**Description**

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed.

See also [MAX\\_RECV\\_SPEED](#) option in CURL manual.

**See also**

- 62.258 CURL.SetOptionMaxFileSize 2172

Created 18th August 2014, last changed 20th April 2018.

## 62.260 `CURL.SetOptionMaxRedirs`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionMaxRedirs"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

Maximum number of redirects.

-1

**Result** Returns "OK" on success.

### Description

If that many redirections have been followed, the next redirect will cause an error (`CURLE_TOO_MANY_REDIRECTS`). This option only makes sense if the `CURL.SetOptionFollowLocation` is used at the same time.

Added in 7.15.1: Setting the limit to 0 will make CURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

See also [MAXREDIRS](#) option in CURL manual.

### Examples

Allow up to three redirects:

```
Set Variable [ $result; Value: MBS("CURL.SetOptionFollowLocation"; $curl; 1) ]
```

```
Set Variable [ $result; Value: MBS("CURL.SetOptionMaxRedirs"; $curl; 3) ]
```

## 62.261 `CURL.SetOptionMaxSendSpeed`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionMaxSendSpeed"; curl; Value )

(old name: `CURL.SetOptionMaxSendSpeedLarge`)

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Maximum sending speed in bytes per second.

50000

**Result** Returns "OK" on success.

### Description

If an upload exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed.

Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.

Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.

See also [MAX\\_SEND\\_SPEED](#) option in CURL manual.

**62.262 CURL.SetOptionNETRCFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionNETRCFile"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The file path.

\$path

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

Pass a text string containing the full path name to the file you want libcurl to use as .netrc file. If this option is omitted, and CURL.SetOptionNetRC is set, libcurl will attempt to find a .netrc file in the current user's home directory.

Starting with version 8.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

**62.263 CURL.SetOptionNetRC**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionNetRC"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The netrc preference.

0

**Result** Returns "OK" on success.

**Description**

This parameter controls the preference of libcurl between using user names and passwords from your ~/.netrc file, relative to user names and passwords in the URL supplied with CURLOPT\_URL.

libcurl uses a user name (and supplied or prompted password) supplied with CURL.SetOptionUsername in preference to any of the options controlled by this parameter.

Pass a long, set to one of the values described below.

CURL\_NETRC\_OPTIONAL 1 The use of your ~/.netrc file is optional, and information in the URL is to be preferred. The file will be scanned for the host and user name (to find the password only) or for the host only, to find the first user name and password after that machine, which ever information is not specified in the URL. Undefined values of the option will have this effect.  
CURL\_NETRC\_IGNORED 0 The library will ignore the file and use only the information in the URL. This is the default.  
CURL\_NETRC\_REQUIRED 2 This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file for the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libcurl does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

## 62.264 CURL.SetOptionNewDirectoryPerms

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionNewDirectoryPerms"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

The permissions value. (octal value!)

7\*8\*8+5\*8+5

**Result** Returns "OK" on success.

### Description

Pass a number as a parameter, containing the value of the permissions that will be assigned to newly created directories on the remote server. The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://.

See also [NEW\\_DIRECTORY\\_PERMS](#) option in CURL manual.

### See also

- 62.265 CURL.SetOptionNewFilePerms

2181

Created 18th August 2014, last changed 18th August 2014.

**62.265 CURL.SetOptionNewFilePerms**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionNewFilePerms"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The permissions value. (octal value!)

8\*8\*6+4+8+4

**Result** Returns "OK" on success.

**Description**

Pass a number as parameter, containing the value of the permissions that will be assigned to newly created files on the remote server. The default value is 0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://.

Values are specified in octal, so octal 755 is decimal 493. Octal 644 is 420 (6\*8\*8+4\*8+4).

See also [NEW\\_FILE\\_PERMS](#) option in CURL manual.

**See also**

- 62.264 CURL.SetOptionNewDirectoryPerms

## 62.266 `CURL.SetOptionNoBody`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionNoBody"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Whether to ignore body.

1

**Result** Returns "OK" on success.

### Description

Set to 1 tells the library to not include the body-part in the output. This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libcurl do a HEAD request.

To change request to GET, you should use `CURL.SetOptionGet`. Change request to POST with `CURL.SetOptionPost` etc.

See also **NOBODY** option in CURL manual.

### Examples

Get only the headers:

MBS( "CURL.SetOptionNoBody"; \$curl; 1 )

## 62.267 `CURL.SetOptionNoProxy`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionNoProxy"; curl; Value { ; Encoding } )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The list of hosts which use no proxy.

"local.com,mbsplugins.com"

#### **Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

### Description

This text should be a comma separated list of hosts which do not use a proxy, if one is specified.

The only wildcard is a single \* character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com.

## 62.268 `CURL.SetOptionPassword`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "CURL.SetOptionPassword"; curl; Value { ; Encoding } )
```

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The password text.

"test123"

#### **Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

### Description

The `CURL.SetOptionPassword` option should be used in conjunction with the `CURL.SetOptionUsername` option.

See also [PASSWORD](#) option in CURL manual.

### Examples

Set login credentials:

```
Set Variable [ $result ; Wert: MBS("CURL.SetOptionUserName"; $curl; Logins::Username) ]
Set Variable [ $result ; Wert: MBS("CURL.SetOptionPassword"; $curl; Logins::Password) ]
```

Use netverify.com to check a driver license:

```
# Setup transfer
Set Variable [ $r; Value:MBS("Trace") ]
Set Variable [ $curl; Value:MBS("CURL.New") ]
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "https://netverify.com/api/netverify/v2/fast-fill") ]
Set Variable [ $result; Value:MBS("CURL.SetOptionVerbose"; $curl; 1) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionUserName"; $curl; "25D63FB16966473DA2416454FD468BBD") ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPassword"; $curl; "4356789038498914948018924658901622") ]
Set Variable [ $result; Value:MBS("CURL.SetOptionVerbose"; $curl; 1) ]
```

```

Set Variable [ $result; Value:MBS("CURL.SetOptionHTTPHeader"; $curl; "Accept: application/json"; "Expect:") ]
Set Variable [ $metadata; Value:" { \"type\": \"DRIVING_LICENSE\", \"country\": \"USA\" } " ]
Set Variable [ $r; Value:MBS("CURL.FormAddKeyValue";$curl; "metadata"; $metadata) ]
Set Variable [ $r; Value:MBS("CURL.FormAddKeyContainerContentType";$curl; "backsideImage"; "test.jpg"; Donor Docs::DocPDF; "image/jpeg") ]
Set Variable [ $r; Value:MBS("CURL.FormFinish";$curl) ]
# Run transfer
Set Field [ Donor Docs::ResultCodePost; MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ Donor Docs::DebugTextPost; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result; Value: MBS("CURL.GetResultAsText"; $curl) ]
Set Field [ Donor Docs::ResultTextPost; $result ]
Set Variable [ $r; Value:MBS("CURL.Release";$curl) ]

```

Download file via SFTP to file on disk:

```

Set Variable [ $curl; Value:MBS("CURL.New") ]
# set download URL, e.g. sftp://monkeybreadsoftware.net/test.jpg
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; SFTP Download::URL ) ]
# build file path on disk and open output file
Set Variable [ $name; Value:GetValue(SFTP Download::FileName; 1) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; SFTP Download::FolderPath; $name ) ]
Set Variable [ $r; Value:MBS("CURL.CreateOutputFile"; $curl; $path) ]
# login only via password
Set Variable [ $result; Value:MBS( "CURL.SetOptionSSHAuthTypes"; $curl; 2+8 ) ]
# set credentials
Set Variable [ $result; Value:MBS("CURL.SetOptionUsername"; $curl; SFTP Download::UserName ) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPassword"; $curl; SFTP Download::Password ) ]
# run transfer
Set Field [ SFTP Download::ErrorCode; MBS("CURL.Perform"; $curl) ]
# check debug log for errors
Set Field [ SFTP Download::Debug; MBS("CURL.GetDebugAsText"; $curl) ]
# free CURL session
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]

```

## 62.272 CURL.SetOptionPort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionPort"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

The new port number.

8000

**Result** Returns "OK" on success.

### Description

Specify what remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.

See also CURL.SetOptionFTPPort.

Protocols	Common Ports
http	80, 443 with SSL
ftp	20 and 21
sftp	22
smtp	25, 465 with SSL, 587
pop3	110, 995 with SSL
imap	143, 993 with TLS

See also **PORT** option in CURL manual.

### Examples

Use Port 25 for smtp:

```
MBS( "CURL.SetOptionPort"; $curl; 25 )
# alternative 587 or with SSL 465.
```

Use Port 8080 for http:

```
MBS( "CURL.SetOptionPort"; $curl; 8080 )
```

## 62.273 `CURL.SetOptionPost`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionPost"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Whether this is a POST request.

1

**Result** Returns "OK" on success.

### Description

A parameter set to 1 tells the library to do a regular HTTP post. This will also make the library use a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use one of `CURL.SetOptionPostFields` options to specify what data to post and `CURL.SetOptionPostFieldSize` to set the data size.

Optionally, you can provide data to POST using the `CURL.SetInput*` functions but then you must make sure to not set `CURL.SetOptionPostFields` to anything but "". When providing data with a callback, you must transmit it using chunked transfer-encoding or you must set the size of the data with the `SetOptionPostFieldSize` or `CURL.SetOptionPostFieldSizeLarge` option. To enable chunked encoding, you simply pass in the appropriate Transfer-Encoding header.

You can override the default POST Content-Type: header by setting your own with `CURL.SetOptionHTTPHeader`.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with `CURL.SetOptionHTTPHeader` as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with `CURL.SetOptionHTTPHeader`. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting `CURL.SetOptionPost` to 1, it will automatically set `CURL.SetOptionNoBody` to 0 (since

7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explicitly set the new request type using `CURL.SetOptionNoBody` or `CURL.SetOptionGet` or similar.

For debugging, the website <https://www.posttestserver.com> is very useful. It allows you to see what is received on the other end for a post operation.

If you need GET, please use `CURL.SetOptionGet`. If you need DELETE, PATCH or others, please use `CURL.SetOptionCustomRequest` function.

See also **POST** option in CURL manual.

### Examples

Enables POST option:

```
MBS( "CURL.SetOptionPost"; $curl; 1 )
```

Using Rosette web service:

```
# Start new CURL transfer
Set Variable [ $curl; Value:MBS("CURL.New") ]
# Set options like Verbose Debug Messages
Set Variable [ $result; Value:MBS("CURL.SetOptionVerbose"; $curl; 1) ]
# the url of webservice
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "https://api.rosette.com/rest/v1/morphology/parts-of-speech") ]
# the header info for tagging, API Key comes from a global field.
Set Variable [ $result; Value:MBS("CURL.SetOptionHTTPHeader"; $curl; "user_key: " & RosetteAPISettings::RosetteAPIKey; "Content-Type: application/json"; "Accept: application/json" ) ]
# We want a POST transfer:
Set Variable [ $result; Value:MBS("CURL.SetOptionPost"; $curl; 1 ) ]
# Build JSON using the plugin function to properly encode a string:
Set Variable [ $request; Value:" { \"content\": " & MBS("JSON.CreateString"; TextData::TextAsInput) & " } " ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPostFields"; $curl; $request) ]
# show our JSON in a field for debugging:
Set Field [ TextData::CURLInput; $request ]
# Run transfer
Set Variable [ $result; Value:MBS("CURL.Perform"; $curl) ]
# Check result and debug messages
Set Field [ TextData::CurlDebug; MBS("CURL.GetDebugAsText"; $curl) ]
Set Field [ TextData::CurlOutput; MBS("CURL.GetResultAsText"; $curl) ]
# Cleanup
Set Variable [ $r; Value:MBS("CURL.Release"; $curl) ]
```

Charge with Stripe webservice:

```
# new session
Set Variable [ $curl; Value:MBS("CURL.New") ]
# use stripe charge API
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "https://api.stripe.com/v1/charges") ]
# set user name
Set Variable [ $result; Value:MBS("CURL.SetOptionUsername"; $curl; "sk_test_ your id here") ]
# make a post with given content:
Set Variable [ $result; Value:MBS("CURL.SetOptionPost"; $curl; 1) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPostFields"; $curl; "amount=400& currency=usd& de-
scription=Charge% 20for% 20test@example.com& source [ object ] =card& source [ number ] =4242424242424242&
source [ exp_month ] =12& source [ exp_year ] =2017& source [ cvc ] =123" ) ]
# perform

## 62.274 CURL.SetOptionPostFieldSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionPostFieldSize"; curl; Value )

(old name: CURL.SetOptionPostFieldSizeLarge)

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

The post fields data size in bytes.

1234

**Result** Returns "OK" on success.

### Description

If you want to post data to the server without letting libcurl do a string length() to measure the data size, this option must be used. When this option is used you can post fully binary data, which otherwise is likely to fail. If this size is set to -1, the library will use strlen() to get the size.

See also [POSTFIELDSIZE](#) option in CURL manual.

### See also

- 62.277 CURL.SetOptionPostRedir 2205

Created 18th August 2014, last changed 18th July 2019.

**62.275 CURL.SetOptionPostFields**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionPostFields"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The post data.

””

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

”UTF8”

**Result** Returns ”OK” on success.

**Description**

Pass a text, which should be the full data to post in an HTTP POST operation.

The plugin sets the size for you. You can overwrite it with `CURL.SetOptionPostFieldSize` function.

If you plan to pass a form, maybe check functions like `CURL.FormAddKeyValue` instead of building post fields yourself.

You can use `CURL.SetOptionHTTPHeader` to set the content type and other headers.

Using this function is not recommended for more than a few hundred MB of text. If you need more, better stream the data with `CURL.OpenInputFile` from a file.

See also [COPYPOSTFIELDS](#) option in CURL manual.

**Examples**

Set post field with some XML for SOAP Webservice:

```
MBS("CURL.SetOptionPostFields"; $curl; "<xml>....</xml>"; "UTF-8")
```

Set post fields:

```
MBS("CURL.SetOptionPostFields"; $curl; "first=John& last=Smith"; "UTF-8")
```

Build form:

```
MBS( "CURL.FormAddKeyValue"; $curl; "login"; "testuser" )
MBS( "CURL.FormAddKeyValue"; $curl; "password"; "xxx" )
MBS( "CURL.FormFinish"; $curl )
```

Charge with Stripe webservice:

```
# new session
Set Variable [ $curl; Value:MBS("CURL.New") ]
# use stripe charge API
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "https://api.stripe.com/v1/charges") ]
# set user name
Set Variable [ $result; Value:MBS("CURL.SetOptionUsername"; $curl; "sk_test__ your id here") ]
# make a post with given content:
Set Variable [ $result; Value:MBS("CURL.SetOptionPost"; $curl; 1) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPostFields"; $curl; "amount=400& currency=usd& de-
scription=Charge% 20for% 20test@example.com& source [ object ] =card& source [ number ] =4242424242424242&
source [ exp_month ] =12& source [ exp_year ] =2017& source [ cvc ] =123" ) ]
# perform
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
# now check result
Set Field [ CURL Test::Text; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
Set Field [ CURL Test::header; MBS("CURL.GetDebugAsText"; $curl) ]
# cleanup
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

Run a generic POST request for REST or SOAP web service:

```
# new session
Set Variable [ $curl; Value:MBS("CURL.New") ]
# use stripe charge API
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "https://someURL/service") ]
# set user name and password if needed:
Set Variable [ $result; Value:MBS("CURL.SetOptionUsername"; $curl; "user name") ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPassword"; $curl; "password") ]
# set some additional headers, which may include custom authorization and content types:
Set Variable [ $result; Value:MBS( "CURL.SetOptionHTTPHeader"; $curl; "Authorization: Bearer a92eabb9-
76f9-42ee-b280-bcd15cb2e9db"; "Content-Type: application/json" ) ]
# make a post with given content:
Set Variable [ $result; Value:MBS("CURL.SetOptionPostFields"; $curl; $json ) ]
# perform
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
# now check result
Set Field [ CURL Test::Text; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
Set Field [ CURL Test::header; MBS("CURL.GetDebugAsText"; $curl) ]
# cleanup
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

- Ausgabe 4/2016, Seite 19

Created 18th August 2014, last changed 19th April 2020.

**62.276 CURL.SetOptionPostQuote**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionPostQuote"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The ftp commands.

""

**Result** Returns "OK" on success.

**Description**

The commands will only be run if no error occurred. Disable this operation again by passing no value to this function.

This option takes a list of items. So this function takes a variable number of arguments. If you call function with 2 parameters, you set an empty list. If you call it with 5 parameters, you set a list with 3 values. If you want to do a ftp operation instead of download/upload/directory listing, please use `CURL.SetOptionQuote`.

See also `CURL.SetOptionQuote` and `CURL.SetOptionPreQuote`.

File names may be passed with quotes to include spaces in file names.

See also **POSTQUOTE** option in CURL manual.

**Examples**

Create folder:

```
MBS( "CURL.SetOptionPostQuote"; $curl; "MKD testfolder" )
```

Rename file using two FTP commands:

```
MBS( "CURL.SetOptionPostQuote" ; $curl ; "RNFR foo.txt"; "RNTO bar.txt" )
```

Delete file after upload:

```
MBS( "CURL.SetOptionPostQuote"; $curl; "DELE test.txt" )
```

Delete folder after upload:

```
MBS( "CURL.SetOptionPostQuote"; $curl; "RMD testfolder" )
```

Set file permissions:

```
MBS( "CURL.SetOptionPostQuote" ; $curl ; "SITE CHMOD 777 testfile")
```

Call with three parameters:

```
MBS( "CURL.SetOptionPostQuote"; handle; $value1; $value2; $value3 )
```

Rename file for SFTP commands:

```
MBS( "CURL.SetOptionPostQuote" ; $curl ; "rename \"old name.txt\" \"new name.txt\"")
```

Create folder with SFTP:

```
Set Variable [ $result ; Value: MBS( "CURL.SetOptionPostQuote"; $curl; "mkdir testPost" ) ]
```

**62.277 CURL.SetOptionPostRedir**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionPostRedir"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new bitmask for redirections.

3

**Result** Returns "OK" on success.

**Description**

Pass a bitmask to control how libcurl acts on redirects after POSTs that get a 301 or 302 response back. A parameter with bit 0 set (value `CURL_REDIR_POST_301`) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value `CURL_REDIR_POST_302`) makes libcurl maintain the request method after a 302 redirect. `CURL_REDIR_POST_ALL` is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting `CURL.SetOptionFollowLocation`. (This option was known as `CURLOPT_POST301` up to 7.19.0 as it only supported the 301 way before then)

<code>CURL_REDIR_POST_301</code>	1
<code>CURL_REDIR_POST_302</code>	2
<code>CURL_REDIR_POST_ALL</code>	3

See also [POSTREDIR](#) option in CURL manual.

## 62.279 `CURL.SetOptionPreQuote`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "CURL.SetOptionPreQuote"; curl; Value )
```

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The ftp commands.

""

**Result** Returns "OK" on success.

### Description

Disable this operation again by passing no value to this function. Before version 7.15.6, if you also set `CURL.SetOptionNoBody` to 1, this option didn't work.

This option takes a list of items. So this function takes a variable number of arguments. If you call function with 2 parameters, you set an empty list. If you call it with 5 parameters, you set a list with 3 values.

See also `CURL.SetOptionQuote` and `CURL.SetOptionPostQuote`.

File names may be passed with quotes to include spaces in file names.

See also **PREQUOTE** option in CURL manual.

### Examples

Create folder before upload:

```
MBS( "CURL.SetOptionPreQuote"; $curl; "MKD testfolder" )
```

Rename file before uploading using two FTP commands:

```
MBS( "CURL.SetOptionPreQuote" ; $curl ; "RNFR foo.txt"; "RNTO bar.txt" )
```

Delete file before upload:

```
MBS( "CURL.SetOptionPreQuote"; $curl; "DELE test.txt" )
```

Delete folder before upload:

```
MBS( "CURL.SetOptionPreQuote"; $curl; "RMD testfolder" )
```

Set file permissions:

```
MBS( "CURL.SetOptionPreQuote" ; $curl ; "SITE CHMOD 777 testfile")
```

Call with three parameters:

```
MBS( "CURL.SetOptionPreQuote"; handle; $value1; $value2; $value3 )
```

## 62.280 `CURL.SetOptionProtocols`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProtocols"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The bitmask defining which protocols to use.

1

**Result** Returns "OK" on success.

### Description

Pass a number that holds a bitmask of protocol values (See below). If used, this bitmask limits what protocols libcurl may use in the transfer. This allows us to have a plugin built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libcurl will accept all protocols it supports. See also `CURL.SetOptionRedirProtocols`.

HTTP 1

HTTPS2

See also [PROTOCOLS](#) option in CURL manual.

## 62.281 `CURL.SetOptionProxy`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "CURL.SetOptionProxy"; curl; Value { ; Encoding } )
```

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The proxy string

"http://cache.local.com/:8000"

#### **Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"utf8"

**Result** Returns "OK" on success.

### Description

The parameter should be a text string holding the host name or dotted IP address. To specify port number in this string, append : [ port ] to the end of the host name. The proxy string may be prefixed with [ protocol ] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option. If not specified, libcurl will default to using port 1080 for proxies. see also `CURL.SetOptionProxyPort`.

When you tell the library to use an HTTP proxy, libcurl will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as `CURL.SetOptionQuote` and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with `CURL.SetOptionHTTPProxyTunnel`.

libcurl respects the environment variables `http_proxy`, `ftp_proxy`, `all_proxy` etc, if any of those are set. The `CURL.SetOptionProxy` option does however override any possibly set environment variables.

Setting the proxy string to "" (an empty string) will explicitly disable the use of a proxy, even if there is an environment variable set for it.

Since 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with `CURL.SetOptionProxy`, include protocol prefix (`http://`) and embedded user + password.

Since 7.21.7, the proxy string may be specified with a protocol:// prefix to specify alternative proxy protocols. Use socks4://, socks4a://, socks5:// or socks5h:// (the last one to enable socks5 and asking the proxy to do the resolving, also known as `CURLPROXY_SOCKS5_HOSTNAME` type) to request the specific SOCKS version to be used. No protocol specified, http:// and all others will be treated as HTTP proxies.

Setting the property and getting back OK does just mean that the plugin passed the value. It does not confirm that the proxy is working or used.

See also **PROXY** option in `CURL` manual.

### Examples

Set a proxy:

```
MBS( "CURL.SetOptionProxy"; $curl; "http://cache.local.com/:8000")
```

## 62.282 `CURL.SetOptionProxyAuth`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyAuth"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The bitmask of allowed authentication methods. 15

**Result** Returns "OK" on success.

### Description

Pass a number as parameter, which is set to a bitmask, to tell libcurl which authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libcurl will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the `CURL.SetOptionProxyUsername` option. The bitmask can be constructed by or'ing together the bits listed above for the `CURL.SetOptionHTTPAuth` option. As of this writing, only Basic, Digest and NTLM work. See also [PROXYAUTH](#) option in CURL manual.

**62.283 CURL.SetOptionProxyCAInfo**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyCAInfo"; curl; Path )

**Parameters****curl**

The CURL session handle.

\$curl

**Path**

The native file path.

**Result** Returns OK or error.

**Description**

This option is used only if `CURL.SetOptionProxySSLVerifyPeer` is true

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer. See also [PROXY\\_CAINFO](#) option in CURL manual.

## 62.284 `CURL.SetOptionProxyCAPath`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyCAPath"; curl; Path )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Path**

The native file path.

**Result** Returns OK or error.

### Description

This option is used only if `CURL.SetOptionProxySSLVerifyPeer` is true

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer. See also [PROXY\\_CAPATH](#) option in CURL manual.

**62.285 CURL.SetOptionProxyCRLFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyCRLFile"; curl; Path )

**Parameters****curl**

The CURL session handle.

\$curl

**Path**

The native file path to the file.

**Result** Returns OK or error.

**Description**

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer. ## 62.288 `CURL.SetOptionProxyPassword`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyPassword"; curl; Value { ; Encoding } )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The password text.

"pass123"

#### **Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

### Description

Please use `CURL.SetOptionProxyUsername` to set username.

See also [PROXYPASSWORD](#) option in CURL manual.

**62.289 CURL.SetOptionProxyPinnedPublicKey**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyPinnedPublicKey"; curl; Path )

**Parameters****curl**

The CURL session handle.

\$curl

**Path**

The file path.

**Result** Returns OK or error.

**Description**

The public key in DER form used to validate the proxy public key.  
This option is used only if `CURL.SetOptionProxySSLVerifyPeer` is true.  
Please path native file path to key file.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer. ## 62.290 CURL.SetOptionProxyPort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyPort"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

The new port value.

8080

**Result** Returns "OK" on success.

### Description

See also [PROXYPORT](#) option in CURL manual.

### Examples

Set proxy with explicit port:

```
Set Variable [ $r; MBS( "CURL.SetOptionProxy"; $curl; "http://cache.local.com/" ) ]
```

```
Set Variable [ $r; MBS( "CURL.SetOptionProxyPort"; $curl; 8000 ) ]
```

**62.299 CURL.SetOptionProxySSLVersion**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxySSLVersion"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The option value.

**Result** Returns OK or error.

**Description**

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion\* constants.

The maximum TLS version can be set by using one of the `CURL_SSLVERSION_MAX_` macros below. It is also possible to OR one of the `CURL_SSLVERSION_` macros with one of the `CURL_SSLVERSION_MAX_` macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future. See also [PROXY\\_SSLVERSION](#) option in CURL manual.

Default	65536	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	262144	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	327680	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	393216	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	458752	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

- 62.347 CURL.SetOptionServiceName 2302

Created 15th April 2018, last changed 16th April 2018.

## 62.301 `CURL.SetOptionProxyTLS13Ciphers`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.3	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyTLS13Ciphers"; curl; Ciphers )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Ciphers**

The list of ciphers.

**Result** Returns OK or error.

### Description

The list of cipher suites to use for the TLS 1.3 connection to a proxy. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

<https://curl.haxx.se/docs/ssl-ciphers.html>

The application does not have to keep the string around after setting this option.

See also [PROXY\\_TLS13\\_CIPHERS](#) option in CURL manual.

Created 15th April 2018, last changed 16th April 2018.

## 62.305 `CURL.SetOptionProxyTransferMode`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyTransferMode"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Whether to pass transfer mode to proxy.

1

**Result** Returns "OK" on success.

### Description

If the value is set to 1 (one), it tells libcurl to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL. Without this setting, or it being set to 0 (zero, the default), `CURL.SetOptionTransferText` has no effect when doing FTP via a proxy. Beware that not all proxies support this feature.

See also [PROXY\\_TRANSFER\\_MODE](#) option in CURL manual.

### See also

- 62.288 `CURL.SetOptionProxyPassword` 2220
- 62.307 `CURL.SetOptionProxyUsername` 2241

Created 18th August 2014, last changed 28th November 2019.

**62.306 CURL.SetOptionProxyType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyType"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The proxy type. Pass number listed below, e.g. 1 for CURLPROXY\_HTTP\_1\_0.

1

**Result** Returns "OK" on success.

**Description**

Available options for this are CURLPROXY\_HTTP (0), CURLPROXY\_HTTP\_1\_0 (1), CURLPROXY SOCKS4 (4), CURLPROXY SOCKS5 (5), CURLPROXY SOCKS4A (6) and CURLPROXY SOCKS5\_HOST-NAME (7). The HTTP type is default.

If you set proxy type to CURLPROXY\_HTTP\_1\_0 (0), it will only affect how libcurl speaks to a proxy when CONNECT is used. The HTTP version used for "regular" HTTP requests is instead controlled with CURL.SetOptionHTTPVersion.

See also **PROXYTYPE** option in CURL manual.

**Examples**

Set Socks 5 proxy:

MBS( "CURL.SetOptionProxyType"; \$curl; 5 )

**See also**

- 62.236 CURL.SetOptionHTTPVersion 2145

Created 18th August 2014, last changed 4th February 2016.

**62.307 CURL.SetOptionProxyUsername**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionProxyUsername"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The user name.

"testuser"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

In order to specify the password to be used in conjunction with the user name use the CURL.SetOptionProxyPassword option.

See also [PROXYUSERNAME](#) option in CURL manual.

**See also**

- 62.282 CURL.SetOptionProxyAuth 2214
- 62.286 CURL.SetOptionProxyHeader 2218

- 62.304 CURL.SetOptionProxyTLSAuthUsername 2237
- 62.305 CURL.SetOptionProxyTransferMode 2238
- 62.365 CURL.SetOptionTLSAuthUsername 2320
- 62.381 CURL.SetOptionUsername 2346

Created 18th August 2014, last changed 5th July 2015.

## 62.308 CURL.SetOptionPut

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionPut"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

Whether this is a PUT request.

1

**Result** Returns "OK" on success.

### Description

A parameter set to 1 tells the library to use HTTP PUT to transfer data. The data should be set with `CURL.SetInputText` or other functions.

This option is deprecated and starting with version 7.12.1 you should instead use `CURL.SetOptionUpload`. See also **PUT** option in CURL manual.

### Examples

Turns put on:

```
MBS( "CURL.SetOptionPut"; $curl; 1 )
```

Make request with PUT:

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "http://test.test/test/hello.txt") ]
Set Variable [ $result; Value:MBS("CURL.SetOptionUpload"; $curl; 1) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPut"; $curl; 1) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPassword"; $curl; CURL Test::Password) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionUsername"; $curl; CURL Test::Name) ]
Set Variable [ $result; Value:MBS("CURL.SetInputText"; $curl; "This is content to upload") ]
# run
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
# check results
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

Created 18th August 2014, last changed 19th April 2020.

## 62.309 CURL.SetOptionQuote

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionQuote"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

The ftp commands.

"mkdir testfolder"

**Result** Returns "OK" on success.

### Description

This will be done before any other commands are issued (even before the CWD command for FTP). Disable this operation again by passing no value to this function. When speaking to a FTP (or SFTP) server, prefix the command with an asterisk (\*) to make libcurl continue even if the command fails as by default libcurl will stop at first failure.

The set of valid FTP commands depends on the server (see RFC 959 for a list of mandatory commands).

The valid SFTP commands are: chgrp, chmod, chown, ln, mkdir, pwd, rename, rm, rmdir, symlink.

This option takes a list of items. So this function takes a variable number of arguments. If you call function with 2 parameters, you set an empty list. If you call it with 5 parameters, you set a list with 3 values.

See also CURL.SetOptionPreQuote and CURL.SetOptionPostQuote.

Here is list of raw FTP commands:

[http://en.wikipedia.org/wiki/List\\_of\\_FTP\\_commands](http://en.wikipedia.org/wiki/List_of_FTP_commands)

File names may be passed with quotes to include spaces in file names.

See also **QUOTE** option in CURL manual.

### Examples

Delete file only:

MBS( "CURL.SetOptionQuote"; \$curl; "DELE test.txt" )

Delete folder:

```
MBS( "CURL.SetOptionQuote"; $curl; "RMD testfolder" )
```

Create folder with FTP:

```
MBS( "CURL.SetOptionQuote"; $curl; "MKD testfolder" )
```

Rename file using two FTP commands:

```
MBS( "CURL.SetOptionQuote" ; $curl ; "RNFR foo.txt"; "RNT0 bar.txt" )
```

Set file permissions for FTP:

```
MBS( "CURL.SetOptionQuote" ; $curl ; "SITE CHMOD 777 testfile")
```

Call with three parameters:

```
MBS( "CURL.SetOptionQuote"; handle; $value1; $value2; $value3 )
```

List all files:

```
MBS( "CURL.SetOptionQuote" ; $curl ; "NLST -all" )
```

Connect to FTP server and delete a file:

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
# this is URL to ftp server
Set Variable [ $r; Value:MBS("CURL.SetOptionURL"; $curl; "ftp://www.monkeybreadsoftware.de/") ]
# set user name
Set Variable [ $r; Value:MBS("CURL.SetOptionUserName"; $curl; "xxx") ]
# set password
Set Variable [ $r; Value:MBS("CURL.SetOptionPassword"; $curl; "xxx") ]
# set delete command of file "test.jpg" in folder "images"
Set Variable [ $r; Value:MBS("CURL.SetOptionQuote"; $curl; "DELE images/test.jpg") ]
# run transfer
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
# get debug messages
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

Move file on SFTP in done folder with variables and quotes:

```
MBS("CURL.SetOptionQuote"; $curl; "rename " & "\" & $Path & $folder & "/" & $$FileName & "\"
& " " & "\" & $Path & $folder & "Done/"
```

```
& $$FileName & "\")
```

Change file permissions via SFTP:

```
# set permissions to 777, so everyone can read/write/execute the file.
Set Variable [ $result ; Value: MBS( "CURL.SetOptionQuote"; $curl; "chmod 777 /Users/cs/Pictures/test.jpg"
) ]
```

Change file owner group via SFTP:

```
# change group to group 20
Set Variable [ $result ; Value: MBS( "CURL.SetOptionQuote"; $curl; "chgrp 20 /Users/cs/Pictures/test.jpg"
) ]
```

Change file owner via SFTP:

```
# change owner to user 501
Set Variable [ $result ; Value: MBS( "CURL.SetOptionQuote"; $curl; "chown 501 /Users/cs/Pictures/test.jpg"
) ]
```

**62.316 CURL.SetOptionRandomFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionRandomFile"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

File path for SSL engine.

"/tmp/test.txt"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"utf8"

**Result** Returns "OK" on success.

**Description**

Pass a file path. The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.

Starting with version 8.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

See also [RANDOM\\_FILE](#) option in CURL manual.

## 62.317 CURL.SetOptionRange

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionRange"; curl; Value { ; Encoding } )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

Range string.

"1000-2000"

#### Encoding

Optional

The text encoding for text parameter. Default is UTF-8.

"utf8"

**Result** Returns "OK" on success.

### Description

Pass a text as parameter, which should contain the specified range you want. It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). For RTSP, the formatting of a range should follow RFC 2326 Section 12.29. For RTSP, byte ranges are not permitted. Instead, ranges should be given in npt, utc, or smpte formats.

Pass an empty string to this option to disable the use of ranges.

Ranges work on HTTP, FTP, FILE (since 7.18.0), and RTSP (since 7.20.0) transfers only.

See also [RANGE](#) option in CURL manual.

## 62.318 CURL.SetOptionRedirProtocols

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionRedirProtocols"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

The bitmask defining which protocols to use.

1

**Result** Returns "OK" on success.

### Description

Pass a number that holds a bitmask of protocol values (see below). If used, this bitmask limits what protocols libcurl may use in a transfer that it follows to in a redirect when `CURL.SetOptionFollowLocation` is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libcurl will allow all protocols except for FILE and SCP.

HTTP 1

HTTPS2

## 62.319 `CURL.SetOptionReferer`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionReferer"; curl; Value { ; Encoding } )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The new referrer string.

"https://www.mbsplugins.de/"

#### **Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"utf8"

**Result** Returns "OK" on success.

### Description

This string will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with `CURL.SetOptionHTTPHeader`. See also [REFERER](#) option in CURL manual.

**62.320 CURL.SetOptionRequestTarget**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionRequestTarget"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The option value.

**Result** Returns OK or error.

**Description**

See also [REQUEST\\_TARGET](#) option in CURL manual.

Created 15th April 2018, last changed 16th April 2018.

## 62.321 `CURL.SetOptionResolve`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionResolve"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The option value.

**Result** Returns OK or error.

### Description

Provide custom host name to IP address resolves.

See also [RESOLVE](#) option in CURL manual.

### See also

Created 15th April 2018, last changed 15th April 2018.

**62.322 CURL.SetOptionResumeFrom**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionResumeFrom"; curl; Value )

(old name: CURL.SetOptionResumeFromLarge)

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The offset to start at.

1000

**Result** Returns "OK" on success.

**Description**

Pass a number as parameter. It contains the offset in number of bytes that you want the transfer to start from. Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

When doing uploads with FTP, the resume position is where in the local/source file libcurl should try to resume the upload from and it will then append the source file to the remote target file.

See also [RESUME\\_FROM](#) option in CURL manual.

## 62.323 `CURL.SetOptionSASLAUTHZID`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	9.4	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSASLAUTHZID"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The new authorisation identity.

**Result** Returns OK or error.

### Description

Pass a text as parameter, which should be pointing to the authorisation identity (authzid) for the transfer. Only applicable to the PLAIN SASL authentication mechanism where it is optional.

When not specified only the authentication identity (authcid) as specified by the username will be sent to the server, along with the password. The server will derive a authzid from the authcid when not provided, which it will then uses internally.

When the authzid is specified, the use of which is server dependent, it can be used to access another user's inbox, that the user has been granted access to, or a shared mailbox for example.

See also [SASL\\_AUTHZID](#) option in CURL manual.

## 62.325 `CURL.SetOptionSSHAuthTypes`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSHAuthTypes"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

The new types.

3

**Result** Returns "OK" on success.

### Description

Pass a number set to a bitmask consisting of one or more of `CURLSSH_AUTH_PUBLICKEY`, `CURLSSH_AUTH_PASSWORD`, `CURLSSH_AUTH_HOST`, `CURLSSH_AUTH_KEYBOARD`. Set `CURLSSH_AUTH_ANY` to let libcurl pick one.

<code>CURLSSH_AUTH_ANY</code>	-1	all types supported by the server.
<code>CURLSSH_AUTH_NONE</code>	0	none allowed, silly but complete.
<code>CURLSSH_AUTH_PUBLICKEY</code>	1	public/private key files.
<code>CURLSSH_AUTH_PASSWORD</code>	2	password.
<code>CURLSSH_AUTH_HOST</code>	4	host key files.
<code>CURLSSH_AUTH_KEYBOARD</code>	8	keyboard interactive.
<code>CURLSSH_AUTH_DEFAULT</code>	-1	default.

See also [SSH\\_AUTH\\_TYPES](#) option in CURL manual.

