to the text view.

\$textview

Result Returns OK or error.

Description

Puts text on the clipboard and returns OK.

See also

165.3 TextView.CreateOnPopoverWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

```
MBS( "TextView.CreateOnPopoverWithControl"; WindowRef; Popover Name; ControlName { ; DX; DY }
)
```

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Popover Name

The name of the popover to look for on the window.

"MyPopover"

ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

DX

Optional

A delta to move text view more to left or right.

0

DY

Optional

A delta to move text view more to top or bottom.

0

Result Returns text view reference number on success.

Description

Use TextView.Release later to destroy the text view.

Text view reference numbers are starting at 81000 and counting up for each new text view.

165.4 TextView.CreateOnPopoverWithSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

MBS("TextView.CreateOnPopoverWithSize"; WindowRef; Popover Name; x; y; w; h)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Popover Name

The name of the popover to look for on the window.

"MyPopover"

x

The left coordinate in the popover.

0

y

The top coordinate in the popover.

0

w

The width of the text view in the popover.

600

h

The height of the text view in the popover.

400

Result Returns text view reference number on success.

Description

Use TextView.Release later to destroy the text view.

Text view reference numbers are starting at 81000 and counting up for each new text view.

165.5 TextView.CreateWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

MBS("TextView.CreateWithControl"; WindowRef; ControlName { ; DX; DY })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

DX

Optional

A delta to move text view more to left or right.

0

DY

Optional

A delta to move text view more to top or bottom.

0

Result Returns text view reference number on success.

Description

Use TextView.Release later to destroy the text view.

If you use a register (tab controls) on the window, be aware that the text view actually is in front of the register (tab controls). You may hide the text view if another register is visible.

Text view reference numbers are starting at 81000 and counting up for each new text view.

When creating on a card window, please pass reference to parent window or just 0 for front window. On MacOS you may need to pass delta y value to adjust position.

If you create a control on a new window, you may do window update command in your script first to have FileMaker actually build the window with controls and display it. A short script pause or using FM.RunScriptLater with 0.1 delay can help having all controls draw themselves. Then you can use this command to put our control on top. We use GetControl() to query left, top, width and height and this gives empty value if control is not yet here.

165.6 TextView.CreateWithSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

MBS("TextView.CreateWithSize"; WindowRef; x; y; w; h)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

x

The left coordinate in the window.

0

y

The top coordinate in the window.

0

w

The width of the text view in the window.

100

h

The height of the text view in the window.

100

Result Returns text view reference number on success.

Description

Use TextView.Release later to destroy the text view.

If you use a register (tab controls) on the window, be aware that the text view actually is in front of the register (tab controls). You may hide the text view if another register is visible.

Text view reference numbers are starting at 81000 and counting up for each new text view.

7907

Created 15th April 2019, last changed 15th April 2019.

165.10 TextView.GetAutoResizingMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	No	No	No	No

MBS("TextView.GetAutoResizingMask"; TextView)

Parameters

TextView

The reference number to the text view.

\$textview

Result Returns number or error.

Description

This defines whether view changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

165.21 TextView.GetTop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

MBS("TextView.GetTop"; TextView; swap)

Parameters

TextView

The reference number to the text view.

\$textview

swap

Whether to swap y coordinate. By default we swap them. Pass 0 to disable or 1 to swap.

1

Result Returns y coordinate or error.

Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	No	No	No	No

MBS("TextView.SetAutoResizingMask"; TextView; Value)

Parameters

Text View

The reference number to the text view.

\$textview

Value

The new setting.

4+8

Result Returns OK or error.

Description

This defines whether view changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

MBS("TextView.SetFrame"; TextView; X; Y; Width; Height { ; swap })

Parameters

TextView

The reference number to the text view.

\$textview

X

The x coordinate.

Y

The y coordinate.

Width

The width of the control.

Height

The height of the control.

swap

Optional

Whether to swap y coordinate. By default we swap them. Pass 0 to disable or 1 to swap.

1

Result Returns OK or error.

Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

165.33 TextView.SetFrameWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
165 TextView	9.2	Yes	Yes	No	No	Yes

MBS("TextView.SetFrameWithControl"; TextView; ControlName { ; DX; DY })

Parameters

TextView

The reference number to the text view.

\$textview

ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

DX

Optional

A delta to move text view more to left or right.

0

DY

Optional

A delta to move text view more to top or bottom.

0

Result Returns OK or error.

Description

If you moved control in layout mode, this can move the text view back to the new position.

Also useful to switch between different locations on the layout.

Chapter 166

Time

Time functions.

166.1 Time.Format

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
166 Time	6.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "Time.Format"; TimeStamp; FormatString { ; Locale } )
```

Parameters

TimeStamp

The FileMaker time stamp.

```
Get(CurrentTimeStamp)
```

FormatString

The format string.

Locale

Optional

The locale to use. Be aware that identifiers are not the same on Mac, Windows and Linux.

```
"FR_fr"
```

Result Returns text or error.

Description

locale is the name of the locale to use. You can pass empty string to use default/current locale.

Format is a format string like for strftime command in C.

The format specification is a string and may contain special character sequences called conversion specifications, each of which is introduced by a '%' character and terminated by some other character known as a

conversion specifier character. All other character sequences are ordinary character sequences.

The characters of ordinary character sequences (including the null byte) are copied verbatim from format to s. However, the characters of conversion specifications are replaced as follows:

Some conversion specifications can be modified by preceding the conversion specifier character by the E or O modifier to indicate that an alternative format should be used. If the alternative format or specification does not exist for the current locale, the behavior will be as if the unmodified conversion specification were used. (SU) The Single UNIX Specification mentions % Ec, % EC, % Ex, % EX, % Ey, % EY, % Od, % Oe, % OH, % OI, % Om, % OM, % OS, % Ou, % OU, % OV, % Ow, % OW, % Oy, where the effect of the O modifier is to use alternative numeric symbols (say, roman numerals), and that of the E modifier is to use a locale-dependent alternative representation.

Examples

Formats a date:

```
MBS( "Time.Format"; Get ( CurrentTimeStamp ); "% d % B % Y" )
```

Example result: 11 December 2016

Formats a date in french:

```
MBS( "Time.Format"; Get ( CurrentTimeStamp ); "% d % B % Y"; "FR_fr" )
```

Example result: 11 décembre 2016

Format a timestamp for MySQL:

```
MBS( "Time.Format"; Get ( CurrentTimeStamp ); "% Y-% m-% d % H:% M:% S" )
```

Example result: 2016-12-11 11:35:26

Time for HTTP Request:

```
MBS( "Time.Format"; Get ( CurrentTimeStamp ); "% a, % d % b % Y % H:% M:% S % Z" )
```

Example result: Sun, 11 Dec 2016 11:36:18 CET

Query week number:

```
MBS( "Time.Format"; Get(HostTimeStamp); "% W" )
```

Created 17th August 2016, last changed 31st May 2019.

- % a The abbreviated weekday name according to the current locale.
- % A The full weekday name according to the current locale.
- % b The abbreviated month name according to the current locale.
- % B The full month name according to the current locale.
- % c The preferred date and time representation for the current locale.
- % C The century number (year/100) as a 2-digit integer. (SU)
- % d The day of the month as a decimal number (range 01 to 31).
- % D Equivalent to % m/% d/% y. (Yecch-for Americans only. Americans should note that in other countries % d/% m/% y is rather common. This means that in international context this format is ambiguous and should not be used.) (SU)
- % e Like % d, the day of the month as a decimal number, but a leading zero is replaced by a space. (SU)
- % E Modifier: use alternative format, see below. (SU)
- % F Equivalent to % Y-% m-% d (the ISO 8601 date format). (Not on Windows)
- % G The ISO 8601 week-based year (see NOTES) with century as a decimal number. The 4-digit year corresponding to the ISO week number (see % V). This has the same format and value as % Y, except that if the ISO week number belongs to the previous or next year, that year is used instead. (TZ)
- % g Like % G, but without century, that is, with a 2-digit year (00-99). (TZ)
- % h Equivalent to % b. (SU)
- % H The hour as a decimal number using a 24-hour clock (range 00 to 23).
- % I The hour as a decimal number using a 12-hour clock (range 01 to 12).
- % j The day of the year as a decimal number (range 001 to 366).
- % k The hour (24-hour clock) as a decimal number (range 0 to 23); single digits are preceded by a blank. (See also % H.) (TZ)
- % l The hour (12-hour clock) as a decimal number (range 1 to 12); single digits are preceded by a blank. (See also % I.) (TZ)
- % m The month as a decimal number (range 01 to 12).
- % M The minute as a decimal number (range 00 to 59).
- % n A newline character. (SU)
- % O Modifier: use alternative format, see below. (SU)
- % p Either "AM" or "PM" according to the given time value, or the corresponding strings for the current locale. Noon is treated as "PM" and midnight as "AM".
- % P Like % p but in lowercase: "am" or "pm" or a corresponding string for the current locale. (GNU)
- % r The time in a.m. or p.m. notation. In the POSIX locale this is equivalent to % I:% M:% S % p. (SU)
- % R The time in 24-hour notation (% H:% M). (SU) For a version including the seconds, see % T below.
- % s The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). (TZ)
- % S The second as a decimal number (range 00 to 60). (The range is up to 60 to allow for occasional leap seconds.)
- % t A tab character. (SU)
- % T The time in 24-hour notation (% H:% M:% S). (SU)
- % u The day of the week as a decimal, range 1 to 7, Monday being 1. See also % w. (SU)
- % U The week number of the current year as a decimal number, range 00 to 53,

166.2 Time.Parse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
166 Time	6.4	Yes	No	Yes	Yes	Yes

MBS("Time.Parse"; Text; FormatString { ; Locale })

Parameters

Text

The text to parse for date and/or time

"2016-11-30"

FormatString

The format string.

Locale

Optional

The locale to use. Be aware that identifiers are not the same on Mac, Windows and Linux.

"FR_fr"

Result Returns timestamp or error.

Description

The Time.Parse function parses the string in the parameter, according to the string pointed to by format parameter, and returns the result as timestamp. The resulting values will be relative to the local time zone. Thus, it can be considered the reverse operation of Time.Format.

The Time.Parse function is the converse function to FormateDateMBS and converts the character string pointed to by s to values which are stored in the date, using the format specified by format. Here format is a character string that consists of field descriptors and text characters, reminiscent of scanf (in C++). Each field descriptor consists of a % character followed by another character that specifies the replacement for the field descriptor. All other characters in the format string must have a matching character in the input string, except for whitespace, which matches zero or more whitespace characters in the input string. There should be whitespace or other alphanumeric characters between any two field descriptors.

The Time.Parse function processes the input string from left to right. Each of the three possible input elements (whitespace, literal, or format) are handled one after the other. If the input cannot be matched to the format string the function stops. The remainder of the format and input strings are not processed.

The supported input field descriptors are listed below. In case a text string (such as a weekday or month name) is to be matched, the comparison is case insensitive. In case a number is to be matched, leading zeros are permitted but not required.

Some field descriptors can be modified by the E or O modifier characters to indicate that an alternative format or specification should be used. If the alternative format or specification does not exist in the current locale, the unmodified field descriptor is used.

The E modifier specifies that the input string may contain alternative locale-dependent versions of the date and time representation:

Returns true on success. If the functions fails to match all of the format string and therefore an error occurred the function returns false.

Before libc 5.4.13 whitespace (and the 'n' and 't' specifications) was not handled, no 'E' and 'O' locale modifier characters were accepted, and the 'C' specification was a synonym for the 'c' specification.

The 'y' (year in century) specification is taken to specify a year in the 20th century by libc4 and libc5. It is taken to be a year in the range 1950-2049 by glibc 2.0. It is taken to be a year in 1969-2068 since glibc 2.1.

For reasons of symmetry, glibc tries to support for ParseDateMBS the same format characters as for FormatDateMBS. (In most cases the corresponding fields are parsed, but no field in tm is changed.) This leads to

Similarly, because of GNU extensions to FormatDateMBS, % k is accepted as a synonym for % H, and % l should be accepted as a synonym for % I, and % P is accepted as a synonym for % p. Finally

The glibc implementation does not require whitespace between two field descriptors.

Examples

Parse a date:

```
MBS( "Time.Parse"; "2016-11-30"; "% Y-% m-% d" )
```

Example result: 30.11.2016 00:00

Parse a timestamp:

```
MBS( "Time.Parse"; "2016-11-30 13:31"; "% Y-% m-% d % H:% M" )
```

Example result: 30.11.2016 13:31

166.2.1 Blog Entries

- [MBS FileMaker Plugin, version 6.4pr4](#)
- [Tip of the day: Query connected clients on FileMaker Server by script](#)

Created 17th August 2016, last changed 17th June 2018.

% %	The % character.
% a or % A	The weekday name according to the current locale, in abbreviated form or the full name.
% b or % B or % h	The month name according to the current locale, in abbreviated form or the full name.
% c	The date and time representation for the current locale.
% C	The century number (0-99).
% d or % e	The day of month (1-31).
% D	Equivalent to % m/% d/% y. (This is the American style date, very confusing to non-Americans, especially since % d/% m/% y is widely used in Europe. The ISO 8601 standard format is % Y-% m-% d.)
% H	The hour (0-23).
% I	The hour on a 12-hour clock (1-12).
% j	The day number in the year (1-366).
% m	The month number (1-12).
% M	The minute (0-59).
% n	Arbitrary whitespace.
% p	The locale's equivalent of AM or PM. (Note: there may be none.)
% r	The 12-hour clock time (using the locale's AM or PM). In the POSIX locale equivalent to % I:% M:% S % p. If t_fmt_ampm is empty in the LC_TIME part of the current locale then the behavior is undefined.
% R	Equivalent to % H:% M.
% S	The second (0-60; 60 may occur for leap seconds; earlier also 61 was allowed).
% t	Arbitrary whitespace.
% T	Equivalent to % H:% M:% S.
% U	The week number with Sunday the first day of the week (0-53). The first Sunday of January is the first day of week 1.
% w	The weekday number (0-6) with Sunday = 0.
% W	The week number with Monday the first day of the week (0-53). The first Monday of January is the first day of week 1.
% x	The date, using the locale's date format.
% X	The time, using the locale's time format.
% y	The year within century (0-99). When a century is not otherwise specified, values in the range 69-99 refer to years in the twentieth century (1969-1999); values in the range 00-68 refer to years in the twenty-first century (2000-2068).
% Y	The year, including century (for example, 1991).

<code>% Ec</code>	The locale's alternative date and time representation.
<code>% EC</code>	The name of the base year (period) in the locale's alternative representation.
<code>% Ex</code>	The locale's alternative date representation.
<code>% EX</code>	The locale's alternative time representation.
<code>% Ey</code>	The offset from <code>% EC</code> (year only) in the locale's alternative representation.
<code>% EY</code>	The full alternative year representation. The <code>O</code> modifier specifies that the numerical input may be in an alternative locale-dependent format:
<code>% Od</code> or <code>% Oe</code>	The day of the month using the locale's alternative numeric symbols; leading zeros are permitted but not required.
<code>% OH</code>	The hour (24-hour clock) using the locale's alternative numeric symbols.
<code>% OI</code>	The hour (12-hour clock) using the locale's alternative numeric symbols.
<code>% Om</code>	The month using the locale's alternative numeric symbols.
<code>% OM</code>	The minutes using the locale's alternative numeric symbols.
<code>% OS</code>	The seconds using the locale's alternative numeric symbols.
<code>% OU</code>	The week number of the year (Sunday as the first day of the week) using the locale's alternative numeric symbols.
<code>% Ow</code>	The number of the weekday (Sunday=0) using the locale's alternative numeric symbols.
<code>% OW</code>	The week number of the year (Monday as the first day of the week) using the locale's alternative numeric symbols.
<code>% Oy</code>	The year (offset from <code>% C</code>) using the locale's alternative numeric symbols.
<code>% F</code>	Equivalent to <code>% Y-% m-% d</code> , the ISO 8601 date format.
<code>% g</code>	The year corresponding to the ISO week number, but without the century (0-99).
<code>% G</code>	The year corresponding to the ISO week number. (For example, 1991.)
<code>% u</code>	The day of the week as a decimal number (1-7, where Monday = 1).
<code>% V</code>	The ISO 8601:1988 week number as a decimal number (1-53). If the week (starting on Monday) containing 1 January has four or more days in the new year, then it is considered week 1. Otherwise, it is the last week of the previous year, and the next week is week 1.
<code>% z</code>	An RFC-822/ISO 8601 standard timezone specification.
<code>% Z</code>	The timezone name.
<code>% s</code>	The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). Leap seconds are not counted unless leap second support is available.

166.3 Time.TimeStampToUTC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
166 Time	6.1	Yes	Yes	Yes	Yes	Yes

MBS("Time.TimeStampToUTC"; TimeStamp { ; AsText })

Parameters

TimeStamp

The input time stamp in local time zone.

AsText

Optional

Boolean to decide whether to pass back timestamp (0, default) or text (1).

1

Result Returns OK or error.

Description

Returns either timestamp in UTC (by removing time zone offset) or as text in format like this: 2014-08-18T12:00:00Z.

Examples

Convert local time to UTC:

```
MBS( "Time.TimeStampToUTC"; Get(CurrentTimeStamp) )
```

Example result: 11.12.2016 10:36:44

Convert time to UTC text:

```
MBS( "Time.TimeStampToUTC"; Get(CurrentTimeStamp); 1 )
```

Example result: 2016-12-11T10:36:50Z

166.3.1 Blog Entries

- [MBS FileMaker Plugin, version 9.1pr4](#)

Created 6th February 2016, last changed 11st December 2016.

166.4 Time.TimeZoneOffset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
166 Time	9.1	Yes	Yes	Yes	Yes	Yes

MBS("Time.TimeZoneOffset"; AsText)

Parameters

AsText

Pass 1 to get back time zone as text like "+03:00". Otherwise default is zero to return as number of seconds.
1

Result Returns value or error.

Description

Returns either seconds or formatted text.

Time zone changes on Windows don't take effect until you restart FileMaker. For MacOS, the functions notice the changes in system automatically.

Examples

Query time zone as text:

```
MBS( "Time.TimeZoneOffset"; 1 )
```

Example result: "+01:00"

Query time zone as number:

```
MBS( "Time.TimeZoneOffset"; 0 )
```

Example result: 3600

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
166 Time	8.3	Yes	Yes	Yes	Yes	Yes

MBS("Time.UnixTimeStampToFileMaker"; UnixTime { ; GMT })

Parameters

UnixTime

The time value from unix.

1527786192

GMT

Optional

Pass 1 for GMT or 0 for local time zone. Default is 0 for local time.

0

Result Returns OK or error.

Description

Pass unix time, which is number of seconds since 1970.

Examples

Convert time:

MBS("Time.UnixTimeStampToFileMaker"; 1527786192)

Example result: "31.05.2018 19:03:12"

Chapter 167

Toolbar

Extend FileMaker toolbar with new buttons.

167.1 Toolbar.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Toolbar.Install")

Result Returns OK or error.

Description

You call this functions once at startup. You can use `Toolbar.Register` after or before to introduce new identifiers. Use `Window.SetToolbarConfiguration` to install a new configuration including your custom identifiers or use customize toolbar palette.

Created 20th August 2014, last changed 20th August 2014.

167.2 Toolbar.InstallBackground

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Toolbar.InstallBackground"; Image { ; Mode; DisableTitle })

Parameters

Image

The image to you. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$img

Mode

Optional

Can be 0 to stretch (default) or 1 to left align image.

0

DisableTitle

Optional

If 1, we do not draw the window title on top of the image.

0

Result Returns OK or error.

Description

There is currently only one style for all FileMaker windows on Mac OS X.

We draw an image below the toolbar buttons. Either we stretch it to full width we align it to left and fill the space on the right with last pixel colors.

There are little redraw issues, especially when resizing window.

Currently doesn't work in FileMaker 14 and newer. If you need that to work, please contact us.

167.3 Toolbar.Register

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Toolbar.Register"; Identifier; FileName; ScriptName; Parameter; Label; PaletteLabel; Tooltip; Image)

Parameters

Identifier

The toolbar identifier. Must be an unique string.

"Test"

FileName

The file name of the FileMaker database where the script is located.

"Toolbar.fmp12"

ScriptName

The name of the script to call when toolbar item is pressed.

"ToolbarScript"

Parameter

The parameter to pass to the script. This can be same as identifier. Using different parameters allows you to use one script for all toolbar items.

"SwitchToMainLayout"

Label

The label, which normally appears in the toolbar and in the overflow menu.

"Hello"

PaletteLabel

The label that appears when it is in the customization palette. Can be same as label or different.

"Hello World"

Tooltip

The tooltip for the label!

"click me"

Image

The image to use for the toolbar item. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

Result Returns OK or error.

Description

Please use an identifier with your own prefix/suffix to make sure you have no conflict with existing identifiers.

Once your item is registered, the next time the toolbar updates itself it will use it.

You can use Window.SetToolbarConfiguration or the customize palette to add your toolbar item.

You need to call `Toolbar.Install` at least once before using this command to have it take effect.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

167.4 Toolbar.SetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar	6.4	Yes	No	No	No	No

MBS("Toolbar.SetImage"; Identifier; Image)

Parameters

Identifier

The toolbar identifier.

Possible toolbar identifiers: RecordNavigationToolbarItemIdentifier, ShowAllToolbarItemIdentifier, NSToolbarSpaceItem, NewRecordToolbarItemIdentifier, DeleteRecordToolbarItemIdentifier, NSToolbarSpaceItem, FindDropdownToolbarItemIdentifier, SortToolbarItemIdentifier, UploadServerToolbarItemIdentifier, QuickFindToolbarItemIdentifier, DuplicateRecordToolbarItemIdentifier, ManageToolbarItemIdentifier, SaveAsExcelToolbarItemIdentifier, SaveAsPDFToolbarItemIdentifier, SaveAsSnapshotLinkToolbarItemIdentifier, ImportToolbarItemIdentifier, ExportToolbarItemIdentifier, PrintToolbarItemIdentifier, PageSetupToolbarItemIdentifier, SendMailToolbarItemIdentifier, OmitRecordToolbarItemIdentifier, ShowOmittedToolbarItemIdentifier, NewWindowToolbarItemIdentifier, DebuggerToolbarItemIdentifier, DataViewerToolbarItemIdentifier, SavedFindToolbarItemIdentifier, NewLayoutAnyModeToolbarItemIdentifier
"NewRecordToolbarItemIdentifier"

Image

The image to use for the toolbar item. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

Result Returns OK or error.

Description

Use an empty image to remove image from table.

You need to call `Toolbar.Install` at least once before using this command to have it take effect.

Examples

Sets images for new and delete toolbar:

```
Set Variable [ $r; Value:MBS( "Toolbar.SetImage"; "NewRecordToolbarItemIdentifier"; Toolbar::NewRecordImage) ]
```

```
Set Variable [ $r; Value:MBS( "Toolbar.SetImage"; "DeleteRecordToolbarItemIdentifier"; Toolbar::DeleteRecordImage) ]
```

167.5 Toolbar.SetLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar	6.4	Yes	No	No	No	No

MBS("Toolbar.SetLabel"; Identifier; Text)

Parameters

Identifier

The toolbar identifier.

Possible toolbar identifiers: RecordNavigationToolbarItemIdentifier, ShowAllToolbarItemIdentifier, NSToolbarSpaceItem, NewRecordToolbarItemIdentifier, DeleteRecordToolbarItemIdentifier, NSToolbarSpaceItem, FindDropdownToolbarItemIdentifier, SortToolbarItemIdentifier, UploadServerToolbarItemIdentifier, QuickFindToolbarItemIdentifier, DuplicateRecordToolbarItemIdentifier, ManageToolbarItemIdentifier, SaveAsExcelToolbarItemIdentifier, SaveAsPDFToolbarItemIdentifier, SaveAsSnapshotLinkToolbarItemIdentifier, ImportToolbarItemIdentifier, ExportToolbarItemIdentifier, PrintToolbarItemIdentifier, PageSetupToolbarItemIdentifier, SendMailToolbarItemIdentifier, OmitRecordToolbarItemIdentifier, ShowOmittedToolbarItemIdentifier, NewWindowToolbarItemIdentifier, DebuggerToolbarItemIdentifier, DataViewerToolbarItemIdentifier, SavedFindToolbarItemIdentifier, NewLayoutAnyModeToolbarItemIdentifier
"NewRecordToolbarItemIdentifier"

Text

The text to use for label.

"New Person"

Result Returns OK or error.

Description

Use an empty text to remove entry from labels table.

You need to call Toolbar.Install at least once before using this command to have it take effect.

Examples

Overwrite labels:

```
Set Variable [ $r; Value:MBS( "Toolbar.SetLabel"; "NewRecordToolbarItemIdentifier"; "New Person" ) ]
Set Variable [ $r; Value:MBS( "Toolbar.SetLabel"; "DeleteRecordToolbarItemIdentifier"; "Delete Person" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar	6.4	Yes	No	No	No	No

MBS("Toolbar.SetPaletteLabel"; Identifier; Text)

Parameters

Identifier

The toolbar identifier.

Possible toolbar identifiers: RecordNavigationToolbarItemIdentifier, ShowAllToolbarItemIdentifier, NSToolbarSpaceItem, NewRecordToolbarItemIdentifier, DeleteRecordToolbarItemIdentifier, NSToolbarSpaceItem, FindDropdownToolbarItemIdentifier, SortToolbarItemIdentifier, UploadServerToolbarItemIdentifier, QuickFindToolbarItemIdentifier, DuplicateRecordToolbarItemIdentifier, ManageToolbarItemIdentifier, SaveAsExcelToolbarItemIdentifier, SaveAsPDFToolbarItemIdentifier, SaveAsSnapshotLinkToolbarItemIdentifier, ImportToolbarItemIdentifier, ExportToolbarItemIdentifier, PrintToolbarItemIdentifier, PageSetupToolbarItemIdentifier, SendMailToolbarItemIdentifier, OmitRecordToolbarItemIdentifier, ShowOmittedToolbarItemIdentifier, NewWindowToolbarItemIdentifier, DebuggerToolbarItemIdentifier, DataViewerToolbarItemIdentifier, SavedFindToolbarItemIdentifier, NewLayoutAnyModeToolbarItemIdentifier
"NewRecordToolbarItemIdentifier"

Text

The text to use for palette label.

"New Person"

Result Returns OK or error.

Description

Use an empty text to remove entry from labels table.

You need to call Toolbar.Install at least once before using this command to have it take effect.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar	6.4	Yes	No	No	No	No

MBS("Toolbar.SetTooltip"; Identifier; Text)

Parameters

Identifier

The toolbar identifier.

Possible toolbar identifiers: RecordNavigationToolbarItemIdentifier, ShowAllToolbarItemIdentifier, NSToolbarSpaceItem, NewRecordToolbarItemIdentifier, DeleteRecordToolbarItemIdentifier, NSToolbarSpaceItem, FindDropdownToolbarItemIdentifier, SortToolbarItemIdentifier, UploadServerToolbarItemIdentifier, QuickFindToolbarItemIdentifier, DuplicateRecordToolbarItemIdentifier, ManageToolbarItemIdentifier, SaveAsExcelToolbarItemIdentifier, SaveAsPDFToolbarItemIdentifier, SaveAsSnapshotLinkToolbarItemIdentifier, ImportToolbarItemIdentifier, ExportToolbarItemIdentifier, PrintToolbarItemIdentifier, PageSetupToolbarItemIdentifier, SendMailToolbarItemIdentifier, OmitRecordToolbarItemIdentifier, ShowOmittedToolbarItemIdentifier, NewWindowToolbarItemIdentifier, DebuggerToolbarItemIdentifier, DataViewerToolbarItemIdentifier, SavedFindToolbarItemIdentifier, NewLayoutAnyModeToolbarItemIdentifier
"NewRecordToolbarItemIdentifier"

Text

The text to use for tooltip.

"Creates a new person record."

Result Returns OK or error.

Description

Use an empty text to remove entry from tooltips table.

You need to call Toolbar.Install at least once before using this command to have it take effect.

167.9 Window.ConfigureToolBarMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	8.3	Yes	No	No	No	No

MBS("Window.ConfigureToolBarMenu"; Mode)

Parameters

Mode

Pass 1 to disable menu completely. Pass 2 to remove the show/hide command. Pass 4 to remove the configuration command. Pass 6 to remove both commands.

1

Result Returns OK or error.

Description

The plugin can watch what menu is about to show up for the toolbar. We can remove menu or remove some entries.

Examples

Disable toolbar menus:

Set Variable [\$r; Value: MBS("Window.ConfigureToolBarMenu"; 1)]

167.10 Window.GetToolBarConfiguration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Window.GetToolBarConfiguration"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns configuration xml or error.

Description

Contains displayMode, visible, and a list of the item identifiers currently in the toolbar.

Do not depend on any details of the normal contents of a configuration dictionary. This may change with an update to Mac OS X or FileMaker.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Window.GetToolBarCustomizationPaletteIsRunning"; WindowRef)

Parameters**WindowRef**

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns state or error.

Description

Returns 1 if palette is visible or 0 if not.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Window.GetToolBarVisible"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns state or error.

Description

Value is 0 if invisible or 1 if visible.

167.13 Window.RunToolBarCustomizationPalette

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Window.RunToolBarCustomizationPalette"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

You can use Window.GetToolBarCustomizationPaletteIsRunning to query if customization sheet is open.

Examples

Run toolbar customization for current window:

MBS("Window.RunToolBarCustomizationPalette"; 0)

167.14 Window.SetShowsToolBarButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	2.4	Yes	No	No	No	No

MBS("Window.SetShowsToolBarButton"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

Whether to ignore mouse events or not. Pass 1 to ignore mouse events or 0 to not ignore mouse events.

1

Result Returns "OK" on success.

Description

Examples

Hide toolbar button for frontmost window:

```
MBS("Window.SetShowsToolBarButton"; 0; 0)
```

Show toolbar button for window:

```
MBS("Window.SetShowsToolBarButton"; $WindowRef; 1)
```

167.15 Window.SetToolbarConfiguration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Window.SetToolbarConfiguration"; WindowRef; ConfigurationXML)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

ConfigurationXML

The configuration XML. Should be the one returned by Window.GetToolbarConfiguration.

\$ConfigurationXML

Result Returns OK or error.

Description

Pass a xml with the toolbar's configuration information. If you want to provide a custom xml, you should first get the receiver's current configuration xml, then create a modified copy, rather than trying to construct one yourself.

Do not depend on any details of the normal contents of a configuration dictionary. This may change with an update to Mac OS X or FileMaker.

168.2 TouchBar.AddButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.AddButton"; TouchBarRef; Identifier; Text; Image; CustomizationLabel; visibilityPriority; fileName; scriptName { ; Expression })

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

Identifier

The identifier for the new item.

"com.yourdomain.send"

Text

The text of the button. Can be empty to show no text.

"Send"

Image

The image of the button. Pass container here with PNG for best result. JPEG may not work due to missing transparency. Can be one of the following texts to pick a default image: `NSImageNameTouchBarAddDetailTemplate`, `NSImageNameTouchBarAddTemplate`, `NSImageNameTouchBarAlarmTemplate`, `NSImageNameTouchBarAudioInputMuteTemplate`, `NSImageNameTouchBarAudioInputTemplate`, `NSImageNameTouchBarAudioOutputMuteTemplate`, `NSImageNameTouchBarAudioOutputVolumeHighTemplate`, `NSImageNameTouchBarAudioOutputVolumeLowTemplate`, `NSImageNameTouchBarAudioOutputVolumeMediumTemplate`, `NSImageNameTouchBarAudioOutputVolumeOffTemplate`, `NSImageNameTouchBarBookmarksTemplate`, `NSImageNameTouchBarColorPickerFill`, `NSImageNameTouchBarColorPickerFont`, `NSImageNameTouchBarColorPickerStroke`, `NSImageNameTouchBarCommunicationAudioTemplate`, `NSImageNameTouchBarCommunicationVideoTemplate`, `NSImageNameTouchBarComposeTemplate`, `NSImageNameTouchBarDeleteTemplate`, `NSImageNameTouchBarDownloadTemplate`, `NSImageNameTouchBarEnterFullScreenTemplate`, `NSImageNameTouchBarExitFullScreenTemplate`, `NSImageNameTouchBarFastForwardTemplate`, `NSImageNameTouchBarFolderCopyToTemplate`, `NSImageNameTouchBarFolderMoveToTemplate`, `NSImageNameTouchBarFolderTemplate`, `NSImageNameTouchBarGetInfoTemplate`, `NSImageNameTouchBarGoBackTemplate`, `NSImageNameTouchBarGoDownTemplate`, `NSImageNameTouchBarGoForwardTemplate`, `NSImageNameTouchBarGoUpTemplate`, `NSImageNameTouchBarHistoryTemplate`, `NSImageNameTouchBarIconViewTemplate`, `NSImageNameTouchBarListViewTemplate`, `NSImageNameTouchBarMailTemplate`, `NSImageNameTouchBarNewFolderTemplate`, `NSImageNameTouchBarNewMessageTemplate`, `NSImageNameTouchBarOpenInBrowserTemplate`, `NSImageNameTouchBarPauseTemplate`, `NSImageNameTouchBarPlayheadTemplate`, `NSImageNameTouchBarPlayPauseTemplate`, `NSImageNameTouchBarPlayTemplate`, `NSImageNameTouchBarQuickLookTemplate`, `NSImageNameTouchBarRecordStartTemplate`, `NSImageNameTouchBarRecordStopTemplate`, `NSImageNameTouchBarRefreshTemplate`, `NSImageNameTouchBarRewindTemplate`, `NSImageNameTouchBarRotateLeftTemplate`, `NSImageNameTouchBarRotateRightTemplate`, `NSImageNameTouchBarSearchTemplate`, `NSImageNameTouchBarShareTemplate`, `NSImageNameTouchBarSidebarTemplate`, `NSImageNameTouchBarSkipAhead15SecondsTemplate`, `NSImageNameTouchBarSkipAhead30SecondsTemplate`, `NSImageNameTouchBarSkipAheadTemplate`, `NSImageNameTouchBarSkipBack15SecondsTemplate`, `NSImageNameTouchBarSkipBack30Sec-`

ondsTemplate, NSImageNameTouchBarSkipBackTemplate, NSImageNameTouchBarSkipToEndTemplate, NSImageNameTouchBarSkipToStartTemplate, NSImageNameTouchBarSlideshowTemplate, NSImageNameTouchBarTagIconTemplate, NSImageNameTouchBarTextBoldTemplate, NSImageNameTouchBarTextBoldTemplate, NSImageNameTouchBarTextCenterAlignTemplate, NSImageNameTouchBarTextItalicTemplate, NSImageNameTouchBarTextJustifiedAlignTemplate, NSImageNameTouchBarTextLeftAlignTemplate, NSImageNameTouchBarTextListTemplate, NSImageNameTouchBarTextRightAlignTemplate, NSImageNameTouchBarTextStrikethroughTemplate, NSImageNameTouchBarTextUnderlineTemplate, NSImageNameTouchBarUserAddTemplate, NSImageNameTouchBarUserGroupTemplate, NSImageNameTouchBarUserTemplate, NSImageNameTouchBarVolumeDownTemplate or NSImageNameTouchBarVolumeUpTemplate.
 ”NSImageNameTouchBarMailTemplate”

CustomizationLabel

The customization label.

”Send Email”

visibilityPriority

The visibility priority. Ranges from -1000 for low to 1000 for high.

0

fileName

The file name where the script is stored.

Get(fileName)

scriptName

The script name (or ID) to trigger when button is used. Parameter to the script is the identifier.

”TouchBar SendEmail”

Expression

Optional

An expression to execute when button is pressed.

””

Result Returns OK or error.

Description**Examples**

Add a back button:

```
Set Variable [ $r ; Value: MBS( "TouchBar.AddButton"; $t; "PrevRecord"; "" ; "NSImageNameTouchBar-GoBackTemplate"; "Previous"; 0; Get(fileName); "PrevRecordTouchBar" ) ]
```

Add a next button:

```
Set Variable [ $r ; Value: MBS( "TouchBar.AddButton"; $t; "NextRecord"; "" ; "NSImageNameTouchBar-GoForwardTemplate"; "Previous"; 0; Get(fileName); "NextRecordTouchBar" ) ]
```

Add a plus button:

```
Set Variable [ $r ; Value: MBS( "TouchBar.AddButton"; $t; "AddRecord"; "" ; "NSImageNameTouchBarAd-
```

```
dTemplate"; "Add"; 0; Get(FileName); "AddRecordTouchBar" ) ]
```

Add a delete button:

```
Set Variable [ $r ; Value: MBS( "TouchBar.AddButton"; $t; "DeleteRecord"; ""; "NSImageNameTouch-  
BarDeleteTemplate"; "Delete"; 0; Get(FileName); "DeleteRecordTouchBar" ) ]
```

Add button to trigger data viewer:

```
Set Variable [ $r ; Value: MBS( "TouchBar.AddButton"; $t; "DataViewerButton"; "DataViewer"; "";  
"DataViewer"; 0; ""; ""; "MBS(\\"MenuBar.RunMenuCommand\\"; 49297)" ) ]
```

Add button to trigger debugger:

```
Set Variable [ $r ; Value: MBS( "TouchBar.AddButton"; $t; "DebuggerButton"; "Debugger"; ""; "Debug-  
ger"; 0; ""; ""; "MBS(\\"MenuBar.RunMenuCommand\\"; 49260)" ) ]
```

168.3 TouchBar.AssignToApp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.AssignToApp"; TouchBarRef)

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

Result Returns OK or error.

Description

Examples

Build App TouchBar:

```
# Create a new TouchBar
Set Variable [ $t; Value:MBS( "TouchBar.Create" ) ]
# Add two buttons
Set Variable [ $r; Value:MBS( "TouchBar.AddButton"; $t; "AddRecord"; ""; "NSImageNameTouchBarAddTemplate"; "Add"; 0; Get(FileName); "AddRecordTouchBar" ) ]
Set Variable [ $r; Value:MBS( "TouchBar.AddButton"; $t; "DeleteRecord"; ""; "NSImageNameTouchBarDeleteTemplate"; "Delete"; 0; Get(FileName); "DeleteRecordTouchBar" ) ]
Set Variable [ $r; Value:MBS( "TouchBar.AddButton"; $t; "InfoButton"; ""; TouchBar::MBS; "Info"; 0; Get(FileName); "InfoTouchBar" ) ]
# Set which button show by default:
Set Variable [ $r; Value:MBS( "TouchBar.SetDefaultItemIdentifiers"; $t; "AddRecord$InfoButton$NSTouchBarItemIdentifierOtherItemsProxy" ) ]
# Set the primary button:
Set Variable [ $r; Value:MBS( "TouchBar.SetPrincipalItemIdentifier"; $t; "AddRecord" ) ]
# Set which buttons can be configured:
Set Variable [ $r; Value:MBS( "TouchBar.SetCustomizationAllowedItemIdentifiers"; $t; "AddRecord$InfoButton$DeleteRecord" ) ]
# Set this touch bar to be the app one:
Set Variable [ $r; Value:MBS( "TouchBar.AssignToApp"; $t ) ]
```

168.4 TouchBar.AssignToWindow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.AssignToWindow"; TouchBarRef; WindowRef)

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

Examples

Build TouchBar for Window:

```
# Create a new TouchBar
Set Variable [ $t; Value:MBS( "TouchBar.Create" ) ]
# Add two buttons
Set Variable [ $r; Value:MBS( "TouchBar.AddButton"; $t; "PrevRecord"; ""; "NSImageNameTouchBarGoBackTemplate"; "Previous"; 0; Get(FileName); "PrevRecordTouchBar" ) ]
Set Variable [ $r; Value:MBS( "TouchBar.AddButton"; $t; "NextRecord"; ""; "NSImageNameTouchBarGoForwardTemplate"; "Previous"; 0; Get(FileName); "NextRecordTouchBar" ) ]
# Set which button show by default:
Set Variable [ $r; Value:MBS( "TouchBar.SetDefaultItemIdentifiers"; $t; "PrevRecord$NextRecord$NSTouchBarItemIdentifierOtherItemsProxy" ) ]
# Set the primary button:
Set Variable [ $r; Value:MBS( "TouchBar.SetPrincipalItemIdentifier"; $t; "NextRecord" ) ]
# Set which buttons can be configured:
Set Variable [ $r; Value:MBS( "TouchBar.SetCustomizationAllowedItemIdentifiers"; $t; "PrevRecord$NextRecord" ) ]
# Assign touchbar to current window:
Set Variable [ $r; Value:MBS( "TouchBar.AssignToWindow"; $t; 0 ) ]
```

Created 1st November 2016, last changed 3th November 2016.

168.5 TouchBar.Available

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.Available")

Result Returns 1 or 0.

Description

Returns 1 on Mac OS X 10.12.1 with TouchBar support.

The value 1 does not mean that there is a TouchBar, just the software to handle it.

But 0 clearly says that there is none.

Examples

Check touchbar:

```
If [ MBS( "TouchBar.Available" ) ]
Show Custom Dialog [ "TouchBar" ; "Is available and may be installed." ]
Else
Show Custom Dialog [ "TouchBar" ; "Is not available." ]
End If
```

168.8 TouchBar.GetAutomaticCustomizeTouchBarItemEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.GetAutomaticCustomizeTouchBarItemEnabled")

Result Returns 0, 1 or error.

Description

Whether or not a menu item to customize the touch bar can be automatically added to the main menu. It will only actually be added when a touch bar hardware or simulator is present. Defaults to 0. Setting this property to 1 is the recommended way to add the customization menu item.

But if non-standard placement of the menu item is needed, creating a menu item with an action of toggle-TouchBarCustomizationPalette can be used instead.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.GetCustomizationAllowedItemIdentifiers"; TouchBarRef)

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

Result Returns OK or error.

Description

The items that are presented in the customization palette for the user to add to the touch bar. These items will be presented to the user in the order specified in this array.

See also

168.10 TouchBar.GetCustomizationIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.GetCustomizationIdentifier"; TouchBarRef)

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

Result Returns text or error.

Description

A string uniquely identifying this bar for customization purposes. All bars with this identifier will have their items coordinated automatically during customization or instantiation.

Touch bars lacking a customizationIdentifier are not customizable.

See also

- 168.18 TouchBar.SetCustomizationIdentifier

7980

Created 1st November 2016, last changed 1st November 2016.

Created 1st November 2016, last changed 1st November 2016.

168.12 TouchBar.GetDefaultItemIdentifiers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.GetDefaultItemIdentifiers"; TouchBarRef)

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

Result Returns OK or error.

Description

An array of identifiers specifying the items in this touch bar.

Item identifiers should be globally unique, excepting NSTouchBarItemIdentifierFixedSpaceSmall, NSTouchBarItemIdentifierFixedSpaceLarge, NSTouchBarItemIdentifierFlexibleSpace, and NSTouchBarItemIdentifierOtherItemsProxy.

This array also corresponds to the item ordering for the receiver in the “default set” in the customization palette.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.GetItemIdentifiers"; TouchBarRef)

Parameters**TouchBarRef**

The reference number for the touch bar.

\$TouchBar

Result Returns list or error.

Description

If the bar has not been customized this will match the defaultItemIdentifiers.

See also

- 168.12 TouchBar.GetDefaultItemIdentifiers 7974
- 168.20 TouchBar.SetDefaultItemIdentifiers 7982

Created 1st November 2016, last changed 1st November 2016.

168.14 TouchBar.GetPrincipalItemIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.GetPrincipalItemIdentifier"; TouchBarRef)

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

Result Returns text or error.

Description

Specifying a principal item identifier communicates that the item with that identifier has special significance to this touch bar. Currently, that item will be placed in the center of the resolved touch row. Note that multiple visible bars may each specify a principal item identifier - but only one of them can have the request honored.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.SetAutomaticCustomizeTouchBarItemEnabled"; Setting)

Parameters

Setting

The new setting. Can be 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Whether or not a menu item to customize the touch bar can be automatically added to the main menu. It will only actually be added when a touch bar hardware or simulator is present. Defaults to 0. Setting this property to 1 is the recommended way to add the customization menu item.

But if non-standard placement of the menu item is needed, creating a menu item with an action of toggle-TouchBarCustomizationPalette can be used instead.

Examples

Enable menu command:

```
If [ MBS( "TouchBar.Available" ) ]
Set Variable [ $r; Value:MBS( "TouchBar.SetAutomaticCustomizeTouchBarItemEnabled"; 1 ) ]
End If
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.SetPrincipalItemIdentifier"; TouchBarRef; Identifier)

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

Identifier

The identifier for the main command.

"Analyze"

Result Returns OK or error.

Description

Specifying a principal item identifier communicates that the item with that identifier has special significance to this touch bar. Currently, that item will be placed in the center of the resolved touch row. Note that multiple visible bars may each specify a principal item identifier - but only one of them can have the request honored.

Examples

Set main item:

```
Set Variable [ $r; Value:MBS( "TouchBar.SetPrincipalItemIdentifier"; $t; "NextRecord" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
168 TouchBar	6.5	Yes	No	No	No	No

MBS("TouchBar.Visible"; TouchBarRef)

Parameters

TouchBarRef

The reference number for the touch bar.

\$TouchBar

Result Returns 0, 1 or error.

Description

When 1, the touch bar is attached to an eligible touch bar provider, and its items are displayable, assuming adequate space.

Created 1st November 2016, last changed 1st November 2016.

168.24 Window.ClearTouchBar

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window 168 TouchBar	8.4	Yes	No	No	No	No

MBS("Window.ClearTouchBar"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

You assign the TouchBar with TouchBar.AssignToWindow function.

Examples

Clear touch bar for front window:

```
MBS( "Window.ClearTouchBar"; 0 )
```

Chapter 169

Twain

Functions to acquire images from scanners.

169.1 Twain.Acquire

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.Acquire" { ; Modal; ShowUI; BringWindowToFront })

Parameters

Modal

Optional

Whether to run the process modal. Default is 0 for running non modal. Ignored in most cases.

0

ShowUI

Optional

Whether to show the dialog. Pass 1 to show dialog or 0 to not show it. Default is 1.

1

BringWindowToFront

Optional

For Windows only a flag. Pass 1 to have the plugin watch for new windows and bring them to front and avoid them showing behind FileMaker's windows. Default 0.

1

Result Returns OK or the Twain error code.

Description

The acquire process will go asynchronously. You can define a script with Twain.SetNotificationScript to be

called when transfers are done. If you acquire without UI, you can make script pause to let the acquire work and check with `Twain.GetImageCount` function whether images have been received.

Even when using no UI, you can pass `Modal = 1` to have the plugin transfer the image right after acquire without waiting for an event from twain driver.

Examples

Acquire with UI, window to front and modal:

```
MBS( "Twain.Acquire"; 1; 1; 1)
```

169.7 Twain.CurrentImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.CurrentImage")

Result Returns error or image reference.

Description

Returns the image reference for use with GImage functions.

Please use functions like GImage.WriteToPNGContainer and later GImage.Release to free memory.

If you get no image here, you may have called Twain.SetFolderPath before and images are written to folder.

See also

169.8 Twain.DisableDS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.DisableDS")

Result Returns OK or the Twain error code.

Description

This function is called automatically if needed.

Call it only if you know what you do.

Created 18th August 2014, last changed 18th August 2014.

169.9 Twain.GetAutofeed

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.GetAutofeed")

Result Return current setting.

Description

Value is -1 if you didn't yet call Twain.SetAutofeed before.

See also

- 169.44 Twain.SetAutofeed

8033

Created 18th August 2014, last changed 18th August 2014.

169.10 Twain.GetAutomaticBorderDetection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.3	Yes	Yes	No	No	No

MBS("Twain.GetAutomaticBorderDetection")

Result Return current setting.

Description

Value is -1 if you didn't yet call Twain.SetAutomaticBorderDetection before.
0 = off, 1 = on, -1 = default/undefined.

169.13 Twain.GetBrightness

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.5	Yes	Yes	No	No	No

MBS("Twain.GetBrightness")

Result Returns the value.

Description

Source should normalize the values into the range. Make sure that a '0' value is available as the Current Value when the Source starts up. If the Source's \pm range is asymmetric about the '0' value, set range maxima to ± 1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.

Plugin uses value -10000 for undefined/default.

169.34 Twain.GetShadow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.5	Yes	Yes	No	No	No

MBS("Twain.GetShadow")

Result Returns the value.

Description

All values darker than this value will be clipped to this value.

Whether darker values are smaller or larger can be determined by examining the Current value of PixelFlavor.

Source

If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.

Plugin uses value -10000 for undefined/default.

See also

- 169.68 Twain.SetShadow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.ImageInfo"; Selector)

Parameters

Selector

Which information you want to have.
"Width"

Result Return error message or value.

Description

Possible keys:

Example Databases

- [Twain/Twain](#)

Created 18th August 2014, last changed 18th August 2014.

XResolution	Horizontal resolution. In pixels per inch.
YResolution	Vertical resolution. In pixels per inch.
ImageWidth	How wide, in pixels, the entire image to be transferred is.
ImageLength	How tall/long, in pixels, the image to be transferred is.
SamplesPerPixel	The number of samples being returned. For R-G-B, this field would be set to 3. For C-M-Y-K, 4. For Grayscale or Black and White, 1.
BitsPerSample	For each sample, the number of bits of information. 24-bit R-G-B will typically have 8 bits of information in each sample (8+8+8). Some 8-bit color is sampled at 3 bits Red, 3 bits Green, and 2 bits Blue. Such a scheme would put 3, 3, and 2 into the first 3 elements of this array. The supplied array allows up to 8 samples. Samples are not limited to 8 bits. However, both the application and Source must simultaneously support sample sizes greater than 8 bits per color.
BitsPerPixel	The number of bits in each image pixel (or bit depth). This value is invariant across the image. 24-bit R-G-B has BitsPerPixel = 24. 40-bit C-M-Y-K has BitsPerPixel=40. 8-bit Grayscale has BitsPerPixel = 8. Black and White has BitsPerPixel = 1.
Planar	Whether image is planar. If SamplesPerPixel > 1, indicates whether the samples follow one another on a pixel-by-pixel basis (R-G-B-R-G-B-R-G-B...) as is common with a one-pass scanner or all the pixels for each sample are grouped together (complete group of R, complete group of G, complete group of B) as is common with a three-pass scanner. If the pixel-by-pixel method (also known as "chunky") is used, the Source should set Planar = false. If the grouped method (also called "planar") is used, the Source should set Planar = true.
PixelFormat	This is the highest categorization for how the data being transferred should be interpreted by the application. This is how the application can tell if the data is Black and White, Grayscale, or Color. Currently, the only color type defined is "tri-stimulus", or color described by three characteristics. Most popular color description methods use tri-stimulus descriptors. For simplicity, the constant used to identify tri-stimulus color is called TWPT_RGB, for R-G-B color. There is no default for this value.
Compression	The compression method used to process the data being transferred. Default is no compression.

169.37 Twain.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.Initialize"; Country; Language)

Parameters

Country

The country code.

"USA"

Language

The language code.

"ENGLISH"

Result Returns OK or an error message.

Description

You pass a language and country code to request language settings. Some drivers may ignore that to prefer the system language setting.

Possible Countries: Afghanistan, Algeria, Americansamoa, Andorra, Angola, Anguilla, Antigua, Argentina, Aruba, Ascension, Australia, Austria, Bahamas, Bahrain, Bangladesh, Barbados, Belgium, Belize, Benin, Bermuda, Bhutan, Bolivia, Botswana, Britain, Britvirginis, Brazil, Brunei, Bulgaria, Burkinafaso, Burma, Burundi, Camaroon, Canada, Capeverdeis, Caymanis, Centralafrep, Chad, Chile, China, Christmasis, Cocosis, Colombia, Comoros, Congo, Cookis, Costarica, Cuba, Cyprus, Czechoslovakia, Denmark, Djibouti, Dominica, Dominicanrep, Easteris, Ecuador, Egypt, Elsalvador, Eqguinea, Ethiopia, Falklandis, Faeroeis, Fijiislands, Finland, France, Frantilles, Frguiana, Frpolyneisa, Futanais, Gabon, Gambia, Germany, Ghana, Gibraltar, Greece, Greenland, Grenada, Gredines, Guadeloupe, Guam, Guantanamobay, Guatemala, Guinea, Guineabissau, Guyana, Haiti, Honduras, Hongkong, Hungary, Iceland, India, Indonesia, Iran, Iraq, Ireland, Israel, Italy, Ivorycoast, Jamaica, Japan, Jordan, Kenya, Kiribati, Korea, Kuwait, Laos, Lebanon, Liberia, Libya, Liechtenstein, Luxembourg, Macao, Madagascar, Malawi, Malaysia, Maldives, Mali, Malta, Marshallis, Mauritania, Mauritius, Mexico, Micronesia, Miquelon, Monaco, Mongolia, Montserrat, Morocco, Mozambique, Namibia, Nauru, Nepal, Netherlands, Nethantilles, Nevis, Newcaledonia, Newzealand, Nicaragua, Niger, Nigeria, Niue, Norfolk, Norway, Oman, Pakistan, Palau, Panama, Paraguay, Peru, Phillipines, Pitcairnis, Pnewguinea, Poland, Portugal, Qatar, Reunioni, Romania, Rwanda, Saipan, Sanmarino, Saotome, Saudiarabia, Senegal, Seychellesis, Sierraleone, Singapore, Solomonis, Somali, Southafrica, Spain, Srilanka, Sthelena, Stkitts, Stlucia, Stpierre, Stvincent, Sudan, Suriname, Swaziland, Sweden, Switzerland, Syria, Taiwan, Tanzania, Thailand, Tobago, Togo, Tongais, Trinidad, Tunisia, Turkey, Turkscaicos, Tuvalu, Uganda, Ussr, Uaemirates, Unitedkingdom, Usa, Uruguay, Vanuatu, Vaticancity, Venezuela, Wake, Wallisis, Westernsahara, Westernsamoa, Yemen, Yugoslavia, Zaire, Zambia, Zimbabwe, Albania, Armenia, Azerbaijan, Belarus, Bosniaherzgo, Cambodia, Croatia, Czechrepublic, Diegogarcia, Eritrea, Estonia, Georgia, Latvia, Lesotho, Lithuania, Macedonia, Mayotteis, Moldova, Myanmar, Northkorea, Puertorico, Russia, Serbia, Slovakia, Slovenia, Southkorea, Ukraine, Usvirginis, Vietnam.

When FileMaker Pro is used (32 bit), we can of course only see and use devices with 32 bit drivers.

For FileMaker Server with 64bit, we only see 64bit drivers.

For 64-bit on Windows you can find 64-bit TwainDSM.dll here:
<https://sourceforge.net/projects/twain-dsm/>

Examples

Initialize for english:

```
MBS("Twain.Initialize"; "USA"; "ENGLISH")
```

169.38 Twain.IsDSEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.IsDSEnabled")

Result Returns 1 if enabled and 0 if not.

Description

Created 18th August 2014, last changed 18th August 2014.

169.39 Twain.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	4.2	Yes	Yes	No	No	No

MBS("Twain.IsInitialized")

Result Returns 1 or 0.

Description

If value is 1, everything is okay.

If value is zero, the library is not initialized and you need to call Twain.Initialize function.

On a hosted database this function is better than using a global variable, as the variable can't see if initialization was made on server or client side.

Created 18th August 2014, last changed 18th August 2014.

169.43 Twain.SelectDSIdentity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SelectDSIdentity"; IndexOrName)

Parameters

IndexOrName

Which data source to use. Can be name of product or index in list of identities.

1

Result Returns OK or error message.

Description

See also

- 169.6 Twain.CurrentDSIdentity 7993

169.44 Twain.SetAutofeed

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SetAutofeed"; Value)

Parameters

Value

The new settings. Can be 1 to enable auto feeder or 0 to disable.

0

Result Returns OK.

Description

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto feed. If the scanner does not support auto feeding, the scanner will ignore this setting.

Examples

Set options and acquire:

```
$r = MBS( "Twain.SetCloseAfterTransfer"; 1 )
```

```
$r = MBS( "Twain.SetFeededEnabled"; 1 )
```

```
$r = MBS( "Twain.SetAutofeed"; 1 )
```

```
$r = MBS( "Twain.Acquire" )
```

169.45 Twain.SetAutomaticBorderDetection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.3	Yes	Yes	No	No	No

MBS("Twain.SetAutomaticBorderDetection"; Value)

Parameters

Value

The new settings. Can be 1 to enable automatic border detection or 0 to disable.

0

Result Returns OK.

Description

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable automatic border detection. If the scanner does not support automatic border detection, the scanner will ignore this setting and set it back to -1.

0 = off, 1 = on, -1 = default/undefined.

- [MBS Filemaker Plugin, version 3.3pr1](#)

Created 18th August 2014, last changed 18th August 2014.

169.48 Twain.SetBrightness

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.5	Yes	Yes	No	No	No

MBS("Twain.SetBrightness"; Value)

Parameters**Value**

The new brightness setting.

0

Result Returns OK.

Description

Source should normalize the values into the range. Make sure that a '0' value is available as the Current Value when the Source starts up. If the Source's \pm range is asymmetric about the '0' value, set range maxima to ± 1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.

Plugin uses value -10000 for undefined/default.

169.49 Twain.SetCancelScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.3	Yes	Yes	No	No	No

```
MBS( "Twain.SetCancelScript"; FileName; ScriptName { ; Parameter } )
```

Parameters

FileName

The name of the FileMaker File that contains the script.

```
"MyDatabase.fp7"
```

ScriptName

The name of the script to run

```
"CancelledScript"
```

Parameter

Optional

The parameter to pass.

```
""
```

Result Returns OK or error.

Description

This may also be called on errors. The plugin simply calls whenever the dialog closes and we have no images.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers fail handler:

```
MBS( "Twain.SetCancelScript"; Get ( FileName ); "CancelledScript"
```

169.50 Twain.SetCloseAfterTransfer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SetCloseAfterTransfer"; Value)

Parameters**Value**

The new settings. Can be 1 to closing or 0 to disable. Default is 0.

0

Result Returns OK.

Description

GUI is only closed when being used.