### Examples

Use password, no private key:

```
MBS( "CURL.SetOptionSSHAuthTypes"; $curl; 2+8 )
```

Download file via SFTP to file on disk:

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
# set download URL, e.g. sftp://monkeybreadsoftware.net/test.jpg
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; SFTP Download::URL ) ]
# build file path on disk and open output file
Set Variable [ $name; Value:GetValue(SFTP Download::FileName; 1) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; SFTP Download::FolderPath; $name ) ]
```

```

Set Variable [ $r; Value:MBS("CURL.CreateOutputFile"; $curl; $path) ]
# login only via password
Set Variable [ $result; Value:MBS( "CURL.SetOptionSSHAuthTypes"; $curl; 2+8 ) ]
# set credentials
Set Variable [ $result; Value:MBS("CURL.SetOptionUsername"; $curl; SFTP Download::UserName ) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionPassword"; $curl; SFTP Download::Password ) ]
# run transfer
Set Field [ SFTP Download::ErrorCode; MBS("CURL.Perform"; $curl) ]
# check debug log for errors
Set Field [ SFTP Download::Debug; MBS("CURL.GetDebugAsText"; $curl) ]
# free CURL session
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]

```

## 62.326 `CURL.SetOptionSSHCompression`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSHCompression"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The option value. Pass 1 to enable or 0 to disable.

**Result** Returns OK or error.

### Description

See also [SSH\\_COMPRESSION](#) option in CURL manual.

### See also

- 62.195 `CURL.SetOptionCookieSession` 2088
- 62.333 `CURL.SetOptionSSLCipherList` 2279

Created 15th April 2018, last changed 16th April 2018.

**62.327 CURL.SetOptionSSHHostPublicKeyMD5**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSHHostPublicKeyMD5"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new MD5 hash.

"8B1A9953C4611296A827ABF8C47804D7"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

Pass a string containing 32 hexadecimal digits. The string should be the 128 bit MD5 checksum of the remote host's public key, and libcurl will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers.

See also [SSH\\_HOST\\_PUBLIC\\_KEY\\_MD5](#) option in CURL manual.

**See also**

- 62.330 CURL.SetOptionSSHPublicKeyfile

2271

Created 18th August 2014, last changed 5th July 2015.

## 62.328 `CURL.SetOptionSSHKnownHosts`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSHKnownHosts"; curl; Value { ; Encoding } )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The known hosts file path.

"/tmp/knownhosts.txt"

#### **Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

### Description

The `known_hosts` file should use the OpenSSH file format as supported by libssh2. If this file is specified, libcurl will only accept connections with hosts that are known and present in that file, with a matching public key.

See also [SSH\\_KNOWNHOSTS](#) option in CURL manual.

### See also

- 62.343 `CURL.SetOptionSSLVerifyHost`

2292

Created 18th August 2014, last changed 5th July 2015.

**62.329 CURL.SetOptionSSHPrivateKeyfile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSHPrivateKeyfile"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new file path.

"c:\myprivatekey"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

If not used, libcurl defaults to using ~/.ssh/id\_dsa. If the file is password-protected, set the password with `CURL.SetOptionKeyPassword`.

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

See also [SSH\\_PRIVATE\\_KEYFILE](#) option in CURL manual.

**Examples**

Login via SSH with public key:

```
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionURL"; $curl; "sftp://test.com:1222/test.fmp12" ) ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionVerbose"; $curl; 1) ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionUpload"; $curl; 1) ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionConnectionTimeout"; $curl; 10) ]
#
# specify paths to keys, public key optional as it is usually included in private key file:
Set Variable [ $result ; Value: MBS("CURL.SetOptionSSHPrivateKeyfile"; $curl; "/Users/jameykey/.ssh/id_rsa")
]
Set Variable [ $result ; Value: MBS("CURL.SetOptionSSHPublicKeyfile"; $curl; "/Users/jameykey/.ssh/id_rsa.pub")
]
Set Variable [ $result ; Value: MBS("CURL.SetOptionUsername"; $curl; CURL Test::Name) ]
#
```

```

# no password with private key!
// Set Variable [ $result ; Value: MBS("CURL.SetOptionPassword"; $curl; CURL Test::Password) ]
#
# upload text or open a file path
Set Variable [ $d ; Value: "Just a little bit text. Have fun!" ]
Set Variable [ $result ; Value: MBS("CURL.SetInputText"; $curl; $d) ]
// Set Variable [ $result ; Value: MBS("CURL.OpenInputFile"; $curl; "/Users/test/Desktop/test.fmp12") ]
#
# do it!
Set Field [ CURL Test::Result ; MBS("CURL.Perform"; $curl) ]
Set Field [ CURL Test::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]

```

Created 18th August 2014, last changed 19th April 2020.

**62.330 CURL.SetOptionSSHPublicKeyfile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSHPublicKeyfile"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new public key file path.

"c:\mykey.pub"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

If not used, libcurl defaults to using ~/.ssh/id\_dsa.pub.

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

See also [SSH\\_PUBLIC\\_KEYFILE](#) option in CURL manual.

**Examples**

Login via SSH with public key:

```
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionURL"; $curl; "sftp://test.com:1222/test.fmp12" ) ]

### 62.330.1 Blog Entries

- [MBS FileMaker Plugin, version 7.6pr3](#)

Created 18th August 2014, last changed 19th April 2020.

**62.331 CURL.SetOptionSSLCert**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLCert"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The file path to the certificate.

"/tmp/test.pem"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"utf8"

**Result** Returns "OK" on success.

**Description**

Pass a text string as parameter. The string should be the file name of your certificate. The default format is "PEM" and can be changed with `CURL.SetOptionSSLCertType`.

With NSS this can also be the nickname of the certificate you wish to authenticate with. If you want to use a file from the current directory, please precede it with "/" prefix, in order to avoid confusion with a nickname.

Starting with version 8.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

For the GSX example, apple-cert+key.pem in our case is a text file containing the key and certificate:

```
—BEGIN RSA PRIVATE KEY—
```

```
Proc-Type: 4,ENCRYPTED
```

```
DEK-Info: AES-256-CBC,B8DCBDA00BFB07EB3CE3901334FC7028
```

```
lKa9vkyhSkx1N8PS+0gUsDLa5Ki36z9wuw9IdVQAeNuGYwPvpPwGzYiUWXE7p8H1
```

```
...
```

```
WHhQqB/FACH0XbOWWUtHInNlNVHFcKKtJdg/JllkMQfvSD3XnSNLgLvOpr10L85Z
```

```
—END RSA PRIVATE KEY—
```

```
—BEGIN CERTIFICATE—
```

```
MIIEuTCCA6GgAwIBAgIIVbEoCG6/FTIwDQYJKoZIhvcNAQELBQAwezE1MDMGA1UE
```

```
....
AYf7yNIM0btoU2ymPrzwn02AKxnk6QRMqVkirDHSWew/mQfxlOg2HN2HJ1MQR9wC
3bxbgvJL1EFq9AAK5g==
—END CERTIFICATE—
```

You can normally just copy the files together with a text editor.  
See also **SSLCERT** option in CURL manual.

### Examples

Set a client SSL certificate:

```
Set Variable [ $r; Value:MBS("CURL.SetOptionSSLCert"; $curl; "/some/certfile.pem") ]
Set Variable [ $r; Value:MBS("CURL.SetOptionSSLCertType"; $curl; "PEM") ]
Set Variable [ $r; Value:MBS("CURL.SetOptionKeyPassword"; $curl; "secret") ]
```

Send request to Apple's gsx webservice:

```
Set Variable [ $XMLRequest; Value:"" ]
# Start new session
Set Variable [ $curl; Value:MBS("CURL.New") ]
# URL for web service
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "https://gsxapiut.apple.com:443/gsx-
ws/services/emea/asp") ]
# Mark content as XML
Set Variable [ $result; Value:MBS("CURL.SetOptionHTTPHeader"; $curl; "Content-Type: text/xml; charset=UTF-
8") ]
# Pass XML content for request
Set Variable [ $result; Value:MBS("CURL.SetOptionPostFields"; $curl; $XMLRequest) ]
# Certificate and private key in one file
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLCert"; $curl; "/Users/cs/Keys/apple-cert+key.pem")
]
# Root certificates
Set Variable [ $result; Value:MBS("CURL.SetOptionCAInfo"; $curl; "/Users/cs/Keys/cacert.pem") ]
# SSL Key is in PEM Format
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLCertType"; $curl; "PEM") ]
# Password for key file
Set Variable [ $result; Value:MBS("CURL.SetOptionKeyPassword"; $curl; "xxx") ]
# SSL Verification on
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLVerifyPeer"; $curl; 1) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLVerifyHost"; $curl; 1) ]
# use TLS v1.2
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLVersion"; $curl; 6) ]
# RUN now
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ CURL Test::Text; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
```

```
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
# Cleanup
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

Talk to Apple's global service exchange webservice:

```
# Various parameters
Set Variable [ $userid ; Value: "???" ]
Set Variable [ $serviceAccountNo ; Value: "???" ]
Set Variable [ $PrivateKeyPassword ; Value: "???" ]

# Build XML with our values:
Set Variable [ $xml ; Value: Tabelle::Login XML Template ]
Set Variable [ $xml ; Value: Substitute($xml; "$userid$"; MBS("Text.EncodeToXML"; $userid)) ]
Set Variable [ $xml ; Value: Substitute($xml; "$serviceAccountNo$"; MBS("Text.EncodeToXML"; $serviceAccountNo)) ]

# Start CURL
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionURL";$curl; "https://gsxapi.apple.com/gsx-ws/services/emea/asp") ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionSSLCertType"; $curl; "PEM") ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionKeyPassword"; $curl; $PrivateKeyPassword) ]
# pem file with private key and certificate from Apple
Set Variable [ $r ; Value: MBS("CURL.SetOptionSSLCert"; $curl; "/Users/test/Desktop/test.pem") ]
# some root certificates
Set Variable [ $r ; Value: MBS("CURL.SetOptionCAINFO"; $curl; "/Users/test/Desktop/cacert.pem") ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionSSLVersion"; $curl; 6) // TLS v1.2 ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionTimeOut"; $curl; 10) ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionHTTPHeader"; $curl; "Content-Type: text/xml; charset=UTF-8") ]
# run the login query
Set Variable [ $r ; Value: MBS("CURL.Perform"; $curl) ]
# check result
Set Variable [ $httpResponse ; Value: MBS( "CURL.GetResponseCode"; $curl ) ]
Set Field [ Tabelle::CURL Result ; $r ]
Set Field [ Tabelle::CURL Input ; $xml ]
Set Field [ Tabelle::CURL Debug ; MBS("CURL.GetDebugAsText"; $curl; "UTF8") ]

- [Using Apple's Global Service Exchange web service in FileMaker](#)
- [MBS FileMaker Plugin, version 7.6pr3](#)
- [Using Apple's Global Service Exchange web service in FileMaker](#)

Created 18th August 2014, last changed 19th April 2020.

**62.332 CURL.SetOptionSSLCertType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLCertType"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The type string.

"PEM"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

Pass a string as parameter. The string should be the format of your certificate. Supported formats are "PEM", "DER" and "P12" for PKCS# 12-encoded files.

Due to a bug the P12 format was not working in 7.4 or earlier. This was fixed in 7.5.  
See also [SSLCERTTYPE](#) option in CURL manual.

**Examples**

Set a client SSL certificate:

```
Set Variable [ $r; Value:MBS("CURL.SetOptionSSLCert"; $curl; "/some/certfile.pem") ]
Set Variable [ $r; Value:MBS("CURL.SetOptionSSLCertType"; $curl; "PEM") ]
Set Variable [ $r; Value:MBS("CURL.SetOptionKeyPassword"; $curl; "secret") ]
```

Use P12 certificate with pfx file:

```
Set Variable [ $r; Value:MBS("CURL.SetOptionSSLCert"; $curl; "/some/certfile.pfx") ]
Set Variable [ $r; Value:MBS("CURL.SetOptionSSLCertType"; $curl; "P12") ]
Set Variable [ $r; Value:MBS("CURL.SetOptionKeyPassword"; $curl; "secret") ]
```

**62.333 CURL.SetOptionSSLCipherList**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLCipherList"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new text string with list of ciphers.

"RC4-SHA:SHA1+DES"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"utf8"

**Result** Returns "OK" on success.

**Description**

The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators.

For OpenSSL and GnuTLS valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You'll find more details about cipher lists on this URL: <http://www.openssl.org/docs/apps/ciphers.html>

For NSS, valid examples of cipher lists include 'rsa\_rc4\_128\_md5', 'rsa\_aes\_128\_sha', etc. With NSS you don't add/remove ciphers. If one uses this option then all known ciphers are disabled and only those passed in are enabled.

You'll find more details about the NSS cipher lists on this URL: [http://directory.fedora.redhat.com/docs/mod\\_nss.html#](http://directory.fedora.redhat.com/docs/mod_nss.html#Directives)

**62.336 CURL.SetOptionSSLEngine**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLEngine"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The name of the crypto engine.

""

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"utf8"

**Result** Returns "OK" on success.

**Description**

Pass a string as parameter. It will be used as the identifier for the crypto engine you want to use for your private key.

If the crypto device cannot be loaded, `CURLE_SSL_ENGINE_NOTFOUND` is returned.

See also **SSLENGINE** option in CURL manual.

## 62.337 `CURL.SetOptionSSLEngineDefault`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLEngineDefault"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Pass always 1.

1

**Result** Returns "OK" on success.

### Description

If the crypto device cannot be set, `CURLE_SSL_ENGINE_SETFAILED` is returned.

See also [SSLENGINE\\_DEFAULT](#) option in CURL manual.

Created 18th August 2014, last changed 18th August 2014.

**62.338 CURL.SetOptionSSLFalseStart**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLFalseStart"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The option value.

**Result** Returns OK or error.

**Description**

Pass 1 to enable.

See also [SSL\\_FALSESTART](#) option in CURL manual.

**See also**

- 62.333 [CURL.SetOptionSSLCipherList](#)

2279

Created 15th April 2018, last changed 16th April 2018.

**62.339** **CURL.SetOptionSSLKey**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "CURL.SetOptionSSLKey"; curl; Value { ; Encoding } )
```

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The private key file path.

"/tmp/test.pem"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

Pass a string as parameter. The string should be the file name of your private key. The default format is "PEM" and can be changed with `CURL.SetOptionSSLKeyType`.

Starting with version 8.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

See also **SSLKEY** option in CURL manual.

**Examples**

Set private key:

```
MBS( "CURL.SetOptionSSLKey"; $curl; $cacertPath )
```

Send request to Apple's gsx webservice:

```
Set Variable [ $XMLRequest; Value:"" ]
```

```
# Start new session
```

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
```

```
# URL for web service
```

```
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "https://gsxapiut.apple.com:443/gsx-  
ws/services/emea/asp") ]
```

```
# Mark content as XML
```

```
Set Variable [ $result; Value:MBS("CURL.SetOptionHTTPHeader"; $curl; "Content-Type: text/xml; charset=UTF-  
8") ]
```

```

# Pass XML content for request
Set Variable [ $result; Value:MBS("CURL.SetOptionPostFields"; $curl; $XMLRequest) ]
# Certificate and private key in one file
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLCert"; $curl; "/Users/cs/Keys/apple-cert+key.pem")
]
# Root certificates
Set Variable [ $result; Value:MBS("CURL.SetOptionCAInfo"; $curl; "/Users/cs/Keys/cacert.pem") ]
# SSL Key is in PEM Format
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLCertType"; $curl; "PEM") ]
# Password for key file
Set Variable [ $result; Value:MBS("CURL.SetOptionKeyPassword"; $curl; "xxx") ]
# SSL Verification on
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLVerifyPeer"; $curl; 1) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLVerifyHost"; $curl; 1) ]
# use TLS v1.2
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLVersion"; $curl; 6) ]
# RUN now
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ CURL Test::Text; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
# Cleanup
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]

```

## 62.340 `CURL.SetOptionSSLKeyType`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLKeyType"; curl; Value { ; Encoding } )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The key type.

"PEM"

#### **Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

### Description

Pass a string as parameter. The string should be the format of your private key. Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case `CURL.SetOptionSSLKey` is used as an identifier passed to the engine. You have to set the crypto engine with `CURL.SetOptionSSLEngine`. "DER" format key file currently does not work because of a bug in OpenSSL.

See also [SSLKEYTYPE](#) option in CURL manual.

**62.342 CURL.SetOptionSSLSessionIDCache**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLSessionIDCache"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

Whether to cache session IDs.

1

**Result** Returns "OK" on success.

**Description**

Set to 0 to disable cache. Set this to 1 to enable it. By default all transfers are done using the cache. While nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. See also [SSL\\_SESSIONID\\_CACHE](#) option in CURL manual.

**See also**

- 62.313 [CURL.SetOptionRTSPSessionID](#)

2250

Created 18th August 2014, last changed 18th August 2014.

## 62.343 `CURL.SetOptionSSLVerifyHost`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLVerifyHost"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Whether to verify host.

1

**Result** Returns "OK" on success.

### Description

This option determines whether libcurl verifies that the server cert is for the server it is known as.

When negotiating a SSL connection, the server sends a certificate indicating its identity.

When value is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

Curl considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told Curl to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn't matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

This option controls checking the server's claimed identity. The server could be lying. To control lying, see `CURL SetOptionSSLVerifyPeer`.

see also

[http://www.mbsplugins.de/archive/2013-01-31/SSL\\_Security\\_with\\_CURL/monkeybreadsoftware\\_blog\\_archive](http://www.mbsplugins.de/archive/2013-01-31/SSL_Security_with_CURL/monkeybreadsoftware_blog_archive)

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.

See also [SSL\\_VERIFYHOST](#) option in CURL manual.

### Examples

Disable SSL Verification:

```
MBS( "CURL.SetOptionSSLVerifyPeer"; $curl; 0 )
```

```
MBS( "CURL.SetOptionSSLVerifyHost"; $curl; 0 )
```

Enables verification and uses cacert.pem file for certificates:

```
MBS( "CURL.SetOptionCAInfo"; $curl; $cacertPath )
```

```
MBS( "CURL.SetOptionSSLVerifyHost"; $curl; 2 )
```

```
MBS( "CURL.SetOptionSSLVerifyPeer"; $curl; 1 )
```

**62.344 CURL.SetOptionSSLVerifyPeer**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLVerifyPeer"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

Whether to verify peer.

1

**Result** Returns "OK" on success.

**Description**

Pass a number as parameter. By default, curl assumes a value of 1.

This option determines whether curl verifies the authenticity of the peer's certificate. A value of 1 means curl verifies; 0 (zero) means it doesn't.

When negotiating an SSL connection, the server sends a certificate indicating its identity. Curl verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. curl uses a default bundle of CA certificates (the path for that is determined at build time) and you can specify alternate certificates with the `CURL.SetOptionCAINFO` option or the `CURL.SetOptionCAPATH` option.

When `CURL.SetOptionSSLVerifyPeer` is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the peer certificate verification succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use `CURL.SetOptionSSLVerifyHost` to control that. The check that the host name in the certificate is valid for the host name you're connecting to is done independently of the `CURL.SetOptionSSLVerifyPeer` option.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.

See also [SSL\\_VERIFYPEER](#) option in CURL manual.

### Examples

Disable SSL Verification:

```
MBS( "CURL.SetOptionSSLVerifyPeer"; $curl; 0 )
MBS( "CURL.SetOptionSSLVerifyHost"; $curl; 0 )
```

Enables verification and uses cacert.pem file for certificates:

```
MBS( "CURL.SetOptionCAInfo"; $curl; $cacertPath )
MBS( "CURL.SetOptionSSLVerifyHost"; $curl; 2 )
MBS( "CURL.SetOptionSSLVerifyPeer"; $curl; 1 )
```

**62.346 CURL.SetOptionSSLVersion**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSSLVersion"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

Pass number from 0 to 7.

0

**Result** Returns "OK" on success.

**Description**

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion\* constants.

The maximum TLS version can be set by using one of the `CURL_SSLVERSION_MAX_` macros below. It is also possible to OR one of the `CURL_SSLVERSION_` macros with one of the `CURL_SSLVERSION_MAX_` macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.

See also [SSLVERSION](#) option in CURL manual.

Default	65536	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	262144	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	327680	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	393216	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	458752	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

### Examples

SMTP via SSL without TLS:

```
$r = MBS( "CURL.SetOptionSSLVersion"; $curl; 3 )
$r = MBS( "CURL.SetOptionPort"; $curl; 25 )
```

Set to use TLSv1.2:

```
Set Variable [ $r; MBS( "CURL.SetOptionUseSSL"; $curl; 3 ) ]
Set Variable [ $r; MBS( "CURL.SetOptionSSLVersion"; $curl; 6 ) ]
```

Do FTPS by using FTP and upgrade to TLS:

```
# Start new session
Set Variable [ $curl ; Value: MBS("CURL.New") ]
# Set URL to load (HTTP, HTTPS, FTP, FTPS, SFTP, etc.)
Set Variable [ $result ; Value: MBS("CURL.SetOptionURL"; $curl; "ftp://ftp.christians-software.de/") ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionUsername"; $curl; "12144-test") ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionPassword"; $curl; "qr"8km3% Eu\7") ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionConnectionTimeout"; $curl; 10) ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionSSLVersion"; $curl; 1) // want TLS v1.0 or better ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionUseSSL"; $curl; 3) // require SSL ]
# RUN now
Set Field [ CURL Test::Result ; MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ CURL Test::Text ; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
Set Field [ CURL Test::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
# Cleanup
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]
```

**62.347 CURL.SetOptionServiceName**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionServiceName"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The option value.

**Result** Returns OK or error.

**Description**

See also [SERVICE\\_NAME](#) option in CURL manual.

**See also**

- 62.300 CURL.SetOptionProxyServiceName

2233

Created 15th April 2018, last changed 16th April 2018.

**62.348 CURL.SetOptionSocks5Auth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSocks5Auth"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The option value.

**Result** Returns OK or error.

**Description**

Bitmask of allowed auth methods for connections to SOCKS 5 proxies.

See also [SOCKS5\\_AUTH](#) option in CURL manual.

**See also**

**62.349** `CURL.SetOptionSocks5GSSAPINec`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSocks5GSSAPINec"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The setting.

1

**Result** Returns "OK" on success.

**Description**

Pass a long set to 1 to enable or 0 to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation.

See also [SOCKS5\\_GSSAPI\\_NEC](#) option in CURL manual.

**See also**

**62.350 CURL.SetOptionSocks5GSSAPIService**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSocks5GSSAPIService"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The service name.

""

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it.

See also [SOCKS5\\_GSSAPI\\_SERVICE](#) option in CURL manual.

## 62.353 `CURL.SetOptionStreamWeight`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionStreamWeight"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The option value.

**Result** Returns OK or error.

### Description

Default is 16.

See also [STREAM\\_WEIGHT](#) option in CURL manual.

### See also

- 62.351 `CURL.SetOptionStreamDepends` 2306

**62.354 CURL.SetOptionSuppressConnectHeaders**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionSuppressConnectHeaders"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The option value.

**Result** Returns OK or error.

**Description**

Pass 1 to suppress or 0 if not.

See also [SUPPRESS\\_CONNECT\\_HEADERS](#) option in CURL manual.

Created 15th April 2018, last changed 16th April 2018.

## 62.355 `CURL.SetOptionTCPFastOpen`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTCPFastOpen"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The option value.

**Result** Returns OK or error.

### Description

See also [TCP\\_FASTOPEN](#) option in CURL manual.

Created 15th April 2018, last changed 16th April 2018.

**62.356 CURL.SetOptionTCPKeepAlive**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTCPKeepAlive"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new setting. 1 = on and 0 = off.

1

**Result** Returns OK or error.

**Description**

If set to 1, TCP keep alive probes will be sent to avoid TCP/IP timeouts. The delay and frequency of these probes can be controlled by the `CURL.SetOptionTCPKeepIdle` and `CURL.SetOptionTCPKeepInterval` options, provided the operating system supports them. Set to 0 (default behavior) to disable keep alive probes. See also [TCP\\_KEEPALIVE](#) option in CURL manual.

**Examples**

Configure keep alive:

```
# Enable TCP keep-alive for this transfer
Set Variable [ $r; Value:MBS( "CURL.SetOptionTCPKeepAlive"; $curl; 1 ) ]
# keep-alive idle time to 120 seconds
Set Variable [ $r; Value:MBS( "CURL.SetOptionTCPKeepIdle"; $curl; 120 ) ]
# interval time between keep-alive probes: 60 seconds
Set Variable [ $r; Value:MBS( "CURL.SetOptionTCPKeepInterval"; $curl; 60 ) ]
```

**See also**

- 62.357 `CURL.SetOptionTCPKeepIdle` 2312
- 62.358 `CURL.SetOptionTCPKeepInterval` 2313

Created 8th July 2015, last changed 11st March 2020.

## 62.357 `CURL.SetOptionTCPKeepIdle`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTCPKeepIdle"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The new setting.

120

**Result** Returns OK or error.

### Description

Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes. Not all operating systems support this option.

See also [TCP\\_KEEPIDLE](#) option in CURL manual.

### See also

- 62.356 `CURL.SetOptionTCPKeepAlive` 2311
- 62.358 `CURL.SetOptionTCPKeepInterval` 2313

Created 8th July 2015, last changed 9th July 2015.

**62.358 CURL.SetOptionTCPKeepInterval**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTCPKeepInterval"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new value.

60

**Result** Returns OK or error.

**Description**

Sets the interval, in seconds, that the operating system will wait between sending keepalive probes. Not all operating systems support this option.

See also [TCP\\_KEEPINTVL](#) option in CURL manual.

**See also**

- 62.356 CURL.SetOptionTCPKeepAlive 2311
- 62.357 CURL.SetOptionTCPKeepIdle 2312

Created 8th July 2015, last changed 9th July 2015.

**62.359** **CURL.SetOptionTCPNoDelay**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTCPNoDelay"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new setting.

1

**Result** Returns "OK" on success.

**Description**

Pass a number specifying whether the `TCP_NODELAY` option should be set or cleared (1 = set, 0 = clear). The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP's Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

See also [TCP\\_NODELAY](#) option in CURL manual.

Created 18th August 2014, last changed 18th August 2014.

**62.360 CURL.SetOptionTFTPBlockSize**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTFTPBlockSize"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

Block size for TFTP

512

**Result** Returns "OK" on success.

**Description**

Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used.

See also [TFTP\\_BLKSIZE](#) option in CURL manual.

**See also**

**62.362 CURL.SetOptionTLS13Ciphers**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.3	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTLS13Ciphers"; curl; Ciphers )

**Parameters****curl**

The CURL session handle.

\$curl

**Ciphers**

The list of ciphers.

**Result** Returns OK or error.

**Description**

The list of cipher suites to use for the TLS 1.3 connection. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

<https://curl.haxx.se/docs/ssl-ciphers.html>

The application does not have to keep the string around after setting this option.

See also [TLS13\\_CIPHERS](#) option in CURL manual.

**62.363 CURL.SetOptionTLSAuthPassword**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTLSAuthPassword"; curl; Password { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Password**

The password.

\$Password

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns OK or error.

**Description**

Please also set OptionTLSAuthType.

See also [TLSAUTH\\_PASSWORD](#) option in CURL manual.

**See also**

- 62.247 CURL.SetOptionKeyPassword 2158

Created 18th August 2014, last changed 5th July 2015.

**62.364 CURL.SetOptionTLSAuthType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTLSAuthType"; curl; Type { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Type**

the TLS authentication type.

"SRP"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns OK or error.

**Description**

Please also set username and password.

You can set this to "SRP" to use Secure Remote Password authentication.

See also [TLSAUTH\\_TYPE](#) option in CURL manual.

**See also**

## 62.365 `CURL.SetOptionTLSAuthUsername`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTLSAuthUsername"; curl; Username { ; Encoding } )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Username**

The user name.

\$Username

#### **Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns OK or error.

### Description

Please also set `OptionTLSAuthType`.

See also [TLSAUTH\\_USERNAME](#) option in CURL manual.

### See also

- 62.304 `CURL.SetOptionProxyTLSAuthUsername` 2237

Created 18th August 2014, last changed 5th July 2015.

**62.366 CURL.SetOptionTelnetOptions**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTelnetOptions"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new options.

””

**Result** Returns "OK" on success.

**Description**

Provide a list with variables to pass to the telnet negotiations. The variables should be in the format <option=value>. libcurl supports the options 'TTYTYPE', 'XDISPLOC' and 'NEW\_ENV'. See the TELNET standard for details.

This option takes a list of items. So this function takes a variable number of arguments. If you call function with 2 parameters, you set an empty list. If you call it with 5 parameters, you set a list with 3 values. See also [TELNETOPTIONS](#) option in CURL manual.

**Examples**

Call with three parameters:

MBS( "CURL.SetOptionTelnetOptions"; handle; \$value1; \$value2; \$value3 )

**See also**

- 62.88 [CURL.GetOptionTelnetOptions](#) 1918
- 62.239 [CURL.SetOptionHeaderOptions](#) 2148
- 62.250 [CURL.SetOptionLoginOptions](#) 2162
- 62.296 [CURL.SetOptionProxySSLOptions](#) 2228
- 62.341 [CURL.SetOptionSSLOptions](#) 2290
- 62.361 [CURL.SetOptionTFTPNoOptions](#) 2316

Created 18th August 2014, last changed 18th August 2014.

## 62.367 `CURL.SetOptionTimeCondition`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTimeCondition"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The time condition. Pass 0 for none, 1 for If Modified since, 2 for If not modified since.

2

**Result** Returns "OK" on success.

### Description

Pass a number as parameter. This defines how the `CURL.SetOptionTimeValue` time value is treated. You can set this parameter to `CURL_TIMECOND_IFMODSINCE` (1) or `CURL_TIMECOND_IFUNMODSINCE` (2). This feature applies to HTTP, FTP, RTSP, and FILE.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would not have been met. `CURL.GetConditionUnmet` can be used after a transfer to learn if a zero-byte successful "transfer" was due to this condition not matching.

See also [TIMECONDITION](#) option in CURL manual.

### See also

- [62.37 `CURL.GetConditionUnmet`](#) 1858
- [62.361 `CURL.SetOptionTFTPNoOptions`](#) 2316
- [62.369 `CURL.SetOptionTimeValue`](#) 2325

Created 18th August 2014, last changed 18th August 2014.

**62.368 CURL.SetOptionTimeout**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTimeout"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

Timeout in seconds.

60

**Result** Returns "OK" on success.

**Description**

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause curl to use the SIGALRM to enable time-outing system calls.

See also **TIMEOUT** option in CURL manual.

**Examples**

Sets timeout to one minute:

MBS( "CURL.SetOptionTimeout"; \$curl; 60 )

**See also**

**62.369 CURL.SetOptionTimeValue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTimeValue"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new time value.

123456789

**Result** Returns "OK" on success.

**Description**

This should be the time in seconds since 1 Jan 1970, and the time will be used in a condition as specified with `CURL.SetOptionTimeCondition`.

See also [TIMEVALUE](#) option in CURL manual.

## 62.370 CURL.SetOptionTimeoutMS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTimeoutMS"; curl; Value )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Value

Timeout value in milliseconds.

60000

**Result** Returns "OK" on success.

### Description

Like `CURL.SetOptionTimeout` but takes number of milliseconds instead. If libcurl is built to use the standard system name resolver, that portion of the transfer will still use full-second resolution for timeouts with a minimum timeout allowed of one second.

See also [TIMEOUT\\_MS](#) option in `CURL` manual.

### Examples

Sets timeout to half second:

```
MBS( "CURL.SetOptionTimeOutMS"; $curl; 500 )
```

### See also

Created 18th August 2014, last changed 8th December 2016.

**62.371 CURL.SetOptionTransferEncoding**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTransferEncoding"; curl; Param )

**Parameters****curl**

The CURL session handle.

\$curl

**Param**

The new setting.

1

**Result** Returns OK or error.

**Description**

Pass 1 to enable or 0 to disable.

Adds a request for compressed Transfer Encoding in the outgoing HTTP request. If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libcurl on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with `CURL.SetOptionAcceptEncoding` in that a Transfer-Encoding is strictly meant to be for the transfer and thus **MUST** be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.

See also [TRANSFER\\_ENCODING](#) option in CURL manual.

**Examples**

Enable transfer encoding:

MBS( "CURL.SetOptionTransferEncoding"; \$curl; 1 )

**See also**

- 62.176 `CURL.SetOptionAcceptEncoding` 2055
- 62.235 `CURL.SetOptionHTTPTransferDecoding` 2144

Created 8th July 2015, last changed 8th December 2016.

## 62.372 `CURL.SetOptionTransferText`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionTransferText"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Whether to use ASCII mode.

1

**Result** Returns "OK" on success.

### Description

A parameter set to 1 tells the library to use ASCII mode for FTP transfers, instead of the default binary transfer. For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libcurl does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/ flaw that nobody has rectified. libcurl simply sets the mode to ASCII and performs a standard transfer.

See also [TRANSFERTEXT](#) option in CURL manual.

### Examples

Set transfer mode to binary data:

```
MBS( "CURL.SetOptionTransferText"; $curl; 0 )
```

Set transfer mode to text:

```
MBS( "CURL.SetOptionTransferText"; $curl; 1 )
```

**62.373 CURL.SetOptionURL**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionURL"; curl; URL { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**URL**

The URL you want to use.

"http://www.mbsplugins.de/"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"utf8"

**Result** Returns "OK" on success.

**Description**

If you want to include password and username, please use `CURL.SetOptionUsername` and `CURL.SetOptionPassword` instead of including them in the URL.

The parameter should be a text string which must be URL-encoded in the following format:

scheme://host:port/path

For a greater explanation of the format please see RFC 3986 (<http://curl.haxx.se/rfc/rfc3986.txt>).

If the given URL lacks the scheme, or protocol, part ("http://" or "ftp://" etc), libcurl will attempt to resolve which protocol to use based on the given host name. If the protocol is not supported, libcurl will return (`CURLE_UNSUPPORTED_PROTOCOL`) when you call `CURL.Perform` or `CURL.PerformInBackground`. Use `CURL.Protocols` for detailed information on which protocols are supported.

The host part of the URL contains the address of the server that you want to connect to. This can be the fully qualified domain name of the server, the local network name of the machine on your network or the IP address of the server or machine represented by either an IPv4 or IPv6 address. For example:

<http://www.example.com/>

`http://hostname/`

`http://192.168.0.1/`

`http:// [ 2001:1890:1112:1::20 ] /`

It is also possible to specify the user name and password as part of the host, for some protocols, when connecting to servers that require authentication.

For example the following types of authentication support this:

`http://user:password@www.domain.com ftp://user:password@ftp.domain.com pop3://user:password@mail.domain.com`

The port is optional and when not specified libcurl will use the default port based on the determined or specified protocol: 80 for http, 21 for ftp and 25 for smtp, etc. The following examples show how to specify the port:

`http://www.weirdserver.com:8080/` - This will connect to a web server using port 8080.

`smtp://mail.domain.com:587/` - This will connect to a smtp server on the alternative mail port.

The path part of the URL is protocol specific and whilst some examples are given below this list is not conclusive:

## HTTP

The path part of a HTTP request specifies the file to retrieve and from what directory. If the directory is not specified then the web server's root directory is used. If the file is omitted then the default document will be retrieved for either the directory specified or the root directory. The exact resource returned for each URL is entirely dependent on the server's configuration.

`http://www.netscape.com` - This gets the main page (index.html in this example) from Netscape's web server.

`http://www.netscape.com/index.html` - This returns the main page from Netscape by specifying the page to get.

`http://www.netscape.com/contactus/` - This returns the default document from the contactus directory.

## FTP

The path part of an FTP request specifies the file to retrieve and from what directory. If the file part is omitted then libcurl downloads the directory listing for the directory specified. If the directory is omitted then the directory listing for the root / home directory will be returned.

`ftp://cool.haxx.se` - This retrieves the directory listing for our FTP server.

`ftp://cool.haxx.se/readme.txt` - This downloads the file `readme.txt` from the root directory.

`ftp://cool.haxx.se/libcurl/readme.txt` - This downloads `readme.txt` from the `libcurl` directory.

`ftp://user:password@my.example.com/readme.txt` - This retrieves the `readme.txt` file from the user's home directory. When a username and password is specified, everything that is specified in the path part is relative to the user's home directory. To retrieve files from the root directory or a directory underneath the root directory then the absolute path must be specified by prepending an additional forward slash to the beginning of the path.

`ftp://user:password@my.example.com//readme.txt` - This retrieves the `readme.txt` from the root directory when logging in as a specified user.

## SMTP

The path part of a SMTP request specifies the host name to present during communication with the mail server. If the path is omitted then libcurl will attempt to resolve the local computer's host name. However, this may not return the fully qualified domain name that is required by some mail servers and specifying this path allows you to set an alternative name, such as your machine's fully qualified domain name, which you might have obtained from an external function such as `gethostname` or `getaddrinfo`.

`smtp://mail.domain.com` - This connects to the mail server at `domain.com` and sends your local computer's host name in the HELO / EHLO command.

`smtp://mail.domain.com/client.domain.com` - This will send `client.domain.com` in the HELO / EHLO command to the mail server at `domain.com`.

## POP3

The path part of a POP3 request specifies the mailbox (message) to retrieve. If the mailbox is not specified then a list of waiting messages is returned instead.

pop3://user:password@mail.domain.com - This lists the available messages  
pop3://user:password@mail.domain.com/1 - This retrieves the first message

## SCP

The path part of an SCP request specifies the file to retrieve and from what directory. The file part may not be omitted. The file is taken as an absolute path from the root directory on the server. To specify a path relative to the user's home directory on the server, prepend ~/ to the path portion. If the user name is not embedded in the URL, it can be set with the `CURL.SetOptionUsername` option.

scp://user@example.com/etc/issue - This specifies the file `/etc/issue`

scp://example.com/~my-file - This specifies the file `my-file` in the user's home directory on the server

## SFTP

The path part of an SFTP request specifies the file to retrieve and from what directory. If the file part is omitted then libcurl downloads the directory listing for the directory specified. If the path ends in a / then a directory listing is returned instead of a file. If the path is omitted entirely then the directory listing for the root / home directory will be returned. If the user name is not embedded in the URL, it can be set with the `SetOptionUsername` option.

sftp://user:password@example.com/etc/issue - This specifies the file `/etc/issue`

sftp://user@example.com/~my-file - This specifies the file `my-file` in the user's home directory

sftp://ssh.example.com/~Documents/ - This requests a directory listing of the `Documents` directory under the user's home directory

## NOTES

Starting with version 7.20.0, the fragment part of the URI will not be sent as part of the path, which was previously the case.

`CURLOPT_URL` is the only option that must be set before `CURL.Preform` or `CURL.PerformInBackground` is called.

`CURLOPT_PROTOCOLS` can be used to limit what protocols libcurl will use for this transfer, independent of what libcurl has been compiled to support. That may be useful if you accept the URL from an external source and want to limit the accessibility.

For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!

Instead use `OptionUsername` and `OptionPassword`.

See also [URL](#) option in [CURL manual](#).

### Examples

Set URL for FTP:

```
MBS( "CURL.SetOptionURL"; $curl; "ftp://user:password@my.example.com/readme.txt" )
```

Set URL for a REST API:

```
Set Variable [ $r; MBS("CURL.SetOptionURL"; $curl; "https://example.com/wc-api/v2/products" ) ]
```

Query webservice with JSON request:

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "http://test.test/ws/v1/catalogo/get-modelos" ) ]
# pass JSON for query
Set Variable [ $result; Value:MBS("CURL.SetOptionPostFields"; $curl; " { \"brandId\" : \"1\", \"device\" : \"70\" } "; "UTF-8" ) ]
Set Field [ models::result; MBS("CURL.Perform"; $curl) ]
Set Field [ models::text; MBS("CURL.GetResultAsText"; $curl;"UTF8" ) ]
Set Field [ models::header; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

Set URL for a POP3 email download:

```
Set Variable [ $r; MBS("CURL.SetOptionURL"; $curl; "pop3://example.test" ) ]
```

Set URL for a IMAP email download:

```
Set Variable [ $r; MBS("CURL.SetOptionURL"; $curl; "imap://example.test" ) ]
# connect unencrypted and ask for TLS upgrade
Set Variable [ $r; MBS("CURL.SetOptionUseSSL"; $curl; 3) ]
```

Set URL for Gmail imap server:

```
Set Variable [ $r; Value:MBS("CURL.SetOptionURL"; $curl; "imaps://imap.gmail.com/INBOX" ) ]
Set Variable [ $r; Value:MBS("CURL.SetOptionUseSSL"; $curl; 6) ]
Set Variable [ $r; Value:MBS("CURL.SetOptionPort"; $curl; 993) ]
```

Set URL for a IMAP email download via SSL:

```
# connect with SSLv3 directly:
Set Variable [ $r; MBS("CURL.SetOptionURL"; $curl; "imaps://example.test") ]
```

Load email list from gmail:

```
Go to Layout [ "IMAP Postbox" (IMAP Postbox) ; Animation: None ]
# get URL
Set Variable [ $URL ; Value: "imaps://imap.gmail.com/INBOX" ]
# query list of emails
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionURL"; $curl; $URL) ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionUserName"; $curl; IMAP Postbox::Username) ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionPassword"; $curl; IMAP Postbox::Password) ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionUseSSL"; $curl; 3) // required ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionSSLVersion"; $curl; 6) // TLS v1.2 ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionPort"; $curl; 993) ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionConnectionTimeout"; $curl; 10) ]
# Set query for all emails by UID. Not all fields are needed. Only request those you need to make it quicker.
Set Variable [ $r ; Value: MBS("CURL.SetOptionCustomRequest"; $curl; "UID FETCH 1:* (FLAGS INTERNALDATE RFC822.SIZE BODY.PEEK [ HEADER.FIELDS (Message-Id DATE FROM SUBJECT TO SENDER REPLY-TO CC BCC) ] )") ]
# Run transfer
Set Variable [ $result ; Value: MBS("CURL.Perform"; $curl) ]
# We show results for debugging
Set Variable [ $output ; Value: MBS("CURL.GetResultAsText"; $curl) ]
Set Variable [ $debug ; Value: MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $list ; Value: MBS( "JSON.Colorize";MBS("CURL.GetResultAsEMailList"; $curl)) ]
Set Variable [ $r ; Value: MBS("CURL.Release"; $curl) ]
Set Field [ IMAP Postbox::Log ; $debug ]
Set Field [ IMAP Postbox::JSON ; $list ]
```

Set URL for SFTP upload with file name in the URL:

```
MBS( "CURL.SetOptionURL"; $curl; "sftp://server.com/path/readme.txt" )
```

**62.374 CURL.SetOptionUnixSocketPath**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionUnixSocketPath"; curl; Path )

**Parameters****curl**

The CURL session handle.

\$curl

**Path**

Native unix socket path.

**Result** Returns OK or error.

**Description**

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer. See also [UNIX\\_SOCKET\\_PATH](#) option in CURL manual.

## 62.375 `CURL.SetOptionUnrestrictedAuth`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionUnrestrictedAuth"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Whether to follow with authentication.

0

**Result** Returns "OK" on success.

### Description

A parameter set to 1 tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed. This option is meaningful only when setting `CURL.SetOptionFollowLocation`.

See also [UNRESTRICTED\\_AUTH](#) option in CURL manual.

### See also

Created 18th August 2014, last changed 28th November 2019.

**62.376 CURL.SetOptionUpkeepIntervalMS**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionUpkeepIntervalMS"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new interval.

**Result** Returns OK or error.

**Description**

Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

The user needs to explicitly call Upkeep in order to perform the upkeep work.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection. See also [UPKEEP\\_INTERVAL\\_MS](#) option in CURL manual.

## 62.377 `CURL.SetOptionUpload`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionUpload"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

Whether to do an upload.

1

**Result** Returns "OK" on success.

### Description

A parameter set to 1 tells the library to prepare for an upload. With the `CURL.SetInput` functions you can define the upload data. If the protocol is HTTP, uploading means using the PUT request unless you tell curl otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with `CURL.SetOptionHTTPHeader` as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with `CURL.SetOptionHTTPHeader`. With HTTP 1.0 or without chunked transfer, you must specify the size.

See also `CURL.SetOptionPost`.

See also **UPLOAD** option in CURL manual.

### Examples

Set CURL session to be upload:

```
MBS( "CURL.SetOptionUpload"; $curl; 1 )
```

## 62.378 `CURL.SetOptionUploadBufferSize`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionUploadBufferSize"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The new buffer size.

**Result** Returns OK or error.

### Description

Pass an integer specifying your preferred size (in bytes) for the upload buffer in libcurl. It makes libcurl use a larger buffer that gets passed to the next layer in the stack to get sent off. In some setups and for some protocols, there's a huge performance benefit of having a larger upload buffer.

This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size.

The upload buffer size is by default 64 kilobytes. The maximum buffer size allowed to be set is 2 megabytes. The minimum buffer size allowed to be set is 16 kilobytes.

Since curl 7.61.1 the upload buffer is allocated on-demand - so if the handle isn't used for upload, this buffer will not be allocated at all.

For slow upload/downloads, it may be better to set buffer size to 1 MB with `CURL.SetOptionUploadBufferSize` or `CURL.SetOptionBufferSize` properties to make transfers faster.

See also [UPLOAD\\_BUFFER\\_SIZE](#) option in CURL manual.

### See also

- 62.181 `CURL.SetOptionBufferSize` 2061

### 62.378.1 Blog Entries

- [MBS FileMaker Plugin, version 8.5pr5](#)

Created 31st October 2018, last changed 3th October 2019.

**62.379 CURL.SetOptionUseSSL**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionUseSSL"; curl; Value )

(old name: CURL.SetOptionFTPSSL)

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The new SSL setting.

3

**Result** Returns "OK" on success.

**Description**

Pass a number using one of the values from below, to make libcurl use your desired level of SSL for the FTP transfer.

None	0	Don't attempt to use SSL.
Try	1	Try using SSL, proceed as normal otherwise.
Control	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
All	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

Even as this function has FTP in name, we also use it for email sending. So the email upload starts unencrypted and we use TLS to upgrade to an SSL connection.

See also [USE\\_SSL](#) option in CURL manual.

**Examples**

Set to use SSL:

```
$r = MBS( "CURL.SetOptionUseSSL"; $curl; 3 )
```

Set to use TLSv1.2:

```
Set Variable [ $r; MBS( "CURL.SetOptionUseSSL"; $curl; 3 ) ]
Set Variable [ $r; MBS( "CURL.SetOptionSSLVersion"; $curl; 6 ) ]
```

Set URL for Gmail imap server:

```
Set Variable [ $r; Value:MBS("CURL.SetOptionURL"; $curl; "imaps://imap.gmail.com/INBOX") ]  
Set Variable [ $r; Value:MBS("CURL.SetOptionUseSSL"; $curl; 3) ]
```

**62.380 CURL.SetOptionUserAgent**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionUserAgent"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The user agent string.

"Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.0)"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

It will be used for the user agent Header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with `CURL.SetOptionHTTPHeader`.

See also **USERAGENT** option in CURL manual.

**Examples**

Set IE 6 user agent:

```
MBS( "CURL.SetOptionUserAgent"; $curl; "Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.0)" )
```

Set Safari as user agent:

```
MBS( "CURL.SetOptionUserAgent"; $curl; "Mozilla/5.0 (Macintosh; Intel Mac OS X 10_14_6) AppleWebKit/605.1.15 (KHTML, like Gecko) Version/13.0.4 Safari/605.1.15" )
```

**See also**

Created 18th August 2014, last changed 29th January 2020.

**62.381 CURL.SetOptionUsername**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionUsername"; curl; Value { ; Encoding } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The user name

"cs"

**Encoding**

Optional

The text encoding for text parameter. Default is UTF-8.

"UTF8"

**Result** Returns "OK" on success.

**Description**

In order to specify the password to be used in conjunction with the user name use the CURL.SetOption-Password option.

See also [USERNAME](#) option in CURL manual.

**Examples**

Set login credentials:

```
Set Variable [ $result ; Wert: MBS("CURL.SetOptionUserName"; $curl; Logins::Username) ]
```

```
Set Variable [ $result ; Wert: MBS("CURL.SetOptionPassword"; $curl; Logins::Password) ]
```

## 62.382 `CURL.SetOptionVerbose`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionVerbose"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

0 to disable or 1 to enable

1

**Result** Returns "OK" on success.

### Description

Set the parameter to 1 to get curl to display a lot of verbose information about its operations.

Very useful protocol debugging and understanding. You can get the debug messages with `CURL.GetDebugAsText`.

Since version 5.2 of our plugin, this is on by default.

See `CURL.SetDebugWithData`, `CURL.SetDebugWithProgress` and `CURL.SetDebugWithTime` to include data/time in the debug log.

See also **VERBOSE** option in CURL manual.

### Examples

Set verbose mode:

```
Set Variable [ $result ; Wert: MBS("CURL.SetOptionVerbose"; $curl; 1) ]
```

Download with debug log with full details:

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
```

```
Set Variable [ $result; Value:MBS("CURL.CreateDebugOutputFile"; $curl; "/tmp/curl.log") ]
```

```
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "http://www.monkeybreadsoftware.de/images/mbs.jpg") ]
```

```
Set Variable [ $result; Value:MBS("CURL.SetDebugWithTime"; $curl; 1) ]
```

```
Set Variable [ $result; Value:MBS("CURL.SetDebugWithProgress"; $curl; 1) ]
```

```
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
```

```
Set Field [ CURL Test::Image; MBS("CURL.GetResultAsJPEG"; $curl) ]
```

```
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
```

```
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

## 62.383 `CURL.SetOptionWildcardMatch`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionWildcardMatch"; curl; Value )

### Parameters

#### **curl**

The CURL session handle.

\$curl

#### **Value**

The new setting. Can be 1 (on) or 0 (off).

1

**Result** Returns OK or error.

### Description

Set parameter to 1 if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the `OptionURL` option, using an `fnmatch`-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, `libcurl` uses its internal wildcard matching implementation.

A brief introduction of its syntax follows:

- - ASTERISK

`ftp://example.com/some/path/*.txt` (for all `txt`'s from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

`ftp://example.com/some/path/photo?.jpeg`

[ - BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character.

Some examples follow:

```
[ a-zA-Z0-9 ] or [ f-gF-G ] - character interval
[ abc ] - character enumeration
[ ^abc ] or [ !abc ] - negation
[ [ :name: ] ] class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.
[ ] [ -!^ ] - special case - matches only '-', ' ', ' ', '!', or '^'. These characters have no special purpose.
[ \[ \] \\ ] - escape syntax. Matches ' ', ' ' or ' '.
```

Using the rules above, a file name pattern can be constructed:

```
ftp://example.com/some/path/ [ a-z [ :upper: ] \\ ] .jpeg
```

This feature is only supported for FTP download.  
See also **WILDCARDMATCH** option in **CURL** manual.

### Examples

Enable wildcard match:

```
MBS( "CURL.SetOptionWildCardMatch"; $curl; 1 )
```

Download several files via FTP:

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
# Set URL with wildcard match
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; CURL Test::URL) ]
# Set folder where to put files
Set Variable [ $result; Value:MBS("CURL.SetBatchDestinationPath"; $curl; CURL Test::DestPath) ]
# credentials...
Set Variable [ $result; Value:MBS("CURL.SetOptionPassword"; $curl; CURL Test::Password) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionUsername"; $curl; CURL Test::Name) ]
# enable wildcard match
Set Variable [ $result; Value:MBS("CURL.SetOptionWildCardMatch"; $curl; 1) ]
# download them all
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
# check results
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
Set Field [ CURL Test::FileNames; MBS("CURL.GetBatchFileNames"; $curl) ]
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

**62.384 CURL.SetOptionXOAuth2Bearer**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetOptionXOAuth2Bearer"; curl; Value )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

The option value.

**Result** Returns OK or error.

**Description**

For open authentication used with web services.

No Bearer prefix please.

Use e.g. with google mail.

See also [XOAUTH2\\_BEARER](#) option in CURL manual.

**Examples**

Setup OAuth for SMTP with user name, bearer and no password:

```
Set Variable [ $r ; Value: MBS("SendMail.SetSMTPUsername"; $EmailID; "test@gmail.com") ]
```

```
Set Variable [ $r ; Value: MBS("SendMail.SetSMTPPassword"; $EmailID; "" // empty ) ]
```

```
# ...
```

```
Set Variable [ $r ; Value: MBS("CURL.SetOptionXOAuth2Bearer"; $curl; "dXNlcj1zb21...") ]
```

## 62.385 CURL.SetProgressEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetProgressEvaluate"; curl; Expression )

### Parameters

#### curl

The CURL session handle.

\$curl

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let ( \$\$Done = 1 ; 1 )"

**Result** Returns OK or error.

### Description

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the curl reference, so you can pass it to other functions if needed.

### See also

- 62.94 CURL.GetProgressEvaluate 1924
- 62.95 CURL.GetProgressFileName 1925

### 62.385.1 Blog Entries

- [MBS FileMaker Plugin, version 6.1pr5](#)
- [Evaluate vs. Script Trigger](#)

Created 4th March 2016, last changed 4th April 2018.

**62.386 CURL.SetProgressScript**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	5.2	Yes	Yes	No	No	Yes

MBS( "CURL.SetProgressScript"; curl; Filename; ScriptName )

**Parameters****curl**

The CURL session handle.

\$curl

**Filename**

The database file name where the script is located.

"test.fmp12"

**ScriptName**

The script name.

"MyScript"

**Result** Returns OK or error.

**Description**

This script is called for asynchronous transfers when percent value changed.

So you can update progress user interface.

Does not work on server due to missing capability to trigger scripts in the plugin SDK with FileMaker Server.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

**Examples**

Start a curl session and setup a few scripts:

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
```

```
Set Variable [ $r; Value:MBS("CURL.SetFinishedScript"; $curl; Get(FileName); "DownloadFinished") ]
```

```
Set Variable [ $r; Value:MBS("CURL.SetProgressScript"; $curl; Get(FileName); "ProgressScript") ]
```

**See also**

Created 12nd July 2015, last changed 22nd December 2016.

**62.387 CURL.SetTag**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetTag"; curl { ; Value } )

**Parameters****curl**

The CURL session handle.

\$curl

**Value**

Optional

The new tag value.

Get(RecordID)

**Result** Returns OK or error.

**Description**

The tag value allows you to store any value related to the CURL transfer here like a RecordID in FileMaker.

In the finished script, you can then use the CURL handle passed as parameter to query your tag value.

See also *CURL.SetFinishedScript* and *CURL.PerformAsync*.

**Examples**

Sets tag to be record ID:

```
Set Variable [ $r; Value:MBS("CURL.SetTag"; $curl; Get(RecordID)) ]
```

Test tag:

```
Set Variable [ $curl; Value:MBS( "CURL.New" ) ]
```

```
# Set Tag to some value
```

```
Set Variable [ $r; Value:MBS( "CURL.SetTag"; $curl; "Hello World" ) ]
```

```
# Later read back the value
```

```
Set Variable [ $tag; Value:MBS( "CURL.GetTag"; $curl ) ]
```

**See also**

**62.388 CURL.SetUpdateProgressDialog**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetUpdateProgressDialog"; curl; value )

**Parameters****curl**

The CURL session handle.

\$curl

**value**

0 to disable updates or 1 to enable updates

1

**Result** Returns "OK" on success.

**Description**

You can setup a progress dialog with our ProgressDialog functions. If you enable updates, the plugin will automatically update the progress bar with percentage of upload or download done.

Does not work with CURL.PerformInBackground.

**Examples**

Enable updates

```
MBS( "CURL.SetUpdateProgressDialog"; $curl; 1 )
```

Use progress dialog with upload or download:

```
# setup progress dialog
Set Variable [ $result; Value:MBS("ProgressDialog.SetCancel"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetProgress"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetTopText"; "Sending email...") ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetShowButton"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.Show") ]
# Tell plugin to move bar for us automatically.
Set Variable [ $result; Value:MBS("CURL.SetUpdateProgressDialog"; $curl; 1) ]
# Run the transfer
Set Variable [ $r; Value:MBS("CURL.Perform"; $curl) ]
# hide progress dialog
Set Variable [ $result; Value:MBS("ProgressDialog.Hide") ]
```

**62.389 CURL.SetupAWS**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetupAWS"; curl; AWSAccessKeyId; AWSSecretAccessKey; Region; Service; Path; Domain; Verb { ; HashedPayload; Headers; QueryParameters } )

**Parameters****curl**

The CURL session handle.

\$curl

**AWSAccessKeyId**

Your access key for AWS.

**AWSSecretAccessKey**

Your secret.

**Region**

The region to use.

"eu-central-1"

**Service**

The service to use.

"s3"

**Path**

The path for the URL. Should always start with "/".

"/bucketname/test.jpg"

**Domain**

Optional the domain to use. By default we just build it from region and service.

"s3.eu-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"

**Verb**

The HTTP Operation to do. Can be POST, PUT, GET or DELETE.

"PUT"

**HashedPayload**

Optional

The hashed payload. If empty, we calculate it automatically from input data or postfields. This is a lowercase hex SHA256.

**Headers**

Optional

Extra HTTP headers to include. Here you can specify various headers to include in signature and request.

"x-amz-acl: public-read"

**QueryParameters**

Optional

Available in MBS FileMaker Plugin 8.4 or newer.

List of query parameters to include. Keys and values must be URL encoded.

"id=123&test=abc"

**Result** Returns OK or error.

### Description

This implements AWS4-HMAC-SHA256 signature for credentials, sets authentication, URL, HTTP Headers and other parameters.

For upload or post, please set input parameters first.

When using `CURL.OpenInputFile` to stream data, you need to calculate the payload hash yourself and pass it here as parameter.

### Examples

Download via S3:

```
Set Variable [ $AWSAccessKeyId; Value:"xxx" ]
Set Variable [ $AWSSecretAccessKey; Value:"yyy" ]
Set Variable [ $Region; Value:"eu-central-1" ]
Set Variable [ $Bucketname; Value:"zzz" ]
Set Variable [ $Filename; Value:"test.jpg" ]
Set Variable [ $Verb; Value:"GET" ]
Set Variable [ $Service; Value:"s3" ]
# Keep those empty for default
Set Variable [ $Domain; Value:"" ]
Set Variable [ $HashedPayload; Value:"" ]
# Build a path
Set Variable [ $Path; Value:"/" & $BucketName & "/" & $Filename ]
#
Set Variable [ $curl; Value:MBS("CURL.New") ]
Set Variable [ $result; Value:MBS("CURL.SetupAWS"; $curl; $AWSAccessKeyId; $AWSSecretAccessKey;
$Region; $Service; $Path; $Domain; $Verb) ]
Set Variable [ $result; Value:MBS("CURL.SetDebugWithData"; $curl; 1) ]
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
Set Field [ CURL Test::Image; MBS("CURL.GetResultAsJPEG"; $curl) ]
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

Upload to S3:

```
Set Variable [ $AWSAccessKeyId; Value:"xxx" ]
Set Variable [ $AWSSecretAccessKey; Value:"xxx" ]
Set Variable [ $Region; Value:"us-east-1" ]
Set Variable [ $Bucketname; Value:"xxx" ]
Set Variable [ $Filename; Value:"test.jpg" ]
Set Variable [ $Service; Value:"s3" ]
# do upload
```

```

Set Variable [ $Verb; Value:"PUT" ]
# make file available to public
Set Variable [ $Headers; Value: "Content-Type: image/jpeg&x-amz-acl: public-read" ]
# Keep those empty for default
Set Variable [ $Domain; Value:"" ]
Set Variable [ $HashedPayload; Value:"" ]
# Build a path
Set Variable [ $Path; Value:"/" & $BucketName & "/" & $Filename ]
#
Set Variable [ $curl; Value:MBS("CURL.New") ]
# pass in container
Set Variable [ $result; Value:MBS("CURL.SetInputFile"; $curl; CURL Test::Image) ]
#
Set Variable [ $result; Value:MBS("CURL.SetupAWS"; $curl; $AWSAccessKeyId; $AWSSecretAccessKey;
$Region; $Service; $Path; $Domain; $Verb; ""; $Headers) ]
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
Set Field [ CURL Test::resultText; MBS("CURL.GetResultAsText"; $curl) ]
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]

```

Upload PDF from container:

```

Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $result ; Value: MBS("CURL.SetInputPDF"; $curl; Documents::PDFContainer) ]
Set Variable [ $result ; Value: MBS("CURL.SetupAWS"; $curl; $AWSAccessKeyId; $AWSSecretAccessKey;
$Region; $Service; $Path; $Domain; $Verb; ""; $headers) ]
Set Field [ CURL Test::Result ; MBS("CURL.Perform"; $curl) ]
Set Field [ CURL Test::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]

```

Upload file from disk and calculate hash ourselves:

```

# Build a path to file (local) and in AWS
Set Variable [ $Filename ; Value: "test.pdf" ]
Set Variable [ $Path ; Value: "/" & $BucketName & "/PDF/" & $Filename ]
Set Variable [ $localPath ; Value: "/Users/cs/Desktop/license.pdf" ]
# calculate hash for file to upload
Set Variable [ $HashedPayload ; Value: Lower(MBS( "Hash.Digest"; "sha256"; "path"; $localPath; ""; "hex"
)) ]
# upload
Set Variable [ $curl ; Value: MBS("CURL.New") ]
# file content is streamed
Set Variable [ $result ; Value: MBS("CURL.OpenInputFile"; $curl; $localPath) ]
# setup AWS
Set Variable [ $result ; Value: MBS("CURL.SetupAWS"; $curl; $AWSAccessKeyId; $AWSSecretAccessKey;
$Region; $Service; $Path; $Domain; $Verb; $HashedPayload; $headers) ]
Set Field [ CURL Test::Result ; MBS("CURL.Perform"; $curl) ]

```

```
Set Field [ CURL Test::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]
```

**62.390 CURL.SetupOAuth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.3	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.SetupOAuth"; curl; ConsumerKey; ConsumerSecret; AccessToken; AccessTokenSecret; HTTPVerb; URL { ; Parameters; Headers; Datas; Nonce; Timestamp; HMAC; Verifier } )

**Parameters****curl**

The CURL session handle.

\$curl

**ConsumerKey**

The oauth consumer key.

"xvz1evFS4wEEPTGEGPHBog"

**ConsumerSecret**

The oauth consumer secret.

"kAcSOqF21Fu85e7zjz7ZN2U4ZRhfV3WpwPAoE3Z7kBw"

**AccessToken**

The oauth access token. Can be empty if not yet known.

"370773112-GmHxMAGYyLbNEtIKZeRNFsMKPR9EyMZeS9weJAEb"

**AccessTokenSecret**

The oauth access token secret. Can be empty if not yet known.

"LswwdoUaIvS8ltyTt5jkrh4J50vUPVVHtR2YPI5kE"

**HTTPVerb**

The HTTP verb. e.g. POST, PUT, GET, DELETE. Default if empty is GET.

"POST"

**URL**

The URL to query without parameters.

"https://api.twitter.com/1.1/statuses/update.json"

**Parameters**

Optional

List of parameters. Can be empty. Please pass list with newline as delimiter. values should be URL encoded already.

"include\_entities=true"

**Headers**

Optional

List of additional header entries to include. Can be empty. We automatically set Authorization header.

"Accept: application/json\$Content-Type: application/json"

**Datas**

Optional

Data value list for POST.

```
"status=Hello&others=123"
```

**Nonce**

Optional

The nonce value. If empty, we generate it automatically for you.

```
"kYjzVBB8Y0ZFabxSWbWovY3uYSQ2pTgmZeNu2VS4cg"
```

**Timestamp**

Optional

The timestamp to use for signature. If empty, we query current timestamp (same as you calling Time.UnixTimeStamp)

```
1318622958
```

**HMAC**

Optional

Which HMAC algorithm to use. Can be HMAC-SHA512, HMAC-SHA256 or HMAC-SHA1. Default is HMAC-SHA1 if parameter is missing or empty.

```
"HMAC-SHA1"
```

**Verifier**

Optional

The verifier. Usually an ID shown on a website after login to the service and authorization of an app.

```
"3456789"
```

**Result** Returns OK or error.

**Description**

The plugin calculates the signature and adds headers for authorization to the CURL handle.

Sets URL with parameters and optionally data values for POST.

**Examples**

Setup OAuth query for Twitter:

```
# global settings (Sample entries from Twitter documentation)
# https://developer.twitter.com/en/docs/basics/authentication/guides/creating-a-signature.html
#
Set Variable [ $ConsumerKey ; Value: "xvz1evFS4wEEPTGEFPHBog" ]
Set Variable [ $ConsumerSecret ; Value: "kAcSOqF21Fu85e7zjz7ZN2U4ZRhfV3WpwPAoE3Z7kBw" ]
Set Variable [ $AccessToken ; Value: "370773112-GmHxMAGyYlBNEtIKZeRNfSfMKPR9EyMZes9weJAEb" ]
]
Set Variable [ $AccessTokenSecret ; Value: "LswwdoUaIvS8ltyTt5jkrh4J50vUPVVHtR2YPi5kE" ]
Set Variable [ $nonce ; Value: "kYjzVBB8Y0ZFabxSWbWovY3uYSQ2pTgmZeNu2VS4cg" ]
Set Variable [ $TimeStamp ; Value: "1318622958" ]
#
Set Variable [ $URL ; Value: "https://api.twitter.com/1.1/statuses/update.json" ]
Set Variable [ $Method ; Value: "POST" ]
#
Set Variable [ $Parameters ; Value: "include_entities=true" ]
Set Variable [ $Headers ; Value: "" ]
Set Variable [ $Data ; Value: "status=Hello% 20Ladies% 20% 2B% 20Gentlemen% 2C% 20a% 20signed%" ]
```

```

200Auth% 20request% 21" ]
#
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $result ; Value: MBS("CURL.SetupOAuth"; $curl; $ConsumerKey; $ConsumerSecret; $Access-Token; $AccessTokenSecret; $Method; $URL; $Parameters; $Headers; $Data; $Nonce; $Timestamp) ]
# Perform...
#
# signature must be hCtSmYh+iHYCEqBWrE7C7hYmtUk=
#
# Cleanup
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]

```

Query magento web service:

```

# globale einstellungen für Zugang
Set Variable [ $ConsumerKey ; Value: "xxx" ]
Set Variable [ $ConsumerSecret ; Value: "xxx" ]
Set Variable [ $AccessToken ; Value: "xxx" ]
Set Variable [ $AccessTokenSecret ; Value: "xxx" ]
#
# Für diesen Request GET mit der Customers URL
Set Variable [ $URL ; Value: "http://xxxx/index.php/rest/V1/customers/" & $customerID ]
Set Variable [ $Method ; Value: "GET" ]
# Optional parameters for filters
Set Variable [ $Parameters ; Value: "abc=hello&test=world" ]
#
# Start new session
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $result ; Value: MBS("CURL.SetupOAuth"; $curl; $ConsumerKey; $ConsumerSecret; $Access-Token; $AccessTokenSecret; $Method; $URL; $Parameters; "") ]
# RUN now
Set Field [ CURL::Result ; MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ CURL::HTTP Response ; MBS("CURL.GetResponseCode"; $curl) ]
Set Field [ CURL::Customer Info ; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
Set Field [ CURL::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
# Cleanup
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]

```

Update customers in magento:

```

Set Variable [ $ConsumerKey ; Value: "xxx" ]
Set Variable [ $ConsumerSecret ; Value: "xxx" ]
Set Variable [ $AccessToken ; Value: "xxx" ]
Set Variable [ $AccessTokenSecret ; Value: "xxx" ]
#
# PUT to this URL

```

```

Set Variable [ $URL ; Value: "http://m2.castinfo.im-labor.de/index.php/rest/V1/customers/" & CURL::customerID ]
Set Variable [ $Method ; Value: "PUT" ]
Set Variable [ $Content ; Value: MBS( "JSON.AddItemToObject"; " { } "; "customer"; CURL::CustomerInfo) ]
Set Variable [ $Parameters ; Value: "" ]
Set Variable [ $Headers ; Value: "Accept: application/json$Content-Type: application/json" ]
#
#
# Start new session
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $result ; Value: MBS("CURL.SetupOAuth"; $curl; $ConsumerKey; $ConsumerSecret; $AccessToken; $AccessTokenSecret; $Method; $URL; $Parameters; $Headers) ]
Set Variable [ $result ; Value: MBS("CURL.SetDebugWithData"; $curl; 1) ]
Set Variable [ $result ; Value: MBS("CURL.SetOptionPostFields"; $curl; $Content; "UTF8") ]
# RUN now
Set Field [ CURL::Result ; MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ CURL::HTTP Response ; MBS("CURL.GetResponseCode"; $curl) ]
Set Field [ CURL::Customer Info ; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
Set Field [ CURL::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
# Cleanup
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]

```

## 62.391 CURL.Upkeep

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	8.5	Yes	Yes	Yes	Yes	Yes

MBS( "CURL.Upkeep"; curl )

### Parameters

#### curl

The CURL session handle.

\$curl

**Result** Returns OK or error.

### Description

Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and CURL.Upkeep is called, an HTTP/2 PING frame is sent on the connection.

This function must be explicitly called in order to perform the upkeep work. The connection upkeep interval is set with CURL.SetOptionUpkeepIntervalMS.

- [MBS FileMaker Plugin, version 8.5pr5](#)

Created 31st October 2018, last changed 31st October 2018.

**62.392 CURL.UseSystemCertificates**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
62 CURL	7.2	Yes	Yes	Yes	No	No

MBS( "CURL.UseSystemCertificates"; curl )

**Parameters****curl**

The CURL session handle.

\$curl

**Result** Returns number or error.

**Description**

For macOS and Windows we load the available certificates from keychain or Windows Certificate Store and pass them to CURL. This is better than having no certificates at all.

Even better is normally to provide a cacert.pem file with only the expected certificates.

Returns number of certificates loaded.

**Examples**

Enable system certificates:

```
Set Variable [ $result; Value:MBS("CURL.UseSystemCertificates"; $curl) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLVerifyPeer"; $curl; 1) ]
Set Variable [ $result; Value:MBS("CURL.SetOptionSSLVerifyHost"; $curl; 2 ) ]
```

Do download with TLS and system certificates:

```
# Start new session
Set Variable [ $curl ; Value: MBS("CURL.New") ]
# Set URL to load (HTTP, HTTPS, FTP, FTPS, SFTP, etc.)
Set Variable [ $result ; Value: MBS("CURL.SetOptionURL"; $curl; CURL Test::URL) ]
# Use system certificate store for TLS
Set Variable [ $result ; Value: MBS( "CURL.UseSystemCertificates"; $curl ) ]
# RUN now
Set Field [ CURL Test::Result ; MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ CURL Test::Text ; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
Set Field [ CURL Test::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
# Cleanup
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]
```

# Chapter 63

## Debugger

Control the debugger window on macOS.

### 63.1 Debugger.BringToFront

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
63 Debugger	7.4	Yes	No	No	No	No

MBS( "Debugger.BringToFront" )

**Result** Returns OK or error.

**Description**

Created 14th August 2017, last changed 14th August 2017.

## 63.2 Debugger.CurrentLineNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
63 Debugger	8.5	Yes	No	No	No	No

MBS( "Debugger.CurrentLineNumber" )

**Result** Returns number or error.

### Description

This is the line number showing the hash mark and may not be the current line.

If FileMaker does not update the debugger window while running several steps, the line returned is usually the last one it stopped.

Result is -1 if not known. First row is number 1.

### 63.2.1 Blog Entries

- [MBS FileMaker Plugin, version 8.5pr4](#)

Created 25th October 2018, last changed 25th October 2018.

## 63.3 Debugger.GetCallStack

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
63 Debugger	7.4	Yes	No	No	No	No

MBS( "Debugger.GetCallStack" )

**Result** Returns list or error.

### Description

Usually first entry is current script followed by callers.

Created 14th August 2017, last changed 15th August 2017.

## 63.4 Debugger.IsVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
63 Debugger	7.4	Yes	No	No	No	No

MBS( "Debugger.IsVisible" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if visible or 0 if not.

### Example Databases

- [CURL/Amazon S3 Upload File](#)

Created 14th August 2017, last changed 14th August 2017.

## 63.5 Debugger.Title

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
63 Debugger	7.4	Yes	No	No	No	No

MBS( "Debugger.Title" )

**Result** Returns text or error.

### Description

Created 14th August 2017, last changed 14th August 2017.

## 63.6 Debugger.Window

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
63 Debugger	7.4	Yes	No	No	No	No

MBS( "Debugger.Window" )

**Result** Returns window reference number or error.

### Description

Allows to use other commands like Window.Hide.

### See also

- 185.41 Window.Hide

8717

Created 14th August 2017, last changed 14th August 2017.

# Chapter 64

## Dialog

Shows a message dialog with icon and customized buttons.

### 64.1 Dialog.AddField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	6.4	Yes	No	No	No	No

MBS( "Dialog.AddField"; Label { ; Text; Placeholder; Password; TextViewHeight } )

#### Parameters

##### Label

The label text for the field.

"First Name:"

##### Text

Optional

The text for the field. This is initial text.

""

##### Placeholder

Optional

The placeholder text shown when no text is in the field. (not for text view)

"Put your name here"

##### Password

Optional

Pass 1 to hide text with • or 0 for normal text field.

0

##### TextViewHeight

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

Pass number of points in height for a textView. If value is >20, we will use a text view instead of a text field.

50

**Result** Returns index or error.

### Description

Please use Dialog.GetFieldText later to query text for field.

Returns the index of the field.

Maximum we allow 10 fields.

### Examples

Adds two fields:

```
Set Variable [ $r; Value:MBS("Dialog.AddField"; "Username: "; "" ; "username here") ]
```

```
Set Variable [ $r; Value:MBS("Dialog.AddField"; "Password: "; "" ; "password here"; 1) ]
```

## 64.9 Dialog.GetFieldText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	6.4	Yes	No	No	No	No

MBS( "Dialog.GetFieldText"; FieldIndex )

### Parameters

#### FieldIndex

The index of the field. Range from 0 to 9.

0

**Result** Returns field text or error.

### Description

### Examples

Query text of first field:

```
MBS("Dialog.GetFieldText"; 0)
```

### See also

## 64.10 Dialog.GetIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.GetIcon" { ; ImageType; Filename } )

### Parameters

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG. Ignored on Windows: Always returns PNG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns image or error.

### Description

The default image is the application icon (NSApplicationIcon application property).

## 64.19 Dialog.GetSheetRunning

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.2	Yes	No	No	No	No

MBS( "Dialog.GetSheetRunning" )

**Result** Returns status or error.

### Description

You can run a loop with script pauses if you want your script to wait. You exit your loop when this function returns not a 1.

Created 18th August 2014, last changed 18th August 2014.

## 64.20 Dialog.GetSheetScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.2	Yes	No	No	No	No

MBS( "Dialog.GetSheetScriptName" )

**Result** Returns script name.

### Description

If you use sheet functions you can setup a file name and script name, so the plugin can call this script when sheet is done.

### See also

- 64.18 Dialog.GetSheetFileName 2399

## 64.28 Dialog.Run

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.Run" )

**Result** Returns OK or error.

### Description

Returns which button was pressed.

On Windows may return Abort, Cancel, Continue, Ignore, No, OK, Retry, Try Again or Yes.

On Mac returns text of the buttons clicked.

Version 6.2 adds new capabilities for Windows including custom buttons, timeout, suppression checkbox and icon.

### Examples

Show dialog with 7 buttons:

```
Set Variable [ $r; Value: MBS("Dialog.Reset") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 0; "Send All Copies to US") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 1; "Send All Copies to the Informant") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 2; "No Copies are required") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 3; "Reorder copies and send them to Informant") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 4; "Reorder copies and send them to US") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 5; "Reorder and send to US") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 6; "Town Hall Form Only") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 7; "Cancel") ]
Set Variable [ $r; Value: MBS("Dialog.SetMessage"; "Hello World" ) ]
Set Variable [ $r; Value: MBS("Dialog.SetWindowTitle"; "test" ) ]
Set Variable [ $r; Value: MBS("Dialog.Run" ) ]
Set Variable [ $button; Value: MBS("Dialog.GetButtonPressed" ) ]
```

## 64.29 Dialog.RunSheet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.2	Yes	No	No	No	No

MBS( "Dialog.RunSheet"; WindowRef )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

**Result** Returns Ok or error.

### Description

Please pass reference to a window to use as parent window.

The script will be triggered later and you can query the button clicked with Dialog.GetButtonPressed or Dialog.GetLastResult. The button clicked is also passed as parameter to the script. Use Dialog.SetSheetFileName and Dialog.SetSheetScriptName to define which script to run.

## 64.30 Dialog.SetAlternateButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetAlternateButton"; text )

### Parameters

#### text

The new text.  
"Don't Save"

**Result** Returns OK.

### Description

#### See also

- [64.4 Dialog.GetAlternateButton](#) 2385

## 64.31 Dialog.SetButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	7.1	Yes	Yes	No	No	No

MBS( "Dialog.SetButton"; Index; Text )

### Parameters

#### Index

The index of the button. From 1 to 10.

4

#### Text

The new button label.

**Result** Returns OK or error.

### Description

Index 1 is default button, 2 alternate button, 3 other button and 4 to 10 are even more buttons.

### Examples

Set six buttons:

```
Set Variable [ $r; Value:MBS("Dialog.SetDefaultButton"; "1") ]
Set Variable [ $r; Value:MBS("Dialog.SetAlternateButton"; "2") ]
Set Variable [ $r; Value:MBS("Dialog.SetOtherButton"; "3") ]
Set Variable [ $r; Value:MBS("Dialog.SetButton"; 4; "4") ]
Set Variable [ $r; Value:MBS("Dialog.SetButton"; 5; "5") ]
Set Variable [ $r; Value:MBS("Dialog.SetButton"; 6; "6") ]
```

Show dialog with 7 buttons:

```
Set Variable [ $r; Value: MBS("Dialog.Reset") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 0; "Send All Copies to US") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 1; "Send All Copies to the Informant") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 2; "No Copies are required") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 3; "Reorder copies and send them to Informant") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 4; "Reorder copies and send them to US") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 5; "Reorder and send to US") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 6; "Town Hall Form Only") ]
Set Variable [ $r; Value: MBS("Dialog.SetButton"; 7; "Cancel") ]
Set Variable [ $r; Value: MBS( "Dialog.SetMessage"; "Hello World" ) ]
Set Variable [ $r; Value: MBS( "Dialog.SetWindowTitle"; "test" ) ]
Set Variable [ $r; Value: MBS( "Dialog.Run" ) ]
Set Variable [ $button; Value: MBS( "Dialog.GetButtonPressed" ) ]
```

## 64.32 Dialog.SetButtons

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetButtons"; buttons )

### Parameters

#### buttons

Which buttons to show.

"OK"

**Result** Returns OK or error.

### Description

On Windows only a fixed list of combinations are allowed.

Possible combinations are: OK, OKCancel, RetryCancel, YesNo, YesNoCancel, AbortRetryIgnore or CancelTryContinue.

## 64.33 Dialog.SetDefaultButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetDefaultButton"; text { ; NoDefault } )

### Parameters

#### text

The new default button text.

"OK"

#### NoDefault

Optional

Whether to not have a default button. Pass 1 to have no default button, so return key will not close dialog.

Default value here is 0 for allowing enter. (Mac only)

0

**Result** Returns OK or error.

### Description

When an empty string, a default localized button title ("OK" in English) is used.

### See also

## 64.34 Dialog.SetFieldText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	6.4	Yes	No	No	No	No

MBS( "Dialog.SetFieldText"; FieldIndex; Text )

### Parameters

#### FieldIndex

The index of the field. Range from 0 to 9.