Examples

Set options and acquire:

```
$r = MBS( "Twain.SetCloseAfterTransfer"; 1 )
```

```
$r = MBS( "Twain.SetFeededEnabled"; 1 )
```

```
$r = MBS( "Twain.SetAutofeed"; 1 )
```

```
$r = MBS( "Twain.Acquire" )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.5	Yes	Yes	No	No	No

MBS("Twain.SetContrast"; Value)

Parameters**Value**

The new brightness setting.

0

Result Returns OK.

Description

Scale the values available internally into a homogeneous range between -1000 and 1000. Make sure that a '0' value is available as the Current value when the Source starts up. If the Source's \pm range is asymmetric about the '0' value, set range maxima to ± 1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.

Plugin uses value -10000 for undefined/default.

169.57 Twain.SetFileType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SetFileType"; filetype)

Parameters

filetype

The new file type. Can be BMP, JPEG, TIFF, PNG or GIF. Default is JPEG. "TIFF"

Result Returns OK on success.

Description

Only used if you use Twain.SetFolderPath.

For PDF, you can use DynaPDF / PDFKit functions to convert image to PDF.

See also

169.58 Twain.SetFolderPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SetFolderPath"; path)

Parameters

path

The path to the folder to use for storing image files. If empty clears the file path
"/Users/cs/Desktop/"

Result Returns OK on success.

Description

If you set the path with this function, images are not available with the Twain.CurrentImage function and Twain.ImageCount returns always zero. But with Twain.GetFilePaths you can learn where files have been stored.

The path must end with a slash on Mac and a backslash on Windows.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

169.59 Twain.SetGamma

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.5	Yes	Yes	No	No	No

MBS("Twain.SetGamma"; Value)

Parameters

Value

The new brightness setting.

0

Result Returns OK.

Description

Default value 2.2. The setting is -10000 if not set.

See also

- 169.26 Twain.GetGamma 8013

Created 18th August 2014, last changed 18th August 2014.

169.60 Twain.SetHighlight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.5	Yes	Yes	No	No	No

MBS("Twain.SetHighlight"; Value)

Parameters**Value**

The new brightness setting.

0

Result Returns OK.

Description

All values lighter than this value will be clipped to this value. Whether lighter values are smaller or larger can be determined by examining the Current value of PixelFlavor.

If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.

Value can be between 0 and 255.

Plugin uses value -10000 for undefined/default.

See also

- 169.27 Twain.GetHighlight

8014

Created 18th August 2014, last changed 18th August 2014.

169.61 Twain.SetNotificationScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SetNotificationScript"; FileName; ScriptName { ; Parameter })

Parameters

FileName

The name of the FileMaker File that contains the script.

"MyDatabase.fp7"

ScriptName

The name of the script to run

"GotImage"

Parameter

Optional

The parameter to pass.

"Twain"

Result Returns OK or error.

Description

In the target script you can call ImageInfo and CurrentImage functions to query image and process it.

For example save it as JPEG or PNG in a container. Of course the JPEG or PNG can easily be added to a PDF file.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers fail handler:

```
MBS( "Twain.SetNotificationScript"; Get ( FileName ); "GotImage"
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SetOrientation"; Value)

Parameters

Value

the new orientation value.

0

Result Returns OK.

Description

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder. If the scanner does not support the feeder, the scanner will ignore this setting.

Value can be:

- 0 0 degree
- 1 90 degree
- 2 180 degree
- 3 270 degree
- 0 Portrait
- 3 Landscape

Created 18th August 2014, last changed 18th August 2014.

169.70 Twain.SupportsGray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SupportsGray")

Result Returns 1 if RGB is supported and 0 if not. Or error.

Description

See also

- 169.69 Twain.SupportsBW 8060
- 169.72 Twain.SupportsRGB 8063

Created 18th August 2014, last changed 18th August 2014.

169.71 Twain.SupportsMemoryTransfer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SupportsMemoryTransfer")

Result Returns 1 if memory transfers are supported and 0 if not. Or error.

Description

Created 18th August 2014, last changed 18th August 2014.

169.72 Twain.SupportsRGB

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.SupportsRGB")

Result Returns 1 if RGB is supported and 0 if not. Or error.

Description

See also

- 169.69 Twain.SupportsBW 8060
- 169.70 Twain.SupportsGray 8061

Created 18th August 2014, last changed 18th August 2014.

169.73 Twain.TransferImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
169 Twain	3.1	Yes	Yes	No	No	No

MBS("Twain.TransferImage")

Result Returns OK or the Twain error code.

Description

This function is called automatically if needed.

Call it only if you know what you do.

Created 18th August 2014, last changed 18th August 2014.

Chapter 170

UNNotification

User notifications for iOS and MacOS

You can receive push notifications as well as use local notifications to remind user about events and locations.

170.1 UNNotification.Action

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Action"; UNNotificationRef)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Result Returns text or error.

Description

If this notification had an action triggered, the action identifier is returned.

Else an empty result is returned.

See also

- 170.8 UNNotification.Date 8073
- 170.9 UNNotification.Deliver 8074
- 170.19 UNNotification.Region 8086

8066

CHAPTER 170. UNNOTIFICATION

- 170.40 UNNotification.SetSound 8114
- 170.44 UNNotification.SetTitle 8119
- 170.48 UNNotification.Title 8124

Created 15th April 2017, last changed 15th April 2017.

170.2 UNNotification.AddUserInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.AddUserInfo"; UNNotificationRef; Key; Value)

Parameters

UNNotificationRef

The reference number of the notification.
\$Notification

Key

The key to use.
"RecordID"

Value

The value to use.
Get(RecordID)

Result Returns OK or error.

Description

This allows you to include any data you like with the notification and later query it.

Examples

Add record ID to notification:

```
MBS( "UNNotification.AddUserInfo"; $Notification; "RecordID"; Get(RecordID) )
```

Created 15th April 2017, last changed 17th April 2017.

170.3 UNNotification.AuthorizationError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.3	Yes	No	No	No	Yes

MBS("UNNotification.AuthorizationError")

Result Returns text message.

Description

If you are not allowed to do notifications, this will return localized error message.
Returns empty text if no error happened.

See also

170.4 UNNotification.AuthorizationGranted

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.3	Yes	No	No	No	Yes

MBS("UNNotification.AuthorizationGranted")

Result Returns 1 or 0.

Description

Returns 1 if allowed or 0 if not. Please check UNNotification.AuthorizationError for the reason.

170.5 UNNotification.Badge

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Badge"; UNNotificationRef)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Result Returns number, empty result or error.

Description

Can be empty to leave badge unchanged.

Zero means no badge. Else the given number is used for application badge on delivery.

Examples

Test badge property:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# set a badge
Set Variable [ $r; Value:MBS("UNNotification.SetBadge"; $notification; 123) ]
# and query back
Set Variable [ $value; Value:MBS("UNNotification.Badge"; $notification) ]
# free memory
Set Variable [ $r; Value:MBS("UNNotification.Release"; $notification) ]
```

- 170.31 UNNotification.SetBadge 8100
- 170.48 UNNotification.Title 8124
- 170.49 UNNotification.Type 8126

Created 15th April 2017, last changed 17th April 2017.

170.6 UNNotification.Body

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Body"; UNNotificationRef)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Result Returns text or error.

Description

Examples

Test body property:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# set a body
Set Variable [ $r; Value:MBS("UNNotification.SetBody"; $notification; "Hello World") ]
# and query back
Set Variable [ $value; Value:MBS("UNNotification.Body"; $notification) ]
# free memory
Set Variable [ $r; Value:MBS("UNNotification.Release"; $notification) ]
```

170.7 UNNotification.CategoryIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.CategoryIdentifier"; UNNotificationRef)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Result Returns text or error.

Description

Examples

Try category identifier:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set category identifier:
Set Variable [ $r; Value:MBS("UNNotification.SetCategoryIdentifier"; $notification; "Hello") ]
# and query back values
Set Variable [ $value; Value:MBS("UNNotification.CategoryIdentifier"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

170.8 UNNotification.Date

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Date"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.
\$Notification

Result Returns date or error.

Description

Empty if notification is not delivered

See also

170.9 UNNotification.Deliver

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	9.3	Yes	No	No	No	Yes

MBS("UNNotification.Deliver"; UNNotificationRef { ; Identifier })

Parameters

UNNotificationRef

The reference number of the notification.
\$Notification

Identifier

Optional

The identifier for the notification. Should be unique unless you want to replace an existing one.

Result Returns OK or error.

Description

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	9.3	Yes	No	No	No	Yes

MBS("UNNotification.GetDescription"; UNNotificationRef)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Result Returns text or error.

Description

Shows technical details from framework about notification.

See also

- 170.38 UNNotification.SetNFCScript 8111

170.12 UNNotification.Identifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Identifier"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.

\$Notification

Result Returns text or error.

Description

The unique identifier for this notification request. It can be used to replace or remove a pending notification request or a delivered notification.

Examples

Queries identifier:

MBS("UNNotification.Identifier"; \$Notification)

See also

- 170.9 UNNotification.Deliver 8074
- 170.46 UNNotification.ThreadIdentifier 8122
- 174.11 UserNotification.GetIdentifier 8168
- 174.30 UserNotification.SetIdentifier 8189

Created 15th April 2017, last changed 17th April 2017.

170.13 UNNotification.IsRegisteredForRemoteNotifications

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.IsRegisteredForRemoteNotifications")

Result Returns 1, 0 or error.

Description

Returns 1 if the application is currently registered for remote notifications, taking into account any system-wide settings; doesn't relate to connectivity.

Examples

Check registration state:

```
Show Custom Dialog [ "Check registration state"; MBS( "UNNotification.IsRegisteredForRemoteNotifications" ) ]
```

170.14 UNNotification.LaunchImageName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	No	No	No	No	Yes

MBS("UNNotification.LaunchImageName"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.

\$Notification

Result Returns text or error.

Description

The launch image that will be used when the app is opened from the notification.

Examples

Test launch image:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set launch image name:
Set Variable [ $r; Value:MBS("UNNotification.SetLaunchImageName"; $notification; "MyLogo") ]
# and query back
Set Variable [ $value; Value:MBS("UNNotification.LaunchImageName"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

170.15 UNNotification.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.New")

Result Returns notification reference number or error.

Description

Set values and call UNNotification.Add later to schedule it.

Works on MacOS 10.14 or newer with MBS Plugin 9.1 or newer.

Examples

Create new notification and set title:

```
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
Set Variable [ $r; Value:MBS("UNNotification.SetTitle"; $notification; "Hello") ]
```

170.16 UNNotification.NextTriggerDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.NextTriggerDate"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.
\$Notification

Result Returns timestamp, empty or error.

Description

This is only available for time interval and calendar based notification triggers.
Returns empty result if not applicable.

See also

- 170.29 UNNotification.Schedule 8097
- 170.43 UNNotification.SetTimeIntervalTrigger 8117

Created 15th April 2017, last changed 15th April 2017.

170.17 UNNotification.NotificationSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.NotificationSettings"; Selector)

Parameters**Selector**

What value to return or what action to do.

"authorizationStatus"

Result Returns value or error.

Description

You can pass "update" to query new settings. This may be needed to know about changes the user may have made.

Pass "AuthorizationStatus" to get authorization status. Can be NotDetermined, Denied and Authorized.

Pass "alertStyle" to query alert style. Can be None, Banner or Alert.

Pass "soundSetting", "badgeSetting", "alertSetting", "notificationCenterSetting", "lockScreenSetting" or "carPlaySetting" to query settings. Can be NotSupported, Disabled or Enabled.

For MBS Plugin 9.1 or newer, you can also pass providesAppNotificationSettings (1 or 0), showPreviewsSetting (Always, WhenAuthenticated, Never) and criticalAlertSetting (NotSupported, Disabled, Enabled) to query those.

Examples

Query authorization status:

```
MBS( "UNNotification.NotificationSettings"; "AuthorizationStatus" )
```

Query alert style:

```
MBS( "UNNotification.NotificationSettings"; "alertStyle" )
```

Request update to settings:

```
MBS( "UNNotification.NotificationSettings"; "Update" )
```

Query sound setting:

```
MBS("UNNotification.NotificationSettings"; "soundSetting")
```

Query badge setting:

```
MBS("UNNotification.NotificationSettings"; "badgeSetting")
```

Query alert setting:

```
MBS("UNNotification.NotificationSettings"; "alertSetting")
```

Query notification center setting:

```
MBS("UNNotification.NotificationSettings"; "notificationCenterSetting")
```

Query lock screen setting:

```
MBS("UNNotification.NotificationSettings"; "lockScreenSetting")
```

Query car play setting:

```
MBS("UNNotification.NotificationSettings"; "carPlaySetting")
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	No	No	No	No	Yes

MBS("UNNotification.Region"; UNNotificationRef)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Result Returns list or error.

Description

Returns list with following values: Latitude, Longitude, Radius, Identifier.

Examples

Create location trigger and query back values:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set Title and Body
Set Variable [ $r; Value:MBS("UNNotification.SetTitle"; $notification; "Hello") ]
Set Variable [ $r; Value:MBS("UNNotification.SetBody"; $notification; "Greetings from FileMaker") ]
# set a location trigger
Set Variable [ $r; Value:MBS( "UNNotification.SetLocationTrigger"; $notification; 37,354444; -121,969167;
50000; "Santa Clara area") ]
# and query back trigger settings
Set Variable [ $value; Value:MBS("UNNotification.Region"; $notification) ]
Set Variable [ $value; Value:MBS("UNNotification.Repeats"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]

170.22 UNNotification.RemoteNotificationsDeviceToken

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.RemoteNotificationsDeviceToken")

Result Returns text.

Description

If the registration for remote notifications is successful, this function will return the hex encoded device token. You can pass the device token to your server sending the push notifications.

Text is empty if registration failed.

e.g. "416204F694DA65CC1AFD9E473C7E44C22DD66B61FD4DA61B255A89EE436B6F61"

See UNNotification.RemoteNotificationsError for the reason. Push notifications are not supported in iOS Simulator!

Examples

Show device token:

```
Show Custom Dialog [ "Device Token"; MBS("UNNotification.RemoteNotificationsDeviceToken") ]
```

170.24 UNNotification.RemoveAllDeliveredNotifications

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.RemoveAllDeliveredNotifications")

Result Returns OK or error.

Description

You can normally query delivered notifications for your application until they are removed.

Examples

Remove all pending and delivered notifications:

```
MBS( "UNNotification.RemoveAllDeliveredNotifications" ) &
MBS( "UNNotification.RemoveAllPendingNotificationRequests" )
```

170.25 UNNotification.RemoveAllPendingNotificationRequests

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.RemoveAllPendingNotificationRequests")

Result Returns OK or error.

Description

Clears all notifications which are not yet delivered.

Examples

Remove all pending and delivered notifications:

```
MBS( "UNNotification.RemoveAllDeliveredNotifications" ) &  
MBS( "UNNotification.RemoveAllPendingNotificationRequests" )
```

See also

- 170.18 UNNotification.PendingNotificationRequests 8085

170.26 UNNotification.RemoveDeliveredNotificationsWithIdentifiers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.RemoveDeliveredNotificationsWithIdentifiers"; Identifiers)

Parameters

Identifiers

List of notification identifiers.

Result Returns OK or error.

Description

You can normally query delivered notifications for your application until they are removed. This function removes all notifications matching given identifiers.

See also

- 170.27 UNNotification.RemovePendingNotificationRequestsWithIdentifiers

8095

Created 15th April 2017, last changed 15th April 2017.

170.27 UNNotification.RemovePendingNotificationRequestsWithIdentifiers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.RemovePendingNotificationRequestsWithIdentifiers"; Identifiers)

Parameters

Identifiers

List of notification identifiers.

Result Returns OK or error.

Description

Clears all notifications which are not yet delivered matching given identifiers.

See also

- 170.26 UNNotification.RemoveDeliveredNotificationsWithIdentifiers 8094

Created 15th April 2017, last changed 15th April 2017.

170.28 UNNotification.Repeats

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Repeats"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.

\$Notification

Result Returns 1, 0 or error.

Description

Returns 1 if the trigger has repeat flag enabled or 0 if not.

Examples

Query repeat flag:

MBS("UNNotification.Repeats"; \$Notification)

Created 15th April 2017, last changed 17th April 2017.

170.29 UNNotification.Schedule

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Schedule"; UNNotificationRef { ; Identifier })

Parameters

UNNotificationRef

The reference number of the notification.
\$Notification

Identifier

Optional

The identifier for the notification. Should be unique unless you want to replace an existing one. Optional for 9.3 or newer.

Result Returns OK or error.

Description

Only for new notifications and you need to define trigger before scheduling.

The new notification when presented will get a new notification reference number.

Works on MacOS 10.14 or newer with MBS Plugin 9.1 or newer.

Examples

Create notification and add a time trigger:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set Title and Body
Set Variable [ $r; Value:MBS("UNNotification.SetTitle"; $notification; "Hello") ]
Set Variable [ $r; Value:MBS("UNNotification.SetBody"; $notification; "Greetings from FileMaker") ]
# set a time interval trigger
Set Variable [ $r; Value:MBS("UNNotification.SetTimeIntervalTrigger"; $notification; 60; 0) ]
# and query back trigger settings
Set Variable [ $value; Value:MBS("UNNotification.TimeInterval"; $notification) ]
Set Variable [ $value; Value:MBS("UNNotification.Repeats"; $notification) ]
Set Variable [ $value; Value:MBS("UNNotification.NextTriggerDate"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

170.30 UNNotification.SetActionScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetActionScript"; Filename; ScriptName)

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

Called for both local and remote notifications.

Parameter to the script is a list with first the ID of the notification and second the action identifier.

Use UNNotification.AddUserInfo to associate your own values with the notifications, which you can then use in the triggered script.

Examples

Sets action script:

MBS("UNNotification.SetActionScript"; Get(Filename); "NotificationActionTriggered")

170.31 UNNotification.SetBadge

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetBadge"; UNNotificationRef; Badge)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Badge

The new badge number. Can be empty to clear. Can be zero to remove badge. Or a number to set.

Result Returns OK or error.

Description

Examples

Test badge property:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# set a badge
Set Variable [ $r; Value:MBS("UNNotification.SetBadge"; $notification; 123) ]
# and query back
Set Variable [ $value; Value:MBS("UNNotification.Badge"; $notification) ]
# free memory
Set Variable [ $r; Value:MBS("UNNotification.Release"; $notification) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetBody"; UNNotificationRef; Body)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Body

The new body text.

"Greetings from FileMaker"

Result Returns OK or error.

Description

Examples

Test body property:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# set a body
Set Variable [ $r; Value:MBS("UNNotification.SetBody"; $notification; "Hello World") ]
# and query back
Set Variable [ $value; Value:MBS("UNNotification.Body"; $notification) ]
# free memory

170.33 UNNotification.SetCalendarDateTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	9.3	Yes	No	No	No	Yes

MBS("UNNotification.SetCalendarDateTrigger"; UNNotificationRef; TimeStamp)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

TimeStamp

The time stamp for the date and time to use.

Get(SystemTimeStamp)

Result Returns OK or error.

Description

Can be scheduled on the device to notify based on date and time values.

Will schedule to run at the given date and time.

170.34 UNNotification.SetCalendarTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetCalendarTrigger"; UNNotificationRef { ; Year; Month; Day; Hour; Minute; Second; Repeat })

Parameters**UNNotificationRef**

The reference number of the notification.

\$Notification

Year

Optional

The year to use. Can be empty.

Month

Optional

The month to use. Can be empty.

Day

Optional

The day to use. Can be empty.

Hour

Optional

The hour to use. Can be empty.

Minute

Optional

The minute to use. Can be empty.

Second

Optional

The second to use. Can be empty.

Repeat

Optional

Whether to repeat. Can be 1 to enable or 0 to disable. Default is 0.

0

Result Returns OK or error.

Description

Can be scheduled on the device to notify based on date and time values, and optionally repeat. For example, if a notification should be delivered at the next 8:00 AM then set the 'hour' parameter to 8. If the notification should be delivered every day at 8:00 AM then set repeats to 1.

Examples

Repeat daily 8am:

```
MBS( "UNNotification.SetCalendarTrigger"; $NotificationRef; ""; ""; ""; 8; ""; ""; 1 )
```

Schedule to show up 10:30 am every day:

```
# Create a new notification
```

```
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
```

```
Set Variable [ $r; Value:MBS( "UNNotification.SetTitle"; $Notification; "Hello World") ]
```

```
# Set calendar trigger:
```

```
Set Variable [ $r; Value:MBS( "UNNotification.SetCalendarTrigger"; $Notification; ""; ""; ""; 10; 30; ""; 1 ) ]
```

```
# and schedule
```

```
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

170.35 UNNotification.SetCategoryIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetCategoryIdentifier"; UNNotificationRef; CategoryIdentifier)

Parameters**UNNotificationRef**

The reference number of the notification.

\$Notification

CategoryIdentifier

The new category identifier.

Result Returns OK or error.

Description**Examples**

Try category identifier:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set category identifier:
Set Variable [ $r; Value:MBS("UNNotification.SetCategoryIdentifier"; $notification; "Hello") ]
# and query back values
Set Variable [ $value; Value:MBS("UNNotification.CategoryIdentifier"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

Created 15th April 2017, last changed 17th April 2017.

170.36 UNNotification.SetLaunchImageName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	No	No	No	No	Yes

MBS("UNNotification.SetLaunchImageName"; UNNotificationRef; ImageName)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

ImageName

The name of the image to show. Can be system image name or name of an image included with application.
"MBSLogo"

Result Returns OK or error.

Description

The launch image that will be used when the app is opened from the notification.

Examples

Test launch image:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set launch image name:
Set Variable [ $r; Value:MBS("UNNotification.SetLaunchImageName"; $notification; "MyLogo") ]
# and query back
Set Variable [ $value; Value:MBS("UNNotification.LaunchImageName"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

See also

- 170.14 UNNotification.LaunchImageName 8079

Created 15th April 2017, last changed 17th April 2017.

170.37 UNNotification.SetLocationTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	No	No	No	No	Yes

MBS("UNNotification.SetLocationTrigger"; UNNotificationRef; Latitude; Longitude; Radius; Identifier { ; Repeat })

Parameters**UNNotificationRef**

The reference number of the notification.
\$Notification

Latitude

The latitude of the region center.
37.354444

Longitude

The longitude of the region center.
-121.969167

Radius

The radius of the circular region in meter.
50000

Identifier

The user displayable identifier for the region.
"Santa Clara area"

Repeat

Optional
Whether to repeat this notification. Pass 1 to enable or 0 to disable. Default is 0.
0

Result Returns OK or error.

Description

Can be scheduled on the device to notify when the user enters or leaves a geographic region. The identifier on region must be unique. Scheduling multiple notifications with different regions containing the same identifier will result in undefined behavior. The number of location triggers that may be scheduled by an application at any one time is limited by the system. Applications must have "when-in-use" authorization through CoreLocation.

Examples

Create location trigger and query back values:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set Title and Body
Set Variable [ $r; Value:MBS("UNNotification.SetTitle"; $notification; "Hello") ]
```

```
Set Variable [ $r; Value:MBS("UNNotification.SetBody"; $notification; "Greetings from FileMaker") ]
# set a location trigger
Set Variable [ $r; Value:MBS( "UNNotification.SetLocationTrigger"; $Notification; 37,354444; -121,969167;
50000; "Santa Clara area") ]
# and query back trigger settings
Set Variable [ $value; Value:MBS("UNNotification.Region"; $notification) ]
Set Variable [ $value; Value:MBS("UNNotification.Repeats"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

- 170.44 UNNotification.SetTitle 8119

Created 15th April 2017, last changed 17th April 2017.

170.38 UNNotification.SetNFCScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	9.4	No	No	No	No	Yes

MBS("UNNotification.SetNFCScript"; Filename; ScriptName)

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

If you use Background Tag Reading for NFC tags with CoreNFC framework, you can call this function in start script to define the script to trigger.

You need to add an associated domain to your iOS application.

See

https://developer.apple.com/documentation/security/password_autofill/setting_up_an_app_s_associated_domains

Examples

Sets action script:

MBS("UNNotification.SetNFCScript"; Get(Filename); "NFC Detected")

170.39 UNNotification.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetScript"; Filename; ScriptName)

Parameters

Filename

The database file name where the script is located.

"test.fmp12"

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

Called for both local and remote notifications.

Parameter to the script is the ID of the notification.

Use UNNotification.AddUserInfo to associate your own values with the notifications, which you can then use in the triggered script.

Examples

Sets script:

MBS("UNNotification.SetScript"; Get(Filename); "NotificationReceived")

170.40 UNNotification.SetSound

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetSound"; UNNotificationRef; SoundName)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

SoundName

Pass empty to have no sound. Pass "default" for the default system sound. Or pass the name of a sound, one of the system sounds or a sound file included with the app.

"default"

Result Returns OK or error.

Description

Examples

Use default sound:

```
MBS( "UNNotification.SetSound"; $Notification; "default" )
```

Use no sound:

```
MBS( "UNNotification.SetSound"; $Notification; "" )
```

Use my sound:

```
MBS( "UNNotification.SetSound"; $Notification; "mySound" )
```

170.42 UNNotification.SetThreadIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetThreadIdentifier"; UNNotificationRef; Identifier)

Parameters

UNNotificationRef

The reference number of the notification.
\$Notification

Identifier

The new thread identifier.
"Chat123"

Result Returns OK or error.

Description

The unique identifier for the thread or conversation related to this notification request. It will be used to visually group notifications together.

Examples

Test thread identifier:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set thread identifier for grouping:
Set Variable [ $r; Value:MBS("UNNotification.SetThreadIdentifier"; $notification; "Hello") ]
# and query back
Set Variable [ $value; Value:MBS("UNNotification.ThreadIdentifier"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

170.43 UNNotification.SetTimeIntervalTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetTimeIntervalTrigger"; UNNotificationRef; TimeInterval { ; Repeat })

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

TimeInterval

The delay until the notification shows. In seconds.

3600

Repeat

Optional

Whether to repeat. Can be 1 to enable or 0 to disable. Default is 0.

0

Result Returns OK or error.

Description

Can be scheduled on the device to notify after the time interval, and optionally repeat.

Time Interval must be at least 60 seconds if repeating.

Examples

Create notification and add a time trigger:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set Title and Body
Set Variable [ $r; Value:MBS("UNNotification.SetTitle"; $notification; "Hello") ]
Set Variable [ $r; Value:MBS("UNNotification.SetBody"; $notification; "Greetings from FileMaker") ]
# set a time interval trigger
Set Variable [ $r; Value:MBS("UNNotification.SetTimeIntervalTrigger"; $notification; 60; 0) ]
# and query back trigger settings
Set Variable [ $value; Value:MBS("UNNotification.TimeInterval"; $notification) ]
Set Variable [ $value; Value:MBS("UNNotification.Repeats"; $notification) ]
Set Variable [ $value; Value:MBS("UNNotification.NextTriggerDate"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

170.44 UNNotification.SetTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SetTitle"; UNNotificationRef; Title)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Title

The new title.

"Hello"

Result Returns OK or error.

Description

Examples

Create new notification and set title:

```
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
Set Variable [ $r; Value:MBS("UNNotification.SetTitle"; $notification; "Hello") ]
```

Try title:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# set a title
Set Variable [ $r; Value:MBS("UNNotification.SetTitle"; $notification; "Hello") ]
# and query back
Set Variable [ $title; Value:MBS("UNNotification.Title"; $notification) ]
# free memory
Set Variable [ $r; Value:MBS("UNNotification.Release"; $notification) ]
```

170.45 UNNotification.SubTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.SubTitle"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.
\$Notification

Result Returns text or error.

Description**See also**

170.46 UNNotification.ThreadIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.ThreadIdentifier"; UNNotificationRef)

Parameters

UNNotificationRef

The reference number of the notification.

\$Notification

Result Returns text or error.

Description

The unique identifier for the thread or conversation related to this notification request. It will be used to visually group notifications together.

Examples

Test thread identifier:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# Set thread identifier for grouping:
Set Variable [ $r; Value:MBS("UNNotification.SetThreadIdentifier"; $notification; "Hello") ]
# and query back
Set Variable [ $value; Value:MBS("UNNotification.ThreadIdentifier"; $notification) ]
# and schedule
Set Variable [ $r; Value:MBS("UNNotification.Schedule"; $notification; "test") ]
```

170.47 UNNotification.TimeInterval

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.TimeInterval"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.
\$Notification

Result Returns value or error.

Description

Returns empty result if not applicable.

Examples

Query time interval:

MBS("UNNotification.TimeInterval"; \$Notification)

See also

- 170.29 UNNotification.Schedule 8097

170.48 UNNotification.Title

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Title"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.

\$Notification

Result Returns text or error.

Description**Examples**

Try title:

```
# Create a new notification
Set Variable [ $notification; Value:MBS("UNNotification.New") ]
# set a title
Set Variable [ $r; Value:MBS("UNNotification.SetTitle"; $notification; "Hello") ]

Created 15th April 2017, last changed 17th April 2017.

170.49 UNNotification.Type

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.Type"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.

\$Notification

Result Returns text or error.

Description

Can be Push, Calendar, Interval, Location or nothing.

As type is defined by trigger, a new notification without a trigger returns empty result.

Examples

Query type

MBS("UNNotification.Type"; \$Notification)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.UserInfoKeys"; UNNotificationRef)

Parameters**UNNotificationRef**

The reference number of the notification.
\$Notification

Result Returns list of keys or error.

Description

You can pass data with push or local notifications and later query it here.

Examples

List all keys available:

MBS("UNNotification.UserInfoKeys"; \$Notification)

See also

- 170.2 UNNotification.AddUserInfo 8067

170.51 UNNotification.UserInfoValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
170 UNNotification	7.2	Yes	No	No	No	Yes

MBS("UNNotification.UserInfoValue"; UNNotificationRef; Key)

Parameters

UNNotificationRef

The reference number of the notification.
\$Notification

Key

The key to lookup.
"RecordID"

Result Returns value or error.

Description

Examples

Query record ID:

```
MBS( "UNNotification.UserInfoValue"; $Notification; "RecordID" )
# you need to earlier put the value in the user info!
```

Chapter 171

Updater

Functions to control the Updater engine of FileMaker.

All the updater functions require FileMaker 15 or newer. They may break if FileMaker changes their updater engine. For example check when updater check run last time.

171.1 Updater.CheckForUpdates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	Yes	No	No	No

MBS("Updater.CheckForUpdates")

Result Returns OK or error.

Description

Created 29th September 2016, last changed 29th September 2016.

171.2 Updater.CheckForUpdatesInBackground

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	Yes	No	No	No

MBS("Updater.CheckForUpdatesInBackground")

Result Returns OK or error.

Description

This is meant for programmatically initiating a check for updates. That is, it will display no UI unless it actually finds an update, in which case it proceeds as usual.

Created 29th September 2016, last changed 29th September 2016.

171.3 Updater.GetAutomaticallyChecksForUpdates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	Yes	No	No	No

MBS("Updater.GetAutomaticallyChecksForUpdates")

Result Returns 1, 0 or error.

Description

You may use this to detect if FileMaker told the updater to check automatically for updates.

See also

- 171.4 Updater.GetAutomaticallyDownloadsUpdates 8132
- 171.8 Updater.SetAutomaticallyChecksForUpdates 8136
- 171.9 Updater.SetAutomaticallyDownloadsUpdates 8137

Created 29th September 2016, last changed 29th September 2016.

171.4 Updater.GetAutomaticallyDownloadsUpdates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	No	No	No	No

MBS("Updater.GetAutomaticallyDownloadsUpdates")

Result Returns 1, 0 or error.

Description

This is by default off in FileMaker Pro.

See also

- 171.3 Updater.GetAutomaticallyChecksForUpdates 8131
- 171.8 Updater.SetAutomaticallyChecksForUpdates 8136
- 171.9 Updater.SetAutomaticallyDownloadsUpdates 8137

Created 29th September 2016, last changed 29th September 2016.

171.5 Updater.GetFeedURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	No	No	No	No

MBS("Updater.GetFeedURL")

Result Returns text or error.

Description

This is an URL for a XML file which provides update details.

If you get this URL and download the XML file, you can find the download URLs for the updaters.

Created 29th September 2016, last changed 29th September 2016.

171.6 Updater.GetSendsSystemProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	No	No	No	No

MBS("Updater.GetSendsSystemProfile")

Result Returns 1, 0 or error.

Description

This is off by default in FileMaker 15.

See also

- 171.10 Updater.SetSendsSystemProfile

8138

Created 29th September 2016, last changed 29th September 2016.

171.7 Updater.LastUpdateCheckDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	Yes	No	No	No

MBS("Updater.LastUpdateCheckDate")

Result Returns timestamp or error.

Description

Your solution can query this date and check if it should complain to user about not checking for updates for a long time.

Returns empty result if not known.

Created 29th September 2016, last changed 29th September 2016.

171.8 Updater.SetAutomaticallyChecksForUpdates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	Yes	No	No	No

MBS("Updater.SetAutomaticallyChecksForUpdates"; Flag)

Parameters

Flag

The new flag. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Changing this only influences the Sparkle framework doing the updates, not the FileMaker preferences.

See also

- 171.3 Updater.GetAutomaticallyChecksForUpdates 8131

- 171.9 Updater.SetAutomaticallyDownloadsUpdates 8137

Created 29th September 2016, last changed 29th September 2016.

171.9 Updater.SetAutomaticallyDownloadsUpdates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	No	No	No	No

MBS("Updater.SetAutomaticallyDownloadsUpdates"; Flag)

Parameters**Flag**

The new flag. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Changing this only influences the Sparkle framework doing the updates, not the FileMaker preferences.

See also

- 171.3 Updater.GetAutomaticallyChecksForUpdates 8131

Created 29th September 2016, last changed 29th September 2016.

171.10 Updater.SetSendsSystemProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	No	No	No	No

MBS("Updater.SetSendsSystemProfile"; Flag)

Parameters

Flag

The new flag. Pass 1 to enable or 0 to disable.

1

Result Returns OK or error.

Description

Changing this only influences the Sparkle framework doing the updates, not the FileMaker preferences.

See also

- 171.6 Updater.GetSendsSystemProfile

8134

Created 29th September 2016, last changed 29th September 2016.

171.11 Updater.UpdateInProgress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
171 Updater	6.5	Yes	No	No	No	No

MBS("Updater.UpdateInProgress")

Result Returns 1, 0 or error.

Description

Created 29th September 2016, last changed 29th September 2016.

Chapter 172

URLScheme

Handle URL schemes in your Mac runtime.

172.1 URLScheme.GetDefaultHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
172 URLScheme	3.0	Yes	Yes	Yes	No	No

MBS("URLScheme.GetDefaultHandler"; scheme)

Parameters

scheme

The schema name.

"http", "https", "mailto" or something else

Result Returns handler.

Description

On Mac returns the bundle id. e.g. com.fetchsoftworks.Fetch for Fetch.app.

On Windows returns command line for launching target app. e.g. '"C:\Program Files\Internet Explorer\iexplore.exe" % 1'

Examples

Query default email application:

```
MBS("URLScheme.GetDefaultHandler"; "mailto")
```

See also

- 172.3 URLScheme.SetDefaultHandler

8144

Example Databases

- [Query URL Scheme](#)

172.1.1 Blog Entries

- [MBS Filemaker Plugin, version 3.0pr6](#)

Created 18th August 2014, last changed 22nd October 2018.

172.2 URLScheme.InstallURLEventHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
172 URLScheme	2.0	Yes	No	No	No	No

MBS("URLScheme.InstallURLEventHandler"; FileName; ScriptName)

(old name: InstallURLEventHandler)

Parameters

FileName

The name of the FileMaker File that contains the script

ScriptName

The name of the script to run

Result Returns OK or an error message.

Description

Using this event you can register your application as the handler for an URL schema and get the URL if the user clicks a link for your schemas.

This function is only useful in a locked FileMaker solution. Please check the Readme in the examples for more details.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Installs a script:

```
MBS("URLScheme.InstallURLEventHandler"; "MyDatabase.fp7"; "MyURLScript")
```

172.2.1 Blog Entries

- [Redirect fmp URL scheme for runtimes](#)
- [MBS Filemaker Plugin, version 3.0pr6](#)

Created 18th August 2014, last changed 18th April 2016.

172.3 URLScheme.SetDefaultHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
172 URLScheme	2.0	Yes	Yes	No	No	No

MBS("URLScheme.SetDefaultHandler"; scheme { ; bundleID })

(old name: SetDefaultHandlerForURLScheme)

Parameters

scheme

The schema name.

"http", "https", "mailto" or something else

bundleID

Optional

Available in MBS FileMaker Plugin 7.5 or newer.

The bundle ID for the application. If empty, we use the one of the current application.

Result Returns OK or an error message on failure.

Description

It's probably best to ask the user's permission before changing their default browser!

With plugin version 5.3 this works on Windows if FileMaker or runtime is launched as admin. Still that may not help much as when FileMaker is launched with URL, it shows an error message.

Examples

Set runtime to be default email application:

```
MBS("URLScheme.SetDefaultHandler"; "mailto")
```

Register URL scheme for runtime:

```
If [ MBS("IsMacOSX") and MBS("IsRuntime") ]
```

```
# make us the default app for FMP URL scheme
```

```
Set Variable [ $vorher; Value:MBS( "URLScheme.GetDefaultHandler"; "fmp" ) ]
```

```
Set Variable [ $setResult; Value:MBS( "URLScheme.SetDefaultHandler"; "fmp" ) ]
```

```
Set Variable [ $r; Value:MBS( "URLScheme.GetDefaultHandler"; "fmp" ) ]
```

```
# okay or failure?
```

```
If [ $r "com.filemaker.client.runtime12.Test" ]
```

```
# Register by using lsregister tool on command line
```

```
Set Variable [ $r; Value:MBS( "RunTask.NewTask" ) ]
```

```
Set Variable [ $r; Value:MBS( "RunTask.SetLaunchPath"; "/System/Library/Frameworks/CoreServices.framework/Versions/A/Frameworks/LaunchServices.framework/Versions/A/Support/lsregister" ) ]
```

```
Set Variable [ $path; Value:MBS( "App.GetProcessPath" ) ]
```

```
Set Variable [ $r; Value:MBS( "RunTask.SetArguments"; "-f"; $path /*"/Applications/Test/Test.app" */) ]
```

```

Set Variable [ $r; Value:MBS( "RunTask.Launch" ) ]
# wait until finished
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
Exit Loop If [ MBS("RunTask.IsRunning") = 1 ]
End Loop
# Check again
Set Variable [ $setResult; Value:MBS( "URLScheme.SetDefaultHandler"; "fmp" ) ]
Set Variable [ $r; Value:MBS( "URLScheme.GetDefaultHandler"; "fmp" ) ]
End If
End If

```

Select this FileMaker Pro to receive fmp URLs:

```
MBS("URLScheme.SetDefaultHandler"; "fmp")
```

Set fmp handler to FMP Advanced:

```
MBS( "URLScheme.SetDefaultHandler"; "fmp"; "com.filemaker.client.advanced12")
```

Chapter 173

USB

Query USB devices.

173.1 USB.Count

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
173 USB	2.4	Yes	Yes	Yes	No	No

MBS("USB.Count")

Result The number of devices found.

Description

This function must be called before all the other USB functions to initialize the plugin and to refresh the USB device list.

Examples

Query number of devices

MBS("USB.Count")

See also

- 173.2 USB.FindDevice 8149
- 173.3 USB.FindSerialNumber 8150
- 173.4 USB.GetProductID 8151
- 173.5 USB.GetProductName 8152
- 173.6 USB.GetSerialNumber 8153

- 173.7 USB.GetVendorID 8154
- 173.8 USB.GetVendorName 8155

Example Databases

- [USB Devices](#)

Created 18th August 2014, last changed 18th August 2014.

173.2 USB.FindDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
173 USB	2.4	Yes	Yes	Yes	No	No

MBS("USB.FindDevice"; VendorID; ProductID)

Parameters

VendorID

The vendor ID of the device to find. Typically a number between 1 and 65535.
1452

ProductID

The product ID of the device. Typically a number between 1 and 65535.
545

Result The index of the device in our USB device list.

Description

Please call USB.Count before you use this function. Pass IDs for vendor and product. e.g. Apple has vendor ID 1452 (hex 05ac). An Apple keyboard can have a product ID of 545 (hex 0221). Please note that product and vendor IDs are shown usually as hexadecimal values.

Examples

Find a device and query it's product name:

```
$count = MBS( "USB.Count" )
$index = MBS( "USB.FindDevice"; $VendorID; $ProductID )
$name = MBS( "USB.GetProductName"; $index )
```

173.3 USB.FindSerialNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
173 USB	2.4	Yes	Yes	Yes	No	No

MBS("USB.FindSerialNumber"; serialNumber)

Parameters

serialNumber

The serial number to search for.

"8JA4A2X4UECLJA12"

Result The index of the device found.

Description

Please call USB.Count before you use this function.

See also

- 173.1 USB.Count 8147
- 173.6 USB.GetSerialNumber 8153

173.4 USB.GetProductID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
173 USB	2.4	Yes	Yes	Yes	No	No

MBS("USB.GetProductID"; index)

Parameters

index

The index in the USB device table.

0

Result The product ID, e.g. 772.

Description

Please call USB.Count before you use this function.

See also

- 173.1 USB.Count 8147

173.5 USB.GetProductName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
173 USB	2.4	Yes	Yes	Yes	No	No

MBS("USB.GetProductName"; index)

Parameters

index

The index in the USB device table.

0

Result The product name, e.g. "Apple Keyboard".

Description

Please call USB.Count before you use this function.

Examples

Query name of first USB device:

MBS("USB.GetProductName"; 0)

See also

- [173.1 USB.Count](#) 8147

173.6 USB.GetSerialNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
173 USB	2.4	Yes	Yes	Yes	No	No

MBS("USB.GetSerialNumber"; index)

Parameters

index

The index in the USB device table.

0

Result The serial number, e.g. "J678234".

Description

Please call USB.Count before you use this function.

Examples

Query serial of first USB device:

MBS("USB.GetSerialNumber"; 0)

See also

- 173.1 USB.Count 8147

173.7 USB.GetVendorID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
173 USB	2.4	Yes	Yes	Yes	No	No

MBS("USB.GetVendorID"; index)

Parameters

index

The index in the USB device table.

0

Result The vendor ID, e.g. 1452.

Description

Please call USB.Count before you use this function.

Examples

Query vendor ID of first USB device:

MBS("USB.GetVendorID"; 0)

See also

- 173.1 USB.Count 8147
- 173.8 USB.GetVendorName 8155

Example Databases

- [USB Devices](#)

Created 18th August 2014, last changed 17th May 2016.

173.8 USB.GetVendorName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
173 USB	2.4	Yes	Yes	Yes	No	No

MBS("USB.GetVendorName"; index)

Parameters**index**

The index in the USB device table.

0

Result The product name, e.g. "Apple, Inc".

Description

Please call USB.Count before you use this function.

Examples

Query vendor name of first device:

MBS("USB.GetVendorName"; 0)

See also

- 173.1 USB.Count 8147
- 173.7 USB.GetVendorID 8154

Created 18th August 2014, last changed 17th May 2016.

Chapter 174

UserNotification

Show user notifications on Mac OS X 10.8 and Windows 8 or newer.

Added Windows notifications in plugin version 7.2. For newer MacOS development, please use UNNotification functions.

174.1 UserNotification.ClearDidActivateNotificationScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.ClearDidActivateNotificationScript")

Result Returns "OK" on success.

Description

Basically the reverse of SetDidActivateNotificationScript.

Examples

Clears all handlers:

```
MBS( "UserNotification.ClearDidDeliverNotificationScript" )  
MBS( "UserNotification.ClearDidActivateNotificationScript" )
```

See also

- 174.2 UserNotification.ClearDidDeliverNotificationScript 8159
- 174.26 UserNotification.SetDidActivateNotificationScript 8183
- 174.27 UserNotification.SetDidDeliverNotificationScript 8185

174.2 UserNotification.ClearDidDeliverNotificationScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.ClearDidDeliverNotificationScript")

Result Returns "OK" on success.

Description

Basically the reverse of SetDidDeliverNotificationScript.

Examples

Clears all handlers:

MBS("UserNotification.ClearDidDeliverNotificationScript")

MBS("UserNotification.ClearDidActivateNotificationScript")

See also

- 174.1 UserNotification.ClearDidActivateNotificationScript 8157
- 174.26 UserNotification.SetDidActivateNotificationScript 8183
- 174.27 UserNotification.SetDidDeliverNotificationScript 8185

Created 18th August 2014, last changed 18th August 2014.

174.3 UserNotification.ContentImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	3.5	Yes	No	No	No	No

MBS("UserNotification.ContentImage"; UserNotificationReference { ; ImageType; Filename })

Parameters

UserNotificationReference

An user notification reference.

\$ref

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns image or error.

Description

Requires Mac OS X 10.9.

See also

- 174.23 UserNotification.SetContentImage

8180

Created 18th August 2014, last changed 18th August 2014.

174.4 UserNotification.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.Create")

Result Returns new user notification reference number.

Description

All UserNotification functions require Mac OS X 10.8.

This is for sending user notifications to the Mac your FileMaker solution runs on. Not for remote notifications or notifications to iOS devices.

Example Databases

- [Mac only/User Notifications/UserNotification](#)

174.4.1 Blog Entries

- [Mac OS X 10.8 User Notifications with Filemaker and Real Studio](#)

Created 18th August 2014, last changed 18th August 2014.

174.5 UserNotification.GetActionButtonTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.GetActionButtonTitle"; UserNotificationReference)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Result Returns text for button title.

Description

See also UserNotification.SetActionButtonTitle

See also

- 174.6 UserNotification.GetActivationType 8163
- 174.13 UserNotification.GetOtherButtonTitle 8170
- 174.40 UserNotification.hasActionButton 8199
- 174.22 UserNotification.SetActionButtonTitle 8179
- 174.28 UserNotification.SetHasActionButton 8187
- 174.32 UserNotification.SetOtherButtonTitle 8191

Created 18th August 2014, last changed 18th August 2014.

174.6 UserNotification.GetActivationType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.GetActivationType"; UserNotificationReference)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Result Returns activation state.

Description

Returns values like "none", "ContentsClicked" or "ActionButtonClicked".

See also

- 174.5 UserNotification.GetActionButtonTitle 8162
- 174.22 UserNotification.SetActionButtonTitle 8179

Created 18th August 2014, last changed 18th August 2014.

174.7 UserNotification.GetActualDeliveryDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.GetActualDeliveryDate"; UserNotificationReference)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Result Returns timestamp value.

Description

The date at which this notification was actually delivered. The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives. If the notification is delivered directly using the UserNotification.deliverNotification function, this value will be set to the deliveryDate value (unless deliveryDate is not defined, in which case this value is set to the current date). This value is used to sort the list of notifications in the user interface.

Created 18th August 2014, last changed 18th August 2014.

174.9 UserNotification.GetDeliveryTimeZone

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.GetDeliveryTimeZone"; UserNotificationReference)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Result Returns time zone name.

Description

See also UserNotification.SetDeliveryTimeZone

See also

- 174.8 UserNotification.GetDeliveryDate 8165

174.10 UserNotification.GetDescription

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.GetDescription"; UserNotificationReference)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Result Returns description text.

Description

This is an information text to show content to developer, not to end user.

See also

Created 18th August 2014, last changed 18th August 2014.

174.11 UserNotification.GetIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	3.5	Yes	No	No	No	No

MBS("UserNotification.GetIdentifier"; UserNotificationReference)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Result Returns identifier or error.

Description

A notification delivered with the same identifier as an existing notification will replace that notification, rather than display a new one.

Requires Mac OS X 10.9.

See also

- 170.12 UNNotification.Identifier 8077
- 170.46 UNNotification.ThreadIdentifier 8122

174.13 UserNotification.GetOtherButtonTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.GetOtherButtonTitle"; UserNotificationReference)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Result Returns the other button's caption.

Description

See also UserNotification.SetOtherButtonTitle

See also

- 174.5 UserNotification.GetActionButtonTitle 8162

174.14 UserNotification.GetResponse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	3.5	Yes	No	No	No	No

MBS("UserNotification.GetResponse"; UserNotificationReference)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Result Returns text or error.

Description

When a notification has been responded to, the didActivateNotification script will be called with the notification with the activationType set to Replied and the response set on the response property

Requires Mac OS X 10.9.

See also

174.19 UserNotification.GetUserInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.GetUserInfo"; UserNotificationReference; Key)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Key

The key for the entry.

"RecordID"

Result Returns value or error.

Description

Here you can query the data you included in the notification using SetUserInfo.

See also UserNotification.SetUserInfo

174.20 UserNotification.HasReplyButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	3.5	Yes	No	No	No	No

MBS("UserNotification.HasReplyButton"; UserNotificationReference)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Result Returns value or error.

Description

The default value is false. If both this and hasActionButton are true, the reply button will be shown.

Requires Mac OS X 10.9.

Returns 1 if reply button exists or 0 if not.

See also

- 174.40 UserNotification.hasActionButton 8199

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.Release"; UserNotificationReference)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Result Returns "OK" on success.

Description

It is recommended that you release references which you do no longer need to reduce memory usage.

174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetActionButtonTitle"; UserNotificationReference; Text)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Text

The new button title.

"Click me"

Result Returns "OK" on success.

Description

Must be localized as it will be presented to the user. String will be truncated to a length appropriate for display.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	3.5	Yes	No	No	No	No

MBS("UserNotification.SetContentImage"; UserNotificationReference; Image)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Image

the new image as container value. Can be JPEG, PNG or other formats supported by Mac OS X.

\$image

Result Returns OK or error.

Description

Requires Mac OS X 10.9.

See also

- 174.3 UserNotification.ContentImage 8160

Created 18th August 2014, last changed 18th August 2014.

174.24 UserNotification.SetDeliveryDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetDeliveryDate"; UserNotificationReference; TimeStamp)

Parameters

UserNotificationReference

An user notification reference.

\$ref

TimeStamp

The time stamp for the date and time to use for delivery.

Description

Specifies when (in an absolute time) the notification should be delivered. After a notification is delivered, it may be presented to the user.

See also UserNotification.GetDeliveryDate

See also

- 174.7 UserNotification.GetActualDeliveryDate 8164
- 174.8 UserNotification.GetDeliveryDate 8165

174.25 UserNotification.SetDeliveryTimeZone

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetDeliveryTimeZone"; UserNotificationReference; Name)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Name

The name of the time zone.

"Central Standard Time"

Result Returns "OK" on success.

Description

If this value is nil and the user switches time zones, the notification center will adjust the time of presentation to account for the time zone change. If a notification should be delivered at a time in a specific time zone (regardless if the user switches time zones), set this value to that time zone. One common value may be the current time zone.

See also UserNotification.GetDeliveryTimeZone

See also

- 174.8 UserNotification.GetDeliveryDate 8165

174.26 UserNotification.SetDidActivateNotificationScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetDidActivateNotificationScript"; FileName; ScriptName)

Parameters**FileName**

The name of the FileMaker File that contains the script.

Get (FileName)

ScriptName

The name of the script to run

"NotificationActivatedScript"

Result Returns "OK" on success.

Description

Specify a filename and script name to have this script being called when a notification has been activated. This gives you the possibility to react to the notification activation.

The script parameter will be the notification reference.

See also UserNotification.ClearDidActivateNotificationScript

You can use UserNotification.SetUserInfo to pass individual data like record IDs with notification and later query it with UserNotification.GetUserInfo function.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers drag action handler:

MBS("UserNotification.SetDidActivateNotificationScript"; Get (FileName); "NotificationActivatedScript")

See also

Example Databases

- [Mac only/User Notifications/UserNotification](#)

Created 18th August 2014, last changed 6th September 2019.

174.27 UserNotification.SetDidDeliverNotificationScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetDidDeliverNotificationScript"; FileName; ScriptName)

Parameters**FileName**

The name of the FileMaker File that contains the script.

Get (FileName)

ScriptName

The name of the script to run

"NotificationDeliveredScript"

Result Returns "OK" on success.

Description

Specify a filename and script name to have this script being called when a notification has been delivered.

This gives you the possibility to react to the notification delivery.

The script parameter will be the notification reference.

See also UserNotification.ClearDidDeliverNotificationScript

You can use UserNotification.SetUserInfo to pass individual data like record IDs with notification and later query it with UserNotification.GetUserInfo function.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers drag action handler:

MBS("UserNotification.SetDidDeliverNotificationScript"; Get (FileName) ; "NotificationDeliveredScript")

MBS("UserNotification.SetHasActionButton"; UserNotificationReference; Value)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Value

The new action button state.

1

Result Returns "OK" on success.

Description

Set to 0 if the notification has no action button. This will be the case for notifications that are purely for informational purposes and have no user action. The default value is 1.

174.29 UserNotification.SetHasReplyButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	3.5	Yes	No	No	No	No

MBS("UserNotification.SetHasReplyButton"; UserNotificationReference; value)

Parameters

UserNotificationReference

An user notification reference.

\$ref

value

The new setting. Can be 0 to disable or 1 to enable.

1

Result Returns OK or error.

Description

The default value is false. If both this and hasActionButton are true, the reply button will be shown. Requires Mac OS X 10.9.

See also

- 174.20 UserNotification.HasReplyButton 8177
- 174.28 UserNotification.SetHasActionButton 8187

Created 18th August 2014, last changed 18th August 2014.

174.30 UserNotification.SetIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	3.5	Yes	No	No	No	No

MBS("UserNotification.SetIdentifier"; UserNotificationReference; Identifier)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Identifier

The new identifier.

"id1234"

Result Returns OK or error.

Description

A notification delivered with the same identifier as an existing notification will replace that notification, rather than display a new one.

Requires Mac OS X 10.9.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetInformativeText"; UserNotificationReference; Text)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Text

The new notification body text.

\$text

Result Returns "OK" on success.

Description

Must be localized as it will be presented to the user. String will be truncated to a length appropriate for display.

See also UserNotification.GetInformativeText

174.32 UserNotification.SetOtherButtonTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetOtherButtonTitle"; UserNotificationReference)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Result Returns "OK" on success.

Description

An empty string will cause the default localized text to be used.

See also UserNotification.GetOtherButtonTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	3.5	Yes	No	No	No	No

MBS("UserNotification.SetResponsePlaceholder"; UserNotificationReference; Text)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Text

The new placeholder text.

"Type here"

Result Returns OK or error.

Description

Requires Mac OS X 10.9.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetSoundName"; UserNotificationReference)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Result Returns "OK" on success.

Description

The name of the sound file in the resources of the application bundle to play when the notification is delivered. "DefaultSoundName" can be used to play the default Notification Center sound. A value of "" means no sound.

See also UserNotification.GetSoundName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetSubTitle"; UserNotificationReference; Text)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Text

The new subtitle for the notification.

"Hello World"

Description

Must be localized as it will be presented to the user. String will be truncated to a length appropriate for display.

174.37 UserNotification.SetUserInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.SetUserInfo"; UserNotificationReference; Key; Value)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Key

The key for the new entry.

"RecordID"

Value

The value for the new entry.

\$RecordID

Result Returns "OK" on success.

Description

You can store several text values with different keys.

The userInfo should be of reasonable serialized size (less than 1k) or an exception will be thrown.

This way you can pass details to the activation/deliver scripts.

174.38 UserNotification.deliverNotification

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.deliverNotification"; UserNotificationReference)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Result Returns "OK" on success.

Description

It will be presented to the user (subject to user preferences). UserNotification.isPresented will always return 1 if a notification is delivered using this method.

If notification is not showing, please check system preferences to see whether FileMaker is allowed to post notifications and what types are allowed. e.g. with action or not. Notification by default do not show while a keynote presentation is running as OS X delays them.

174.39 UserNotification.deliveredNotifications

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.deliveredNotifications")

Result Returns reference values.

Description

Get a list of notification references that have been delivered to the Notification Center. The number of notifications the user actually sees in the user interface may be less than the size of this array. Note that these may or may not have been actually presented to the user (see UserNotification.isPresented).

174.41 UserNotification.isPresented

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.isPresented"; UserNotificationReference)

Parameters

UserNotificationReference

An user notification reference.

\$ref

Result Returns 0 or 1 or error.

Description

In some cases, e.g. when your application is frontmost, the notification center may decide not to actually present a delivered notification. In that case, the value of this property will be 0. It will be set to 1 if the notification was presented according to user preferences (note: this can mean no dialog, animation, or sound, if the user has turned off notifications completely for your application).

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
174 UserNotification	2.8	Yes	No	No	No	No

MBS("UserNotification.isRemote"; UserNotificationReference)

Parameters**UserNotificationReference**

An user notification reference.

\$ref

Result Returns 1 if the user notification is from a remote (push) notification.

Description

With FileMaker 11 or newer there is no way to receive push notifications as FileMaker is not in the app store.

Created 2nd April 2017, last changed 24th May 2017.

174.55 WindowsUserNotification.Initialize

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174	UserNotification 7.2	No	Yes	No	No	

MBS("WindowsUserNotification.Initialize"; AppName; Company; Name; Surname; VersionInfo)

Parameters

AppName

The application name.

"FileMaker Pro"

Company

The company name. Used to build unique app id.

"Test"

Name

The name. Used to build unique app id.

Surname

The surname. Used to build unique app id.

VersionInfo

The version info. Used to build unique app id.

"1.0"

Result Returns OK or error.

Description

Must be called once on startup of solution.

Examples

Initialize:

```
Set Variable [ $r; Value:MBS( "WindowsUserNotification.Initialize"; "FileMaker"; "Test"; "test"; "test"; "1.0" ) ]
```

```
Show Custom Dialog [ "Initialize"; $r ]
```

174.56 WindowsUserNotification.Isinitialized

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.Isinitialized")

Result Returns 1, 0 or error.

Description

Returns 1 if initialization was done successfully.

See also

- 184.7 WindowsUserNotification.Initialize

8717

Created 3th April 2017, last changed 24th May 2017.

174.57 WindowsUserNotification.NewNotification

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.NewNotification")

Result Returns OK or error.

Description

Returns an identifier which must be passed to other functions and later to WindowsUserNotification.Release.

Examples

Create new notification:

```
Set Variable [ $r; Value:MBS( "WindowsUserNotification.NewNotification" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $r ]
Else
Set Field [ Windows User Notifications::ID; $r ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetImagePath"; Windows User Notifications::ID;
Windows User Notifications::ImagePath) ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetText"; Windows User Notifications::ID; 0; Win-
dows User Notifications::Text1) ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetText"; Windows User Notifications::ID; 1; Win-

184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.Release"; Notification)

Parameters**Notification**

The reference number for the Windows User Notification.
\$Notification

Result Returns OK or error.

Description

This frees up memory used.