0

#### Text

The text for the field.

"Hello"

**Result** Returns OK or error.

### Description

#### See also

## 64.35 Dialog.SetIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetIcon"; Image )

### Parameters

#### Image

The container with image to use as dialog icon. Should be a PNG with transparency.

**Result** Returns OK or error.

### Description

By default, the image is the application icon, accessed through the application bundle's `NSApplicationIcon` property.

So for FileMaker Pro, the icon is the FileMaker icon.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetInformativeText"; text )

### Parameters

#### text

The new informative text.

"Hello World"

**Result** Returns OK or error.

### Description

This text shows below the message text set with Dialog.SetMessage.

### See also

- [64.11 Dialog.GetInformativeText](#) 2392

## 64.37 Dialog.SetLeft

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	7.3	Yes	Yes	No	No	No

MBS( "Dialog.SetLeft"; Value )

### Parameters

#### Value

The new horizontal position.

100

**Result** Returns OK or error.

### Description

Value -1 means not defined.

This is reset by Dialog.Reset function.

You should not need this as dialog is automatically positioned in front of FileMaker window.

### Examples

Set to 100 points:

MBS( "Dialog.SetLeft"; 100 )

## 64.39 Dialog.SetMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetMode"; Mode )

### Parameters

#### Mode

The new mode.

"Warning"

**Result** Returns OK or error.

### Description

Indicates the severity level of the alert.

Allowed modes on Mac: Warning, Information, Critical, Error.

Allowed modes on Windows: Question, Hand, Stop, Error, Information, Warning or Exclamation.

So the cross platform options are Information, Error and Warning.

New in 7.1 for Mac: Note and Stop.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetOtherButton"; text { ; NoCancel } )

### Parameters

#### text

The title for the other button.

"Cancel"

#### NoCancel

Optional

Whether to not allow a cancel button. Pass 1 to have no cancel button, so esc key will not close dialog. Default value here is 0 for allowing cancel. (Windows only)

0

**Result** Returns OK or error.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	6.2	Yes	No	No	No	No

MBS( "Dialog.SetSheetEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate.

"Let ( \$\$Done = 1 ; 1 )"

**Result** Returns OK or error.

### Description

If you run a sheet, this expression is evaluated when the sheet is done.

Only used for Dialog.RunSheet.

### See also

- 64.17 Dialog.GetSheetEvaluate 2398
- 64.28 Dialog.Run 2409
- 64.29 Dialog.RunSheet 2411

### 64.41.1 Blog Entries

- [MBS FileMaker Plugin, version 6.2pr2](#)

Created 29th March 2016, last changed 25th November 2019.

## 64.42 Dialog.SetSheetFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.2	Yes	No	No	No	No

MBS( "Dialog.SetSheetFileName"; filename )

### Parameters

#### filename

The database file name where the script is located.

"test.fmp12"

**Result** Returns OK or error.

### Description

If you run a sheet, this file name is used to locate the script to call when the sheet is done.

Only used for Dialog.RunSheet.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Sets notification script:

```
MBS( "Dialog.SetSheetFileName"; "test.fmp12" )
MBS( "Dialog.SetSheetScriptName"; "SheetDoneScript" )
```

### See also

- 64.18 Dialog.GetSheetFileName 2399

### Example Databases

- [Dialog](#)

Created 18th August 2014, last changed 25th November 2019.

## 64.43 Dialog.SetSheetScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.2	Yes	No	No	No	No

MBS( "Dialog.SetSheetScriptName"; ScriptName )

### Parameters

#### ScriptName

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

If you run a sheet, this script name is used to locate the script to call when the sheet is done.

Only used for Dialog.RunSheet.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Sets notification script:

```
MBS( "Dialog.SetSheetFileName"; "test.fmp12" )
MBS( "Dialog.SetSheetScriptName"; "SheetDoneScript" )
```

### See also

- 64.18 Dialog.GetSheetFileName 2399

## 64.44 Dialog.SetShowsSuppressionButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetShowsSuppressionButton"; Value )

### Parameters

#### Value

When 1 the alert includes the suppression checkbox, else 0.

**Result** Returns OK or error.

### Description

#### See also

- [64.21 Dialog.GetShowsSuppressionButton](#) 2402
- [64.23 Dialog.GetSuppressionState](#) 2404

### Example Databases

- [Dialog](#)

## 64.45 Dialog.SetSuppressionButtonTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetSuppressionButtonTitle"; text )

### Parameters

#### text

The new button label.

"Never show this message again."

**Result** Returns OK or error.

### Description

This allows you to show a checkbox. It doesn't need to be a suppression checkbox, you can use it for other questions to user.

### See also

- [64.22 Dialog.GetSuppressionButtonTitle](#) 2403

### Example Databases

- [Dialog](#)

Created 18th August 2014, last changed 27th March 2016.

## 64.46 Dialog.SetTimeout

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	5.2	Yes	Yes	No	No	No

MBS( "Dialog.SetTimeout"; Value )

### Parameters

#### Value

The new timeout value in seconds.

30

**Result** Returns OK or error.

### Description

If a timeout is set the plugin will run a timer to close the window after a given time period.

The result of the dialog will be "Abort" and your scripts can continue.

### Examples

Run a dialog with timeout:

```
Set Variable [ $r; Value:MBS("Dialog.Reset") ]
Set Variable [ $r; Value:MBS("Dialog.SetIcon"; Dialog::Icon) ]
Set Variable [ $r; Value:MBS("Dialog.SetInformativeText"; Dialog::InformativeText) ]
Set Variable [ $r; Value:MBS("Dialog.SetMessage"; Dialog::Message) ]
Set Variable [ $r; Value:MBS("Dialog.SetMode"; "Warning") ]
Set Variable [ $r; Value:MBS("Dialog.SetWindowTitle"; Dialog::WindowTitle) ]
Set Variable [ $r; Value:MBS("Dialog.SetTimeout"; 20) ]
Set Variable [ $result; Value:MBS("Dialog.Run") ]
Set Field [ Dialog::Result; $result ]
```

### See also

Created 11st June 2015, last changed 26th March 2016.

## 64.47 Dialog.SetTop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	7.3	Yes	Yes	No	No	No

MBS( "Dialog.SetTop"; Value )

### Parameters

#### Value

The new vertical position.

100

**Result** Returns OK or error.

### Description

Value -1 means not defined.

This is reset by Dialog.Reset function.

You should not need this as dialog is automatically positioned in front of FileMaker window.

### Examples

Set to 100 points:

MBS( "Dialog.SetTop"; 100 )

## 64.48 Dialog.SetWindowTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
64 Dialog	4.1	Yes	Yes	No	No	No

MBS( "Dialog.SetWindowTitle"; Title )

### Parameters

#### Title

The new window title.

"Hello"

**Result** Returns OK or error.

### Description

Only Windows operation system uses the window title property.

### See also

# Chapter 65

## DialogModifications

Modifications for built in FileMaker dialogs.

### 65.1 DialogModifications.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
65 DialogModifications	4.3	Yes	No	No	No	No

```
MBS( "DialogModifications.Clear" )
```

**Result** Returns OK.

#### Description

#### Examples

Install with setup and clear:

```
MBS( "DialogModifications.Install" )  
MBS( "DialogModifications.Clear" )  
MBS( "DialogModifications.Set"; "Import", "Import of Contacts" )  
# do something here which shows dialog  
MBS( "DialogModifications.Clear" )
```

#### See also

- [65.2 DialogModifications.Install](#) 2436
- [65.3 DialogModifications.Set](#) 2437

Created 18th August 2014, last changed 18th August 2014.

## 65.2 DialogModifications.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
65 DialogModifications	4.3	Yes	No	No	No	No

MBS( "DialogModifications.Install" )

**Result** Returns OK or error.

### Description

Those functions are to rename text in a FileMaker dialogs. So before you run an operation which shows one of the built in dialogs, you can install, clear and set the items to replace. After the dialog finished you should call DialogModifications.Clear function. This makes sure you don't replace text when you don't expect this. See also DialogModifications.Uninstall.

### Examples

Install with setup:

MBS( "DialogModifications.Install" )

MBS( "DialogModifications.Clear" )

MBS( "DialogModifications.Set"; "Import", "Import of Contacts" )

### See also

- 65.1 DialogModifications.Clear 2435
- 65.3 DialogModifications.Set 2437
- 65.4 DialogModifications.Uninstall 2438

Created 18th August 2014, last changed 18th August 2014.

## 65.3 DialogModifications.Set

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
65 DialogModifications	4.3	Yes	No	No	No	No

MBS( "DialogModifications.Set"; Key; Value )

### Parameters

#### Key

The item to look for. Text must match exactly.

"Sichern"

#### Value

The new text to use.

"Daten sichern"

**Result** Returns OK.

### Description

See also DialogModifications.Clear.

Be aware that match is exactly byte per byte, so different variants of quotes like " and " or " can make a big difference.

Also you may need to provide several variants of text to cover all variants in different FileMaker localizations or versions.

### Examples

Replaces a text:

MBS("DialogModifications.Set"; "Wollen Sie den GESAMTEN Datensatz löschen?"; "Wollen Sie den Kontakt löschen?")

### See also

## 65.4 DialogModifications.Uninstall

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
65 DialogModifications	4.3	Yes	No	No	No	No

MBS( "DialogModifications.Uninstall" )

**Result** Returns OK.

### Description

You should call this when you no longer need the replacements.  
See also DialogModifications.Install.

### See also

- 65.2 DialogModifications.Install

2436

Created 18th August 2014, last changed 18th August 2014.

# Chapter 66

## Dictionary

Key/Value map to store values. An associative array preserving data types.

### 66.1 Dictionary.AddSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.AddSQL"; DictionaryRef; SQL Statement; FileName { ; Params } )

#### Parameters

##### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.  
\$dic

##### SQL Statement

SQL Statement as a Text string

##### FileName

The target database name. Can be empty to not limit query to one database.  
""

##### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns number of items added or error.

#### Description

From the result set, the first field is used as key and second field if exists as value.

Returns error in case of SQL error with error message.

You don't need to use ORDER BY in SQL as the order in a dictionary is defined by storage which for you means unordered.

This function is currently only supported for FileMaker 11 and newer. If you need it for older versions, please contact us.

### Examples

Test function:

```
# create dictionary
$dic = MBS("Dictionary.Create")
# add keys and values via SQL
MBS("Dictionary.AddSQL"; $dic; "SELECT TextField, NumberField FROM \"Test Table\"")
# query keys
$keys = MBS("Dictionary.Keys"; $dic)
# and values
$values = MBS("Dictionary.ValueForKey"; $dic; "Hello")
# free
MBS("Dictionary.Release"; $dic )
```

Add zip codes for three countries from 3 databases to dictionary:

```
MBS( "Dictionary.AddSQL"; $dic; "SELECT ('DE' + \"_5_stellige_PLZ\"),Ort FROM \"PLZ Deutschland Konvertiert\" "; "PLZ Deutschland" ) +
MBS( "Dictionary.AddSQL"; $dic; "SELECT ('AT' + \"_4_stellige_PLZ\"),Ort FROM \"PLZ Österreich Konvertiert\" "; "PLZ Österreich" ) +
MBS( "Dictionary.AddSQL"; $dic; "SELECT ('CH' + \"_4_stellige_PLZ\"),Ort FROM \"PLZ Schweiz Konvertiert\" "; "PLZ Schweiz" )
```

### See also

#### 66.1.1 Blog Entries

- [MBS FileMaker Plugin, version 5.2pr9](#)

- [MBS FileMaker Plugin, version 5.1pr1](#)

Created 12nd March 2015, last changed 13th February 2017.

## 66.2 Dictionary.AddSQLRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary 81 FMSQL	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.AddSQLRecord"; DictionaryRef; Keys; SQL Statement; FileName { ; Params } )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Keys

The list of keys for the dictionary. Could be the same as the field list.

"FirstName\$LastName\$Company"

#### SQL Statement

SQL Statement as a Text string

#### FileName

The target database name. Can be empty to not limit query to one database.

""

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

### Description

From the result set, the first record is used for values and given key list for the keys.

Returns error in case of SQL error with error message.

As we only use first record, you can use FETCH FIRST 1 ROWS ONLY in the SQL command to only query first record.

This function is currently only supported for FileMaker 11 and newer. If you need it for older versions, please contact us.

### Examples

Query record and get JSON:

```
Set Variable [ $dic ; Value: MBS("Dictionary.Create") ]
Set Variable [ $r ; Value: MBS( "Dictionary.AddSQLRecord"; $dic; "Vorname$Nachname$Firma"; "SE-
LECT Vorname, Nachname, Firma FROM Kontakte"; "Kontakte" ) ]
Set Variable [ $json ; Value: MBS( "Dictionary.ToJSON"; $dic ) ]
Set Variable [ $r ; Value: MBS( "Dictionary.Release"; $dic ) ]
```

## 66.3 Dictionary.AddSQLRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary 81 FMSQL	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.AddSQLRecords"; DictionaryRef; Keys; SQL Statement; FileName { ; Params } )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.  
\$dic

#### Keys

The list of keys for the dictionary. Could be the same as the field list.  
"FirstName\$LastName\$Company"

#### SQL Statement

SQL Statement as a Text string

#### FileName

The target database name. Can be empty to not limit query to one database.  
""

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

### Description

From the result set, the records are used for values and given key list for the keys.  
If you have multiple records, you get all values collected per field in a list.  
Returns error in case of SQL error with error message.

This function is currently only supported for FileMaker 11 and newer. If you need it for older versions, please contact us.

### Examples

Query record and get JSON:

```
Set Variable [ $dic ; Value: MBS("Dictionary.Create") ]
Set Variable [ $r ; Value: MBS( "Dictionary.AddSQLRecords"; $dic; "Vorname$Nachname$Firma"; "SELECT Vorname, Nachname, Firma FROM Kontakte"; "Kontakte" ) ]
Set Variable [ $json ; Value: MBS( "Dictionary.ToJSON"; $dic ) ]
Set Variable [ $r ; Value: MBS( "Dictionary.Release"; $dic ) ]
```

Created 12nd December 2014, last changed 12nd December 2014.

## 66.5 Dictionary.Clone

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.Clone"; DictionaryRef )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

**Result** Returns reference number or error.

### Description

A new reference number with a new dictionary behind and all keys and values copied.

#### See also

- 66.4 Dictionary.Clear 2446

- 66.7 Dictionary.Create 2449

### 66.5.1 Blog Entries

- [MBS FileMaker Plugin, version 6.1pr5](#)

Created 5th March 2016, last changed 5th March 2016.

## 66.6 Dictionary.Count

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.Count"; DictionaryRef )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

**Result** Returns number or error.

### Description

### Examples

Query count of a dictionary:

```
$count = MBS("Dictionary.Count"; $Param)
```

### See also

- [66.4 Dictionary.Clear](#) 2446
- [66.5 Dictionary.Clone](#) 2447
- [66.7 Dictionary.Create](#) 2449

Created 12nd December 2014, last changed 12nd December 2014.

## 66.7 Dictionary.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.Create" { ; Key; Value } )

### Parameters

#### Key

Optional

Optional, a key.

#### Value

Optional

Optional, a value.

**Result** Returns dictionary reference number or error.

### Description

Dictionaries are hash maps, so lookup is very fast (often faster than search in your FileMaker database). You can use them for storing parameters or lookup tables.

Optionally you can pass keys and values as parameters to this function.

If you looked for assoziative arrays, you are right here.

### Examples

Build a dictionary in a calculation:

```
Let ( [
/*
Create new Dictionary
/
param = MBS( "Dictionary.Create" );

/*
Fill in parameters
/
r1 = MBS( "Dictionary.SetValueForKey"; param; "text"; Pass Parameters with Dictionary::TextField );
r2 = MBS( "Dictionary.SetValueForKey"; param; "number"; Pass Parameters with Dictionary::Number-
Field);
r3 = MBS( "Dictionary.SetValueForKey"; param; "date"; Pass Parameters with Dictionary::DateField);
r4 = MBS( "Dictionary.SetValueForKey"; param; "time"; Pass Parameters with Dictionary::TimeField);
r5 = MBS( "Dictionary.SetValueForKey"; param; "timestamp"; Pass Parameters with Dictionary::TimeS-
tampField);
r6 = MBS( "Dictionary.SetValueForKey"; param; "container"; Pass Parameters with Dictionary::Contain-
erField)
/*
```

```
return dictionary
/
]; param )
```

Build a dictionary with given Keys and Values:

```
MBS("Dictionary.Create"; "FirstName"; $FirstName; "LastName"; $LastName; "City"; $City; "Phone";
$Phone; "Email"; $Email)
```

Test script to look for duplicate UUIDs:

```
Set Variable [ $dic ; Value: MBS( "Dictionary.Create" ) ]
Loop
Set Variable [ $uuid ; Value: Get(UUID) ]
If [ MBS("Dictionary.HasKey"; $dic; $uuid) ]
Show Custom Dialog [ "Duplicate!" ; $uuid ]
Exit Loop If [ 1 ]
End If
Set Variable [ $r ; Value: MBS( "Dictionary.SetValueForKey"; $dic; $uuid; $uuid ) ]
End Loop
Set Field [ test::test ; MBS( "Dictionary.Keys"; $dic ) ]
Set Variable [ $r ; Value: MBS( "Dictionary.Release"; $dic ) ]
```

## 66.8 Dictionary.CreateNamed

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.CreateNamed"; KeyRef { ; Key; Value } )

### Parameters

#### KeyRef

The desired key reference.

"IDs"

#### Key

Optional

Optional, a key.

#### Value

Optional

Optional, a value.

**Result** Returns dictionary reference or error.

### Description

Dictionaries are hash maps, so lookup is very fast (often faster than search in your FileMaker database). You can use them for storing parameters or lookup tables.

Optionally you can pass keys and values as parameters to this function.

If you looked for assoziative arrays, you are right here.

### Examples

Creates new dictionary with reference number "IDs":

```
MBS("Dictionary.CreateNamed"; "IDs")
```

### See also

## 66.9 Dictionary.Deserialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.Deserialize"; Text )

### Parameters

#### Text

The serialized data as text.

**Result** Returns dictionary reference number or error.

### Description

### Examples

Create a dictionary and serialize it:

```
Set Variable [ $list; Value:MBS( "Dictionary.Create"; "Hello"; "World"; "1234"; "Just a test!" ) ]
Set Variable [ $text; Value:MBS("Dictionary.Serialize"; $list) ]
Set Variable [ $secondList; Value:MBS("Dictionary.Deserialize"; $text) ]
Show Custom Dialog [ "List"; "Encoded: " & $text & $& $& "Decoded Keys: " & MBS("Dictionary.Keys";
$secondList) & $& $& "D... ]
Set Variable [ $r; Value:MBS("Dictionary.Release"; $list) ]
Set Variable [ $r; Value:MBS("Dictionary.Release"; $secondList) ]
```

Serialize and unserialize with date and time:

```
# Create Dictionary
Set Variable [ $dict; Value:MBS ( "Dictionary.Create" ) ]
# put date and time inside:
Set Variable [ $r; Value:MBS ( "Dictionary.SetValueForKey"; $dict; "theTime"; Get ( CurrentTime ) ) ]

## 66.10 Dictionary.HasKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.HasKey"; DictionaryRef; Key )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Key

The key to use. Keys are case sensitive. Also keys must be text and should be single line.

"FirstName"

**Result** Returns 1, 0 or error.

### Description

### Examples

Checks if some values are there:

```
$hasText = MBS("Dictionary.HasKey"; $Param; "text")
```

```
$hasFun = MBS("Dictionary.HasKey"; $Param; "fun")
```

### See also

Created 12nd December 2014, last changed 12nd December 2014.

## 66.11 Dictionary.KeyAtIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.KeyAtIndex"; DictionaryRef; Index )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Index

The index for the key. Range from 0 to Dictionary.Count-1.

0

**Result** Returns OK or error.

### Description

Index starts at zero and ends at Dictionary.Count-1.

### Examples

Query first key:

```
MBS("Dictionary.KeyAtIndex"; $Param; 0)
```

### See also

- [66.6 Dictionary.Count](#) 2448

## 66.12 Dictionary.Keys

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.Keys"; DictionaryRef )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

**Result** Returns list or error.

### Description

The order is random and defined by how the dictionary internally stores values.

See also Dictionary.Values.

### Examples

Query list of keys:

```
$keys = MBS("Dictionary.Keys"; $Param)
```

### See also

## 66.13 Dictionary.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.List" )

**Result** Returns list or error.

### Description

This helps debugging, especially finding scripts which do not release their objects properly.

## 66.15 Dictionary.RemoveKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.RemoveKey"; DictionaryRef; Key )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.  
\$dic

#### Key

The key to use. Keys are case sensitive.  
"FirstName"

**Result** Returns OK or error.

### Description

#### See also

- 66.7 Dictionary.Create

2449

Created 12nd December 2014, last changed 12nd December 2014.

## 66.16 Dictionary.Serialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.Serialize"; DictionaryRef )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

**Result** Returns text or error.

### Description

The dictionary content is stored in a base64 encoded string which the plugin function Dictionary.Deserialize can read.

Does not work with external containers.

Using this function allows to store a dictionary in a text field or transmit it with Socket functions, SerialPort functions or by writing it to a file.

### Examples

Create a dictionary and serialize it:

```
Set Variable [ $list; Value:MBS( "Dictionary.Create"; "Hello"; "World"; "1234"; "Just a test!" ) ]
Set Variable [ $text; Value:MBS("Dictionary.Serialize"; $list) ]
Set Variable [ $secondList; Value:MBS("Dictionary.Deserialize"; $text) ]
Show Custom Dialog [ "List"; "Encoded: " & $text & $& $& "Decoded Keys: " & MBS("Dictionary.Keys";
$secondList) & $& $& "D... ]
Set Variable [ $r; Value:MBS("Dictionary.Release"; $list) ]
Set Variable [ $r; Value:MBS("Dictionary.Release"; $secondList) ]
```

Serialize and unserialize with date and time:

```
# Create Dictionary
Set Variable [ $dict; Value:MBS ( "Dictionary.Create" ) ]
# put date and time inside:
Set Variable [ $r; Value:MBS ( "Dictionary.SetValueForKey"; $dict; "theTime"; Get ( CurrentTime ) ) ]
Set Variable [ $r; Value:MBS ( "Dictionary.SetValueForKey"; $dict; "theDate"; Get ( CurrentDate ) ) ]
# Serialize this
Set Variable [ $dictEncoded; Value:MBS ( "Dictionary.Serialize"; $dict ) ]
# Free dictionary
Set Variable [ $r; Value:MBS ( "Dictionary.Release"; $dict ) ]
# Unpack it:
Set Variable [ $newDict; Value:MBS ( "Dictionary.Deserialize"; $dictEncoded ) ]
# and get values
Set Variable [ $TheTime; Value: MBS ( "Dictionary.ValueForKey"; $newDict; "theTime" ) ]
Set Variable [ $TheDate; Value: MBS ( "Dictionary.ValueForKey"; $newDict; "theDate" ) ]
```

```
Show Custom Dialog [ $TheTime & " " & $TheDate ]  
Set Variable [ $r; Value:MBS ( "Dictionary.Release"; $newDict ) ]
```

## 66.17 Dictionary.SetList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	6.2	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.SetList"; DictionaryRef; List { ; Delimiter } )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### List

The list of values with delimiter.

"Hello=World\$Other=Value"

#### Delimiter

Optional

The delimiter for the value list. Default is tab key.

"="

**Result** Returns OK or error.

### Description

The list contains key=value entries with a configurable delimiter.

#### See also

- 66.7 Dictionary.Create 2449

Created 2nd May 2016, last changed 2nd May 2016.

## 66.18 Dictionary.SetQuickList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	7.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.SetQuickList"; DictionaryRef; ListRef { ; Delimiter } )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Delimiter

Optional

The delimiter for the value list. Default is tab key.

"="

**Result** Returns OK or error.

### Description

The list contains key=value entries with a configurable delimiter.

### See also

- 66.7 Dictionary.Create 2449
- 66.17 Dictionary.SetList 2463

## 66.19 Dictionary.SetValueForKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.SetValueForKey"; DictionaryRef; Key; Value )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Key

The key to use. Keys are case sensitive. Also keys must be text and should be single line.

"FirstName"

#### Value

The new value. Supported data types include empty, text, number, boolean, container, time, timestamp and date.

"Hello World"

**Result** Returns OK or error.

### Description

Data type is preserved, so you can even store containers in the dictionary.

Keys should be text and are handled case sensitive.

### Examples

Build a dictionary in a calculation:

```
Let ( [
/*
Create new Dictionary
/
param = MBS( "Dictionary.Create" );

/*
Fill in parameters
/
r1 = MBS( "Dictionary.SetValueForKey"; param; "text"; Pass Parameters with Dictionary::TextField );
r2 = MBS( "Dictionary.SetValueForKey"; param; "number"; Pass Parameters with Dictionary::Number-
Field);
r3 = MBS( "Dictionary.SetValueForKey"; param; "date"; Pass Parameters with Dictionary::DateField);
r4 = MBS( "Dictionary.SetValueForKey"; param; "time"; Pass Parameters with Dictionary::TimeField);
r5 = MBS( "Dictionary.SetValueForKey"; param; "timestamp"; Pass Parameters with Dictionary::TimeS-
tampField);
r6 = MBS( "Dictionary.SetValueForKey"; param; "container"; Pass Parameters with Dictionary::Contain-
erField)
/*
```

```
return dictionary
/
]; param )
```

Serialize and unserialize with date and time:

```
# Create Dictionary
Set Variable [ $dict; Value:MBS ( "Dictionary.Create" ) ]
# put date and time inside:
Set Variable [ $r; Value:MBS ( "Dictionary.SetValueForKey"; $dict; "theTime"; Get ( CurrentTime ) ) ]
Set Variable [ $r; Value:MBS ( "Dictionary.SetValueForKey"; $dict; "theDate"; Get ( CurrentDate ) ) ]
# Serialize this
Set Variable [ $dictEncoded; Value:MBS ( "Dictionary.Serialize"; $dict ) ]
# Free dictionary
Set Variable [ $r; Value:MBS ( "Dictionary.Release"; $dict ) ]
# Unpack it:
Set Variable [ $newDict; Value:MBS ( "Dictionary.Deserialize"; $dictEncoded ) ]
# and get values
Set Variable [ $TheTime; Value: MBS ( "Dictionary.ValueForKey"; $newDict; "theTime" ) ]
Set Variable [ $TheDate; Value: MBS ( "Dictionary.ValueForKey"; $newDict; "theDate" ) ]
Show Custom Dialog [ $TheTime & " " & $TheDate ]
Set Variable [ $r; Value:MBS ( "Dictionary.Release"; $newDict ) ]
```

## 66.20 Dictionary.SetVariables

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.SetVariables"; DictionaryRef { ; Options } )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Options

Optional

Whether to create local or global variables. Pass 2 to create global variables (\$\$) Pass 0 to create local variables (\$), default.

Add 1 to free the dictionary after doing this.

1+2

**Result** Returns OK or error.

### Description

The plugin evaluates a Let statement which defines variables in current script with the content of the dictionary. This is very useful for passing arguments to a script (see blog post & guide)

This does not work, if passing Directory reference number from client to server or back!

**See also**

## 66.21 Dictionary.ToJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary 102 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.ToJSON"; DictionaryRef )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

**Result** Returns OK or error.

### Description

This is useful for passing data from dictionary to some javascript.

### Examples

Test exporting dictionaries:

```
#
#
# Create new Dictionary
#
Set Variable [ $param; Value:MBS( "Dictionary.Create" ) ]
#
# Fill in values
#
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "text"; Pass Parameters with Dictionary::TextField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "number"; Pass Parameters with Dictionary::NumberField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "date"; Pass Parameters with Dictionary::DateField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "time"; Pass Parameters with Dictionary::TimeField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "timestamp"; Pass Parameters with Dictionary::TimeStampField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "container"; Pass Parameters with Dictionary::ContainerField ) ]
#
# Call save xml, json and text
#
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToXML"; $param; 1); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.xml"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToText"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.txt"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToJSON"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.json"); "UTF8" ) ]
```

```
dPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.json.txt"); "UTF8") ]  
#  
# free memory  
#  
Set Variable [ $r; Value:MBS("Dictionary.Release"; $param) ]
```

## 66.22 Dictionary.ToText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.ToText"; DictionaryRef { ; Column Delimiter; Row Delimiter } )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Column Delimiter

Optional

The delimiter between key and value. Should not be part of content. By default we use tab key.

#### Row Delimiter

Optional

The delimiter between rows. By default we use return key (char 13)

**Result** Returns OK or error.

### Description

Containers are just added as text and delimiters inside a text value can cause trouble.

### Examples

Test exporting dictionaries:

```
#
#
# Create new Dictionary
#
Set Variable [ $param; Value:MBS( "Dictionary.Create" ) ]
#
# Fill in values
#
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "text"; Pass Parameters with Dictionary::TextField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "number"; Pass Parameters with Dictionary::NumberField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "date"; Pass Parameters with Dictionary::DateField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "time"; Pass Parameters with Dictionary::TimeField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "timestamp"; Pass Parameters with Dictionary::TimeStampField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "container"; Pass Parameters with Dictionary::ContainerField ) ]
#
```

```

# Call save xml, json and text
#
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToXML"; $param; 1); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "dictionary.xml"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToText"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "dictionary.txt"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToJSON"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "dictionary.json.txt"); "UTF8" ) ]
#
# free memory
#
Set Variable [ $r; Value:MBS("Dictionary.Release"; $param) ]

```

## 66.23 Dictionary.ToXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary 194 XML	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.ToXML"; DictionaryRef { ; Format } )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Format

Optional

If 1, we format pretty. Pass 0 to get compact xml.

1

**Result** Returns OK or error.

### Description

### Examples

Test exporting dictionaries:

```
#
#
# Create new Dictionary
#
Set Variable [ $param; Value:MBS( "Dictionary.Create" ) ]
#
# Fill in values
#
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "text"; Pass Parameters with Dictionary::TextField ) ]

Created 25th February 2016, last changed 20th February 2018.

## 66.24 Dictionary.ValueForKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.ValueForKey"; DictionaryRef; Key )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Key

The key to use. Keys are case sensitive.

"FirstName"

**Result** Returns value or error.

### Description

As dictionary preserves data type, result can be empty, text, number, date, time, timestamp, container or boolean.

### Examples

Serialize and unserialize with date and time:

```
# Create Dictionary
Set Variable [ $dict; Value:MBS ( "Dictionary.Create" ) ]
# put date and time inside:
Set Variable [ $r; Value:MBS ( "Dictionary.SetValueForKey"; $dict; "theTime"; Get ( CurrentTime ) ) ]
Set Variable [ $r; Value:MBS ( "Dictionary.SetValueForKey"; $dict; "theDate"; Get ( CurrentDate ) ) ]
# Serialize this
Set Variable [ $dictEncoded; Value:MBS ( "Dictionary.Serialize"; $dict ) ]
# Free dictionary
Set Variable [ $r; Value:MBS ( "Dictionary.Release"; $dict ) ]
# Unpack it:
Set Variable [ $newDict; Value:MBS ( "Dictionary.Deserialize"; $dictEncoded ) ]
# and get values
Set Variable [ $TheTime; Value: MBS ( "Dictionary.ValueForKey"; $newDict; "theTime" ) ]
Set Variable [ $TheDate; Value: MBS ( "Dictionary.ValueForKey"; $newDict; "theDate" ) ]
Show Custom Dialog [ $TheTime & " " & $TheDate ]
Set Variable [ $r; Value:MBS ( "Dictionary.Release"; $newDict ) ]
```

## 66.25 Dictionary.ValueTypeForKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.ValueTypeForKey"; DictionaryRef; Key )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

#### Key

The key to use. Keys are case sensitive.

"FirstName"

**Result** Returns type or error.

### Description

Value can be Invalid, Text, Number, Date, Time, TimeStamp, Container or Boolean.

### See also

- 66.7 Dictionary.Create 2449
- 66.19 Dictionary.SetValueForKey 2465

Created 12nd March 2015, last changed 12nd March 2015.

## 66.26 Dictionary.Values

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.Values"; DictionaryRef )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.

\$dic

**Result** Returns list or error.

### Description

Of course data in dictionary is converted to text, so this function will not return details like data type or container content.

Order is same as for Dictionary.Keys if the dictionary is not changed inbetween.

### Examples

Query list of keys and values:

```
$keys = MBS("Dictionary.Keys"; $Param)
$values = MBS("Dictionary.Values"; $Param)
```

# Chapter 67

## DirectoryWatcher

Watch directories for changes on Windows.

Watch changes on directories and get script triggered for changes. See FSEvents functions for Mac.

### 67.1 DirectoryWatcher.AddDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	Yes, Windows only	No	No

MBS( "DirectoryWatcher.AddDirectory"; Watcher; Path; recursive; Action )

#### Parameters

##### Watcher

The watcher reference number.

\$watcher

##### Path

The directory path to verify.

"C:\Users\Administrator\Desktop"

##### recursive

Whether to recursively check subdirectories. Pass 1 to turn on or 0 to turn off.

1

##### Action

The changes to monitor.

"Filename\$DirName\$Attributes\$Size\$LastWrite\$LastAccess\$Creation\$Security"

**Result** Returns OK or error.

#### Description

With the actions you can define what changes to report.

Action	Value	Description
Filename	1	Any file name change in the watched directory or subtree causes a change notification wait operation to return. Changes include renaming, creating, or deleting a file name.
DirName	2	Any directory-name change in the watched directory or subtree causes a change notification wait operation to return. Changes include creating or deleting a directory.
Attributes	4	Any attribute change in the watched directory or subtree causes a change notification wait operation to return.
Size	8	Any file-size change in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change in file size only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.
LastWrite	16	Any change to the last write-time of files in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change to the last write-time only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.
LastAccess	32	Any change to the last access time of files in the watched directory or subtree causes a change notification wait operation to return.
Creation	64	Any change to the creation time of files in the watched directory or subtree causes a change notification wait operation to return.
Security	256	Any security-descriptor change in the watched directory or subtree causes a change notification wait operation to return.

### Examples

Watch for changes in directory:

```
MBS("DirectoryWatcher.AddDirectory"; $Watcher; Directory Watcher::Directory; 1; "Filename$DirName$Attributes$Size$LastWrite$LastAccess$Creation$Security")
```

### Example Databases

- [Win Only/Directory Watcher](#)

Created 5th March 2017, last changed 26th May 2017.

## 67.2 DirectoryWatcher.ChangeCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	Yes, Windows only	No	No

MBS( "DirectoryWatcher.ChangeCount"; Watcher )

### Parameters

#### Watcher

The watcher reference number.

\$watcher

**Result** Returns number or error.

### Description

We queue the changes in a list and you can query it.

### Example Databases

- [Win Only/Directory Watcher](#)

Created 5th March 2017, last changed 5th March 2017.

## 67.3 DirectoryWatcher.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	Yes, Windows only	No	No

MBS( "DirectoryWatcher.Create" )

**Result** Returns reference number or error.

### Description

Works on server and client.

May not work for network shared disks as most drivers don't pass through change events.

### See also

- [67.8 DirectoryWatcher.Release](#)

2487

### Example Databases

- [Win Only/Directory Watcher](#)

Created 5th March 2017, last changed 27th February 2019.

## 67.4 DirectoryWatcher.GetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	No	No	No

MBS( "DirectoryWatcher.GetEvaluate"; Watcher )

### Parameters

#### Watcher

The watcher reference number.

\$watcher

**Result** Returns text or error.

### Description

#### See also

- 67.5 DirectoryWatcher.GetFileName 2484
- 67.6 DirectoryWatcher.GetScriptName 2485
- 67.7 DirectoryWatcher.NextChange 2486

- 67.10 DirectoryWatcher.SetEvaluate 2489
- 67.11 DirectoryWatcher.SetFileName 2490

Created 5th March 2017, last changed 5th March 2017.

## 67.5 DirectoryWatcher.GetFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	No	No	No

MBS( "DirectoryWatcher.GetFileName"; Watcher )

### Parameters

#### Watcher

The watcher reference number.

\$watcher

**Result** Returns text or error.

### Description

#### See also

- 67.4 DirectoryWatcher.GetEvaluate 2483
- 67.6 DirectoryWatcher.GetScriptName 2485
- 67.8 DirectoryWatcher.Release 2487
- 67.10 DirectoryWatcher.SetEvaluate 2489
- 67.11 DirectoryWatcher.SetFileName 2490
- 67.12 DirectoryWatcher.SetScriptName 2491

Created 5th March 2017, last changed 5th March 2017.

**67.6 DirectoryWatcher.GetScriptName**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	No	No	No

MBS( "DirectoryWatcher.GetScriptName"; Watcher )

**Parameters****Watcher**

The watcher reference number.

\$watcher

**Result** Returns text or error.

**Description****See also**

- 67.4 DirectoryWatcher.GetEvaluate 2483
- 67.5 DirectoryWatcher.GetFileName 2484
- 67.11 DirectoryWatcher.SetFileName 2490
- 67.12 DirectoryWatcher.SetScriptName 2491

Created 5th March 2017, last changed 5th March 2017.

## 67.7 DirectoryWatcher.NextChange

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	Yes, Windows only	No	No

MBS( "DirectoryWatcher.NextChange"; Watcher )

### Parameters

#### Watcher

The watcher reference number.

\$watcher

**Result** Returns list or error.

### Description

The list contains first the path name, second the action code and third the name of the action.

Action	Name
1	Added
2	Removed
3	Modified
4	Renamed Old Name
5	Renamed New Name

### See also

- [67.10 DirectoryWatcher.SetEvaluate](#) 2489

### Example Databases

- [Win Only/Directory Watcher](#)

Created 5th March 2017, last changed 5th March 2017.

**67.8 DirectoryWatcher.Release**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	Yes, Windows only	No	No

MBS( "DirectoryWatcher.Release"; Watcher )

**Parameters****Watcher**

The watcher reference number.

\$watcher

**Result** Returns OK or error.

**Description**

This will free all memory used and stops the checks.

**See also**

- 67.3 DirectoryWatcher.Create 2482

2487

### 67.9.1 Blog Entries

- [MBS FileMaker Plugin, version 7.4pr2](#)

Created 6th August 2017, last changed 9th January 2020.

**67.10 DirectoryWatcher.SetEvaluate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	No	No	No

MBS( "DirectoryWatcher.SetEvaluate"; Watcher; Expression )

**Parameters****Watcher**

The watcher reference number.

\$watcher

**Expression**

The expression to evaluate.

**Result** Returns OK or error.

**Description****See also**

- 67.4 DirectoryWatcher.GetEvaluate 2483
- 67.5 DirectoryWatcher.GetFileName 2484
- 67.7 DirectoryWatcher.NextChange 2486

- 67.11 DirectoryWatcher.SetFileName 2490
- 67.12 DirectoryWatcher.SetScriptName 2491

Created 5th March 2017, last changed 5th March 2017.

## 67.11 DirectoryWatcher.SetFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	No	No	No

MBS( "DirectoryWatcher.SetFileName"; Watcher; Filename )

### Parameters

#### Watcher

The watcher reference number.

\$watcher

#### Filename

The database file name where the script is located.