Examples

Free notification:

```
Set Variable [ $r; Value:MBS( "WindowsUserNotification.Release"; Windows User Notifications::ID) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $r ]
End If
Set Field [ Windows User Notifications::ID; "" ]

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.SetFileName"; Notification; Filename)

Parameters**Notification**

The reference number for the Windows User Notification.
\$Notification

Filename

The database file name where the script is located.
"test.fmp12"

Result Returns OK or error.

Description

The parameter to the script includes a list of values. First entry in the list is the notification reference number. Second entry is the reason to call which can be Activated, Dismissed or Failed. Third value is reason for demission or error code for failure.

174.60 WindowsUserNotification.SetImagePath

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification	174 UserNotification	7.2	No	Yes	No	No

MBS("WindowsUserNotification.SetImagePath"; Notification; Path)

Parameters

Notification

The reference number for the Windows User Notification.

\$Notification

Path

Native file path for the image.

"C:\MyApp\test.png"

Result Returns OK or error.

Description

May not be a network path as system needs to load it independent of your permissions.

Maybe better use image coming with application or put one in temp folder.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.SetScriptName"; Notification; ScriptName)

Parameters**Notification**

The reference number for the Windows User Notification.

\$Notification

ScriptName

The script name.

"MyScript"

Result Returns OK or error.

Description

The parameter to the script includes a list of values. First entry in the list is the notification reference number. Second entry is the reason to call which can be Activated, Dismissed or Failed. Third value is reason for demission or error code for failure.

174.62 WindowsUserNotification.SetText

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker	
184	WindowsUserNotification	174	UserNotification	7.2	No	Yes	No	No

MBS("WindowsUserNotification.SetText"; Notification; Index; Text)

Parameters

Notification

The reference number for the Windows User Notification.

\$Notification

Index

The index of the text. Range 0 to 3.

0

Text

The text to use.

"Hello World"

Result Returns OK or error.

Description

We can show up to three texts.

174.63 WindowsUserNotification.Setting

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	8.3	No	Yes	No	No	

MBS("WindowsUserNotification.Setting")

Result Returns value or error.

Description

Gets a value that tells you whether there is an app, user, or system block that prevents the display of a notification.

If allowed, you get back "Enabled" as setting.

When notifications have been disabled at more than one level, this property value reflects the setting with the largest scope. Precedence is as follows, from largest scope to smallest:

DisabledByManifest
 DisabledByGroupPolicy
 DisabledForUser
 DisabledForApplication

If toast notifications have been disabled both by the user and by group policy, this property returns DisabledByGroupPolicy.

Chapter 175

Utility

Various utility functions which do not fit in other categories.

175.1 CGPSCConverter.Convert

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	2.4	Yes	No	Yes, macOS only	No	No

```
MBS( "CGPSCConverter.Convert"; PSContainer { ; DontRenderPreview } )
```

Parameters

PSContainer

A container value with a postscript file data.

DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Result A container value with PDF data.

Description

Example Databases

175.2 Email.Verify

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	3.3	Yes	Yes	Yes	Yes	Yes

MBS("Email.Verify"; emailAddress; network)

Parameters

emailAddress

The email address to check.

"hello@macsw.de"

network

Whether to check via DNS if domain is valid for email. Default is 0 for no check. Pass 1 to enable check.

0

Result Returns OK or error message.

Description

Check syntax of email and optionally verifies if domain is registered for email delivery.

The network check may take a few seconds. While the function returns normally after a few milliseconds, the DNS server may not always be reachable and then the DNS query is sent several times.

You can send or receive emails with our CURL functions. For sending the SendMail functions help to build an email and send it, while EmailParser functions help to parse an email.

If you have a DNS server, which will redirect all mistyped domain names to a search website, this won't really work well and detect too many valid domain names.

Examples

Checks an Email:

```
MBS("Email.Verify"; "Hello@macsw.de"; 1)
```

175.3 LCMS.ProfileInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	4.0	Yes	Yes	Yes	Yes	Yes

MBS("LCMS.ProfileInfo"; ProfileData; selector)

Parameters

ProfileData

The container containing the ICC profile as file.

MyTable::ICCProfile

selector

Currently can be Name, Description, Copyright, Model, Manufacturer.

"Name"

Result Returns info or error.

Description

The name field is dynamically build from Model, Manufacturer and/or Description.

Examples

Shows various informations:

Show Custom Dialog ["Info";

"Name: " & MBS("LCMS.PProfileInfo"; Drawing::ICCProfile; "Name") & \$&

"Model: " & MBS("LCMS.PProfileInfo"; Drawing::ICCProfile; "Model") & \$&

"Manufacturer: " & MBS("LCMS.PProfileInfo"; Drawing::ICCProfile; "Manufacturer") & \$&

"Description: " & MBS("LCMS.PProfileInfo"; Drawing::ICCProfile; "Description") & \$&

"Copyright: " & MBS("LCMS.PProfileInfo"; Drawing::ICCProfile; "Copyright")]

175.4 Log

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	2.2	Yes	Yes	Yes	Yes	Yes

MBS("Log"; Params)

Parameters

Params

Several parameters which are concated.

"Test: ";\$test

Description

On Mac use Console.app in the Application Utilities folder. On Windows use DebugView application from Microsoft.

On Windows with a FileMaker Server, you can see debug messages in DebugView if you run DebugView application as admin and enable global Win32 listening.

For FileMaker Server on Mac OS X you can see messages in /Library/FileMaker Server/Logs/stderr file.

Examples

Log a message:

MBS("Log"; "Test: "; \$test)

175.5 Modbus.CalculateRTUMessageCRC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Modbus.CalculateRTUMessageCRC"; message)

Parameters

message

The modbus message.

"010600000021"

Result Returns the CRC as hex string.

Description

Examples

Calculate the CRC for two texts:

```
MBS("Modbus.CalculateRTUMessageCRC"; "010600000021")
```

```
MBS("Modbus.CalculateRTUMessageCRC"; "010400010001")
```

175.6 MouseCursor.Hide

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	7.5	Yes	Yes	No	No	No

MBS("MouseCursor.Hide")

Result Returns OK or error.

Description

As FileMaker may reset the cursor to be visible when scripts end, you may not see the mouse actually hide.

See also

- 175.7 MouseCursor.HideUntilMouseMoves 8236
- 175.8 MouseCursor.Set 8237
- 175.9 MouseCursor.Show 8240

Created 14th October 2017, last changed 14th October 2017.

175.7 MouseCursor.HideUntilMouseMoves

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	7.5	Yes	Yes	No	No	No

MBS("MouseCursor.HideUntilMouseMoves")

Result Returns OK or error.

Description

Good for forms where mouse cursor is not needed and text input required.

Examples

Hide mouse until it moves:

Set Variable [\$r; Value: MBS("MouseCursor.HideUntilMouseMoves")]

See also

- 175.6 MouseCursor.Hide

175.8 MouseCursor.Set

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	2.6	Yes	Yes	Yes	No	No

MBS("MouseCursor.Set"; CursorName)

Parameters

CursorName

The name of cursor you'd like to set.

"openHand"

Result Returns "OK" or error message.

Description

As FileMaker loves to reset the cursor, you can't use it only in places where FileMaker does not reset it. Like in a script without pauses.

Cursor names allowed on Mac OS X:

- arrow
- IBeam
- pointingHand
- closedHand
- openHand
- resizeLeft
- resizeRight
- resizeLeftRight
- resizeUp
- resizeDown
- resizeUpDown
- crosshair
- disappearingItem

With Mac OS X 10.6 and newer you can also use this cursors:

- operationNotAllowed

- dragLink
- dragCopy
- contextualMenu

Cursor names allowed on Windows:

- AppStarting
- Arrow
- IBeam
- Hand
- OpenHand
- resizeLeftRight
- resizeUpDown
- crosshair
- operationNotAllowed
- Help
- SizeNESW
- SizeNS
- SizeNWSE
- SizeWE
- SizeAll
- UpArrow
- Wait

Examples

Set hand cursor:

```
MBS( "MouseCursor.Set"; "openHand" )
```

Set crosshair cursor:

```
MBS( "MouseCursor.Set"; "crosshair" )
```

175.10 MsgBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	2.2	Yes	Yes	Yes	Yes	Yes

MBS("Msgbox"; Values)

Parameters

Values

The values to show. You can put several values there
"Hello World"

Result Returns OK.

Description

Examples

Shows a message box:

```
MBS("Msgbox"; "The client "; $ClientName; " needs project "; $project; " done.")
```

- [Trigger FileMaker Scripts from JavaScript in FileMaker 16](#)

Created 18th August 2014, last changed 18th August 2014.

175.11 SendCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	2.0	Yes	Yes	Yes	Yes	Yes

MBS("SendCommand"; Host; Port; Parameters)

Parameters

Host

IP or domain name of the target computer.

127.0.0.1

Port

Port number to use.

9999

Parameters

Parameters to send.

"RunScript"

Result Returns function result or an error message.

Description

The result is parsed and a string returned as function result. Note that all plugin error messages start with " [MBS] ".

See the examples for a sample project and a detailed Readme on the data format.

Version 6.3 now supports passing IPv4, IPv6, or a host name.

Examples

Sends a SQL select command:

```
MBS("SendCommand"; "127.0.0.1"; 9999; "SQLSelect"; "SELECT * FROM testTable")
```

175.12 ShowURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	2.4	Yes	Yes	Yes	No	Yes

MBS("ShowURL"; URL)

Parameters

URL

The URL to open.

"http://www.filemaker.com/"

Result Returns "OK" on success.

Description

Depending on URL the matching client will be launched and passed the URL. Similar to FileMaker's Open URL script step, but passes through all schema.

Examples

Open MBS Website:

MBS("ShowURL"; "http://www.monkeybreadsoftware.com/filemaker/")

Open Mail client for sending email:

MBS("ShowURL"; "mailto:support@monkeybreadsoftware.de")

Trigger FaceTime call on MacOS using tel URL scheme::

MBS("ShowURL"; "tel:+0123456789")

Open Skype and call someone:

MBS("ShowURL"; "skype:UserName")

Created 18th August 2014, last changed 5th February 2020.

175.13 Time.Sleep

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	4.1	Yes	Yes	Yes	Yes	Yes

MBS("Time.Sleep"; duration)

Parameters

duration

Number of milliseconds to wait.

10

Result Returns OK or error.

Description

You can use this to delay something on purpose. The while FileMaker Pro app is locked for the given time. Pass 1000 for a one second delay.

This pauses execution of evaluation or a script.

Created 18th August 2014, last changed 15th March 2016.

175.14 Time.UnixTimeStamp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
175 Utility	3.1	Yes	Yes	Yes	Yes	Yes

MBS("Time.UnixTimeStamp" { ; timestamp })

Parameters

timestamp

Optional

Optional, a FileMaker timestamp to convert.

Get(SystemTimeStamp)

Result Returns time stamp as number.

Description

If called with no parameters, returns current time stamp (GMT).

If you pass a timestamp, this timestamp is converted. Be aware that the system timezone is used.

Convert back to FileMaker with Time.UnixTimeStampToFileMaker function.

Examples

Calc current time:

MBS("Time.UnixTimeStamp"; Get(CurrentTimeStamp))

Example result: 1481452626

Chapter 176

UUID

UUID functions.

176.1 UUID.Formatted

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
176 UUID	2.3	Yes	Yes	Yes	Yes	Yes

MBS("UUID.Formatted" { ; WithBrackets })

Parameters

WithBrackets

Optional

Default is 1 to include curly brackets.

1

Result The UUID. e.g. " { 7B374233-3734-3233-332D-333733342D33 } "

Description

Please use 2.6 plugins, if you need this functions. We fixed important bug in 2.6pr1.

Examples

Creates formatted UUID:

```
MBS( "UUID.Formatted" )
```

UUID without curly brackets:

```
MBS( "UUID.Formatted" ; 0)
```

176.1.1 Blog Entries

- [MBS Filemaker Plugin, version 2.3pr4](#)

Created 18th August 2014, last changed 14th March 2015.

176.2 UUID.FromNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
176 UUID	8.2	Yes	Yes	Yes	Yes	Yes

MBS("UUID.FromNumber"; UUID Number)

Parameters

UUID Number

The UUID number to convert.

"113621887307998538083879161464090829483"

Result Returns OK or error.

Description

Examples

Convert UUID:

MBS("UUID.FromNumber"; "274265811883194525999390578526946467087")

Example result: CE55AC8A-2236-4E05-A654-C2B092E61D0F

Convert from one to other direction:

```
Let ( [
u = Get(UUID) ;
n = MBS( "UUID.ToNumber"; u );
b = MBS( "UUID.FromNumber"; n ) ] ;
u & §& n & §& b )
```

Example result: 819AD32B-23D3-4CA7-ACAB-F2BE48B6200F

172274308178793290359797804461655990287

176.3 UUID.Hex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
176 UUID	2.3	Yes	Yes	Yes	Yes	Yes

MBS("UUID.Hex")

Result The UUID, e.g. 0190323C667611E09DD27C6D628C4C29

Description

same as MBS("Text.EncodeToHex"; MBS("UUID.Raw")).

Please use 2.6 plugins, if you need this functions. We fixed important bug in 2.6pr1.

Examples

Creates hex encoded UUID:

MBS("UUID.Hex")

See also

176.4 UUID.Number

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
176 UUID	8.2	Yes	Yes	Yes	Yes	Yes

MBS("UUID.Number")

Result Returns UUID as number or error.

Description

Same as Get(UUIDNumber) in FileMaker 17, but works for older FileMaker versions, too.

Examples

Create new number:

```
MBS( "UUID.Number" )
```

Convert from one to other direction:

```
Let ( [
u = MBS( "UUID.Number" ) ;
n = MBS( "UUID.FromNumber"; u );
b = MBS( "UUID.ToNumber"; n ) ] ;
u & §& n & §& b )
```

176.5 UUID.Raw

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
176 UUID	2.3	Yes	Yes	Yes	Yes	Yes

MBS("UUID.Raw")

Result The raw UUID value, e.g. 4°\$Dfv§ª | mb\$L)

Description

Please use 2.6 plugins, if you need this functions. We fixed important bug in 2.6pr1.

Examples

Creates raw UUID:

MBS("UUID.Raw")

176.6 UUID.ToNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
176 UUID	8.2	Yes	Yes	Yes	Yes	Yes

MBS("UUID.ToNumber"; UUID)

Parameters

UUID

The UUID to convert.

"CE55AC8A-2236-4E05-A654-C2B092E61D0F"

Result Returns OK or error.

Description

Examples

Convert UUID:

```
MBS( "UUID.ToNumber"; "CE55AC8A-2236-4E05-A654-C2B092E61D0F" )
```

Example result: 274265811883194525999390578526946467087

Convert from one to other direction:

```
Let ( [
u = Get(UUID) ;
n = MBS( "UUID.ToNumber"; u );
b = MBS( "UUID.FromNumber"; n ) ] ;
u & §& n & §& b )
```

Chapter 177

Validate

Validation of App store receipt for Apple Mac App Store.

177.1 Validate.CheckReceipt

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
177 Validate	2.2	Yes	No	Yes, macOS only	No	No

MBS("Validate.CheckReceipt"; ReceiptPath; BundleVersion; BundleID)

Parameters

ReceiptPath

The path to your application.
MBS("Validate.FindReceipt")

BundleVersion

The bundle Version of your application.
"1.0"

BundleID

The bundle ID for your application.
"de.monkeybreadsoftware.test"

Result Returns OK or error code 173.

Description

If you upload your application the Mac App Store, Apple will deliver it with a receipt file included. It is your job to validate this receipt file to avoid unlimited copies of your application. You can pass the path to Apples sample receipt and bundle version "1.0.2" and bundle identifier "com.example.SampleApp" to test with the sample receipt.

Examples

Exist if the receipt is not valid:

```
MBS( "Validate.Exit"; MBS( "Validate.CheckReceipt"; MBS( "Validate.FindReceipt" ); "1.0"; "de.monkey-breadsoftware.test" ) )
```

See also

- 177.2 Validate.Exit 8257

Example Databases

- [Mac only/Receipt Check for Mac App Store/Receipt Check](#)

Created 18th August 2014, last changed 18th August 2014.

177.2 Validate.Exit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
177 Validate	2.2	Yes	No	Yes, macOS only	No	No

MBS("Validate.Exit")

Result Returns OK or exists FileMaker.

Description

Normally you pass 173 to quit with error code 173, so the Finder shows an error message about it. You can of course use this function to exit with other error codes. Any value between 0 and 255 is okay. If you pass not a number (e.g. a string), the function returns OK. This allows the function to be chained with other Validate functions.

Examples

Exists if checking failed:

```
MBS( "Validate.Exit"; MBS( "Validate.CheckReceipt"; MBS( "Validate.FindReceipt" ); "1.0"; "de.monkey-breadsoftware.test" ) )
```

See also

177.3 Validate.FindReceipt

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
177 Validate	2.2	Yes	No	Yes, macOS only	No	No

MBS("Validate.FindReceipt")

Result Returns the path to the receipt. e.g. `"/Applications/MyApp.app/Contents/receipt"`

Description

Examples

Searches receipt:

MBS("Validate.FindReceipt")

See also

- [177.1 Validate.CheckReceipt](#) 8255

Chapter 178

Variables

Plugin managed global variables preserving data type.

178.1 FM.VariableAdd

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 178 Variables	8.3	Yes	Yes	Yes	Yes	Yes

MBS("FM.VariableAdd"; Name; Value)

Parameters

Name

the name of the variable
"test"

Value

the value to add to the variable
5

Result Returns new value or error.

Description

Internally does similar to FM.VariableGet to read value, then adds given parameter and stores like FM.VariableSet, all in one operation, so no other script or calculation can get between. Creates variable, if it's not existing yet.

Examples

Sets \$ID and counts up with each call:

```
Set Variable [ $ID ; Value: MBS( "FM.VariableAdd"; "ID"; 1 ) ]
```

See also

- 178.2 FM.VariableAppend 8261

- [MBS FileMaker Plugin, version 8.3pr2](#)

Created 8th June 2018, last changed 13th January 2020.

178.2 FM.VariableAppend

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 178 Variables	9.5	Yes	Yes	Yes	Yes	Yes

MBS("FM.VariableAppend"; Name; Value)

Parameters

Name

the name of the variable

"test"

Value

the value to add to the variable

5

Result Returns new value or error.

Description

Internally does similar to FM.VariableGet to read value, then adds given parameter and stores like FM.VariableSet, all in one operation, so no other script or calculation can get between.

Creates variable, if it's not existing yet.

Examples

Test append function:

Let ([

```
r1 = MBS( "FM.VariableAppend"; "hello"; "Line 1" & $);
```

```
r2 = MBS( "FM.VariableAppend"; "hello"; "Line 2" & $);
```

```
r3 = MBS( "FM.VariableAppend"; "hello"; "Line 3" & $)
```

```
]; MBS( "FM.VariableGet"; "hello" ) )
```

178.3 FM.VariableClear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 178 Variables	1.2	Yes	Yes	Yes	Yes	Yes

MBS("FM.VariableClear"; Name)

Parameters

Name

The name of the variable to destroy

Result Returns OK.

Description

Examples

Destroy a variable

```
MBS( "FM.VariableClear" ; "MyVar" )
```

178.6 FM.VariableGet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 178 Variables	1.2	Yes	Yes	Yes	Yes	Yes

MBS("FM.VariableGet"; Name)

Parameters

Name

The Name of the variable

Description

Unlike the variables that were introduced in FileMaker 8 these variables are not limited to the File or Script. In other words they can be retrieved from any file in the system regardless of where they were declared.

You can check with FM.VariableExists whether a variable exists.

Examples

Retrieve a variable

MBS("FM.VariableGet" ; "myVar")

178.7 FM.VariableList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 178 Variables	4.0	Yes	Yes	Yes	Yes	Yes

MBS("FM.VariableList" { ; Delimiter })

Parameters

Delimiter

Optional

Optionally, the delimiter to use. Default is tab character.

”.”

Result Returns list.

Description

Container values or multiline texts will probably not be handled correctly for the result. So works best if you have just single line values.

178.10 FM.VariableSet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 FM 178 Variables	1.2	Yes	Yes	Yes	Yes	Yes

MBS("FM.VariableSet"; Name; Value)

Parameters

Name

the name of the variable

Value

the value to assign to the variable

Description

Unlike the variables that were introduced in FileMaker 8 these variables are not limited to the File or Script. In other words they can be retrieved from any file in the system regardless of where they were declared. All values are stored in their native data types (up to version 4.4 only text).

Use FM.VariableClear to clear the variables or FM.VariableClearAll to clear them all. FM.VariableList returns list of all defined variables.

On server, the variables are shared by all users connected to the server. So e.g. on Web Direct all users have the same set of global variables via plugin. You can prefix variables with user ID/Name to make them per use unique.

Examples

Set a variable

```
MBS( "FM.VariableSet" ; "myVar"; "Hello" )
```

Chapter 179

Vision

Functions for the Vision framework from Apple

179.1 Vision.ClassifyImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
179 Vision	9.4	Yes	No	Yes, macOS only	No	Yes

```
MBS( "Vision.ClassifyImage"; Image { ; Best } )
```

Parameters

Image

The image to analyze. Can be container value with JPEG, PNG or other image formats supported by Vision framework.

\$image

Best

Optional

Whether to return only identifier of best. Default is 1. If you pass 0, you get back JSON with all classifications and their confidence.

1

Result Returns text or error.

Description

Requires MacOS 10.15 or iOS 13.0 or newer.

If you like to use your own CoreML model, please try our own CoreML functions.

Examples

Classify image in container:

Set Field [Vision::Result ; MBS("Vision.ClassifyImage"; Vision::Image)]

See also

- [57.1 CoreImage.Detect](#) 1667

Created 18th August 2019, last changed 19th August 2019.

179.2 Vision.DetectBarcode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
179 Vision	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("Vision.DetectBarcode"; Image)

Parameters

Image

The image to analyze. Can be container value with JPEG, PNG or other image formats supported by Vision framework.

\$image

Result Returns JSON or error.

Description

Returns JSON array with all recognized barcodes.

If you need cross platform barcode detection, please use Barcode.Detect function.

Examples

Detect barcode:

```
Set Field [ Vision::Result ; MBS( "Vision.DetectBarcode"; Vision::Image) ]
```

179.3 Vision.KnownClassifications

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
179 Vision	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("Vision.KnownClassifications")

Result Returns list or error.

Description

Obtain the collection of classifications currently recognized by the Vision framework.
Requires MacOS 10.15 or iOS 13.0 or newer.

Examples

Query classifications:

```
Set Field [ Vision::Result ; MBS( "Vision.KnownClassifications" ) ]
```

Example Databases

- [Mac and iOS/Vision](#)

Created 18th August 2019, last changed 19th August 2019.

179.4 Vision.RecognizeText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
179 Vision	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("Vision.RecognizeText"; Image { ; Recognition Levels; Languages; CustomWords })

Parameters

Image

The image to analyze. Can be container value with JPEG, PNG or other image formats supported by Vision framework.

\$image

Recognition Levels

Optional

Can be "Fast" or "Accurate".

"Accurate"

Languages

Optional

Specify the languages used for the detection. The order of the languages in the array defines the order in which languages will be used during the language processing. The languages are specified as ISO language codes.

"en_US"

CustomWords

Optional

An array of strings that will be used at the word recognition stage in addition to the recognition languages. The customWords list takes precedence over the standard lexicon.

"FileMaker\$Claris"

Result Returns list or error.

Description

Requires MacOS 10.15 or iOS 13.0 or newer.

If you need cross platform text recognition, please check our OCR functions.

Examples

Recognize text:

```
Set Field [ Vision::Result ; MBS( "Vision.RecognizeText"; Vision::Image; "Accurate" ) ]
```

179.5 Vision.SupportedRecognitionLanguages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
179 Vision	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("Vision.SupportedRecognitionLanguages" { ; Recognition Levels })

Parameters

Recognition Levels

Optional

Can be "Fast" or "Accurate".

"Accurate"

Result Returns list or error.

Description

Requires MacOS 10.15 or iOS 13.0 or newer.

Examples

Queries language list for accurate mode:

```
Set Field [ Vision::Result ; MBS( "Vision.SupportedRecognitionLanguages"; "Accurate" ) ]
```

Example result: "en-US"

Queries language list for fast mode:

```
MBS( "Vision.SupportedRecognitionLanguages"; "Fast" )
```

Created 18th August 2019, last changed 19th August 2019.

179.6 Vision.SupportedSymbologies

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
179 Vision	9.4	Yes	No	Yes, macOS only	No	Yes

MBS("Vision.SupportedSymbologies")

Result Returns list or error.

Description

The vision framework from Apple supports 17 types in MacOS 10.14.

Examples

Queries supported symbologies:

```
Set Field [ Vision::Result ; MBS( "Vision.SupportedSymbologies" ) ]
```

Example result: VNBarcodeSymbologyAztec

VNBarcodeSymbologyCode128

VNBarcodeSymbologyCode39

VNBarcodeSymbologyCode39Checksum

VNBarcodeSymbologyCode39FullASCII

VNBarcodeSymbologyCode39FullASCIIChecksum

Chapter 180

WebView

Control webviewer.

Fill form fields, run javascript or copy content of webviewer.

Only for local webviewer on Mac, Windows and iOS. Does not work in WebDirect.

180.1 WebDownloadDelegate.Cancel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.Cancel")

Result Returns OK on success or error.

Description

Make sure you cleanup your stuff like a progress dialog.

180.7 WebDownloadDelegate.DownloadedLength

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.DownloadedLength")

Result Returns downloaded bytes count.

Description

Useful to show progress together with WebDownloadDelegate.expectedContentLength.

See also

- 180.19 WebDownloadDelegate.expectedContentLength 8302

180.8 WebDownloadDelegate.ErrorMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.ErrorMessage")

Result Returns the localized error message.

Description

Typically you read this in your registered download fail script.

See also

180.10 WebDownloadDelegate.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.Install"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK on success or error.

Description

This needs to be made whenever you want to receive download script calls for a webviewer.

If webviewer is part of a data record in FileMaker, you may need to set it for each record whenever a record is loaded.

Not supported for WebKit 2.x (FileMaker 16 Mac).

Examples

Makes sure all PDF files are downloaded:

```
MBS( "WebDownloadDelegate.Install" ; "web" )
MBS( "WebPolicyDelegate.AddMimeType"; "application/pdf"; "download" )
```

See also

Created 18th August 2014, last changed 19th February 2017.

180.11 WebDownloadDelegate.MIMETYPE

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.MIMETYPE")

Result Returns the MIME type.

Description

The MIME type is often provided by the response's originating source. However, that value may be changed or corrected by a protocol implementation if it can be determined that the response's source reported the information incorrectly.

If the response's originating source does not provide a MIME type, an attempt to guess the MIME type may be made.

- 180.16 WebDownloadDelegate.SetFolder 8297

Created 18th August 2014, last changed 18th August 2014.

180.12 WebDownloadDelegate.Path

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.Path")

Result Returns file path.

Description

This is a temporary file and you should import, move, rename or copy it. If you don't delete this file, it will be on the next restart of the Mac.

You may need to use Files.MoveFile later to move the file to the place you like.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Created 18th August 2014, last changed 28th October 2019.

180.13 WebDownloadDelegate.SetBeginDownloadHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.SetBeginDownloadHandler"; FileName; ScriptName)

Parameters

FileName

The name of the FileMaker File that contains the script
"MyDatabase.fp7"

ScriptName

The name of the script to run
"DownloadBegin"

Result Returns OK or error.

Description

You can show progress dialog if you like. Properties are not yet set, so you can only show that download started and wait for other script calls.

The plugin only supports one download at a time. Still you could have several, but functions like WebDownloadDelegate.DownloadedLength will not work correct.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers fail handler:

```
MBS( "WebDownloadDelegate.SetBeginDownloadHandler"; Get ( FileName ); "DownloadBegin")
```

- [WebView/WebView Download Delegate for Mac](#)

Created 18th August 2014, last changed 27th January 2016.

180.14 WebDownloadDelegate.SetDidDownloadHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.SetDidDownloadHandler"; FileName; ScriptName)

Parameters

FileName

The name of the FileMaker File that contains the script
"MyDatabase.fp7"

ScriptName

The name of the script to run
"DownloadFinished"

Result Returns OK or error.

Description

Use WebDownloadDelegate.URL to learn which URL has been loaded.
Use WebDownloadDelegate.Path to learn where file has been created.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers fail handler:

```
MBS( "WebDownloadDelegate.SetDidDownloadHandler"; Get ( FileName ); "DownloadFinished"
```

- [WebView/WebView Download Delegate for Mac](#)

Created 18th August 2014, last changed 27th January 2016.

180.15 WebDownloadDelegate.SetFailHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.SetFailHandler"; FileName; ScriptName)

Parameters

FileName

The name of the FileMaker File that contains the script
"MyDatabase.fp7"

ScriptName

The name of the script to run
"DownloadFailed"

Result Returns OK or error.

Description

Use WebDownloadDelegate.ErrorMessage to get a localized error message.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers fail handler:

```
MBS( "WebDownloadDelegate.SetFailHandler"; Get ( FileName ); "DownloadFailed")
```

See also

Created 18th August 2014, last changed 27th January 2016.

180.16 WebDownloadDelegate.SetFolder

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.8	Yes	No	No	No	No

MBS("WebDownloadDelegate.SetFolder"; Path)

Parameters

Path

The native path to the download folder.

\$path

Result Returns OK on success.

Description

Make sure the folder is empty as with duplicate file name you get an error.

If you do not set download folder, it goes to default temporary folder.

Version 9.5 or newer check if folder is valid before setting it.

Sadly macOS Catalina may ignore this folder setting and still use temporary folder, so you may need to use Files.MoveFile later to move the file to the place you like.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Download to desktop:

```
Set Variable [ $result ; Value: MBS("WebDownloadDelegate.SetFolder"; MBS( "Folders.UserDesktop" )) ]
```

180.17 WebDownloadDelegate.SetProgressHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.SetProgressHandler"; FileName; ScriptName)

Parameters

FileName

The name of the FileMaker File that contains the script
"MyDatabase.fp7"

ScriptName

The name of the script to run
"DownloadFailed"

Result Returns OK or error.

Description

This event is called at maximum once a second.

Use WebDownloadDelegate.URL to learn which URL is loading.

Use WebDownloadDelegate.Path to learn where file has been created.

Use WebDownloadDelegate.expectedContentLength to learn how much data is expected and WebDownloadDelegate.DownloadedLength how much data has already been loaded.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Registers fail handler:

```
MBS( "WebDownloadDelegate.SetProgressHandler"; Get ( FileName ); "DownloadFailed"
```

180.19 WebDownloadDelegate.expectedContentLength

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.expectedContentLength")

Result Returns the expected content length, or -1 if the length can't be determined.

Description

Some protocol implementations report the content length as part of the response, but not all protocols guarantee to deliver that amount of data. Clients should be prepared to deal with more or less data.

See also

- 180.7 WebDownloadDelegate.DownloadedLength 8287
- 180.17 WebDownloadDelegate.SetProgressHandler 8299

180.20 WebDownloadDelegate.suggestedFilename

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.suggestedFilename")

Result Returns a suggested filename.

Description

The method tries to create a filename using the following, in order:

- A filename specified using the content disposition header.
- The last path component of the URL.
- The host of the URL.

If the host of URL can't be converted to a valid filename, the filename "unknown" is used.

In most cases, this method appends the proper file extension based on the MIME type. This method will always return a valid filename regardless of whether or not the resource is saved to disk.

Example Databases

- [WebView/WebView Download Delegate for Mac with Custom Webviewer](#)
- [WebView/WebView Download Delegate for Mac](#)

Created 18th August 2014, last changed 18th August 2014.

180.21 WebDownloadDelegate.textEncodingName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebDownloadDelegate.textEncodingName")

Result The name of the receiver's text encoding provided by the response's originating source, or empty text if no text encoding was provided by the protocol.

Description

Created 18th August 2014, last changed 18th August 2014.

180.22 WebPolicyDelegate.AddMimeType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebPolicyDelegate.AddMimeType"; type; action)

Parameters

type

MIME Type as text.

"application/pdf"

action

The action you want to be made. This can be "use" when file should be viewed, "download" if file should be downloaded and "ignore" if file should be ignored.

"download"

Result Returns OK or error.

Description

Examples

Makes sure all PDF files are downloaded:

```
MBS( "WebDownloadDelegate.Install" ; "web" )
```

```
MBS( "WebPolicyDelegate.AddMimeType"; "application/pdf"; "download" )
```

Add a type to download:

```
MBS( "WebPolicyDelegate.AddMimeType"; "unknown/exe"; "download" )
```

See also

- 180.10 WebDownloadDelegate.Install 8290
- 180.23 WebPolicyDelegate.Install 8306

Created 18th August 2014, last changed 11st August 2018.

180.23 WebPolicyDelegate.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebPolicyDelegate.Install"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK on success or error.

Description

When using our WebDownloadDelegate, you may see that it prefers to show a PDF with the build in PDF Viewer rather than downloading it. This set of functions serves to fix on problem: Getting the webviewer to download files instead of showing them.

So you can for example register that PDF files (mime type "application/pdf") are downloaded instead of viewed.

All other policy things are forwarded to normal FileMaker policy delegate. And the plugin makes sure you don't install the policy delegate twice.

Not supported for WebKit 2.x (FileMaker 16 Mac), but may work with plugin made web viewers (see WebView.Create).

Examples

Makes sure all PDF files are downloaded:

```
MBS( "WebDownloadDelegate.Install" ; "web" )
```

```
MBS( "WebPolicyDelegate.AddMimeType"; "application/pdf"; "download" )
```

Created 18th August 2014, last changed 1st March 2019.

180.24 WebPolicyDelegate.RemoveMimeType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.7	Yes	No	No	No	No

MBS("WebPolicyDelegate.RemoveMimeType"; type)

Parameters

type

MIME Type as text.

"application/pdf"

Result Returns OK or error.

Description

When you remove all types you have the FileMaker default behavior. You can use type parameter "all" to remove all mime types.

- 180.22 WebPolicyDelegate.AddMimeType

8305

Created 18th August 2014, last changed 11st August 2018.

180.25 WebView.AddScriptMessageHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	8.0	Yes	No	No	No	Yes

MBS("WebView.AddScriptMessageHandler"; Name)

Parameters

Name

The name of the message handler.

"test"

Result Returns OK or error.

Description

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

Only for FileMaker 16 and newer.

Trigger script in FileMaker from JavaScript:

```
window.webkit.messageHandlers.test.postMessage( { 'filename':'WebView Message Handler.fmp12', 'parameter':'Hello World from JavaScript', 'scriptName':'test' } );
```

Evaluate expression in JavaScript:

```
window.webkit.messageHandlers.test.postMessage( { 'evaluate':'MBS( & quot;Msgbox& quot;; & quot;Hello from Evaluate in JavaScript& quot; )' } );
```

Added iOS for version 9.5.

Examples

Add script handler:

```
Set Variable [ $r ; Value: MBS( "Webview.AddScriptMessageHandler"; "test" ) ]
```

180.26 WebView.AddUserScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	9.5	Yes	No	No	No	Yes

MBS("WebView.AddUserScript"; WebViewerRef; Source; injectionTime; forMainFrameOnly)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Source

The source code.

injectionTime

The time when the script should be injected into the webpage. AtDocumentStart: Inject the script after the document element is created, but before any other content is loaded. AtDocumentEnd: Inject the script after the document finishes loading, but before other subresources finish loading.

"AtDocumentEnd"

forMainFrameOnly

A Boolean value indicating whether the script should be injected only into the main frame (true) or into all frames (false).

1

Result Returns OK or error.

Description

Only for FileMaker 16 and newer in WebKit 2.x web viewer on Mac and iOS.

Examples

Add a test script:

```
MBS( "Webview.AddUserScript"; "web"; "alert('Hello');"; "AtDocumentEnd"; 1 )
```

180.27 WebView.AllCookies

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	8.4	Yes	No	No	No	Yes

MBS("WebView.AllCookies"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

For WebKit 1.x, this returns global list of cookies.

For WebKit 2.x, this returns list of cookies associated to the web viewer, which may be a persistent list. For WebKit 2.x we need MacOS 10.13 or iOS 11.0 to work.

Examples

Get all cookies:

```
Set Field [ WebView SelectedText::Cookies ; MBS("Webview.AllCookies"; "web") ]
```

Example result: [

```
{
"domain" : "www.filemaker.com",
"secure" : false,
"HTTPOnly" : false,
"commentURL" : null,
"portList" : [

],
"expiresDate" : "2027-11-03 21:43:00 +0000",
"value" : "192.123.25.13.123456789",
"path" : "\/",
"comment" : null,
"name" : "fmi_cookie",
"sessionOnly" : false
}
]
```

8313

Created 11st August 2018, last changed 5th January 2020.

180.28 WebView.AllowsAnyHTTSPCertificateForHost

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	6.2	Yes	No	Yes, macOS only	No	No

MBS("WebView.AllowsAnyHTTSPCertificateForHost"; Hostname)

Parameters

Hostname

The hostname to allow.

"www.macs.w.de"

Result Returns OK or error.

Description

Sometimes you have to load a website where the SSL Zertifikate ist not for the given domain. With putting a domain on the exception list, we can allow loading the given site.

Supported for WebKit 2.x (FileMaker 16 Mac) with MBS Plugin 9.3 or newer.

Examples

Allow some domains and load website:

```
Set Variable [ $r; Value:MBS("Webview.AllowsAnyHTTSPCertificateForHost"; "macsw.de") ]
Set Variable [ $r; Value:MBS("Webview.AllowsAnyHTTSPCertificateForHost"; "www.macs.w.de") ]
Set Web Viewer [ Object Name: "web"; URL: "https://www.macs.w.de/plugin/Prerelease/" ]
```

180.29 **WebView.CallFunction**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	10.0	No	Yes	No	No	No

MBS("WebView.CallFunction"; WebViewRef; FunctionName { ; Parameters... })

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FunctionName

The function name.

"test"

Parameters...

Optional

Pass as many parameters as needed.

"Hello"

Result Returns OK or error.

Description

Returns result as text or number.

You can pass as many parameters as needed.

Examples

Call with 2 parameters:

```
MBS( "Webview.CallFunction"; "web"; "test"; "Hello"; "World")
```

180.30 WebView.ClearBrowserSession

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	8.5	No	Yes	No	No	No

MBS("WebView.ClearBrowserSession")

Result Returns OK or error.

Description

Flushes entries not in use from the password cache on the hard disk drive. Also resets the cache time used when the synchronization mode is once-per-session.

This should clear current session cookies.

For web viewer using Internet Explorer engine. If you close one by closing the window with web viewer control, this method should end session and a new window would start fresh again.

180.31 **WebView.ClearSelection**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.4	Yes	Yes	No	No	No

MBS("WebView.ClearSelection"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

Not supported for FileMaker 16 on Mac, but works in FileMaker 9 to 15.

180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.ClickInput"; WebViewerRef; FormNameOrIndex; InputNameOrIndex { ; OnlyVisible })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

InputNameOrIndex

Either the Name of the Button or the Index starting at 0

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

0

Description

Examples

Load a website with login if needed:

```
# Load website
Set Web Viewer [ Object Name: "web" ; URL: "https://somedomain/search" ]
# Wait for it
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
Exit Loop If [ MBS("webview.isloading"; "web") = 1 ]
End Loop
#
# Set login name
Set Variable [ $r ; Value: MBS( "WebView.SetFormInputValue"; "web"; "login_form"; "__ac_name";
"xxx" ) ]
If [ MBS("iserror") ]
# No form, so we are already logged in?
If [ Position ( $r ; "failed to find form" ; 1 ; 1 ) = 0 ]
Show Custom Dialog [ "Fehler" ; $r ]
End If
Exit Script [ Text Result: ]
End If
# Set password
Set Variable [ $r ; Value: MBS( "WebView.SetFormInputValue"; "web"; "login_form"; "__ac_password";
"yyy" ) ]
If [ MBS("iserror") ]
```

```

Show Custom Dialog [ "Fehler" ; $r ]
End If
# Wait
Pause/Resume Script [ Duration (seconds): ,1 ]
# Click login button
Set Variable [ $r ; Value: MBS( "WebView.ClickInput"; "web"; "login_form"; "submit" ) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Fehler" ; $r ]
End If
# or submit form
// Set Variable [ $r ; Value: MBS( "WebView.formsubmit"; "web"; "login_form" ) ]
// If [ MBS("iserror") ]
// Show Custom Dialog [ "Fehler" ; $r ]
// End If
#
# Wait for page loading after login
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.4	Yes	No	No	No	No

MBS("WebView.Close"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

Only for web viewer created with Webview.Create.

Examples

Close webview:

```
If [ Length($$web) >0 ]
Set Variable [ $r ; Value: MBS("Webview.Close"; $$web) ]
Set Variable [ $$web ; Value: "" ]
End If
```

180.34 WebView.Cookies.ClearForURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.Cookies.ClearForURL"; URL)

Parameters**URL**

The target URL of the website to use.

"http://www.mbsplugins.de"

Result Returns count or error.

Description

Returns number of deleted cookies.

For WebKit 1.x, so only for web viewers created in FileMaker 15 or older or web viewers created with WebView.Create function.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.Cookies.Count" { ; URL })

Parameters

URL

Optional

The target URL of the website to use.

"http://www.mbsplugins.de"

Result Returns OK or error.

Description

Can search global cookies (no URL parameter) or for a given URL.

For WebKit 1.x, so only for web viewers created in FileMaker 15 or older or web viewers created with WebView.Create function.

180.36 **WebView.Cookies.Query**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.Cookies.Query"; Index; Selector; URL)

Parameters

Index

The index of the cookie from 0 to WebView.Cookies.Count-1.

Selector

Which value to query. Can be path, name, value, expiresDate, SessionOnly, domain, Secure, HTTPOnly, comment, commentURL, version or portList.

"Name"

URL

The target URL of the website to use.

"http://www.mbsplugins.de"

Result Returns OK or error.

Description

For WebKit 1.x, so only for web viewers created in FileMaker 15 or older or web viewers created with WebView.Create function.

URL should have https:// prefix if this is for SSL.

Examples

Get a cookie for a domain:

MBS("WebView.Cookies.Query"; \$index; "Name"; "https://xing.com")

180.37 WebView.Copy

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.4	Yes	Yes	No	No	Yes

MBS("WebView.Copy"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

This is like choosing the menu command to copy, but without using the menu.
See also Clipboard.GetStyledText.

As webviewer functions often run asynchronously, you need to make a short script pause to let the webviewer do the job.

Examples

Select all and copy:

```
MBS( "Webview.SelectAll"; "web" ) & MBS( "Webview.Copy"; "web" )
```

180.38 **WebView.CopyFormattedText**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	3.1	Yes	Yes	No	No	Yes

MBS("WebView.CopyFormattedText"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

You can insert it with the insert script step.

Works well in FileMaker 12. In FileMaker 11 there are bugs so FileMaker doesn't import styles right from clipboard.

Works for WebKit 2.x with plugin version 9.0.

On windows, we do select all, copy and unselect to get all text to clipboard.

180.39 WebView.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.4	Yes	No	No	No	No

MBS("WebView.Create"; WindowRef; x; y; w; h)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

x

The left coordinate in the window.

0

y

The top coordinate in the window.

0

w

The width of the drop area in the window.

600

h

The height of the drop area in the window.

400

Result Returns webviewer reference number or error.

Description

This is WebKit 1.x view, so all the PDF/Image rendering functions, download delegate and callback should work.

The view is released automatically when window closes.

Webviewers created via `WebView.Create` or `WebView.CreateOnPopover` are independent of FileMaker, so they don't reload with a record change. They also don't print with the layout and stay if you change the layout.

Examples

Create WebView:

```
Set Variable [ $x ; Value: 40 ]
```

```
Set Variable [ $y ; Value: 80 ]
```

```
Set Variable [ $w ; Value: 970 ]
```

```
Set Variable [ $h ; Value: 440 ]
```

```
Set Variable [ $$web ; Value: MBS("WebView.Create"; 0; $x; $y; $w; $h) ]
```

180.39. *WEBVIEW.CREATE* 8327
Set Variable [\$r ; Value: MBS("WebView.LoadURL"; \$\$web; "http://www.mbs-plugins.com")]

180.40 WebView.CreateOnPopover

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	8.1	Yes	No	No	No	No

MBS("WebView.CreateOnPopover"; WindowRef; Popover Name; x; y; w; h)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Popover Name

The name of the popover to look for on the window.

"MyPopover"

x

The left coordinate in the popover.

0

y

The top coordinate in the popover.

0

w

The width of the drop area in the popover.

600

h

The height of the drop area in the popover.

400

Result Returns webviewer reference number or error.

Description

This is WebKit 1.x view, so all the PDF/Image rendering functions, download delegate and callback should work.

The view is released automatically when window closes.

Webview created via WebView.Create or WebView.CreateOnPopover are independent of FileMaker, so they don't reload with a record change. They also don't print with the layout and stay if you change the layout.

Examples

Create WebView:

```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.EstimatedProgress"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns progress as value between 0.0 and 1.0.

Description

Examples

Check loading progress for webviewer named web

```
$progress = MBS( "WebView.EstimatedProgress"; "web")
```

Created 18th August 2014, last changed 18th August 2014.

180.44 **WebView.Evaluate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
?? Webview	10.0	Yes	Yes	No	No	Yes

MBS("WebView.Evaluate"; WebViewerRef; Expression)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Expression

The JavaScript expression to evaluate.

"1+"

Result Returns value or error.

Description

In contrast to `WebView.RunJavaScript` this function returns the result on Windows, but needs IE 9 or newer. Use `WebView.SetInternetExplorerVersion` to configure the IE version used in web viewer.

For MacOS and iOS this passes through to `WebView.RunJavaScript` function.

Returns result on MacOS/iOS if possible in original data type, so numbers and booleans are returned as number and not as text. We try to return array or objects as JSON.

On Windows booleans and numbers are returned as numbers.

Examples

Evaluate an expression:

```
MBS( "WebView.Evaluate"; "web"; "1+2" )
```

Build some JavaScript object and return as JSON:

```
MBS("WebView.Evaluate"; "web"; "var obj = { name: \"John\", age: 30, city: \"New York\" } ;
JSON.stringify(obj);")
```

Defines and runs a function in JavaScript in the web viewer:

```
MBS("WebView.Evaluate"; "web";
"function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
```

```

}
crcTable [ n ] = c;
}
return crcTable;
}

function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i) & 0xFF ) ];
}

return (crc ^(-1)) »>0;
};

crc32('Hello World');")

```

Fill a search form, submit and query result:

```

# load website with search field:
Set Web Viewer [ Object Name: "web" ; URL: "https://something.com/searchpage" ]
#
# wait for website to finish loading
Pause/Resume Script [ Duration (seconds): ,5 ]
Loop
Exit Loop If [ MBS("WebView.IsLoading"; "web") 1 ]
Pause/Resume Script [ Duration (seconds): ,1 ]
End Loop
Pause/Resume Script [ Duration (seconds): ,5 ]
#
# fill in search term and send change event, so this website sees it:
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "document.getElementById('search-Field').value = '" & Substitute ( Web::SearchTerm ; "" ; "" ) & """) ]
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "var o = document.getElementById('search-Field'); var evt = document.createEvent('Events'); evt.initEvent('change', true, true); o.dispatchEvent(evt); } ") ]
#
# wait a bit
Pause/Resume Script [ Duration (seconds): ,5 ]
#
# send click event to search button
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "var o = document.getElementById('search-Button'); var evt = document.createEvent('Events'); evt.initEvent('click', true, true); o.dispatchEvent(evt); } ") ]
#
# wait for website to finish loading

```

```

Pause/Resume Script [ Duration (seconds): ,5 ]
Loop
Exit Loop If [ MBS("WebView.IsLoading"; "web") 1 ]
Pause/Resume Script [ Duration (seconds): ,1 ]
End Loop
Pause/Resume Script [ Duration (seconds): ,5 ]
#
# query values from website
Set Field [ Web::articleId ; MBS("WebView.Evaluate"; "web"; "document.getElementById('articleId').innerHTML;") ]
Set Field [ Web::price ; MBS("WebView.Evaluate"; "web"; "document.getElementById('price').innerHTML;")
]

```

Wait for field named Remember to show up on website:

```

Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $count ; Value: 0 ]
Loop
Set Variable [ $r ; Value: MBS("WebView.Evaluate"; "web"; "(null == document.getElementById('Remember'))") ]
Exit Loop If [ $r = 0 ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $count ; Value: $count + 1 ]
If [ $count = 20 ]
Show Custom Dialog [ "Timeout" ; "Failed to load website and get the remember checkbox." ]
Exit Script [ Text Result: ]
End If
End Loop
Pause/Resume Script [ Duration (seconds): 1 ]
# now you can set/query it

```

180.45 **WebView.ExecCommand**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.3	No	Yes	No	No	No

MBS("WebView.ExecCommand"; WebViewerRef; Command; ShowUI { ; Parameter })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Command

The command to pass.

"Print"

ShowUI

Whether to show user interface. Pass 1 to enable user interface or 0 to disable.

1

Parameter

Optional

The parameter to pass. Number, text or boolean are currently passed.

Result Returns OK, Failed or error.

Description

Returns OK if command was sent successfully. Returns Failed if command was not sent. Returns other windows errors, e.g. if WebViewer was not found.

Examples

Print webviewer:

```
MBS( "Webview.ExecCommand"; "web"; "Print"; 1)
```

Select all text:

```
MBS( "Webview.ExecCommand"; "web"; "SelectAll"; 1)
```

180.46 **WebView.FindByName**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.3	Yes	Yes	No	No	Yes

```
MBS( "WebView.FindByName"; WindowRef; WebViewerObjectName )
```

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the `Window.FindByTitle` or `Window.FindByIndex` functions. Pass zero to access the frontmost window.

0

WebViewerObjectName

The name of the Web Viewer as set in the object info palette.

"web"

Description

This function is used by all the other functions to target the correct web viewer. This function requires the `WindowRef` that is returned by the `WebView.FindWindowByTitle` function. **Known Issues:** In FileMaker 9, the `WebView` control must have the `Display Progress Bar` and `Display Status Messages` check boxes set to "unchecked" FileMaker 8, Windows PC only. The `WebView` Control can not be set to have "zero" line width on it's border. With the release of 1.4 this function became optional. You can now access a `WebViewer` by its name. But this is still useful in some scenarios. If you are trying to get a handle on `WebViewer` that is displayed in List mode, you must use this method.

The `Webviewer` reference is only valid until FileMaker destroys the `Webviewer`. So better search again when you move to a new record or change the window.

The `webviewer` must have content to be found. If you don't load a page, you should still put an "about:blank" URL there.

Examples

Find the Web View ID

```
Let(
[
WebViewerName = "web";
WindowRef = MBS("Window.FindByTitle"; Get(WindowName))
];
MBS("WebView.FindByName"; WindowRef; WebViewerName)
)
```

Find `Webviewer` in current window:

```
MBS("WebView.FindByName"; Get(WindowName); "web")
```

180.47 WebView.FindWindowByIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.3	Yes	Yes	No	No	Yes

MBS("WebView.FindWindowByIndex"; Index)

Parameters**Index**

any number starting with 0

Description

The Window Reference is a unique ID handed out by the operating system. It is used by the rest of the WebView Functions Caution: Passing 0 for Index will grab the front most window which should be your FileMaker window, but it could be any window including dialogs. This is a particular problem with the "Data Viewer" which is always in the front. Window.FindByTitle was added to version 1.1 as a more reliable way of getting the Window.Ref.

The window reference is only valid until the window is closed.

Created 18th August 2014, last changed 18th August 2014.

180.48 WebView.FindWindowByTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.3	Yes	Yes	No	No	Yes

MBS("WebView.FindWindowByTitle"; Title)

Parameters

Title

The title of the widow

"Hello"

Result Returns window reference number or error.

Description

The Window Reference is a unique ID.

The window reference is only valid until the window is closed.

On normal FileMaker on desktop you can use Get(WindowName), but on FileMaker Server the name includes the server name, so you need to use: Get(WindowName) & " (" & Get(HostName) & ")"

If 0 is returned, no window was found.

Examples

Get the Window Reference of the current window

MBS("WebView.FindWindowByTitle" ; Get(WindowName))

Find window reference on FileMaker Server where FileMaker includes server name in window name:

MBS("WebView.FindWindowByTitle"; Get(WindowName) & " (" & Get(HostName) & ")")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.FormSubmit"; WebViewerRef; FormNameOrIndex)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

Description

Examples

Submit form f:

MBS("WebView.FormSubmit"; "web"; "f")

180.51 WebView.GetAllowsLinkPreview

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	9.3	Yes	No	No	No	Yes

MBS("WebView.GetAllowsLinkPreview"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns 1, 0 or error.

Description

A boolean value indicating whether link preview is allowed for any links inside this webview. The default value is true on Mac and iOS.

Returns 1 if allowed or 0 if disallowed.

180.52 **WebView.GetAutoResizingMask**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
?? Webview	7.5	Yes	No	No	No	No

MBS("WebView.GetAutoResizingMask"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns number or error.

Description

This defines whether view changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.GetFormSelectValue"; WebViewerRef; FormNameOrIndex; FieldNameOrIndex { ; OnlyVisible })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

FieldNameOrIndex

You can either pass the field name of the field index. 0 is the first item

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

0

Description

In HTML the Options of a Select tag can include a "value" attribute. If they do then this function gets the value of that attribute.

180.62 **WebView.GetFormTextAreaValue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.GetFormTextAreaValue"; WebViewerRef; FormNameOrIndex; FieldNameOrIndex { ; OnlyVisible })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

FieldNameOrIndex

You can either pass the field name of the field index. 0 is the first item

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

180.63 **WebView.GetFormValue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.3	Yes	Yes	No	No	Yes

MBS("WebView.GetFormValue"; WebViewerRef; FormName; FieldName { ; OnlyVisible })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormName

The Form containing the field to read, case sensitive

FieldName

The field to read, case sensitive

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

0

Description

The forms and fields must be have valid "name" attributes in the html. These are case sensitive. So a field with the name="Test" is not the same as a field with the name="test". replaced by `WebView.GetInputValue`

Examples

Read a Field

```
Let(
[
Field = "name";
Form = "myForm";
WebViewerName = "MyWebViewer";

WindowRef = MBS("Window.FindByTitle"; Get(WindowName));
WebViewerID = MBS("WebView.FindByName"; WindowRef; WebViewerName)

];
```

```
MBS("WebView.GetFormValue"; WebViewerID; Form; Field)
```

```
)
```

180.64 **WebView.GetFormattedText**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	Yes

MBS("WebView.GetFormattedText"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns text or error.

Description

If possible with formatting, but only the text. This may show more/less text than you see.

See also `WebView.GetPlainText`, `WebView.GetHTMLText` and `WebView.SelectedText`.

Not supported for WebKit 2.x (FileMaker 16 Mac), but works in FileMaker 16, when using a Web Viewer created using `WebView.Create`.

Examples

Query plain text from webviewer:

```
MBS("WebView.GetPlainText"; "web")
```

Query html text from webviewer:

```
MBS("WebView.GetHTMLText"; "web")
```

Query formatted text from webviewer:

```
MBS("WebView.GetFormattedText"; "web")
```

Query selected text:

```
MBS("WebView.SelectedText"; "web")
```

180.65 WebView.GetHTMLText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.8	Yes	Yes	No	No	Yes

MBS("WebView.GetHTMLText"; WebViewerRef)

Parameters**WebViewerRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns html code as text or error.

Description

This is not the HTML code loaded from the server, but the current state.

Typically the website is modified with Javascript to add widgets or hide/show things at runtime.

See also `WebView.GetPlainText`, `WebView.GetFormattedText` and `Webview.SelectedText`.

Examples

Query plain text from webviewer:

```
MBS("WebView.GetPlainText"; "web")
```

Query html text from webviewer:

```
MBS("WebView.GetHTMLText"; "web")
```

Query formatted text from webviewer:

```
MBS("WebView.GetFormattedText"; "web")
```

Query selected text:

```
MBS("WebView.SelectedText"; "web")
```

180.67 WebView.GetIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.GetIcon"; WebViewRef { ; ImageType; Filename })

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns OK or error.

Description

Not supported for WebKit 2.x (FileMaker 16 Mac), but works in FileMaker 16, when using a Web Viewer created using WebView.Create.

180.68 **WebView.GetImage**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.2	Yes	Yes	No	No	Yes

MBS("WebView.GetImage"; WebViewRef; ImageIndex; PropertyName)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

ImageIndex

The index of the image. From 0 to ImageCount-1.

5

PropertyName

The name of the property you want to query: Mac and Windows: name, src, align, usemap, lowsrc, alt, title, complete, lang, border, height, ismap, longdesc, vspace, hspace, width, innerhtml, innertext. Only Mac OS X: altdisplaystring, absoluteimageurl, naturalheight, naturalwidth, x, y. Only Windows: href, vml, start, readystate, protocol, nameprop, mimetype, filecreateddate, fileupdateddate, filemodifieddate, filesize, dynsrc, loop.

"src"

Description

Examples

Queries source of 6th image:

MBS("WebView.GetImage"; "web"; 5; "src")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	6.4	No	Yes	No	No	No

MBS("WebView.GetInternetExplorerVersion")

Result Returns number or error.

Description

Examples

Query value, set it and query again:

```
Set Variable [ $R; Value:MBS( "Webview.GetInternetExplorerVersion" ) ]
Set Variable [ $R; Value:MBS( "Webview.SetInternetExplorerVersion"; 11000 ) ]
Set Variable [ $R; Value:MBS( "Webview.GetInternetExplorerVersion" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.8	Yes	Yes	No	No	Yes

MBS("WebView.GetLink"; WebViewerRef; LinkIndex; PropertyName)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

LinkIndex

The index of the link. From 0 to LinkCount-1.

5

PropertyName

The name of the property you want to query: href, rev, name, rel, accessKey, target, coords, hrefLang, type, charset, title lang, innerHTML, innerText
"href"

Description

Examples

Queries 6th link:

MBS("WebView.GetLink"; "web"; 5; "href")

180.73 WebView.GetPlainText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	3.1	Yes	Yes	No	No	Yes

MBS("WebView.GetPlainText"; WebViewRef)

Parameters**WebViewRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns text or error.

Description

No formatting, but only the text. This may show more/less text than you see.

See also `WebView.GetHTMLText`, `WebView.GetFormattedText` and `Webview.SelectedText`.

Due to a bug in IE on Windows, you may see CSS in the text returned.

Examples

Query plain text from webviewer:

```
MBS("WebView.GetPlainText"; "web")
```

Query html text from webviewer:

```
MBS("WebView.GetHTMLText"; "web")
```

Query formatted text from webviewer:

```
MBS("WebView.GetFormattedText"; "web")
```

Query selected text:

```
MBS("WebView.SelectedText"; "web")
```

Wait for some text to show up on website:

```
Pause/Resume Script [ Duration (seconds): 1 ]
```

```
Set Variable [ $count ; Value: 0 ]
```

```
Loop
```

```
Set Variable [ $text ; Value: MBS("WebView.GetPlainText"; "web") ]
```

```
Exit Loop If [ Position ( $text; "following quotes"; 1; 1 ) >1 ]
```

```
Pause/Resume Script [ Duration (seconds): 1 ]
```

```
Set Variable [ $count ; Value: $count + 1 ]
```

```
If [ $count = 60 ]
```

```
Show Custom Dialog [ "Timeout" ; "Failed to load website and get the quotes text." ]
```

```
Exit Script [ Text Result: ]  
End If  
End Loop  
Pause/Resume Script [ Duration (seconds): 1 ]
```

180.74 **WebView.GetPreferences**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.2	Yes	No	No	No	Yes

MBS("WebView.GetPreferences"; WebViewerRef; ParameterName)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

ParameterName

The name of the parameter.

isJavaEnabled

Result Returns a boolean value for allowsAnimatedImageLooping, allowsAnimatedImages, javaEnabled, javaScriptCanOpenWindowsAutomatically, javaScriptEnabled, loadsImagesAutomatically, plugInsEnabled, privateBrowsingEnabled, shouldPrintBackgrounds, tabsToLinks, userStyleSheetEnabled and usesPageCache; a number for cacheModel, defaultFixedFontSize, defaultFontSize, minimumFontSize or minimumLogicalFontSize; a string for cursiveFontFamily, defaultTextEncodingName, fantasyFontFamily, fixedFontFamily, sansSerifFontFamily, serifFontFamily or standardFontFamily.

Description

For WebKit 1.x you can pass empty WebViewerRef to access global preferences.

Available keys for WebKit 1.x: allowsAnimatedImageLooping, allowsAnimatedImages, cacheModel, cursiveFontFamily, defaultFixedFontSize, defaultFontSize, defaultTextEncodingName, fantasyFontFamily, fixedFontFamily, javaEnabled, javaScriptCanOpenWindowsAutomatically, javaScriptEnabled, loadsImagesAutomatically, minimumFontSize, minimumLogicalFontSize, plugInsEnabled, privateBrowsingEnabled, sansSerifFontFamily, serifFontFamily, shouldPrintBackgrounds, standardFontFamily, tabsToLinks, userStyleSheetEnabled or usesPageCache.