"test.fmp12"

**Result** Returns OK or error.

### Description

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### See also

- 67.4 DirectoryWatcher.GetEvaluate 2483

Created 5th March 2017, last changed 5th March 2017.

## 67.12 DirectoryWatcher.SetScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
67 DirectoryWatcher	7.1	No	Yes	No	No	No

MBS( "DirectoryWatcher.SetScriptName"; Watcher; ScriptName )

### Parameters

#### Watcher

The watcher reference number.

\$watcher

#### ScriptName

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

# Chapter 68

## DNSLookup

Query the IP address for a domain name.

Or find the domain name for an IPv4 or IPv6 address.

### 68.1 DNSLookup.Address

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
68 DNSLookup	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DNSLookup.Address"; LookupRef { ; Index } )

#### Parameters

##### LookupRef

The reference number for the DNS Lookup.

\$Lookup

##### Index

Optional

The index of the address. From 0 to DNSLookup.AddressCount-1. Index of -1 gives list with all values.

0

**Result** Returns text or error.

#### Description

#### See also

- 68.2 DNSLookup.AddressCount 2495
- 68.5 DNSLookup.LookupHostByAddress 2498
- 68.6 DNSLookup.LookupHostByName 2500

**Example Databases**

**68.1.1 Blog Entries**

- [DNS Lookups in FileMaker](#)

Created 25th November 2015, last changed 25th November 2015.

## 68.2 DNSLookup.AddressCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
68 DNSLookup	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DNSLookup.AddressCount"; LookupRef )

### Parameters

#### LookupRef

The reference number for the DNS Lookup.

\$Lookup

**Result** Returns number or error.

### Description

#### See also

- [68.1 DNSLookup.Address](#) 2493
- [68.4 DNSLookup.AliasCount](#) 2497

### 68.2.1 Blog Entries

## 68.3 DNSLookup.Alias

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
68 DNSLookup	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DNSLookup.Alias"; LookupRef { ; Index } )

### Parameters

#### LookupRef

The reference number for the DNS Lookup.

\$Lookup

#### Index

Optional

The index of the alias. From 0 to DNSLookup.AliasCount-1. Index of -1 gives list with all values.

0

**Result** Returns text or error.

### Description

#### See also

- [68.4 DNSLookup.AliasCount](#) 2497
- [68.5 DNSLookup.LookupHostByAddress](#) 2498
- [68.6 DNSLookup.LookupHostByName](#) 2500

#### 68.3.1 Blog Entries

- [DNS Lookups in FileMaker](#)

Created 25th November 2015, last changed 25th November 2015.

## 68.4 DNSLookup.AliasCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
68 DNSLookup	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DNSLookup.AliasCount"; LookupRef )

### Parameters

#### LookupRef

The reference number for the DNS Lookup.

\$Lookup

**Result** Returns number or error.

### Description

#### See also

- [68.2 DNSLookup.AddressCount](#) 2495

### 68.4.1 Blog Entries

- [DNS Lookups in FileMaker](#)

Created 25th November 2015, last changed 25th November 2015.

## 68.5 DNSLookup.LookupHostByAddress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
68 DNSLookup	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DNSLookup.LookupHostByAddress"; IP )

### Parameters

#### IP

The IP address to query.

"192.35.60.462"

**Result** Returns reference number or error.

### Description

Lookup is synchronous.

### Examples

Lookup an IP:

```
Set Variable [ $q; Value:MBS( "DNSLookup.LookupHostByAddress"; DNS Lookup::IP to lookup ) ]
If [ MBS("IsError") = 0 ]
Set Field [ DNS Lookup::Name; MBS( "DNSLookup.Name"; $q ) ]
Set Field [ DNS Lookup::Addresses; MBS( "DNSLookup.Address"; $q; -1 ) ]
Set Field [ DNS Lookup::Aliases; MBS( "DNSLookup.Alias"; $q; -1 ) ]
Set Variable [ $r; Value:MBS( "DNSLookup.Release"; $q ) ]
End If
```

### See also

- [DNS Lookups in FileMaker](#)

Created 25th November 2015, last changed 1st January 2016.

## 68.6 DNSLookup.LookupHostByName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
68 DNSLookup	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DNSLookup.LookupHostByName"; DomainName { ; Type } )

### Parameters

#### DomainName

The domain name to lookup.  
"monkeybreadsoftware.de"

#### Type

Optional

What IP type to find. Can be 4 for IPv4 or 6 for IPv6. Default is IPv4. This is currently ignored on Windows and you get back default IP type.

4

**Result** Returns reference number or error.

### Description

Lookup is synchronous.

By default queries the primary IP type the machine is configured for.

### Examples

Lookup domain name:

```
Set Variable [ $q; Value:MBS( "DNSLookup.LookupHostByName"; DNS Lookup::Name to lookup; Get(Script-Parameter) ) ]
If [ MBS("IsError") = 0 ]
Set Field [ DNS Lookup::Name; MBS( "DNSLookup.Name"; $q ) ]
Set Field [ DNS Lookup::Addresses; MBS( "DNSLookup.Address"; $q; -1 ) ]
Set Field [ DNS Lookup::Aliases; MBS( "DNSLookup.Alias"; $q; -1 ) ]
Set Variable [ $r; Value:MBS( "DNSLookup.Release"; $q ) ]
End If
```

# Chapter 69

## DocumentCameraScan

Scan documents on iOS directly into FileMaker with the camera.

For MacOS see ContinuityCamera functions.

### 69.1 DocumentCameraScan.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.Clear" )

**Result** Returns OK or error.

#### Description

Optional function to call if you like to release memory for last scan result.

#### Examples

Clears current scan:

```
Set Variable [ $r; Value: MBS( "DocumentCameraScan.Clear" ) ]
```

#### See also

- 69.2 DocumentCameraScan.Close 2507
- 69.7 DocumentCameraScan.PageImage 2513
- 69.8 DocumentCameraScan.Scan 2515
- 69.11 DocumentCameraScan.Title 2519
- 69.12 DocumentCameraScan.Visible 2520

**69.2 DocumentCameraScan.Close**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.Close" )

**Result** Returns OK or error.

**Description**

If the dialog is not open, this function does nothing.

The plugin will close it automatically when the script is triggered.

**See also**

- 69.1 DocumentCameraScan.Clear 2505
- 69.8 DocumentCameraScan.Scan 2515
- 69.10 DocumentCameraScan.Supported 2518
- 69.11 DocumentCameraScan.Title 2519
- 69.12 DocumentCameraScan.Visible 2520

Created 6th January 2020, last changed 8th January 2020.

### 69.3 DocumentCameraScan.ErrorMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.ErrorMessage" )

**Result** Returns text.

#### Description

#### Examples

Script may look like this:

```
Set Variable [ $param ; Value: Get( ScriptParameter ) ]
If [ $param = "Error" ]
Show Custom Dialog [ "Failed to scan" ; MBS( "DocumentCameraScan.ErrorMessage" ) ]
Else If [ $param = "Scan" ]
Perform Script [ Specified: From list ; "Import" ; Parameter: ]
Else If [ $param = "Cancel" ]
# do nothing
End If
```

#### See also

Created 6th January 2020, last changed 8th January 2020.

## 69.4 DocumentCameraScan.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.Initialize" )

**Result** Returns OK or error.

### Description

Requires iOS 13 or newer.

### Examples

Script to initialize:

```
# Initialize document camera scanner
#
If [ MBS("DocumentCameraScan.IsInitialized") = 0 ]
Set Variable [ $r ; Value: MBS("DocumentCameraScan.Initialize") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to initialize" ; $r ]
Else If [ MBS("DocumentCameraScan.Supported") = 0 ]
Show Custom Dialog [ "Not supported on this device." ]
End If
End If
```

### See also

- [69.11 DocumentCameraScan.Title](#) 2519
- [69.12 DocumentCameraScan.Visible](#) 2520
- [127.6 IsError](#) 6374

### Example Databases

- [iOS/DocumentCameraScan test](#)

### 69.4.1 Blog Entries

- [Document Camera Scan functions for FileMaker iOS SDK](#)

## 69.5 DocumentCameraScan.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.IsInitialized" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 on success or 0 on failure.

### Examples

Script to initialize:

```
# Initialize document camera scanner
#
If [ MBS("DocumentCameraScan.IsInitialized") = 0 ]
Set Variable [ $r ; Value: MBS("DocumentCameraScan.Initialize") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to initialize" ; $r ]
Else If [ MBS("DocumentCameraScan.Supported") = 0 ]
Show Custom Dialog [ "Not supported on this device." ]
End If
End If
```

### See also

- 69.4 DocumentCameraScan.Initialize 2509
- 69.10 DocumentCameraScan.Supported 2518
- 127.6 IsError 6374

Created 6th January 2020, last changed 24th January 2020.

## 69.6 DocumentCameraScan.PageCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.PageCount" )

**Result** Returns number or error.

### Description

### Examples

Import scan result:

```
Set Variable [ $count ; Value: MBS( "DocumentCameraScan.PageCount" ) ]
If [ $count >0 ]
Set Variable [ $index ; Value: 0 ]
Loop
# store image
New Record/Request
Set Field [ Contacts::Video ; MBS( "DocumentCameraScan.PageImage"; $Index; "PNG"; "test.png" ) ]
Commit Records/Requests [ With dialog: On ]
# next
Set Variable [ $index ; Value: $index + 1 ]
Exit Loop If [ $index $count ]
End Loop
End If
```

## 69.7 DocumentCameraScan.PageImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.PageImage"; Index { ; ImageType; Filename } )

### Parameters

#### Index

The index of the page. Range is 0 to DocumentCameraScan.PageCount-1.

0

#### ImageType

Optional

The type of image to return. Either JPEG or PNG. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns container value or error.

### Description

See DocumentCameraScan.PageCount for the count of pages.

### Examples

Import scan result:

```
Set Variable [ $count ; Value: MBS( "DocumentCameraScan.PageCount" ) ]
If [ $count >0 ]
Set Variable [ $index ; Value: 0 ]
Loop
# store image
New Record/Request
Set Field [ Contacts::Video ; MBS( "DocumentCameraScan.PageImage"; $Index; "PNG"; "test.png" ) ]
Commit Records/Requests [ With dialog: On ]
# next
Set Variable [ $index ; Value: $index + 1 ]
Exit Loop If [ $index $count ]
End Loop
End If
```

## 69.8 DocumentCameraScan.Scan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.Scan" )

**Result** Returns OK or error.

### Description

Please use DocumentCameraScan.Initialize before and check DocumentCameraScan.Supported to make sure you only show the button when it may work.

### Examples

Start the dialog:

```
Set Variable [ $r ; Value: MBS( "DocumentCameraScan.Scan" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to scan" ; $r ]
End If
```

## 69.9 DocumentCameraScan.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.SetScript"; Filename; ScriptName )

### Parameters

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

Parameter to the script is either Cancel, Error or Scan.

In case of error, please use DocumentCameraScan.ErrorMessage to query the error message to display.

When you get Scan as parameter, you may use DocumentCameraScan.PageCount function to query number of pages scanned.

### Examples

Script may look like this:

```
Set Variable [ $param ; Value: Get(ScriptParameter) ]
If [ $param = "Error" ]
Show Custom Dialog [ "Failed to scan" ; MBS( "DocumentCameraScan.ErrorMessage" ) ]
Else If [ $param = "Scan" ]
Perform Script [ Specified: From list ; "Import" ; Parameter: ]
Else If [ $param = "Cancel" ]
# do nothing
End If
```

## 69.10 DocumentCameraScan.Supported

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
69 DocumentCameraScan	10.0	No	No	No	No	Yes

MBS( "DocumentCameraScan.Supported" )

**Result** Returns 1, 0 or error.

### Description

May return 0 if hardware is not supported.

### Examples

Check supported state:

```
If [ MBS("DocumentCameraScan.Supported") = 1 ]
Show Custom Dialog [ "Not supported on this device." ]
End If
```

# Chapter 70

## DragDrop

Accept Drag& Drop of files, text, pictures, URLs or Emails.

### 70.1 DragDrop.ClearDragActionHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.ClearDragActionHandler"; droparea )

#### Parameters

##### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns "OK" on success.

#### Description

Basically the reverse of SetDragActionHandler.

#### Examples

Clears all handlers:

```
MBS( "DragDrop.ClearDragActionHandler"; $dropHandle )
```

```
MBS( "DragDrop.ClearDragEnterHandler"; $dropHandle )
```

```
MBS( "DragDrop.ClearDragExitHandler"; $dropHandle )
```

#### See also

Created 18th August 2014, last changed 5th February 2018.

## 70.2 DragDrop.ClearDragEnterHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.ClearDragEnterHandler"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns "OK" on success.

### Description

Basically the reverse of SetDragActionHandler.

### Examples

Clears all handlers:

```
MBS( "DragDrop.ClearDragActionHandler"; $dropHandle )
MBS( "DragDrop.ClearDragEnterHandler"; $dropHandle )
MBS( "DragDrop.ClearDragExitHandler"; $dropHandle )
```

Created 18th August 2014, last changed 5th February 2018.

## 70.3 DragDrop.ClearDragExitHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.ClearDragExitHandler"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns "OK" on success.

### Description

Basically the reverse of SetDragActionHandler.

### Examples

Clears all handlers:

```
MBS( "DragDrop.ClearDragActionHandler"; $dropHandle )
MBS( "DragDrop.ClearDragEnterHandler"; $dropHandle )
MBS( "DragDrop.ClearDragExitHandler"; $dropHandle )
```

## 70.4 DragDrop.CreateOnPopoverWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	9.2	Yes	Yes	No	No	No

```
MBS( "DragDrop.CreateOnPopoverWithControl"; WindowRef; Popover Name; ControlName { ; DX; DY }
)
```

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### Popover Name

The name of the popover to look for on the window.

"MyPopover"

#### ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

#### DX

Optional

A delta to move drop area more to left or right.

0

#### DY

Optional

A delta to move drop area more to top or bottom.

0

**Result** Returns Drop Area ID on success.

### Description

Use DragDrop.Release later to destroy the drop area.

Drag & Drop reference numbers are starting at 31000 and counting up for each new drop area.

70 DragDrop	9.2	Yes	Yes	No	No	No

MBS( "DragDrop.CreateOnPopoverWithSize"; WindowRef; Popover Name; x; y; w; h )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### Popover Name

The name of the popover to look for on the window.

"MyPopover"

#### x

The left coordinate in the popover.

0

#### y

The top coordinate in the popover.

0

#### w

The width of the drop area in the popover.

600

#### h

The height of the drop area in the popover.

400

**Result** Returns Drop Area ID on success.

### Description

Use DragDrop.Release later to destroy the drop area.

Drag & Drop reference numbers are starting at 31000 and counting up for each new drop area.

### See also

## 70.6 DragDrop.CreateWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.CreateWithControl"; WindowRef; ControlName { ; DX; DY } )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a rectangle.

"mymedia"

#### DX

Optional

A delta to move drop area more to left or right.

0

#### DY

Optional

A delta to move drop area more to top or bottom.

0

**Result** Returns Drop Area ID on success.

### Description

Use DragDrop.Release later to destroy the drop area.

If you use a register on the window, be aware that the drop area actually is in front of the register. So you need to check in the script which register page is current and should get the dropped files.

Drag & Drop reference numbers are starting at 31000 and counting up for each new drop area.

Added Windows support for MBS Plugin 8.1 for FileMaker 16 or newer.

When creating on a card window, please pass reference to parent window or just 0 for front window. On MacOS you may need to pass delta y value to adjust position.

If you create a control on a new window, you may do window update command in your script first to have FileMaker actually build the window with controls and display it. A short script pause or using FM.RunScriptLater with 0.1 delay can help having all controls draw themselves. Then you can use this command to put our control on top. We use GetControl() to query left, top, width and height and this gives empty value if control is not yet here.

Creation fails to pick the right window in case the window is selected by name and the window name is not

unique. In that case better work with window reference numbers or just pass 0 for current front window.

### Examples

Creates a new drop area:

```
Set Variable [ $$dropview ; Value: MBS("DragDrop.CreateWithControl"; Get(WindowName); "drop") ]
Set Variable [ $result ; Value: MBS( "DragDrop.RegisterDropTypes"; $$dropview; "file" ) ]
Set Variable [ $result ; Value: MBS( "DragDrop.SetDragActionHandler"; $$dropview; Get ( FileName );
"DragAction" ) ]
Set Variable [ $result ; Value: MBS( "DragDrop.SetCursor"; $$dropview; 1 ) ]
Set Variable [ $result ; Value: MBS( "DragDrop.SetImage"; $$dropview; DragTest::DropLogo ) ]
```

## 70.7 DragDrop.CreateWithSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.CreateWithSize"; WindowRef; x; y; w; h )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### x

The left coordinate in the window.

0

#### y

The top coordinate in the window.

0

#### w

The width of the drop area in the window.

100

#### h

The height of the drop area in the window.

100

**Result** Returns Drop Area ID on success.

### Description

Use DragDrop.Release later to destroy the drop area.

If you use a register on the window, be aware that the drop area actually is in front of the register. So you need to check in the script which register page is current and should get the dropped files.

Drag & Drop reference numbers are starting at 31000 and counting up for each new drop area.

Added Windows support for MBS Plugin 8.1 for FileMaker 16 or newer.

## 70.8 DragDrop.CreateWithWindow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.CreateWithWindow"; WindowRef )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

**Result** Returns Drop Area ID on success.

### Description

Use DragDrop.Release later to destroy the drop area.

If you use a register (tab controls) on the window, be aware that the drop area actually is in front of the register (tab controls). So you need to check in the script which register page is current and should get the dropped files.

Drag & Drop reference numbers are starting at 31000 and counting up for each new drop area.

Added Windows support for MBS Plugin 8.1 for FileMaker 16 or newer. On Windows the control can't be transparent, so you may not want to use this function on Windows.

Not recommended for Windows. Better use DragDrop.CreateWithControl.

## 70.9 DragDrop.GetAutoResizingMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	9.1	Yes	No	No	No	No

MBS( "DragDrop.GetAutoResizingMask"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area. \$dropHandle

**Result** Returns number or error.

### Description

This defines whether view changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

## 70.12 DragDrop.GetEmailID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.7	Yes	No	No	No	No

MBS( "DragDrop.GetEmailID"; droparea; Index )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area. \$dropHandle

#### Index

Optional, zero based index of the received email. Default is 0.

1

**Result** Returns the email id as text.

### Description

Index from 0 to DragDrop.GetEmailCount -1.

Using the ID you can ask Mail by Apple Script for the content or other details on the email.

For an email drag from Apple Mail, the function DragDrop.GetPath may give the path to a copy of the email file in temporary folder.

You can use DragDrop.GetPath to get the email as file.

70 DragDrop	2.7	Yes	No	No	No	No

MBS( "DragDrop.GetEmailMailbox"; droparea; Index )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### Index

Optional, zero based index of the received email. Default is 0.

1

**Result** The mailbox name as text.

### Description

Index from 0 to DragDrop.GetEmailCount -1.

#### See also

## 70.14 DragDrop.GetEmailSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.7	Yes	No	No	No	No

MBS( "DragDrop.GetEmailSubject"; droparea; Index )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area. \$dropHandle

#### Index

Optional, zero based index of the received email. Default is 0.

1

**Result** The email subject as text.

### Description

Index from 0 to DragDrop.GetEmailCount -1.

For an email drag from Apple Mail, the function DragDrop.GetPath may give the path to a copy of the email file in temporary folder.

### See also

## 70.15 DragDrop.GetFileDescriptor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	8.1	No	Yes	No	No	No

MBS( "DragDrop.GetFileDescriptor"; droparea; Index; Selector )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### Index

The index of the file descriptor from 0 to DragDrop.GetFileDescriptorCount-1.

0

#### Selector

Which value to return. Can be Name, Size, Data or Path.

"Name"

**Result** Returns value or error.

### Description

The file descriptor may include a file path and/or file data.

The data is returned as container value.

### Examples

Check for a file descriptor coming with Drag & Drop:

```
Set Variable [ $count ; Value: MBS("DragDrop.GetFileDescriptorCount"; $dropview; "") ]
If [ $count >0 ]
Set Variable [ $index ; Value: 0 ]
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
Set Variable [ $name ; Value: MBS("DragDrop.GetFileDescriptor"; $dropview; $index; "name") ]
Set Variable [ $data ; Value: MBS("DragDrop.GetFileDescriptor"; $dropview; $index; "data") ]
Set Variable [ $size ; Value: MBS("DragDrop.GetFileDescriptor"; $dropview; $index; "size") ]
Set Variable [ $path ; Value: MBS("DragDrop.GetFileDescriptor"; $dropview; $index; "path") ]

If [ Length ( $path ) >0 ]
New Record/Request
Set Field [ DragTest::field ; MBS("Files.ReadFile"; $path; "auto") ]
Set Field [ DragTest::Description ; "Got via file descriptor with path" ]
Set Field [ DragTest::Text ; $path ]
Commit Records/Requests [ With dialog: Off ]
Else If [ $size >0 ]
New Record/Request
Set Field [ DragTest::field ; $data ]
Set Field [ DragTest::Text ; $name ]
```

## 70.15. DRAGDROP.GETFILEDESCRIPTOR

2543

```
Set Field [ DragTest::Description ; "Got via file descriptor with data" ]  
Commit Records/Requests [ With dialog: Off ]  
End If
```

```
# next  
Set Variable [ $index ; Value: $index+1 ]  
Exit Loop If [ $index = $count ]  
End Loop  
End If
```

## 70.16 DragDrop.GetFileDescriptorCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	8.1	No	Yes	No	No	No

MBS( "DragDrop.GetFileDescriptorCount"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns number or error.

### Description

## 70.17 DragDrop.GetHTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	9.2	Yes	Yes	No	No	No

MBS( "DragDrop.GetHTML"; droparea { ; Encoding } )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area. \$dropHandle

#### Encoding

Optional

The text encoding for result. Default is Windows ANSI.

UTF8

**Result** Returns HTML text or error.

### Description

HTML may be prefixed on Windows with metadata like the source URL. You may remove all text before <html> to get only the html.

## 70.18 DragDrop.GetHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	4.0	Yes	Yes	No	No	No

MBS( "DragDrop.GetHeight"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns height or error.

### Description

#### See also

## 70.19 DragDrop.GetLeft

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	4.0	Yes	Yes	No	No	No

MBS( "DragDrop.GetLeft"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns x coordinate or error.

### Description

#### See also

- 70.6 DragDrop.CreateWithControl 2529

## 70.20 DragDrop.GetMouseX

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.GetMouseX"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns the mouse x coordinate.

### Description

Call this function in the drag action script. The mouse position is relative to the window.  
Added Windows support for MBS Plugin 8.1.

### Examples

Queries Mouse X and Y coordinates:

```
MBS( "DragDrop.GetMouseX"; $droparea ) & " / " & MBS( "DragDrop.GetMouseY"; $droparea )
```

### See also

- 70.6 DragDrop.CreateWithControl 2529

## 70.21 DragDrop.GetMouseY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.GetMouseY"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns the mouse y coordinate.

### Description

Call this function in the drag action script. The mouse position is relative to the window.  
Added Windows support for MBS Plugin 8.1.

### Examples

Queries Mouse X and Y coordinates:

```
MBS( "DragDrop.GetMouseX"; $droparea ) & " / " & MBS( "DragDrop.GetMouseY"; $droparea )
```

### See also

## 70.22 DragDrop.GetPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.GetPath"; droparea { ; index } )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### index

Optional

Optional index for the file path. Index goes from 0 to DragDrop.GetPathCount-1.

0

**Result** The path or empty value.

### Description

Call this function in the drag action script.

For an email drag from Apple Mail, this function may give the path to a copy of the email file in temporary folder.

Use Path.NativePathToFileMakerPath to convert to a FileMaker path if you plan to use "filemac:" for an insert file script step.

Added Windows support for MBS Plugin 8.1.

### Examples

Process paths in Drag & Drop:

```
Set Variable [ $count ; Value: MBS("DragDrop.GetPathCount"; $dropview) ]
If [ $count >0 ]
Set Variable [ $index ; Value: 0 ]
Loop
Pause/Resume Script [ Duration (seconds): ,1 ]
Set Variable [ $path ; Value: MBS("DragDrop.GetPath"; $dropview; $index) ]
If [ Length ( $path ) >0 ]
If [ MBS("Files.FileExists"; $path) = 0 ]
# File not yet written? Wait a bit
Pause/Resume Script [ Duration (seconds): 1 ]
End If
New Record/Request
Set Field [ DragTest::field ; MBS("Files.ReadFile"; $path; "auto") ]
Set Field [ DragTest::Text ; $path ]
Set Field [ DragTest::Description ; "Got via path list" ]
Commit Records/Requests [ With dialog: Off ]
End If
```

```
# next
Set Variable [ $index ; Value: $index+1 ]
Exit Loop If [ $index = $count ]
End Loop
End If
```

Stores files in records:

```
Set Variable [ $dropview ; Value: Get(ScriptParameter) ]
Set Variable [ $count ; Value: MBS("DragDrop.GetPathCount"; $dropview) ]
// Show Custom Dialog [ "Number of files: " & $count ]
Set Variable [ $index ; Value: 0 ]
If [ $count >0 ]
Loop
Set Variable [ $OSPfad ; Value: MBS("DragDrop.GetPath"; $dropview; $index) ]
Set Variable [ $FMPfad ; Value: MBS( "Path.NativePathToFilemakerPath"; $OSPfad ) ]
#
If [ MBS("Files.FileExists"; $OSPfad) ]
Go to Layout [ "MIX" ; Animation: None ]
New Record/Request
#
Set Field [ MIX::Path ; $OSPfad ]
Set Field [ MIX::Name ; MBS( "Path.LastPathComponent"; $OSPfad ) ]
#
Go to Field [ MIX::Image ]
Insert Picture [ Reference ; "$FMPfad" ]
#
Commit Records/Requests [ With dialog: Off ]
Go to Layout [ original layout ; Animation: None ]
End If
#
Set Variable [ $index ; Value: $index+1 ]
Exit Loop If [ $index = $count ]
End Loop
End If
```

## 70.23 DragDrop.GetPathCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.GetPathCount"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** The number of paths.

### Description

Call this function in the drag action script.  
Added Windows support for MBS Plugin 8.1.

### Examples

Stores files in records:

```

Set Variable [ $dropview ; Value: Get( ScriptParameter ) ]
Set Variable [ $count ; Value: MBS( "DragDrop.GetPathCount"; $dropview ) ]
// Show Custom Dialog [ "Number of files: " & $count ]
Set Variable [ $index ; Value: 0 ]
If [ $count > 0 ]
Loop
Set Variable [ $OSPFad ; Value: MBS( "DragDrop.GetPath"; $dropview; $index ) ]
Set Variable [ $FMPfad ; Value: MBS( "Path.NativePathToFilemakerPath"; $OSPFad ) ]
#
If [ MBS( "Files.FileExists"; $OSPFad ) ]
Go to Layout [ "MIX" ; Animation: None ]
New Record/Request
#
Set Field [ MIX::Path ; $OSPFad ]
Set Field [ MIX::Name ; MBS( "Path.LastPathComponent"; $OSPFad ) ]
#
Go to Field [ MIX::Image ]
Insert Picture [ Reference ; "$FMPfad" ]
#
Commit Records/Requests [ With dialog: Off ]
Go to Layout [ original layout ; Animation: None ]
End If
#
Set Variable [ $index ; Value: $index+1 ]
Exit Loop If [ $index = $count ]
End Loop
End If

```

## 70.24 DragDrop.GetPicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	No	No	No	No

MBS( "DragDrop.GetPicture"; droparea { ; ImageType; Filename; index } )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.  
"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.  
"test.jpg"

#### index

Optional

Index for the file path. Index goes from 0 to DragDrop.GetPathCount-1.  
0

**Result** Returns container value with picture.

### Description

Call this function in the drag action script. This can be a direct picture drag or a file drag where we load the picture file.

### Examples

Queries picture as PNG

MBS( "DragDrop.GetPicture"; \$droparea; "PNG"; "myfile.png" )

### See also

## 70.25 DragDrop.GetRTF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	9.2	Yes	Yes	No	No	No

MBS( "DragDrop.GetRTF"; droparea { ; Encoding } )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### Encoding

Optional

The text encoding for result. Default is Windows ANSI.

UTF8

**Result** Returns RTF or error.

## 70.26 DragDrop.GetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	3.3	Yes	Yes	No	No	No

MBS( "DragDrop.GetTag"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns the stored tag value or an error.

### Description

## 70.27 DragDrop.GetText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.6	Yes	Yes	No	No	No

MBS( "DragDrop.GetText"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** The text.

### Description

Added Windows support for MBS Plugin 8.1.

### Examples

Process text coming with Drag & Drop:

```
Set Variable [ $text ; Value: MBS("DragDrop.GetText"; $dropview) ]
If [ Length($text) >0 ]
New Record/Request
Set Field [ DragTest::Text ; $text ]
Set Field [ DragTest::Description ; "Got text" ]
Commit Records/Requests [ With dialog: Off ]
End If
```

## 70.28 DragDrop.GetTop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	4.0	Yes	Yes	No	No	No

MBS( "DragDrop.GetTop"; droparea; swap )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### swap

Whether to swap y coordinate. By default we swap them. Pass 0 to disable or 1 to swap.

1

**Result** Returns y coordinate or error.

### Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

## 70.31 DragDrop.GetVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	4.0	Yes	Yes	No	No	No

MBS( "DragDrop.GetVisible"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns 1, 0 or error.

### Description

Returns 1 if visible and 0 if hidden.

### See also

- 70.6 DragDrop.CreateWithControl 2529

## 70.32 DragDrop.GetWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	4.0	Yes	Yes	No	No	No

MBS( "DragDrop.GetWidth"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns width or error.

### Description

#### See also

## 70.33 DragDrop.GetWindowRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	3.3	Yes	Yes	No	No	No

MBS( "DragDrop.GetWindowRef"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns window reference number or error.

### Description

### See also

- [70.6 DragDrop.CreateWithControl](#) 2529

### 70.33.1 Blog Entries

- [MBS Filemaker Plugin, version 3.3pr5](#)

Created 18th August 2014, last changed 15th April 2019.

## 70.34 DragDrop.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	4.0	Yes	Yes	No	No	No

MBS( "DragDrop.List" )

**Result** Returns list of IDs.

### Description

This helps debugging, especially finding scripts which do not release their objects properly.  
Created 18th August 2014, last changed 5th February 2018.

## 70.35 DragDrop.RegisterDropTypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	No	No	No	No

MBS( "DragDrop.RegisterDropTypes"; droparea; Types )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area. \$dropHandle

#### Types

The types you want to accept for the window. This can be Cocoa native type specifications or some special types: "images" for all image types, "movies" for movie types, "file" for files, "URL" for URLs, "Email" for emails and "text" for text. If you use more than one type, separate them with comma.

"images"

**Result** Returns "OK" on success.

### Description

Call this function for each window where you want to define drag types. As FileMaker defines some types by itself, you don't need to call this method for every type.

Version 2.7 adds "Emails" as type. You can receive Email drops from Apple Mail this way. The functions DragDrop.GetEmailCount, DragDrop.GetEmailID, DragDrop.GetEmailMailbox, DragDrop.GetEmailAccount and DragDrop.GetEmailSubject give you the details on received emails. GetURL gives URL of email if you received only one.

For Version 9.2 or newer you can pass RTF and HTML for the types.

### Examples

Registers for file drop for the current window:

```
MBS( "DragDrop.RegisterDropTypes"; $droparea; "file")
```

Create with control:

```
Set Variable [ $dropview ; Value: MBS("DragDrop.CreateWithControl"; 0; "DropArea") ]
Set Variable [ $result ; Value: MBS( "DragDrop.RegisterDropTypes"; $dropview; "file") ]
Set Variable [ $result ; Value: MBS( "DragDrop.SetDragActionHandler"; $dropview; Get ( FileName ) ; "DragAction" ) ]
Set Variable [ $result ; Value: MBS( "DragDrop.SetCursor"; $dropview; 1 ) ]
```

## 70.36 DragDrop.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.Release"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns "OK" on success.

### Description

If you go to layout editor and drop zones are still active, this may cause trouble. Like you can't drag & drop controls.

### Examples

Releases a drop area:

```
If [ Length($$dropView) >0 ]
Set Variable [ $result ; Value: MBS( "DragDrop.Release"; $$dropview) ]
Set Variable [ $$dropview ; Value: "" ]
End If
```

## 70.38 DragDrop.SetAutoResizingMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	9.1	Yes	No	No	No	No

MBS( "DragDrop.SetAutoResizingMask"; droparea; Value )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### Value

The new setting.

4+8

**Result** Returns OK or error.

### Description

This defines whether view changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

### Examples

Resize with window growing:

MBS( "DragDrop.SetAutoResizingMask"; \$\$dragDrop; 4+2+8+16 )

### See also

## 70.39 DragDrop.SetCursor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.SetCursor"; droparea; mode )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### mode

The cursor mode. Currently: 0 = default, 1 = copy, 2 = link and 4 = move.

1

**Result** Returns "OK" on success.

### Description

This defines what cursor the user sees when moving mouse over the drop area.

FileMaker seems to overwrite our cursor change. Sorry.

Added Windows support for MBS Plugin 8.1 and new mode Move.

### Examples

Set cursor to shop plus sign:

```
MBS( "DragDrop.SetCursor"; $dropview; 1)
```

## 70.40 DragDrop.SetDragActionHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.SetDragActionHandler"; droparea; FileName; ScriptName )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### FileName

The name of the FileMaker File that contains the script

#### ScriptName

The name of the script to run

**Result** Returns "OK" on success.

### Description

Specify a filename and script name to have this script being called when a drag operation drops something on the window. This gives you the possibility to process the data.

The script parameter will be the drop area reference.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Registers drag action handler:

```
MBS( "DragDrop.SetDragActionHandler"; $dropHandle; Get ( FileName ); "MyDragAction")
```

### See also

## 70.41 DragDrop.SetDragEnterHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.SetDragEnterHandler"; droparea; FileName; ScriptName )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### FileName

The name of the FileMaker File that contains the script

#### ScriptName

The name of the script to run

**Result** Returns "OK" on success.

### Description

Specify a filename and script name to have this script being called when a drag operation enters the window. This gives you the possibility to draw something like a note "Drop here".

The script parameter will be the drop area reference.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Registers drag enter handler:

```
MBS( "DragDrop.SetDragEnterHandler"; $dropHandle; Get ( FileName ); "MyDragEnter")
```

### See also

- 70.2 DragDrop.ClearDragEnterHandler 2523

### 70.41.1 FileMaker Magazin

- Ausgabe 2/2020, Seite 39

Created 18th August 2014, last changed 5th February 2018.

## 70.42 DragDrop.SetDragExitHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.SetDragExitHandler"; droparea; FileName; ScriptName )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### FileName

The name of the FileMaker File that contains the script

#### ScriptName

The name of the script to run

**Result** Returns "OK" on success.

### Description

Specify a filename and script name to have this script being called when a drag operation leaves the window. This gives you the possibility to restore the window from anything you drew there on Drag Enter. The script parameter will be the drop area reference.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Registers drag exit handler:

```
MBS( "DragDrop.SetDragExitHandler"; $dropHandle; Get ( FileName ); "MyDragExit")
```

### See also

- 70.2 DragDrop.ClearDragEnterHandler 2523

## 70.43 DragDrop.SetFrame

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	4.0	Yes	Yes	No	No	No

MBS( "DragDrop.SetFrame"; droparea; X; Y; Width; Height { ; swap } )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### X

The x coordinate.

#### Y

The y coordinate.

#### Width

The width of the control.

#### Height

The height of the control.

#### swap

Optional

Whether to swap y coordinate. By default we swap them. Pass 0 to disable or 1 to swap.

1

**Result** Returns OK or error.

### Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

### See also

## 70.44 DragDrop.SetFrameWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	8.5	Yes	Yes	No	No	No

MBS( "DragDrop.SetFrameWithControl"; droparea; ControlName { ; DX; DY } )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area. \$dropHandle

#### ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!  
"mymedia"

#### DX

Optional

A delta to move drop area more to left or right.

0

#### DY

Optional

A delta to move drop area more to top or bottom.

0

**Result** Returns OK or error.

### Description

If you moved control in layout mode, this can move the drop area back to the new position. Also useful to switch between different locations on the layout.

### Examples

Move drop area:

```
Set Variable [ $r ; Value: MBS( "DragDrop.SetFrameWithControl"; $$dropview; "drop") ]
```

### See also

## 70.45 DragDrop.SetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	Yes	No	No	No

MBS( "DragDrop.SetImage"; droparea; image )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area. \$dropHandle

#### image

the image to use. For best results, pass a container value with a PNG image.

**Result** Returns "OK" on success.

### Description

Currently not working right in FileMaker 13. Better just put image in layout where you plan to put the drag area.

Added Windows support for MBS Plugin 8.1. Please use picture without alpha channel.

Image is scaled to viewing area, so best make sure you have exactly two times the pixels in the image relative to size of the control.

### Examples

Put a picture on drop area:

```
Set Variable [ $result; Value:MBS( "DragDrop.SetImage"; $dropview; DragTest::img ) ]
```

## 70.46 DragDrop.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	3.3	Yes	Yes	No	No	No

MBS( "DragDrop.SetTag"; droparea; tag )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area. \$dropHandle

#### tag

A string you want to associate with the dropview.

**Result** Returns OK or error message.

### Description

Use the tag to store whatever value you want to associate with the drop view. You can later query it using DragDrop.GetTag.

### See also

## 70.47 DragDrop.SetVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	4.0	Yes	Yes	No	No	No

MBS( "DragDrop.SetVisible"; droparea; Visible )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

#### Visible

The new visible state.

1

**Result** Returns OK or error.

### Description

By default we create it visible, but you can hide it if it's on a register and the user clicked to other tab.

### See also

- 70.6 DragDrop.CreateWithControl 2529

## 70.48 DragDrop.UnregisterDropTypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
70 DragDrop	2.4	Yes	No	No	No	No

MBS( "DragDrop.UnregisterDropTypes"; droparea )

### Parameters

#### droparea

The reference ID for this drop area. Use functions like DragDrop.CreateWithControl to create a drop area.  
\$dropHandle

**Result** Returns "OK" on success.

### Description

This can be done for cleanup, but normally you simply let the window go away.

### Examples

Unregisters all drag types for the drop area:

```
MBS( "DragDrop.UnregisterDropTypes"; $droparea)
```

### See also

# Chapter 71

## DynaPDF

Create, Import and Modify PDFs on Mac OS X and Windows.

### 71.1 DynaPDF.AddActionToObj

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddActionToObj"; PDF; ObjectType; ObjectEvent; Action Handle; Object Handle )

#### Parameters

##### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

##### ObjectType

The type of object that should get the action. Can be Action, Annotation, Bookmark, Catalog, Field, Page or PageLink.

"Field"

##### ObjectEvent

Which event should trigger the action. Can be OnOpen, OnClose, OnMouseUp, OnMouseEnter, OnMouseExit, OnMouseDown, OnFocus, OnBlur, OnKeyStroke, OnFormat, OnCalc, OnValidate, OnPageVisible, OnPageInVisible, OnPageOpen, OnPageClose, OnBeforeClosign, OnBeforeSaving, OnAfterSaving, OnBeforePrinting or OnAfterPrinting.