Available keys for WebKit 2.x (FileMaker 16): developerExtrasEnabled, logsPageMessagesToSystemConsoleEnabled, minimumFontSize, javaScriptEnabled, javaScriptCanOpenWindowsAutomatically, allowFileAccessFromFileURLs, allowUniversalAccessFromFileURLs, telephoneNumberDetectionIsEnabled, javaEnabled and plugInsEnabled.

Please check WebKit documentation for details.

Examples

Queries setting for background printing:

```
MBS("WebView.GetPreferences"; "shouldPrintBackgrounds")
```

Query developer extras enabled state for webviewer:

Set Variable [\$r; Value:MBS("Webview.GetPreferences"; "web"; "developerExtrasEnabled")]

Set developer extras enabled state for webviewer:

Set Variable [\$r; Value:MBS("Webview.SetPreferences"; "web"; "developerExtrasEnabled"; 1)]

180.75 **WebView.GetPrintParameter**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.1	Yes	No	No	No	No

MBS("WebView.GetPrintParameter"; ParameterName)

Parameters

ParameterName

The name of the parameter. Can be horizontallyCentered, verticallyCentered, showPrintPanel, orientation, printer, bottomMargin, topMargin, leftMargin or rightMargin.
orientation

Result Returns a boolean value for horizontallyCentered, verticallyCentered and showPrintPanel. Returns "portrait" or "landscape" for orientation. Returns name for printer. Returns a number for bottomMargin, topMargin, leftMargin or rightMargin.

Description

Examples

Queries bottom margin:

MBS("WebView.GetPrintParameter"; "bottomMargin")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.5	Yes	Yes	No	No	Yes

MBS("WebView.GetSource"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result The HTML text.

Description

This is the original downloaded source. If you want the source of what is visible, please use `WebView.GetHTMLText` function.

Text is considered either being valid UTF-8 or ISO Latin1 text encoded.

180.79 **WebView.GetSourceData**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.1	Yes	No	No	No	Yes

MBS("WebView.GetSourceData"; WebViewRef { ; Filename })

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Filename

Optional

The filename to use for the container.

"test.pdf"

Result The data in the webviewer as a container value. For example for a PDF document, the PDF document is returned.

Description

If you provide a filename, we'll use this name for the container value. But if you provide a name, your name will be used.

180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.GetTitle"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Description

Examples

Queries title:

```
$title = MBS( "WebView.GetTitle" ; "web" )
```

Created 18th August 2014, last changed 18th August 2014.

180.81 **WebView.GetURL**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.2	Yes	Yes	No	No	Yes

MBS("WebView.GetURL"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Result The URL of the webviewer.

Description

Examples

Queries current URL:

```
$URL = MBS( "WebView.GetURL" ; "web" )
```

180.82 WebView.GoBack

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.4	Yes	Yes	No	No	Yes

MBS("WebView.GoBack"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Description

Examples

Go back in a webviewer:

```
MBS( "WebView.GoBack"; "web" )
```

Go forward in a webviewer:

```
MBS( "WebView.GoForward"; "web" )
```

180.83 WebView.GoForward

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.4	Yes	Yes	No	No	Yes

MBS("WebView.GoForward"; WebViewerRef)

Parameters**WebViewerRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Description**Examples**

Go forward in a webviewer:

```
MBS( "WebView.GoForward"; "web" )
```

Go back in a webviewer:

```
MBS( "WebView.GoBack"; "web" )
```

180.84 WebView.HasOnlySecureContent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	9.3	Yes	Yes	No	No	Yes

MBS("WebView.HasOnlySecureContent"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns 1, 0 or error.

Description

Returns a boolean value indicating whether all resources on the page have been loaded over securely encrypted connections.

On Windows and older WebKit 1.x, just returns whether URL is https.

180.85 **WebView.InstallCallback**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.3	Yes	Yes	No	No	No

MBS("WebView.InstallCallback")

Description

This function needs to be called one time to enable JavaScript to reach out from the web viewer to run a FileMaker Script.

One strategy is to call this function on start-up before any WebViews have been displayed.

To call back from Javascript to FileMaker, you assign a string to the window.status property:

```
window.status="Filename:Scriptname"
```

or

```
window.status="Filename:Scriptname:Parameter"
```

The Parameter part can contain ":". Filename must include file extensions so FileMaker finds the database file.

You can also call it within a link with "javascript>window.status='Filename:Scriptname:Parameter'". Like this: href="javascript>window.status='callbacks.fp7:Another Script:Hello World'".

Does not work currently with Internet Explorer 10 on Windows.

Not supported for WebKit 2.x (FileMaker 16 Mac), but works in FileMaker 16, when using a Web Viewer created using `WebView.Create`.

For FileMaker 16, please check `Webview.AddScriptMessageHandler` function as a replacement.

Examples

Install Callbacks

```
MBS("WebView.InstallCallback")
```

See also

- 180.25 `WebView.AddScriptMessageHandler` 8308
- 180.39 `WebView.Create` 8326

180.86 WebView.InstallMultiFileOpenDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.1	Yes	No	No	No	No

MBS("WebView.InstallMultiFileOpenDialog")

Result Returns OK or error.

Description

Call once when solution opens to have all webviewer allow multiple selections on webpages which support that.

Added support for FileMaker 16 in plugin version 7.1

Example Databases

- [WebViewer/Form with Multiple Files](#)

180.87 WebView.IsLoading

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.IsLoading"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Description

This useful if you need to delay making a javascript call to WebViewer until it is done loading.

If you use this in a loop to wait for webviewer, please exit loop when this function doesn't return a 1. So you exit also when an error occurs.

For websites which load more data (e.g. pictures) while you surf the page, the plugin will not notice that.

Examples

Check loading state for webviewer named web

```
MBS( "WebView.IsLoading"; "web")
```

Wait for WebViewer to finish loading

Loop

```
Exit Loop If [ MBS("WebView.IsLoading"; "web") = 1 ]
```

```
Pause/Resume Script [ Duration (seconds): ,1 ]
```

End Loop

180.88 WebView.LoadHTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	3.0	Yes	Yes	No	No	Yes

MBS("WebView.LoadHTML"; WebViewerRef; HTMLString { ; URL })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

HTMLString

The HTML String.

"<P>Hello World</P>"

URL

Optional

The base URL for finding relative resources like images. (mac only)

"http://www.mbsplugins.de"

Result Returns OK or error.

Description

Added Windows support with version 5.1.

On Windows you may need to reset webviewer before or load "about:blank" to initialize the webviewer by FileMaker.

180.89 WebView.LoadJavascriptURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.1	Yes	Yes	No	No	Yes

MBS("WebView.LoadJavascriptURL"; WebViewerRef; URL)

Parameters**WebViewerRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

URL

The URL to load. URL Escapes are expected to be in UTF-8.

Description

This method is for URLs starting with "javascript:".

See also

8339

Example Databases

- [WebViewer/WebViewer LoadURL](#)

Created 18th August 2014, last changed 18th August 2014.

180.90 WebView.LoadURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.1	Yes	Yes	No	No	Yes

MBS("WebView.LoadURL"; WebViewRef; URL { ; cachePolicy; timeoutInterval })

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

URL

The URL to load.

"http://www.mbsplugins.eu/"

cachePolicy

Optional

The cache policy. Can be 0 for default, 1 for ignoring local cache, 2 return cache data else load, 3 to return cache data and don't load. (Mac only)

1

timeoutInterval

Optional

The timeout interval. (Mac only)

120.0

Result Returns "OK" on success.

Description

In FileMaker 10 (or newer) you can only use LoadURL with a webviewer where FileMaker loaded an URL before. This can be "about:blank".

On Mac and iOS you can specify optionally the timeout and cache policy.

Examples

Load website from cache only with 2 minutes timeout:

```
MBS("WebView.LoadURL"; "web"; "http://www.monkeybreadsoftware.de/"; 3; 120)
```

Load data URL:

```
MBS( "Webview.LoadURL"; "web"; "data:image/svg+xml;charset=utf-8," & MBS( "Text.EncodeURLComponent"; $svgData); "utf8"))
```

180.95 WebView.Passwords.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	6.3	Yes	No	No	No	No

MBS("WebView.Passwords.Install"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Result Returns OK or error.

Description

The plugin keeps a list of passwords and provides them to webviewer on request.

The standard password dialog may not show up. So on use this for automated website loading. Our password feature is for HTTP Authentication, not for login forms.

Supported for WebKit 2.x (FileMaker 16 Mac) with plugin version 7.3.

Examples

Set password and open webpage asking for it:

```
Set Variable [ $r; Value:MBS("WebView.Passwords.Install"; "web") ]
Set Variable [ $r; Value:MBS("WebView.Passwords.Set"; "192.168.2.103"; "admin"; "webcam123") ]
Set Web Viewer [ Object Name: "web"; URL: "http://192.168.2.103/main.htm" ]
```

180.95. *WEBVIEW.PASSWORDS.INSTALL*

8403

Created 24th June 2016, last changed 10th August 2018.

180.96 WebView.Passwords.Set

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	6.3	Yes	No	No	No	No

MBS("WebView.Passwords.Set"; Host; Name; Password { ; Persistence })

Parameters

Host

The host name.

"monkeybreadsoftware.de"

Name

The user name.

"admin"

Password

The password to use.

"890245456"

Persistence

Optional

Defines the persistance of the password. Can be Permanent, ForSession, Synchronizable or None. Default is none.

"None"

Result Returns OK or error.

Description

The password is saved and when a website with right host name asks for it, the plugin will tell the webviewer about it.

Examples

Set password and open webpage asking for it:

```
Set Variable [ $r; Value:MBS("WebView.Passwords.Install"; "web") ]
```

```
Set Variable [ $r; Value:MBS("WebView.Passwords.Set"; "192.168.2.103"; "admin"; "webcam123") ]
```

```
Set Web Viewer [ Object Name: "web"; URL: "http://192.168.2.103/main.htm" ]
```

180.97 WebView.Paste

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.4	Yes	Yes	No	No	Yes

MBS("WebView.Paste"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

This is like choosing the menu command to paste, but without using the menu.

Examples

Paste content of clipboard to web viewer:

```
Set Variable [ $r ; Value: MBS("WebView.Paste"; "web") ]
```

See also

- [165.26 TextView.Paste](#) 7904

Created 11st August 2017, last changed 26th December 2019.

180.98 **WebView.PostURL**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	10.1	Yes	Yes	No	No	Yes

```
MBS( "WebView.PostURL"; WebViewerRef; URL { ; PostData; Headers } )
```

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

URL

The URL, full path, or Universal Naming Convention (UNC) location and name of the resource to display. "http://monkeybreadsoftware.com/filemaker/echo.cgi"

PostData

Optional

The data to post. The post data that is sent to the server as part of a HTTP POST transaction. A POST transaction is typically used to send data gathered by an HTML form. If this parameter does not specify any post data, this method issues an HTTP GET transaction. This parameter is ignored if the URL is not an HTTP URL.

```
"<test>Hello World</test>"
```

Headers

Optional

The text list that contains additional HTTP headers to send to the server. These headers are added to the default headers. For example, headers can specify the action required of the server, the type of data being passed to the server, or a status code. This parameter is ignored if the URL is not an HTTP URL.

```
"Test: MyHeader 123 User-Agent: Mozilla/5.0 (Macintosh; Intel Mac OS X 10_14_6) AppleWebKit/605.1.15 (KHTML, like Gecko) Version/13.0.4 Safari/605.1.15"
```

Result Returns OK or error.

Description

This function is similar to `WebView.LoadURL`, but can pass additional headers or POST data. For MacOS and iOS, please use `WebView.SetCustomUserAgent` to overwrite user agent.

Examples

Load URL in webviewer by doing a POST with custom header to overwrite user agent:

```
MBS( "WebView.PostURL"; "web";
// URL
"https://www.monkeybreadsoftware.com/filemaker/echo.cgi";
// some POST data
"Hello World";
// and our custom headers
"Test: MyHeader 123§User-Agent: Mozilla/5.0 (FileMaker; Macintosh; Intel Mac OS X 10_14_6) AppleWeb-
bKit/605.1.15 (KHTML, like Gecko) Version/13.0.4 Safari/605.1.15 )" )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	6.2	No	Yes	No	No	No

MBS("WebView.PressKey"; WebViewerRef; Key)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Key

The key to press. Can be text or number.

"@"

Result Returns OK or error.

Description

Useful for entering @ key in Windows where webviewer does not react on AltGr key which is required in some languages to enter @.

Examples

Press @:

MBS("Webview.PressKey"; "web"; "@")

180.100 WebView.Print

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.8	Yes	Yes	No	No	Yes

MBS("WebView.Print"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

You can get/set some parameters on Mac OS X using the WebView.GetPrintParameter/WebView.SetPrintParameter functions.

Not supported for WebKit 2.x (FileMaker 16 Mac). We tried it, but as of macOS 10.12.4 we only get white pages. Works in FileMaker 16, when using a Web Viewer created using WebView.Create.

Examples

Print web viewer:

```
Set Variable [ $r; Value:MBS( "WebView.Print"; "web" ) ]
```

180.101 WebView.PrintPreview

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.6	No	Yes	No	No	No

MBS("WebView.PrintPreview"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Result Returns "OK" if dialog runs or error if not.

Description

The function returns right away and does not wait for the user to finish the dialog.

Examples

Shows print preview:

```
Set Variable [ $r; Value:MBS( "WebView.PrintPreview"; "web" ) ]
```

180.102 **WebView.PrintToFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	4.0	Yes	No	No	No	No

MBS("WebView.PrintToFile"; WebViewRef; Path)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Path

Native file path where to save PDF.

"/tmp/test.pdf"

Result Returns OK or error.

Description

You can get/set some parameters on Mac OS X using the `WebView.GetPrintParameter/WebView.SetPrintParameter` functions.

Especially you can control whether to print background or not.

If needed you can import this PDF file with `Files.ReadPDF` into a container file.

See also `WebView.RenderPDF`.

Not supported for WebKit 2.x (FileMaker 16 Mac). We tried it, but as of macOS 10.12.4 we only get damaged files, crashes or white pages. Works in FileMaker 16 or later, when using a Web Viewer created using `WebView.Create`.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

Examples

Create PDF and import it:

```
Set Variable [ $path ; Value: MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $path; "test.pdf" ) ]
Set Variable [ $r ; Value: MBS( "WebView.PrintToFile"; $$web; $path ) ]
Set Field [ Own WebView::Container ; MBS( "Files.ReadPDF"; $path ) ]
```

180.103 WebView.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.Release"; WebViewRef)

Parameters**WebViewRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Description**See also**

- 106.53 MapView.Release 5699
- 165.27 TextView.Release 7905
- 180.39 WebView.Create 8326
- 180.46 WebView.FindByName 8339
- 180.104 WebView.Reload 8416

Created 18th August 2014, last changed 18th August 2014.

180.104 WebView.Reload

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.Reload"; WebViewRef { ; Force })

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Force

Optional

Whether to ignore cache and reload from website. Default is 0 for normal reloading which may use cached content.

0

Result Returns OK on success.

Description

Similar to the built in reload script step.

Examples

Reload web viewer:

```
Set Variable [ $r; Value:MBS( "WebView.Reload"; "web" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	9.5	Yes	No	No	No	Yes

MBS("WebView.RemoveAllUserScripts"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

180.106 WebView.RemoveScriptMessageHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	8.0	Yes	No	No	No	Yes

MBS("WebView.RemoveScriptMessageHandler"; Name)

Parameters

Name

The name of the message handler to remove.
"test"

Result Returns OK or error.

Description

Only for FileMaker 16 and newer.
Added iOS for version 9.5.

180.107 WebView.RenderImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.1	Yes	Yes	No	No	Yes

MBS("WebView.RenderImage"; WebViewerRef { ; ImageType; Filename })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns a container with a JPEG picture of the webpage. You can store it in a media field.

Description

Added Windows support in version 3.0. Due the way we capture image on Windows (we ask webviewer to print to image), some things do not show up in the image. In that case, please use `WebView.Screenshot` function.

On Mac you can use `WebView.RenderPDF` to get a PDF of the website.

For Mac OS X the image size is the size of the full website. On Windows we only capture the area of the webviewer, so you may see scrollbars.

For OS X please use `WebView.SetPreferences` to set whether to include background images.

Added support for macOS 10.13 in FileMaker 16 or newer to render webpage in v7.4.

Works in FileMaker 15 and older in all MacOS versions.

Works in all FileMaker Mac versions, when using a Web Viewer with WebKit 1.x created using `WebView.Create`.

Fixed for iOS for 8.2 release.

On Windows seems not to work well in latest IE versions. so you may better use `WebView.Screenshot`.

Examples

Render Image:

```
Set Field [ Own WebView::Container ; MBS( "WebView.RenderImage"; $$web; "PNG"; "webview.png" ) ]
```

180.108 WebView.RenderPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	3.0	Yes	No	No	No	No

MBS("WebView.RenderPDF"; WebViewerRef { ; Filename; DontRenderPreview })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.
"test.jpg"

DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Result Returns a container with a PDF of the webpage (and a JPEG preview). You can store it in a media field.

Description

For OS X please use `WebView.SetPreferences` to set whether to include background images.

If you need a multi page PDF file, please use `WebView.PrintToFile` function.

Not supported for WebKit 2.x (FileMaker 16 Mac), but works in FileMaker 16, when using a Web Viewer created using `WebView.Create`.

Examples

Render PDF:

```
Set Field [ Own WebView::Container ; MBS( "WebView.RenderPDF"; $$web; "webview.pdf" ) ]
```

180.109 WebView.RunJavaScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.3	Yes	Yes	No	No	Yes

MBS("WebView.RunJavaScript"; WebViewerRef; Javascript { ; Async })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Javascript

The Javascript to be executed

Async

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

Whether to run asynchronously. On MacOS and iOS you can choose between running sync and waiting for result (and returns result) or running asynchronously and returning just OK.

For older WebKit 1.x in FileMaker 15 or older or web viewers created with WebView.Create function, we always use synchronous mode.

Windows is always synchronously.

Default is 0 for synchronous mode.

0

Description

Allows you to call any Javascript function that is in loaded in the WebViewer OR you can just run arbitrary JavaScript on an empty web page. The results of the JavaScript are returned on Macintosh only. There is another function called WebView.RunJavaScriptReturnTitle which can be used to return the value of a Javascript function on both platforms. Use "\n" in javascript strings for a newline character.

Does not work on WebDirect!

See newer WebView.Evaluate function which works better on Windows and returns results.

Check JS Functions for JavaScript engine for cross platform code to run without web viewer.

Version 10.0 or newer return result on MacOS/iOS if possible in original data type, so numbers are returned as number and not as text. We try to return array or objects as JSON.

Examples

Set the htmlcode of a field as string:

```
MBS( "WebView.RunJavaScript"; "browser"; "document.getElementById('td_ProcName_v').innerHTML='hello';"
)
```

Run JavaScript

```
Let(
[

// very simple javascript

javascript = "alert('OK');";

webViewName = "myWebViewer";
windowRef = MBS("Window.FindByTitle"; Get ( WindowName ));
webViewerID = MBS("WebView.FindByName"; windowRef; webViewName)

];
Case(
webViewerID = 0; "Web Viewer \" & webViewName & "\" Not Found: " & windowRef ;

MBS("WebView.RunJavaScript"; webViewerID; javascript)

)

)
```

Start a video inside an interactive container on Mac:

```
MBS( "WebView.RunJavaScript" ; "movie"; "document.getElementsByTagName('video') [ 0 ] .play();" )
```

Send change event to send to a field with ID \$FieldID so javascript code on webpage knows we changed something:

```
MBS( "WebView.RunJavaScript" ; "web"; "var o = document.getElementById('\" & $FieldID & "')
if (document.createEvent) {
var evt = document.createEvent('Events');
evt.initEvent('change', true, true);
o.dispatchEvent(evt); } "
```

Clear onBeforeLoad event handler:

```
MBS( "WebView.RunJavaScript" ; "HTMLEditor"; "window.onbeforeunload = null;" )
```

Send click event:

```
MBS( "WebView.RunJavaScript" ; "browser"; "var o = document.forms [ 0 ] .loginButton;
if (document.createEvent)
{
var evt = document.createEvent('Events');
evt.initEvent('click', true, true);
```

```
o.dispatchEvent(evt);
} ")
```

Filling a complex form of a web app with help of Javascript:

```
# go to Vouchers

# find the voucher ID and save it to field.
Imposta variabile [ $r ; Valore: MBS( "WebView.RunJavaScript" ; "browser"; "document.getElement-
ById('vouchersTable').getElementsByClassName('voucherCode') [ 1 ] .innerText") ]
Imposta campo [ Browser Web::VAR txt ; $r ]

```

Start a video inside an interactive container on Win:

```
MBS( "WebView.RunJavaScript" ; "player"; "document.getElementById('Player').controls.play();" )
```

```
# see https://msdn.microsoft.com/en-us/library/windows/desktop/dd562656\(v=vs.85\).aspx
```

Redirect Window.Open to trigger a FileMaker Script:

```
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "window.open = function(url, name,
```

```
features, replace) { location.href='fmp://$/MyDatabase.fmp12?script=NewWindow& param='+url; } ") ]
// may not work for all platforms!
```

Query text of an element found by it's CSS class name:

```
MBS( "WebView.RunJavaScript"; WebViewRef; "document.getElementsByClassName('topteaaser__master') [ 0 ] .innerText")
```

Query duration of video in interactive container on Mac:

```
MBS( "WebView.RunJavaScript" ; "web"; "document.getElementsByTagName('video') [ 0 ] .duration;" )
```

Query current time of video in interactive container on Mac:

```
MBS( "WebView.RunJavaScript" ; "web"; "document.getElementsByTagName('video') [ 0 ] .currentTime;" )
```

Login for realtytrac website:

```
Set Web Viewer [ Object Name: "web" ; URL: "https://www.realtytrac.com/login" ]
#
# wait for website loading
#
Loop
Pause/Resume Script [ Duration (seconds): .1 ]
Exit Loop If [ MBS("WebView.IsLoading"; "web") 1 ]
End Loop
Pause/Resume Script [ Duration (seconds): .1 ]
#
# fill in form values with login:
Set Variable [ $r ; Value: MBS( "WebView.SetFormInputValue" ; "web"; 0; "userName"; "xxx" ) ]
Set Variable [ $r ; Value: MBS( "WebView.SetFormInputValue" ; "web"; 0; "password"; "yyy" ) ]
#
# send change events to let the javascript framework know we changed them
#
Set Variable [ $r ; Value: MBS( "WebView.RunJavaScript" ; "web"; "var o = document.getElementById('loginFormPagePassword'); if (document.createEvent)
{
var evt = document.createEvent('Events');
evt.initEvent('change', true, true);
o.dispatchEvent(evt);
} ") ]
Set Variable [ $r ; Value: MBS( "WebView.RunJavaScript" ; "web"; "var o = document.forms [ 0 ] .userName.value;
if (document.createEvent)
{
var evt = document.createEvent('Events');
evt.initEvent('change', true, true);
```

```

o.dispatchEvent(evt);
} ") ]
#
Pause/Resume Script [ Duration (seconds): .1 ]
#
# Send click event to submit button
#
Set Variable [ $r ; Value: MBS( "WebView.RunJavaScript" ; "web"; "var o = document.getElement-
ById('btnLoginPageSubmit'); if (document.createEvent)
{
var evt = document.createEvent('Events');
evt.initEvent('click', true, true);
o.dispatchEvent(evt);
} ") ]

```

Go to record, wait and then jump to position to play video from there: (Mac)

```

# Go to record with video
Go to Record/Request/Page [ Next ; Exit after last: Off ]
# give time to load movie
Pause/Resume Script [ Duration (seconds): .5 ]
# jump to position
Set Variable [ $r ; Value: MBS( "WebView.RunJavaScript"; "MovieView"; "document.getElementById('fm-
player').currentTime = 30;" ) ]
# play
Set Variable [ $r ; Value: MBS( "WebView.RunJavaScript"; "MovieView"; "document.getElementById('fm-
player').play();" ) ]

```

Work with form fields via JavaScript:

// Query number of forms on website:

```
MBS( "WebView.RunJavaScript" ; "web"; "document.forms.length;" )
```

Query name of form number 0:

```
MBS( "WebView.RunJavaScript" ; "web"; "document.forms [ 0 ] .name;" )
```

Query number of elements on first form:

```
MBS( "WebView.RunJavaScript" ; "web"; "document.forms [ 0 ] .elements.length" )
```

Query name of first element in first form:

```
MBS( "WebView.RunJavaScript" ; "web"; "document.forms [ 0 ] .elements [ 0 ] .name" )
```

Query value of first element in first form:

```
MBS( "WebView.RunJavaScript" ; "web"; "document.forms [ 0 ] .elements [ 0 ] .value")
```

Query value of element by name in form by name:

```
MBS( "WebView.RunJavaScript" ; "web"; "document.forms [ 'RegisterForm' ] .elements [ 'path' ] .value")
```

You can mix index or field/form names as needed.

Call doSave with try/catch to show error messages:

```
MBS( "WebView.RunJavaScript"; WebViewerRef; "try { doSave(); } catch(error) { alert(error); } " )
```

Switch windows media player for a container to fill the field:

```
MBS( "WebView.RunJavaScript";
"MovieField"; // name of layout element for container
document.getElementById('Player').uiMode='none';
document.body.style.transform="";
document.getElementById('Player').stretchToFit=true; " )
```

Fill a search form, submit and query result:

```
# load website with search field:
Set Web Viewer [ Object Name: "web" ; URL: "https://something.com/searchpage" ]
#
# wait for website to finish loading
Pause/Resume Script [ Duration (seconds): ,5 ]
Loop
Exit Loop If [ MBS("WebView.IsLoading"; "web") 1 ]
Pause/Resume Script [ Duration (seconds): ,1 ]
End Loop
Pause/Resume Script [ Duration (seconds): ,5 ]
#
# fill in search term and send change event, so this website sees it:
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "document.getElementById('search-Field').value = '" & Substitute ( Web::SearchTerm ; "" ; "" ) & "'" ) ]
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "var o = document.getElementById('search-Field'); var evt = document.createEvent('Events'); evt.initEvent('change', true, true); o.dispatchEvent(evt); } ") ]
#
# wait a bit
Pause/Resume Script [ Duration (seconds): ,5 ]
#
# send click event to search button
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "var o = document.getElementById('search-Button'); var evt = document.createEvent('Events'); evt.initEvent('click', true, true); o.dispatchEvent(evt);
```

```

") ]
#
# wait for website to finish loading
Pause/Resume Script [ Duration (seconds): ,5 ]
Loop
Exit Loop If [ MBS("WebView.IsLoading"; "web") 1 ]
Pause/Resume Script [ Duration (seconds): ,1 ]
End Loop
Pause/Resume Script [ Duration (seconds): ,5 ]
#
# query values from website
Set Field [ Web::articleId ; MBS("WebView.Evaluate"; "web"; "document.getElementById('articleId').innerHTML;") ]
Set Field [ Web::price ; MBS("WebView.Evaluate"; "web"; "document.getElementById('price').innerHTML;") ]
]

```

Send change, input and blur events to text field:

```

# define sendChangeEvent function
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; " function sendChangeEvent(ID) { var o = document.getElementById(ID); var evt = document.createEvent('Events'); evt.initEvent('change', true, true); o.dispatchEvent(evt); } "" ]
#
# define sendInputEvent function
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; " function sendInputEvent(ID) { var o = document.getElementById(ID); var evt = document.createEvent('Events'); evt.initEvent('input', true, true); o.dispatchEvent(evt); } "" ]
#
# define sendBlurEvent function
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; " function sendBlurEvent(ID) { var o = document.getElementById(ID); var evt = document.createEvent('Events'); evt.initEvent('blur', true, true); o.dispatchEvent(evt); } "" ]
#
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "document.getElementById('name').value = "" & Substitute ( $Name ; "" ; "" ) & "" ) ]
#
# send three events as we often don't know which one is used on the website to recognize the change
#
# send input event, so JavaScript code notices we put something in
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "sendInputEvent('name');") ]
# send change event, so JavaScript code notices we changed text
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "sendChangeEvent('name');") ]
# send blur event, so JavaScript code notices the user left the field
Set Variable [ $r ; Value: MBS("WebView.RunJavaScript"; "web"; "sendBlurEvent('name');") ]
# give time for web viewer to run all the events
Pause/Resume Script [ Duration (seconds): ,5 ]

```

180.110 WebView.RunJavaScriptReturnTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.RunJavaScriptReturnTitle"; WebViewerRef; Javascript)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Javascript

the text source of the javascript

Description

To return a result of the JavaScript to FileMaker, simply set "document.title" to the return value. Why did we do this? Because it was the way we could get the result back from the web view on windows. Use "\n" in javascript strings for a newline character.

See newer WebView.Evaluate function which works better on Windows and returns results.
Check JS Functions for JavaScript engine for cross platform code to run without web viewer.

Examples

Return the htmlcode of a field as string:

```
MBS( "WebView.RunJavaScriptReturnTitle"; "browser"; "document.title=document.getElementById('td_Proc-Name_v').innerHTML;" )
```

Return the text of a html item referenced by id as string:

```
MBS( "WebView.RunJavaScriptReturnTitle"; "browser"; "document.title=document.getElementById('Result').innerText;" )
```

180.111 **WebView.Screenshot**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	3.0	Yes	Yes	No	No	Yes

MBS("WebView.Screenshot"; WebViewRef { ; ImageType; Filename })

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

Result Returns image for storing in container.

Description

The plugin offers several methods. `WebView.RenderImage` works fine on Mac, but not always on Windows. `WebView.RenderPDF` is Mac only. So especially for websites with flash or other content which can't be printed, the screenshot method is the best one.

(older versions before 5.2 would have an unused extra parameter before ImageType)

Windows only supports JPEG as type.

Added iOS support for version 8.5.

On Windows may get wrong rectangle if Windows runs desktop with 200% resolution, but you have a 100% resolution screen.

Examples

Store screenshot in container:

```
Set Variable [ $image; Value:MBS("WebView.Screenshot"; "web") ]
```

```
Set Field [ Anlagen::My Container; $image ]
```

180.112 WebView.Scrollbar.getHorizontalMaximum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.Scrollbar.getHorizontalMaximum"; WebViewRef)

Parameters**WebViewRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Result Returns value or error.

Description

Not supported for WebKit 2.x (FileMaker 16 Mac).

Examples

Query current and maximum:

MBS("Webview.Scrollbar.getHorizontalPosition"; "web") & " of " & MBS("Webview.Scrollbar.getHorizontalMaximum"; "web")

180.113 `WebView.Scrollbar.getHorizontalPosition`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.Scrollbar.getHorizontalPosition"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Result Returns value or error.

Description

Not supported for WebKit 2.x (FileMaker 16 Mac).

Examples

Query current and maximum:

```
MBS( "Webview.Scrollbar.getHorizontalPosition"; "web" ) & " of " & MBS( "Webview.Scrollbar.getHorizontalMaximum"; "web" )

180.114 WebView.Scrollbar.getVerticalMaximum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.Scrollbar.getVerticalMaximum"; WebViewRef)

Parameters**WebViewRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Result Returns value or error.

Description

Not supported for WebKit 2.x (FileMaker 16 Mac).

Examples

Query current and maximum:

MBS("Webview.Scrollbar.getVerticalPosition"; "web") & " of " & MBS("Webview.Scrollbar.getVerticalMaximum"; "web")

180.115 WebView.Scrollbar.getVerticalPosition

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.Scrollbar.getVerticalPosition"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Result Returns value or error.

Description

Not supported for WebKit 2.x (FileMaker 16 Mac).

Examples

Query current and maximum:

MBS("Webview.Scrollbar.getVerticalPosition"; "web") & " of " & MBS("Webview.Scrollbar.getVertical-Maximum"; "web")

180.116 WebView.Scrollbar.set

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	No	No	No	No

MBS("WebView.Scrollbar.set"; WebViewRef; X; Y)

Parameters**WebViewRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

X

The new X position.

100

Y

The new Y position.

100

Result Returns OK or error.

Description

You can query the position using `Webview.Scrollbar.getHorizontalPosition` and `Webview.Scrollbar.getVerticalPosition` and than adjust if needed with this function to scroll to the right position in your web viewer.

Not supported for WebKit 2.x (FileMaker 16 Mac).

180.117 WebView.SearchText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.3	Yes	Yes	No	No	No

MBS("WebView.SearchText"; WebViewerRef; Text { ; Backward; CaseSensitive; Wrap })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Text

The text to search for.

"Hello"

Backward

Optional

A boolean value to determinate direction. Pass 0 for forward and 1 for backward. Default is 0. (This option has problems on Windows currently.)

0

CaseSensitive

Optional

Whether to search case sensitive. Pass 1 for case sensitive and 0 for case insensitive. Default is 0.

0

Wrap

Optional

A boolean value to decide whether to wrap around. If text is not found, we start search on the top again.

0

Result Returns 1 if the text was found and 0 if not.

Description

This is like the search field in Safari. Please note that this feature works fine in FileMaker 10, but has problems in FileMaker 11.

Not supported for WebKit 2.x (FileMaker 16 Mac), but works in FileMaker 16, when using a Web Viewer created using WebView.Create.

Examples

Searches for text in webviewer:

```
MBS("WebView.SearchText"; "web"; "Hello")
```

See also

180.118 WebView.SelectAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.4	Yes	Yes	No	No	Yes

MBS("WebView.SelectAll"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

This is like choosing the menu command to select all, but without using the menu.

As webviewer functions often run asynchronously, you need to make a short script pause to let the webviewer do the job.

Examples

Select all and copy:

```
MBS( "Webview.SelectAll"; "web" ) & MBS( "Webview.Copy"; "web" )
```

See also

180.119 WebView.SelectedText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	5.0	Yes	Yes	No	No	Yes

MBS("WebView.SelectedText"; WebViewerRef { ; Formatted })

Parameters**WebViewerRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Formatted

Optional

Optional for Mac. If 1, tries to get text with formatting.

1

Result Returns text or error.

Description

If you put this in a button, the focus may leave WebViewer and selection is lost. In a menu it works better.

See also [WebView.GetPlainText](#), [WebView.GetHTMLText](#) and [WebView.GetFormattedText](#).

Examples

Query plain text from webviewer:

```
MBS("WebView.GetPlainText"; "web")
```

Query html text from webviewer:

```
MBS("WebView.GetHTMLText"; "web")
```

Query formatted text from webviewer:

```
MBS("WebView.GetFormattedText"; "web")
```

Query selected text:

```
MBS("WebView.SelectedText"; "web")
```

180.120 **WebView.SendCommand**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.3	No	Yes	Yes, Windows only	No	No

MBS("WebView.SendCommand"; WebViewRef; CommandID)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

CommandID

The command ID to send.

93

Result Returns OK or error.

Description

This is to send command message to webbrowser control.

See identifiers here:

[https://msdn.microsoft.com/en-us/library/aa741315\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/aa741315(v=vs.85).aspx)

Examples

Print:

MBS("Webview.SendCommand"; "web"; 93)

View source code:

MBS("Webview.SendCommand"; "web"; 2139)

180.121 WebView.SetAllowsLinkPreview

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	9.3	Yes	No	No	No	Yes

MBS("WebView.SetAllowsLinkPreview"; WebViewerRef; Value)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Value

The new value.

1

Result Returns OK or error.

Description

A boolean value indicating whether link preview is allowed for any links inside this webview. The default value is true on Mac and iOS.

Pass 1 to allow or 0 to disallow.

See also

- 180.46 [WebView.FindByName](#) 8339

180.122 **WebView.SetAutoresizingMask**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
?? Webview	7.5	Yes	No	No	No	No

MBS("WebView.SetAutoresizingMask"; WebViewerRef; Value)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Value

The new setting.

4+8

Result Returns OK or error.

Description

This defines whether web viewer changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

Examples

Make the webviewer stay on position in window:

```
MBS( "WebView.SetAutoresizingMask"; "web"; 4+8 )
```

Resize with window growing:

```
MBS( "WebView.SetAutoresizingMask"; $$web; 4+2+8+16 )
```

180.123 **WebView.SetCustomUserAgent**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.9	Yes	No	No	No	No

MBS("WebView.SetCustomUserAgent"; WebViewerRef; UserAgent)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

UserAgent

The new useragent.
"FileMaker Browser"

Result Returns OK or error.

Description

This user agent is reported to websites. By using a different user agent string you can tell a website that FileMaker is using Firefox, Chrome or Internet Explorer instead of Safari (WebKit).

Add iOS with version 9.3.

Examples

Set custom user agent to be Internet Explorer 7:

```
MBS( "WebView.SetCustomUserAgent"; "web"; "Mozilla/4.0 (compatible; MSIE 7.0; Windows NT 6.0)" )
```

Set custom user agent to be Firefox 15:

```
MBS( "WebView.SetCustomUserAgent"; "web"; "Mozilla/5.0 (Macintosh; Intel Mac OS X 10.6; rv:15.0) Gecko/20100101 Firefox/15.0.1" )
```

180.124 **WebView.SetEditable**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	3.0	Yes	Yes	No	No	Yes

MBS("WebView.SetEditable"; WebViewRef; Editable)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Editable

Whether to make the webviewer editable or not. Pass 1 to make editable or 0 to make it not editable.

1

Result Returns OK or error.

Description

You can change the receiver's document programmatically regardless of this setting. By default a WebView object is not editable.

Normally, an HTML document is not editable unless the elements within the document are editable. This method provides a low-level way to make the contents of a WebView object editable without altering the document or DOM structure.

Examples

Turn editing on for a webviewer:

```
Set Variable [ $r ; Value: MBS( "WebView.SetEditable"; "web"; 1 ) ]
```

180.125 WebView.SetFocus

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	9.4	Yes	Yes	No	No	Yes

MBS("WebView.SetFocus"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK or error.

Description

Usually you use Go To Object, but this sets via OS function directly.
FileMaker may overwrite the focus quickly!

180.126 WebView.SetFormButtonValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.SetFormButtonValue"; WebViewerRef; FormNameOrIndex; FieldNameOrIndex; Value { ; OnlyVisible })

Parameters**WebViewerRef**

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

FieldNameOrIndex

You can either pass the field name of the field index. 0 is the first item

Value

The new value for the button.

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

0

Description

To learn about forms and fields on a website, you can use the Form Utility application included with our plugin.

Some websites use a lot of JavaScript, so you may need to send change event to control via `WebView.RunJavaScript` so the javascript is notified about the changes.

Created 18th August 2014, last changed 3th September 2017.

180.127 **WebView.SetFormInputChecked**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.SetFormInputChecked"; WebViewRef; FormNameOrIndex; FieldNameOrIndex; Value { ; OnlyVisible })

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

FieldNameOrIndex

You can either pass the field name of the field index. 0 is the first item

Value

The value to set the input to.

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

0

Description

To learn about forms and fields on a website, you can use the Form Utility application included with our plugin.

Some websites use a lot of JavaScript, so you may need to send change event to control via `WebView.RunJavaScript` so the javascript is notified about the changes.

Examples

Set a field checked:

```
MBS( "WebView.SetFormInputChecked"; "web"; "myForm"; "isValid"; 1)
```

0

Description

To learn about forms and fields on a website, you can use the Form Utility application included with our plugin.

Some websites use a lot of JavaScript, so you may need to send change event to control via `WebView.RunJavaScript` so the javascript is notified about the changes.

Examples

Fill field q on form f on a webpage:

```
MBS( "WebView.SetFormInputValue"; $WebViewerRef; "f"; "q"; "Hello" )
```

Load a website with login if needed:

```
# Load website
Set Web Viewer [ Object Name: "web" ; URL: "https://somedomain/search" ]
# Wait for it
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
Exit Loop If [ MBS("webview.isloading"; "web") = 1 ]
End Loop
#
# Set login name
```

```

Set Variable [ $r ; Value: MBS( "WebView.SetFormInputValue"; "web"; "login_form"; "__ac_name";
"xxx" ) ]
If [ MBS("iserror") ]
# No form, so we are already logged in?
If [ Position ( $r ; "failed to find form" ; 1 ; 1 ) = 0 ]
Show Custom Dialog [ "Fehler" ; $r ]
End If
Exit Script [ Text Result: ]
End If
# Set password
Set Variable [ $r ; Value: MBS( "WebView.SetFormInputValue"; "web"; "login_form"; "__ac_password";
"yyy" ) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Fehler" ; $r ]
End If
# Wait
Pause/Resume Script [ Duration (seconds): ,1 ]
# Click login button
Set Variable [ $r ; Value: MBS( "WebView.ClickInput"; "web"; "login_form"; "submit" ) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Fehler" ; $r ]
End If
# or submit form
// Set Variable [ $r ; Value: MBS( "WebView.formsubmit"; "web"; "login_form" ) ]
// If [ MBS("iserror") ]
// Show Custom Dialog [ "Fehler" ; $r ]
// End If
#
# Wait for page loading after login
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
Exit Loop If [ MBS("webview.isloading"; "web") = 1 ]
End Loop
# Go to search page where we want to be after login
Set Web Viewer [ Object Name: "web" ; URL: "https://somedomain/search" ]

```

180.129 `WebView.SetFormSelectValue`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.SetFormSelectValue"; WebViewerRef; FormNameOrIndex; FieldNameOrIndex; Value { ; OnlyVisible })

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

FieldNameOrIndex

You can either pass the field name of the field index. 0 is the first item

Value

The value to set the input to.

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

0

Description

Note: In HTML the Options of a Select tag can include a "value" attribute. If they do then this function sets the selection based on the value of the "value" attribute.

To learn about forms and fields on a website, you can use the Form Utility application included with our plugin.

Some websites use a lot of JavaScript, so you may need to send change event to control via `WebView.RunJavaScript` so the javascript is notified about the changes.

Examples

Fill a select input item:

```
MBS( "WebView.SetFormSelectValue" ; "web"; "search"; "borough"; "BROOKLYN" )
```

180.130 `WebView.SetFormTextAreaValue`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

```
MBS( "WebView.SetFormTextAreaValue"; WebViewRef; FormNameOrIndex; FieldNameOrIndex; Value
{ ; OnlyVisible } )
```

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

FieldNameOrIndex

You can either pass the field name of the field index. 0 is the first item

Value

the value you want to set

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

0

Result Returns "OK" or error message.

Description

Please note that this method does not work for other field types.

To learn about forms and fields on a website, you can use the Form Utility application included with our plugin.

Some websites use a lot of JavaScript, so you may need to send change event to control via `WebView.RunJavaScript` so the javascript is notified about the changes.

Examples

set field named "InputText" for form named "form1" in webview named "web" to "Hello World":

```
MBS("WebView.SetFormTextAreaValue"; "web"; "form1"; "InputText"; "Hello World")
```

180.131 `WebView.SetFormValue`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.3	Yes	Yes	No	No	Yes

```
MBS( "WebView.SetFormValue"; WebViewerRef; FormNameOrIndex; Field; NewValue { ; OnlyVisible } )
```

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

FormNameOrIndex

Either the Name of the Form or the Index starting at 0

Field

the name of the field, case sensitive

NewValue

the value to set

OnlyVisible

Optional

Whether to look for all fields or only the visible ones. Default is false.

0

Description

To learn about forms and fields on a website, you can use the Form Utility application included with our plugin.

Some websites use a lot of JavaScript, so you may need to send change event to control via `WebView.RunJavaScript` so the javascript is notified about the changes.

Examples

Set A form value

```
Let(
[
Field = "name";
NewValue = "Clark Kent";
Form = "myForm";
WebViewerName = "MyWebViewer";

WindowRef = MBS("Window.FindByTitle"; Get(WindowName));
WebViewerID = MBS("WebView.FindByName"; WindowRef; WebViewerName)

];
```

180.131. *WEBVIEW.SETFORMVALUE*

8467

```
MBS("WebView.SetFormValue"; WebViewID; Form; Field; NewValue)  
)
```

Fill a form:

```
MBS( "WebView.SetFormValue" ; "web"; "search"; "street_name"; "test2" )
```

180.132 WebView.SetHidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	7.1	Yes	No	No	No	No

MBS("WebView.SetHidden"; WebViewerRef; Value)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Value

The new value. Pass 1 to hide or 0 to show.

1

Result Returns OK or error.

Description

On Mac we can turn a web viewer invisible without FileMaker noticing and so you can do things without the user seeing it.

Examples

Hide a webviewer:

```
MBS( "Webview.SetHidden"; "web"; 1 )
```

Created 24th February 2017, last changed 25th August 2017.

180.133 **WebView.SetInternetExplorerVersion**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	6.4	No	Yes	No	No	No

MBS("WebView.SetInternetExplorerVersion"; Version)

Parameters

Version

The version to use. Set to zero to go back to default.

11000

Result Returns OK or error.

Description

By default FileMaker uses IE7 for the webviewer, even if you have version 11 enabled.

In a test on Windows 10, we get by default this browser version:

Mozilla/4.0 (compatible; MSIE 7.0; Windows NT 6.2; Win64; x64; Trident/7.0; .NET4.0C; .NET4.0E; Tablet PC 2.0; .NET CLR 2.0.50727; .NET CLR 3.0.30729; .NET CLR 3.5.30729)

and with setting it to 11000, we get this:

Mozilla/5.0 (Windows NT 6.2; Win64; x64; Trident/7.0; rv:11.0) like Gecko

FileMaker 16 defaults to Internet Explorer 11.

Examples

Set version to IE 11:

MBS("Webview.SetInternetExplorerVersion"; 11000)

- [Select Internet Explorer version for FileMaker](#)

Value	Description
11001	Internet Explorer 11. Webpages are displayed in IE11 edge mode, regardless of the declared <code>!DOCTYPE</code> directive. Failing to declare a <code>!DOCTYPE</code> directive causes the page to load in Quirks.
11000	IE11. Webpages containing standards-based <code>!DOCTYPE</code> directives are displayed in IE11 edge mode. Default value for IE11.
10001	Internet Explorer 10. Webpages are displayed in IE10 Standards mode, regardless of the <code>!DOCTYPE</code> directive.
10000	Internet Explorer 10. Webpages containing standards-based <code>!DOCTYPE</code> directives are displayed in IE10 Standards mode. Default value for Internet Explorer 10.
9999	Windows Internet Explorer 9. Webpages are displayed in IE9 Standards mode, regardless of the declared <code>!DOCTYPE</code> directive. Failing to declare a <code>!DOCTYPE</code> directive causes the page to load in Quirks.
9000	Internet Explorer 9. Webpages containing standards-based <code>!DOCTYPE</code> directives are displayed in IE9 mode. Default value for Internet Explorer 9. In Internet Explorer 10, Webpages containing standards-based <code>!DOCTYPE</code> directives are displayed in IE10 Standards mode.
8888	Webpages are displayed in IE8 Standards mode, regardless of the declared <code>!DOCTYPE</code> directive. Failing to declare a <code>!DOCTYPE</code> directive causes the page to load in Quirks.
8000	Webpages containing standards-based <code>!DOCTYPE</code> directives are displayed in IE8 mode. Default value for Internet Explorer 8. In Internet Explorer 10, Webpages containing standards-based <code>!DOCTYPE</code> directives are displayed in IE10 Standards mode.
7000	Webpages containing standards-based <code>!DOCTYPE</code> directives are displayed in IE7 Standards mode. Default value for applications hosting the WebBrowser Control.

180.134 WebView.SetPreferences

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.2	Yes	No	No	No	Yes

MBS("WebView.SetPreferences"; WebViewerRef; ParameterName; ParameterValue)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

ParameterName

The name of the parameter.
isJavaEnabled

ParameterValue

The value for the given parameter: A boolean value for allowsAnimatedImageLooping, allowsAnimatedImages, javaEnabled, javaScriptCanOpenWindowsAutomatically, javaScriptEnabled, loadsImagesAutomatically, plugInsEnabled, privateBrowsingEnabled, shouldPrintBackgrounds, tabsToLinks, userStyleSheetEnabled and usesPageCache. A number for cacheModel, defaultFixedFontSize, defaultFontSize, minimumFontSize or minimumLogicalFontSize. A string for cursiveFontFamily, defaultTextEncodingName, fantasyFontFamily, fixedFontFamily, sansSerifFontFamily, serifFontFamily or standardFontFamily.

0

Result Returns OK or an error message.

Description

For WebKit 1.x you can pass empty WebViewerRef to access global preferences.

Available keys for WebKit 1.x (FileMaker till version 15 and WebView.Create): allowsAnimatedImageLooping, allowsAnimatedImages, cacheModel, cursiveFontFamily, defaultFixedFontSize, defaultFontSize, defaultTextEncodingName, fantasyFontFamily, fixedFontFamily, javaEnabled, javaScriptCanOpenWindowsAutomatically, javaScriptEnabled, loadsImagesAutomatically, minimumFontSize, minimumLogicalFontSize, plugInsEnabled, privateBrowsingEnabled, sansSerifFontFamily, serifFontFamily, shouldPrintBackgrounds, standardFontFamily, tabsToLinks, userStyleSheetEnabled or usesPageCache.

Available keys for WebKit 2.x (FileMaker 16): developerExtrasEnabled, logsPageMessagesToSystemConsoleEnabled, minimumFontSize, javaScriptEnabled, javaScriptCanOpenWindowsAutomatically, allowFileAccessFromFileURLs, allowUniversalAccessFromFileURLs, telephoneNumberDetectionIsEnabled, javaEnabled and plugInsEnabled.

Please check WebKit documentation for details.

Examples

set print background option:

```
MBS("WebView.SetPreferences"; $WebViewerRef; "shouldPrintBackgrounds", 1)
```

Disables image loading:

```
MBS("WebView.SetPreferences"; $WebViewerRef; "loadsImagesAutomatically", 1)
```

Disable Java:

```
MBS("WebView.SetPreferences"; $WebViewerRef; "javaEnabled"; 0)
```

Disable Plugins:

```
MBS("WebView.SetPreferences"; $WebViewerRef; "plugInsEnabled"; 0)
```

Set developer extras enabled state for webviewer to show inspector:

```
Set Variable [ $r; Value:MBS("Webview.SetPreferences"; "web"; "developerExtrasEnabled"; 1) ]
```

Enable file URLs:

```
Set Variable [ $r; Value:MBS("Webview.SetPreferences"; "web"; "allowFileAccessFromFileURLs"; 1) ]
```

180.135 WebView.SetPrintParameter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	2.1	Yes	No	No	No	No

MBS("WebView.SetPrintParameter"; ParameterName; ParameterValue)

Parameters

ParameterName

The name of the parameter. Can be horizontallyCentered, verticallyCentered, showPrintPanel, orientation, printer, bottomMargin, topMargin, leftMargin or rightMargin.
orientation

ParameterValue

The value for the given parameter: A boolean value for horizontallyCentered, verticallyCentered and showPrintPanel. "portrait" or "landscape" for orientation. The printer name for printer. A number for bottomMargin, topMargin, leftMargin or rightMargin.
portrait

Result Returns OK or an error message.

Description

If showPrintPanel (Default 1) if set to 0, then no print window is shown. verticallyCentered and horizontallyCentered define if content is centered. If printer name is not valid, it will be ignored.

Version 5.2 adds PaperName, PaperWidth and PaperHeight.

Examples

Sets bottom margin to 5 points:

```
MBS("WebView.SetPrintParameter"; "bottomMargin"; 5)
```

Use square paper size:

```
Set Variable [ $r; Value:MBS("WebView.SetPrintParameter"; "paperWidth"; 800) ]
Set Variable [ $r; Value:MBS("WebView.SetPrintParameter"; "paperHeight"; 800) ]
```

Use A4 paper:

```
MBS("WebView.SetPrintParameter"; "paperName"; "iso-a4")
```

Set landscape:

```
MBS("WebView.SetPrintParameter"; "orientation"; "landscape")
```

180.136 `WebView.SetPrivateBrowsing`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	9.5	Yes	No	No	No	Yes

MBS("WebView.SetPrivateBrowsing"; WebViewRef; Value)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function. "web"

Value

The new mode. Pass 1 to enable private browsing. Pass 0 to disable.

1

Result Returns OK or error.

Description

If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed. Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.

Examples

Enable private browsing:

```
Set Variable [ $r ; Value: MBS( "Webview.SetPrivateBrowsing"; "web"; 1 ) ]
```

180.137 **WebView.SetSilent**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	6.5	No	Yes	No	No	No

MBS("WebView.SetSilent"; WebViewRef; Value)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Value

The new setting. Pass 1 to make silent or 0 to allow errors.

1

Result Returns OK or error.

Description

Default is 0 to enable errors to show.

Examples

Disable errors:

```
Set Variable [ $r; Value:MBS( "Webview.SetSilent"; "web"; 1 ) ]
```

Enable errors:

```
MBS( "Webview.SetSilent"; "web"; 0 )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	1.4	Yes	Yes	No	No	Yes

MBS("WebView.SetTitle"; WebViewerRef; Value)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Value

The value to set

Description

The same as document.write = "Something"

Created 16th July 2019, last changed 16th July 2019.

180.140 WebView.UserScripts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	9.5	Yes	No	No	No	Yes

MBS("WebView.UserScripts"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns JSON or error.

Description

Returns JSON array of objects with three fields for each script: source, injectionTime and forMainFrameOnly. injectionTime is either AtDocumentStart or AtDocumentEnd. forMainFrameOnly is a boolean value.

Examples

Query user scripts:

```
MBS( "Webview.UserScripts"; "web" )
```

Example result: [

```
{
  "forMainFrameOnly" : true,
  "source" : "alert('Hello');",
  "injectionTime" : "AtDocumentEnd"
}
```

180.141 **WebView.canResetPageZoom**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	4.1	Yes	No	No	No	Yes

MBS("WebView.canResetPageZoom"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Description

See also

180.142 WebView.canZoomPageIn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	4.1	Yes	No	No	No	Yes

MBS("WebView.canZoomPageIn"; WebViewerRef)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Description

See also `WebView.GetPageSizeMultiplier` and `WebView.SetPageSizeMultiplier` functions.

See also

180.147 **WebView.setMediaVolume**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	4.1	Yes	No	No	No	No

MBS("WebView.setMediaVolume"; WebViewRef; Value)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Value

The new volume.

0.5

Description

Sets a master volume control for all media elements in the WebView. Valid values are 0..1.

See also

- 180.46 [WebView.FindByName](#) 8339
- 180.144 [WebView.getMediaVolume](#) 8484

Created 18th August 2014, last changed 25th August 2017.

180.148 `WebView.setPageSizeMultiplier`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	4.1	Yes	No	No	No	Yes

MBS("WebView.setPageSizeMultiplier"; WebViewRef; value)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

value

A fractional percentage value, 1.0 is 100% .

0.5

Result Returns OK on success or error message on failure.

Description

Change the zoom factor of the page in views managed by this webView.

This function is only for MacOS and iOS. Please use Webview.setZoom for Windows.

See also

- 180.145 `WebView.getPageSizeMultiplier` 8485
- 180.149 `WebView.setZoom` 8489

Created 18th August 2014, last changed 15th July 2019.

180.149 WebView.setZoom

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	4.2	No	Yes	No	No	No

MBS("WebView.setZoom"; WebViewerRef; factor)

Parameters

WebViewerRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

factor

The scaling factor. Range is 10 to 1000.

50

Result Returns OK on success or error.

Description

This is the function for Windows. Please use Webview.setPageSizeMultiplier, Webview.zoomPageIn or Webview.zoomPageOut for Mac OS X.

Examples

Zooms page out:

```
Set Variable [ $r; MBS("Webview.setZoom"; "web"; 50) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
180 WebView	4.1	Yes	No	No	No	Yes

MBS("WebView.zoomPageIn"; WebViewRef)

Parameters

WebViewRef

Either the Web Viewer Object Name or the Web Viewer ID as returned by "WebView.FindByName" function.

Result Returns OK on success or error message on failure.

Description

This function is only for Mac OS X. Please use `Webview.setZoom` for Windows.

Examples

Zooms page in:

```
Set Variable [ $r; MBS("Webview.ZoomPageIn"; "web") ]
```

See also

Chapter 181

WIA

Scan images from flatbet scanners on Windows.

181.1 WIA.ClearCurrentDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.ClearCurrentDevice")

Result Returns OK or error.

Description

See also

- 181.6 WIA.GetCurrentDevice 8503
- 181.19 WIA.SetCurrentDevice 8524

Created 6th November 2016, last changed 6th November 2016.

181.2 WIA.DeviceCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.DeviceCount")

Result Returns number or error.

Description

Examples

Walk over list of devices and query properties:

```
Go to Layout [ "WIA Scan" (WIA Scan) ]
Delete All Records [ No dialog ]
Set Variable [ $c; Value:MBS("WIA.DeviceCount") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $c ]
Else
If [ $c >0 ]
Set Variable [ $i; Value:0 ]
Loop
Perform Script [ "List Properties"; Parameter: $i ]
# Next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i >= $c ]
End Loop
End If
End If
```

181.3 WIA.DeviceProperties

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	8.3	No	Yes	No	No	No

MBS("WIA.DeviceProperties"; Device)

Parameters

Device

You can pass index of device to check them in a row. Or pass name or unique ID of device. Pass empty string for current device.

\$index

Result Returns JSON or error.

Description

Use WIA.DevicePropertyKeys is you only need the keys.

Examples

Queries properties of first device:

MBS("WIA.DeviceProperties"; 0)

Example result: {

```
"Unique Device ID": " { 6BDD1FC6-810F-11D0-BEC7-08002BE2092F } \\0000",
"Manufacturer": "Brother",
"Description": "Brother DCP-8085DN LAN",
"Type": 65537,
"Port": "BRNET",
"Name": "Brother DCP-8085DN LAN",
"Server": "local",
"Remote Device ID": "",
"UI Class ID": " { 4B29E704-7E5A-466c-A5FD-8BAEC62DC2BA } ",
"Hardware Configuration": 0,
"BaudRate": "",
"STI Generic Capabilities": 57,
"WIA Version": "2.0",
"Driver Version": "3.10.6.13",
"PnP ID String": "\\?*\root# image# 0000# { 6bdd1fc6-810f-11d0-bec7-08002be2092f } ",
"STI Driver Version": 3
}
```

Query current device properties:

MBS("WIA.DeviceProperties"; MBS("WIA.GetCurrentDevice"))

181.4 WIA.DevicePropertyKeys

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.DevicePropertyKeys"; Device)

Parameters

Device

You can pass index of device to check them in a row. Or pass name or unique ID of device. Pass empty string for current device.

\$index

Result Returns OK or error.

Description

The current device (connected) may show more device properties than just the information from the registry, which you get without connection.

Use WIA.DeviceProperties to query all values with keys as JSON.

Examples

Query properties of current device:

MBS("WIA.DevicePropertyKeys"; "")

Example result: Item Name

181.5 WIA.DevicePropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.DevicePropertyValue"; Device; Key)

Parameters

Device

You can pass index of device to check them in a row. Or pass name or unique ID of device. Pass empty string for current device.

\$index

Key

The property key. Can be a text with the name of the property or the corresponding ID.

"Name"

Result Returns value or error.

Description

You can use WIA.DevicePropertyKeys to learn about available keys.

Values are returned as numbers, booleans or converted to text.

Document Handling Status values:

FEED_READY	1	The document feeder has a page loaded and is ready for use.
FLAT_READY	2	The flatbed is ready for use.
DUP_READY	4	The duplexer is enabled and ready to use.
FLAT_COVER_UP	8	The flatbed cover is up.
PATH_COVER_UP	16	The paper path is covered and is preventing proper operation.
PAPER_JAM	32	A document is stuck in the document feeder.
FILM_TPA_READY	64	A transparency adapter is installed and ready for use.
STORAGE_READY	128	A storage device is installed and ready for use.
STORAGE_FULL	256	The storage is full; no upload operations are possible.
MULTIPLE_FEED	512	A multiple feed occurred; this type of feed usually occurs with a PAPER_JAM value.
DEVICE_ATTENTION	1024	There is an error that requires user intervention on the scanner.
LAMP_ERR	2048	The scanner has a problem with the lamp and is not ready.
IMPRINTER_READY	4096	The imprinter capabilities of an imprinter/endorser are enabled and ready for use.
ENDORSER_READY	8192	The endorser capabilities of an imprinter/endorser are enabled and ready for use.
BARCODE_READER_READY	16384	The barcode reader is enabled and ready for use.
PATCH_CODE_READER_READY	32768	The patch code reader is enabled and ready for use.
MICR_READER_READY	65536	The MICR reader is enabled and ready for use.

e.g. if you get back 5, this is feed and duplex ready.

Document Handling Capabilities:

FEED	1	The scanner has a document feeder installed.
FLAT	2	The scanner has a flatbed platen.
DUP	4	The scanner has a duplexer.
DETECT_FLAT	8	The scanner can detect a document on the flatbed platen.
DETECT_SCAN	16	The scanner can detect a document in the feeder only by scanning.
DETECT_FEED	32	The scanner can detect a document in the feeder.
DETECT_DUP	64	The scanner can detect a duplex scan request from a user.
DETECT_FEED_AVAIL	128	The scanner can detect when a document feeder is installed.
DETECT_DUP_AVAIL	256	The scanner can detect when a duplexer is installed.
FILM_TPA	512	The scanner has a transparency or film scanning adapter.
DETECT_FILM_TPA	1024	The scanner can detect when the transparency or film scanning adapter is ready to scan.
STOR	2048	The scanner is equipped with an internal storage device.
DETECT_STOR	4096	The scanner can detect when there is a document in the internal storage.
ADVANCED_DUP	8192	The device supports advanced duplex scan configuration, independently on each document size.
AUTO_SOURCE	16384	The device supports auto-configured scanning.
IMPRINTER	65536	Imprinter
ENDORSER	131072	Endorser
BARCODE_READER	262144	Barcode Reader
PATCH_CODE_READER	524288	Patch Code Reader
MICR_READER	1048576	MICR Reader

e.g. if you get back 21, this is detect scan, duplex and feeder.

Examples

Query name of current device:

```
MBS( "WIA.DevicePropertyValue"; "" ; "Name" )
```

List properties:

```
Set Variable [ $device; Value:Get(ScriptParameter) ]
Set Variable [ $list; Value:MBS("WIA.DevicePropertyKeys"; $device) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $list ]
Else
Set Variable [ $count; Value:ValueCount ( $list ) ]
If [ $count >0 ]
Set Variable [ $i; Value:1 ]
Loop
Set Variable [ $key; Value:GetValue ( $list; $i ) ]
Set Variable [ $value; Value:MBS("WIA.DevicePropertyValue"; $device; $key) ]
New Record/Request
Set Field [ WIA Scan::Device; $device ]
Set Field [ WIA Scan::Key; $key ]
Set Field [ WIA Scan::Value; $value ]
Commit Records/Requests [ No dialog ]
```

```
# Next
Set Variable [ $i; Value:$i+1 ]
Exit Loop If [ $i >$count ]
End Loop
End If
End If
```

Query maximum vertical optical resolution:

```
// via name
MBS("Wia.DevicePropertyValue"; ""; "Vertical Optical Resolution")
// via ID
MBS("Wia.DevicePropertyValue"; ""; 3091)
```

Query Manufacturer of first device:

```
MBS( "WIA.DevicePropertyValue"; 0; "Manufacturer")
```

Example result: "Brother"

Query Document Handling Status:

```
MBS( "WIA.DevicePropertyValue"; ""; "Document Handling Status" )
```

Created 18th June 2018, last changed 18th June 2018.

181.8 WIA.Image

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.Image"; Index)

Parameters

Index

The index of the image from 0 to WIA.ImageCount-1.

0

Result Returns text or error.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Import Images Script:

```
Set Variable [ $count; Value:MBS( "WIA.ImageCount" ) ]
If [ $count >0 ]
Set Variable [ $i; Value:0 ]
Go to Layout [ "Images" (Images) ]
Loop
Set Variable [ $ImagePath; Value:MBS( "WIA.Image"; $i ) ]
If [ MBS( "Files.FileExists"; $ImagePath ) ]
Set Variable [ $image; Value:MBS( "Container.ReadFile"; $ImagePath ) ]
New Record/Request
Set Field [ Images::Name; MBS( "Path.LastPathComponent"; $ImagePath ) ]
Set Field [ Images::Image; $image ]
Commit Records/Requests [ No dialog ]
End If
# Next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i >= $count ]
End Loop
End If
```

Created 6th November 2016, last changed 25th November 2019.

181.10 WIA.ImageDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.ImageDialog"; Flags; FolderPath { ; FileName })

Parameters

Flags

Specifies dialog box behavior. Currently only UseCommonUI is available. Use this flag to use the system UI instead of the vendor-supplied UI.

"UseCommonUI"

FolderPath

The native path to the folder where images are stored. Your application must have write permissions for this folder.

"C:\Scans\"

FileName

Optional

The file name to use. Extensions and/or numbers are added if needed.

"Scan"

Result Returns Cancel, OK or error.

Description

This may ask the user for the device to use.

If a current device is selected, this one will be used.

When the function returns, you can use WIA.ImageCount to query how many images got scanned. Even if the user cancels, there may be some images already available.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

Examples

Show image dialog:

```
Set Variable [ $folder; Value:MBS( "Folders.UserTemporary" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; "FileMakerScans" ) ]
Set Variable [ $r; Value:MBS( "Files.CreateDirectory"; $path ) ]
# Scan...
Set Variable [ $r; Value:MBS("WIA.ImageDialog"; "Default"; $path; "scan" ) ]
Set Variable [ $count; Value:MBS( "WIA.ImageCount" ) ]
# Result can be OK or Cancel and in both cases some images may be there
If [ $r = "OK" ]
Show Custom Dialog [ "Scan Result"; $r ]
End If
```

```

If [ $count >0 ]
Set Variable [ $i; Value:0 ]
Go to Layout [ "Images" (Images) ]
Loop
Set Variable [ $ImagePath; Value:MBS( "WIA.Image"; $i) ]
Set Variable [ $image; Value:MBS( "Container.ReadFile"; $ImagePath) ]
New Record/Request
Set Field [ Images::Name; MBS( "Path.LastPathComponent"; $ImagePath ) ]
Set Field [ Images::Image; $image ]
Commit Records/Requests [ No dialog ]
# Next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i >= $count ]
End Loop
End If

```

181.11 WIA.Images

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	9.1	No	Yes	No	No	No

MBS("WIA.Images")

Result Returns path list or error.

Description

You can path list of image file paths to DynaPDF.AppendImagePages function to add them to a PDF file.

Examples

Query path list:

```
Set Variable [ $paths; Value:MBS( "WIA.Images" ) ]
```

181.12 WIA.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.Initialize")

Result Returns OK or error.

Description

This is done automatically if needed, but you can explicit call it in solution startup if you like. Calls FM.InitMessageFilter automatically.

Examples

Initialize:

```
Set Variable [ $r; Value:MBS("WIA.Initialize") ]
Show Custom Dialog [ "WIA Initialize"; $r ]
```

- [MBS FileMaker Plugin, version 6.5pr9](#)

Created 28th November 2016, last changed 15th November 2019.

181.15 WIA.ItemPropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.ItemPropertyValue"; Item; Key)

Parameters

Item

The item of current device to query. For a scanner this is typical Flatbed or Feeder. see WIA.ListItems "Flatbed"

Key

The property key. Can be a text with the name of the property or the corresponding ID. "Name"

Result Returns value or error.

Description

File formats UUIDs:

BMP	B96B3CAB-0728-11D3-9D7B0000F81EF32E
JPEG	B96B3CAE-0728-11D3-9D7B0000F81EF32E
PNG	B96B3CAF-0728-11D3-9D7B0000F81EF32E
GIF	B96B3CB0-0728-11D3-9D7B0000F81EF32E
TIFF	B96B3CB1-0728-11D3-9D7B0000F81EF32E

Document Handling Flags:

Name	Value	Description
FEEDER 1	Scan by using the document feeder.	
FLATBED 1	Scan by using the flatbed.	
FEEDER 2	Scan by using duplex operation.	
FRONT FEED 1	Scan the front of the document first. This value is valid only when DUPLEX is set.	
BACK FEED 1	Scan the back of the document first. This value is valid only when DUPLEX is set.	
FRONT FEED 2	Scan the front side.	
BACK FEED 2	Scan the back side. This value is valid only when DUPLEX is set.	
FEED 1	Scan the front page of the document.	
FEED 2	Enable per-feed mode. Priorities the front document while scanning.	
ADVANCED DUPLEX 101	Enable advanced feeding of the next document after a scan.	
ADVANCED DUPLEX 102	Scan by using individual configuration settings for each side feeds from (WIA_CATEGORY_FEEDER, FRONT and WIA_CATEGORY_FEEDER, BACK). This flag cannot be set together with DUPLEX. A device that supports different scan settings for the front and back feeds should implement the optional ADF front and back feeds and it should support both DUPLEX and ADVANCED_DUPLEX.	

Use WIA.ItemProperties to query all values with keys as JSON.

Use WIA.SetItemPropertyValue to set a value.

Examples

Queries resolution:

MBS("WIA.ItemPropertyValue"; "Flatbed"; "Horizontal Resolution")

Queries file extension:

MBS("WIA.ItemPropertyValue"; "Flatbed"; "Filename extension")

Queries media type:

```
MBS( "WIA.ItemPropertyValue"; "Flatbed"; "Media Type" )
```

Queries orientation:

```
MBS( "WIA.ItemPropertyValue"; "Flatbed"; "Orientation" )
// 0 = Portrait, 1 = Landscape, 2 = Rotate 180, 3 = Rotate 270
```

List properties of feeder:

```
Set Variable [ $item ; Value: "Feeder" ]
Set Variable [ $list ; Value: MBS("WIA.ItemPropertyKeys"; $item) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error" ; $list ]
Else
Set Variable [ $count ; Value: ValueCount ( $list ) ]
If [ $count >0 ]
Set Variable [ $i ; Value: 1 ]
Loop
Set Variable [ $key ; Value: GetValue ( $list; $i ) ]
Set Variable [ $value ; Value: MBS("WIA.ItemPropertyValue"; $item; $key) ]
New Record/Request
Set Field [ WIA Scan::Device ; $item ]
Set Field [ WIA Scan::Key ; $key ]
Set Field [ WIA Scan::Value ; $value ]
Commit Records/Requests [ With dialog: Off ]
# Next
Set Variable [ $i ; Value: $i+1 ]
Exit Loop If [ $i >$count ]
End Loop
End If
End If
```

Query document handling select:

```
MBS( "WIA.ItemPropertyValue"; "feeder"; "Document Handling Select")
```

181.17 WIA.Scan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.Scan"; Item)

Parameters**Item**

The item of current device to query. For a scanner this is typical Flatbed or Feeder. see WIA.ListItems "Flatbed"

Result Returns OK or error.

Description

We normally put the files on successful transfer into temp file and you get paths back from WIA.Image function.

If the document feeder fails to supply an image, the returned path to image file will be empty.

Examples

Scan via flatbed:

```
MBS( "WIA.Scan"; "Flatbed" )
```

Scan via feeder:

```
MBS( "WIA.Scan"; "Feeder" )
```

Scan duplex from document feeder:

```
# switch on duplex mode
Set Variable [ $r ; Value: MBS( "WIA.SetItemPropertyValue"; "Feeder"; "Document Handling Select"; 4 )
/* 1 = feeder 2 = flatbed 4 = duplex 8 = front first 16 = back first 32 = front only 64 = back only 128 =
next page 256 = preferred 512 = auto advance see https://docs.microsoft.... ]
#
# Scan via document Feeder
Set Variable [ $r ; Value: MBS( "WIA.Scan"; "Feeder" ) ]
#
# Result can be OK or Cancel and in both cases some images may be there
If [ $r "OK" ]
Show Custom Dialog [ "Scan Result" ; $r ]
Else
Perform Script [ Specified: From list ; "Import Images" ; Parameter: ]
End If
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.SelectDeviceDialog"; DeviceType)

Parameters

DeviceType

Which type of device to be selected. Can be Default, Scanner or DigitalCamera.
"Default"

Result Returns OK or error.

Description

Examples

Select a device:

```
Set Variable [ $r; Value:MBS("WIA.SelectDeviceDialog"; "Scanner") ]
If [ $r = "OK" ]
Show Custom Dialog [ "Select Device Dialog Result"; "DeviceID: " & MBS("WIA.GetCurrentDevice") &
$& "Name: " & MBS("WIA.DevicePropertyValue"; ""); "Nam... ]
Else
Show Custom Dialog [ "Select Device Dialog Result"; $r ]
End If
```

181.19 WIA.SetCurrentDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.SetCurrentDevice"; DeviceID)

Parameters

DeviceID

Pass name or unique ID for device.
"Brother DCP-8085DN LAN"

Result Returns OK or error.

Description

Examples

Select a device:

```
Set Variable [ $r; Value:MBS("WIA.SetCurrentDevice"; WIA Scan::Value) ]
If [ $r = "OK" ]
Show Custom Dialog [ "Select Device Dialog Result"; "DeviceID: " & MBS("WIA.GetCurrentDevice") &
$& "Name: " & MBS("WIA.DevicePropertyValue"; ""); "Nam... ]
Else
Show Custom Dialog [ "Select Device Dialog Result"; $r ]
End If
```

181.20 WIA.SetDevicePropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.SetDevicePropertyValue"; Device; Key; Value { ; Type })

Parameters

Device

You can pass index of device to check them in a row. Or pass name or unique ID of device. Pass empty string for current device.

""

Key

The property key.

"Horizontal Resolution"

Value

The value to use.

300

Type

Optional

The data type to use. By default if empty or auto, we detect it based on the type of the existing property. Can be Boolean, Int16, Int32, Int64, UInt16, UInt32, UInt64, String or Double.

"Int32"

Result Returns OK or error.

Description

You can use WIA.DevicePropertyKeys to learn about available keys.

To learn about properties you may need to visit Microsoft websites and figure out the options and the values for the listed constants:

[https://msdn.microsoft.com/en-us/library/windows/desktop/ms630196\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/ms630196(v=vs.85).aspx)

Page sizes are listed here:

[https://msdn.microsoft.com/en-us/library/aa360096\(v=VS.85\).aspx](https://msdn.microsoft.com/en-us/library/aa360096(v=VS.85).aspx)

Please query with WIA.DeviceProperties to see what keys and values are possible. You may want to query before and after setting the value via dialog.

Examples

Set to scan all pages:

MBS("WIA.SetDevicePropertyValue"; ""; 3096; 0)

Set media type to file:

```
MBS( "WIA.SetDevicePropertyValue"; ""; "Media Type"; 2)
```

Set page size to A4:

```
MBS( "WIA.SetDevicePropertyValue"; ""; "Page Size"; 0)
```

Request feeder with duplex:

```
MBS( "WIA.SetDevicePropertyValue"; ""; "Device Handling Document"; 5 ) // 1 for feeder + 4 for duplex
```

Request to keep one page in memory:

```
MBS( "WIA.SetDevicePropertyValue"; ""; "Pages"; 1 ) // keep one page in memory
```

- 181.21 WIA.SetItemPropertyValue 8527

Created 10th November 2016, last changed 15th November 2019.

181.21 WIA.SetItemPropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
181 WIA	6.5	No	Yes	No	No	No

MBS("WIA.SetItemPropertyValue"; Item; Key; Value)

Parameters

Item

The item of current device to query. For a scanner this is typical Flatbed or Feeder. see WIA.ListItems "Flatbed"

Key

The property key. Can be a text with the name of the property or the corresponding ID. "Name"

Value

The new value for this property.

Result Returns OK or error.

Description

Please query with WIA.ItemProperties to see what keys and values are possible. You may want to query before and after setting the value via dialog.

Examples

Set resolution:

```
MBS( "WIA.SetItemPropertyValue"; "Flatbed"; "Horizontal Resolution"; 300 ) &
MBS( "WIA.SetItemPropertyValue"; "Flatbed"; "Vertical Resolution"; 300 )
```

Set rotation:

```
MBS( "WIA.SetItemPropertyValue"; "Flatbed"; "Rotation"; 2 )
// 0 = Portrait, 1 = Landscape, 2 = Rotate 180, 3 = Rotate 270
```

Set gray or color:

```
MBS( "WIA.SetItemPropertyValue"; "Feeder"; "Current Intent"; 2)
// 1 = color
// 2 = gray
```

Set duplex:

```
Set Variable [ $r ; Value: MBS( "WIA.SetItemPropertyValue"; "Feeder"; "Document Handling Select"; 4 )
/*
1 = feeder
2 = flatbed
```

4 = duplex
 8 = front first
 16 = back first
 32 = front only
 64 = back only
 128 = next page
 256 = preferred
 512 = auto advance

see

<https://docs.microsoft.com/en-us/windows-hardware/drivers/image/wia-dps-document-handling-select>

```
/ ]
Show Custom Dialog [ "Set duplex" ; $r ]
```

Set to ignore blank pages:

```
Set Variable [ $r ; Value: MBS( "WIA.SetItemPropertyValue"; "Feeder"; "Blank Pages"; 1 )
```

```
/*
```

0 = Blank page detection is disabled. This is the required default value if the property is supported.

1 = The device detects blank pages and automatically skips scanning them (discards scanned data if any) and continues scanning.

2 = The device detects blank pages and acts as configured through the Job Separators property. This value is valid only when the Feeder item supports the Job Separators property.

see

<https://docs.microsoft.com/en-us/windows-hardware/drivers/image/wia-ips-blank-pages>

```
/ ]
Show Custom Dialog [ "Set blank pages" ; $r ]
```

Set to scan only front page:

```
Set Variable [ $r ; Value: MBS( "WIA.SetItemPropertyValue"; "Feeder"; "Document Handling Select"; 32 )
```

Set image format to JPEG:

```
MBS( "WIA.SetItemPropertyValue"; "Flatbed"; "Format"; "B96B3CAE-0728-11D3-9D7B0000F81EF32E"
)
```

Chapter 182

Window

Control windows.

Move window, fade in/out, change title or disable close button.

182.1 Toolbar.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Toolbar.Install")

Result Returns OK or error.

Description

You call this functions once at startup. You can use `Toolbar.Register` after or before to introduce new identifiers. Use `Window.SetToolbarConfiguration` to install a new configuration including your custom identifiers or use customize toolbar palette.

See also

Created 20th August 2014, last changed 20th August 2014.

182.2 Toolbar.InstallBackground

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Toolbar.InstallBackground"; Image { ; Mode; DisableTitle })

Parameters

Image

The image to you. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$img

Mode

Optional

Can be 0 to stretch (default) or 1 to left align image.

0

DisableTitle

Optional

If 1, we do not draw the window title on top of the image.

0

Result Returns OK or error.

Description

There is currently only one style for all FileMaker windows on Mac OS X.

We draw an image below the toolbar buttons. Either we stretch it to full width we align it to left and fill the space on the right with last pixel colors.

There are little redraw issues, especially when resizing window.

Currently doesn't work in FileMaker 14 and newer. If you need that to work, please contact us.

182.3 Toolbar.Register

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Toolbar.Register"; Identifier; FileName; ScriptName; Parameter; Label; PaletteLabel; Tooltip; Image)

Parameters

Identifier

The toolbar identifier. Must be an unique string.

"Test"

FileName

The file name of the FileMaker database where the script is located.

"Toolbar.fmp12"

ScriptName

The name of the script to call when toolbar item is pressed.

"ToolbarScript"

Parameter

The parameter to pass to the script. This can be same as identifier. Using different parameters allows you to use one script for all toolbar items.

"SwitchToMainLayout"

Label

The label, which normally appears in the toolbar and in the overflow menu.

"Hello"

PaletteLabel

The label that appears when it is in the customization palette. Can be same as label or different.

"Hello World"

Tooltip

The tooltip for the label!

"click me"

Image

The image to use for the toolbar item. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

Result Returns OK or error.

Description

Please use an identifier with your own prefix/suffix to make sure you have no conflict with existing identifiers.

Once your item is registered, the next time the toolbar updates itself it will use it.

You can use Window.SetToolbarConfiguration or the customize palette to add your toolbar item.

You need to call `Toolbar.Install` at least once before using this command to have it take effect.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

182.4 Toolbar.Unregister

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Toolbar.Unregister"; Identifier)

Parameters

Identifier

The toolbar item identifier.

"Test"

Result Returns OK or error.

Description

The changes apply as soon as the toolbar updates itself.

See also

- 182.3 Toolbar.Register

8534

Created 20th August 2014, last changed 20th August 2014.

182.5 Window.Activate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.8	Yes	Yes	No	No	No

MBS("Window.Activate"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK on success.

Description

This function does more than just show. if the window has been minimized, it will restore it. Also the window is moved to front and made the current window for keyboard input.

Sadly windows limits which windows can go to front, so some windows may not come to front unless they are clicked on.

As activation can be asynchronously, the window may activate later, e.g. in a script pause or at the end of the script.

Use MBS("Process.SetFrontMost") to move the whole app to the front.

182.6 Window.AddBottomOverlay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	5.3	Yes	No	No	No	No

```
MBS( "Window.AddBottomOverlay" { ; WindowRef; Color } )
```

Parameters

WindowRef

Optional

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Color

Optional

The color to use. Can be a color name or hex notation like in HTML. Default is OS X window color. "red"

Result Returns OK or error.

Description

Deprecated as it should no longer be needed.

Examples

Add red bottom control:

```
MBS( "Window.AddBottomOverlay"; 0; "# FF0000" )
```

Add gray bottom control:

```
MBS( "Window.AddBottomOverlay"; 0; "# ECECEC" )
```

182.7 Window.AsPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.3	Yes	No	No	No	No

MBS("Window.AsPDF"; WindowRef { ; Filename; DontRenderPreview })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Filename

Optional

The filename for the PDF file. Default is "window.pdf".

"mywindow.pdf"

DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

Description

Examples

Queries PDF of current window:

```
MBS( "Window.AsPDF"
```

182.8 Window.ClearFocus

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.1	Yes	Yes	No	No	No

MBS("Window.ClearFocus"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

The focus goes back to the window with no control having focus.

Works only for OS controls like Webviewer, not for FileMaker's custom controls.

See also Window.SetFocus.

Examples

Clears focus of window:

```
MBS( "Window.ClearFocus"; Get(WindowName) )
```

See also

182.9 Window.ClearTouchBar

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window 168 TouchBar	8.4	Yes	No	No	No	No

MBS("Window.ClearTouchBar"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

You assign the TouchBar with TouchBar.AssignToWindow function.

Examples

Clear touch bar for front window:

```
MBS( "Window.ClearTouchBar"; 0 )
```

See also

182.10 Window.ConfigureToolbarMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	8.3	Yes	No	No	No	No

MBS("Window.ConfigureToolbarMenu"; Mode)

Parameters

Mode

Pass 1 to disable menu completely. Pass 2 to remove the show/hide command. Pass 4 to remove the configuration command. Pass 6 to remove both commands.

1

Result Returns OK or error.

Description

The plugin can watch what menu is about to show up for the toolbar. We can remove menu or remove some entries.

Examples

Disable toolbar menus:

Set Variable [\$r; Value: MBS("Window.ConfigureToolbarMenu"; 1)]

182.11 Window.Current

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	5.2	Yes	Yes	No	No	No

MBS("Window.Current")

Result Returns number or error.

Description

This is same window the plugin would pick if you pass reference number 0 or empty to a window function. It can be that the plugin does reference here the data viewer, debugger or some calculation dialog, if one is open.

The number returned is a number starting 15001 and counting up for each window the plugin sees.

Examples

Query current window:

```
MBS("Window.Current")
```

Show title of current window:

```
MBS( "Window.GetTitle" ; MBS( "Window.Current" ) )
```

182.12 Window.DisableScrollbars

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.9	Yes	Yes	No	No	No

MBS("Window.DisableScrollbars"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns "OK" on success.

Description

This can stop users from scrolling.

FileMaker may reset this whenever it thinks it needs to reset it. Like with moving to other window or selecting another record.

Examples

Looks up window reference for the window named test and disables scrollbars there:

```
MBS("Window.DisableScrollbars"; MBS("Window.FindByTitle"; "test"))
```

Disables scrollbars on front window:

```
MBS("Window.DisableScrollbars")
```

182.13 Window.EnableScrollbars

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.9	Yes	Yes	No	No	No

MBS("Window.EnableScrollbars"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns "OK" on success.

Description

It is possible that the scrollbar does not redraw until something happens.

Examples

Looks up window reference for the window named test and disables scrollbars there:

```
MBS("Window.EnableScrollbars"; MBS("Window.FindByTitle"; "test"))
```

Enables scrollbars on front window:

```
MBS("Window.DisableScrollbars")
```

182.14 Window.Fade

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	5.4	Yes	Yes	No	No	No

MBS("Window.Fade"; WindowRef; fadeIn { ; NoAnimation; Duration })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

fadeIn

Pass 1 to fade in or 0 for fade out.

NoAnimation

Optional

Whether to avoid animation. Pass 1 to disable animation. Default is 0 to allow animation.

0

Duration

Optional

The duration in seconds. Can be a value between 0.1 and 5.0.

0.5

Result Returns OK or error.

Description

On Windows fading child windows does not work currently.

Examples

Fade out:

```
Set Variable [ $r ; Value: MBS( "Window.Fade"; 0 /* current window */; 0 /* fade out */; 0; 1 ) ]
```

Fade in:

```
Set Variable [ $r ; Value: MBS( "Window.Fade"; 0 /* current window */; 1 /* fade in */; 0; 1 ) ]
```

182.15 Window.FindByIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.0	Yes	Yes	No	No	No

MBS("Window.FindByIndex"; Index)

Parameters

Index

0 based index of the current windows open in FileMaker. If no value is entered then 0 is assumed. Using 0 will give the window reference for the current window. See caution in description

Result Returns window reference number or error.

Description

The Window Reference is a unique ID handed out by the operating system. It is used by the rest of the Window Functions. Caution: Passing 0 for Index will grab the front most window which should be your FileMaker window, but it could be any window including dialogs. This is a particular problem with the "Data Viewer" which is always in the front. Window.FindByTitle was added to version 1.1 as a more reliable way of getting the Window.Ref

The window reference is only valid until the window is closed.

On normal FileMaker on desktop you can use Get(WindowName), but on FileMaker Server the name includes the server name, so you need to use: Get(WindowName) & " (" & Get(HostName) & ")"

Window reference numbers are starting at 15000 and counting up for each new window.

Examples

Find the window ref

```
MBS( "Window.FindByIndex" ; 0 )
```

Find window reference on FileMaker Server where FileMaker includes server name in window name:

```
MBS( "Window.FindByTitle"; Get(WindowName) & " (" & Get(HostName) & ")" )
```

Created 18th August 2014, last changed 9th January 2015.

182.16 Window.FindByTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.1	Yes	Yes	No	No	No

MBS("Window.FindByTitle"; WindowName)

Parameters

WindowName

The Name of the window to find

MBS_DevTool

Result Returns window reference number or error.

Description

The reference is the Operating System's unique ID for the the window. Many of the other functions use the WindowReference to target the window.

The window reference is only valid until the window is closed.

If 0 is returned, no window was found.

Window reference numbers are starting at 15000 and counting up for each new window.

Examples

Application Window Window Ref

```
Let(
[
/*-----PARAMETERS-----*/
WindowName =
Case(
Position(Get ( ApplicationVersion ); "Advanced"; 1; 1);"FileMaker Pro Advanced";
"FileMaker Pro"
)
];

182.17 Window.FlashWindow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.1	No	Yes	No	No	No

```
MBS( "Window.FlashWindow"; WindowRef { ; Invert } )
```

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Invert

Optional

If this parameter is 1, the window is flashed from one state to the other. If it is 0, the window is returned to its original state (either active or inactive). When an application is minimized and this parameter is 1, the taskbar window button flashes active/inactive. If it is 0, the taskbar window button flashes inactive, meaning that it does not change colors. It flashes, as if it were being redrawn, but it does not provide the visual invert clue to the user.

1

Result Returns 1, 0 or error.

Description

It does not change the active state of the window.

The return value specifies the window's state before the call to the FlashWindow function. If the window caption was drawn as active before the call, the return value is nonzero. Otherwise, the return value is zero.

Flashing a window means changing the appearance of its caption bar as if the window were changing from inactive to active status, or vice versa. (An inactive caption bar changes to an active caption bar; an active caption bar changes to an inactive caption bar.)

Typically, a window is flashed to inform the user that the window requires attention but that it does not currently have the keyboard focus.

The FlashWindow function flashes the window only once; for repeated flashing, the application should create a system timer.

Please use the main window from FileMaker, not the window of solution.

Examples

Flash Window:

```
MBS( "Window.FlashWindow"; "FileMaker Pro Advanced"; 1)
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.8	Yes	Yes	No	No	No

MBS("Window.GetClassName"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns class name as text.

Description

Sometimes it's easier to identify a window by the class name than the title. The title may change or be localized, but the class name typically stays the same.

Added Mac support in Plugin version 3.3.

182.22 Window.GetLeft

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.8	Yes	Yes	No	No	No

MBS("Window.GetLeft"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Return left of window.

Description

See also Window.GetTop, Window.GetWidth and Window.GetHeight.

Examples

Get position of front window:

```
MBS( "Window.GetLeft"; 0 ) & "/" & MBS( "Window.GetTop"; 0 )
```

182.23 Window.GetMaxHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.GetMaxHeight"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns value or error.

Description

The maximum/minimum window sizes define how much a window can be resized by the user.

Examples

Query maximum height for current window:

```
MBS( "Window.GetMaxHeight"; Get(WindowName) )
```

Example result: 10000000000057

182.24 Window.GetMaxWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.GetMaxWidth"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns value or error.

Description

The maximum/minimum window sizes define how much a window can be resized by the user.

Examples

Query maximum width for current window:

MBS("Window.GetMaxWidth"; Get(WindowName))

182.25 Window.GetMinHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.GetMinHeight"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns value or error.

Description

The maximum/minimum window sizes define how much a window can be resized by the user.

Examples

Query minimum width for current window:

```
MBS( "Window.GetMinHeight"; Get(WindowName) )
```

Example result: 439

182.26 Window.GetMinWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.GetMinWidth"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns value or error.

Description

The maximum/minimum window sizes define how much a window can be resized by the user.

Examples

Query minimum width for current window:

```
MBS( "Window.GetMinWidth"; Get(WindowName) )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.2	Yes	Yes	No	No	No

MBS("Window.GetTitle"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Description

The WindowRef is returned by either Window.FindByTitle or Window.FindByIndex. Although it works on both platforms it was added specifically for Windows, where it can be used to get the the Name of the Application Window.

Examples

Query title of front window:

MBS("Window.GetTitle"; 0)

182.44 Window.HideScrollbars

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.4	Yes	Yes	No	No	No

MBS("Window.HideScrollbars"; WindowRef { ; NoResizeHandler })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

NoResizeHandler

Optional

Optionally, whether to not watch for window resizing to keep scrollbars hidden even if FileMaker normally shows them. Default is 0. You can pass 1 to disable the default behavior.

0

Result Returns "OK" on success.

Description

Please also use Window.SetResizable to disable resize.

Works fine with FileMaker 11/12 on Mac and Windows. Also works with FileMaker 10 on Windows (but not on Mac).

Please update plugins to latest 2.7 release to have this function work in FileMaker 12.

FileMaker may decide to show scrollbars when resizing, so please disable resizing, too.

The plugin installs a resize handler for Mac, so we can keep scrollbars hidden in FileMaker 12 for now while resizing.

Disabled for FileMaker 16, so it returns only an error.

Deprecated.

Examples

Looks up window reference for the window named test and hides scrollbars there:

```
MBS("Window.HideScrollbars"; MBS("Window.FindByTitle"; "test"))
```

182.45 Window.IgnoresMouseEvents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.1	Yes	No	No	No	No

MBS("Window.IgnoresMouseEvents"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Description

On Mac OS X you can disable mouse events for a given window. All Mouse Events will fall to the window behind.

See also

- 182.15 Window.FindByIndex 8550
- 182.16 Window.FindByTitle 8552

182.46 Window.IsFullScreen

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	3.0	Yes	No	No	No	No

MBS("Window.IsFullScreen"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns 0 or 1.

Description

Indicates that a window has fullscreen appearance.

A fullscreen window does not draw its titlebar, and may have special handling for its toolbar.

Available in Mac OS X v10.7 and later.

182.51 Window.IsModified

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.1	Yes	No	No	No	No

MBS("Window.IsModified"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Description

In many OS X applications OS a little dark red dot inside the Red Close button signifies that a window has been modified. FileMaker normally doesn't use this.

182.52 Window.IsVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.0	Yes	Yes	No	No	No

MBS("Window.IsVisible"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Description

The WindowRef can be obtained by using either Window.FindByTitle or Window.FindByIndex.

Examples

Check if window in invisible

```
Let(
[
/*-----PARAMETERS-----*/
WindowRef = MBS( "Window.FindByTitle" ; "Contacts" )
];
/*-----FUNCTION-----*/
MBS(
"Window.IsVisible";
WindowRef
)
)
```

182.54 Window.ListCommands

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.ListCommands"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns list or error.

Description

This allows you to see what commands are available for Window.RunCommand.

Examples

Shows list of commands for a window:

```
Show Custom Dialog [ "list"; MBS("Window.ListCommands"; 0) ]
```

182.55 Window.Maximize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.0	Yes	Yes	No	No	No

MBS("Window.Maximize"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

On Windows the window maximizes.

On Mac the window zooms to fit content.

Examples

Maximize front window:

```
MBS( "Window.Maximize"; 0)
```

Maximize database window:

```
MBS( "Window.Maximize"; Get(WindowName))
```

182.56 Window.Minimize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.0	Yes	Yes	No	No	No

MBS("Window.Minimize"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

On Mac the window is moved to the dock.

On Windows it goes to the task bar.

Examples

Minimize front window:

```
MBS( "Window.Minimize"; 0)
```

182.57 Window.ModalDialogFront

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	5.4	Yes	Yes	No	No	No

MBS("Window.ModalDialogFront")

Result Returns 1, 0 or error.

Description

This allows you to know in a trigger if a dialog window is currently open and maybe you better wait?
Created 29th October 2015, last changed 22nd November 2015.

182.58 Window.Move

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.2	Yes	Yes	No	No	No

MBS("Window.Move"; WindowRef; X; Y { ; NoAnimation; Duration })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

X

The new X position of the window.

300

Y

The new Y position of the window.

200

NoAnimation

Optional

Whether to avoid animation. Pass 1 to disable animation. Default is 0 to allow animation.

0

Duration

Optional

The duration in seconds. Can be a value between 0.1 and 5.0.

0.5

Result Returns OK on success.

Description

On Mac OS X we use Apples functions for animated move. On Windows we have our own code.

Examples

Moves a window:

```
MBS("Window.Move"; $WindowRef; 300; 200)
```

182.59 Window.PositionNextDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	10.0	Yes	Yes	No	No	No

MBS("Window.PositionNextDialog"; X; Y { ; Width; Height; Center })

Parameters

X

The X position in points to use for the dialog. Can be empty.

300

Y

The Y position in points to use for the dialog. Can be empty.

200

Width

Optional

The width in points to use for the dialog. Can be empty. We check against min/max size for dialog.

500

Height

Optional

The height in points to use for the dialog. Can be empty. We check against min/max size for dialog.

400

Center

Optional

Whether to center dialog. Pass 1 to center on screen or 0 to not center. Pass 2 to center in front of the frontmost FileMaker document window.

1

Result Returns OK or error.

Description

MBS Plugin watches for new windows to show and resize/move the next dialog.

The dialog may briefly show before we can move it.

There is the possibility you position a dialog outside visible screen area, so please check screen size yourself.

To clear the settings, you can call function without parameters or with empty values.

Examples

Shows dialog at specific location:

```
Set Variable [ $r ; Value: MBS("Window.PositionNextDialog"; 300; 300; 500; 400) ]
Show Custom Dialog [ "Test" ; "Hello World" ]
```

Center next dialog:

```
Set Variable [ $r ; Value: MBS("Window.PositionNextDialog"; "" ; "" ; "" ; "" ; 1) ]  
Show Custom Dialog [ "Test" ; "Hello World" ]
```

Clear settings:

```
MBS("Window.PositionNextDialog")
```

182.60 Window.RemoveMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	3.3	No	Yes	No	No	No

MBS("Window.RemoveMenu"; WindowRef; Mode)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Mode

Can be 1 to remove menu entries instead of whole menu. That may be more permanent and allows you to get back invisible menu when you switch to layout mode and back. Default value 0 unassigns menu from Window.

1

Result Returns OK on success.

Description

You can use this function to remove the FileMaker menu bar.

Examples

Remove menu:

```
$h = MBS("Window.FindByTitle"; "FileMaker Pro Advanced")
$r = MBS("Window.RemoveMenu"; $h)
```

Clear menu entries:

```
$h = MBS("Window.FindByTitle"; "FileMaker Pro Advanced")
$r = MBS("Window.RemoveMenu"; $h; 1)
```

182.62 Window.Resize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.2	Yes	Yes	No	No	No

MBS("Window.Resize"; WindowRef; width; height { ; NoAnimation; Duration })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

width

The new width of the window.

300

height

The new height of the window.

200

NoAnimation

Optional

Whether to avoid animation. Pass 1 to disable animation. Default is 0 to allow animation.

0

Duration

Optional

The duration in seconds. Can be a value between 0.1 and 5.0.

0.5

Result Returns OK on success.

Description

On Mac OS X we use Apples functions for animated resizing. On Windows we have our own code. Please make sure on Windows that the window is not maximized as resizing a maximized window puts it in a mode where you can't manual resize it.

Examples

Resizes a window:

```
MBS("Window.Resize"; $WindowRef; 300; 200)
```

Resize main window on windows:

```
MBS("Window.Resize"; "FileMaker Pro Advanced"; 800; 600)
```

182.63 Window.ResizeContentView

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.0	Yes	No	No	No	No

MBS("Window.ResizeContentView"; WindowRef { ; X; Y; W; H })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

X

Optional

Delta for x position of content view. Use positive value to move to right or negative to move to left.

0

Y

Optional

Delta for y position of content view. Use positive value to move to top or negative to move to bottom.

-5

W

Optional

Delta for width of content view. Use positive value to make wider or negative value to make narrower.

0

H

Optional

Delta for height of content view. Use positive value to make heigher or negative value to make smaller.

0

Result Returns OK or error.

Description

This allows you to move the content view within any window.

e.g. on a FileMaker window to stretch content to move scrollbars out of sight.

Examples

Resizes to hide scrollbar partial:

```
MBS("Window.ResizeContentView"; 0; 0; -5; 0; 5)
```

Reset content view:

```
MBS("Window.ResizeContentView"; $window; 0; 0; 0; 0)
```

Resizes to hide scrollbar:

182.63. *WINDOW.RESIZECONTENTVIEW*

8609

MBS("Window.ResizeContentView"; 0; 0; -16; 0; 16)

Hide bottom area with controls:

MBS("Window.ResizeContentView"; 0; 0; -16; 0; 16)

182.64 Window.RunCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.RunCommand"; WindowRef; Command)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Command

The name of the command.

Result Returns OK or error.

Description

Please use Window.ListCommands to find available commands.

Please run as last command in script, so the function can do the job properly.

Be aware that this is not supported by FileMaker. Some commands work correctly, but others do nothing or can crash FileMaker.

Examples

Shows dialog to customize table fields:

```
Set Variable [ $r; Value:MBS("Window.RunCommand"; 0; "onModifyTableView") ]
```

Zooms window:

```
Set Variable [ $r; Value:MBS("Window.RunCommand"; 0; "zoom") ]
```

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

You can use Window.GetToolbarCustomizationPaletteIsRunning to query if customization sheet is open.

Examples

Run toolbar customization for current window:

MBS("Window.RunToolbarCustomizationPalette"; 0)

182.66 Window.Screenshot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	5.4	Yes	Yes	No	No	Yes

MBS("Window.Screenshot"; WindowRef { ; MarginLeft; MarginTop; MarginRight; MarginBottom; ImageType; Filename })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

MarginLeft

Optional

The margin from left to cut away border.

0

MarginTop

Optional

The margin from top to cut away border.

0

MarginRight

Optional

The margin from right to cut away border.

0

MarginBottom

Optional

The margin from bottom to cut away border.

0

ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type. The image is not written to disk. This file name is just added to the container for later export.

"test.jpg"

Result Returns image or error.

Description

Returns the image as container value, so you can assign it to a container field or save to disk with Container.WriteFile function.

Margins are different for Mac and Windows.

Added iOS support in version 8.5, but margins are not supported there, so we always take full screen.

On Windows may get wrong rectangle if Windows runs desktop with 200% resolution, but you have a 100% resolution screen.

Examples

Creates screenshot:

```
MBS("Window.Screenshot"; Get(WindowName); Window Screenshot::Margin Left; Window Screenshot::Margin Top; Window Screenshot::Margin Right; Window Screenshot::Margin Bottom)
```

Screenshot of current window as JPEG:

```
MBS( "Window.Screenshot"; 0)
```

182.67 Window.Scrollbar.GetScrollElasticity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.Scrollbar.GetScrollElasticity"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns value or error.

Description

Value can be none, auto or allowed.

Returns ? if something goes wrong or empty result if no scrollbar is found.

See also

182.68 Window.Scrollbar.SetScrollElasticity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.Scrollbar.SetScrollElasticity"; WindowRef; Mode)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Mode

The new mode to use. Can be auto, none or allowed.

"none"

Result Returns OK or error.

Description

Since FileMaker 14 windows bounce on the scrolling edge and this function can change behavior.

Examples

Sets the mode to none for front window:

```
MBS("Window.Scrollbar.SetScrollElasticity"; 0; "none")
```

Set scrollbar elasticity after delay of 0.1 seconds:

```
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; 0.1; "MBS(\\"Window.Scrollbar.SetScrollElasticity\\"; 0; \\"none\\")" ) ]
```

182.69 Window.Scrollbar.getHorizontalMaximum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.2	Yes	Yes	No	No	Yes

MBS("Window.Scrollbar.getHorizontalMaximum"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns value or error.

Description

Added Windows and iOS support for version 8.5.

Looks like the maximum on Windows is always 65535.

Examples

Query maximum value:

MBS("Window.Scrollbar.getHorizontalMaximum"; 0)

182.75 Window.SetAlpha

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.0	Yes	Yes	No	No	No

MBS("Window.SetAlpha"; WindowRef; Alpha)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Alpha

The new alpha value as a float value between 0.0 (invisible) to 1.0 (opaque).

0.5

Result Returns OK or error.

Description

NOTE: If you set the Alpha of a window too low it will not accept mouse clicks. Windows limitation: Currently the plug-in can only set the transparency of Application Window, not the individual database windows.

Seems not to work for FileMaker 11 on Windows with document windows. So please test if it works on your version.

Examples

Set the Transparency of a window by name

```
Let(
[
/*-----PARAMETERS-----*/
```

```
FileMakerApplicationWindowName =
```

```
Case(
```

```
Position(Get ( ApplicationVersion ); "Advanced"; 1; 1); "FileMaker Pro Advanced";
```

```
"FileMaker Pro"
```

```
);
```

```
WindowRef =
```

```
MBS(
```

```
"Window.FindByTitle";
```

```
FileMakerApplicationWindowName
```

```
);
```

```
Alpha = .5
```

```
];
```

182.75. WINDOW.SETALPHA

8625

```
/*-----FUNCTION-----*/
```

```
MBS(  
"Window.SetAlpha";  
WindowRef;  
Alpha  
)  
)
```

182.76 Window.SetBounds

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.0	Yes	Yes	No	No	No

MBS("Window.SetBounds"; WindowRef; Left; Top; Right; Bottom)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Left

the LEFT bound of the window

100

Top

the TOP bound of the window

100

Right

the RIGHT bound of the window

500

Bottom

the BOTTOM bound of the window

500

Description

This is another way of resizing the window. On Windows this function can be used to adjust the size of the application window as well.

Examples

Set Window Bounds

```
Let(
[
/*-----PARAMETERS-----*/
WindowRef = 0;
Left = 100;
Top = 100;
Right = 500;
Bottom = 500
];
/*-----FUNCTION-----*/
MBS(
"Window.SetBounds";
WindowRef;
```

182.76. *WINDOW.SETBOUNDS*

8627

```
Left;  
Top;  
Right;  
Bottom  
)  
)
```

182.77 Window.SetCloseButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.1	Yes	Yes	No	No	No

```
MBS( "Window.SetCloseButton"; WindowRef; State { ; AddMenu; DatabaseFilename; ScriptName; Parameter } )
```

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

State

The new state of the close button.

1

AddMenu

Optional

Whether to add a close menu if needed. Default is false here.

0

DatabaseFilename

Optional

The name of the filename database where the script can be found.

"test.fp7"

ScriptName

Optional

The name of the script.

"WindowClose"

Parameter

Optional

Parameter for the script call.

""

Result Returns OK on success.

Description

Please note! On Windows that SetCloseButton removes all buttons from the title bar and not just the close button.

For runtime solution a special handling is needed. First on Mac you can simply use this function as normal to enable the close button and the window will close.

On Windows simply enabling will not work as the close button is linked to a close menu entry in the system menu for this window. So if AddMenu is true, the plugin will check the menu. If there is no close entry, it will install a default window menu. This way we can enable the close button. To actually close the window,

we also install a callback to catch the clicks on this close button. We call your script so you can use the close window script step. This way we can have a close button on the runtimes.

Enjoy and use at your own risk. This function may not work with every FileMaker version, so please test carefully before you deliver. Tested with FileMaker 11.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

Examples

Disable the Window Close button

```
MBS( "Window.SetCloseButton" ; 0; 0)
```

Enable the Window Close button

```
MBS( "Window.SetCloseButton" ; 0; 1)
```

Disable the Window Close button in a runtime on Windows:

```
MBS( "Window.SetCloseButton" ; MBS( "Window.FindByTitle" ; "window title" ); 1; 1; "mydatabase.usr"; "CloseWindow" )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.3	Yes	Yes	No	No	No

MBS("Window.SetCurrentTag"; Tag)

Parameters

Tag

The new tag value.

Result Returns OK or error.

Description

The MBS Plugin manages a list of open windows, so you can set tag value for current window. Be aware that current window could be debugger window or data viewer window!

See also

182.79 Window.SetDockImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	7.5	Yes	No	No	No	No

```
MBS( "Window.SetDockImage"; WindowRef { ; Image } )
```

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Image

Optional

The image to use. Can be container in various formats, e.g. PNG. If empty, clears existing picture.

\$MyImage

Result Returns OK or error.

Description

The miniaturized window image is the image displayed in the Dock when the window is minimized. If you did not assign a custom image to the window, the value of this property is empty.

When the user minimizes the window, the Dock displays this image in the corresponding Dock tile, scaling it as needed to fit in the tile. If you do not specify a custom image using this property, the Dock creates one for you automatically.

You can also set this property as needed to change the minimized window image. Typically, you would specify a custom image immediately prior to a window being minimized. You can set this image while the window is minimized to update the current image in the Dock. However, you should not use this property to create complex animations in the Dock.

Support for custom images is disabled by default. To enable support the plugin automatically sets the AppleDockIconEnabled key to true when updating the image. Due to this enable process, the function may only work the second time you call it after restarting FileMaker.

Examples

Set image for current window:

```
Set Variable [ $r ; Value: MBS( "Window.SetDockImage"; 0; Assets::Image) ]
```

182.80 Window.SetFocus

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	8.5	Yes	Yes	No	No	No

MBS("Window.SetFocus"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK or error.

Description

The focus goes back to the window.

Works only for OS controls like Webviewer, not for FileMaker's custom controls.

This can be used to move away focus from Webviewer and back to a FileMaker text field.

182.83 Window.SetIgnoresMouseEvents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.1	Yes	No	No	No	No

MBS("Window.SetIgnoresMouseEvents"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

Whether to ignore mouse events or not. Pass 1 to ignore mouse events or 0 to not ignore mouse events.

1

Description

On Mac OS X you can disable mouse events for a given window. All Mouse Events will fall to the window behind.

182.84 Window.SetMaxHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.SetMaxHeight"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

The new value.

500

Result Returns OK or error.

Description

The maximum/minimum window sizes define how much a window can be resized by the user. Those limits may have no impact on what Window.Resize can do.

Examples

Set maximum height to 800 point:

```
MBS( "Window.SetMaxHeight"; Get(WindowName); 800 )
```

- 182.85 Window.SetMaxWidth 8638
- 182.86 Window.SetMinHeight 8639

Created 11st December 2016, last changed 11st December 2016.

182.85 Window.SetMaxWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.SetMaxWidth"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

The new value.

500

Result Returns OK or error.

Description

The maximum/minimum window sizes define how much a window can be resized by the user. Those limits may have no impact on what Window.Resize can do.

Examples

Set maximum width to 800 point:

```
MBS( "Window.SetMaxWidth"; Get(WindowName); 800 )
```

Created 11st December 2016, last changed 11st December 2016.

182.86 Window.SetMinHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.SetMinHeight"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

The new value.

500

Result Returns OK or error.

Description

The maximum/minimum window sizes define how much a window can be resized by the user. Those limits may have no impact on what Window.Resize can do.

Examples

Set minimum height to only 200:

```
MBS( "Window.SetMinHeight"; Get(WindowName); 200 )
```

182.87 Window.SetMinWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.SetMinWidth"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

The new value.

500

Result Returns OK or error.

Description

The maximum/minimum window sizes define how much a window can be resized by the user. Those limits may have no impact on what Window.Resize can do.

Examples

Set minimum width to 200 point:

```
MBS( "Window.SetMinWidth"; Get(WindowName); 200 )
```

182.88 Window.SetMiniaturizeButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.1	Yes	Yes	No	No	No

MBS("Window.SetMiniaturizeButton"; WindowRef; On or Off)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

On or Off

1

Description

Examples

Set the Miniturize buton off

```
Let(
[
windowRef = MBS("Window.FindByTitle"; Get(WindowName))
];
```

```
MBS(
"Window.SetMiniaturizeButton";
windowRef;
0
)
)
```

Set the Miniturize buton On

```
Let(
[
windowRef = MBS("Window.FindByTitle"; Get(WindowName))
];
```

```
MBS(
"Window.SetMiniaturizeButton";
windowRef;
1
)
)
```

182.89 Window.SetModified

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.1	Yes	No	No	No	No

MBS("Window.SetModified"; WindowRef; On or Off)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

On or Off

0

Description

On Mac OS, a window has a "Modified" State. If the content's of a window have been modified the Red Close button shows this by displaying a dark center. This function gives you control over that setting. Normally FileMaker window's do not display the modified state of a the window.

Examples

Clear modified flag for front window:

```
MBS( "Window.SetModified"; 0; 1 )
```

182.90 Window.SetProgress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	7.3	No	Yes	No	No	No

MBS("Window.SetProgress"; WindowRef; State { ; Value; Maximum })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

State

The state to set. Can be NoProgress, Indeterminate, normal, error or paused.

"Normal"

Value

Optional

Current progress value.

50

Maximum

Optional

The maximum value for progress.

100

Result Returns OK or error.

Description

You can show progress on the task bar icon of your window.

Usually start with setting to indeterminate, than could up in a script with normal state and finally disable progress indication with setting no progress.

Requires Windows 7.

Examples

Sets progress to 50% :

```
MBS( "Window.SetProgress"; Get(FensterName); "normal"; 50; 100)
```

Set progress to indeterminate:

```
MBS( "Window.SetProgress"; Get(FensterName); "indeterminate"
```

182.91 Window.SetResizable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.4	Yes	Yes	No	No	No

MBS("Window.SetResizable"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

Whether window should be resizable: 0 for non resizable or 1 for resizable.

1

Result Returns "OK" on success.

Description

Examples

Disable resize for frontmost window:

```
MBS("Window.SetResizable"; 0; 0)
```

Enable resize for window:

```
MBS("Window.SetResizable"; $WindowRef; 1)
```

182.92 Window.SetShadow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.1	Yes	No	No	No	No

MBS("Window.SetShadow"; WindowRef; On or Off)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

On or Off

1

Description

On Mac OS X window's normally have a shadow, this function lets you turn the shadow on and off

182.93 Window.SetShowsToolBarButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	2.4	Yes	No	No	No	No

MBS("Window.SetShowsToolBarButton"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

Whether to ignore mouse events or not. Pass 1 to ignore mouse events or 0 to not ignore mouse events.

1

Result Returns "OK" on success.

Description

Examples

Hide toolbar button for frontmost window:

```
MBS("Window.SetShowsToolBarButton"; 0; 0)
```

Show toolbar button for window:

```
MBS("Window.SetShowsToolBarButton"; $WindowRef; 1)
```

182.94 Window.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.3	Yes	Yes	No	No	No

MBS("Window.SetTag"; WindowRef; Tag)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Tag

The new tag value.

Result Returns OK or error.

Description

The MBS Plugin manages a list of open windows, so you can set tag value for a window.

Please be aware that referencing windows just by name is not good as window names may not be unique.

Use Window.Current to get ID for current window. Or use function Window.SetCurrentTag to set tag of current window.

182.95 Window.SetTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	1.2	Yes	Yes	No	No	No

MBS("Window.SetTitle"; WindowRef; Title)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Title

The title

"Hello World"

Description

The WindowRef is returned by either Window.FindByTitle or Window.FindByIndex. Although it works on both platforms it was added specifically for Windows, where it can be used to Change the Name of the Application Window.

Examples

Set the Title of the Application Window

```
MBS( "Window.SetTitle" ; $$WindowRef; "New Title")
```

182.96 Window.SetTitleIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	3.2	No	Yes	No	No	No

MBS("Window.SetTitleIcon"; WindowRef; ImageRef { ; bigIcon })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

ImageRef

The image reference for the picture image, a number returned from the GImage.New functions

1

bigIcon

Optional

Optional flag. Pass 1 to set big icon (for app switcher) or 0 for small icon (icon in title bar). Default is 0.

1

Result Returns OK or error status.

Description

Version 6.2 no longer takes a mask image like previous versions, so you now pass a picture with transparency like a PNG file for example.

182.97 Window.SetTitleVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.0	Yes	No	No	No	No

MBS("Window.SetTitleVisible"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

The new visible setting.

1

Result Returns OK or error.

Description

Set to 1 to make it visible and 0 to hide it.

Requires OS X 10.10 or newer.

Examples

Hide titlebar

Set Variable [\$r; Value:MBS("Window.SetTitleVisible"; 0; 1)]

182.98 Window.SetTitlebarAppearsTransparent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.0	Yes	No	No	No	No

MBS("Window.SetTitlebarAppearsTransparent"; WindowRef; Value)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Value

The new visible setting. Pass 1 to make transparent. Pass 0 to make opaque.

1

Result Returns OK or error.

Description

When 1, the titlebar doesn't draw its background, allowing all buttons to show through, and "click through" to happen. In general, this is only useful when being full screen.

Examples

Set titlebar invisible and resize content to fill space:

```
Set Variable [ $r; Value:MBS("Window.SetTitlebarAppearsTransparent"; 0; 1) ]
```

```
Set Variable [ $r; Value:MBS("Window.ResizeContentView"; 0; 0; 0; 0; 22) ]
```

182.99 Window.SetToolbarConfiguration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	4.3	Yes	No	No	No	No

MBS("Window.SetToolbarConfiguration"; WindowRef; ConfigurationXML)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

ConfigurationXML

The configuration XML. Should be the one returned by Window.GetToolbarConfiguration.

\$ConfigurationXML

Result Returns OK or error.

Description

Pass a xml with the toolbar's configuration information. If you want to provide a custom xml, you should first get the receiver's current configuration xml, then create a modified copy, rather than trying to construct one yourself.

Do not depend on any details of the normal contents of a configuration dictionary. This may change with an update to Mac OS X or FileMaker.

182.106 Window.ShowKeyboard

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	9.5	Yes	Yes	No	No	No

MBS("Window.ShowKeyboard")

Result Returns OK or error.

Description

Examples

Show keyboard:

```
Set Variable [ $r ; Value: MBS("Window.ShowKeyboard") ]
```

Show character palette:

```
Set Variable [ $r ; Value: MBS("Window.ShowCharacterPalette") ]
```

182.107 Window.ShowOverlay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.3	Yes	No	No	No	No

MBS("Window.ShowOverlay"; WindowRef; alpha; red; green; blue)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

alpha

The alpha value to use. Range 0.0 (invisible) to 1.0 (full visible). Default 0.5.

0.5

red

The red color value. Default 0.0.

0.0

green

The green color value. Default 0.0.

0.0

blue

The blue color value. Default 0.0.

0.0

Result Returns "OK" on success.

Description

This way you can have the user focus on a dialog in front of the main window.

Does not work in FileMaker 18.

Deprecated.

Examples

Show an overlay:

MBS("Window.ShowOverlay"; Get(WindowName); 0.5; 0.0; 0.0; 0.0)

182.108 Window.ShowScrollbars

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.4	Yes	Yes	No	No	No

MBS("Window.ShowScrollbars"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns "OK" on success.

Description

Tries to reverse HideScrollbars call.

Works fine with FileMaker 11/12 on Mac and Windows. Also works with FileMaker 10 on Windows (but not on Mac).

Disabled for FileMaker 16, so it returns only an error.

Examples

Looks up window reference for the window named test and shows scrollbars there:

```
MBS("Window.ShowScrollbars"; MBS("Window.FindByTitle"; "test"))
```

182.109 Window.ShowTableViewDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	6.5	Yes	No	No	No	No

MBS("Window.ShowTableViewDialog"; WindowRef { ; Force })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Force

Optional

Pass 1 to avoid checks whether button can be clicked. Normally plugin wants to avoid that you click there when not appropriate. But to toggle the button for a card window, you may want to force it as FileMaker does not support that.

0

Result Returns OK or error.

Description

Please run as last command in script, so the function can do the job properly.

On Windows you can try similar by simulating a mouse click on the right coordinate.

Examples

Show table view dialog command:

```
Set Variable [ $r; Value:MBS("Window.ShowTableViewDialog"; 0) ]
```

182.110 Window.ShowsToolBarButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
167 Toolbar 182 Window	2.4	Yes	No	No	No	No

MBS("Window.ShowsToolBarButton"; WindowRef)

Parameters**WindowRef**

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns 0 if toolbar button is hidden or 1 if toolbar button is visible.

Description**See also**

182.111 Window.ToggleFullScreen

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	3.0	Yes	No	No	No	No

MBS("Window.ToggleFullScreen"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK on success.

Description

If an application supports fullscreen, it should add a menu item to the View menu with toggleFullScreen as the action.

Available in Mac OS X v10.7 and later.

This method does not much if you don't mark a window to be the primary fullscreen window.

182.112 Window.TopHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	8.3	Yes	Yes	No	No	No

MBS("Window.TopHeight"; WindowRef { ; WithFrame })

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

WithFrame

Optional

Whether to include frame on Mac. Pass 1 to include frame. Default is 1 to include it.

0

Result Returns number or error.

Description

This is the height for any toolbars between content and the window top border.

On MacOS without frame, the top height is for example about 50 pixels for two toolbars in the window. With Frame, you include 81 pixels for toolbar and window title. So top height can be 131 as an example.

Ruler is not included in that height, as it's part of FileMaker's content.

182.113 Window.Update

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
182 Window	2.8	Yes	Yes	No	No	No

MBS("Window.Update"; WindowRef)

Parameters

WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

Result Returns OK on success.

Description

This does not cause a FileMaker window to load new or modified records. It simply asks the window to redraw all controls.

Chapter 183

WindowsScript

Run Windows Scripts.

Microsoft did not port the ScriptControl to 64-bit, so the official control coming with Windows, is only for 32-bit.

Alternative, you can install Tablacus Script Control 64 to get it working in 64-bit. http://www.eonet.ne.jp/~gakana/tablacus/scriptcontrol_en.html

183.1 WindowsScript.AddCode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.AddCode"; ScriptID; Code)

Parameters

ScriptID

The ID of a WindowsScript in memory.

Code

the code to add to the script

Description

Used to build a script in memory. You can use this function more then once on the same script. If you add code that overlaps with code that is already in the script then the last one added takes precedence. For Ex. IF you add FUNCTION HelloWorld() HelloWorld = "HELLO WORLD" END FUNCTION To a VBScript that already has the function "HelloWorld()" in it, it is replaced by your new version. If the code can't be added to the script one of the following is returned - "MBS: Missing ScriptID." - "MBS: Failed to create Windows Script object." - description of exception

If you use VBScript, you don't need "dim" keyword for defining variables.

Examples

Trigger a FileMaker Script Using OS Scripting

```

Let(
[
// — the name of the script to run —————

ScriptName = "Triggered Script";
FileName = Get(FileName);

//—————

//— don't need to edit anything below this line ——

Applescript = "do script " & Quote(ScriptName);

VBScriptText =
"FUNCTION DoFMScript(FileName, ScriptName)" & "§" &
"Set fmApp = CreateObject(\"FMPro.Application\")" & "§" &
"fmApp.Visible = True" & "§" &
"Set fmDocs = fmApp.Documents" & "§" &
"For Each fmDoc In fmDocs" & "§" &
"If InStr(LCase(fmDoc.fullname), LCase(FileName)) >0 Then" & "§" &
" fmDoc.dofmscript (ScriptName)" & "§" &
"End If" & "§" &
"Next" & "§" &

"END FUNCTION";

ScriptID = MBS("WindowsScript.Create");
lang= MBS("WindowsScript.SetLanguage"; ScriptID; "VBScript");
addcode = MBS("WindowsScript.AddCode"; ScriptID; VBScriptText)

];
Case(
Get ( SystemPlatform ) = 1;

// Mac OSX Case
MBS(
"Applescript.Run";
Applescript
);

// Windows Case
MBS("WindowsScript.ExecuteFunction";ScriptID; "DoFMScript";FileName; ScriptName) &
MBS("WindowsScript.Close"; ScriptID)

```

```

Case(

183.3 WindowsScript.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

```
MBS( "WindowsScript.Create" )
```

Description

Once the script is created you can add script code to by using the `WindowsScript.AddCode` function. The script is then executed using `WindowScript.Run`. The default language of a new script is `Jscript`. This can be changed by using the `WindowsScript.SetLanguage` function.

ScriptControl from Microsoft is 32-bit only. If you need 64-bit, please install a 64-bit alternative `MSScript.ocx` file.

Examples

Trigger a FileMaker Script Using OS Scripting

```
Let(
[
// — the name of the script to run —————

ScriptName = "Triggered Script";
FileName = Get(FileName);

//—————

//— don't need to edit anything below this line ——

183.10 WindowsScript.ErrorText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.ErrorText"; ScriptID)

Parameters

ScriptID

The ID of a WindowsScript in memory.

2

Description

For ex. "FUNCTION myFunction(string" This line of a script is missing a ")" at the end of the line.

183.11 WindowsScript.Eval

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.Eval"; ScriptID; Text)

Parameters**ScriptID**

The ID of a WindowsScript in memory.

\$\$scriptID

Text

The text to evaluate

1

Description**See also**

183.12 WindowsScript.ExecuteFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.ExecuteFunction"; ScriptID; FunctionName { ; Function Parameter; Function Parameters })

Parameters

ScriptID

The ID of a WindowsScript in memory.

0

FunctionName

The name of the function you are using in the script

Function Parameter

Optional

The first function parameter

Function Parameters

Optional

any other function parameters that are needed

Description

Examples

Trigger a FileMaker Script Using OS Scripting

```
Let(
[
// — the name of the script to run —————

ScriptName = "Triggered Script";
FileName = Get(FileName);

//—————

//— don't need to edit anything below this line ———

Applescript = "do script " & Quote(ScriptName);

VBScriptText =
"FUNCTION DoFMSCript(FileName, ScriptName)" & "§" &
"Set fmApp = CreateObject(\"FMPro.Application\")" & "§" &
"fmApp.Visible = True" & "§" &
"Set fmDocs = fmApp.Documents" & "§" &
```

```

# # # # # # # # # # # # # # */
Let(
[

Applescript = "do script " & Quote(theScriptName);

183.13 WindowsScript.ExecuteStatement

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.ExecuteStatement"; Script)

Parameters

Script

The script command.

Description

See also

- 183.12 WindowsScript.ExecuteFunction

8696

Created 18th August 2014, last changed 18th August 2014.

183.14 WindowsScript.GetAllowUI

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.GetAllowUI"; ScriptID)

Parameters

ScriptID

The ID of a WindowsScript in memory.

Description

Scripts can either allow user interaction or not.

See also

- 183.16 WindowsScript.GetTimeout 8703
- 183.18 WindowsScript.SetAllowUI 8705

Created 18th August 2014, last changed 18th August 2014.

183.15 WindowsScript.GetLanguage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.GetLanguage"; ScriptID)

Parameters

ScriptID

The ID of a WindowsScript in memory.

Description

The Windows Scripting Host can run scripts that are written in any of several languages. This function returns the current language setting, for example "JScript" or "VBScript"

See also

- 183.19 WindowsScript.SetLanguage

8706

Created 18th August 2014, last changed 18th August 2014.

183.16 WindowsScript.GetTimeout

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.GetTimeout"; ScriptID)

Parameters

ScriptID

The ID of a WindowsScript in memory.

Description

This function returns that setting.

See also

Created 18th August 2014, last changed 18th August 2014.

183.17 WindowsScript.GetUseSafeSubset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.GetUseSafeSubset"; ScriptID)

Parameters

ScriptID

The ID of a WindowsScript in memory.

Description

If Use Safe Subset is enabled then subset of the normal functions are allowed.

See also

8710

Created 18th August 2014, last changed 18th August 2014.

183.18 WindowsScript.SetAllowUI

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.SetAllowUI"; ScriptID; On or Off)

Parameters**ScriptID**

The ID of a WindowsScript in memory.

\$ScriptID

On or Off**Description**

Scripts can either allow user interaction or not.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.SetLanguage"; ScriptID; Language)

Parameters

ScriptID

The ID of a WindowsScript in memory.

Language

The scripting language you want to use
"VBScript"

Description

For ex. "FUNCTION myFunction(string" This line of a script is missing a ")" at the end of the line.

Examples

Trigger a FileMaker Script Using OS Scripting

```
Let(
[
// — the name of the script to run —————

183.20 WindowsScript.SetTimeout

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
183 WindowsScript	1.1	No	Yes	Yes, Windows only	No	No

MBS("WindowsScript.SetTimeout"; ScriptID; TimeOut)

Parameters**ScriptID**

The ID of a WindowsScript in memory.

1

TimeOut

Seconds, default is 10000

2

Description

This function allows you to change to change that setting. The units are seconds.

Chapter 184

WindowsUserNotification

Show user notifications on Windows 8 or newer.

184.1 WindowsUserNotification.Available

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.Available")

Result Returns 1 or 0.

Description

Returns 1 on Windows 8.1 and Windows 10 if all functions are available to show notifications.

See also

- 184.2 WindowsUserNotification.GetFileName 8712
- 184.5 WindowsUserNotification.GetText 8715

- 184.14 WindowsUserNotification.SetText 8727
- 184.15 WindowsUserNotification.Setting 8728
- 184.17 WindowsUserNotification.XMLUsed 8731

Created 2nd April 2017, last changed 24th May 2017.

184.2 WindowsUserNotification.GetFileName

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.GetFileName"; Notification)

Parameters

Notification

The reference number for the Windows User Notification.
\$Notification

Result Returns text or error.

Description

See also

- 184.15 WindowsUserNotification.Setting 8728

Created 2nd April 2017, last changed 24th May 2017.

184.3 WindowsUserNotification.GetImagePath

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.GetImagePath"; Notification)

Parameters

Notification

The reference number for the Windows User Notification.
\$Notification

Result Returns OK or error.

Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

See also

- 121.2 Path.FileMakerPathToNativePath 6139

Created 2nd April 2017, last changed 24th May 2017.

184.4 WindowsUserNotification.GetScriptName

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.GetScriptName"; Notification)

Parameters

Notification

The reference number for the Windows User Notification.
\$Notification

Result Returns text or error.

Description

See also

Created 2nd April 2017, last changed 24th May 2017.

184.5 WindowsUserNotification.GetText

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.GetText"; Notification; Index)

Parameters**Notification**

The reference number for the Windows User Notification.
\$Notification

Index

The index of the text. Range 0 to 3.
0

Result Returns text or error.

Description**See also**

- 184.2 WindowsUserNotification.GetFileName 8712

184.6 WindowsUserNotification.HideNotification

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.HideNotification"; Notification)

Parameters

Notification

The reference number for the Windows User Notification.
\$Notification

Result Returns OK or error.

Description

Examples

Hide notification:

```
Set Variable [ $r; Value:MBS( "WindowsUserNotification.HideNotification"; Windows User Notifications::ID)
]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $r ]
End If
```

See also

Created 2nd April 2017, last changed 24th May 2017.

184.7 WindowsUserNotification.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184 WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.Initialize"; AppName; Company; Name; Surname; VersionInfo)

Parameters

AppName

The application name.

"FileMaker Pro"

Company

The company name. Used to build unique app id.

"Test"

Name

The name. Used to build unique app id.

Surname

The surname. Used to build unique app id.

VersionInfo

The version info. Used to build unique app id.

"1.0"

Result Returns OK or error.

Description

Must be called once on startup of solution.

Examples

Initialize:

```
Set Variable [ $r; Value:MBS( "WindowsUserNotification.Initialize"; "FileMaker"; "Test"; "test"; "test"; "1.0" ) ]
```

```
Show Custom Dialog [ "Initialize"; $r ]
```

- 184.11 WindowsUserNotification.SetFileName 8724

- 184.14 WindowsUserNotification.SetText 8727
- 184.15 WindowsUserNotification.Setting 8728

Example Databases

- [Win Only/Windows User Notifications](#)

Created 2nd April 2017, last changed 24th May 2017.

184.8 WindowsUserNotification.Isinitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184 WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.Isinitialized")

Result Returns 1, 0 or error.

Description

Returns 1 if initialization was done successfully.

See also

- 184.7 WindowsUserNotification.Initialize

Created 3th April 2017, last changed 24th May 2017.

184.9 WindowsUserNotification.NewNotification

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.NewNotification")

Result Returns OK or error.

Description

Returns an identifier which must be passed to other functions and later to WindowsUserNotification.Release.

Examples

Create new notification:

```
Set Variable [ $r; Value:MBS( "WindowsUserNotification.NewNotification" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $r ]
Else
Set Field [ Windows User Notifications::ID; $r ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetImagePath"; Windows User Notifications::ID;
Windows User Notifications::ImagePath) ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetText"; Windows User Notifications::ID; 0; Win-
dows User Notifications::Text1) ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetText"; Windows User Notifications::ID; 1; Win-
dows User Notifications::Text2) ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetText"; Windows User Notifications::ID; 2; Win-
dows User Notifications::Text3) ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetText"; Windows User Notifications::ID; 3; Win-
dows User Notifications::Text4) ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetScriptName"; Windows User Notifications::ID;
"Trigger") ]
Set Variable [ $r; Value:MBS( "WindowsUserNotification.SetFileName"; Windows User Notifications::ID;
Get(FileName)) ]
End If
```

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.Release"; Notification)

Parameters

Notification

The reference number for the Windows User Notification.
\$Notification

Result Returns OK or error.

Description

This frees up memory used.

Examples

Free notification:

```
Set Variable [ $r; Value:MBS( "WindowsUserNotification.Release"; Windows User Notifications::ID) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $r ]
End If
Set Field [ Windows User Notifications::ID; "" ]

Created 2nd April 2017, last changed 24th May 2017.

184.11 WindowsUserNotification.SetFileName

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174	UserNotification	7.2	No	Yes	No	No

MBS("WindowsUserNotification.SetFileName"; Notification; Filename)

Parameters

Notification

The reference number for the Windows User Notification.
\$Notification

Filename

The database file name where the script is located.
"test.fmp12"

Result Returns OK or error.

Description

The parameter to the script includes a list of values. First entry in the list is the notification reference number. Second entry is the reason to call which can be Activated, Dismissed or Failed. Third value is reason for demission or error code for failure.

184.12 WindowsUserNotification.SetImagePath

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.SetImagePath"; Notification; Path)

Parameters

Notification

The reference number for the Windows User Notification.

\$Notification

Path

Native file path for the image.

"C:\MyApp\test.png"

Result Returns OK or error.

Description

May not be a network path as system needs to load it independent of your permissions.

Maybe better use image coming with application or put one in temp folder.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

184.13 WindowsUserNotification.SetScriptName

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.SetScriptName"; Notification; ScriptName)

Parameters

Notification

The reference number for the Windows User Notification.
\$Notification

ScriptName

The script name.
"MyScript"

Result Returns OK or error.

Description

The parameter to the script includes a list of values. First entry in the list is the notification reference number. Second entry is the reason to call which can be Activated, Dismissed or Failed. Third value is reason for demission or error code for failure.

184.14 WindowsUserNotification.SetText

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	7.2	No	Yes	No	No	

MBS("WindowsUserNotification.SetText"; Notification; Index; Text)

Parameters**Notification**

The reference number for the Windows User Notification.

\$Notification

Index

The index of the text. Range 0 to 3.

0

Text

The text to use.

"Hello World"

Result Returns OK or error.

Description

We can show up to three texts.

184.15 WindowsUserNotification.Setting

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker
184	WindowsUserNotification 174 UserNotification	8.3	No	Yes	No	No	

MBS("WindowsUserNotification.Setting")

Result Returns value or error.

Description

Gets a value that tells you whether there is an app, user, or system block that prevents the display of a notification.

If allowed, you get back "Enabled" as setting.

When notifications have been disabled at more than one level, this property value reflects the setting with the largest scope. Precedence is as follows, from largest scope to smallest:

DisabledByManifest
 DisabledByGroupPolicy
 DisabledForUser
 DisabledForApplication

If toast notifications have been disabled both by the user and by group policy, this property returns DisabledByGroupPolicy.

Chapter 185

WindowTransition

Perform window effects like a cube rotation on Mac.

185.1 WindowTransition.Perform

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
185 WindowTransition	1.5	Yes	No	No	No	No

MBS("WindowTransition.Perform"; Duration)

Parameters

Duration

the number of seconds for the transition to complete

Description

You first call WindowTransition.Prepare or WindowTransition.PrepareWindow to let the OS take screenshot of window or screen. Than you switch layout or window and make a script pause of maybe 0.1 seconds to have FileMaker redraw everything. Also you can call refresh window script step. Than you call WindowTransition.Perform to actually do the transition.

Not official supported by Apple and some effects don't work well on latest OS X versions!

See also

- 185.2 WindowTransition.Prepare 8734
- 185.3 WindowTransition.PrepareWindow 8736

Created 18th August 2014, last changed 4th February 2015.

185.2 WindowTransition.Prepare

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
185 WindowTransition	1.5	Yes	No	No	No	No

MBS("WindowTransition.Prepare"; TransitionType; TransitionOption; HasBackGround; HasBackColor; Red; Green; Blue)

Parameters

TransitionType

The transition type (see description above)

TransitionOption

Options for each transition (see description)

HasBackGround

If HasBackGround is true, a background is drawn behind the transition which may have a background color.

HasBackColor

Whether the background on the transition has a color.

Red

The RED value of the back ground

Green

The GREEN value of the back ground

Blue

The BLUE value of the back ground

Description

You select which transition you would like to use by setting the Parameter "TransitionType" to one of the numbers listed here.

- 0 - No transition effect.
- 1 - Cross-fade
- 2 - Zoom/fade towards us.
- 3 - Reveal new desktop under old.
- 4 - Slide old out and new in.
- 5 - Warp old and fade out revealing new.
- 6 - Swap desktops over graphically.
- 7 - The well-known cube effect.
- 8 - Warp old, switch and un-warp.
- 9 - The flip effect known from Dashboard

You can set the direction of the transition by Setting the TransitionOption parameter as follows:

- 0 - Old window moves down.

- 1 - Old window moves left.
- 2 - Old window moves right.
- 3 - Swap: Old window moves into screen, new comes from right.
- 5 - Swap: Old window moves to bottom left, new comes from top right.
- 6 - Old window to bottom right, New from top left.
- 7 - Swap: Old window moves down, new from top right.
- 8 - Old window moves up.
- 9 - Old window moves top left.
- 10 - Swap: old to top right. new from bottom left.
- 11 - Swap: old desktop up, new from bottom right.
- 12 - Swap: old in, new from bottom.
- 13 - Swap: old one moves left, new from bottom right.
- 14 - Swap: old one moves right, new from bottom left.
- 15 - Swap: onl one in, new from bottom right.
- 16 - Swap: old in, new out.

The options Begininning with "Swap:" Apply only to the Swap transition.

NOTE! In order to have the transition correctly swap the old view for the new view you will need to arrange you FileMaker Script to do perform the following commands in this order:

Change window contents (ie go to layout, go to record) PrepareTransition Pause script (.01 seconds) PerformTransition

The pause script step is important. It allows FileMaker to draw the new contents.

See also

- 185.1 WindowTransition.Perform 8733
- 185.3 WindowTransition.PrepareWindow 8736

Created 18th August 2014, last changed 18th August 2014.

185.3 WindowTransition.PrepareWindow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
185 WindowTransition	1.5	Yes	No	No	No	No

MBS("WindowTransition.PrepareWindow"; TransitionType; TransitionOption; HasBackGround; HasBackColor; Red; Green; Blue)

Parameters

TransitionType

The transition type (see description)

TransitionOption

Options for each transition (see description)

HasBackGround

If HasBackGround is true, a background is drawn behind the transition which may have a background color.

HasBackColor

Whether the background on the transition has a color.

Red

The RED value of the back ground

Green

The GREEN value of the back ground

Blue

The BLUE value of the back ground

Description

You select which transition you would like to use by setting the Parameter "TransitionType" to one of the numbers listed here.

- 0 - No transition effect.
 - 1 - Cross-fade
 - 2 - Zoom/fade towards us.
 - 3 - Reveal new desktop under old.
 - 4 - Slide old out and new in.
 - 5 - Warp old and fade out revealing new.
 - 6 - Swap desktops over graphically.
 - 7 - The well-known cube effect.
 - 8 - Warp old, switch and un-warp.
 - 9 - The flip effect known from Dashboard
- Add 128 for transparent background.

You can set the direction of the transition by Setting the TransitionOption parameter as follows:

- 0 - Old window moves down.
- 1 - Old window moves left.
- 2 - Old window moves right.
- 3 - Swap: Old window moves into screen, new comes from right.
- 5 - Swap: Old window moves to bottom left, new comes from top right.
- 6 - Old window to bottom right, New from top left.
- 7 - Swap: Old window moves down, new from top right.
- 8 - Old window moves up.
- 9 - Old window moves top left.
- 10 - Swap: old to top right. new from bottom left.
- 11 - Swap: old desktop up, new from bottom right.
- 12 - Swap: old in, new from bottom.
- 13 - Swap: old one moves left, new from bottom right.
- 14 - Swap: old one moves right, new from bottom left.
- 15 - Swap: onl one in, new from bottom right.
- 16 - Swap: old in, new out.

The options Beginning with "Swap:" Apply only to the Swap transition.

NOTE! In order to have the transition correctly swap the old view for the new view you will need to arrange you FileMaker Script to do perform the following commands in this order:

Change window contents (ie go to layout, go to record) PrepareTransition Pause script (.01 seconds) PerformTransition

The pause script step is important. It allows FileMaker to draw the new contents.

Chapter 186

WinSendMail

Send emails via mail client on Windows.

This can use Outlook or Thunderbird on Windows to send email with or without GUI. Using Messaging Application Programming Interface (MAPI)

186.1 WinSendMail.AddAttachmentContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.AddAttachmentContainer"; WinSendMailRef; Container { ; Name })

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.
\$Email

Container

The container to attach to email.
Attachment::Container

Name

Optional
The name for the attachment. If empty, we use file name from container.
"sample.pdf"

Result Returns OK or error.

Description

You can use AddAttachment several times to add several attachments.

For Outlook testing shows only one attachment works, while Thunderbird works with several attachments. Outlook also allows to pass no text and a html file as attachment to build a html email.

Examples

Adds an image as attachment:

```
MBS( "WinSendMail.AddAttachmentFile"; $mail; myTable::myImage; "birthday.jpg" )
```

Created 28th February 2017, last changed 25th November 2017.

186.2 WinSendMail.AddAttachmentFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.AddAttachmentFile"; WinSendMailRef; Path { ; Name })

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.

\$Email

Path

The native file path to the file to include as attachment.

"c:\sample.pdf"

Name

Optional

The name for the attachment. If empty, we use file name from file path.

"sample.pdf"

Result Returns OK or error.

Description

You can use AddAttachment several times to add several attachments.

For Outlook testing shows only one attachment works, while Thunderbird works with several attachments.

Outlook also allows to pass no text and a html file as attachment to build a html email.

Examples

Adds an image as attachment:

```
MBS( "WinSendMail.AddAttachmentFile"; $mail; "c:\temp\test.jpg"; "birthday.jpg" )
```

CHAPTER 186. WINSENDMAIL

Created 28th February 2017, last changed 25th November 2017.

186.3 WinSendMail.AddAttachmentText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.AddAttachmentText"; WinSendMailRef; Value { ; Encoding })

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.

\$Email

Value

The text to use for the attachment.

"Hello World"

Encoding

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

Result Returns OK or error.

Description

You can use AddAttachment several times to add several attachments.

For Outlook testing shows only one attachment works, while Thunderbird works with several attachments. Outlook also allows to pass no text and a html file as attachment to build a html email.

Examples

Adds an attachment with text field:

MBS("WinSendMail.AddAttachmentText"; \$Mail; MyTable::MyTextField; "UTF-8")

See also

- 143.2 SendMail.AddAttachmentFile 6878
- 143.3 SendMail.AddAttachmentText 6881
- 186.1 WinSendMail.AddAttachmentContainer 8739
- 186.2 WinSendMail.AddAttachmentFile 8741
- 186.8 WinSendMail.AttachmentCount 8752

Created 28th February 2017, last changed 25th November 2017.

186.4 WinSendMail.AddBCC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.AddBCC"; WinSendMailRef; Email { ; Name })

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.

\$Email

Email

The email address of the recipient.

"SMTP:test@mbsplugins.de"

Name

Optional

Optional the name of the recipient.

"John Miller"

Result Returns OK or error.

Description

See also WinSendMail.AddRecipient.

You can call this method several times to add several recipients.

Email addresses need to be prefixed with "SMTP:".

Examples

Add BCC recipient:

```
MBS( "WinSendMail.AddBCC"; $Mail; "test@test.test"; "Test Tester" )
```

See also

- 143.4 SendMail.AddBCC 6883
- 143.5 SendMail.AddCC 6885

Example Databases

- Win Only/Send Email via Email Application

Created 28th February 2017, last changed 21st September 2018.

186.5 WinSendMail.AddCC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.AddCC"; WinSendMailRef; Email { ; Name })

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.
\$Email

Email

The email address of the recipient.
"SMTP:test@mbsplugins.de"

Name

Optional
Optional the name of the recipient.
"John Miller"

Result Returns OK or error.

Description

See also WinSendMail.AddRecipient.
You can call this method several times to add several recipients.

Email addresses need to be prefixed with "SMTP:".

Examples

Add CC recipient:

MBS("WinSendMail.AddCC"; \$Mail; "test@test.test"; "Test Tester")

See also

- 143.4 SendMail.AddBCC 6883

Created 28th February 2017, last changed 21st September 2018.

186.6 WinSendMail.AddRecipient

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.AddRecipient"; WinSendMailRef; Type; Email { ; Name })

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.
\$Email

Type

The type of recipient. Can be TO, BCC, CC or ReplyTo.
"CC"

Email

The email address of the recipient.
"SMTP:test@mbsplugins.de"

Name

Optional
Optional the name of the recipient.
"John Miller"

Result Returns OK or error.

Description

This function can be used easily if the type is also a field in your database.

As an alternative you can of course also use WinSendMail.AddTo, WinSendMail.AddReplyTo, WinSendMail.AddCC or WinSendMail.AddBCC.

You can call this method several times to add several recipients.

Email addresses need to be prefixed with "SMTP:".

- 186.10 WinSendMail.ClearRecipients

8754

Created 28th February 2017, last changed 21st September 2018.

186.7 WinSendMail.AddTo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.AddTo"; WinSendMailRef; Email { ; Name })

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.
\$Email

Email

The email address of the recipient.
"SMTP:test@mbsplugins.de"

Name

Optional
Optional the name of the recipient.
"John Miller"

Result Returns OK or error.

Description

See also WinSendMail.AddRecipient.
You can call this method several times to add several recipients.

Some mail clients (Outlook) may fail if name is missing.

This address is provider-specific message delivery data. Generally, the messaging system provides such addresses for inbound messages. For outbound messages, the Address member can point to an address entered by the user for a recipient not in an address book (that is, a custom recipient). The format of an address pointed to by the Address member is [address type] [e-mail address] . Examples of valid addresses are FAX:206-555-1212 and SMTP:M@X.COM.

Examples

Add To recipient:

MBS("WinSendMail.AddTo"; \$Mail; "test@test.test"; "Test Tester")

See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.ClearRecipients"; WinSendMailRef)

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.
\$Email

Result Returns OK or error.

Description

Removes all TO, CC, BCC and ReplyTO entries.

See also

- 143.13 SendMail.ClearRecipients 6897
- 186.6 WinSendMail.AddRecipient 8748
- 186.9 WinSendMail.ClearAttachments 8753

Created 28th February 2017, last changed 5th March 2017.

186.11 WinSendMail.CreateEmail

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.CreateEmail")

Result Returns email number or error.

Description

The reference number returned by this function can be passed to other plugin functions for setting up the email.

Later use WinSendMail.Release to free memory.

SendMail reference numbers are starting at 67000 and counting up for each new email.

Examples

Send an email with values from field:

```
Set Variable [ $email; Value:MBS( "WinSendMail.CreateEmail" ) ]
Set Variable [ $r; Value:MBS( "WinSendMail.AddTo"; $email; Send::To Email ; Send::To Name ) ]
Set Variable [ $r; Value:MBS( "WinSendMail.AddCC"; $email; Send::CC Email ; Send::CC Name ) ]
Set Variable [ $r; Value:MBS( "WinSendMail.SetFrom"; $email; Send::From Email ; Send::From Name ) ]
Set Variable [ $r; Value:MBS( "WinSendMail.SetSubject"; $email; Send::Subject ) ]
Set Variable [ $r; Value:MBS( "WinSendMail.SetText"; $email; Send::Text ) ]
Set Variable [ $r; Value:MBS( "WinSendMail.Send"; $email ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ Title: "Failed to send email"; Message: $r; Default Button: "OK", Commit: "Yes";
Commit: "No" ]
Else
Pause/Resume Script [ Duration (seconds): 2 ]
End If
Set Variable [ $r; Value:MBS( "WinSendMail.Release"; $email ) ]
```

186.14 WinSendMail.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.Release"; WinSendMailRef)

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.
\$Email

Result Returns OK or error.

Description

See also

- [143.26 SendMail.Release](#) 6912

186.15 WinSendMail.Send

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.Send"; WinSendMailRef; Flags)

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.

\$Email

Flags

The flags. Add 1 to show no dialog. Add 2 to disable logon user interface. Add 4 to disable parent window.

Result Returns OK or error.

Description

The email is sent using the locally installed mail client.
Some email clients seem not to like more than one attachment.

With outlook you can keep text empty and attach a html file. Then Outlook will use the html file as content of the email and allows you to send html email.

Falls back to WinSendMail.SendAnsi if Unicode support is missing in older Windows versions.

Outlook loves to return failed, if you pass in email address for To/BCC/CC and no name.
See WinSendMail.SendAsync for having a function which does not wait.

Created 28th February 2017, last changed 28th February 2019.

186.16 WinSendMail.SendAnsi

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.SendAnsi"; WinSendMailRef; Flags)

Parameters**WinSendMailRef**

The email reference number obtained using WinSendMail.CreateEmail function.

\$Email

Flags

The flags. Add 1 to show no dialog. Add 2 to disable logon user interface. Add 4 to disable parent window.

Result Returns OK or error.

Description

Same as WinSendMail.Send, but limited to Windows ANSI text encoding.

Use this only if unicode MAPI interface is not supported by an older email client.

See also

- 186.15 WinSendMail.Send 8760

Created 28th February 2017, last changed 15th April 2017.

186.17 WinSendMail.SendAsync

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	9.1	No	Yes	No	No	No

MBS("WinSendMail.SendAsync"; WinSendMailRef; Flags)

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.

\$Email

Flags

The flags. Add 1 to show no dialog. Add 2 to disable logon user interface. Add 4 to disable parent window.

Result Returns OK or error.

Description

The email is sent using the locally installed mail client. But this function does not wait for the result. Some email clients seem not to like more than one attachment.

With outlook you can keep text empty and attach a html file. Than Outlook will use the html file as content of the email and allows you to send html email.

Falls back to WinSendMail.SendAnsi if Unicode support is missing in older Windows versions.

Outlook loves to return failed, if you pass in email address for To/BCC/CC and no name.

186.18 WinSendMail.SetFrom

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
186 WinSendMail	7.1	No	Yes	No	No	No

MBS("WinSendMail.SetFrom"; WinSendMailRef; Email { ; Name })

Parameters

WinSendMailRef

The email reference number obtained using WinSendMail.CreateEmail function.

\$Email

Email

The email address of the from field.

"test@mbsplugins.de"

Name

Optional

Optional the name of the from field. If this name contains special characters, it will be automatically encoded with UTF-8. Do not put an email address here!

"John Miller"

Result Returns OK or error.

Description

Examples

Sets the from address:

```
Set Variable [ $r; Value:MBS( "WinSendMail.SetFrom"; $email; Send::From Email ; Send::From Name ) ]
```

Chapter 187

WMFP

The Windows Media Foundation Player can play audio and video independent of a container field.

Instead of using an interactive container field, you can play audio in background or video on your layout without putting a container field there.

See also AVPlayer functions for MacOS.

187.1 WMFP.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.Create"; URL { ; WindowRef; ControlName })

Parameters

URL

The URL for the video. See Path.FilePathToFileURL function to convert file path.

"file://C:/Users/Christian/Desktop/test.MOV"

WindowRef

Optional

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

ControlName

Optional

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a rectangle.

"mymedia"

Result Returns reference number or error.

Description

The player can be audio only without showing in the layout or reference a layout object to play with video. The file is loaded asynchronously, so please wait a few milliseconds or check state later.

Use WMFP.Release later to destroy the video player.

Pass no window reference and no control name to create an audio player for background playback.

Examples

Load video into new player:

```
# Create new player and load video
Set Variable [ $URL ; Value: MBS( "Path.FilePathToFileURL"; Windows Player::Path) ]
# Player is a rectangle on the layout
Set Variable [ $$player ; Value: MBS("WMFP.Create"; $URL; 0; "Player") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to load video" ; $$player ]
Set Variable [ $$player ; Value: "" ]
Else
# Little pause to let loading happen in background
Pause/Resume Script [ Duration (seconds): ,1 ]
Set Variable [ $r ; Value: MBS("WMFP.SetPlaybackEndedScriptTrigger"; $$player; Get(FileName); "Play-
back Done") ]
Set Variable [ $r ; Value: MBS("WMFP.Play"; $$player) ]
End If
```

187.2 WMFP.FrameStep

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.FrameStep"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns OK or error.

Description

The player object does not support frame stepping during reverse playback (that is, while the playback rate is negative).

Examples

Play one frame forward:

Set Variable [\$r; Value: MBS("WMFP.FrameStep"; \$\$Player)]

Created 25th December 2019, last changed 26th December 2019.

187.3 WMFP.GetBalance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.GetBalance"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns number or error.

Description

Value is between -1 (left only) to +1 (right only)

See also

- 187.19 WMFP.SetBalance

Created 25th December 2019, last changed 25th December 2019.

187.4 WMFP.GetDuration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.GetDuration"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns number or error.

Description

Returns duration of the video in seconds.

Examples

Show position, duration and state:

```
Show Custom Dialog [ "Position" ; Round(MBS("WMFP.GetPosition"; $$player);1) &
" of " &
Round(MBS("WMFP.GetDuration"; $$player);1) &
"&
MBS("WMFP.GetState"; $$player) ]

187.5 WMFP.GetIdealVideoSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.GetIdealVideoSize"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns list or error.

Description

The sizes where the video can be displayed without significantly degrading performance or image quality. Returns a list of values with minimum width, minimum height, maximum width and maximum height

Examples

Query size:

MBS("WMFP.GetIdealVideoSize"; \$\$Player)

Example result: 1

1

2826

1978

See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.1	No	Yes	No	No	No

MBS("WMFP.GetLoop"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns 0, 1 or error.

Description

Returns 1 if looping or 0 if not.

MBS("WMFP.GetNativeVideoSize"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns list or error.

Description

Returns a list with width and height in pixels, aspect ratio x & y.

Examples

Query ideal size:

MBS("WMFP.GetNativeVideoSize"; \$\$Player)

Example result: 568

320

71

40

MBS("WMFP.GetPosition"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns number or error.

Description

Returns value in seconds.

Examples

Show position, duration and state:

```
Show Custom Dialog [ "Position" ; Round(MBS("WMFP.GetPosition"; $$player);1) &
" of " &
```

```
Round(MBS("WMFP.GetDuration"; $$player);1) &

Created 25th December 2019, last changed 26th December 2019.

187.11 WMFP.GetState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.GetState"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns text or error.

Description

State is Empty, Paused, Playing, Stopped or Shutdown.

Examples

Show position, duration and state:

```
Show Custom Dialog [ "Position" ; Round(MBS("WMFP.GetPosition"; $$player);1) &
" of " &
Round(MBS("WMFP.GetDuration"; $$player);1) &
$&

187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.SetBalance"; Player; Value)

Parameters**Player**

The reference number for the Windows Media Foundation Player object.

\$\$Player

Value

The new value.

0

Result Returns OK or error.

Description

The value can be any number in the following range (inclusive).

Value	Meaning
-1.0	The left channel is at full volume; the right channel is silent.
+1.0	The right channel is at full volume; the left channel is silent.

If the value is zero, the left and right channels are at equal volumes. The default value is zero.

Examples

Set balance to play only right speaker:

MBS("WMFP.SetBalance"; \$\$Player; 1.0)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	No	No	No

MBS("WMFP.SetBorder"; Player; Color)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"# FF0000"

Result Returns OK or error.

Description

The border color is used to letterbox the video.

Examples

Set border color:

```
MBS( "WMFP.SetBorder"; $$Player; "black")
```

Set border color to red:

```
MBS( "WMFP.SetBorder"; $$Player; "# FF0000")
```

- [Windows Media Foundation Player for FileMaker](#)

Created 25th December 2019, last changed 26th December 2019.

187.21 WMFP.SetFrame

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.SetFrame"; Player; ControlName { ; DX; DY })

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

DX

Optional

A delta to move player more to left or right.

0

DY

Optional

A delta to move player more to top or bottom.

0

Result Returns OK or error.

Description

If you moved control in layout mode, this can move the text view back to the new position.

Also useful to switch between different locations on the layout.

187.22 WMFP.SetLoop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.1	No	Yes	No	No	No

MBS("WMFP.SetLoop"; Player { ; Loop })

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Loop

Optional

The new setting. Pass 1 to enable looping or 0 to disable. Default is 0.

1

Result Returns OK or error.

Description

You can enable looping to automatically restart playback when file reached the end.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.SetMute"; Player; Value)

Parameters**Player**

The reference number for the Windows Media Foundation Player object.

\$\$Player

Value

The new setting. Pass 1 to mute or 0 to unmute.

1

Result Returns OK or error.

Description

Pass 1 to mute.

Examples

Disable sound:

```
Set Variable [ $r; Value: MBS( "WMFP.SetMute"; $$Player; 1 ) ]
```

Enable sound:

```
Set Variable [ $r; Value: MBS( "WMFP.SetMute"; $$Player; 0 ) ]
```

187.24 WMFP.SetPlaybackEndedScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.SetPlaybackEndedScriptTrigger"; Player; FileName; ScriptName)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

ScriptName

The name of the script to run.

"MyScript"

Result Returns OK or error.

Description

The given script is triggered when player reaches the end of the video.

Pass empty file and script name to clear.

187.25 WMFP.SetPosition

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.SetPosition"; Player; Value)

Parameters**Player**

The reference number for the Windows Media Foundation Player object.

\$\$Player

Value

The new position.

\$pos

Result Returns OK or error.

Description

Pass new position in seconds.

Examples

Jump 10 seconds forward:

```
Set Variable [ $r ; Value: MBS("WMFP.SetPosition"; $$player; 10 + MBS("WMFP.GetPosition"; $$player)) ]
```

Jump back to start:

```
Set Variable [ $r ; Value: MBS("WMFP.SetPosition"; $$player; 0) ]
```

187.26 WMFP.SetRate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.SetRate"; Player; Value)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Value

The new rate.

1.0

Result Returns OK or error.

Description

The playback rate is expressed as a ratio of the current rate to the normal rate. For example, 1.0 indicates normal playback, 0.5 indicates half speed, and 2.0 indicates twice speed. Positive values indicate forward playback, and negative values indicate reverse playback.

Examples

Set to double speed:

```
Set Variable [ $r; Value: MBS( "WMFP.SetRate"; $$Player; 2 ) ]
```

187.27 WMFP.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.SetTag"; Player; Value)

Parameters**Player**

The reference number for the Windows Media Foundation Player object.

\$\$Player

Value

The new value.

Get(RecordNumber)

Result Returns OK or error.

Description

Use the tag to store whatever value you want to associate with the text view. You can later query it using WMFP.GetTag.

Examples

Set tag:

MBS("WMFP.SetTag"; \$\$Player; "Hello")

See also

- 187.12 WMFP.GetTag 8780

Created 25th December 2019, last changed 25th December 2019.

187.28 WMFP.SetVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	No	No	No

MBS("WMFP.SetVisible"; Player; Visible)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Visible

The new visible state. Pass 0 to hide or 1 to show.

1

Result Returns OK or error.

Description

By default we create it visible, but you can hide it if it's on a register and the user clicked to other tab.

Examples

Hide player, e.g. when switching layouts or registers:

```
Set Variable [ $r ; Value: MBS("WMFP.SetVisible"; $$player; 0) ]
```

Show player:

```
Set Variable [ $r ; Value: MBS("WMFP.SetVisible"; $$player; 1) ]
```

187.29 WMFP.SetVolume

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	Yes, Windows only	No	No

MBS("WMFP.SetVolume"; Player)

Parameters**Player**

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns OK or error.

Description

Volume is expressed as an attenuation level, where 0.0 indicates silence and 1.0 indicates full volume (no attenuation).

If you call this method before playback starts, the setting is applied after playback starts.

Examples

Set to volume to 50% :

Set Variable [\$r; Value: MBS("WMFP.SetVolume"; \$\$Player; 0.5)]

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
187 WMFP	10.0	No	Yes	No	No	No

MBS("WMFP.UpdateVideo"; Player)

Parameters

Player

The reference number for the Windows Media Foundation Player object.

\$\$Player

Result Returns OK or error.

Description

This function makes sure the video is updated now, not later.

Examples

Update video now:

Set Variable [\$r; Value: MBS("WMFP.UpdateVideo"; \$\$Player)]

Created 25th December 2019, last changed 26th December 2019.

Chapter 188

WMIQuery

Query Windows Management Interface to learn about hardware and system configuration.

188.1 WMIQuery.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
188 WMIQuery	5.2	No	Yes	Yes, Windows only	No	No

```
MBS( "WMIQuery.Connect"; WMIQueryRef; NetworkResource { ; UserName; Password; Locale; Authority } )
```

Parameters

WMIQueryRef

The reference to the query. Create it with `WMIQuery.New` and destroy them with `WMIQuery.Release`.
\$ref

NetworkResource

The path of the correct WMI namespace to connect to. For local access to the default namespace, use a simple object path: `"root\default"` or `"\\.\\.\root\default"`. For access to the default namespace on a remote computer using COM or Microsoft-compatible networking, include the computer name: `"\\myserver\root\default"`. The computer name also can be a DNS name or IP address. Starting with Windows Vista, Connect can connect with computers running IPv6 using an IPv6 address.

`"ROOT\CimV2"`

UserName

Optional

The user name you need for a connection. An empty value indicates the current security context. If the user name is from a domain different from the current domain, the string may contain the domain name and user name separated by a backslash.

Password

Optional

The password you need for a connection. An empty value indicates the current security context. A blank string "" specifies a valid zero-length password.

Locale**Optional**

If empty, the current locale is used. If not empty, this parameter indicates the correct locale for information retrieval. For Microsoft locale identifiers, the format of the string is "MS_XXX", where XXX is a string in hexadecimal form that indicates the Local Identification (LCID), for example, American English would appear as "MS_409". If an invalid locale is specified, then the method returns "Invalid Parameter". Windows 7: If an invalid locale is specified, then the default locale of the server is used unless there is a server-supported locale provided by the user application.

Authority**Optional**

This parameter contains the name of the domain of the user to authenticate. Authority can have the following values: Empty: If you leave this parameter blank, NTLM authentication is used and the NTLM domain of the current user is used. If the domain is specified in strUser, which is the recommended location, then it must not be specified here. Specifying the domain in both parameters results in an invalid parameter error. Kerberos:<principal name>Kerberos authentication is used and this parameter should contain a Kerberos principal name. NTLMDOMAIN:<domain name>NT LAN Manager authentication is used and this parameter should contain an NTLM domain name.

Result Returns OK or error.

Description

Connects through DCOM to a WMI namespace on the computer specified in the strNetworkResource parameter.

Examples

Connect locally:

```
MBS( "WMIQuery.Connect"; "ROOT\CimV2" )
```

Connect and Query:

```
Set Variable [ $q; Value:MBS("WMIQuery.New") ]
If [ MBS("IsError") = 0 ]
Set Field [ WMI Query::QueryID; $q ]

188.6 WMIQuery.PropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
188 WMIQuery	5.2	No	Yes	Yes, Windows only	No	No

MBS("WMIQuery.PropertyValue"; WMIQueryRef; Name)

Parameters

WMIQueryRef

The reference to the query. Create it with WMIQuery.New and destroy them with WMIQuery.Release.
\$ref

Name

The name of the property to query.
"test"

Result Returns OK or error.

Description

The plugin returns text and number types as text or numbers.

Other data types are tried to convert to text.

A special handling is added for Arrays of Int32 and Text to return them as lists.

If you find an unsupported property type, please tell us, so we can add it here.

Chapter 189

WordFile

Modify Word files.

Load a word file, replace tags with real values and save file.

189.1 WordFile.AddMediaFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	9.1	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.AddMediaFile"; WordFile; Name; Image)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Name

The name of the item to add.

"image1.jpeg"

Image

The container value with the image.

Test::MyImage

Result Returns OK or error.

Description

You can use this function to add a new image.

You need to add the reference in XML yourself to let the image appear somewhere in the document.

See also

- 189.8 WordFile.GetMediaFile 8822
- 189.11 WordFile.MediaFiles 8825

- [MBS FileMaker Plugin, version 9.1pr6](#)

Created 6th March 2019, last changed 6th March 2019.

189.2 WordFile.Append

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	7.5	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.Append"; WordFile; Other WordFile { ; AddPageBreak })

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Other WordFile

The reference number of the second word file.

\$wordFile2

AddPageBreak

Optional

Available in MBS FileMaker Plugin 9.2 or newer.

Whether to add a page break.

1

Result Returns OK or error.

Description

This function takes document part from other word file and copies it's xml nodes to the current document. Please only copy from one document to other if they both are made from same template, so internal IDs for styles match.

189.2.1 Blog Entries

- [MBS FileMaker Plugin, version 9.2pr4](#)
- [MBS FileMaker Plugin, version 7.5pr9](#)

Created 22nd November 2017, last changed 19th April 2019.

189.3 WordFile.AppendTableRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	7.1	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.AppendTableRow"; WordFile; Placeholder)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Placeholder

The name of the placeholder.

"City"

Result Returns OK or error.

Description

If you have tables in your template word file and you like to duplicate rows and add them to the end of the table, just call this function with a placeholder field in that row. The place holder in the document must start with « and end with » characters.

Use WordFile.AppendTableRow to add new row to the end or WordFile.DuplicateTableRow to add it after the referenced one.

Examples

Add two lines and remove template line:

```
# load from container
Set Variable [ $wordfile ; Value: MBS( "WordFile.OpenContainer"; WordFile::Input ) ]
If [ MBS("ISError") ]
Show Custom Dialog [ "Error" ; $wordFile ]
Exit Script [ Text Result: ]
End If
#

189.4 WordFile.DuplicateTableRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	7.1	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.DuplicateTableRow"; WordFile; Placeholder)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Placeholder

The name of the placeholder.

"City"

Result Returns OK or error.

Description

If you have tables in your template word file and you like to duplicate rows in place, just call this function with a placeholder field in that row.

Use WordFile.AppendTableRow to add new row to the end or WordFile.DuplicateTableRow to add it after the referenced one.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	7.5	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.GetFieldText"; WordFile; FieldName)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

FieldName

The name of the field.

"Name"

Result Returns text or error.

Description

The plugin looks for the field with given name and queries it's text.

Returns true if field was found.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	6.3	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.GetMediaFile"; WordFile; Name)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Name

The name of the item to query.

"image1.jpeg"

Result Returns container value or error.

Description

Returns the images, so you can put them into a container.

Examples

Extract image from word file:

```
Set Variable [ $w; Value:MBS( "WordFile.OpenContainer"; WordTest::wordfile ) ]
Set Variable [ $r; Value:MBS( "WordFile.GetMediaFile"; $w; "image1.jpeg" ) ]
Set Field [ WordTest::image; $r ]
Set Variable [ $r; Value:MBS( "WordFile.Release"; $w ) ]
```

189.9 WordFile.GetXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	6.2	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.GetXML"; WordFile { ; Part })

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Part

Optional

The name of the part to query. See WordFile.Parts for a list of parts. if no part is given, we use the document.

"document"

Result Returns xml text or error.

Description

Getting the raw xml allows you to make modification yourself like adding paragraphs or a table.

Examples

Query XML of first footer:

```
MBS( "WordFile.GetXML"; $wordFile; "footer1" )
```

Query document relations:

```
MBS( "WordFile.GetXML"; $WordFile; "document.xml.rels")
```

189.10 WordFile.HasTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	5.4	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.HasTag"; WordFile; Placeholder)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Placeholder

The name of the placeholder.

"City"

Result Returns 1 or 0 or error.

Description

The place holder in the document must start with « and end with » characters. The place holder you pass here, should not have those quotes.

If you change font or style of the text within the marker, it will not be recognized. So please keep all text between and including the « and » markers (or whatever is configured) within the same font style.

Examples

Checks for a tag city:

```
Set Variable [ $r; Value:MBS("WordFile.HasTag"; $WordFile; "City") ]
```

Created 5th November 2015, last changed 2nd May 2018.

189.11 WordFile.MediaFiles

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	6.3	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.MediaFiles"; WordFile)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Result Returns list or error.

Description

This may include jpeg and png files.

Examples

Check what media files exist in a word file:

```
Set Variable [ $w; Value:MBS( "WordFile.OpenContainer"; WordTest::wordfile ) ]
```

```
Set Variable [ $r; Value:MBS( "WordFile.MediaFiles"; $w ) ]
```

```
Set Variable [ $r; Value:MBS( "WordFile.Release"; $w ) ]
```

189.12 WordFile.OpenContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	5.4	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.OpenContainer"; Container)

Parameters

Container

The container value containing the word file.

MyTable::MyContainerField

Result Returns reference number or error.

Description

Can be a docx or a xml file.

Reference numbers for WordFiles start at 46000.

Does not work for old .doc files!

May break if newer versions of Microsoft Word or Office change the docx file format.

Examples

Open from container:

```
# load from container
Set Variable [ $wordfile; Value:MBS( "WordFile.OpenContainer"; WordFile::Input ) ]
# later clean up
Set Variable [ $r; Value:MBS("WordFile.Release"; $WordFile) ]
```

Open word file and extract text:

```
Set Variable [ $w; Value:MBS( "WordFile.OpenContainer"; Extract text from Word file::WordFile ) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to read word file"; $w ]
Exit Script [ ]
End If
Set Field [ Extract text from Word file::Text; MBS( "WordFile.Texts"; $w ) ]
Set Variable [ $r; Value:MBS( "WordFile.Release"; $w ) ]
```

189.13 WordFile.OpenFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	5.4	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.OpenFile"; Path)

Parameters

Path

The file path for the word file.

"C:\test\test.docx"

Result Returns reference number or error.

Description

Can be a docx or a xml file.

Reference numbers for WordFiles start at 46000.

Does not work for old .doc files!

May break if newer versions of Microsoft Word or Office change the docx file format.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Opens file:

```
Set Variable [ $WordFile; Value:MBS("WordFile.OpenFile"; "/Users/cs/Desktop/Test1.xml") ]
```

Opens a docx file:

```
Set Variable [ $WordFile; Value:MBS("WordFile.OpenFile"; "/Users/cs/Desktop/Test.docx") ]
```

MBS("WordFile.Parts"; WordFile)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Result Returns list or error.

Description

This may tell you how many headers/footers we found in a docx file.

Examples

Query parts of document:

MBS("WordFile.Parts"; \$wordFile)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	7.0	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.RemoveTableRow"; WordFile; Placeholder)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Placeholder

The name of the placeholder.

"City"

Result Returns OK or error.

Description

If you have tables in your template word file and you only fill some rows, you can remove superfluous rows using this function.

Examples

Remove extra rows

```
Set Variable [ $index; Value:5 ]
```

```
Loop
```

```
Set Variable [ $r; Value:MBS( "WordFile.RemoveTableRow"; $WordFile; "Bst_Menge_" & If($index <10; "0"; "") & $index) ]
```

```
Set Variable [ $r; Value:MBS( "WordFile.RemoveTableRow"; $WordFile; "Bst_Bemerkung_" & If($index <10; "0"; "") & $index) ]
```

```
Set Variable [ $index; Value:$index + 1 ]
```

```
Exit Loop If [ $index >20 ]
```

```
End Loop
```

189.18 WordFile.ReplaceTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	5.4	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.ReplaceTag"; WordFile; Placeholder { ; Text; All })

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Placeholder

The name of the placeholder.

In plugin version 7.4 and newer case insensitive for ASCII characters.

"City"

Text

Optional

The new text. Should not contain newline characters.

"New York"

All

Optional

Pass 1 to replace all placeholders with same text.

1

Result Returns OK or error.

Description

The place holder in the document must start with « and end with » characters. The place holder you pass here, should not have those quotes.

If you need to replace multi line text like addresses, please use several placeholders, at least one per line. Or for newer plugin pass text with new lines, but that will only work for main text and not headers.

If you need to insert multiple entries, you can do this:

Ask the plugin for the XML of the document via WordFile.GetXML. Split the XML into the part before your template line, the template and the xml after. Your line probably is wrapped between a <p>and </p>. Now you can build a new XML with your content and repeat the template part with new text as often as needed. Than pass back the XML to the plugin via WordFile.SetXML.

Version 7.0 and newer can handle multi line text better for normal paragraphs. It creates for you new paragraphs for each line in the new text.

If you change font or style of the text within the marker, it will not be recognized. So please keep all text between and including the « and » markers (or whatever is configured) within the same font style.

Examples

Replaces placeholder with text:

```
Set Variable [ $r; Value:MBS("WordFile.ReplaceTag"; $WordFile; "City"; "Nickenich") ]
```

Replaces all placeholder with text:

```
Set Variable [ $r; Value:MBS("WordFile.ReplaceTag"; $WordFile; "City"; "Nickenich"; 1) ]
```

Replace some tags:

```
# load from container
Set Variable [ $wordfile ; Value: MBS( "WordFile.OpenContainer"; WordFile::Input ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error" ; $wordFile ]
Exit Current Script [ Result: ]
End If
# replace placeholders from one record
Set Variable [ $r ; Value: MBS( "WordFile.ReplaceTag"; $WordFile; "FG_Nr"; WordFile::FG_Nr.) ]
Set Variable [ $r ; Value: MBS( "WordFile.ReplaceTag"; $WordFile; "P_Name"; WordFile::P_Name) ]
Set Variable [ $r ; Value: MBS( "WordFile.ReplaceTag"; $WordFile; "P_Vorname"; WordFile::P_Vorname) ]
]
# write to desktop
Set Variable [ $DesktopPath ; Value: MBS("Folders.UserDesktop") ]
Set Variable [ $FilePath ; Value: MBS( "Path.AddPathComponent"; $DesktopPath; "test output.docx" ) ]
Set Variable [ $r ; Value: MBS( "WordFile.WriteFile"; $WordFile; $FilePath ) ]
Set Variable [ $r ; Value: MBS( "Files.LaunchFile"; $FilePath ) ]
# clean up
Set Variable [ $r ; Value: MBS("WordFile.Release"; $WordFile) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	7.4	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.SetCaseless"; WordFile; Mode)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Mode

The new mode. Pass 1 to compare caseless. Pass 0 to compare case insensitive. (Default)

1

Result Returns OK or error.

Description

This enables you to make the text comparison case insensitive for comparing ASCII characters.

Examples

Set case insensitive:

MBS("WordFile.SetCaseless"; \$WordFile; 1)

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	7.5	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.SetFieldText"; WordFile; FieldName; FieldText)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

FieldName

The name of the field.

"Name"

FieldText

The new field text.

"Hello"

Result Returns OK or error.

Description

The plugin looks for the field with given name and sets it's text.

Returns true if field was found.

Examples

Set a field value:

```
Set Variable [ $r; Value: MBS( "WordFile.SetFieldText"; $WordFile; "subject"; "Hello World" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	6.3	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.SetMarkers"; WordFile; OpenMarker; CloseMarker)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

OpenMarker

The new marker to search before tag.

"«"

CloseMarker

The new end marker.

"»"

Result Returns 1, 0 or error.

Description

Default are « and ».

Should be different and not empty.

Returns 1 on success or 0 on failure.

Please don't use < or > for markers as those conflict with XML structure.

MBS("WordFile.SetMediaFile"; WordFile; Name; Image)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Name

The name of the item to change.

"image1.jpeg"

Image

The container value with the image.

Test::MyImage

Result Returns OK or error.

Description

You can use this function to replace a placeholder image with a new image.

Please make sure the new image has same dimensions and same file type as the original one.

Examples

Replace image:

```
Set Variable [ $w; Value:MBS( "WordFile.OpenContainer"; WordTest::wordfile ) ]
Set Variable [ $r; Value:MBS( "WordFile.SetMediaFile"; $w; "image1.jpeg"; WordTest::image ) ]
Set Variable [ $r; Value:MBS( "WordFile.WriteFile"; $w; "/Users/cs/Desktop/output.docx" ) ]

XML

The XML content for the word file.

Part

Optional

The name of the part to query. See WordFile.Parts for a list of parts. if no part is given, we use the document.

"document"

Result Returns OK or error.

Description

189.24 WordFile.Texts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	5.4	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.Texts"; WordFile)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Result Returns text or error.

Description

Plugin inserts a few newline characters for detected line ends.

May not give all text. If you miss something, please send us test files.

Examples

Extracts text:

```
Set Field [ WordFiles::Texts; MBS("WordFile.Texts"; $WordFile) ]
```

Open word file and extract text:

```
Set Variable [ $w; Value:MBS( "WordFile.OpenContainer"; Extract text from Word file::WordFile ) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to read word file"; $w ]
Exit Script [ ]
End If
Set Field [ Extract text from Word file::Text; MBS( "WordFile.Texts"; $w ) ]
Set Variable [ $r; Value:MBS( "WordFile.Release"; $w ) ]
```

Created 5th November 2015, last changed 19th January 2018.

189.25 WordFile.WriteFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
189 WordFile	5.4	Yes	Yes	Yes	Yes	Yes

MBS("WordFile.WriteFile"; WordFile; Path)

Parameters

WordFile

The reference number of the open word file.

\$wordFile

Path

The native file path.

"C:\Test\test.docx"

Result Returns OK or error.

Description

File extension should be correct, either docx or xml depending on what you loaded.

May break if newer versions of Microsoft Word or Office change the docx file format.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Writes a DocX file:

```
Set Variable [ $r; Value:MBS("WordFile.WriteFile"; $WordFile; "/Users/cs/Desktop/TestOutput.docx") ]
```

Chapter 190

XL

Read and Write Excel files.

You can import or export data from/to XML files in old (xls) or new format (xlsx). Requires LibXL License (not included in MBS Plugin license)

190.1 XL.Book.AddCustomNumFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.AddCustomNumFormat"; bookRef; format)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

format

The format string.
"# .000"

Result Returns number or error.

Description

The format string customNumFormat indicates how to format and render the numeric value of a cell. Returns the custom format identifier. It's used in XL_Format_setNumFormat.

Read website for details:

<http://www.libxl.com/custom-format.html>

Examples

Create Excel file with some date value:

```

# create new xls file
Set Variable [ $book; Value:MBS( "XL.NewBook"; 0 ) ]
# create date format
Set Variable [ $dateFormat; Value:MBS( "XL.Book.AddFormat"; $book ) ]
Set Variable [ $dateFormatID; Value:MBS( "XL.Book.AddCustomNumFormat"; $book; "mmmm\d\,yyyy" ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $book; $dateFormat; $dateFormatID ) ]
# create sheet
Set Variable [ $sheet; Value:MBS( "XL.Book.AddSheet"; $book; "Sales Receipt" ) ]
# Write date
Set Variable [ $d; Value:MBS( "XL.Date.Pack"; $book; 2013; 10; 21 ) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 4; 4; $d; $dateFormat ) ]
#
Set Field [ Writing data::Output; MBS("XL.Book.Save"; $book; "test.xls") ]
Set Variable [ $r; Value:MBS("XL.Book.Release"; $book) ]

```

Add american phone number formatting:

```

Set Variable [ $f; Value:MBS( "XL.Book.AddCustomNumFormat"; $book; " [ <=9999999 ] # # # \-# # # # ;\(# # # \)\# # # \-# # # # " ) ]

```

Add dollar amount formatting:

```

Set Variable [ $f; Value:MBS( "XL.Book.AddCustomNumFormat"; $book; "_($ # # # 0.00_);_($ (# # # 0.00);_($* -??_);_(@)" ) ]

```

Add a custom format with condition:

```

# define custom number format
#
Set Variable [ $customFormat ; Value: MBS( "XL.Book.AddCustomNumFormat"; $book; " [ Red ] # [ <=100 ] ; [ Blue ] # [ >100 ] " ) ]
#
# make format
#
Set Variable [ $textFormat ; Value: MBS( "XL.Book.AddFormat"; $book ) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetNumFormat"; $book; $textFormat; $customFormat ) ]
#
# add sheet and use format:
#
Set Variable [ $sheet ; Value: MBS( "XL.book.AddSheet"; $book; "" ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 8; 1; 90; $textFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 8; 1; 110; $textFormat ) ]

```

Format dollar with CAD before:

```

MBS( "XL.Book.AddCustomNumFormat"; $book; "\"CAD\"$# ,## 0.00;\\"CAD-$\"# ,## 0.00;\\"CAD

```

190.1. *XL.BOOK.ADDCUSTOMNUMFORMAT* 8851

190.2 XL.Book.AddFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.AddFont"; bookRef { ; initFont })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

initFont

Optional

The index of an existing font which you want to use as a template.

0

Result Returns new font index or error.

Description

Examples

Create a font:

```
Set Variable [ $textFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetSize"; $book; $textfont; 8) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetName"; $book; $textfont; "Century Gothic") ]
```

Created 18th August 2014, last changed 5th May 2016.

190.3 XL.Book.AddFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "XL.Book.AddFormat"; bookRef { ; initFormat } )
```

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

initFormat

Optional

The index of an existing format which you want to use as a template.

0

Result Returns index of new format or error.

Description

Examples

Writes sheet with red font:

```
# create new xls file
Set Variable [ $book; Value:MBS( "XL.NewBook"; 0 ) ]
# create fonts
Set Variable [ $redColor; Value:MBS( "XL.Color.Pack"; $book; 255; 0; 0 ) ]
Set Variable [ $redFont; Value:MBS( "XL.Book.AddFont"; $book ) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetColor"; $book; $redFont; $redColor ) ]
#
# create formats
Set Variable [ $redFormat; Value:MBS( "XL.Book.AddFormat"; $book ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $redFormat; $redFont ) ]
#
# create sheet
Set Variable [ $sheet; Value:MBS( "XL.Book.AddSheet"; $book; "Sales Receipt" ) ]
#
# add number in red
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 5; 3; 123; $redFormat ) ]
#
Set Field [ Writing data::Output; MBS("XL.Book.Save"; $book; "test.xls") ]
Set Variable [ $r; Value:MBS("XL.Book.Release"; $book) ]
```

Use a number format:

```
# create new format
Set Variable [ $format; Value:MBS( "XL.Book.AddFormat"; $book ) ]
```

```
# use existing number format
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $book; $format; 7) ]
# and use format
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 5; 3; 123; $format) ]
```

Apply a new format to a column:

```
# create new format
Set Variable [ $format; Value:MBS( "XL.Book.AddFormat"; $BookRef ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $BookRef; $format; 7) ]
# set as format for column
Set Variable [ $r; Value:MBS( "XL.Sheet.SetColumn"; $BookRef; 0; 6; 6; 50 ; $format; 0 ) ]
# loop over all rows
Set Variable [ $lastRow; Value:MBS( "XL.Sheet.GetLastRow"; $BookRef; $sheet ) ]
Set Variable [ $row; Value:1 ]
Loop
Set Variable [ $r; Value:MBS( "XL.Sheet.SetCellFormat"; $BookRef; $sheet; $row; 6; $format ) ]
# next
Set Variable [ $row; Value:$row + 1 ]
Exit Loop If [ $row >$lastRow ]
End Loop
```

Create header row:

```
#
# define a font:
#
Set Variable [ $headerFont ; Value: MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetSize"; $book; $headerFont; 12) ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetName"; $book; $headerFont; "Century Gothic") ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetBold"; $book; $headerFont; 1) ]
#
# define a format:
#
Set Variable [ $headerFormat ; Value: MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetFont"; $book; $headerFormat; $headerFont) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetFillPattern"; $book; $headerFormat; 1) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetPatternForegroundColor"; $book; $headerFormat; MBS(
"XL.Color.Pack"; $book; 200; 200; 200) ) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetAlignH"; $book; $headerFormat; 2 /* center */ ) ]
#
Set Variable [ $r ; Value: MBS( "XL.Sheet.SetRow"; $book; $sheet; $row ; 20 ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 0; "Account" ; $headerFor-
mat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 1; "Account Group" ;
$headerFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 2; "Report Name" ; $head-
```

```

erFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 3; "Date TS" ; $headerFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 4; "Text" ; $headerFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 5; "Text2" ; $headerFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 6; "Text3" ; $headerFormat ) ]

```

190.4 XL.Book.AddPictureContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.AddPictureContainer"; bookRef; container)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

container

The container value with the image inside.

\$container

Result Returns image number or error.

Description

Returns a picture identifier. Supports BMP, DIB, PNG, JPG and WMF picture formats.

Use picture identifier with XL_Sheet_setPicture function.

Examples

Add a picture to excel sheet:

```
# add picture to file
Set Variable [ $logoID; Value:MBS( "XL.Book.AddPictureContainer"; $book; Writing data::Logo) ]
# position with size:
Set Variable [ $r; Value:MBS( "XL.Sheet.SetPictureWithSize"; $book; $sheet; 2; 1; $logoID; 100; 100) ]
# or with factor:
Set Variable [ $r; Value:MBS( "XL.Sheet.SetPictureWithScale"; $book; $sheet; 2; 1; $logoID; .2) ]
```

Adds picture with proportional scaled image:

```
Set Variable [ $image ; Value: MBS( "GMImage.NewFromContainer"; Writing data::Logo ) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $destWidth ; Value: 120 ]
Set Variable [ $destHeight ; Value: 120 ]
Set Variable [ $width ; Value: MBS( "GMImage.GetWidth"; $image ) ]
Set Variable [ $height ; Value: MBS( "GMImage.GetHeight"; $image ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $image ) ]
Set Variable [ $factor ; Value: Min ( $destheight / $height; $destwidth / $width ) ]
Set Variable [ $dwidth ; Value: $width * $factor ]
Set Variable [ $dheight ; Value: $height * $factor ]
#
Set Variable [ $logoID ; Value: MBS( "XL.Book.AddPictureContainer"; $book; Writing data::Logo) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.SetPictureWithSize"; $book; $sheet; 2; 1; $logoID; $dwidth;
```

```
$dheight) ]  
End If  
End If
```

190.5 XL.Book.AddPictureFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.AddPictureFile"; bookRef; filepath)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

filepath

The native file path to the image file to include.

"c:\test.jpg"

Result Returns image number or error.

Description

Returns a picture identifier. Supports BMP, DIB, PNG, JPG and WMF picture formats.

Use picture identifier with XL_Sheet_setPicture function.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

190.6 XL.Book.AddSheet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.AddSheet"; bookRef; Name { ; InitSheet })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Name

The name for the new sheet.

"Taxsheet"

InitSheet

Optional

The index of an existing sheet to use as template.

0

Result Returns new sheet index or error message.

Description

Use initSheet parameter if you wish to copy an existing sheet.

Note initSheet must be only from this book.

Examples

Writes sheet with red font:

```
# create new xls file
Set Variable [ $book; Value:MBS( "XL.NewBook"; 0 ) ]
# create fonts
Set Variable [ $redColor; Value:MBS( "XL.Color.Pack"; $book; 255; 0; 0 ) ]
Set Variable [ $redFont; Value:MBS( "XL.Book.AddFont"; $book ) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetColor"; $book; $redFont; $redColor ) ]
#
# create formats
Set Variable [ $redFormat; Value:MBS( "XL.Book.AddFormat"; $book ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $redFormat; $redFont ) ]
#
# create sheet
Set Variable [ $sheet; Value:MBS( "XL.Book.AddSheet"; $book; "Sales Receipt" ) ]
#
# add number in red
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 5; 3; 123; $redFormat ) ]
#
Set Field [ Writing data::Output; MBS("XL.Book.Save"; $book; "test.xls") ]
Set Variable [ $r; Value:MBS("XL.Book.Release"; $book ) ]
```

190.9 XL.Book.DeleteSheet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.DeleteSheet"; bookRef; sheetIndex)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet to delete. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns OK on success.

Description

If the sheet to delete is referenced by other sheets, this may cause problems.

Examples

Remove all sheets but the second one:

```
# Find libXL and load it
If [ MBS("XL.IsInitialized") = 1 ]
Perform Script [ "InitXL" ]
End If
# Load template excel file
Set Variable [ $bookRef; Value:MBS( "XL.LoadBook"; "/Users/cs/Desktop/Test.xlsx" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $bookRef ]
Exit Script [ ]
End If
# remove all but second sheet
Set Variable [ $c; Value:MBS( "XL.Book.SheetCount"; $bookRef ) ]
If [ $c >= 2 ]
If [ $c > 2 ]
Set Variable [ $i; Value:2 ]
Loop
Set Variable [ $r; Value:MBS( "XL.Book.DeleteSheet"; $bookRef; $i ) ]
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $c = $i ]
End Loop
End If
Set Variable [ $r; Value:MBS( "XL.Book.DeleteSheet"; $bookRef; 0 ) ]
End If
# Save to container and cleanup
Set Variable [ $r; Value:MBS("XL.Book.SaveToFile"; $bookRef; "/Users/cs/Desktop/output.xlsx" ) ]
```

Set Variable [\$r; Value:MBS("XL.Book.Release"; \$bookRef)]

Preprocess file before import in FileMaker by removing a row and a sheet:

```
# Find libXL and load it
If [ MBS("XL.IsInitialized") 1 ]
Perform Script [ Specified: From list ; "InitXL" ; Parameter: ]
End If
#
# path to xls or xlsx file
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "test.xls"
) ]
#
# Load template excel file
Set Variable [ $bookRef ; Value: MBS( "XL.LoadBook"; $path) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error" ; $bookRef ]
Exit Script [ Text Result: ]
End If
#
# Remove first row of first sheet

CHAPTER 190. XL

- 190.117 XL.LoadBook 9010
- 190.244 XL.Sheet.RemoveRow 9184

Created 18th August 2014, last changed 13th February 2020.

190.10 XL.Book.DeleteSheetsExcept

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	5.4	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.DeleteSheetsExcept"; bookRef; Name)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Name

The name of the sheet to keep.

"People"

Result Returns OK or error.

Description

Returns error if sheet name is not found.

On success, the book has only one sheet left.

If the sheet to delete is referenced by other sheets, this may cause problems.

Examples

Delete all sheets except one:

```
Set Variable [ $r; Value:MBS("XL.Book.DeleteSheetsExcept"; $bookRef; "Reiter 2") ]
```

190.16 XL.Book.GetPicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.GetPicture"; bookRef; index)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

index

The index of the picture from 0 to XL.Book.PictureCount-1.

0

Result Returns image or error.

Description

Returns container value with file, jpeg, tiff or png.

Please use XL.Book.GetPictureType to know the picture type before or Container.GetName and Container.GetTypes after.

190.17 XL.Book.GetPictureType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.GetPictureType"; bookRef; index)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

index

The index of the picture from 0 to XL.Book.PictureCount-1.
0

Result Returns picture type or error.

Description

Types are: PNG, JPEG, WMF, DIB, EMF and TIFF.

See also

190.18 XL.Book.GetRGBMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.GetRGBMode"; bookRef)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Result Returns 0 for index mode or 1 for RGB mode or error.

Description

Examples

Sets the fore color to red:

```

If [ MBS( "XL.Book.GetRGBMode"; $book ) = 0 ]
Set Variable [ $r; Value: MBS( "XL.Format.SetPatternForegroundColor"; $book; $format; 10 ) ]
Else
Set Variable [ $c; Value: MBS( "XL.Color.Pack"; $book; 255; 0; 0 ) ]
Set Variable [ $r; Value: MBS( "XL.Format.SetPatternForegroundColor"; $book; $format; $c ) ]
End If
Set Variable [ $r; Value: MBS( "XL.Format.SetFillPattern"; $book; $format; 1 ) ]

```

Created 18th August 2014, last changed 18th August 2014.

190.20 XL.Book.GetText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.GetText"; bookRef { ; formulas })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

formulas

Optional

Whether to return formulas as text. If you pass 1 here, the formulas will be returned instead of their result.

0

Result Returns text of workbook.

Description

Numbers are formatted as floating point numbers with dot as decimal separator.

Boolean values are returned as FALSE or TRUE.

This function will not calculate formulas.

190.21 XL.Book.InsertSheet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.InsertSheet"; bookRef; Index; Name { ; InitSheet })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

Index

The index where to insert the sheet.
0

Name

The name for the new sheet.
"Taxsheet"

InitSheet

Optional
The index of an existing sheet to use as template.
0

Result Returns new sheet index or error message.

Description

Use initSheet parameter if you wish to copy an existing sheet.
Note initSheet must be only from this book.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.MoveSheet"; bookRef; SourceIndex; DestIndex)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

SourceIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

DestIndex

The destination index of the sheet.

0

Result Returns OK or error.

Description

Takes a sheet with SourceIndex and insert it in front of a sheet with DestIndex.

Returns OK on success and error on failure.

- [How to use XL functions with MBS FileMaker Plugin](#)

Created 18th August 2014, last changed 9th July 2015.

190.29 XL.Book.SaveToFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.SaveToFile"; bookRef; path)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

path

The native path to write the file to.

"C:\test.xls"

Result Returns OK or error message.

Description

Returns error on failure or OK on result.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Preprocess file before import in FileMaker by removing a row and a sheet:

```
# Find libXL and load it
If [ MBS("XL.IsInitialized") 1 ]
Perform Script [ Specified: From list ; "InitXL" ; Parameter: ]
End If
#
# path to xls or xlsx file
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "test.xls"
) ]
#
# Load template excel file
Set Variable [ $bookRef ; Value: MBS( "XL.LoadBook"; $path ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error" ; $bookRef ]
Exit Script [ Text Result: ]
End If
#
# Remove first row of first sheet
Set Variable [ $r ; Value: MBS( "XL.Sheet.RemoveRow"; $BookRef; 0 /* sheet index */; 0 /* row index */ ) ]
#
```

190.29. *XL.BOOK.SAVETOFILE*

8889

```
# Remove second sheet
Set Variable [ $r ; Value: MBS( "XL.Book.DeleteSheet"; $bookRef; 1 /* sheet index */ ) ]
#
# Save to file and cleanup
Set Field [ XL::OutputFile ; MBS("XL.Book.SaveToFile"; $bookRef; $path) ]
Set Variable [ $r ; Value: MBS( "XL.Book.Release"; $bookRef) ]
#
# now let FileMaker import file
```

190.37 XL.Book.SheetIndexForName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	5.4	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.SheetIndexForName"; bookRef; Name)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Name

The name of the sheet to keep.

"People"

Result Returns number or error.

Description

Returns empty result if not found.

Examples

Shows index for a sheet:

Show Custom Dialog ["Sheets"; MBS("XL.Book.SheetIndexForName"; \$bookRef; "Reiter 2")]

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	5.4	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.Sheets"; bookRef)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

Result Returns list or error.

Description

Examples

Shows list of sheets:

```
Show Custom Dialog [ "Sheets"; MBS("XL.Book.Sheets"; $bookRef) ]
```

190.39 XL.Book.Version

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Book.Version"; bookRef)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

Result Returns number or error.

Description**Examples**

Query version of LibXL:

```
Set Variable [ $book ; Value: MBS( "XL.NewBook" ) ]
Set Variable [ $version ; Value: MBS( "XL.Book.Version"; $book ) ]
Set Variable [ $r ; Value: MBS( "XL.Book.Release"; $book ) ]
Show Custom Dialog [ "Version" ; $version ]
```

190.40 XL.Color.Pack

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Color.Pack"; bookRef; red; green; blue)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

red

The red color value from 0 to 255.

255

green

The green color value from 0 to 255.

255

blue

The blue color value from 0 to 255.

255

Result Returns color value.

Description

Examples

Checks what color value to use for 100% red:

```
MBS( "XL.Color.Pack"; $$book; 255; 0; 0)
// shows 10 in indexed color mode
// shows 16711680 in RGB mode
```

Writes sheet with red font:

```
# create new xls file
Set Variable [ $book; Value:MBS( "XL.NewBook"; 0 ) ]
# create fonts
Set Variable [ $redColor; Value:MBS( "XL.Color.Pack"; $book; 255; 0; 0) ]
Set Variable [ $redFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetColor"; $book; $redFont; $redColor) ]
#
# create formats
Set Variable [ $redFormat; Value:MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $redFormat; $redFont) ]
#
# create sheet
```

190.40. XL.COLOR.PACK

8901

```
Set Variable [ $sheet; Value:MBS( "XL.Book.AddSheet"; $book; "Sales Receipt" ) ]
#
# add number in red
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 5; 3; 123; $redFormat) ]
#
Set Field [ Writing data::Output; MBS("XL.Book.Save"; $book; "test.xls") ]
Set Variable [ $r; Value:MBS("XL.Book.Release"; $book) ]
```

190.41 XL.Color.UnPack

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Color.UnPack"; bookRef; value; selector)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

value

The packed color value.

255

selector

The selector on what to return. Can be red, green or blue.

"red"

Result Returns color component value or error.

Description

Examples

Extracts color in RGB mode:

```
$r = MBS( "XL.Color.UnPack"; $$book; 16711680; "red")
$g = MBS( "XL.Color.UnPack"; $$book; 16711680; "green")

190.42 XL.CopyContent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("XL.CopyContent"; bookRef; otherBookRef { ; Options })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

otherBookRef

The reference to the second workbook. Please use XL.NewBook to create a file.

\$ref2

Options

Optional

Which items to skip when copying content.

””

Result Returns OK or error.

Description

The plugin loops through all sheets and creates matching sheets on new book. Formats and fonts are created on the fly.

This allows you to convert from XLS to XLSX or back.

Please report if something is not copied. Of course plugin can only copy what libXL supports, so things like movies or diagrams are not copied. And if you use demo mode, only a small part is copied with values. Rest will be blank.

Option	Description.
SkipPictures	Don't copy pictures.
SkipMerges	Don't copy merged cells.
SkipNamedRanges	Don't copy named ranges.
SkipPrintArea	Don't copy print area.
SkipPrintRepeat	Don'T copy print repeat
SkipPrintFit	Don't copy print fit.
SkipHorPageBreak	Don't copy horizontal page breaks.
SkipComments	Don't copy cell comments.
SkipFormats	Don't copy formats.
SkipRowHidden	Don't copy hidden rows.
SkipColHidden	Don't copy hidden columns.

190.42. *XL.COPYCONTENT*

190.43 XL.CopyRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	6.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.CopyRow"; bookRef1; bookRef2; sheetIndex1; sheetIndex2; SourceRow; DestRow { ; Options })

Parameters

bookRef1

The reference to the source workbook. Please use XL.LoadBook to load a file.

\$ref

bookRef2

The reference to the destination workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex1

The source index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

sheetIndex2

The destination index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

SourceRow

The source row index.

\$srow

DestRow

The destination row index.

\$drow

Options

Optional

Which items to skip when copying content.

””

Result Returns OK or error.

Description

Source and destination can be in different sheets/books.

This copies most properties and all cells.

If something is missing, please let us know.

Examples

Copy row:

```
# load one from container
```

Option	Description.
SkipPictures	Don't copy pictures.
SkipMerges	Don't copy merged cells.
SkipNamedRanges	Don't copy named ranges.

190.46 XL.Date.Pack

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Date.Pack"; bookRef; year; month; day { ; hour; minute; second; msec })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

year

The year value.

2013

month

The month value from 1 to 12.

10

day

The day value.

18

hour

Optional

The hour value from 0 to 23.

11

minute

Optional

The minute value from 0 to 59.

1

second

Optional

The second value from 0 to 59.

5

msec

Optional

The millisecond value from 0 to 999.

0

Result Returns timestamp number or error.

Description**Examples**

Build a date:

```
MBS( "XL.Date.Pack"; $$book; 2013; 10; 21; 19; 55; 13)
// shows 41568.83001157407125
```

Build a date without time:

```
MBS( "XL.Date.Pack"; $$book; 2013; 10; 21)
```

Create Excel file with some date value:

```
# create new xls file
Set Variable [ $book; Value:MBS( "XL.NewBook"; 0 ) ]
# create date format
Set Variable [ $dateFormat; Value:MBS( "XL.Book.AddFormat"; $book ) ]
Set Variable [ $dateFormatID; Value:MBS( "XL.Book.AddCustomNumFormat"; $book; "mmmm\d\, \yyyy" ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $book; $dateFormat; $dateFormatID ) ]
# create sheet
Set Variable [ $sheet; Value:MBS( "XL.Book.AddSheet"; $book; "Sales Receipt" ) ]
# Write date
Set Variable [ $d; Value:MBS( "XL.Date.Pack"; $book; 2013; 10; 21 ) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 4; 4; $d; $dateFormat ) ]
#
Set Field [ Writing data::Output; MBS("XL.Book.Save"; $book; "test.xls") ]
Set Variable [ $r; Value:MBS("XL.Book.Release"; $book) ]
```

190.55 **XL.Font.GetStrikeOut**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Font.GetStrikeOut"; book; Font)

Parameters

book

The reference to the workbook. Please use `XL.LoadBook` to load a file.

\$ref

Font

The index of the font in the book to target.

0

Result Returns value or error.

Description

- 190.117 `XL.LoadBook` 9010

Created 18th August 2014, last changed 18th August 2014.

190.56 XL.Font.GetUnderline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Font.GetUnderline"; book; Font)

Parameters**book**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Font

The index of the font in the book to target.

0

Result Returns value or error.

Description

Values:

- 0 No underline
- 1 Single underline
- 2 Double underline
- 33 Single ACC
- 34 Double ACC

Created 18th August 2014, last changed 18th August 2014.

190.57 XL.Font.SetBold

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Font.SetBold"; book; Font; Value)

Parameters**book**

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

Font

The index of the font in the book to target.
0

Value

The new setting. Pass 1 for bold and 0 for normal.
0

Result Returns OK or error.

Description**Examples**

Make a font bold:

```
MBS( "XL.Font.SetBold"; $book; $font10; 1 )
```

Create a format for bold font:

```
# create a font
Set Variable [ $textFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetBold"; $book; $textfont; 1) ]
# create format
Set Variable [ $textFormat; Value:MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $textFormat; $textFont) ]
```

Writes a formula with bold font format:

```
# add a bold font based on another font
Set Variable [ $textFontBold ; Value: MBS( "XL.Book.AddFont"; $book; $textFont) ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetBold"; $book; $textFontBold; 1) ]
# add format based on other format
Set Variable [ $dollarFormatBold ; Value: MBS( "XL.Book.AddFormat"; $book; $dollarFormat) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetFont"; $book; $dollarFormatBold; $textFontBold) ]
# use format
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteFormula"; $book; $sheet; 38; 4; "SUM(E16:E38)";
$dollarFormatBold) ]
```

- 190.249 XL.Sheet.SetCellFormats 9192

Created 18th August 2014, last changed 12nd November 2018.

190.58 XL.Font.SetColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Font.SetColor"; book; Font; Value)

Parameters**book**

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

Font

The index of the font in the book to target.
0

Value

The new font color.
255

Result Returns OK or error.

Description

If you set value and book is in RGB mode you can use XL.ColorPack function to get a numeric value for color components. If the book is not in RGB mode, you can use color values as described below.

Color values if not in RGB Mode:

Examples

Make a font blue in non RGB mode:

```
MBS( "XL.Font.SetColor"; $book; $font10; 12 )
```

Writes sheet with red font:

```
# create new xls file
Set Variable [ $book; Value:MBS( "XL.NewBook"; 0 ) ]
# create fonts
Set Variable [ $redColor; Value:MBS( "XL.Color.Pack"; $book; 255; 0; 0 ) ]
Set Variable [ $redFont; Value:MBS( "XL.Book.AddFont"; $book ) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetColor"; $book; $redFont; $redColor ) ]
#
# create formats
Set Variable [ $redFormat; Value:MBS( "XL.Book.AddFormat"; $book ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $redFormat; $redFont ) ]
#
# create sheet
```

```

Set Variable [ $sheet; Value:MBS( "XL.Book.AddSheet"; $book; "Sales Receipt" ) ]
#
# add number in red
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 5; 3; 123; $redFormat) ]
#
Set Field [ Writing data::Output; MBS("XL.Book.Save"; $book; "test.xls") ]
Set Variable [ $r; Value:MBS("XL.Book.Release"; $book) ]

```

Create font with color 22:

```

Set Variable [ $titleFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetColor"; $book; $titlefont; 22) ]

```

190.59 XL.Font.SetItalic

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Font.SetItalic"; book; Font; Value)

Parameters**book**

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

Font

The index of the font in the book to target.
0

Value

The new font italic setting. Pass 1 for italic and 0 for normal.
0

Result Returns OK or error.

Description**Examples**

Make a font italic:

MBS("XL.Font.SetItalic"; \$book; \$font10; 1)

See also

- 190.51 XL.Font.GetItalic 8917

190.60 XL.Font.SetName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Font.SetName"; book; Font; Value)

Parameters**book**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Font

The index of the font in the book to target.

0

Value

The new font name.

"Arial"

Result Returns OK or error.

Description

Default name is "Arial".

Examples

Create a font:

```
Set Variable [ $textFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetSize"; $book; $textfont; 8) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetName"; $book; $textfont; "Century Gothic") ]
```

190.89 XL.Format.SetAlignH

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Format.SetAlignH"; Book; Format; Value)

Parameters

Book

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Format

The index of the format in the book to target.

0

Value

The new setting.

\$value

Result Returns OK or error.

Description

Possible values:

- 0 general
- 1 left
- 2 center
- 3 right
- 4 full
- 5 justify
- 6 merge
- 7 distributed

Examples

Create left aligned format with specific font:

```
# create a font
Set Variable [ $textFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetSize"; $book; $textfont; 8) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetName"; $book; $textfont; "Century Gothic") ]
# create format
Set Variable [ $textFormat; Value:MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $textFormat; $textFont) ]
```

```
Set Variable [ $r; Value:MBS( "XL.Format.SetAlignH"; $book; $textFormat; 1) // left ]
```

Create header row:

```
#
# define a font:
#
Set Variable [ $headerFont ; Value: MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetSize"; $book; $headerFont; 12) ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetName"; $book; $headerFont; "Century Gothic") ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetBold"; $book; $headerFont; 1) ]
#
# define a format:
#
Set Variable [ $headerFormat ; Value: MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetFont"; $book; $headerFormat; $headerFont) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetFillPattern"; $book; $headerFormat; 1) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetPatternForegroundColor"; $book; $headerFormat; MBS(
"XL.Color.Pack"; $book; 200; 200; 200) ) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetAlignH"; $book; $headerFormat; 2 /* center */ ) ]
#
Set Variable [ $r ; Value: MBS( "XL.Sheet.SetRow"; $book; $sheet; $row ; 20 ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 0; "Account" ; $headerFor-
mat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 1; "Account Group" ;
$headerFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 2; "Report Name" ; $head-
erFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 3; "Date TS" ; $headerFor-
mat ) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 4; "Text" ; $headerFormat
) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 5; "Text2" ; $headerFormat
) ]
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 6; "Text3" ; $headerFormat
) ]
```

190.90 XL.Format.SetAlignV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Format.SetAlignV"; Book; Format; Value)

Parameters**Book**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Format

The index of the format in the book to target.

0

Value

The new setting.

\$value

Result Returns OK or error.

Description

Possible values:

- 0 Top
- 1 Center
- 2 Bottom
- 3 Jusity
- 4 Distributed

Examples

Create left aligned format with specific font:

```
# create a font
Set Variable [ $textFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetSize"; $book; $textfont; 8) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetName"; $book; $textfont; "Century Gothic") ]
# create format
Set Variable [ $textFormat; Value:MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $textFormat; $textFont) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetAlignH"; $book; $textFormat; 1) // left ]
Set Variable [ $r; Value:MBS( "XL.Format.SetAlignV"; $book; $textFormat; 0) // top ]
```

190.105 XL.Format.SetFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Format.SetFont"; Book; Format; Value)

Parameters**Book**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Format

The index of the format in the book to target.

0

Value

The new font index.

\$value

Result Returns OK or error.

Description

You can use XL.Book.AddFont to create a new font.

Examples

Create left aligned format with specific font:

```
# create a font
Set Variable [ $textFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetSize"; $book; $textfont; 8) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetName"; $book; $textfont; "Century Gothic") ]
# create format
Set Variable [ $textFormat; Value:MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $textFormat; $textFont) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetAlignH"; $book; $textFormat; 1) // left ]
```

\$value

Result Returns OK or error.

Description

The identifier must be a valid built-in number format identifier or the identifier of a custom number format.

To create a custom format use Xl.Book.addCustomNumFormat.

See built-in values in the table on this page:

<http://www.libxl.com/format.html>

Constant	Value	Description	Example
NUMFORMAT_GENERAL	0	general format	
NUMFORMAT_NUMBER	1	general number	1000
NUMFORMAT_NUMBER_D2	2	number with decimal point	1000.00
NUMFORMAT_NUMBER_SEP	3	number with thousands separator	100,000
NUMFORMAT_NUMBER_SEP_D2	4	number with decimal point and thousands separator	100,000.00
NUMFORMAT_CURRENCY_NEGBRA	5	monetary value, negative in brackets	(1000\$)
NUMFORMAT_CURRENCY_NEGBRAED	6	monetary value, negative is red in brackets	(1000\$)
NUMFORMAT_CURRENCY_D2_NEGBRA	7	monetary value with decimal point, negative in brackets	(\$1000.00)
NUMFORMAT_CURRENCY_D2_NEGBRAED	8	monetary value with decimal point, negative is red in brackets	(\$1000.00)
NUMFORMAT_PERCENT	9	percent value, multiply the cell value by 100	75%
NUMFORMAT_PERCENT_D2	10	percent value with decimal point, multiply the cell value by 100	75.00%
NUMFORMAT_SCIENTIFIC_D2	11	scientific value with E character and decimal point	10.00E+1
NUMFORMAT_FRACTION_ONEDIG	12	fraction value, one digit	10 1/2
NUMFORMAT_FRACTION_TWODIG	13	fraction value, two digits	10 23/95
NUMFORMAT_DATE	14	date value, depends on OS settings	3/11/2009
NUMFORMAT_CUSTOM_D_MON_YY	15	custom date value	11-Mar-09
NUMFORMAT_CUSTOM_D_MON	16	custom date value	11-Mar
NUMFORMAT_CUSTOM_MON_YY	17	custom date value	Mar-09
NUMFORMAT_CUSTOM_HMM_AM	18	custom date value	8:30 AM
NUMFORMAT_CUSTOM_HMSS_AM	19	custom date value	8:30:00 AM
NUMFORMAT_CUSTOM_HMM	20	custom date value	8:30
NUMFORMAT_CUSTOM_HMSS	21	custom date value	8:30:00
NUMFORMAT_CUSTOM_MDYYYY_HMM	22	custom datetime value	3/11/2009 8:30
NUMFORMAT_NUMBER_SEP_NEGBRA	37	number with thousands separator, negative in brackets	(4,000)
NUMFORMAT_NUMBER_SEP_NEGBRAED	38	number with thousands separator, negative is red in brackets	(4,000)
NUMFORMAT_NUMBER_D2_SEP_NEGBRA	39	number with thousands separator and decimal point, negative in brackets	(4,000.00)
NUMFORMAT_NUMBER_D2_SEP_NEGBRAED	40	number with thousands separator and decimal point, negative is red in brackets	(4,000.00)
NUMFORMAT_ACCOUNT	41	account value	5,000
NUMFORMAT_ACCOUNTCUR	42	account value with currency symbol	\$5,000
NUMFORMAT_ACCOUNT_D2	43	account value with decimal point	5,000.00
NUMFORMAT_ACCOUNT_D2_CUR	44	account value with currency symbol and decimal point	\$5,000.00
NUMFORMAT_CUSTOM_MMSS	45	custom time value	30:55
NUMFORMAT_CUSTOM_H0MSS	46	custom time value	20:30:55
NUMFORMAT_CUSTOM_MMSS0	47	custom time value	30:55.0
NUMFORMAT_CUSTOM_000P0E_PLUS0	48	custom value	15.2E+3
NUMFORMAT_TEXT	49	text value	any text

Examples

Use a number format:

```
# create new format
Set Variable [ $format; Value:MBS( "XL.Book.AddFormat"; $book) ]
# use existing number format
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $book; $format; 7) ]
# and use format
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 5; 3; 123; $format) ]
```

Apply a new format to a column:

```
# create new format
Set Variable [ $format; Value:MBS( "XL.Book.AddFormat"; $BookRef ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $BookRef; $format; 7) ]
# set as format for column
Set Variable [ $r; Value:MBS( "XL.Sheet.SetColumn"; $BookRef; 0; 6; 6; 50 ; $format; 0 ) ]
# loop over all rows
Set Variable [ $lastRow; Value:MBS( "XL.Sheet.GetLastRow"; $BookRef; $sheet ) ]
Set Variable [ $row; Value:1 ]
Loop
Set Variable [ $r; Value:MBS( "XL.Sheet.SetCellFormat"; $BookRef; $sheet; $row; 6; $format ) ]
# next
Set Variable [ $row; Value:$row + 1 ]
Exit Loop If [ $row >$lastRow ]
End Loop
```

190.109. *XL.FORMAT.SETNUMFORMAT*

8995

Created 18th August 2014, last changed 19th March 2018.

190.110 XL.Format.SetPatternBackgroundColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Format.SetPatternBackgroundColor"; Book; Format; Value)

Parameters

Book

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Format

The index of the format in the book to target.

0

Value

The new setting.

\$value

Result Returns OK or error.

Description

If you set value and book is in RGB mode you can use XL.ColorPack function to get a numeric value for color components. If the book is not in RGB mode, you can use color values as described in XL.Font.SetColor.

This is the background color for the pattern, you can put in the background of a cell. If your pattern is stripes, the one color is the foreground one and the other the background one.

Examples

Sets the fore color to red:

```
If [ MBS( "XL.Book.GetRGBMode"; $book) = 0 ]
Set Variable [ $r; Value: MBS( "XL.Format.SetPatternBackgroundColor"; $book; $format; 10) ]
Else
Set Variable [ $c; Value: MBS( "XL.Color.Pack"; $book; 255; 0; 0) ]
Set Variable [ $r; Value: MBS( "XL.Format.SetPatternBackgroundColor"; $book; $format; $c) ]
End If
Set Variable [ $r; Value: MBS( "XL.Format.SetFillPattern"; $book; $format; 1 ) ]
```

190.111 XL.Format.SetPatternForegroundColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Format.SetPatternForegroundColor"; Book; Format; Value)

Parameters

Book

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Format

The index of the format in the book to target.

0

Value

The new setting.

\$value

Result Returns OK or error.

Description

If you set value and book is in RGB mode you can use XL.ColorPack function to get a numeric value for color components. If the book is not in RGB mode, you can use color values as described in XL.Font.SetColor.

This is the foreground color for the pattern, you can put in the background of a cell. If your pattern is stripes, the one color is the foreground one and the other the background one. Setting no foreground color and using a pattern, can lead to use of the default color (black).

Examples

Sets the fore color to red:

```
If [ MBS( "XL.Book.GetRGBMode"; $book ) = 0 ]
Set Variable [ $r; Value: MBS( "XL.Format.SetPatternForegroundColor"; $book; $format; 10) ]
Else
Set Variable [ $c; Value: MBS( "XL.Color.Pack"; $book; 255; 0; 0) ]
Set Variable [ $r; Value: MBS( "XL.Format.SetPatternForegroundColor"; $book; $format; $c) ]
End If
Set Variable [ $r; Value: MBS( "XL.Format.SetFillPattern"; $book; $format; 1 ) ]
```

190.112 XL.Format.SetRotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Format.SetRotation"; Book; Format; Value)

Parameters**Book**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Format

The index of the format in the book to target.

0

Value

The new setting.

\$value

Result Returns OK or error.

Description

Must be a value from the following table:

Value	Meaning
0 - 90	Text rotated counterclockwise 0 to 90 degrees
91 - 180	Text rotated clockwise 1 to 90 degrees
255	Vertical text

190.114 XL.Format.SetWrap

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Format.SetWrap"; Book; Format; Value)

Parameters**Book**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Format

The index of the format in the book to target.

0

Value

The new setting. Pass 1 to enable wrap and 0 to disable.

\$value

Result Returns OK or error.

Description**Examples**

Create wrapping format:

```
Set Variable [ $textFormat; Value:MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetWrap"; $book; $textFormat; 1) ]
```

Write two lines with adjusting the row height:

```
# create format with wrap
#
Set Variable [ $textFormat ; Value: MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetWrap"; $book; $textFormat; 1) ]
#
# put in text with Char(10) for new line
#
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; $row; 1; "First line" & Char(10)
& "Second line"; $textFormat) ]
#
# make line higher
Set Variable [ $r ; Value: MBS( "XL.Sheet.SetRow"; $book; $sheet; $row; 20 ) ]
```

Create sheet with column format:

```
# create new xls file
Set Variable [ $book ; Value: MBS( "XL.NewBook"; 1 ) ]
```

```

# load logo picture
Set Variable [ $logoID ; Value: MBS( "XL.Book.AddPictureContainer"; $book; Writing data::Logo) ]
# create fonts
# create format for column
Set Variable [ $colFormat ; Value: MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetWrap"; $book; $colFormat; 1) // enable wrap ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetAlignH"; $book; $colFormat; 1) // left ]
#
# create specialized format for one cell with lock
Set Variable [ $lockFormat ; Value: MBS( "XL.Book.AddFormat"; $book; $colFormat) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetLocked"; $book; $lockFormat; 1) // on ]
#
# create sheet
Set Variable [ $sheet ; Value: MBS( "XL.Book.AddSheet"; $book; "Sales Receipt") ]
# set default format for whole column
Set Variable [ $r ; Value: MBS( "XL.Sheet.SetCol"; $book; $sheet; 1; 1; 12; $colFormat ) ]
#
# put some text in using column format
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; 2; 1; "Long text wraps due to
column format") ]
#
# and locked format
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; 3; 1; "And this is locked"; $lock-
Format) ]
#
# save and export
Set Field [ Writing data::Output ; MBS("XL.Book.Save"; $book; "test.xlsx") ]
Set Variable [ $r ; Value: MBS("XL.Book.Release"; $book) ]
#

CHAPTER 190. XL

9237

Created 18th August 2014, last changed 11st February 2020.

190.115 XL.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	2.9	Yes	Yes	Yes	Yes	Yes

MBS("XL.Initialize"; LibPath; LicenseName; LicenseKey)

Parameters**LibPath**

Native path to the DLL on Windows or Dylib file on MacOS. Can be empty for default file name with file in same folder as plugin.

"C:\libxl\libxl.dll"

LicenseName

The name of your libXL license.

""

LicenseKey

The license key of your libXL license.

""

Result Returns OK on success.

Description

You can keep the library in a database field and export it at runtime to a known location and load it from there.

If you have no license yet, you can test this function by passing empty strings for name and key.

For getting a license key, please visit the libXL website:

<https://www.monkeybreadsoftware.com/filemaker/libxl.shtml>

Starting with version 4.4, you can pass just the filename of library and the plugin finds it in the Extensions folder or in FileMaker's application folder.

Windows error 193 means that 64-bit FileMaker tried to load 32-bit library or 32-bit FileMaker tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.

Starting version 9.5, the plugin will look into the same folder for the DLL as the plugin resides. And we still look for 32/64 suffixes to DLL name. If no name is provided, we look for libxl.dll/dylib/so files.

If you get a crash here on MacOS, please check if crash report says Code Signature Invalid. Then you may need to code sign the dylib yourself to match the code signature of your runtime application. The dylib from MBS is normally code signed already and should work as is.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Initialize XL:

```
MBS( "XL.Initialize"; "/Library/FileMaker Server/Extensions/libxl.dylib"; "Test User"; "mac-43567890..." )
```

Initialize when needed:

```
# Initialize XL
If [ MBS( "XL.IsInitialized" ) = 1 ]
If [ Get ( SystemPlatform ) = -3 ]
# iOS
Exit Script [ ]
Else If [ Get ( SystemPlatform ) = -2 ]
# Windows
Set Variable [ $path; Value: "libxl.dll" ]
Set Variable [ $key; Value: "win-32213..." ]
Else
# Mac
Set Variable [ $path; Value: "libxl.dylib" ]
Set Variable [ $key; Value: "mac-32213..." ]
End If
Set Variable [ $r; Value: MBS( "XL.Initialize"; $path; "test"; $key ) ]
If [ $r = "OK" ]
Show Custom Dialog [ "LibXL failed to initialize"; $r ]
End If
End If
```

Initialize with license key on Windows with Server:

```
MBS( "XL.Initialize"; "C:\Program Files\FileMaker\FileMaker Server\Database Server\Extensions\libxl.dll";
"Test User"; "win-43567890..." )
```

Initialize automatically and look in same folder as plugin for the DLL/dylib/so file:

```
MBS("XL.Initialize"; "" ; $LicenseName; $LicenseKey)
```

190.116 XL.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	4.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.IsInitialized")

Result Returns 1 or 0.

Description

If value is 1, everything is okay.

If value is zero, the library is not initialized and you need to call XL.Initialize function.

On a hosted database this function is better than using a global variable, as the variable can't see if initialization was made on server or client side.

Examples

Initialize when needed:

```
# Initialize XL
If [ MBS( "XL.IsInitialized" ) = 1 ]
If [ Get ( SystemPlatform ) = -3 ]
# iOS
Exit Script [ ]
Else If [ Get ( SystemPlatform ) = -2 ]
# Windows
Set Variable [ $path; Value: "libxl.dll" ]
Set Variable [ $key; Value: "win-32213..." ]
Else
# Mac
Set Variable [ $path; Value: "libxl.dylib" ]
Set Variable [ $key; Value: "mac-32213..." ]
End If
Set Variable [ $r; Value: MBS( "XL.Initialize"; $path; "test"; $key ) ]
If [ $r = "OK" ]
Show Custom Dialog [ "LibXL failed to initialize"; $r ]
End If
End If
```

190.117 XL.LoadBook

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	2.9	Yes	Yes	Yes	Yes	Yes

MBS("XL.LoadBook"; Data { ; Type })

Parameters

Data

Either text with file path or container value which contains the Excel file data.

"C:\test\test.xls"

Type

Optional

Which type of file this is. Pass 0 for unknown, 1 to try xml format (xlsx) and 2 to try binary format (xls).

0

Result Returns book reference number on success.

Description

Works with both XML based xlsx files and older xls files.

Book reference numbers are starting at 19000 and counting up for each new book.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Load file from container with auto detect:

```
Set Variable [ $book; Value: MBS( "XL.LoadBook"; MyTable::myFileContainer; 0 ) ]
```

Preprocess file before import in FileMaker by removing a row and a sheet:

```
# Find libXL and load it
If [ MBS("XL.IsInitialized") 1 ]
Perform Script [ Specified: From list ; "InitXL" ; Parameter: ]
End If
#
# path to xls or xlsx file
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "test.xls"
) ]
#
# Load template excel file
Set Variable [ $bookRef ; Value: MBS( "XL.LoadBook"; $path ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error" ; $bookRef ]
Exit Script [ Text Result: ]
```

```

End If
#
# Remove first row of first sheet
Set Variable [ $r ; Value: MBS( "XL.Sheet.RemoveRow"; $BookRef; 0 /* sheet index */; 0 /* row index */ ) ]
#
# Remove second sheet
Set Variable [ $r ; Value: MBS( "XL.Book.DeleteSheet"; $bookRef; 1 /* sheet index */ ) ]
#
# Save to file and cleanup
Set Field [ XL::OutputFile ; MBS("XL.Book.SaveToFile"; $bookRef; $path) ]
Set Variable [ $r ; Value: MBS( "XL.Book.Release"; $bookRef) ]
#
# now let FileMaker import file

```

190.118 XL.LoadBookPartially

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.LoadBookPartially"; Data; SheetIndex; FirstRow; LastRow { ; Type })

Parameters**Data**

Either text with file path or container value which contains the Excel file data.

"C:\test\test.xls"

SheetIndex

The index of the sheet to delete. This number ranges from 0 to XL.Book.SheetCount-1.

0

FirstRow

The first row index to load. Starts with 0 for first one.

0

LastRow

The last row index to load.

100

Type

Optional

Which type of file this is. Pass 0 for unknown, 1 to try xml format (xlsx) and 2 to try binary format (xls).

0

Result Returns book reference number on success.

Description

Loads a file only with specified sheet index and row range into memory.

Works with both XML based xlsx files and older xls files.

Book reference numbers are starting at 19000 and counting up for each new book.

Examples

Try partial loading:

```
# Load second sheet

190.119 XL.NewBook

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	2.9	Yes	Yes	Yes	Yes	Yes

MBS("XL.NewBook"; XML)

Parameters**XML**

Pass 1 to create a new XML bases Excel file (xlsx). Else pass 0 for an old style file (xls). Default is 0.
0

Result Returns book reference number.

Description

Please call XL.Book.Release later to free memory.

Book reference numbers are starting at 19000 and counting up for each new book.

Examples

Create a new book:

```
$book = MBS( "XL.NewBook"; 0 )
```

190.120 XL.Sheet.AddHyperlink

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	4.3	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.AddHyperlink"; bookRef; sheetIndex; HyperLink; rowFirst; rowLast; colFirst; colLast)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

HyperLink

The text for the hyperlink.

"http://www.mbsplugins.de/"

rowFirst

The first row for the area. First row has index 0.

\$row

rowLast

The last row for the area. First row has index 0.

\$row

colFirst

The first column for the area. First column has index 0.

\$column

colLast

The last column for the area. First column has index 0.

\$column+1

Result Returns OK or error.

Description**Examples**

Add a link to cell B16:

MBS("XL.Sheet.AddHyperlink"; \$book; \$sheet; "http://www.heise.de/"; 15; 15; 1; 1)

190.121 XL.Sheet.AddIgnoredError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.AddIgnoredError"; bookRef; sheetIndex; rowFirst; colFirst; rowLast; colLast; ignoreErrors)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

rowFirst

The first row for the area. First row has index 0.

\$row

colFirst

The first column for the area. First column has index 0.

\$column

rowLast

The last row for the area. First row has index 0.

\$row

colLast

The last column for the area. First column has index 0.

\$column

ignoreErrors

The combination of errors to ignore.

"InconsistRange\$EvalError"

Result Returns OK or error.

Description

It allows to hide green triangles on left sides of cells. For example, if a cell is formatted as text but contains a numeric value, this is considered to be a potential error because the number won't be treated as a number, for example, in calculations. It is possible to combine a few IgnoredError values as list.

Returns error message on failure.

See also

- 190.36 XL.Book.SheetCount 8896
- 190.117 XL.LoadBook 9010

IgnoredError value	Description
NoError	No errors
EvalError	Ignore errors when cells contain formulas that result in an error.
EmptyCellRef	Ignore errors when formulas refer to empty cells.
NumberStoredAsText	Ignore errors when numbers are formatted as text or are preceded by an apostrophe.
InconsistRange	Ignore errors when formulas omit certain cells in a region.
InconsistFormula	Ignore errors when a formula in a region of your worksheet differs from other formulas in the same region.
TwoDigTextYear	Ignore errors when formulas contain text formatted cells with years represented as 2 digits.
UnlockFormula	Ignore errors when unlocked cells contain formulas.
DataValidation	Ignore errors when a cell's value in a Table does not comply with the Data Validation rules specified.

Created 22nd April 2017, last changed 22nd April 2017.

190.122 XL.Sheet.AddrToRowCol

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.AddrToRowCol"; bookRef; sheetIndex; Address; Selector)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Address

The address to convert.

"A1"

Selector

Which value to return: row, column, rowRelative, colRelative or address.

"row"

Result Returns value or error.

Description**Examples**

Query row number:

MBS("XL.Sheet.AddrToRowCol"; \$book; 0; "C10"; "row")

Example result: 9

Query column number:

MBS("XL.Sheet.AddrToRowCol"; \$book; 0; "C10"; "column")

Example result: 2

- 190.138 XL.Sheet.AutoFilter.SetSort 9041
- 190.139 XL.Sheet.AutoFilter.SetTop10 9042

Created 1st July 2017, last changed 1st July 2017.

190.136 XL.Sheet.AutoFilter.SetCustomFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.3	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.AutoFilter.SetCustomFilter"; bookRef; sheetIndex; FilterColumnIndex; Operator1; Value1 { ; Operator2; Value2; AndOperator })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

FilterColumnIndex

The column index of the filter. Range from 0 to XL.Sheet.AutoFilter.ColumnSize-1.

\$FilterColumn

Operator1

The operator used by the filter comparison in the first filter criteria. Can be =, , <, , >or

"="

Value1

value used in the first filter criteria

10

Operator2

Optional

The operator used by the filter comparison in the second filter criteria. Can be =, , <, , >or

"="

Value2

Optional

The value used in the second filter criteria.

"20"

AndOperator

Optional

Flag indicating whether the two criterias have an "and" relationship. Pass "And" or "Or".

"And"

Result Returns OK or error.

Description

Operator1: operator used by the filter comparison in the first filter criteria;Value1: value used in the first filter criteria;Operator2: operator used by the filter comparison in the second filter criteria;Value2: value used in the second filter criteria;AndOperator: Flag indicating whether the two criteria have an "and"

relationship.

190.137 XL.Sheet.AutoFilter.SetRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.AutoFilter.SetRef"; bookRef; sheetIndex; rowFirst; rowLast; colFirst; colLast)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

rowFirst

The first row for the area. First row has index 0.

\$row

rowLast

The last row for the area. First row has index 0.

\$row

colFirst

The first column for the area. First column has index 0.

\$column

colLast

The last column for the area. First column has index 0.

\$column+1

Result Returns OK or error.

Description**Examples**

Set area:

Set Variable [\$r ; Value: MBS("XL.Sheet.AutoFilter.SetRef"; \$book; \$sheet; 2; 10; 1; 4)]

190.138 XL.Sheet.AutoFilter.SetSort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.AutoFilter.SetSort"; bookRef; sheetIndex; columnIndex { ; descending })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

columnIndex

The zero based column index.

0

descending

Optional

Whether to sort descending. Pass 0 for ascending and 1 for descending. Default is descending.

0

Result Returns OK or error.

190.139 XL.Sheet.AutoFilter.SetTop10

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.3	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.AutoFilter.SetTop10"; bookRef; sheetIndex; FilterColumnIndex; Value; Top; Percent)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

FilterColumnIndex

The column index of the filter. Range from 0 to XL.Sheet.AutoFilter.ColumnSize-1.

\$FilterColumn

Value

Number of items

Top

Pass 1 to get top items or 0 for bottom items.

1

Percent

Pass 1 for percent values.

1

Result Returns OK or error.

190.140 XL.Sheet.CellsDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellsDate"; bookRef; sheetIndex; Row; Column)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

Result Returns 1 if cell is a time or date, 0 if normal cell or error message.

190.144 XL.Sheet.CellReadBooleans

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellReadBooleans"; bookRef; sheetIndex; First row; Last row; First column; Last column { ; Row Delimiter; Column Delimiter })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

First row

The first row to process. First row has index 0.

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns list of values or error.

Description

If one cell can't be read a boolean, the value in the result will be empty.

Created 18th August 2014, last changed 18th August 2014.

190.152 XL.Sheet.CellReadNumbers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellReadNumbers"; bookRef; sheetIndex; First row; Last row; First column; Last column { ; Row Delimiter; Column Delimiter })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

First row

The first row to process. First row has index 0.

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns list of values or error.

Description

If one cell can't be read as number, the value in the result will be empty.

190.153 XL.Sheet.CellReadText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellReadText"; bookRef; sheetIndex; Row; Column)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

Result Returns text or error message.

Description**Examples**

Reads text from first cell in first sheet:

MBS("XL.Sheet.CellReadText"; \$book; 0; 0; 0)

190.154 XL.Sheet.CellReadTexts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellReadTexts"; bookRef; sheetIndex; First row; Last row; First column; Last column { ; Row Delimiter; Column Delimiter })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

First row

The first row to process. First row has index 0.

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns list of values or error.

Description

If one cell can't be read as text, the value in the result will be empty.

Examples

Read area of cells:

MBS("XL.Sheet.CellReadTexts"; \$bookRef; \$sheet; 0; 5; 0; 5)

190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellWriteBooleans"; bookRef; sheetIndex; First row; Last row; First column; Last column; Values { ; Row Delimiter; Column Delimiter })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

First row

The first row to process. First row has index 0.

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Values

The values to use. Can be separated with row and column delimiter to give each row and column a different value. But you can also use same value for all rows or for all columns.

"1"

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns number of errors or error.

Description

190.159. XL.SHEET.CELLWRITEBOOLEANS 9075

You can write one value or multiple values to a given range of cells.
Returns number of errors occurred, so on success you get back zero.

Formula

The new formula to write.

"1+2"

Format

Optional

The format for the cell. This is index from 0 to XL.GetFormatCount-1 in the book's list of formats.

0

Result Returns OK or error message.

Description

As LibXL does not calculate the result of the formula, it will not encode the result in the Excel file. It does only store the formula, so an app opening the file will have to do the calculation. But QuickLook on Mac OS X does not calculate, so results do not show there.

See also XL.Sheet.CellReadFormula and XL.Sheet.CellsIsFormula.

Examples for formulas are: "TODAY()", "IF(C1>0;ABS(C1*D1);"""")", "SUM(E16:E38)" or "E39+E39*E40".

Examples

Loads book, writes some cells and saves back to container field:

```
# Load template excel file
Set Variable [ $bookRef; Value:MBS( "XL.LoadBook"; XL::ExcelFile) ]
Set Variable [ $sheet; Value:0 ]
# First row
Set Variable [ $row; Value:4 ]
```

```

Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $BookRef; $sheet; $row; 0; 1 ) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteText"; $BookRef; $sheet; $row; 1; "Cherries" ) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $BookRef; $sheet; $row; 2; 5 ) ]
# Second row
Set Variable [ $row; Value:5 ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $BookRef; $sheet; $row; 0; 2 ) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteText"; $BookRef; $sheet; $row; 1; "Banana" ) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $BookRef; $sheet; $row; 2; 3,5 ) ]
# Third row
Set Variable [ $row; Value:6 ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $BookRef; $sheet; $row; 0; 3 ) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteText"; $BookRef; $sheet; $row; 1; "Oranges" ) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $BookRef; $sheet; $row; 2; 6,25 ) ]
# Last row
Set Variable [ $row; Value:13 ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteFormula"; $BookRef; $sheet; $row; 2; "SUM(C5:C13)" ) ]
]
# Save to container and cleanup
Set Field [ XL::OutputFile; MBS("XL.Save"; $bookRef; "test.xls" ) ]
Set Variable [ $r; Value:MBS( "XL.Book.Release"; $bookRef ) ]
Set Field [ XL::Result; $r ]

```

Writes a formula with bold font format:

```

# add a bold font based on another font
Set Variable [ $textFontBold ; Value: MBS( "XL.Book.AddFont"; $book; $textFont ) ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetBold"; $book; $textFontBold; 1 ) ]
# add format based on other format
Set Variable [ $dollarFormatBold ; Value: MBS( "XL.Book.AddFormat"; $book; $dollarFormat ) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetFont"; $book; $dollarFormatBold; $textFontBold ) ]
# use format
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteFormula"; $book; $sheet; 38; 4; "SUM(E16:E38)";
$dollarFormatBold ) ]

```

190.166 XL.Sheet.CellWriteFormulaBoolean

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	6.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellWriteFormulaBoolean"; bookRef; sheetIndex; Row; Column; Formula; Value { ; Format })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

Formula

The new formula to write.

"1=2"

Value

The boolean value to put in cell.

0

Format

Optional

The format for the cell. This is index from 0 to XL.GetFormatCount-1 in the book's list of formats.

0

Result Returns OK or error.

Description

The value should be the current result, so there is something to display without calculating.

190.169 XL.Sheet.CellWriteFormulas

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellWriteFormulas"; bookRef; sheetIndex; First row; Last row; First column; Last column; Values { ; Row Delimiter; Column Delimiter })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

First row

The first row to process. First row has index 0.

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Values

The values to use. Can be separated with row and column delimiter to give each row and column a different value. But you can also use same value for all rows or for all columns.

"1+2"

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns number of errors or error.

Description

You can write one value or multiple values to a given range of cells. Returns number of errors occurred, so on success you get back zero.

190.170 XL.Sheet.CellWriteNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellWriteNumber"; bookRef; sheetIndex; Row; Column; Value { ; Format })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

Value

The new value to write.

123

Format

Optional

The format for the cell. This is index from 0 to XL.GetFormatCount-1 in the book's list of formats.

0

Result Returns OK or error message.

Description**Examples**

Create Excel file with some date value:

```
# create new xls file
Set Variable [ $book; Value:MBS( "XL.NewBook"; 0 ) ]
# create date format
Set Variable [ $dateFormat; Value:MBS( "XL.Book.AddFormat"; $book ) ]
Set Variable [ $dateFormatID; Value:MBS( "XL.Book.AddCustomNumFormat"; $book; "mmm\ddd\,yy" ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $book; $dateFormat; $dateFormatID ) ]
# create sheet
Set Variable [ $sheet; Value:MBS( "XL.Book.AddSheet"; $book; "Sales Receipt" ) ]
# Write date
```

```

Set Variable [ $d; Value:MBS( "XL.Date.Pack"; $book; 2013; 10; 21) ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 4; 4; $d; $dateFormat) ]
#
Set Field [ Writing data::Output; MBS("XL.Book.Save"; $book; "test.xls") ]
Set Variable [ $r; Value:MBS("XL.Book.Release"; $book) ]

```

Writes sheet with red font:

```

# create new xls file
Set Variable [ $book; Value:MBS( "XL.NewBook"; 0 ) ]
# create fonts
Set Variable [ $redColor; Value:MBS( "XL.Color.Pack"; $book; 255; 0; 0) ]
Set Variable [ $redFont; Value:MBS( "XL.Book.AddFont"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Font.SetColor"; $book; $redFont; $redColor) ]
#
# create formats
Set Variable [ $redFormat; Value:MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetFont"; $book; $redFormat; $redFont) ]
#
# create sheet
Set Variable [ $sheet; Value:MBS( "XL.Book.AddSheet"; $book; "Sales Receipt") ]
#
# add number in red
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 5; 3; 123; $redFormat) ]
#
Set Field [ Writing data::Output; MBS("XL.Book.Save"; $book; "test.xls") ]
Set Variable [ $r; Value:MBS("XL.Book.Release"; $book) ]

```

Use a number format:

```

# create new format
Set Variable [ $format; Value:MBS( "XL.Book.AddFormat"; $book) ]
# use existing number format
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $book; $format; 7) ]
# and use format
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $book; $sheet; 5; 3; 123; $format) ]

```

Write to a time formatted cell a time value:

```
MBS("XL.Sheet.CellWriteNumber"; $BookRef; $sheet; $row; $col; GetAsNumber(ExcelTest::TimeField)/(24*60*60))
```

190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellWriteNumbers"; bookRef; sheetIndex; First row; Last row; First column; Last column; Values { ; Row Delimiter; Column Delimiter })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

First row

The first row to process. First row has index 0.

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Values

The values to use. Can be separated with row and column delimiter to give each row and column a different value. But you can also use same value for all rows or for all columns.

"123"

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns number of errors or error.

Description

190.171. XL.SHEET.CELLWRITENUMBERS 9101

You can write one value or multiple values to a given range of cells.
Returns number of errors occurred, so on success you get back zero.

190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.CellWriteText"; bookRef; sheetIndex; Row; Column; Text { ; Format })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

Text

The new text to write.

"hello"

Format

Optional

The format for the cell. This is index from 0 to XL.GetFormatCount-1 in the book's list of formats.

0

Result Returns OK or error message.

Description**Examples**

Loads book, writes some cells and saves back to container field:

```
# Load template excel file
Set Variable [ $bookRef; Value:MBS( "XL.LoadBook"; XL::ExcelFile) ]
Set Variable [ $sheet; Value:0 ]
# First row
Set Variable [ $row; Value:4 ]
Set Variable [ $r; Value:MBS( "XL.Sheet.CellWriteNumber"; $BookRef; $sheet; $row; 0; 1 ) ]

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Values

The values to use. Can be separated with row and column delimiter to give each row and column a different value. But you can also use same value for all rows or for all columns.

"Test"

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns number of errors or error.

Description

You can write one value or multiple values to a given range of cells.
Returns number of errors occurred, so on success you get back zero.

Examples

Write 4 cells in one call

```
MBS( "XL.Sheet.CellWriteTexts"; $book; $sheet; 1; 1; 1; 4; "A,B,C,D"; §; ", " )
```

Write bold row and data rows:

```
# create bold font & format
Set Variable [ $boldFont ; Value: MBS( "XL.Book.AddFont"; $bookRef ) ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetBold"; $bookRef; $boldFont; 1 ) ]
Set Variable [ $boldFormat ; Value: MBS( "XL.Book.AddFormat"; $bookRef ) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetFont"; $bookRef; $boldFormat; $boldFont ) ]
# Write a title row
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteTexts"; $bookRef; $sheet; 1; 1; 1; 4; "A,B,C,D"; §; ", " ) ]
# Make it bold
Set Variable [ $r ; Value: MBS( "XL.Sheet.SetCellFormats"; $bookRef; $sheet; 1; 1; 1; 4; $boldFormat ) ]
# and write data
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteTexts"; $bookRef; $sheet; 2; 5; 1; 4; $data; §; ", " ) ]
```

190.174 XL.Sheet.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.Clear"; bookRef; sheetIndex { ; rowFirst; rowLast; colFirst; colLast })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

rowFirst

Optional

The first row for the area. Default is 0. First row has index 0.

\$row

rowLast

Optional

The last row for the area. Default is 65535.

\$row

colFirst

Optional

The first column for the area. Default is 0. First column has index 0.

\$column

colLast

Optional

The last column for the area. Default is 255.

\$column

Result Returns OK or error.

Description**See also**

190.182 XL.Sheet.GetCellError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetCellError"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns error code or error.

Description

Possible errors:

ErrorType value	Description
0	# NULL!
7	# DIV/0!
15	# VALUE!
23	# REF!
29	# NAME?
36	# NUM!
42	# N/A
255	no error

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetCellErrors"; bookRef; sheetIndex; First row; Last row; First column; Last column { ; Row Delimiter; Column Delimiter })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

First row

The first row to process. First row has index 0.

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns list of values or error.

Description

If one cell can't be read as error, the value in the result will be empty.

- 190.256 XL.Sheet.SetGroupSummaryRight 9204

Created 18th August 2014, last changed 18th August 2014.

190.195 XL.Sheet.GetHCenter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetHCenter"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns current setting, 1 for yes or 0 for no.

Description**See also**

- 190.36 XL.Book.SheetCount 8896

- 190.258 XL.Sheet.SetHeader 9206
- 190.286 XL.Sheet.SetVCenter 9243

Created 18th August 2014, last changed 18th August 2014.

190.196 XL.Sheet.GetHeader

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetHeader"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns text or error.

Description**See also**

- 190.117 XL.LoadBook 9010

- 190.268 XL.Sheet.SetPaper 9219
- 190.286 XL.Sheet.SetVCenter 9243

Created 18th August 2014, last changed 18th August 2014.

190.197 XL.Sheet.GetHeaderMargin

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetHeaderMargin"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns the margin value or error.

Description**See also**

- 190.36 XL.Book.SheetCount 8896

Created 18th August 2014, last changed 18th August 2014.

190.198 XL.Sheet.GetHidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetHidden"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns boolean or error message.

Description

Value is 1 if sheet is hidden and 0 if sheet is visible.

190.199 XL.Sheet.GetHorPageBreak

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetHorPageBreak"; bookRef; sheetIndex; Index)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Index

The index of the page break from 0 to XL.Sheet.GetHorPageBreakCount-1.

0

Result Returns value or error.

190.201 XL.Sheet.GetLandscape

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetLandscape"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns 1 for landscape mode, 0 for portrait mode or error.

Description**See also**

190.204 XL.Sheet.GetMarginBottom

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetMarginBottom"; bookRef; sheetIndex)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns current margin value or error message.

190.208 XL.Sheet.GetMerge

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190.XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetMerge"; bookRef; sheetIndex; Row; Column; selector)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

selector

Which value to return: rowFirst, rowLast, colFirst or colLast.

"colLast"

Result Returns value or error.

Description

Result is returned for selector values: rowFirst, rowLast, colFirst, colLast.

MBS("XL.Sheet.GetNamedRange"; bookRef; sheetIndex; name; selector { ; ScopeID })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

name

The name of the named range.

"test"

selector

Which value to return: rowFirst, rowLast, colFirst, colLast, name.

"rowFirst"

ScopeID

Optional

The scope ID to use for search. Can be -2 for undefined, -1 for workbook or positive number for other IDs. Default is undefined.

-1

Result Returns value or error.

190.212 XL.Sheet.GetPicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetPicture"; bookRef; sheetIndex; Index; Selector)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Index

The image index from 0 to XL.Sheet.PictureCount-1.

\$index

Selector

Which value to return. Can be id, rowTop, colLeft, rowBottom, colRight, width, height, offsetX or offsetY. "id"

Result Returns value or error.

Description

Output parameters:

(rowTop, colLeft) - top left position of picture;

(rowBottom, colRight) - bottom right position of picture;

width - width of picture in pixels;

height - height of picture in pixels;

offsetX - horizontal offset of picture in pixels;

offsetY - vertical offset of picture in pixels.

Use XL.Book.GetPicture for extracting binary data of picture by workbook picture index.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetPrintArea"; bookRef; sheetIndex; selector)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

selector

The value to query: rowFirst, rowLast, colFirst, colLast.

"rowFirst"

Result Returns OK or error.

Description

Returns error if print area isn't found.

190.214 XL.Sheet.GetPrintFit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetPrintFit"; bookRef; sheetIndex; selector)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

selector

Which value to return. Can be Enabled, hPages or vPages.

"Enabled"

Result Returns value or error.

Description

wPages: number of pages the sheet width is fit to;

hPages: number of pages the sheet height is fit to.

Enabled: 1 if enabled or 0 if disabled.

MBS("XL.Sheet.GetProtect"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns boolean or error message.

Description

Value is 1 if sheet is protected and 0 if sheet is not protected.

190.223 XL.Sheet.GetText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.GetText"; bookRef; Index { ; formulas })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

Index

The index of the sheet you want to query text. Value can be 0 to XL.Book.SheetCount-1.

\$index

formulas

Optional

Whether to return formulas as text. If you pass 1 here, the formulas will be returned instead of their result.

0

Result Returns text of sheet.

Description

Numbers are formatted as floating point numbers with dot as decimal separator.

Boolean values are returned as FALSE or TRUE.

Created 18th August 2014, last changed 18th August 2014.

190.237 XL.Sheet.NamedRange

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.NamedRange"; bookRef; sheetIndex; Index; selector { ; ScopeID })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.
0

Index

The index of the named range from 0 to XL.Sheet.NamedRangeCount.
0

selector

What information to return: rowFirst, rowLast, colFirst, colLast and name.
"name"

ScopeID

Optional

The scope ID to use for search. Can be -2 for undefined, -1 for workbook or positive number for other IDs.
Default is undefined.
-1

Result Returns value or error.

190.244 XL.Sheet.RemoveRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.RemoveRow"; bookRef; sheetIndex; rowFirst; rowLast)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

rowFirst

The first row for the area. First row has index 0.

\$row

rowLast

The last row for the area.

\$row+1

Result Returns OK or error.

Description

Examples

Preprocess file before import in FileMaker by removing a row and a sheet:

```
# Find libXL and load it
If [ MBS("XL.IsInitialized") 1 ]
Perform Script [ Specified: From list ; "InitXL" ; Parameter: ]
End If
#
# path to xls or xlsx file
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "test.xls"
) ]
#
# Load template excel file
Set Variable [ $bookRef ; Value: MBS( "XL.LoadBook"; $path ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error" ; $bookRef ]
Exit Script [ Text Result: ]
End If
#
# Remove first row of first sheet
Set Variable [ $r ; Value: MBS( "XL.Sheet.RemoveRow"; $BookRef; 0 /* sheet index */; 0 /* row index */)
```

```
]
#
# Remove second sheet
Set Variable [ $r ; Value: MBS( "XL.Book.DeleteSheet"; $bookRef; 1 /* sheet index */ ) ]
#
# Save to file and cleanup
Set Field [ XL::OutputFile ; MBS("XL.Book.SaveToFile"; $bookRef; $path) ]
Set Variable [ $r ; Value: MBS( "XL.Book.Release"; $bookRef) ]
#
# now let FileMaker import file
```

190.246 XL.Sheet.RowColToAddr

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.RowColToAddr"; bookRef; sheetIndex; Row; Column; rowRelative; colRelative)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

rowRelative

Whether to use relative row. Pass 1 for relative and 0 for absolute.

1

colRelative

Whether to use relative column. Pass 1 for relative and 0 for absolute.

1

Result Returns address value or error.

Description**Examples**

Calculates address and returns "\$D\$18":

```
MBS( "XL.Sheet.RowColToAddr"; $book; $sheet; 17; 3; 0; 0)
```

Calculates address and returns "D18":

```
MBS( "XL.Sheet.RowColToAddr"; $book; $sheet; 17; 3)
```

190.247 XL.Sheet.SetAutoFitArea

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	5.1	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetAutoFitArea"; bookRef; sheetIndex; rowFirst; colFirst; rowLast; colLast)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

rowFirst

The first row for the area. First row has index 0.

\$row

colFirst

The first column for the area. First column has index 0.

\$column

rowLast

The last row for the area. First row has index 0.

\$row

colLast

The last column for the area. First column has index 0.

\$column

Result Returns OK or error.

Description

The method XL.Sheet.SetCol with -1 width value will affect only to the specified limited area.

190.248 XL.Sheet.SetCellFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetCellFormat"; bookRef; sheetIndex; Row; Column; Format)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

Format

The format for the cell. This is index from 0 to XL.GetFormatCount-1 in the book's list of formats.

0

Result Returns OK or error.

Description

Examples

Apply a new format to a column:

```
# create new format
Set Variable [ $format; Value:MBS( "XL.Book.AddFormat"; $BookRef ) ]
Set Variable [ $r; Value:MBS( "XL.Format.SetNumFormat"; $BookRef; $format; 7 ) ]
# set as format for column
Set Variable [ $r; Value:MBS( "XL.Sheet.SetColumn"; $BookRef; 0; 6; 6; 50 ; $format; 0 ) ]
# loop over all rows
Set Variable [ $lastRow; Value:MBS( "XL.Sheet.GetLastRow"; $BookRef; $sheet ) ]
Set Variable [ $row; Value:1 ]
Loop
Set Variable [ $r; Value:MBS( "XL.Sheet.SetCellFormat"; $BookRef; $sheet; $row; 6; $format ) ]
# next
Set Variable [ $row; Value:$row + 1 ]
Exit Loop If [ $row >$lastRow ]
End Loop
```

190.249 XL.Sheet.SetCellFormats

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	8.0	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetCellFormats"; bookRef; sheetIndex; First row; Last row; First column; Last column; Formats { ; Row Delimiter; Column Delimiter })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

First row

The first row to process. First row has index 0.

3

Last row

The last row to process. First row has index 0.

6

First column

The first column to process. First column has index 0.

2

Last column

The last column to process. First column has index 0.

4

Formats

The format to use. Can be separated with row and column delimiter to give each row and column a different format. But you can also use same format for all rows or for all columns.

\$dollarFormat

Row Delimiter

Optional

The row delimiter for the result. Default is new line character.

"§"

Column Delimiter

Optional

The column delimiter for the result. Default is tab character.

char(9)

Result Returns number of errors or error.

Description

Examples

Write bold row and data rows:

```
# create bold font & format
Set Variable [ $boldFont ; Value: MBS( "XL.Book.AddFont"; $bookRef) ]
Set Variable [ $r ; Value: MBS( "XL.Font.SetBold"; $bookRef; $boldFont; 1) ]
Set Variable [ $boldFormat ; Value: MBS( "XL.Book.AddFormat"; $bookRef) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetFont"; $bookRef; $boldFormat; $boldFont) ]
# Write a title row
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteTexts"; $bookRef; $sheet; 1; 1; 1; 4; "A,B,C,D"; $; ", " ) ]
# Make it bold
Set Variable [ $r ; Value: MBS( "XL.Sheet.SetCellFormats"; $bookRef; $sheet; 1; 1; 1; 4; $boldFormat ) ]
# and write data
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteTexts"; $bookRef; $sheet; 2; 5; 1; 4; $data; $; ", " ) ]
```

190.250 XL.Sheet.SetCol

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetCol"; bookRef; sheetIndex; ColFirst; ColLast; Width { ; Format; Hidden })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

ColFirst

The first column.

0

ColLast

The last column.

0

Width

The new column width measured as the number of characters of the maximum digit width of the numbers 0, 1, 2, ..., 9 as rendered in the normal style's font. Value -1 is used for autofit column widths.

10

Format

Optional

The format for the cell. This is index from 0 to XL.GetFormatCount-1 in the book's list of formats.

0

Hidden

Optional

Whether to hide columns.

0

Result Returns OK or error message.

Description

If format equals 0 then format is ignored. Columns may be hidden.

Examples

Create sheet with column format:

```
# create new xls file
Set Variable [ $book ; Value: MBS( "XL.NewBook"; 1 ) ]
# load logo picture
Set Variable [ $logoID ; Value: MBS( "XL.Book.AddPictureContainer"; $book; Writing data::Logo) ]
```

```

# create fonts
# create format for column
Set Variable [ $colFormat ; Value: MBS( "XL.Book.AddFormat"; $book) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetWrap"; $book; $colFormat; 1) // enable wrap ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetAlignH"; $book; $colFormat; 1) // left ]
#
# create specialized format for one cell with lock
Set Variable [ $lockFormat ; Value: MBS( "XL.Book.AddFormat"; $book; $colFormat) ]
Set Variable [ $r ; Value: MBS( "XL.Format.SetLocked"; $book; $lockFormat; 1) // on ]
#
# create sheet
Set Variable [ $sheet ; Value: MBS( "XL.Book.AddSheet"; $book; "Sales Receipt") ]
# set default format for whole column
Set Variable [ $r ; Value: MBS( "XL.Sheet.SetCol"; $book; $sheet; 1; 1; 12; $colFormat ) ]
#
# put some text in using column format
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; 2; 1; "Long text wraps due to
column format") ]
#
# and locked format
Set Variable [ $r ; Value: MBS( "XL.Sheet.CellWriteText"; $book; $sheet; 3; 1; "And this is locked"; $lock-
Format) ]
#
# save and export
Set Field [ Writing data::Output ; MBS("XL.Book.Save"; $book; "test.xlsx") ]
Set Variable [ $r ; Value: MBS("XL.Book.Release"; $book) ]
#
Export Field Contents [ Writing data::Output ; Create folders: On ]

```

190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetColumn"; bookRef; sheetIndex; colFirst; colLast; width { ; format; hidden })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

colFirst

The first column. First column has index 0.

\$column

colLast

The last column.

\$column

width

The width of the column. Value -1 is used for autofit column widths.

5

format

Optional

The format index to use. You can use XL.Book.AddFormat to create new formats.

\$format

hidden

Optional

Whether to hide column. Default is 0.

0

Result Returns OK or error.

Description

Column width measured as the number of characters of the maximum digit width of the numbers 0, 1, 2, ..., 9 as rendered in the normal style's font. Columns may be hidden.

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.
0

Value

The new setting. Pass 1 to have gridlines visible or 0 to hide gridlines.
1

Result Returns OK or error message.

190.254 XL.Sheet.SetFooter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetFooter"; bookRef; sheetIndex; Text { ; Margin })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Text

The new footer text.

"test"

Margin

Optional

The margin to use.

0.5

Result Returns OK or error message.

Description

The footer text appears at the bottom of every page when printed. The length of the text must be less than or equal to 255. The footer text can contain special commands, for example a placeholder for the page number, current date or text formatting attributes. See XL.SetHeader for details. Margin is specified in inches.

190.258 XL.Sheet.SetHeader

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetHeader"; bookRef; sheetIndex; Text { ; Margin })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.
\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.
0

Text

The new header text.
"test"

Margin

Optional
The margin to use.
0.5

Result Returns OK or error message.

Description

The text appears at the top of every page when printed. The length of the text must be less than or equal to 255. The header text can contain special commands, for example a placeholder for the page number, current date or text formatting attributes. Special commands are represented by single letter with a leading ampersand ("& "). Margin is specified in inches.

Examples

Set sheet name:

MBS("XL.Sheet.SetHeader"; \$book; 0; "My Report 2019")

Code	Description
& L	specifies the beginning of the left section
& P	specifies the current page number
& N	specifies the total number of pages
& \d { 1,3 }	specifies the text font size, where font size is measured in points, for example: & 9 or & 36
& S	specifies whether the strikethrough text style is on or off
& X	specifies whether the superscript text style is on or off
& Y	specifies whether the subscript text style is on or off
& C	specifies the beginning of the center section
& D	specifies a date
& T	specifies a time
& G	specifies a picture
& U	specifies whether the single underline text style is on or off
& E	specifies whether the double underline text style is on or off
& R	specifies the beginning of the right section
& Z	specifies a workbook file path
& F	specifies a workbook file name
& A	specifies a sheet name
& "fontname"	specifies the text font, for example: & "Comic Sans MS"
& B	specifies whether the bold text style is on or off
& I	specifies whether the italic text style is on or off
& &	specifies an ampersand character (&)

190.259 XL.Sheet.SetHorPageBreak

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetHorPageBreak"; bookRef; sheetIndex; Row { ; Pagebreak })

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Pagebreak

Optional

Whether to break or not. Default is 1 for a break.

0

Result Returns OK or error.

190.269 XL.Sheet.SetPictureWithScale

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetPictureWithScale"; bookRef; sheetIndex; Row; Column; pictureId; scale { ; X; Y; pos })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

pictureId

The picture identifier number.

\$pictureID

scale

The scale factor.

1.0

X

Optional

Relative offset.

0

Y

Optional

Relative offset.

0

pos

Optional

The positioning. 0 = Move and Size, 1 = Move, 2 = Absolute.

0

Result Returns OK or error.

Description

Use XL.Book.AddPictureFile or XL.Book.AddPictureContainer for getting picture identifier.

Examples

Add a picture to excel sheet:

```
# add picture to file
Set Variable [ $logoID; Value:MBS( "XL.Book.AddPictureContainer"; $book; Writing data::Logo) ]
# position with size:
Set Variable [ $r; Value:MBS( "XL.Sheet.SetPictureWithSize"; $book; $sheet; 2; 1; $logoID; 100; 100) ]
# or with factor:
Set Variable [ $r; Value:MBS( "XL.Sheet.SetPictureWithScale"; $book; $sheet; 2; 1; $logoID; .2) ]
```

Created 18th August 2014, last changed 27th July 2018.

190.270 XL.Sheet.SetPictureWithSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetPictureWithSize"; bookRef; sheetIndex; Row; Column; pictureId; width; height { ; X; Y; pos })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row for the cell. First row has index 0.

\$row

Column

The column for the cell. First column has index 0.

\$column

pictureId

The picture identifier number.

\$pictureID

width

The picture width to use. Can be -1 or empty for automatic size.

400

height

The picture height to use. Can be -1 or empty for automatic size.

300

X

Optional

Relative offset.

0

Y

Optional

Relative offset.

0

pos

Optional

The positioning. 0 = Move and Size, 1 = Move, 2 = Absolute.

0

Result Returns OK or error.

Description

Use XL.Book.AddPictureFile or XL.Book.AddPictureContainer for getting a picture identifier.

Width and height can be -1 (or empty) for default size of picture.

Examples

Add a picture to excel sheet:

```
# add picture to file
Set Variable [ $logoID; Value:MBS( "XL.Book.AddPictureContainer"; $book; Writing data::Logo) ]
# position with size:
Set Variable [ $r; Value:MBS( "XL.Sheet.SetPictureWithSize"; $book; $sheet; 2; 1; $logoID; 100; 100) ]
# or with factor:
Set Variable [ $r; Value:MBS( "XL.Sheet.SetPictureWithScale"; $book; $sheet; 2; 1; $logoID; .2) ]
```

Adds picture with proportional scaled image:

```
Set Variable [ $image ; Value: MBS( "GMImage.NewFromContainer"; Writing data::Logo ) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $destWidth ; Value: 120 ]
Set Variable [ $destHeight ; Value: 120 ]
Set Variable [ $width ; Value: MBS( "GMImage.GetWidth"; $image ) ]
Set Variable [ $height ; Value: MBS( "GMImage.GetHeight"; $image ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $image ) ]
Set Variable [ $factor ; Value: Min ( $destheight / $height; $destwidth / $width ) ]

190.271 XL.Sheet.SetPrintArea

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetPrintArea"; bookRef; sheetIndex; rowFirst; rowLast; colFirst; colLast)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

rowFirst

The first row for the area. First row has index 0.

\$row

rowLast

The last row for the area. First row has index 0.

\$row

colFirst

The first column for the area. First column has index 0.

\$column

colLast

The last column for the area. First column has index 0.

\$column

Result Returns OK or error.

190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetProtectEx"; bookRef; sheetIndex; protect; Password; ProtectEx)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

protect

Whether to protect. Pass 1 to enable protection and 0 to disable.

1

Password

The password to use.

ProtectEx

The new protection setting. This can be a list of several options or a number.

"default"

Result Returns OK or error.

Description

It is possible to combine a few Enhanced Protection values.

- 190.278 XL.Sheet.SetProtect 9233

Created 22nd April 2017, last changed 22nd April 2017.

Enhanced Protection value	Description
default	Default protection.
all	Nothing is allowed except cell selections.
Objects	Objects are locked when the sheet is protected.
Scenarios	Scenarios are locked when the sheet is protected.
FormatCells	Formatting cells is allowed when the sheet is protected.
FormatColumns	Formatting columns is allowed when the sheet is protected.
FormatRows	Formatting rows is allowed when the sheet is protected.
InsertColumns	Inserting columns is allowed when the sheet is protected.
InsertRows	Inserting rows is allowed when the sheet is protected.
InsertHyperlinks	Inserting hyperlinks is allowed when the sheet is protected.
DeleteColumns	Deleting columns is allowed when the sheet is protected.
DeleteRows	Deleting rows is allowed when the sheet is protected.
SelLockedCells	Selection of locked cells is locked when the sheet is protected.
Sort	Sorting is allowed when the sheet is protected.
AutoFilter	Autofilters are allowed when the sheet is protected.
PivotTables	Pivot tables are allowed when the sheet is protected.
SelUnlockedCells	Selection of unlocked cells is locked when the sheet is protected.

190.280 XL.Sheet.SetRightToLeft

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetRightToLeft"; bookRef; sheetIndex; rightToLeft)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

rightToLeft

The new value.

1

Result Returns OK or error.

Description**See also**

- 190.36 XL.Book.SheetCount 8896
- 190.117 XL.LoadBook 9010
- 190.245 XL.Sheet.RightToLeft 9186

Created 22nd April 2017, last changed 22nd April 2017.

190.281 XL.Sheet.SetRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	3.5	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.SetRow"; bookRef; sheetIndex; Row; Height { ; Format; Hidden })

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Row

The row index to set.

0

Height

The new row height measured in point size.

20

Format

Optional

The format for the cell. This is index from 0 to XL.GetFormatCount-1 in the book's list of formats.

0

Hidden

Optional

Whether to hide columns.

0

Result Returns OK or error message.

Description

Row may be hidden.

Height is in points. If you want to convert from pixels to points you can use this calculation: points = pixels * 72 / 96. So for a height of 72 pixel, you pass 54 points.

- 190.289 XL.Sheet.Split 9246

Created 18th August 2014, last changed 18th August 2014.

190.291 XL.Sheet.Table

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.Table"; bookRef; sheetIndex; Index; Selector)

Parameters

bookRef

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Index

The index of the table to query.

0

Selector

Which value to query. Can be rowFirst, rowLast, colFirst, colLast, headerRowCount (the number of header rows showing at the top of the table. 0 means that the header row is not shown), totalsRowCount (the number of totals rows that shall be shown at the bottom of the table. 0 means that the totals row is not shown) or name.

"rowFirst"

Result Returns OK or error.

Created 22nd April 2017, last changed 22nd April 2017.

190.292 XL.Sheet.TableSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.TableSize"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns number or error.

Description**See also**

Created 22nd April 2017, last changed 22nd April 2017.

190.293 XL.Sheet.Type

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	7.2	Yes	Yes	Yes	Yes	Yes

MBS("XL.Sheet.Type"; bookRef; sheetIndex)

Parameters**bookRef**

The reference to the workbook. Please use XL.LoadBook to load a file.

\$ref

sheetIndex

The index of the sheet. This number ranges from 0 to XL.Book.SheetCount-1.

0

Result Returns text or error.

Description

Type is Sheet, Chart or Unknown.

See also

- 190.36 XL.Book.SheetCount 8896
- 190.117 XL.LoadBook 9010
- 190.291 XL.Sheet.Table 9248

190.294 XL.Uninitialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
190 XL	10.1	Yes	Yes	Yes	Yes	Yes

MBS("XL.Uninitialize")

Result Returns OK or error.

Description

This will clear all XLBook objects, clear all function pointers and free the library. You only need to call this if you like to replace the Library file and load another version. The library is automatically unloaded when FileMaker quits.

Created 28th February 2020, last changed 28th February 2020.

Chapter 191

XML

Functions for working on XML text.

With XPath queries you can query values or lists from XML.

191.1 Dictionary.ToXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
65 Dictionary 191 XML	6.1	Yes	Yes	Yes	Yes	Yes

MBS("Dictionary.ToXML"; DictionaryRef { ; Format })

Parameters

DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.
\$dic

Format

Optional

If 1, we format pretty. Pass 0 to get compact xml.

1

Result Returns OK or error.

Description

Examples

Test exporting dictionaries:

```
#  
#  
# Create new Dictionary
```

```

#
Set Variable [ $param; Value:MBS( "Dictionary.Create" ) ]
#
# Fill in values
#
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "text"; Pass Parameters with Dictionary::TextField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "number"; Pass Parameters with Dictionary::NumberField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "date"; Pass Parameters with Dictionary::DateField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "time"; Pass Parameters with Dictionary::TimeField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "timestamp"; Pass Parameters with Dictionary::TimeStampField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "container"; Pass Parameters with Dictionary::ContainerField ) ]
#
# Call save xml, json and text
#
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToXML"; $param; 1); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.xml"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToText"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.txt"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToJSON"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.json.txt"); "UTF8" ) ]
#
# free memory
#
Set Variable [ $r; Value:MBS("Dictionary.Release"; $param) ]

```

191.2 XML.ApplyStylesheet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	8.4	Yes	Yes	Yes	Yes	Yes

MBS("XML.ApplyStylesheet"; XML; StyleSheet { ; Parameters })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

```
"<test>Hello</test>"
```

StyleSheet

The XML of the style sheet. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

Parameters

Optional

The list of parameters to pass to the engine. Pass a list with key=value format.

```
"id=123&test=2"
```

Result Returns text or error.

Description

Performs a XSLT transformation on the input document.

The output may be a non-wellformed output XML wise!

Returns various errors if XML is not well formed or style sheet is invalid.

Based on LibXSLT, so it provides an implementation of XSLT 1.0, plus most of the EXSLT set of processor-portable extensions functions and some of Saxon's evaluate and expressions extensions.

Examples

Apply a stylesheet:

```
Set Variable [ $InputXML; Value:XSLT::InputXML ]
```

```
Set Variable [ $StyleSheet; Value:XSLT::StyleSheet ]
```

```
Set Variable [ $Output; Value:MBS("XML.ApplyStylesheet"; $InputXML; $StyleSheet) ]
```

```
Set Field [ XSLT::OutputXML; $Output ]
```

191.3 XML.Canonical

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	6.2	Yes	Yes	Yes	Yes	Yes

MBS("XML.Canonical"; XML { ; Flags; Mode })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 2 to include comments.

3

Mode

Optional

The output mode. Can be 0 for Original C14N 1.0 spec, 1 for Exclusive C14N 1.0 spec or 2 for C14N 1.1 spec.

0

Result Returns XML or error.

Description

Examples

Make canonical:

MBS("XML.Canonical"; Canonical XML::Input XML; 3)

191.4 XML.ClearVariables

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.ClearVariables"; VariableList)

Parameters

VariableList

The list of variables.

"test"

Result Returns OK or error.

Description

Pass the list returned from XML.SetVariables to clear the variables list.

See also

191.5 XML.Colorize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	8.2	Yes	Yes	Yes	Yes	Yes

MBS("XML.Colorize"; XML)

Parameters

XML

The XML text to process.

"<test>Hello</test>"

Result Returns formatted text or error.

Description

This colorizes an existing XML text to show to user.

Keys get blue, text value black, attributes in purple.

Text is returned only with colors. You can apply text font and font size with normal FileMaker functions.

Processing time is linear to length, so should be faster than custom functions.

Examples

Colorize a field:

Set Field [Data::XML ; MBS("XML.Colorize"; Data::XML)]

Line numbers, color and format:

MBS("Text.AddLineNumbers"; MBS("XML.Colorize"; MBS("XML.Format"; Buckets::Listing)))

191.6 XML.DeletePath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.4	Yes	Yes	Yes	Yes	Yes

MBS("XML.DeletePath"; XML; Path { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

```
"<test>Hello</test>"
```

Path

The path to the node or attribute to query.

```
"name"
```

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 4 to format returned XML. Add 32 to return result as XML.

```
0
```

Result Returns OK or error.

Description

This function uses a path notation like the JSON functions in FileMaker to describe paths.

You can use name of a node followed by option index in square brackets. On the end you can use # followed by a name of an attribute to select only the attribute.

Delimiter between items can be dot like FileMaker or newline.

If you pass in a XML reference number and you do not pass Flag value 32 for returning as XML, we just modify the XML reference in memory. This avoids performance hit for outputting and parsing xml for each change.

Examples

Delete node:

```
MBS( "XML.DeletePath"; "<test><node>Hello</node></test>"; "test.node"; 0)
```

```
Example result: <?xml version="1.0" encoding="UTF-8"?>
<test/>
```

Delete attribute:

```
MBS( "XML.DeletePath"; "<test><node id=\"123\">Hello</node></test>"; "test.node# id"; 0)
```

```
Example result: <?xml version="1.0" encoding="UTF-8"?>
<test><node>Hello</node></test>
```

191.7 XML.ExtractText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.ExtractText"; XML { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read.

0

Result Returns text or error.

Description

Returns a list with texts from all sub nodes.

Examples

Extracts text:

```
MBS( "XML.ExtractText"; "<Person><FirstName>Markus</FirstName><LastName>Müller</LastName><City>New York</City></Person>" )
```

Example result: Markus

Müller

New York

Custom function to get xml value as text:

```
GetXMLValue(xml, name)
```

returns text of a xml node

```
Let ( [
part = MBS( "XML.SubTree"; xml; name);
result = If( MBS("IsError"); "" ; If(Length(part) = 0; "" ; MBS( "XML.ExtractText"; part)))
] ; Trim( result))
```

191.8 XML.Format

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	6.2	Yes	Yes	Yes	Yes	Yes

MBS("XML.Format"; XML { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 8 to remove all namespaces before query to have queries easier. (new in 6.3)

0

Result Returns XML or error.

Description

Examples

Format the document:

MBS("XML.Format"; Canonical XML::Input XML; 1)

Format removing namespace:

MBS("XML.Format"; "<cfdi:Invoice invoiceTotal=\"450.24\"></cfdi:Invoice>" ; 8)

Check if XML is valid:

MBS("XML.Format"; "<hello></Hello>";0)

Example result: [MBS] Failed to parse XML: Opening and ending tag mismatch: hello line 1 and Hello

191.9 XML.GetAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.GetAttribute"; XML; Name { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Name

The name of the attribute to query.

"name"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read.

0

Result Returns text or error.

Description

Examples

Query attribute value:

MBS("XML.GetAttribute"; "mbsplugins.de"; "href")

Example result: http://mbsplugins.de

Created 27th December 2016, last changed 2nd February 2018.

191.10 XML.GetPathValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.4	Yes	Yes	Yes	Yes	Yes

MBS("XML.GetPathValue"; XML; Path { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times queries to the XML without parsing it each time.

```
"<test>Hello</test>"
```

Path

The path to the node or attribute to query.

```
"name"
```

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 2 to return empty text instead of errors. Add 4 to format returned XML. Add 32 to return result as XML, if it's more than just a text.

```
0
```

Result Returns text or error.

Description

This function uses a path notation like the JSON functions in FileMaker to describe paths.

You can use name of a node followed by option index in square brackets. On the end you can use # followed by a name of an attribute to select only the attribute.

Delimiter between items can be dot like FileMaker or newline.

Examples

Return test node value:

```
MBS( "XML.GetPathValue"; "<test>Hello</test>"; "test"; 0)
```

Example result: "Hello"

Query value of attribute:

```
MBS( "XML.GetPathValue"; "<test id=\"123\">Hello</test>"; "test# id")
```

Example result: "123"

Query value of node:

```
MBS( "XML.GetPathValue"; "<outer><inner>Hello</inner></outer>"; "outer.inner")
```

Example result: "Hello"

Query subtree as XML:

```
MBS( "XML.GetPathValue"; "<outer><middle><inner>Hello</inner></middle></outer>"; "outer.middle"; 32+4)
```

```
Example result: "<?xml version="1.0" encoding="UTF-8"?>
<middle>
<inner>Hello</inner>
</middle>"
```

Query items with index:

```
MBS( "XML.GetPathValue"; "<people><personid>123</personid><personid>456</personid><personid>789</personid></people>"; "people.personid [ 2 ] "; 0)
```

Example result: "789"

Query value from complex XML:

```
MBS("XML.GetPathValue"; XML::BKML_data; "bkml.form106AB.data.line1.realProperty.property [ 0 ] .citystatezip";0)
```

Query items with index in variable:

```
MBS( "XML.GetPathValue"; "<people><personid>123</personid><personid>456</personid><personid>789</personid></people>"; "people.personid [ " & $index & " ] "; 0)
```

191.11 XML.HasAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.HasAttribute"; XML; Name { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Name

The name of the attribute to query.

"name"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read.

0

Result Returns 1, 0 or error.

Description

Examples

Queries whether attribute exists:

MBS("XML.HasAttribute"; "mbsplugins.de"; "href")

Example result: 1

191.12 XML.Import

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	5.3	Yes	Yes	Yes	Yes	Yes

MBS("XML.Import"; XML; InsertFileName { ; TableNamePrefix; Flags })

Parameters

XML

The XML data to import.

InsertFileName

The file name of where the insert table is inside. Can be empty.

Get(FileName)

TableNamePrefix

Optional

The prefix to put in front of all tables.

"Import"

Flags

Optional

Sum of flags. Pass 1 to ignore errors in xml and continue parsing. Pass 2 to ignore outer XML wrapper nodes. Pass 4 to import flat, so no subtables for included nodes. Pass 8 to convert CDATA to text nodes. CDATA should contain ASCII or UTF-8 text! Pass 16 to trim values.

0

Result Returns number or error.

Description

This function can import any XML into FileMaker tables with all fields and attributes.

Returns number of records to be added. This function prefers the import and runs it later at idle time. In a script please call XML.Import and then loop and do script pauses. Then use XML.Import.Status to check regularly for updates. When you get back Finished as status, the script can continue with other work.

If you have a XML file you need to import regularly into FileMaker and you have no XSLT to transform it for FileMaker, you can use this plugin function. On the first run, it creates for a sample xml file the required tables and fields. Then you can define any layout or script to process values, e.g. copy into your tables. On further runs the plugin may add more fields (if newer xml file has more fields) and import newer records.

All tables have three default fields. `_RecordUUID` is an unique identifier for the record. `_ParentRecordUUID` provides a link to the record one level higher in the XML. This can be used to find child/parent records. The `_CreationTimeStamp` is the creation date, so you can distinguish different imports.

As a lot of records with a lot of data is imported and you may not need everything, you may want to put the imports in an extra FileMaker file. You decide if you clear tables before import or you want to keep history of all imports.

If the XML has errors like a missing < in the xml, you get an error. If you switch on IgnoreError parameter, the plugin reads everything until the error is reached which may give less records than possible.

This function works at idle time which is currently not supported on server. But you can use the function XML.Import.Work to perform the work instead of the idle handler. This enables importing of data, but not table/field creation.

Requires FileMaker 12 or newer.

See also XML.Import.SetBaseFields and XML.Import.SetExtraField.

Examples

Imports test.xml into FileMaker:

```
Set Variable [ $text; Value:MBS("Text.ReadTextFile"; "/Users/cs/Desktop/test.xml"; "UTF-8") ]
Set Variable [ $r; Value:MBS("XML.Import"; $text; ""; "") ]
Set Variable [ $text; Value:"" ]
If [ MBS("IsError") = 0 ]
Set Variable [ $total; Value:MBS("XML.Import.Total") ]
Loop
Set Variable [ $todo; Value:MBS("XML.Import.TODO") ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $s; Value:MBS("XML.Import.Status") ]
Exit Loop If [ $s "Working" ]
End Loop
Show Custom Dialog [ "XML Import"; $r & " " & $s ]
End If
```

Import script with progress bar for importing XML with Windows ANSI encoding:

```
Go to Layout [ "XML Import" (Import2Row) ]
Delete All Records [ No dialog ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetBottomText"; "") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetTopText"; "Importiere XML") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetTitle"; "Import...") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetButtonCaption"; "Abbrechen") ]

191.14 XML.Import.ErrorCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	9.3	Yes	Yes	Yes	Yes	Yes

MBS("XML.Import.ErrorCount")

Result Returns number or error.

Description

Should be zero if we had no errors while importing.

See also

191.16 XML.Import.SetBaseFields

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.1	Yes	Yes	Yes	Yes	Yes

MBS("XML.Import.SetBaseFields"; RecordUUIDFieldName; CreationTimeStampFieldName; ParentRecordUUIDFieldName)

Parameters

RecordUUIDFieldName

The field name for the record UUID field.

"_RecordUUID"

CreationTimeStampFieldName

The name for the time stamp field.

"_CreationTimeStamp"

ParentRecordUUIDFieldName

The name for the parent record UUID field.

"_ParentRecordUUID"

Result Returns OK or error.

Description

If the names are empty, the field is not created.

Examples

Disable all fields:

```
MBS("XML.Import.SetBaseFields"; ""; ""; "")
```

Set default names:

```
MBS("XML.Import.SetBaseFields"; "_RecordUUID"; "_CreationTimeStamp"; "_ParentRecordUUID")
```

191.17 XML.Import.SetExtraField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.1	Yes	Yes	Yes	Yes	Yes

MBS("XML.Import.SetExtraField"; FieldName; FieldValue { ; FieldType })

Parameters

FieldName

The name of the extra field.

"ImportID"

FieldValue

The value for this field. Can be any data type, but must match field type.

1

FieldType

Optional

The SQL field type. Default is "VARCHAR" for a text field.

"VARCHAR"

Result Returns OK or error.

Description

Please call before XML.Import.

You can call it again when import loop is done and pass in empty name and value to clear it.

Only one extra field and only added when table is created.

Examples

Set extra field:

```
Set Variable [ $r ; Value: MBS( "XML.Import.SetExtraField"; "test"; "Hello"; "VARCHAR" ) ]
```

191.18 XML.Import.Status

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	5.3	Yes	Yes	Yes	Yes	Yes

MBS("XML.Import.Status")

Result Returns status value.

Description

Returns Working, Finished or Unknown depending of the state.

So before first import, it is unknown. Than with first import it switches to working. Now when it's ready, you get back Finished.

191.19 XML.Import.TODO

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	5.3	Yes	Yes	Yes	Yes	Yes

MBS("XML.Import.TODO" { ; Selector })

Parameters

Selector

Optional

Which value to return. By default we return number of records to create. You can pass here "Tables" to get number of tables, "Fields" to get number of fields or "Records" to get number of records.

Result Returns number.

Description

191.21 XML.Import.Work

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	5.4	Yes	Yes	Yes	Yes	Yes

MBS("XML.Import.Work")

Result Returns OK or error.

Description

Normally we do import on idle while a script pause. But on server this does not work.

You can call this method in a loop to do the inserts for the import.

But it will not create the tables and fields required for import.

Examples

Import on server:

```
Set Variable [ $text; Value:MBS("Text.ReadTextFile"; "/Users/cs/Desktop/test.xml"; "UTF-8") ]
Set Variable [ $r; Value:MBS("XML.Import"; $text; ""; "" ) ]
Set Variable [ $text; Value:"" ]
If [ MBS("IsError") = 0 ]
Set Variable [ $total; Value:MBS("XML.Import.Total") ]
Loop
Set Variable [ $work; Value:MBS("XML.Import.Work") ]

Set Variable [ $status; Value:MBS("XML.Import.Status") ]
Exit Loop If [ $status = "Working" ]
End Loop
End If
```

191.22 XML.ListAttributes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.ListAttributes"; XML { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

```
"<img width=\"123\" height=\"456\" alt=\"test\"></img>"
```

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read.

0

Result Returns list or error.

Description

Examples

Query attribute names:

```
MBS( "XML.ListAttributes"; "<img width=\"123\" height=\"456\" alt=\"test\"></img>" )
```

Example result: width

height

alt

191.23 XML.NodeCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.NodeCount"; XML; Name { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times queries to the XML without parsing it each time.

"<test>Hello</test>"

Name

The name of the node to query. This can be a list to go over several steps to the target tree part.

"something"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read.

0

Result Returns number or error.

Description

Only the top nodes in the XML and not sub nodes down the hierarchy.

See also

- 191.24 XML.NodeNames 9289

- [MBS FileMaker Plugin, version 7.0pr2](#)

Created 2nd January 2017, last changed 23th January 2020.

191.24 XML.NodeNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.NodeNames"; XML { ; recursive; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times queries to the XML without parsing it each time.

"<test>Hello</test>"

recursive

Optional

Whether to recurse in sub tree. Pass 1 for recursive or 0 for non-recursive. Default is 0.

1

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 16 to ignore empty tags. (new in plugin version 7.1)

0

Result Returns list or error.

Description

Excludes the root node. The list has no duplicates.

Examples

Query list of node names:

```
MBS( "XML.NodeNames"; "<Person><FirstName>Markus</FirstName><LastName>Müller</LastName><City>New York</City></Person>" )
```

Example result: FirstName

LastName

City

Create records and fill fields with xml values:

Go to Layout ["XML Parser"]

find the node with all the records we need:

```
Set Variable [ $xml; Value:MBS( "XML.SubTree"; XML Parser::Input XML; "Body$GetCategoryProduct-Response" ) ]
```

query number of products

```
Set Variable [ $count; Value:MBS( "XML.NodeCount"; $xml; "PRODUCT" ) ]
```

loop over products

```
Set Variable [ $index; Value:0 ]
```

Loop

```

# get a product
Set Variable [ $xml; Value:MBS( "XML.SubTree"; $oxml; "PRODUCT"; $index) ]
# get the names of the XML nodes
Set Variable [ $names; Value:MBS( "XML.NodeNames"; $xml; 0; 16) ]
# loop over the names
Set Variable [ $NameCount; Value:ValueCount ( $names ) ]
Set Variable [ $NameIndex; Value:1 ]
New Record/Request
Loop
# Query a value and put it in a field
Set Variable [ $name; Value:GetValue($names; $NameIndex) ]
Set Field By Name [ "XML Parser::" & $name; GetXMLValue( $xml; $name) ]
Set Variable [ $NameIndex; Value:$NameIndex + 1 ]
Exit Loop If [ $NameIndex = $NameCount ]
End Loop
Commit Records/Requests [ No dialog ]
Set Variable [ $index; Value:$index + 1 ]
Exit Loop If [ $index = $count ]
End Loop

```

191.25 XML.Parse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.3	Yes	Yes	Yes	Yes	Yes

MBS("XML.Parse"; XML { ; Flags })

Parameters

XML

The XML to process.

"<test>Hello</test>"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 8 to remove all namespaces before query to have queries easier.

0

Result Returns XML reference or error.

Description

The document stays in memory and can be queried several times as needed.

If you need to query a lot of values, please parse once first. Else all XML functions need to parse again on each call.

Please use XML.Release later to free document from memory.

191.26 XML.Query

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	3.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.Query"; xml; path { ; namespaceList; Flags })

Parameters

xml

The XML you'd like to parse. Can be XML as text or the reference returned by XML.Parse function, so you can make several times queries to the XML without parsing it each time.

"<hello>Hello World</hello>"

path

The XPath you'd like to query.

"/**"

namespaceList

Optional

List of namespaces. This is a list of known namespaces in "<prefix1>=<href1><prefix2>=<href2>..." format.

"SOAP-ENV=http://schemas.xmlsoap.org/soap/envelope/"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 2 to return a list of xml nodes as text instead of xml. (new in 5.4) Add 4 if you do not like the XML to be formatted. Add 8 to remove all namespaces before query to have queries easier. (new in 6.3)

0

Result Returns xml text.

Description

Result is either simple text, a xml node or several xml nodes in a result root node. XML is returned formatted.

Please check on the web for XPath manuals and tutorials.

Version 3.4 of the plugins now also return string, number and boolean results instead of just XML nodes.

If the query to find the node is too difficult, you can of course use text functions instead. For example use Text.FindBetween and Text.DecodeFromXML.

Examples

Query the Hello World text:

MBS("XML.Query"; "<hello>Hello World</hello>"; "/hello/text()")

Example result: Hello World

Query an attribute of a XML Node:

```
MBS("XML.Query"; "<OrderRequestHeader orderID=\"1629\" orderDate=\"2013-07-26T12:20:27\" type=\"new\"><OrderRequestHeader>"; "/OrderRequestHeader/@orderID" )
```

Example result: <?xml version="1.0" encoding="UTF-8"?>
orderID="1629"

Query an attribute of a XML Node as string:

```
MBS("XML.Query"; "<OrderRequestHeader orderID=\"1629\" orderDate=\"2013-07-26T12:20:27\" type=\"new\"><OrderRequestHeader>"; "string(/OrderRequestHeader/@orderID)" )
```

Example result: 1629

Query all text from all nodes named reference ignoring namespaces:

```
MBS( "XML.Query"; XML Query::XML; "//*[ local-name()='reference' ] /text()"; "" ; 2 )
```

Finds a Field node where attribute name is "Class":

```
MBS( "XML.Query"; $xml; "/CDETS/Defect/Field [ @name='Class' ] /text()" )
```

Finds second companyname node in xml data with namespace invoice:

```
MBS("XML.Query"; XML Query::XML; "//invoice:companyname [ 2 ] "; "invoice=http://www.forum-datenaustausch.ch/invoice"; 2)
```

Query node without namespaces:

```
MBS( "XML.Query"; "<cfdi:Invoice invoiceTotal=\"450.24\"></cfdi:Invoice>"; "/Invoice/@invoiceTotal"; "" ; 8+2)
```

Example result: 450.24

Query attributes:

```
MBS( "XML.Query"; "<a><b Guid=\"123\">Entry1</b><b Guid=\"456\">Entry2</b></a>"; "/a/b/@Guid"; "" ; 2 )
```

Example result: 123
456

191.27 XML.ReadContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.4	Yes	Yes	Yes	Yes	Yes

MBS("XML.ReadContainer"; Container { ; Flags })

Parameters

Container

The container value to read as XML file.

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 8 to remove all namespaces before query to have queries easier.

0

Result Returns XML reference or error.

Description

The document stays in memory and can be queried several times as needed.

If you need to query a lot of values, please parse once first. Else all XML functions need to parse again on each call.

Please use XML.Release later to free document from memory.

By passing XML directly from file content to XML engine, we avoid any corruption due to wrong encoding or line endings.

Examples

Read XML from container:

```
MBS( "XML.ReadContainer"; Test::XMLContainer )
```

191.28 XML.ReadFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.4	Yes	Yes	Yes	Yes	Yes

MBS("XML.ReadFile"; Path { ; Flags })

Parameters

Path

The file path or URL to read as XML file.

"/Users/cs/Desktop/test.xml"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 8 to remove all namespaces before query to have queries easier.

0

Result Returns XML reference or error.

Description

The document stays in memory and can be queried several times as needed.

If you need to query a lot of values, please parse once first. Else all XML functions need to parse again on each call.

Not limited in file size, so you can read in giga byte big files if you have free memory.

Please use XML.Release later to free document from memory.

By passing XML directly from file content to XML engine, we avoid any corruption due to wrong encoding or line endings.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Read XML file:

```
$xmlRef = MBS( "XML.ReadFile"; "/Users/cs/Desktop/iTunes Library.xml")
```

191.31 XML.SetPathValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.4	Yes	Yes	Yes	Yes	Yes

MBS("XML.SetPathValue"; XML; Path; Flags; Value)

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Path

The path to the node or attribute to query.

"name"

Flags

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 4 to format returned XML. Add 32 to return result as XML.

0

Value

The new value for node or attribute.

"Hello"

Result Returns OK or error.

Description

If needed, new nodes / attributes are added.

This function uses a path notation like the JSON functions in FileMaker to describe paths.

You can use name of a node followed by option index in square brackets. On the end you can use # followed by a name of an attribute to select only the attribute. Empty brackets or too big index allow you to append new node in v8.1.

Delimiter between items can be dot like FileMaker or newline.

If you pass in a XML reference number and you do not pass Flag value 32 for returning as XML, we just modify the XML reference in memory. This avoids performance hit for outputting and parsing xml for each change.

Examples

Add a first name:

MBS("XML.SetPathValue"; "<person/>"; "person.firstName"; 0; "Joe")

Example result: "<?xml version="1.0" encoding="UTF-8"?><person><firstName>Joe</firstName></person>"

Add id attribute:

```
MBS( "XML.SetPathValue"; "<person/>"; "person# id"; 0; "123" )
```

```
Example result: "<?xml version="1.0" encoding="UTF-8"?>
<person id="123"/>"
```

Adds a new name node with href number.

```
MBS( "XML.SetPathValue"; "<person></person>"; "person.name href=\"10.00\""; 4; "" )
```

```
Example result: "<?xml version="1.0" encoding="UTF-8"?>
<person>
<name href="10.00"/>
</person>"
```

191.32 XML.SetPathXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	8.1	Yes	Yes	Yes	Yes	Yes

MBS("XML.SetPathXML"; XML; Path; Flags; NewXML)

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Path

The path to the node or attribute to query.

"name"

Flags

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 4 to format returned XML. Add 32 to return result as XML.

0

NewXML

The new xml for node or attribute. Can be XML as text or the reference returned by XML.Parse function, so you can make several times queries to the XML without parsing it each time.

"<name>Christian</name>"

Result Returns OK or error.

Description

If needed, new nodes / attributes are added.

This function uses a path notation like the JSON functions in FileMaker to describe paths. Please point with path to new node.

You can use name of a node followed by option index in square brackets. On the end you can use # followed by a name of an attribute to select only the attribute. Empty brackets or too big index allow you to append new node.

Delimiter between items can be dot like FileMaker or newline.

If you pass in a XML reference number and you do not pass Flag value 32 for returning as XML, we just modify the XML reference in memory. This avoids performance hit for outputting and parsing xml for each change.

Examples

Insert new node:

```
MBS("XML.SetPathXML"; "<export><person></person></export>"; "export$person$name"; 0; "<name>Test</name>")
```

Example result: <?xml version="1.0" encoding="UTF-8"?>

```
<export><person><name>Test</name></person></export>
```

Insert second node with index:

```
MBS("XML.SetPathXML"; "<export><person><name>First</name></person></export>"; "export$person$name [ 1 ] "; 0; "<name>Test</name>")
```

Example result: `<?xml version="1.0" encoding="UTF-8"?>`
`<export><person><name>First</name><name>Test</name></person></export>`

Append node:

```
MBS("XML.SetPathXML"; "<export><person><name>First</name></person></export>"; "export$person$name [ ] "; 0; "<name>Test</name>")
```

191.33 XML.SetVariables

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.SetVariables"; XML { ; recursive; Flags; Prefix })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times queries to the XML without parsing it each time.

"<test>Hello</test>"

recursive

Optional

Whether to recurse in sub tree. Pass 1 for recursive or 0 for non-recursive. Default is 0.

1

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read.

0

Prefix

Optional

The prefix to use for the variables names.

""

Result Returns list or error.

Description

Returns list of variable names.

If variables receive multiple values the name in the result comes the highest index in square brackets.

You can call XML.ClearVariables later to clear those variables.

Examples

Set variables:

```
MBS( "XML.SetVariables"; "<Person><FirstName>Markus</FirstName><LastName>Müller</LastName><City>New York</City></Person>" )
```

Example result: LastName

City

FirstName

191.34 XML.SubTree

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	7.0	Yes	Yes	Yes	Yes	Yes

MBS("XML.SubTree"; XML; Name { ; Flags; Index })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Name

The name of the node to query. This can be a list to go over several steps to the target tree part.

"something"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 4 if you do not like the XML to be formatted. Add 8 to remove all namespaces before query to have queries easier. (new in 6.3)

0

Index

Optional

The index of the item to get. First has index 0 as this counts down how many to skip.

0

Result Returns OK or error.

Description

You can pass an index to get nth item.

Returns empty result if index is too high, so you can loop until you get empty result.

Examples

Query person entry:

```
MBS( "XML.SubTree"; "<People><Person><FirstName>Markus</FirstName><LastName>Müller</LastName><City>New York</City></Person></People>"; "Person")
```

Example result: <?xml version="1.0" encoding="UTF-8"?>

```
<Person>
```

```
<FirstName>Markus</FirstName>
```

```
<LastName>Müller</LastName>
```

```
<City>New York</City>
```

```
</Person>
```

Queries values:

```

Set Variable [ $xml; Value:"<a><b>123</b><b>456</b><b>789</b></a>" ]
Show Custom Dialog [ "First item:"; MBS( "XML.ExtractText"; MBS( "XML.SubTree"; $xml; "b"; 0; 0) ) ]
Show Custom Dialog [ "Second item:"; MBS( "XML.ExtractText"; MBS( "XML.SubTree"; $xml; "b"; 0; 1) ) ]
Show Custom Dialog [ "Third item:"; MBS( "XML.ExtractText"; MBS( "XML.SubTree"; $xml; "b"; 0; 2) ) ]

```

Query data in SOAP Webservice response:

```
MBS( "XML.SubTree"; $XML; "Envelope$Body$AddressCheckerResponse$rows")
```

Custom function to get xml value as text:

```
GetXMLValue(xml, name)
```

```
# returns text of a xml node
```

```

Let ( [
part = MBS( "XML.SubTree"; xml; name);
result = If( MBS("IsError"); "" ; If(Length(part) = 0; "" ; MBS( "XML.ExtractText"; part)))
] ; Trim( result))

```

Create records and fill fields with xml values:

```

Go to Layout [ "XML Parser" ]
# find the node with all the records we need:
Set Variable [ $oxml; Value:MBS( "XML.SubTree"; XML Parser::Input XML; "Body$GetCategoryProductsResponse" ) ]
# query number of products
Set Variable [ $count; Value:MBS( "XML.NodeCount"; $oxml; "PRODUCT" ) ]
# loop over products
Set Variable [ $index; Value:0 ]
Loop
# get a product
Set Variable [ $xml; Value:MBS( "XML.SubTree"; $oxml; "PRODUCT"; $index ) ]
# get the names of the XML nodes
Set Variable [ $names; Value:MBS( "XML.NodeNames"; $xml; 0; 16) ]
# loop over the names
Set Variable [ $NameCount; Value:ValueCount ( $names ) ]
Set Variable [ $NameIndex; Value:1 ]
New Record/Request
Loop
# Query a value and put it in a field
Set Variable [ $name; Value:GetValue($names; $NameIndex) ]
Set Field By Name [ "XML Parser::" & $name; GetXMLValue( $xml; $name) ]
Set Variable [ $NameIndex; Value:$NameIndex + 1 ]
Exit Loop If [ $NameIndex = $NameCount ]

```

191.34. XML.SUBTREE

9309

```
End Loop  
Commit Records/Requests [ No dialog ]  
Set Variable [ $index; Value:$index + 1 ]  
Exit Loop If [ $index $count ]  
End Loop
```

191.35 XML.ToJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	8.2	Yes	Yes	Yes	Yes	Yes

MBS("XML.ToJSON"; XML { ; Flags })

Parameters

XML

The XML to process.

"<test>Hello</test>"

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read.

0

Result Returns JSON or error.

Description

For nodes in the XML we create objects and key/values.

Attributes are put in @attributes nodes.

Example Databases

191.36 XML.Validate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	8.1	Yes	Yes	Yes	Yes	Yes

MBS("XML.Validate"; XML; Schema { ; Flags })

Parameters

XML

The XML to process. Can be XML as text or the reference returned by XML.Parse function, so you can make several times changes to the XML without parsing it each time.

"<test>Hello</test>"

Schema

The schema definition.

\$schema

Flags

Optional

Various Flags. Add 1 to ignore errors in xml and continue parsing. This may lead to not everything in the xml being read. Add 8 to remove all namespaces before query to have queries easier.

0

Result Returns OK or error.

Description

Please pass in XML (or reference number from XML.Parse) and a valid XSD schema.

Version 8.2 or newer will return list of errors, so you see them all.

Examples

Validate XML:

Set Variable [\$result; Value:MBS("XML.Validate"; XML Validation::XML; XML Validation::Schema; 0)]

191.37 XML.ValidateFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
191 XML	8.2	Yes	Yes	Yes	Yes	Yes

MBS("XML.ValidateFile"; FilePath; Schema)

Parameters

FilePath

Native file path to the file to check.

"/Users/cs/Desktop/test.xml"

Schema

The schema definition.

\$schema

Result Returns OK or error.

Description

Please pass in XML file path and a valid XSD schema.

Return list of errors, so you see them all.

If you use Process.SetCurrentDirectory to change current folder for the application process, the library uses this folder to search for referenced xsd files.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

Examples

Validate a file in a folder:

```
Set Variable [ $r ; Value: MBS( "Process.SetCurrentDirectory"; "/Users/cs/Documents/todo/XML Vali-
date/" ) ]
```

```
Set Variable [ $result ; Value: MBS("XML.ValidateFile"; "test.xml"; XML Validation::Schema) ]
```

```
Set Field [ XML Validation::Result ; $result ]
```