"OnCalc"

##### Action Handle

The handle for the action. e.g. returned by DynaPDF.CreateJSAction.

\$action

##### Object Handle

The object handle, e.g. a field number for a ObjectType = Field.

\$o

**Result** Returns OK or error.

### Description

The parameter ActHandle requires a handle that was returned by a function that creates an action object such as DynaPDF.CreateGoToAction, etc. The object handle is also a return value of its creation function. If the object type is a page, then use the page number as handle.

It is possible to add multiple actions to one object, but note that DynaPDF does not check whether all actions are valid. For example, it is possible to add more than one action to a text field to the OnFormat event, but Acrobat executes only the first one. Always test your actions with different Acrobat versions because each version handles actions in a different manner.

The OnMouseUp event is the standard event supported by all objects. This event type supports also all action types. The other events are handled differently depending on the Acrobat version. Acrobat 4 supports JavaScript actions only in non-OnMouseUp events. Newer versions support also predefined action types. However, test your forms with the Acrobat versions that should be supported - this is the only way to find incompatibilities.

See also [AddActionToObj](#) function in DynaPDF manual.

### Examples

Create sum field:

```
Set Variable [ $y; Value:50 ]
Set Variable [ $script; Value:"var v1 = this.getField(\"Val1\");" & $& "var v2 = this.getField(\"Val2\");"
& $& "var v3 = this.getField(\"Val3\");" & $& "event.value = v1.value + v2.value + v3.value;" ]
Set Variable [ $script; Value:MBS( "Text.ReplaceNewline"; $script; 2 ) ]
Set Variable [ $a; Value:MBS( "DynaPDF.CreateJSAction"; $pdf; $script ) ]
# Create 1st field
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Val1"; -1; 0; 0; 50; $y; 200; 20 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetTextFieldValue"; $pdf; $f; "50.00"; "50.00"; "Right" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetNumberFormat"; $pdf; $f; "NoneDot"; 2; "MinusBlack" ) ]
# Create 2nd field
Set Variable [ $y; Value:$y + 30 ]
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Val2"; -1; 0; 0; 50; $y; 200; 20 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetTextFieldValue"; $pdf; $f; "100.00"; "100.00"; "Right" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetNumberFormat"; $pdf; $f; "NoneDot"; 2; "MinusBlack" ) ]
# Create 3rd field
Set Variable [ $y; Value:$y + 30 ]
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Val3"; -1; 0; 0; 50; $y; 200; 20 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetTextFieldValue"; $pdf; $f; "200.00"; "200.00"; "Right" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetNumberFormat"; $pdf; $f; "NoneDot"; 2; "MinusBlack" ) ]
# Create sum field
# This last field calculates sum of other fields
# Works only in PDF Viewers supporting JavaScript!
Set Variable [ $y; Value:$y + 30 ]
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Sum"; -1; 0; 10; 50; $y; 200; 20 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetFieldBorderWidth"; $pdf; $f; 0 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetTextFieldValue"; $pdf; $f; "350.00 €"; "350.00 €"; "Right" ) ]
```

```
Set Variable [ $r; Value:MBS( "DynaPDF.SetFieldFlags"; $pdf; $f; "ReadOnly"; 0 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.AddActionToObj"; $pdf; "Field"; "OnCalc"; $a; $f ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetNumberFormat"; $pdf; $f; "CommaDot"; 2; "MinusBlack"; "€"; 0 ) ]
```

Create checkbox to confirm page and jump to next one:

```
Set Variable [ $f ; Value: MBS( "DynaPDF.CreateCheckBox"; $pdf; "OK"; "OK";0; -1; $PageWidth-150; $pageHeight-20; 15; 15 ) ]
# This is javascript from Adobe to go to next page You could substitute many of their examples
Set Variable [ $script ; Value: "this.pageNum++" ]
Set Variable [ $script ; Value: MBS( "Text.ReplaceNewline"; $script; 2 ) ]
Set Variable [ $a ; Value: MBS( "DynaPDF.CreateJSAction"; $pdf; $script ) ]
Set Variable [ $r ; Value: MBS( "DynaPDF.AddActionToObj"; $pdf; "Field"; "OnMouseUp"; $a; $f ) ]
```

## 71.2 DynaPDF.AddAnnotToPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddAnnotToPage"; PDF; PageNum; Handle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### PageNum

The page number.

#### Handle

The annotation handle.

**Result** Returns OK or error.

### Description

With exception of PopUp annotations all annotation types can be drawn on multiple pages. Watermark or Stamp annotations are typical annotations which can be placed on multiple pages.

See also [AddAnnotToPage](#) function in DynaPDF manual.

### See also

- 71.294 DynaPDF.New 3032

## 71.3 DynaPDF.AddBookmark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddBookmark"; PDF; Title; Parent; DestPage { ; Open } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Title

Title of the bookmark

"Chapter 2"

#### Parent

The Parent bookmark or -1.

-1

#### DestPage

Destination page.

5

#### Open

Optional

Optional, whether bookmark should appear open initially. Default is 0 for closed.

0

**Result** Returns Handle of bookmark or error.

### Description

It sets also the page mode to pmUseOutlines (see DynaPDF.SetPageMode). If the outline tree should not be shown when opening the document, then set the page mode back to pmUseNone or any other value before closing the PDF file.

Parent can be a handle of another bookmark if it should be added as a child of this bookmark. If Parent is set to -1 the bookmark is added as a root node.

DestPage specifies the page that should be opened when clicking on the bookmark. The parameter can be set to a page number that does not yet exist. If the page does not exist when closing file then it is adjusted to page number 1.

The parameter Open specifies whether a bookmark node should appear open or closed when it contains children. When a bookmark contains no children then this parameter should be set to false.

Related functions: DynaPDF.AddBookmarkEx, DynaPDF.ChangeBookmark, DynaPDF.InsertBookmark, DynaPDF.InsertBookmarkEx, DynaPDF.SetBookmarkDest, DynaPDF.SetBookmarkStyle.

See also [AddBookmark](#) function in DynaPDF manual.

### Examples

Add a bookmark to link to page 5

MBS( "DynaPDF.AddBookmark"; \$PDF; "Test"; -1; 5; 0 )

## 71.4 DynaPDF.AddBookmarkEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddBookmarkEx"; PDF; Title; Parent; NamedDest; Open )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Title

Title of the bookmark.

"Chapter 2"

#### Parent

Parent bookmark if any or -1 for a root node.

-1

#### NamedDest

Name of a named destination (text) or Named Destination handle (number).

"test"

#### Open

Open (1) or close (0) the node when it has children?

0

**Result** Returns new bookmark handle or error.

### Description

It sets also the page mode to UseOutlines (see DynaPDF.SetPageMode). If the outline tree should not be shown when opening the document, set the page mode back to pmUseNone or any other value before closing the document.

Parent can be a handle of another bookmark if it should be added as a child of this bookmark. If Parent is set to -1 the bookmark is added as a root node.

The difference in comparison to DynaPDF.AddBookmarkEx is that the named destination can be defined as a string. This makes it possible to create the bookmark, also if you don't have the required information to create the named destination at this point. If the named destination does not exist when the file is closed then the bookmark does nothing. See also DynaPDF.CreateNamedDest().

## 71.5 DynaPDF.AddButtonImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddButtonImage"; PDF; Field; Button State; Image File Path )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### Button State

The state of the button. Can be "Up", "Down" or "RollOver".

"Up"

#### Image File Path

The native file path for the image file.

"C:\test\picture.png"

**Result** Returns OK or error.

### Description

Adds an image to a push button to one or more of the three different states of a button. The parameter Field must be handle of a button field that was returned by a DynaPDF.CreateButton function call or the index of an existing field of type button.

The parameter State defines the button state in which the image should appear. Each state is optional; it is possible to add different images to all three states of the button. The rollover state should get a different image than the other states. If two states should get the same image, the image is physically inserted only once to the PDF file.

DynaPDF checks whether duplicate images are already available before inserting an image again. Depending on the parameter UseTransparency (see DynaPDF.SetUseTransparency) the image appears with a transparent background or opaque (default transparent). However, note that the background of the button must be transparent too to get a transparent button. Otherwise the button is still opaque due the opaque background of the button.

The parameter Caption is optional, it can be empty. Each state can contain its own caption which is drawn horizontally and vertically centered by default. The alignment can be changed with the function SetField-TextAlign(). Because each button state is directly drawn when calling the function, the alignment must be set before this function is called.

If a button has already an image for a specific button state, the existing image will be replaced with the new one.

## 71.6 DynaPDF.AddContinueText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddContinueText"; PDF; text )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### text

Text to be printed.  
"Hello World"

**Result** Returns OK or error message.

### Description

Text lines created by this function are handled as a separate block. Before calling the function the first time, the usage must be prepared with DynaPDF.BeginContinueText.

The distance between two text lines can be adjusted with DynaPDF.SetLeading.

## 71.7 DynaPDF.AddDeviceNProcessColorants

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.AddDeviceNProcessColorants"; PDF; DeviceNCS; Colorants; NumColorants; ProcessCS
{ ; Handle } )
```

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### DeviceNCS

Handle of a DeviceN or NChannel color space

#### Colorants

Array of colorant names.

#### NumColorants

Number of colorants in the arrays.

#### ProcessCS

Process color space

#### Handle

Optional

Alternate color space handle or -1.

**Result** Returns OK or error.

### Description

Adds a dictionary to a DeviceN or NChannel color space that describes the process color space whose components are included in the DeviceN or NChannel color space.

The array Colorants holds the process colorant names which are included in the process color space. The names must appear in the normal color space order, e.g. Red, Green, and Blue, for a RGB color space and the number of colorant names must match the number of color components in the process color space. However, the names in the Colorants array need not match the actual color space names. For example, a Red component need not be named Red.

Definitions of process colorants must not appear in the definition of spot colorants (see DynaPDF.AddDeviceNSeparations).

The reserved names Cyan, Magenta, Yellow, and Black are always considered to be process colors, which do not necessarily correspond to the colorants of a specific device; they are not required to have entries in the process dictionary.

If NumColorants is zero the functions deletes existing definitions of process colorants in the DeviceN or NChannel color space. Otherwise, existing definitions will be overridden.

Remarks:

Process colorant names must be defined in the code page 1252 (WinAnsi). The plugin will convert text to Windows ANSI.

### **71.7.1 Blog Entries**

- [MBS FileMaker Plugin, version 7.4pr4](#)

Created 27th August 2017, last changed 27th August 2017.

## 71.8 DynaPDF.AddDeviceNSeparations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddDeviceNSeparations"; PDF; DeviceNCS; Colorants; SeparationCS; NumColorants )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### DeviceNCS

Handle of a DeviceN or NChannel color space.

#### Colorants

Array of colorant names.

#### SeparationCS

Array of Separation color space handles.

#### NumColorants

Number of colorants and handles in the arrays.

**Result** Returns OK or error.

### Description

Adds a dictionary to a DeviceN or NChannel color space that describes the spot colorants which are used in the color space.

This dictionary provides information about the individual colorants that may be useful to some applications. In particular, the alternate color space and tint transformation function of a Separation color space describe the appearance of that colorant alone, whereas those of a DeviceN color space describe only the appearance of its colorants in combination.

The array Colorants holds the spot colorant names and the array SeparationCS holds the corresponding Separation color space handles. The colorant names in the array must match the names in the corresponding Separation color spaces. In addition, the colorants must be included in the DeviceN or NChannel color space. If NumColorants is zero the functions deletes existing definitions of spot colorants in the DeviceN or NChannel color space. Otherwise, existing definitions will be overridden.

See also [AddDeviceNSeparations](#) function in DynaPDF manual.

### Examples

Create separation color space with spotcolor and use it:

```
# Create the DeviceN color space
# Create Blend function (see dynapdf_help.pdf for how this was created)
Set Variable [ $PostScriptFunc ; Value: " { 2 index 0.38 mul 2 index 0 add add 0 3 index 0.56 mul 0 add
add 4 index 0.34 mul 0 4 index add add 0 0 0 add add 7 4 roll pop pop pop } " ]
Set Variable [ $cls ; Value: "PANTONE 345 CVC$PANTONE 293 CVC$Yellow" ]
Set Variable [ $cs ; Value: MBS("DynaPDF.CreateDeviceNColorSpace"; $pdf; $cls; 3; $PostScriptFunc;
"DeviceCMYK"; -1) ]
```

```

# We create also Separation color spaces for the spot colors and add
# these color spaces as an attribute to the DeviceN color space:
# First spot color
Set Variable [ $separations0 ; Value: MBS("DynaPDF.CreateSeparationCS"; $pdf; Trim(GetValue ( $cls; 1
)); "DeviceCMYK"; -1; MBS("DynaPDF.CMYK"; 97; 0; 87; 0) ) ]
# Second spot color
Set Variable [ $separations1 ; Value: MBS("DynaPDF.CreateSeparationCS"; $pdf; Trim(GetValue ( $cls; 2
)); "DeviceCMYK"; -1; MBS("DynaPDF.CMYK"; 255; 143; 0; 0) ) ]
# Put in a list:
Set Variable [ $separations ; Value: $separations0 & $& $separations1 ]
# Add the separation color spaces to the DeviceN color space.
Set Variable [ $r ; Value: MBS("DynaPDF.AddDeviceNSeparations"; $pdf; $cs; $cls; $separations; 2) ]
# Because the DeviceN color space uses a process color we add also
# the attributes of the process color space to it. Note that all
# colorant names must be defined, also if the DeviceN color space
# uses only one component of the process color space.
Set Variable [ $pcs ; Value: "Cyan$Magenta$Yellow$Black" ]
Set Variable [ $r ; Value: MBS("DynaPDF.AddDeviceNProcessColorants"; $pdf; $cs; $pcs; 4; "DeviceCMYK";
-1) ]
# The DeviceN color space is now fully created so that we can use it
# Set the DeviceN color space
Set Variable [ $r ; Value: MBS("DynaPDF.SetExtColorSpace"; $pdf; $cs) ]
# Draw a rectangle with this color
Set Variable [ $r ; Value: MBS("DynaPDF.SetFillColor"; $pdf; 150/255; 100/255; 100/255) ]
Set Variable [ $r ; Value: MBS("DynaPDF.Rectangle"; $pdf; 50; 690; 200; 100; "fill") ]

```

## 71.9 DynaPDF.AddFontSearchPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddFontSearchPath"; PDF; Path; Recursive )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Path

Path to font file directory or path to font file.  
"C:\Fonts"

#### Recursive

Include subdirectories (search recursively). Pass 1 for recursive or 0 for not recursive.  
1

**Result** Returns number of fonts loaded or error message.

### Description

An arbitrary number of search paths can be added at runtime. Subdirectories are added recursively if the parameter Recursive is 1.

Result may be 0 if all those fonts in were already loded.

See also [AddFontSearchPath](#) function in DynaPDF manual.

### Examples

Loads font folder on Windows:

```
MBS( "DynaPDF.AddFontSearchPath"; "C:\Fonts"; 1 )
```

### See also

## 71.10 DynaPDF.AddOutputIntent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddOutputIntent"; PDF; Path )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Path

The native path to the ICC profile.  
\$path

**Result** Returns handle of the Rendering Intent object or error.

### Description

see also DynaPDF.AddOutputIntentEx.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer. See also [AddOutputIntent](#) function in DynaPDF manual.

## 71.11 DynaPDF.AddOutputIntentEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddOutputIntentEx"; PDF; Container )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Container

The container with the ICC Profile as file content.

**Result** Returns handle of the Rendering Intent object or error.

### Description

see also DynaPDF.AddOutputIntent.

See also [AddOutputIntentEx](#) function in DynaPDF manual.

### Examples

Check conformance and add required output intents:

```
# Check if this PDF conforms to PDF/A-1b 2005
Set Variable [ $c; Value:MBS("DynaPDF.CheckConformance"; $pdf; "PDF/A 1b 2005") ]
If [ $c = 1 ]
# A RGB ICC profile must be added to the document
Set Variable [ $r; Value:MBS("DynaPDF.AddOutputIntentEx"; $pdf; ZUGFeRD Invoice::RGB ICC Profile)
]
Else If [ $c = 2 ]
# A CMYK ICC profile must be added to the document
Set Variable [ $r; Value:MBS("DynaPDF.AddOutputIntentEx"; $pdf; ZUGFeRD Invoice::CMYK ICC Profile) ]
Else If [ $c = 3 ]
# A Gray, RGB, or CMYK ICC profile must be added to the document
Set Variable [ $r; Value:MBS("DynaPDF.AddOutputIntentEx"; $pdf; ZUGFeRD Invoice::RGB ICC Profile)
]
End If
```

## 71.12 DynaPDF.AddValToChoiceField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AddValToChoiceField"; PDF; Field; ExpValue; Value { ; Selected } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### ExpValue

Export value (can be empty)

""

#### Value

Visible choice value (required).

"Hello"

#### Selected

Optional

Whether this value should be selected. 1 to select and 0 to not select.

0

**Result** Returns OK or error.

### Description

The parameter Field must be a handle of a combo box or list box. The parameter ExpValue defines the export value that will be submitted to a web server if the value is selected in Adobe's Acrobat. The export value can be an empty string and it is possible to use one export value for multiple values.

The parameter Value is the visible text that can be selected inside the combo box or list box. Value must be a unique string inside the combo box or list box values. Value is required; it must not be an empty string.

If the parameter Selected is true the value appears as selected value in Adobe's Acrobat. List boxes support multiple selected values depending on whether the flag ffMultiSelect was set or not (see DynaPDF.SetFieldFlags and DynaPDF.CreateListBox for further information). If the flag ffMultiSelect is not set, a selected value disables all others (default).

See also [AddValToChoiceField](#) function in DynaPDF manual.

## 71.13 DynaPDF.AllowPageBreak

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AllowPageBreak"; PDF; Allow; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Allow

Whether to allow page breaks. Can be 1 to allow or 0 to disallow.

0

#### PosX

The X position of new text rectangle on the new page.

100

#### PosY

The Y position of new text rectangle on the new page.

100

#### Width

The width of new text rectangle on the new page.

400

#### Height

The height of new text rectangle on the new page.

600

**Result** Returns OK or error.

### Description

By default DynaPDF.WriteFText and DynaPDF.WriteFTextEx functions stop when text rectangle is filled.

If you allow a page break, the plugin will start a new page and add text there.

If you pass all 6 parameters, we use the new rectangle for the following pages.

### Examples

Disable page break:

```
MBS("DynaPDF.AllowPageBreak"; $pdf; 0)
```

## 71.14 DynaPDF.AppendImagePage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AppendImagePage"; PDF; Image Container { ; Resolution } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Image Container

The container with the image to insert.

#### Resolution

Optional

The resolution to use. Normally we use the ones in the images, but you can overwrite it here.

300

**Result** Returns OK or error.

### Description

This is a convenience function. It creates a page (DynaPDF.AppendPage), reads image format (DynaPDF.ReadImageFormat) and resolution (DynaPDF.ReadImageResolution) and places image on the new page (DynaPDF.InsertImageFile).

Returns number of images added. Because TIFF files can include several images, this count may be higher than 1.

### Examples

Create PDF with an image:

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# new page with container image
Set Variable [ $r; Value:MBS( "DynaPDF.AppendImagePage"; $pdf; Create Text::test) ]
# Render one page as Picture
Set Variable [ $PDFData; Value:MBS("DynaPDF.Save"; $pdf; "hello.pdf") ]
# cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
# Put in Container
Set Field [ Create Text::PDF; $PDFData ]
```

## 71.15 DynaPDF.AppendImagePages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AppendImagePages"; PDF; Image Paths { ; Resolution } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Image Paths

The list of native file paths.

"/Users/cs/Desktop/test.jpg"

#### Resolution

Optional

The resolution to use. Normally we use the ones in the images, but you can overwrite it here.

300

**Result** Returns number or error.

### Description

This is a convenience function. It creates pages (DynaPDF.AppendPage), reads image format (DynaPDF.ReadImageFormat) and resolution (DynaPDF.ReadImageResolution) and places image on page (DynaPDF.InsertImageFile).

Returns number of images added. Because TIFF files can include several images, this count may be higher than the number of file paths.

### Examples

Create PDF with images:

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# Set destination path
Set Variable [ $r; Value:MBS( "DynaPDF.OpenOutputFile"; $pdf; "/Users/cs/Desktop/test.pdf" ) ]
# Add pages
Set Variable [ $r; Value:MBS( "DynaPDF.AppendImagePages"; $pdf; "/Users/cs/Desktop/Auto2.JPG$/Users/cs/Desktop/Auto4.JPG$/Users/cs/Desktop/Auto1.JPG"; 300 ) ]
# Save
Set Variable [ $PDFData; Value:MBS("DynaPDF.Save"; $pdf; "hello.pdf" ) ]
# Cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
```

## 71.16 DynaPDF.AppendPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AppendPage"; PDF )

(old name: DynaPDF.Append)

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK on success.

### Description

The default page format for new created pages is DIN A4. However, when changing the page format, the next page is created in the same format as the previous one. The CropBox is also set to the values of the previous page. The other bounding boxes such as ArtBox, BleedBox and so on must be set manually for each page.

Use DynaPDF.SetPageHeight and DynaPDF.SetPageWidth or DynaPDF.SetPageFormat function to change size of current page.

See also [Append](#) function in DynaPDF manual.

### Examples

Append page:

```
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
```

## 71.17 DynaPDF.ApplyShading

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ApplyShading"; PDF; ShadHandle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### ShadHandle

Handle of the shading

**Result** Returns OK or error.

### Description

This function applies a shading to the current clipping path, or if no clipping is active, to the entire page. See also DynaPDF.CreateAxialShading and DynaPDF.CreateRadialShading functions. See also [ApplyShading](#) function in DynaPDF manual.

#### See also

- [71.48 DynaPDF.CreateAxialShading](#) 2665

## 71.18 DynaPDF.AssociateEmbFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AssociateEmbFile"; PDF; DestObject; DestHandle; Relationship; EmbFile )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### DestObject

The destination object type. Can be Annotation, Catalog, Field, Image, Page or Template.

"Annotation"

#### DestHandle

The destination object handle or -1.

-1

#### Relationship

The relationship for the object to its parent. Can be Associated, Data, Source, Supplement or Alternative.

The value Alternative must be used for ZUGFeRD compatible invoices.

"Alternative"

#### EmbFile

Handle of an embedded file.

**Result** Returns OK or error.

### Description

The parameter DestHandle must be a valid handle of a PDF object. If destination object type is a page, then the page number must be used as handle. The first page is denoted by one. If the destination object is the documents catalog then the parameter DestHandle is ignored. Set the parameter to zero or -1 in this case.

The parameter EmbFile must be a valid handle of an embedded file. See DynaPDF.AttachFile or AttachFile for further information.

Associated files are supported since PDF 2.0 and in PDF/A 3 files. In PDF/A 3 files all embedded files must be associated with a PDF object.

See also [AssociateEmbFile](#) function in DynaPDF manual.

### Examples

Add ZUGFeRD invoice xml file:

```
Set Variable [ $FileHandle; Value:MBS("DynaPDF.AttachFileText"; $pdf; ZUGFeRD Invoice::Invoice XML; "UTF-8"; "ZUGFeRD-invoice.xml"; "Invoice as XML" ) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.AssociateEmbFile"; $pdf; "Catalog"; -1; "Alternative"; $FileHandle) ]
```

## 71.19 DynaPDF.AttachFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AttachFile"; PDF; FilePath { ; Description; Compress } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### FilePath

The native file path for the file to attach.  
"/Users/cs/Desktop/invoice.xml"

#### Description

Optional  
The description for the file.  
"ZUGfERD-invoice.xml"

#### Compress

Optional  
Pass 1 to compress or 0 to not compress. You should pass 1 for text data like XML or JSON.  
0

**Result** Returns handle for embedded file or error.

### Description

The description is optional, the parameter can be set to "". The embedded file is compressed if the parameter Compress is set to 1. Otherwise it is left uncompressed. It is not always useful to compress embedded files especially if the file is already compressed, e.g. Zip files or already compressed image formats require no further compression. In the worst case the compressed file becomes larger as the uncompressed version. However, text files and most document formats should be compressed to reduce the file size.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer. See also [AttachFile](#) function in DynaPDF manual.

## 71.20 DynaPDF.AttachFileContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AttachFileContainer"; PDF; Container; FileName { ; Description; Compress } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Container

The container value to use.

\$xmlContainer

#### FileName

The file name to display in PDF viewer.

"ZUGfERD-invoice.xml"

#### Description

Optional

The description for the file.

"invoice.xml"

#### Compress

Optional

Pass 1 to compress or 0 to not compress. You should pass 1 for text data like XML or JSON.

0

**Result** Returns OK or error.

### Description

The description is optional, the parameter can be set to "". The embedded file is compressed if the parameter Compress is set to 1. Otherwise it is left uncompressed. It is not always useful to compress embedded files especially if the file is already compressed, e.g. Zip files or already compressed image formats require no further compression. In the worst case the compressed file becomes larger as the uncompressed version. However, text files and most document formats should be compressed to reduce the file size.

## 71.21 DynaPDF.AttachFileText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.AttachFileText"; PDF; Text; TextEncoding; FileName { ; Description; Compress } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Text

The text content for the file.

\$xml

#### TextEncoding

The text encoding for the text.

"UTF-8"

#### FileName

The file name to display in PDF viewer.

"ZUGFeRD-invoice.xml"

#### Description

Optional

The description for the file.

"invoice.xml"

#### Compress

Optional

Pass 1 to compress or 0 to not compress. You should pass 1 for text data like XML or JSON.

0

**Result** Returns OK or error.

### Description

The description is optional, the parameter can be set to "". The embedded file is compressed if the parameter Compress is set to 1. Otherwise it is left uncompressed. It is not always useful to compress embedded files especially if the file is already compressed, e.g. Zip files or already compressed image formats require no further compression. In the worst case the compressed file becomes larger as the uncompressed version. However, text files and most document formats should be compressed to reduce the file size.

### Examples

Add ZUGFeRD invoice xml file:

```
Set Variable [ $FileHandle; Value:MBS("DynaPDF.AttachFileText"; $pdf; ZUGFeRD Invoice::Invoice XML; "UTF-8"; "ZUGFeRD-invoice.xml"; "Invoice as XML") ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.AssociateEmbFile"; $pdf; "Catalog"; -1; "Alternative"; $FileHandle) ]
```

## 71.22 DynaPDF.BeginContinueText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.BeginContinueText"; PDF; PosX; PosY )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of the first text line

\$x

#### PosY

Y-Coordinate of the first text line

\$y

**Result** Returns OK or error message.

### Description

The distance between two text lines can be adjusted with DynaPDF.SetLeading. If no leading was defined it will be set to the font size. Note that the function changes the leading of the graphics state if it was not defined beforehand. Subsequent calls use then the leading that was set in a prior call. If the font or font size will be changed it is strongly recommended to set the leading to a correct value. The default leading is the font size. The leading, font, character spacing, word spacing, text scaling, or the text color can be changed before calling DynaPDF.AddContinueText the next time.

The point PosX, PosY defines the baseline of the first text line if the coordinate system is bottom-up, otherwise the top-left corner of the text's bounding box. The origin can be changed with the function DynaPDF.SetFontOrigin.

If the font uses horizontal writing mode the text cursor moves from top to bottom. In vertical writing mode the text cursor moves from left to right.

See also [BeginContinueText](#) function in DynaPDF manual.

## 71.23 DynaPDF.BeginLayer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.BeginLayer"; PDF; OCG )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### OCG

OCG or OCMD handle.

\$OCG

**Result** Returns layer reference number or error.

### Description

The layer must be closed with DynaPDF.EndLayer when finish. The parameter OCG must be valid handle of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD) (see DynaPDF.CreateOCG and DynaPDF.CreateOCMD for further information). The OCG or OCMD controls the visibility of the contents that is included in the layer.

DynaPDF.BeginLayer/DynaPDF.EndLayer calls connect normal page contents, such as text, images, and vector graphics with a layer but no interactive objects like annotations or form fields. Annotations and Form Fields can be added to a layer with DynaPDF.AddObjectToLayer.

It is not required to draw the entire contents of a layer in one pass. The page contents can be drawn as usual and delimited into DynaPDF.BeginLayer/DynaPDF.EndLayer calls as necessary. Only contents that is delimited into DynaPDF.BeginLayer/DynaPDF.EndLayer calls becomes part of a layer.

Layers can be nested by calling DynaPDF.BeginLayer more than one time with different OCGs or OCMDs. The visibility of an inner layer depends then also on the visibility of the out ones (see example below). If an outer layer is invisible then all inner layers are invisible too, regardless of the visibility settings of the inner layers. A layer is not part of the graphics state. Neither DynaPDF.BeginLayer nor DynaPDF.EndLayer change any parameter of the graphics state. DynaPDF.BeginLayer must not be called within an open path. See also [BeginLayer](#) function in DynaPDF manual.

## 71.24 DynaPDF.BeginPattern

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.BeginPattern"; PDF; PatternType; TilingType; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PatternType

The pattern type. Can be Colored, UnColored or ShadingPattern.

"Colored"

#### TilingType

The tiling type. Can be ConstSpacing, NoDistortion or FastConstSpacing.

"ConstSpacing"

#### Width

Cell width.

10

#### Height

Cell height.

10

**Result** Returns pattern reference number or error.

### Description

See `dynapdf_help` manual for details.

See also [BeginPattern](#) function in DynaPDF manual.

## 71.25 DynaPDF.BeginTemplate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.BeginTemplate"; PDF; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Width

Width of the template.  
100

#### Height

Height of the template.  
100

**Result** Returns template handle or error.

### Description

See [dynapdf\\_help.pdf](#) manual for details.  
See also [BeginTemplate](#) function in DynaPDF manual.

## 71.26 DynaPDF.Bezier123

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Bezier123"; PDF; x1; y1; x2; y2; x3; y3 )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### x1

X-Coordinate of the first control point P1

\$x1

#### y1

Y-Coordinate of the first control point P1

\$y1

#### x2

X-Coordinate of the second control point P2

\$x2

#### y2

Y-Coordinate of the second control point P2

\$y2

#### x3

X-Coordinate of the end point P3

\$x3

#### y3

Y-Coordinate of the end point P3

\$y3

**Result** Returns OK or error.

### Description

Curved path segments are specified as cubic Bézier curves. Such curves are defined by four points: the two endpoints (the current point P0 and the final point P3) and two control points P1 and P2. Given the coordinates of the four points, the curve is generated by varying the parameter t from 0.0 to 1.0 in the following equation:

$$R(t) = (1-t)^3P_0 + 3t(1-t)^2P_1 + 3t^2(1-t)P_2 + t^3P_3$$

When t = 0.0, the value of the function R(t) coincides with the current point P0; when t = 1.0, R(t) coincides with the final point P3. Intermediate values of t generate intermediate points along the curve. The curve does not, in general, pass through the two control points P1 and P2. Cubic Bézier curves have two desirable properties:

- The curve can be very quickly split into smaller pieces for rapid rendering.
- The curve is contained within the convex hull of the four points defining the curve, most easily visualized as the polygon obtained by stretching a rubber band around the outside of the four points. This property allows rapid testing of whether the curve lies completely outside the visible region, and hence does not have to be rendered.

The most general type of curve in PDF is the cubic Bézier curve with two control points. The starting point P0 is the current point that was set before by a painting operator (DynaPDF.MoveTo, DynaPDF.LineTo and so on). PDF also supports two other Bézier curves with only one control point (see DynaPDF.Bezier13 and DynaPDF.Bezier23). These two curve types are rarely used but still supported by all Acrobat versions incl. DynaPDF.

As mentioned earlier the function requires a start point that must be set with DynaPDF.MoveTo or another painting operator beforehand. Once the start point was set, multiple curve segments can be drawn to build circles, ellipses or other curved paths. The DynaPDF functions DynaPDF.DrawArc, DynaPDF.DrawCircle, DynaPDF.Ellipse and so on use all DynaPDF.Bezier123 to construct the path.

## 71.27 DynaPDF.Bezier13

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Bezier13"; PDF; x1; y1; x3; y3 )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### x1

X-Coordinate of the first control point P1  
\$x1

#### y1

Y-Coordinate of the first control point P1  
\$y1

#### x3

X-Coordinate of the end point P3  
\$x3

#### y3

Y-Coordinate of the end point P3  
\$y3

**Result** Returns OK or error.

### Description

The second control point P2 coincides with the final point P3 of the curve. The start point P0 must be set with DynaPDF.MoveTo or any other painting operator before.

### See also

- 71.26 DynaPDF.Bezier123 2634

Created 18th August 2014, last changed 18th August 2014.

## 71.28 DynaPDF.Bezier23

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Bezier23"; PDF; x2; y2; x3; y3 )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### x2

X-Coordinate of the second control point P2  
\$x2

#### y2

Y-Coordinate of the second control point P2  
\$y2

#### x3

X-Coordinate of the end point P3  
\$x3

#### y3

Y-Coordinate of the end point P3  
\$y3

**Result** Returns OK or error.

### Description

In this version the first control coincides with initial point P0 of the curve. The start point P0 must be set with DynaPDF.MoveTo or any other painting operator before.

#### See also

## 71.29 DynaPDF.CMYK

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CMYK"; Cyan; Magenta; Yellow; Black )

### Parameters

#### Cyan

The cyan color component from 0 to 255.

0

#### Magenta

The magenta color component from 0 to 255.

0

#### Yellow

The yellow color component from 0 to 255.

255

#### Black

The black color component from 0 to 255.

255

**Result** Returns color value as number.

### Description

For use with functions which take a color as a big number.

Calculation is Cyan \* 16777216 + Magenta \* 65536 + Yellow \* 256 + Black.

Use it only if the color space is CMYK.

### Examples

Get a black color value:

```
MBS( "DynaPDF.CMYK"; 0; 0; 0; 255 )
```

## 71.30 DynaPDF.ChangeAnnotName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeAnnotName"; PDF; AnnotationHandle; Name )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### AnnotationHandle

The annotation index.  
5

#### Name

The new annotation name.  
"MyAnnotation"

**Result** Returns OK or error.

### Description

If the parameter Name contains an empty string, the name will be deleted. The annotation name must be a unique string so that the annotation can be identified in JavaScript actions. The string could be a GUIID, a hash, or any other string that uniquely identifies the annotation.

See also [ChangeAnnotName](#) function in DynaPDF manual.

### See also

## 71.31 DynaPDF.ChangeAnnotPos

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeAnnotPos"; PDF; AnnotationHandle; X; Y; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

#### X

The new x position

\$x

#### Y

The new y position

\$y

#### Width

The new width.

100

#### Height

The new height.

100

**Result** Returns OK or error.

### Description

Annotations which contain a visible appearance such as 3D annotations should be scaled without changing the annotation's aspect ratio.

See also [ChangeAnnotPos](#) function in DynaPDF manual.

### See also

- [71.30 DynaPDF.ChangeAnnotName](#) 2640

## 71.32 DynaPDF.ChangeBookmark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeBookmark"; PDF; BookmarkHandle; Title; Parent; DestPage; Open )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### BookmarkHandle

The reference number for the bookmark. Either returned by one of the add/insert functions or just counting from 0 to DynaPDF.GetBookmarkCount-1.

\$BookmarkHandle

#### Title

New title

"Hello"

#### Parent

New parent bookmark.

-1

#### DestPage

New destination page

5

#### Open

Open the bookmark?

0

**Result** Returns OK or error.

### Description

There is no difference between imported bookmarks and bookmarks which were created with DynaPDF. The parameter ABmk requires a valid bookmark handle. A bookmark handle is a simple array index ranging from zero to DynaPDF.GetBookmarkCount -1.

The parameter Title can be "" if it should be deleted. The parameter Open will be ignored if the bookmark contains no children.

The function does not check whether the destination page exists at the time the bookmark is changed. If the destination page does not exist when file is closed then it will be set to page 1.

To get the handle of a specific bookmark use the functions DynaPDF.FindBookmark and DynaPDF.FindNextBookmark to find the bookmark.

It is also possible to enumerate all bookmarks by using DynaPDF.GetBookmarkCount and DynaPDF.GetBookmark until the used bookmark was found (see DynaPDF.GetBookmark for further information).

See also [ChangeBookmark](#) function in DynaPDF manual.

**Examples**

Change the bookmark with new title and new page:

```
MBS( "DynaPDF.ChangeBookmark"; $PDF; $BookmarkHandle; "Hello World"; $NewParent; 6; 0 )
```

**See also**

- 71.3 DynaPDF.AddBookmark 2595

## 71.33 DynaPDF.ChangeFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeFont"; PDF; FontHandle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### FontHandle

Handle of the new font.  
\$font

**Result** Returns OK or error message.

### Description

FontHandle must be a valid font handle that was returned by DynaPDF.SetFont, DynaPDF.SetFontEx, DynaPDF.SetCIDFont, or DynaPDF.LoadFont.

The font size is taken from the current font if any. If no font is active when the function is called, the font size will be set to the value that was used to load font the last time.

See also [ChangeFont](#) function in DynaPDF manual.

### See also

- 71.391 DynaPDF.SetFont 3208
- 71.392 DynaPDF.SetFontEx 3210

Created 18th August 2014, last changed 27th May 2017.

## 71.34 DynaPDF.ChangeFontSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeFontSize"; PDF; Size )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Size

The new font size.  
10

**Result** Returns OK or error message.

### Description

The font size must be greater zero.  
See also [ChangeFontSize](#) function in DynaPDF manual.

#### See also

- 71.30 DynaPDF.ChangeAnnotName 2640

- 71.294 DynaPDF.New 3032

Created 18th August 2014, last changed 27th May 2017.

## 71.35 DynaPDF.ChangeFontStyle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeFontStyle"; PDF; Style )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Style

The new font style. See DynaPDF.LoadFont for details.  
8

**Result** Returns OK or error message.

### Description

Only the style flags Underlined (4) and Striked (8) can be set with this function. The font styles fsBold and fsItalic requires another font file that must be selected with DynaPDF.SetFont.

See also [ChangeFontStyle](#) function in DynaPDF manual.

### See also

Created 18th August 2014, last changed 27th May 2017.

## 71.36 DynaPDF.ChangeFontStyleEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeFontStyleEx"; PDF; Style )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Style

The new font style. See DynaPDF.LoadFont for details.

3

**Result** Returns OK or error message.

### Description

These flags can be used to explicitly enable the emulation of a missing font style.

See also [ChangeFontStyleEx](#) function in DynaPDF manual.

### See also

## 71.37 DynaPDF.ChangeLinkAnnot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeLinkAnnot"; PDF; AnnotationHandle; URL )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### AnnotationHandle

The annotation index.  
5

#### URL

URL or file path.  
"http://www.mbsplugins.de/"

**Result** Returns OK or error.

### Description

The parameter AnnotationHandle must be a valid handle of a file link, page link, or web link Annotation. The parameter URL can be either a file path or an URL to an internet resource; it must not be an empty string. Note that you cannot change the type of the annotation with this function. For example, a web link annotation requires still a URL to an internet resource, while a file link annotation requires a path to a file on a local hard drive.

Imported file link or web link annotations are mostly defined as page link annotation because it is impossible to distinguish between these types during import. Use the function DynaPDF.FindLinkAnnot if you need to change an imported file link or web link annotation.

See also [ChangeLinkAnnot](#) function in DynaPDF manual.

## 71.38 DynaPDF.ChangeSeparationColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ChangeSeparationColor"; PDF; CSHandle; NewColor; Alternate { ; AltHandle } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### CSHandle

Handle of the separation color space.

#### NewColor

New color in the alternate color space.

#### Alternate

The alternate color space. Can be DeviceRGB, DeviceCMYK, DeviceGray, CalGray, CalRGB, Lab, IC-CBased, Pattern, Indexed, Separation, DeviceN, NChannel or the matching number value.

#### AltHandle

Optional  
The Color space handle or -1 for device spaces.

**Result** Returns OK or error.

### Description

The new color value must be defined in the alternate color space. The alternate color space can be any device or ICC based color space including Lab. If a non-device color space is used, the parameter AltHandle must be set to the color space handle of the alternate color space.

If the function succeeds the return value is OK. If the function fails the return value is the error.

See also [ChangeSeparationColor](#) function in DynaPDF manual.

#### See also

## 71.39 DynaPDF.CheckConformance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CheckConformance"; PDF; Type { ; Options } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Type

PDF Version to check. This can be "PDF/A 1b 2005", "PDF/A 2b", "PDF/A 3b" or "Normalize". Version 6.0 of DynaPDF supports also: ZUGFeRD Basic, ZUGFeRD Comfort and ZUGFeRD Extended.

"PDF/A 1b 2005"

#### Options

Optional

Various options. If no options are specified, we use default. Can be specified as number or a texts.

"DeletePostscript\$DeleteOPIComments"

**Result** Returns result or error.

### Description

This function can be used to convert any PDF to PDF/A.

The conversion of arbitrary imported PDF files to PDF/A requires a separate license of the PDF/A Extension (extra purchase in addition to Pro license).

See `dynapdf_help.pdf` manual file for more details on this function.

You can pass those texts for options:

See also [CheckConformance](#) function in DynaPDF manual.

### Examples

Check conformance for ZUGFeRD Extended:

```
MBS( "DynaPDF.CheckConformance"; $pdf; "ZUGFeRD Extended"; "Default" )
```

Check conformance only:

```
MBS("DynaPDF.CheckConformance"; $pdf; "PDF/A 1b 2005"; 0)
```

Check conformance for ZUGFeRD with Pro license:

```
MBS("DynaPDF.CheckConformance"; $pdf; "ZUGFeRD Basic")
```

```
// using default options
```

Check conformance for ZUGFeRD with Lite license:

```
MBS("DynaPDF.CheckConformance"; $pdf; "ZUGFeRD Basic"; 0)
// no corrections
```

Created 2nd November 2014, last changed 29th August 2017.

Default	Default options.
EmbedSubsets	Embed Subsets
DeleteTransferFuncs	Delete Transfer Functions
DeleteMultiMediaContents	Delete MultiMedia content
DeleteActionsAndScripts	Delete Actions and Scripts
DeleteInvRenderingIntent	Delete Invisible Rendering Intent
FlattenFormFields	Flatten form fields
ReplaceV4ICCPProfiles	Replace V4 ICC Profiles
DeleteEmbeddedFiles	Delete embedded files
DeleteOPIComments	Delete OPI comments.
DeleteSignatures	Delete signatures.
DeletePostscript	Delete Postscript XObjects. Rarely used and such Postscript fragments are meaningful on a Postscript device only. It is usually safe to delete such objects.
DeleteAlternateImages	Alternate images are seldom used and prohibited in PDF/A.
ReComprJPEG2000Images	Recompression results usually in larger images. It is often better to keep such files as is.
ResolveOverprint	PDF/A 2 and 3. Set the overprint mode to 0 if overprint mode = 1 and if overprinting for fill or stroke is true and if an ICCBased CMYK color space is used. Note that DeviceCMYK is treated as ICCBased color space due to implicit color conversion rules.
DeleteAppEvents	PDF/A 2 and 3. Application events are prohibited in PDF/A. The view state will be applied.
ApplyExportState	Meaningful only if coDeleteAppEvents is set. Apply the export state.
ApplyPrintState	Meaningful only if coDeleteAppEvents is set. Apply the print state.
DeleteReplies	Delete annotation replies. If absent, replies will be converted to regular text annotations.
ReplCCITTFaxWithFlate	Replace CCITT Fax compression with Flate.
DeleteHalftones	Delete halftone screens.
FlattenLayers	Flatten layers if any.
DeletePresentation	Presentations are prohibited in PDF/A 2 and 3.
NoFontEmbedding	If this flag is set no valid PDF/A file will be produced!
FlushPages	Write converted pages directly into the output file to reduce the memory usage.
AllowDeviceSpaces	If set, device color spaces will not be replaced with ICC based color spaces. This flag is meaningful for normalization only.
MakeLayerVisible	PDF/A 2 and 3 prohibit invisible layers. Layers can also be flattened if this is no option.

## 71.40 DynaPDF.CheckFieldNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CheckFieldNames"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns number or error.

### Description

Use this function if multiple interactive forms were imported. DynaPDF does not check or change duplicate field names during import. Therefore, check the field names and change invalid names if necessary before closing the document. If an interactive form contains duplicate field names or fields with different types, the document will be damaged.

If a form contains invalid duplicate field names, the names must be changed with DynaPDF.SetFieldName. However, if such a field is used in a JavaScript action or by a global JavaScript, the JavaScript(s) must also be changed to avoid error messages in Adobe's Acrobat.

Global JavaScripts can be accessed with the function DynaPDF.GetJavaScript and changed with the function DynaPDF.ChangeJavaScript. A JavaScript action can be accessed with the function DynaPDF.GetJavaScriptAction and changed with the function DynaPDF.ChangeJavaScriptAction.

The function returns the handle of the first invalid field name that was found, that is a value greater or equal zero. If no invalid field name was found the return value is -1.

See also [CheckFieldNames](#) function in DynaPDF manual.

#### See also

- 71.168 DynaPDF.GetFieldName 2851
- 71.294 DynaPDF.New 3032
- 71.384 DynaPDF.SetFieldName 3198

### 71.40.1 Blog Entries

- [MBS FileMaker Plugin, version 8.5pr3](#)

Created 22nd October 2018, last changed 22nd October 2018.

## 71.41 DynaPDF.CircleAnnot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CircleAnnot"; PDF; PosX; PosY; Width; Height; LineWidth; FillColor; StrokeColor; ColorSpace )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### PosX

X-coordinate of the annotation  
100

#### PosY

Y-coordinate of the annotation  
100

#### Width

Width of the annotation  
100

#### Height

Height of the annotation  
100

#### LineWidth

Line width of the circle or ellipse  
2

#### FillColor

Fill color for circle.  
200

#### StrokeColor

Stroke color for circle.  
255

#### ColorSpace

Color space of the fill and stroke colors.  
"RGB"

**Result** Returns annotation handle or error.

### Description

If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth to zero or StrokeColor to the special constant NO\_COLOR (4294967281).

If the interior should be transparent set FillColor to the special constant NO\_COLOR (4294967281).

Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

See also [CircleAnnot](#) function in DynaPDF manual.

**See also**

Created 28th November 2014, last changed 1st December 2014.

## 71.42 DynaPDF.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Clear"; PDF { ; Path } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Path

Optional  
The file path to create the PDF.  
"C:\Test.pdf"

**Result** Returns OK on success.

### Description

Writing PDF to file to disk while creating it allows PDF files to be bigger than available memory. In order to have that working well, you need to call DynaPDF.FlushPages regularly to free memory. Use Path.FilemakerPathToNativePath to convert a FileMaker path to a native path if required.

### Examples

Starts with a new blank PDF:

```
$r = MBS( "DynaPDF.clear"; $PDF )
```

### See also

Created 18th August 2014, last changed 9th July 2015.

## 71.43 DynaPDF.ClipPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ClipPath"; PDF; ClipMode; FillMode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### ClipMode

The clipping mode. Can be EvenOdd for using the Even-Odd rule or winding for using the nonzero Winding Number rule.  
"winding"

#### FillMode

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.  
"fill"

**Result** Returns OK or error.

### Description

The function must be called after a closable path was created. A path that consists of a DynaPDF.MoveTo and DynaPDF.LineTo only call cannot be closed!

A clipping path can also be filled, stroked, or both in one pass. However, the combination of a clipping path operator with a path painting operator is seldom used and not supported in all PDF viewers. To avoid unnecessary problems a path should always be clipped and painted in two separate steps, also if this causes some unnecessary overhead.

Once the clipping was created and activated with DynaPDF.ClipPath you can draw arbitrary contents into it, such as images, text, or vector graphics.

A clipping path is part of the current graphics state. The only way to deactivate a clipping path is to restore the graphics state with DynaPDF.RestoreGraphicState. This assumes that it was saved with DynaPDF.SaveGraphicState before the clipping path was created.

Note that it is not possible to extend or widen an active clipping path. It is only possible to intersect it with a new one. The intersection of two clipping paths is never larger than the initial clipping path.

Remarks:

Text objects are handled separately in PDF for use as clipping path. See DynaPDF.SetTextDrawMode for further information.

See also [ClipPath](#) function in DynaPDF manual.

### Examples

Clip image to circle:

```
# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ "InitDynaPDF" ]
```

```

End If
# Clear current PDF document
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Add image on page
Set Variable [ $destPage ; Value: 1 ]
Set Variable [ $r ; Value: MBS("DynaPDF.AppendPage"; $pdf) ]
# no recompression if possible! But if needed, we use JPEG 90%
Set Variable [ $r ; Value: MBS("DynaPDF.SetSaveNewImageFormat"; $pdf; 0) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetJPEGQuality"; $pdf; 90) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetCompressionFilter"; $pdf; "jpeg") ]
# Save old state to restore later
Set Variable [ $r ; Value: MBS( "DynaPDF.SaveGraphicState"; $pdf ) ]
# Draw circle for clipping
Set Variable [ $r ; Value: MBS( "DynaPDF.DrawCircle"; $pdf; 260; 220; 100; "nofill" ) ]
Set Variable [ $r ; Value: MBS( "DynaPDF.ClipPath"; $pdf; "Winding"; "fill" ) ]
# Draw clipped image
Set Variable [ $r ; Value: MBS("DynaPDF.InsertImage"; $pdf; Merge PDFs::InputImage; 100; 100; 320; 200) ]
# restore graphics static to get unclipped drawing
Set Variable [ $r ; Value: MBS( "DynaPDF.RestoreGraphicState"; $pdf ) ]
# Close page and store PDF in container
Set Variable [ $r ; Value: MBS("DynaPDF.EndPage"; $pdf) ]
Set Field [ Merge PDFs::FinalPDF ; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]

```

## 71.44 DynaPDF.CloseImportFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CloseImportFile"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK.

### Description

The current working PDF stays in memory.  
See also [CloseImportFile](#) function in DynaPDF manual.

### Examples

Load a PDF from container, work with it and close PDF:

```
$r = MBS("DynaPDF.OpenPDFFromContainer"; $PDF; Test::data)
# work with import PDF
MBS( "DynaPDF.CloseImportFile"; $PDF )
```

## 71.45 DynaPDF.ClosePath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ClosePath"; PDF; FillMode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### FillMode

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error message.

### Description

In PDF all vector graphics are paths. Paths can be filled, stroked, or both. Filled path can be drawn by applying the nonzero winding number rule or the even-odd rule (see Path Construction and Painting for further information). Both rules produce different results on complex paths but they have no effect on simple paths like rectangles, circles, and so on.

The filling rules are can be used to produce holes in a path; an area that is left unpainted. The draw direction is important when drawing simple shapes like rectangles and so on. See DynaPDF.SetDrawDirection for further information.

The flag NoFill can be used to discard a path that was already drawn.

Paths are invisible until they will be filled or stroked. DynaPDF displays a warning if an unused path is in memory when drawing an image, text, or when closing the page. The function checks whether a path is in memory prior execution. If no open path is detected the function returns with an error message.

See also [ClosePath](#) function in DynaPDF manual.

### Examples

Draw triangle path:

```
# blue color
Set Variable [ $r ; Value: MBS("DynaPDF.SetFillColor"; $pdf; 0; 0; 1) ]
# go to start point
Set Variable [ $r ; Value: MBS("DynaPDF.MoveTo"; $pdf; 100; 100) ]
# add more points
Set Variable [ $r ; Value: MBS("DynaPDF.LineTo"; $pdf; 200; 100) ]
Set Variable [ $r ; Value: MBS("DynaPDF.LineTo"; $pdf; 100; 200) ]
# and fill
Set Variable [ $r ; Value: MBS("DynaPDF.ClosePath"; $pdf; "fill") ]
```

## 71.46 DynaPDF.ConvertColors

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	9.2	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.ConvertColors"; PDF; Flags { ; Add } )
```

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Flags

The mode to operate. Can be BW\_To\_Gray (RGB and B/W to gray), RGB\_To\_Gray (RGB to gray), ToGrayAdjust (Lighten or darken colors).

"BW\_To\_Gray"

#### Add

Optional

The value for ToGrayAdjust flag.

1.0

**Result** Returns OK or error.

### Description

The function converts inline RGB operators in the current open page to gray. At time of publication only inline operators like g, rg, G, and RG are processed. CMYK colors will be left unchanged. The parameter Add is optional and considered only if the constant ToGrayAdjust is used.

The conversion of RGB inline color operators can be useful if the document was created with a GDI application, e.g. Microsoft Word, Excel and so on and if the file must be split into black & white and color pages. DynaPDF.IsColorPage can then be used to determine whether the page contains still colored objects. The advantage is that RGB black & white values, which are used for text and vector graphics, are already removed so that DynaPDF.IsColorPage returns only true if any other object uses a color, e.g. an image.

The constant ToGrayAdjust can be used to convert RGB colors to gray and to darken or lighten RGB and gray colors. The parameter Add must be a pointer of a floating point variable. The value can be in the range -1.0 through 1.0. Colors in PDF are stored as floating point values in the range 0.0 through 1.0. Since DeviceGray is an additive color space, 0 denotes black and 1.0 white. If all color operators should be set to black for example, then set the variable to -1.0. The function performs a range check. If the color becomes out of range then it will be adjusted to the nearest value that is inside the allowed color range.

## 71.48 DynaPDF.CreateAxialShading

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.2	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.CreateAxialShading"; PDF; sX; sY; eX; eY; SCenter; SColor; EColor { ; Extend1; Extend2 } )
```

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### sX

X-Coordinate of the start point

0

#### sY

Y-Coordinate of the start point

0

#### eX

X-Coordinate of the end point

0

#### eY

Y-Coordinate of the end point

78

#### SCenter

Shading center

2

#### SColor

Start color

MBS("DynaPDF.RGB"; 120; 120; 220)

#### EColor

End color

MBS("DynaPDF.RGB"; 255; 255; 255) /\* white \*/

#### Extend1

Optional

Extend the shading beyond the start point. Pass 1 to extend or 0 if not. Default is 0.

0

#### Extend2

Optional

Extend the shading beyond the end point. Pass 1 to extend or 0 if not. Default is 0.

0

**Result** Returns number or error.

### Description

Axial shadings define a color blend or gradient that varies along a linear axis between two endpoints and extends indefinitely perpendicular to that axis. The shading may optionally be extended beyond either or both endpoints by continuing the boundary colors indefinitely.

The shading center defines the point from where the first color will blend into the other. A value of 1 determines the exact center between the starting and ending point of the shading. Smaller values shift the shading center in direction to the start point, greater values in the direction to the end point.

Axial shadings can be drawn into a clipping path to restrict painting into this path. If the shading is drawn outside of a clipping path it is applied to the entire page. Not that extended shadings are opaque, objects behind the shading becomes invisible if they are overprinted by the shading.

Shadings are drawn by using the current coordinate system. It is recommended to understand that shadings have its own dimension like a normal shape. The parameters `Extend1` and `Extend2` extend the shading beyond its dimension. If the shading is extended it must normally be drawn into a clipping path to avoid overprinting of other objects.

Shadings support the color spaces `DeviceGray`, `DeviceRGB`, and `DeviceCMYK`. The color values of the start and end color must be defined in the current color space. See also `DynaPDF.SetColorSpace`.

Shadings are invisible as long they are not drawn by using the function `DynaPDF.ApplyShading`. `DynaPDF.ApplyShading` requires a shading handle that was returned by this function.

If the function succeeds the return value is the handle of the shading, a value greater or equal zero. If the function fails it returns an error.

See also [CreateAxialShading](#) function in DynaPDF manual.

## 71.49 DynaPDF.CreateButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateButton"; PDF; Name; Caption; Parent; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the text field

"Test"

#### Caption

The caption to use.

"Click me"

#### Parent

Parent group field if any or -1.

-1

#### PosX

X-Coordinate of the text field.

100

#### PosY

Y-Coordinate of the text field.

100

#### Width

Width of the text field.

100

#### Height

Height of the text field.

20

**Result** Returns OK or error.

### Description

The parameter Name must be a unique name for the button field. It is not allowed to create two buttons with an identical name within the hierarchy in which they appear.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the button. If the coordinate system is top-down it defines the upper left corner.

Like all form fields, the width and height is measured incl. the line width of the border. The size of normal vector graphics is measured without the line width; this must be taken into account when calculating the

width and height of a form field.

The border is drawn by using the current line width and border style (see `DynaPDF.SetBorderStyle`). However, interactive form fields support natively the line width 1, 2 and 3 units only (thin, medium, thick). Other values can be applied but the appearance can be changed by Adobe's Acrobat when the form is reset by a Reset Form Action.

The appearance can be influenced with the following properties:

- `DynaPDF.GetFieldBackColor` and `DynaPDF.SetFieldBackColor` // Background color \* `DynaPDF.GetFieldBorderColor` and `DynaPDF.SetFieldBorderColor` // Border color \* `DynaPDF.GetFieldColor` and `DynaPDF.SetFieldColor` // Change a specific color of a field
- `DynaPDF.GetFieldTextColor` and `DynaPDF.SetFieldTextColor` // Color of the caption
- `DynaPDF.GetLineWidth` and `DynaPDF.SetLineWidth` // Line width of the border

The border and background color can be set to `NoColor` (4294967281), the background or border appears then transparent. The border appears also transparent when the line width was set to zero.

`DynaPDF` supports also image buttons. To create an image button store the handle of the button in a variable and add one or more images to the different button states (see `DynaPDF.AddButtonImage` for further information). The caption of the button will be overridden when an image to the up state is added.

Buttons are used to execute an action; the following events are supported by button fields:

- `OnMouseUp`
- `OnMouseDown`
- `OnMouseExit`
- `OnFocus`
- `OnBlur`

This function is implemented in an ANSI and Unicode compatible version. However, CJK encodings or Unicode are NOT supported by form fields. It is possible to use Unicode strings but the font must NOT use the code page `cpUnicode`. Unicode strings must contain characters of the actual used 8 bit code page.

Buttons requires a font, if no font was set before Helvetica is used to draw the caption by using the code page 1252. The caption is centred horizontally and vertically. By default the caption is drawn on multiple lines if it does not fit into a single line. To avoid a line break inside a button field remove the flag `Multiline` (see `DynaPDF.SetFieldFlags`).

Buttons are excluded from printing by default. If a button should be printable set the flag `Print` (see `DynaPDF.SetFieldFlags()` for further information).

Interactive form fields can be structured into several groups by passing a handle of a group field to the parameter `Parent`. See `DynaPDF.CreateGroupField` for further information.

71.49. *DYNAPDF.CREATEBUTTON* 2669

If the function succeeds the return value is the field handle, a value greater or equal zero. If the function fails the return value is an error.

## 71.50 DynaPDF.CreateCheckBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateCheckBox"; PDF; Name; ExpValue; Checked; Parent; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the text field

"IsMale"

#### ExpValue

Export value (required)

"IsMale"

#### Checked

If 1, the check box appears checked. Else pass 0 for unchecked.

0

#### Parent

Parent group field if any or -1.

-1

#### PosX

X-Coordinate of the text field.

100

#### PosY

Y-Coordinate of the text field.

100

#### Width

Width of the text field.

100

#### Height

Height of the text field.

20

**Result** Returns field handle or error.

### Description

See CreateCheckBox function in dynapdf\_help.pdf for details.

## 71.51 DynaPDF.CreateComboBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateComboBox"; PDF; Name; Sort; Parent; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the field

"IsMale"

#### Sort

If 1, the items are sorted.

0

#### Parent

Parent group field if any or -1.

-1

#### PosX

X-Coordinate of the text field.

100

#### PosY

Y-Coordinate of the text field.

100

#### Width

Width of the text field.

100

#### Height

Height of the text field.

20

**Result** Returns handle or error.

### Description

The choice values of the combo box must be added with the function DynaPDF.AddValToChoiceField. This function requires the field handle that was returned by this function.

A combo box can contain value that is not included in the array of choice values. This value can be used to display a string in the combo box when no choice value is selected, e.g. "Select a value!".

The field value can be set with the function `DynaPDF.SetFieldExpValue` as follows:

The parameter `ValIndex` of the function `DynaPDF.SetFieldExpValue` must be set to `PDF_MAX_INT` (2147483647) and the parameter `Value` must contain the wished value or be empty. If `Value` is empty string, a maybe existing field value will be deleted. The choice values of the combo box get the state unselected when setting a field value in this way.

If the coordinate system is bottom-up the point `PosX`, `PosY` defines the lower left corner of the button. If the coordinate system is top-down it defines the upper left corner.

Like all form fields the width and height is measured incl. the line width of the border. The size of normal vector graphics is measured without the line width; this must be taken into account when calculating the width or height of a form field. The line width of the border is derived from the current graphics state (see `DynaPDF.SetLineWidth`), it should be either 0, 1, 2, or 3 units (no border, thin, medium, or thick). The border style can be changed with the functions `DynaPDF.SetBorderStyle` or `DynaPDF.SetFieldBorderStyle`.

The values of the combo box are sorted if the parameter `Sort` is 1.

A combo box requires a font. If no font is active the standard font Helvetica is used. Note: If the form must be compatible to Acrobat 4 the used fonts by the form fields must be restricted to the 14 standard fonts (see `SetFont()` for further information). Acrobat 4 does not support interactive forms that use other fonts than the 14 standard fonts. Such a form requires Acrobat 5 or higher.

However, it is possible to use an arbitrary font as long as the code page 1252 is used.

The font size of a combo box is set to "auto" if either the font size of the active font is set to 1.0 unit or if no font is active when the field is created.

Specific flags supported by combo boxes:

<code>Edit</code>	Enable adding of values in Adobe's Acrobat
<code>Sorted</code>	Change the sort flag if necessary
<code>CommitOnSelCh</code>	Submit the new value immediately (PDF 1.5)
<code>DoNotSpellCheck</code>	Disable spell checking (requires <code>Edit</code> )

Earlier versions of `DynaPDF` allowed the usage of arbitrary 8 bit code pages. Due to changes in Acrobat viewer applications it is no longer possible to use another code page than 1252. In addition, it seems that Acrobat versions greater 6 do no longer support `Type1` fonts in form fields, with the exception of the 14 standard fonts.

Interactive form fields can be structured into several groups by passing a handle of a group field to the parameter `Parent`. See `DynaPDF.CreateGroupField` for further information.

If the function succeeds the return value is the handle of the combo box, a value greater or equal zero. If the function fails it returns an error message.

## 71.52 DynaPDF.CreateDeviceNColorSpace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateDeviceNColorSpace"; PDF; Colorants; NumColorants; PostScriptFunc; Alternate { ; Handle } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Colorants

Array of colorant names (required)

#### NumColorants

Number of colorants in the array.

#### PostScriptFunc

Postscript calculator function (required)

#### Alternate

The alternate color space. Can be DeviceRGB, DeviceCMYK, DeviceGray, CalGray, CalRGB, Lab, IC-CBased, Pattern, Indexed, Separation, DeviceN, NChannel or the matching number value.  
"DeviceCMYK"

#### Handle

Optional  
Alternate color space handle or -1.

**Result** Returns OK or error.

### Description

DeviceN color spaces (PDF 1.3) can contain up to 32 color components. They provide greater flexibility than is possible with standard device color spaces such as DeviceCMYK or with individual Separation color spaces. For example, it is possible to create a DeviceN color space consisting of only the cyan, magenta, and yellow color components, with the black component excluded.

Colors of a DeviceN color space are always treated as subtractive colors, even if the device produces output for the designated component by an additive method. Thus, a tint value of 0 denotes the lightest color that can be achieved with the given colorant and 255 the darkest. This convention is the same one as for DeviceCMYK color components but opposite to the one for DeviceGray or DeviceRGB.

DeviceN was designed to represent color spaces containing multiple components that correspond to colorants of some target device. As with Separation color spaces, PDF consumer applications must be able to approximate the colorants if they are not available on the current output device, such as a display. To accomplish this, the color space definition provides a tint transformation function that can be used to convert all the components to an alternate color space.

The tint transformation function consists of a PostScript calculator function that is called with n tint values and returns m color component values, where n is the number of components needed to specify a color in

the DeviceN color space and *m* is the number of components required by the alternate color space.

Note: Painting in the alternate color space may produce a good approximation of the intended color when only opaque objects are painted. However, it does not correctly represent the interactions between an object and its backdrop when the object is painted with transparency or when overprinting is enabled (see also `DynaPDF.CreateExtGState`).

A DeviceN color space supports the special colorant name `None` which produces no visible output on the device. When a DeviceN color space is painting the named device colorants directly, color components corresponding to `None` colorants are discarded. However, when the DeviceN color space reverts to its alternate color space, those components are passed to the tint transformation function, which can use them as desired. Note: A DeviceN color space whose component colorant names are all `None` always discards its output, just the same as a Separation color space for `None`; it never reverts to the alternate color space. Reversion occurs only if at least one color component (other than `None`) is specified and is not available on the device.

Encoding for colorants name is UTF-8.

See also `CreateDeviceNColorSpace` function in DynaPDF manual.

### Examples

Create the DeviceN color space:

```
# Create Blend function (see dynapdf_help.pdf for how this was created)
Set Variable [ $PostScriptFunc ; Value: " { 2 index 0.38 mul 2 index 0 add add 0 3 index 0.56 mul 0 add
add 4 index 0.34 mul 0 4 index add add 0 0 0 add add 7 4 roll pop pop pop } " ]
Set Variable [ $cls ; Value: "PANTONE 345 CVC$PANTONE 293 CVC$Yellow" ]
Set Variable [ $cs ; Value: MBS("DynaPDF.CreateDeviceNColorSpace"; $pdf; $cls; 3; $PostScriptFunc;
"DeviceCMYK"; -1) ]
```

## 71.53 DynaPDF.CreateGoToAction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateGoToAction"; PDF; DestType; DestPage { ; a; b; c; d } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### DestType

The type of destination, can be XYZoom, Fit, FitHTop, FitVLeft, FitRect, FitB, FitBHTop or FitBVLeft. "Fit"

#### DestPage

Destination Page

5

#### a

Optional

Various, depends on destination type

#### b

Optional

Various, depends on destination type

#### c

Optional

Various, depends on destination type

#### d

Optional

Various, depends on destination type

**Result** Returns action number or error.

### Description

The go-to action changes the view to a specific destination (page, location, and magnification factor). This action type is useful if a specific destination must be used by several objects such as bookmarks and page links.

See also [CreateGoToAction](#) function in DynaPDF manual.

### See also

## 71.54 DynaPDF.CreateGoToActionEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateGoToActionEx"; PDF; NamedDest )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### NamedDest

The index of the named destination.

**Result** Returns an action number or error.

### Description

A named destination can be used if the destination should be accessible from another PDF file. See also DynaPDF.CreateNamedDest.

See also [CreateGoToActionEx](#) function in DynaPDF manual.

### Examples

Adds a go-to action for a cell in the table:

```
Set Variable [ $NamedDest ; Value: MBS( "DynaPDF.CreateNamedDest"; $pdf; "test"; 2; "Fit" ) ]
Set Variable [ $Action ; Value: MBS( "DynaPDF.CreateGoToActionEx"; $PDF; $NamedDest ) ]
Set Variable [ $r ; Value: MBS( "DynaPDF.Table.SetCellAction"; $Table; $rowNum; 0; $action; "Invert" ) ]
```

## 71.55 DynaPDF.CreateGoToRAction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateGoToRAction"; PDF; FileName; PageNum )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### FileName

File path to external PDF file.

#### PageNum

Destination Page  
5

**Result** Returns action index or error.

### Description

A go-to-remote action opens an external PDF file and jumps to the page defined by the parameter PageNum. If the destination page does not exist the first page will be displayed.

The path to the external PDF file should be defined as relative path. Actions must be added to a PDF object with DynaPDF.AddActionToObj. This function is also implemented in a wide version that accepts an Unicode file path. However, Unicode file path are supported since PDF 1.7 (Acrobat 8). Earlier Acrobat versions will fail to open the file if the path contains non-Ansi characters.

If the function succeeds the return value is the action handle, a value greater or equal zero.

See also [CreateGoToRAction](#) function in DynaPDF manual.

## 71.56 DynaPDF.CreateGoToRActionEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateGoToRActionEx"; PDF; FileName; DestName; NewWindow )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### FileName

File path to external PDF file.

#### DestName

Named Destination to access.

#### NewWindow

If true, the file is opened in a new window.

1

**Result** Returns action index or error.

### Description

Creates a go-to-remote action that opens a named destination in an external PDF file. The parameter DestName must be the name of a named destination located in the external PDF file. Note that this is a binary string which must be specified exactly and case-sensitive. If the name was originally defined as an Unicode string, the go-to remote action must use the same string format. Otherwise the destination cannot be found. See also DynaPDF.CreateNamedDest.

The path to the external PDF file should be defined as relative path. Actions must be added to a PDF object with DynaPDF.AddActionToObj.

Unicode file path are supported since PDF 1.7 (Acrobat 8). Earlier Acrobat versions will fail to open the file if the path contains non-Ansi characters.

If the function succeeds the return value is the action handle, a value greater or equal zero.

See also [CreateGoToRActionEx](#) function in DynaPDF manual.

## 71.57 DynaPDF.CreateGroupField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateGroupField"; PDF; Name; Parent )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the field

"Hello"

#### Parent

Parent group field if any or -1.

-1

**Result** Returns handle or error.

### Description

The field itself has no appearance, it is invisible.

For example, if an interactive form contains fields for private personal data and fields for company data in any kind, the fields can be structured into two base parts: `PersonalData` and `CompanyData`. The field names of each part must be unique inside its own hierarchy. However, duplicate field names of fields of the same type are still allowed.

Field names and Group fields

The name of a specific interactive form field is the partial field name. The fully qualified name is not explicitly defined, but is constructed from the partial field name of the field and all of its ancestors.

For a field with no parent, the partial field name and the fully qualified name are the same; for a field that is the child of a parent (group) field, the fully qualified name is formed by appending the child field's partial name to the parent's fully qualified name, separated by a period (.):

parent\_field\_name.child\_partial\_name

For example, if a group field with the partial field name `PersonalData` has a child whose partial field name is `Address`, which in turn has a child with the partial field name `ZipCode`, then the fully qualified name of this last field would be

`PersonalData.Address.ZipCode`

Thus all fields descended from a common ancestor will share the ancestor's fully qualified field name as a common prefix in their own fully qualified names.

The naming scheme must be taken into account when accessing fields of a group in JavaScript functions.

Acrobat 4 does not support group fields inside a hide or form action. For example, if a group field will be added to a hide action, the entire group becomes invisible if the action is executed in Acrobat 5 or higher. Acrobat 4 ignores the group field; each field of the group must be manually added to the hide action. See also [CreateGroupField](#) function in DynaPDF manual.

## 71.58 DynaPDF.CreateJSAction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateJSAction"; PDF; Script )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Script

The javascript text.

**Result** Returns number or error.

### Description

A JavaScript Action causes a script to be compiled and executed by the JavaScript interpreter of Adobe's Acrobat. Depending on the nature of the scripts, this can cause various interactive form fields in the document to update their values or change their visual appearances.

The parameter Script must be a valid JavaScript. The script is not checked by DynaPDF whether it is valid or not. Note that older Acrobat versions of Adobe's Acrobat do not support all JavaScript functions. Due to several bugs in Acrobat 4/5 an invalid JavaScript can cause an access violation in Adobe's Acrobat. Test your scripts carefully with all Acrobat versions which must be supported.

See also [CreateJSAction](#) function in DynaPDF manual.

### Examples

Create sum field:

```
Set Variable [ $y; Value:50 ]
Set Variable [ $script; Value:"var v1 = this.getField(\\"Val1\\");" & $& "var v2 = this.getField(\\"Val2\\");"
& $& "var v3 = this.getField(\\"Val3\\");" & $& "event.value = v1.value + v2.value + v3.value;" ]
Set Variable [ $script; Value:MBS( "Text.ReplaceNewline"; $script; 2 ) ]
Set Variable [ $a; Value:MBS( "DynaPDF.CreateJSAction"; $pdf; $script ) ]
# Create 1st field
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Val1"; -1; 0; 0; 50; $y; 200; 20 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetTextFieldValue"; $pdf; $f; "50.00"; "50.00"; "Right" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetNumberFormat"; $pdf; $f; "NoneDot"; 2; "MinusBlack" ) ]
# Create 2nd field
Set Variable [ $y; Value:$y + 30 ]
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Val2"; -1; 0; 0; 50; $y; 200; 20 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetTextFieldValue"; $pdf; $f; "100.00"; "100.00"; "Right" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetNumberFormat"; $pdf; $f; "NoneDot"; 2; "MinusBlack" ) ]
# Create 3rd field
Set Variable [ $y; Value:$y + 30 ]
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Val3"; -1; 0; 0; 50; $y; 200; 20 ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetTextFieldValue"; $pdf; $f; "200.00"; "200.00"; "Right" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetNumberFormat"; $pdf; $f; "NoneDot"; 2; "MinusBlack" ) ]
```

```

# Create sum field
# This last field calculates sum of other fields
# Works only in PDF Viewers supporting JavaScript!
Set Variable [ $y; Value:$y + 30 ]
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Sum"; -1; 0; 10; 50; $y; 200; 20) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetFieldBorderWidth"; $pdf; $f; 0) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetTextFieldValue"; $pdf; $f; "350.00 €"; "350.00 €"; "Right") ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetFieldFlags"; $pdf; $f; "ReadOnly"; 0) ]
Set Variable [ $r; Value:MBS( "DynaPDF.AddActionToObj"; $pdf; "Field"; "OnCalc"; $a; $f) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetNumberFormat"; $pdf; $f; "CommaDot"; 2; "MinusBlack"; "
€"; 0) ]

```

Create checkbox to confirm page and jump to next one:

```

Set Variable [ $f ; Value: MBS( "DynaPDF.CreateCheckBox"; $pdf; "OK"; "OK";0; -1; $PageWidth-150;
$pageHeight-20; 15; 15 ) ]
# This is javascript from Adobe to go to next page You could substitute many of their examples
Set Variable [ $script ; Value: "this.pageNum++" ]
Set Variable [ $script ; Value: MBS( "Text.ReplaceNewline"; $script; 2 ) ]
Set Variable [ $a ; Value: MBS( "DynaPDF.CreateJSAction"; $pdf; $script ) ]
Set Variable [ $r ; Value: MBS( "DynaPDF.AddActionToObj"; $pdf; "Field"; "OnMouseUp"; $a; $f ) ]

```

## 71.59 DynaPDF.CreateListBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateListBox"; PDF; Name; Sort; Parent; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the field

"IsMale"

#### Sort

Sort the choice values? 0 = no, 1 = yes.

1

#### Parent

Parent group field if any or -1.

-1

#### PosX

X-Coordinate of the text field.

100

#### PosY

Y-Coordinate of the text field.

100

#### Width

Width of the text field.

100

#### Height

Height of the text field.

20

**Result** Returns handle or error.

### Description

The choice values of the list box must be added with the function DynaPDF.AddValToChoiceField. This function requires the field handle that was returned by this function.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the list box. If the coordinate system is top-down it defines the upper left corner.

Like all form fields, the width and height is measured incl. the line width of the border. The size of normal vector graphics is measured without the line width; this must be taken into account when calculating the width or height of a form field. The line width of the border is derived from the current graphics state (see `DynaPDF.SetLineWidth()`), it should be either 0, 1, 2, or 3 units (no border, thin, medium, or thick). The border style can be changed with the functions `SetBorderStyle()` or `DynaPDF.SetFieldBorderStyle()`.

The values of the list box are sorted if the parameter `Sort` is true. List boxes support multiple selected values. To enable multi selection add the flag `ffMultiSelect` to the field (see `DynaPDF.SetFieldFlags()` for further information).

A list box requires a font. If no font is active the standard font Helvetica is used. Note that if the form must be compatible to Acrobat 4, the used fonts by the form fields must be restricted to the 14 standard fonts (see `SetFont()` for further information). Acrobat 4 does not support interactive forms that use other fonts than the 14 standard fonts. Such a form requires Acrobat 5 or higher.

However, it is possible to use an arbitrary font as long as the code page 1252 is used.

The font size of a list box is set to "auto" if either the font size of the active font is set to 1.0 unit or if no font is active when the field is created.

A text field can be formatted and the allowed input values can be restricted to specific data formats. See `DynaPDF.SetDateTimeFormat()`, `DynaPDF.SetNumberFormat()` for further information.

Specific flags supported by list boxes:

- `Sorted` // Change the sort flag if necessary
- `MultiSelect` // Enable multi selection

Earlier versions of DynaPDF allowed the usage of arbitrary 8 bit code pages. Due to changes in Acrobat viewer applications it is no longer possible to use another code page than 1252. In addition, it seems that Acrobat versions greater 6 do no longer support Type1 fonts in form fields, with the exception of the 14 standard fonts.

Interactive form fields can be structured into several groups by passing a handle of a group field to the parameter `Parent`. See `DynaPDF.CreateGroupField()` for further information.

If the function succeeds the return value is the handle of the combo box, a value greater or equal zero. If the function fails the return value is a negative error code.

See also [CreateListBox](#) function in DynaPDF manual.

## 71.60 DynaPDF.CreateNamedDest

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateNamedDest"; PDF; Name; DestPage; DestType { ; a; b; c; d } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the destination

"Chapter1"

#### DestPage

Destination Page

5

#### DestType

The type of destination, can be XYZoom, Fit, FitHTop, FitVLeft, FitRect, FitB, FitBHTop or FitBVLeft.

"Fit"

#### a

Optional

optional parameter

#### b

Optional

optional parameter

#### c

Optional

optional parameter

#### d

Optional

optional parameter

**Result** Returns number or error.

### Description

Named destinations are useful if the destination must be accessed from another PDF file. For example, a link to the beginning of Chapter 3 in another document might refer to the destination by a name, such as Chap3.begin, instead of an explicit page number in the other document. This makes it possible to change the destination in the document without invalidating the external link that refers to the destination.

Named destinations can be used in the same document by bookmarks, page links, and go-to actions. This makes it possible to share named destinations with external and internal links. Named destinations which are located in another document can be accessed with a go-to-remote action (see DynaPDF.CreateGoToRAC-

tionEx for further information).

The different destination types are described in detail at `DynaPDF.CreateGoToAction`.

To avoid unnecessary problems it is usually best to use 7 bit Ansi strings for named destinations.

If the function succeeds the return value is the destination handle, a value greater or equal zero. If the function fails the return value is an error message.

See also [CreateNamedDest](#) function in DynaPDF manual.

### Examples

Created named dest and add a bookmark using it:

```
$NamedDest = MBS("DynaPDF.CreateNamedDest"; $pdf; "link" & Create Text::DestPage; Create Text::DestPage; "FitRect"; 100; 200; 300; 400)
$b = MBS("DynaPDF.AddBookmarkEx"; $pdf; Create Text::Title; Create Text::Parent; $NamedDest; Create Text::Open)
```

## 71.61 DynaPDF.CreateRadialShading

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateRadialShading"; PDF; sX; sY; R1; eX; eY; R2; SCenter; SColor; EColor { ; Extend1; Extend2 } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### sX

X-Coordinate of the inner circle

#### sY

Y-Coordinate of the inner circle

#### R1

Radius of the inner circle

#### eX

X-Coordinate of the outer circle

#### eY

Y-Coordinate of the outer circle

#### R2

Radius of the outer circle

#### SColor

Shading center

#### SColor

Start color

MBS("DynaPDF.RGB"; 120; 120; 220)

#### EColor

End color

MBS("DynaPDF.RGB"; 255; 255; 255) /\* white \*/

#### Extend1

Optional

Extend the shading beyond the start point. Pass 1 to extend or 0 if not. Default is 0.

0

#### Extend2

Optional

Extend the shading beyond the end point. Pass 1 to extend or 0 if not. Default is 0.

0

**Result** Returns OK or error.

### Description

Radial shadings define a color blend or gradient that varies between two circles. The shading may optionally be extended beyond the starting or ending circles by continuing the boundary colors indefinitely. Shadings of this type are commonly used to depict three-dimensional spheres and cones.

The shading center defines the point from where the first color will blend into the other. A value of 1 determines the exact center between the start and end point of the shading. Smaller values shift the shading center in direction to the start circle, greater values to the end circle.

Radial shadings can be drawn into a clipping path to restrict painting into this path. If the shading is drawn outside of a clipping path it is applied to the entire page. Not that extended shadings are opaque, objects behind the shading become invisible if they are overprinted by the shading.

Shadings are drawn by using the current coordinate system. It is recommended to understand that shadings have its own dimension like a normal shape. The parameters `Extend1` and `Extend2` extend the shading beyond its dimension. If the shading is extended it must normally be drawn into a clipping path to avoid overprinting of other objects.

Shadings support any device, ICCBased, and special color spaces like DeviceN or Separation. The color values of the start and end color must be defined in the current color space. See also `DynaPDF.SetColorSpace`, `DynaPDF.SetExtColorSpace`.

This function creates a shading object but it doesn't draw it on the page. The shading can be drawn with `DynaPDF.ApplyShading`.

If the function succeeds the return value is the shading handle, a value greater or equal zero. If the function fails, it returns an error.

See also [CreateRadialShading](#) function in DynaPDF manual.

## 71.62 DynaPDF.CreateRadioButton

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateRadioButton"; PDF; Name; ExpValue; Checked; Parent; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the field

"IsMale"

#### ExpValue

Export value (required)

"IsMale"

#### Checked

If 1, the check box appears checked. Else pass 0 for unchecked.

0

#### Parent

Parent group field if any or -1.

-1

#### PosX

X-Coordinate of the text field.

100

#### PosY

Y-Coordinate of the text field.

100

#### Width

Width of the text field.

100

#### Height

Height of the text field.

20

**Result** Returns handle or error.

### Description

A radio button field is a set of related toggle controls (check boxes), at most one of which may be on at any given time; selecting any one of the button automatically deselects all others.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the first check box that is automatically created by this function. If the coordinate system is top-down it defines the upper left corner.

Like all form fields, the width and height is measured incl. the line width of the border. The size of normal vector graphics is measured without the line width; this must be taken into account when calculating the width or height of a form field. The line width of the border is derived from the current graphics state (see DynaPDF.SetLineWidth), it should be either 0, 1, 2, or 3 units (no border, thin, medium, or thick). The border style can be changed with the functions DynaPDF.SetBorderStyle or DynaPDF.SetFieldBorderStyle.

This field type supports two additional flags: `ffNoToggleToOff` and `ffRadioIsUnion`. The flag `ffNoToggleToOff` has no more any effect in Adobes Acrobat or Reader. The radio button behaves always as if the flag `ffNoToggleToOff` is set.

If the flag `ffRadioIsUnion` is set, and if two or more check boxes contain the same export value, then these check boxes will be selected in unison.

It is not possible to add an action to a radio button field. Actions must be added to the check boxes which are included in the radio button. The handle of the first check box can be calculated by adding 1 to the handle value of the radio button field. For example, if the handle of the radio button is 1, then the handle of the first check box is 2.

If the function succeeds the return value is the handle of the radio button, a value greater or equal zero. If the function fails the return is error message.

## 71.63 DynaPDF.CreateSeparationCS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateSeparationCS"; PDF; Colorant; Alternate; Handle; Color )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Colorant

Colorant name. Required.

"Pantone"

#### Alternate

The alternate color space. Can be DeviceRGB, DeviceCMYK, DeviceGray, CalGray, CalRGB, Lab, IC-CBased, Pattern, Indexed, Separation, DeviceN, NChannel or the matching number value.

"DeviceCMYK"

#### Handle

Alternate color space handle or -1.

#### Color

Color value defined in the alt. color space.

**Result** Returns color space handle or error.

### Description

Color output devices produce full color by combining primary or process colorants in varying amounts. On an additive color device such as a display, the primary colorants consist of red, green, and blue phosphors; on a subtractive device such as a printer, they typically consist of cyan, magenta, yellow, and sometimes black inks. In addition, some devices can apply special colorants, often called spot colorants, to produce effects that cannot be achieved with the standard process colorants alone. Examples include metallic and fluorescent colors and special textures.

When printing a page, most devices produce a single composite page on which all process colorants (and spot colorants, if any) are combined. However, some devices, such as imagesetters, produce a separate, monochromatic rendition of the page, called a separation, for each colorant. When the separations are later combined—on a printing press, for example—and the proper inks or other colorants are applied to them, the result is a full-color page.

A Separation color space (PDF 1.2) provides a means for specifying the use of additional colorants or for isolating the control of individual color components of a device color space for a subtractive device. When such a space is the current color space, the current color is a single-component value, called a tint, that controls the application of the given colorant or color components only.

The parameter Colorant specifies the colorant name which this Separation color space is intended to represent. The special colorant name All refers collectively to all colorants available on an output device, including those for the standard process colorants. When a Separation space with this colorant name is the current color space, painting operators apply tint values to all available colorants at once. This is useful for purposes

such as painting registration targets in the same place on every separation.

Such marks are typically painted as the last step in composing a page to ensure that they are not overwritten by subsequent painting operations.

The special colorant name `None` never produces any visible output. Painting operations in a Separation space with this colorant name have no effect on the current page.

The parameter `Alternate` specifies the alternate color space in which the color should be rendered if the device does not support the specified colorant. The alternate color space can be any Device or CIE based color space but not in turn a special color space like Separation, Indexed, or DeviceN.

The parameter `Handle` specifies the handle of the alternate color space if a CIE based color space should be used. If the alternate color space is a device color space the parameter `Handle` is ignored.

The parameter `Color` specifies the alternate color value, defined in the alternate color space, which is used if the device does not support the colorant.

A color value in a Separation color space consists of a single tint component in the range 0 to 255. The value 0 represents the minimum amount of colorant that can be applied; 255 represent the maximum. Tints are always treated as subtractive colors, even if the device produces output for the designated component by an additive method. Thus, a tint value of 0 denotes the lightest color that can be achieved with the given colorant, and 255 is the darkest. This convention is the same as for DeviceCMYK color components but opposite to the one for DeviceGray and DeviceRGB.

Encoding of Colorant Names

MBS Plugin uses UTF-8 for colorants names.

Notice:

Non-device color spaces cannot be used for interactive objects such as annotations or form fields. The active color space must always be changed to a device color space before creating interactive objects; see `DynaPDF.SetColorSpace`. Note also that annotations support DeviceRGB only. Form fields support DeviceGray, DeviceRGB, and DeviceCMYK.

Remarks:

Use the function `DynaPDF.SetExtColorSpace` to activate the color space in the graphics state. To set a color of a Separation space pass the wished color value to `DynaPDF.SetFillColor`, `DynaPDF.SetStrokeColor`, or `DynaPDF.SetColors`.

Return values:

If the function succeeds the return value is the color space handle, a value greater or equal zero. If the function fails the return value is an error message.

See also [CreateSeparationCS](#) function in DynaPDF manual.

### Examples

Create separation color space:

```
# We create also Separation color spaces for the spot colors and add
# these color spaces as an attribute to the DeviceN color space:
Set Variable [ $separations0 ; Value: MBS("DynaPDF.CreateSeparationCS"; $pdf; "Yellow"; "DeviceCMYK";
-1; MBS("DynaPDF.CMYK"; 0; 0; 87; 0)) ]
```

Draw line in a separation color:

```
# draw line in Cut Color
Set Variable [ $cs ; Value: MBS("DynaPDF.CreateSeparationCS"; $pdf; "Through Cut"; "DeviceCMYK";
-1; MBS("DynaPDF.CMYK"; 0; 255; 0; 0)) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetExtColorSpace"; $pdf; $cs) ]
```

71.63. *DYNAPDF.CREATESEPARATIONCS* 2701

Set Variable [ \$r ; Value: MBS("DynaPDF.SetFillColor"; \$pdf; 1) ]

Set Variable [ \$r ; Value: MBS( "DynaPDF.Rectangle"; \$pdf; \$x; \$y; \$w; \$h; "Stroke" ) ]

## 71.64 DynaPDF.CreateSigField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateSigField"; PDF; Name; Parent; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the field

"IsMale"

#### Parent

Parent group field if any or -1.

-1

#### PosX

X-Coordinate of the text field.

100

#### PosY

Y-Coordinate of the text field.

100

#### Width

Width of the text field.

100

#### Height

Height of the text field.

20

**Result** Returns handle or error message.

### Description

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the signature field. If the coordinate system is top-down it defines the upper left corner.

Like all form fields, the width and height is measured incl. the line width of the border. The size of normal vector graphics is measured without the line width; this must be taken into account when calculating the width or height of a form field. The line width of the border is derived from the current graphics state (see DynaPDF.SetLineWidth), it should be either 0, 1, 2, or 3 units (no border, thin, medium, or thick). The border style can be changed with the functions DynaPDF.SetBorderStyle or DynaPDF.SetFieldBorderStyle. If the PDF file should be digitally signed by DynaPDF call the function DynaPDF.CloseAndSignFile or DynaPDF.CloseAndSignFileEx after all pages has been created. The first signature field is used for signing

if multiple signature fields exist. In this case it is also possible to create a user defined appearance for the signature field. See `CreateSigFieldAP()` for further information.

A signature field can be visible or invisible depending on your requirements. To create a hidden signature field set the flag `ffHidden` to the field (see also `DynaPDF.SetFieldFlags`).

How to lock an Interactive Form after signing?

If an Interactive Form should be filled in and signed within the full version of Adobe's Acrobat 4 or higher then it is possible to create an empty signature field which executes a special JavaScript Action to lock the form after it has been signed. This can be done with a JavaScript Action which contains the JavaScript function `AFSignature_Format()`. This function can be called within the `OnFormat` event of the signature field. Note that this is the one and only event that signature fields support.

The function supports two parameters, the first parameter defines whether all or only specific fields should be locked, the second parameter contains either an empty array or an array of full qualified field names delimited by a comma:

- `AFSignature_Format("ALL", new Array (""))`;
- `AFSignature_Format("THESE", new Array ("Field1, Field2"))`;
- `AFSignature_Format("EXCEPT", new Array ("Field1, Field2"))`;

If a form contains a button with a Submit Form Action then it is recommended to exclude the button field from locking so that it is still possible to submit the form data. Otherwise, the entire form is locked, incl. the submit button, and it is impossible to submit the form data to a web server.

## 71.65 DynaPDF.CreateSigFieldAP

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateSigFieldAP"; PDF; SigField )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### SigField

Handle of a signature field.

\$SigField

**Result** Returns action handle or error.

### Description

The created template is already opened if the function succeeds and you can draw arbitrary contents into it. After the appearance has been defined the template must be closed with EndTemplate.

Note that the template is reserved for the signature field. It must not be placed on pages or other templates. When creating a user defined appearance for a signature field you should also place the validation icon properly so that it does not overprint the entire contents. See also DynaPDF.PlaceSigFieldValidateIcon.

If the function succeeds the return value is the action handle, a value greater or equal zero. If the function fails the return value is the error message.

See also [CreateSigFieldAP](#) function in DynaPDF manual.

## 71.66 DynaPDF.CreateStructureTree

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateStructureTree"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

See dynapdf\_help.pdf manual for details.

Required for PDF/A.

See also [CreateStructureTree](#) function in DynaPDF manual.

### Examples

Create structure tree:

```
Set Variable [ $r; Value:MBS("DynaPDF.CreateStructureTree"; $pdf) ]
```

## 71.67 DynaPDF.CreateTextField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateTextField"; PDF; Name; Parent; Multiline; MaxLen; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Name of the text field

"Input"

#### Parent

Parent group field if any or -1.

-1

#### Multiline

Enable multi line text output.

0

#### MaxLen

Maximum length of the text or 0.

0

#### PosX

X-Coordinate of the text field.

100

#### PosY

Y-Coordinate of the text field.

100

#### Width

Width of the text field.

100

#### Height

Height of the text field.

20

**Result** Returns field handle or error.

### Description

See CreateTextField function in dynapdf\_help.pdf for details.

See also [CreateTextField](#) function in DynaPDF manual.

### Examples

Create a text field:

```
Set Variable [ $f; Value:MBS( "DynaPDF.CreateTextField"; $pdf; "Val1"; -1; 0; 0; 50; $y; 200; 20) ]
```

## 71.68 DynaPDF.CreateXFASStream

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	9.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.CreateXFASStream"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns number or error.

### Description

The parameter Name must be the name of the XFA resource. XML must be a valid XFA stream buffer or empty text, if the buffer should be set later with DynaPDF.SetXFASStream.

If the function succeeds the return value is the stream handle, a value greater or equal zero.

If the function fails the return value is an error message.

### See also

## 71.69 DynaPDF.DeleteAcroForm

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteAcroForm"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

If the document contains no interactive form the function does nothing.  
See also [DeleteAcroForm](#) function in DynaPDF manual.

### See also

- 71.82 DynaPDF.DeleteXFAForm 2725

## 71.70 DynaPDF.DeleteActionFromObjEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteActionFromObjEx"; PDF; ObjType; ActHandle; ObjHandle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### ObjType

The type of object. Can be Action, Annotation, Bookmark, Catalog, Field, Page or PageLink.

"Page"

#### ActHandle

The action handle.

\$action

#### ObjHandle

The object handle.

\$obj

**Result** Returns OK or error.

### Description

If the object type is page, then use the page number as handle. If the handle of the action is not known, because the object was may be imported from an external PDF file, then use the function DynaPDF.DeleteActionFromObjEx instead.

See also [DeleteActionFromObjEx](#) function in DynaPDF manual.

### See also

- 71.294 DynaPDF.New

3032

Created 6th February 2015, last changed 6th February 2015.

## 71.71 DynaPDF.DeleteAnnotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteAnnotation"; PDF; AnnotationHandle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

**Result** Returns OK or error.

### Description

Annotations are global objects. To delete specific annotations of a PDF file use the functions DynaPDF.GetAnnotCount, DynaPDF.GetAnnotType and DynaPDF.DeleteAnnotation.

Annotations are marked as deleted and not removed from list of annotations right away.

See also [DeleteAnnotation](#) function in DynaPDF manual.

### See also

- 71.125 DynaPDF.GetAnnotation 2798

## 71.72 DynaPDF.DeleteBookmark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteBookmark"; PDF; BookmarkHandle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### BookmarkHandle

The reference number for the bookmark. Either returned by one of the add/insert functions or just counting from 0 to DynaPDF.GetBookmarkCount-1.

\$BookmarkHandle

**Result** Returns number or error.

### Description

The parameter BookmarkHandle must be a valid bookmark handle. Please note that this function invalidates all bookmark handles which are numerically greater than BookmarkHandle. DynaPDF supports several functions to find or enumerate bookmarks. It is safe to delete a bookmark within a search run. See the following functions for further information:

- DynaPDF.GetBookmarkCount
- DynaPDF.GetBookmark
- DynaPDF.FindBookmark and DynaPDF.FindNextBookmark

If the function succeeds the return value is the remaining number of bookmarks. If the function fails the return value is an error.

See also [DeleteBookmark](#) function in DynaPDF manual.

### See also

- 71.32 DynaPDF.ChangeBookmark 2642

- 71.129 DynaPDF.GetBookmarkCount 2805
- 71.278 DynaPDF.InsertBookmark 2999
- 71.294 DynaPDF.New 3032

Created 18th August 2014, last changed 18th August 2014.

## 71.73 DynaPDF.DeleteEmbeddedFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteEmbeddedFile"; PDF; Handle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Handle

The index number for the embedded file. Range from 0 to DynaPDF.GetEmbeddedFileCount.

0

**Result** Returns OK or error.

### Description

The parameter Handle must be a valid embedded file handle. Such a handle is a simple array index. DynaPDF.GetEmbeddedFileCount returns the remaining number of embedded files. If all embedded files should be deleted then delete the files from top to bottom by decrementing the loop variable. This is faster because it is not required to reorganize the array in which the files are stored in this case. All handles above the deleted file index become invalid after the file was deleted.

See also [DeleteEmbeddedFile](#) function in DynaPDF manual.

### See also

- 71.108 DynaPDF.FindEmbeddedFile 2772

- 71.149 DynaPDF.GetEmbeddedFileCount 2827
- 71.294 DynaPDF.New 3032

Created 6th February 2015, last changed 6th February 2015.

## 71.74 DynaPDF.DeleteField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteField"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

A field handle.  
\$field

**Result** Returns OK or error.

### Description

The parameter Field must be a valid field handle. If the field is a radio button or group field, the child fields used are also deleted. There is no need to delete each field separately.

A field is never physically deleted. All field handles are still valid after a field was deleted, but the "Used" flag of the field is set to false (see DynaPDF.GetField for further information). If a field contained an action that was not used by another object then the action is also deleted.

Fields can also be deleted by using its name instead of the handle. See DynaPDF.DeleteFieldEx for further information.

See also [DeleteField](#) function in DynaPDF manual.

## 71.75 DynaPDF.DeleteFieldEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteFieldEx"; PDF; Name )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Name

Full qualified field name.  
"FirstName"

**Result** Returns OK or error.

### Description

This function deletes an interactive form field by using its full qualified name, that is the name of any parent group field separated by a period (.) plus the field name.

Check boxes of a radio button have no name. It is not possible to delete such a check box by using this function, use DynaPDF.DeleteField instead. However, the entire radio button can be deleted with this function.

See also [DeleteFieldEx](#) function in DynaPDF manual.

## 71.76 DynaPDF.DeleteJavaScripts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteJavaScripts"; PDF; DelJavaScriptActions )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### DelJavaScriptActions

Delete Javascript Actions? Pass 1 to delete or 0 to not delete.

1

**Result** Returns OK or error.

### Description

Optionally deletes all Javascript Actions from the document.

See also [DeleteJavaScripts](#) function in DynaPDF manual.

### See also

- 71.294 DynaPDF.New

## 71.77 DynaPDF.DeletePage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeletePage"; PDF; PageNumber )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### PageNumber

The page number to delete. Range from 1 to DynaPDF.GetPageCount.  
1

**Result** Returns OK or error.

### Description

See also [DeletePage](#) function in DynaPDF manual.

## 71.79 DynaPDF.DeleteSeparationInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteSeparationInfo"; PDF { ; AllPages } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AllPages

Optional

Optionally, delete the separation info of all pages? Pass 1 to delete.

0

**Result** Returns OK or error.

### Description

If of all pages if the parameter AllPages is set to 1.

See also [DeleteSeparationInfo](#) function in DynaPDF manual.

### See also

## 71.80 DynaPDF.DeleteTemplate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteTemplate"; PDF; Handle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Handle

Template handle.

\$template

**Result** Returns OK or error.

### Description

The parameter Handle must be a valid template handle. A template is not physically deleted by this function, only the content stream is cleared. Templates can be references in other content stream so that it is quite complex to delete a template physically at runtime. However, this behavior is maybe changed in a future version of DynaPDF.

Imported PDF pages are converted to templates by default. The handles of such templates are often not known, however, it is possibly to delete them by using the function DynaPDF.DeleteTemplateEx(

See also [DeleteTemplate](#) function in DynaPDF manual.

## 71.81 DynaPDF.DeleteTemplateEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteTemplateEx"; PDF; Index )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Index

Index of the template inside the page's array.

0

**Result** Returns OK or error.

### Description

The parameter Index represents an index into the array of templates used by the current open page. The number of templates used by a page is returned by the function DynaPDF.GetTemplCount.

It is not easy to identify a specific template, all templates used by a page can be deleted easily, but it is much more complex to delete a specific template if the page contains more than one.

However, if a template contains text, then the functions DynaPDF.EditTemplate and DynaPDF.GetPage-Text can be used to identify a template, but in most cases it is easier to delete a template and check the file with Acrobat or Reader to determine whether it was the right one.

See also [DeleteTemplateEx](#) function in DynaPDF manual.

## 71.82 DynaPDF.DeleteXFAForm

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DeleteXFAForm"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns OK or error.

### Description

This can be useful if the PDF file contains a hybrid form because DynaPDF does not allow editing form fields as long as an XFA form is present.

See also [DeleteXFAForm](#) function in DynaPDF manual.

## 71.83 DynaPDF.DrawArc

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DrawArc"; PDF; PosX; PosY; Radius; StartAngle; EndAngle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of the midpoint of the arc

\$x

#### PosY

Y-Coordinate of the midpoint of the arc

\$y

#### Radius

Radius of the arc.

50

#### StartAngle

Start Angle.

\$StartAngle

#### EndAngle

End Angle.

\$EndAngle

**Result** Returns OK or error.

### Description

A full circle is drawn if the start and end angles are the same. The path is not closed, stroked or filled so that it will be invisible as long it is not stroked, filled or both (see DynaPDF.ClosePath, DynaPDF.StrokePath for further information).

The current point is connected with the start point of the arc and then updated to end point of the arc, see example below.

The draw direction can be changed with the function DynaPDF.SetDrawDirection. The start and end angles are always measured counter clockwise independent of the drawing direction.

See also [DrawArc](#) function in DynaPDF manual.

## 71.84 DynaPDF.DrawArcEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DrawArcEx"; PDF; PosX; PosY; Width; Height; StartAngle; EndAngle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of the midpoint of the arc

\$x

#### PosY

Y-Coordinate of the midpoint of the arc

\$y

#### Width

Width of the bounding rectangle

\$w

#### Height

Height of the bounding rectangle

\$h

#### StartAngle

Start Angle.

\$StartAngle

#### EndAngle

End Angle.

\$EndAngle

**Result** Returns OK or error.

### Description

A full ellipse is drawn if the start and end angles are the same. The path is not closed, stroked or filled so that it will be invisible as long it is not stroked, filled or both (see DynaPDF.ClosePath, DynaPDF.StrokePath for further information).

The current point is connected with the start point of the ellipse and then updated to the end point of the ellipse.

The draw direction can be changed with the function DynaPDF.SetDrawDirection. The start and end angles are always measured counter clockwise independent of the drawing direction.

## 71.85 DynaPDF.DrawChord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DrawChord"; PDF; PosX; PosY; Width; Height; StartAngle; EndAngle; FillMode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of the midpoint of the chord

\$x

#### PosY

Y-Coordinate of the midpoint of the chord

\$y

#### Width

Width of the bounding rectangle

\$w

#### Height

Height of the bounding rectangle

\$h

#### StartAngle

Start Angle.

\$StartAngle

#### EndAngle

End Angle.

\$EndAngle

#### FillMode

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error.

### Description

The draw direction can be changed with the function DynaPDF.SetDrawDirection. The start and end angles are always measured counter clockwise independent of the drawing direction.

A chord is a closed path that can be filled, stroked or both. It is also possible to draw a chord invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described under DynaPDF.ClipPath. The parameter FillMode is ignored if the chord is drawn inside a clipping path. The fill modes are described under DynaPDF.ClosePath.

## 71.86 DynaPDF.DrawCircle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DrawCircle"; PDF; PosX; PosY; Radius; FillMode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of the midpoint of the pie.

\$x

#### PosY

Y-Coordinate of the midpoint of the pie.

\$y

#### Radius

The radius to use.

\$radius

#### FillMode

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error.

### Description

The draw direction can be changed with the function DynaPDF.SetDrawDirection.

A circle is a closed path that can be filled, stroked or both. It is also possible to draw a circle invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described under DynaPDF.ClipPath. The parameter FillMode is ignored if the circle is drawn inside a clipping path. The fill modes are described under DynaPDF.ClosePath.

See also [DrawCircle](#) function in DynaPDF manual.

### Examples

Clip image to circle:

```
# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ "InitDynaPDF" ]
End If
# Clear current PDF document
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Add image on page
Set Variable [ $destPage ; Value: 1 ]
```

```

Set Variable [ $r ; Value: MBS("DynaPDF.AppendPage"; $pdf) ]
# no recompression if possible! But if needed, we use JPEG 90%
Set Variable [ $r ; Value: MBS("DynaPDF.SetSaveNewImageFormat"; $pdf; 0) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetJPEGQuality"; $pdf; 90) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetCompressionFilter"; $pdf; "jpeg") ]
# Save old state to restore later
Set Variable [ $r ; Value: MBS( "DynaPDF.SaveGraphicState"; $pdf ) ]
# Draw circle for clipping
Set Variable [ $r ; Value: MBS( "DynaPDF.DrawCircle"; $pdf; 260; 220; 100; "nofill" ) ]
Set Variable [ $r ; Value: MBS( "DynaPDF.ClipPath"; $pdf; "Winding"; "fill" ) ]
# Draw clipped image
Set Variable [ $r ; Value: MBS("DynaPDF.InsertImage"; $pdf; Merge PDFs::InputImage; 100; 100; 320; 200) ]
# restore graphics static to get unclipped drawing
Set Variable [ $r ; Value: MBS( "DynaPDF.RestoreGraphicState"; $pdf ) ]
# Close page and store PDF in container
Set Variable [ $r ; Value: MBS("DynaPDF.EndPage"; $pdf) ]
Set Field [ Merge PDFs::FinalPDF ; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]

```

## 71.87 DynaPDF.DrawPie

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.DrawPie"; PDF; PosX; PosY; Width; Height; StartAngle; EndAngle; FillMode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of the midpoint of the pie.

\$x

#### PosY

Y-Coordinate of the midpoint of the pie.

\$y

#### Width

Width of the bounding rectangle.

\$w

#### Height

Height of the bounding rectangle.

\$h

#### StartAngle

Start Angle.

\$StartAngle

#### EndAngle

End Angle.

\$EndAngle

#### FillMode

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error.

### Description

The draw direction can be changed with the function DynaPDF.SetDrawDirection. The start and end angles are always measured counter clockwise independent of the drawing direction.

A pie is a closed path that can be filled, stroked or both. It is also possible to draw a pie invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described under DynaPDF.ClipPath. The parameter FillMode is ignored if the pie is drawn inside a clipping path. The fill modes are described under DynaPDF.ClosePath.

## 71.88 DynaPDF.EditPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.EditPage"; PDF; Page )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Page

The number of the page to edit. Range from 1 to DynaPDF.GetPageCount.

1

**Result** Returns OK on success.

### Description

If the page does exist (PageNum is greater than the number of pages in the document), new pages are appended until the number of pages is equal PageNum. An open page must be closed with EndPage() after the required changes are made.

See also [EditPage](#) function in DynaPDF manual.

### Examples

Edit page 1:

```
Set Variable [ $r; Value:MBS("DynaPDF.EditPage"; $pdf; 1) ]
```

Loop over pages and add page numbers:

```
Set Variable [ $PageCount; Value:MBS( "DynaPDF.GetPageCount"; $pdf ) ]
```

```
Set Variable [ $PageNumber; Value:1 ]
```

```
Set Variable [ $pageWidth; Value:MBS("DynaPDF.GetPageWidth"; $pdf) ]
```

```
Set Variable [ $pageHeight; Value:MBS("DynaPDF.GetPageHeight"; $pdf) ]
```

Loop

```
Set Variable [ $r; Value:MBS("DynaPDF.EditPage"; $pdf; $PageNumber) ]
```

```
Set Variable [ $r; Value:MBS( "DynaPDF.SetFont"; $pdf; "Helvetica"; 0; 12) ]
```

```
Set Variable [ $r; Value:MBS( "DynaPDF.WriteFTextEx"; $pdf; 50; $pageHeight - 50; $pageWidth-100; 30; "right"; GetAsText($PageNumber) & " of " & $PageCount) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
```

```
Set Variable [ $PageNumber; Value:$PageNumber +1 ]
```

```
Exit Loop If [ $PageNumber >$PageCount ]
```

End Loop

## 71.89 DynaPDF.EditTemplate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.EditTemplate"; PDF; TemplateIndex )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### TemplateIndex

Index of template. From 0 to DynaPDF.GetTemplateCount-1.

0

**Result** Returns OK or error.

### Description

The parameter Index is the array index inside the page that contains the template. To get the number of templates used by a page call the function DynaPDF.GetTemplCount. The current graphics state is saved entirely before the template will be opened. This graphics state is restored when the template is closed with DynaPDF.EndTemplate. That means, the current font, line width, fill color and so on are all restored to its values before entering the template. DynaPDF.EndTemplate requires an open page that must be opened with DynaPDF.EditPage beforehand. After the changes are made the template must be closed with DynaPDF.EndTemplate.

DynaPDF.EditTemplate is mostly used to extract text strings from imported PDF files because imported pages are converted to templates by default. See DynaPDF.GetPagetext() for an example application.

See also [EditTemplate](#) function in DynaPDF manual.

- [MBS FileMaker Plugin, version 5.1pr9](#)

Created 16th May 2015, last changed 17th May 2015.

## 71.90 DynaPDF.EditTemplate2

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.EditTemplate2"; PDF; TemplateHandle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### TemplateHandle

The template handle number.

\$template

**Result** Returns OK or error.

### Description

Templates can be edited multiple times in the same way as normal PDF pages. Therefore, the function prepares the template for editing. The current graphics state is saved entirely before the template will be opened and restored when the template will be closed with DynaPDF.EndTemplate. The current font, line width, fill color and so on are all restored to its values before entering the template.

The function depends not on an open page.

See also [EditTemplate2](#) function in DynaPDF manual.

Created 16th May 2015, last changed 16th May 2015.

## 71.91 DynaPDF.Ellipse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Ellipse"; PDF; PosX; PosY; Width; Height; FillMode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of the bounding rectangle

\$x

#### PosY

Y-Coordinate of the bounding rectangle.

\$y

#### Width

Width of the bounding rectangle.

200

#### Height

Height of the bounding rectangle.

150

#### FillMode

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error.

### Description

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.

The draw direction can be changed with the function DynaPDF.SetDrawDirection.

An ellipse is a closed path that can be filled, stroked or both. It is also possible to draw an ellipse invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described under DynaPDF.ClipPath. The parameter FillMode is ignored if the ellipse is drawn inside a clipping path. The fill modes are described under DynaPDF.ClosePath.

See also [Ellipse](#) function in DynaPDF manual.

## 71.92 DynaPDF.EnableEncryption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.EnableEncryption"; PDF; OpenPwd; OwnerPwd; Encryption { ; RestrictFlags } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### OpenPwd

Open password.

""

#### OwnerPwd

Owner password.

"Hello"

#### Encryption

Which encryption to use. Can be 40bit, 128bit, 128bitEx, AES128, AES256 or AESRev6.

"AES256"

#### RestrictFlags

Optional

What restrictions to apply. See above.

4+8

**Result** Returns OK on success.

### Description

Available Encryption methods:

ID	Encryption	PDF Version	Acrobat Version
0	RC4 40bit	PDF 1.2	Acrobat 3 or higher
1	RC4 128bit	PDF 1.4	Acrobat 5 or higher
2	RC4 128bit improved	PDF 1.5	Acrobat 6 or higher
3	AES 128bit	PDF 1.6	Acrobat 7 or higher
4	AES 256bit	PDF 1.7	Acrobat 9 or higher

Available restrictions:

FillInFormFields and later are for 128/256 bit encryption only, so ignored if 40 bit encryption is used.

Please combine those like this: Print and Modify = 4 + 8 = 12.

Please see DynaPDF manual on CloseFileEx function for details on which combination of restrictions are possible.

DenyNothing	0	Encrypt the file only
DenyAll	3900	Deny anything
Print	4	Deny printing
Modify	8	Deny modification of contents
CopyObj	16	Deny copying of contents
AddObj	32	No commenting
FillInFormFields	256	requires Modify + AddObj
ExtractObj	512	requires Modify
Assemble	1024	requires Modify
PrintHighRes	2048	Disable high res. printing
ExlMetadata	4096	PDF 1.5 Exclude metadata streams
EmbFilesOnly	8192	PDF 1.6 AES Encryption only

For passwords, please use only ASCII characters to avoid trouble with text encodings.

Requires DynaPDF Pro license.

### Examples

Don't allow adding content:

```
MBS( "DynaPDF.EnableEncryption"; $PDF; ""; "secret"; 1; 16 + 32 + 256 + 1024 )
```

Create AES 256-bit encrypted PDF:

```
# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ Specified: From list ; "InitDynaPDF" ; Parameter: ]
End If
# Clear current PDF document
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Add page
Set Variable [ $r ; Value: MBS("DynaPDF.AppendPage"; $pdf) ]
# Write some text
Set Variable [ $r ; Value: MBS("DynaPDF.SetFont"; $pdf; "Helvetica"; 0; 12) ]
Set Variable [ $x ; Value: MBS("DynaPDF.GetPageHeight"; $pdf)-100 ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetFillColor"; $pdf; 0; 0; 0) ]
Set Variable [ $r ; Value: MBS("DynaPDF.WriteText"; $pdf; 100; $x; "Some black text") ]
# End page
Set Variable [ $r ; Value: MBS("DynaPDF.EndPage"; $pdf) ]
# Add encryption with AES
Set Variable [ $r ; Value: MBS( "DynaPDF.EnableEncryption"; $PDF; "xxx"; "yyy"; "AES256"; 8+16+32+256+512+1024+2048+4096+8192
) ]
# Save PDF to put in container later
Set Variable [ $PDFData ; Value: MBS("DynaPDF.Save"; $pdf; "hello.pdf") ]
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]
# Put in Container
```

71.92. *DYNAPDF.ENABLEENCRYPTION* 2745  
Set Field [ Create Text::PDF ; \$PDFData ]

## 71.93 DynaPDF.EndLayer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.EndLayer"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

See also [EndLayer](#) function in DynaPDF manual.

## 71.95 DynaPDF.EndPattern

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.EndPattern"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

You can open patterns with DynaPDF.BeginPattern or DynaPDF.CreateStdPattern.  
See also [EndPattern](#) function in DynaPDF manual.

**71.97 DynaPDF.ExchangeBookmarks**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ExchangeBookmarks"; PDF; Bmk1; Bmk2 )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Bmk1**

Handle of first bookmark.

3

**Bmk2**

Handle of second bookmark.

5

**Result** Returns OK or error

**Description**

See also [ExchangeBookmarks](#) function in DynaPDF manual.

**See also**

- 71.32 DynaPDF.ChangeBookmark 2642

## 71.98 DynaPDF.ExchangePages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ExchangePages"; PDF; First; Second )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### First

First page number.

3

#### Second

Second page number.

5

**Result** Returns OK or error.

### Description

Page links, bookmarks, go-to actions, and named destinations are changed so that the destination page still refers to the correct page. Note that page numbering starts at 1. It is also possible to move a page to another position in the file (see DynaPDF.MovePage for further information).

See also [ExchangePages](#) function in DynaPDF manual.

### See also

- 71.100 DynaPDF.ExtractImages 2755

## 71.99 DynaPDF.ExtractDocumentText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ExtractDocumentText"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns text or error.

### Description

This is like extracting page by page, but plugin may do it faster than a loop in a FileMaker script and puts a newline between pages.

Use DynaPDF.ExtractPageText if you need text from just one page.

For Mac only solutions, you can also try PDFKit.GetPDFText.

Needs DynaPDF Lite license.

### Examples

Load PDF and extract text:

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer";$pdf; Test::data) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile";$pdf) ]
Set Field [ Test::PageText; MBS("DynaPDF.ExtractDocumentText"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
```

Full script to get text with error checking:

```
If [ MBS("DynaPDF.IsInitialized") = 1 ]
Perform Script [ "InitDynaPDF" ]
End If
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "DynaPDF Fehler"; $pdf ]
Else
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer";$pdf; Test::data) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "DynaPDF Fehler"; $r ]
Else
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile";$pdf) ]
If [ MBS("IsError") ]
```

```

Show Custom Dialog [ "DynaPDF Fehler"; $r ]
Else
Set Field [ Test::PageText; MBS("DynaPDF.ExtractTextOld"; $pdf) ]
Commit Records/Requests [ No dialog ]
End If
End If
# Cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
End If

```

## 71.100 DynaPDF.ExtractImages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ExtractImages"; PDF; Path { ; Flags; Page } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Path

The native Path to the folder ending with slash/backslash.

"C:\Images\"

#### Flags

Optional

Optional, various flags for image extraction.

0

#### Page

Optional

The page number to look at. If missing or empty, we process all pages.

123

**Result** Returns number of imported files or error.

### Description

Please import first a PDF file (or selected pages)

For the flags, please check the pf flags in dynapdf manual.

e.g. pass 34 (pfConvImagesToRGB + pfDecomprAllImages) convert all images to RGB.

Filenames are 4 digit number counting up the images with jpg, jp2 or tif extensions.

This function uses the parser interface in DynaPDF and needs a Pro license.

**71.101 DynaPDF.ExtractPageRectText**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ExtractPageRectText"; PDF; pageIndex; RectLeft; RectTop; RectRight; RectBottom )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**pageIndex**

The number of the page. Must be within 1 and DynaPDF.GetPageCount.

1

**RectLeft**

Left coordinate of the rectangle to search.

0

**RectTop**

Top coordinate of the rectangle to search.

0

**RectRight**

Right coordinate of the rectangle to search.

595

**RectBottom**

Bottom coordinate of the rectangle to search.

842

**Result** Returns the text or error message.

**Description**

Use DynaPDF.ExtractPageText if you need text from whole page.

Text that starts within the given rectangle is captured.

Be aware that PDF coordinates start on bottom left of page with 0/0.

Needs DynaPDF Lite license.

**Examples**

Takes text only from top rectangle:

MBS("DynaPDF.ExtractPageRectText"; \$pdf; \$PageIndex; 0; 695; 595; 842)

Takes text only from left column:

MBS("DynaPDF.ExtractPageRectText"; \$pdf; \$PageIndex; 0; 0; 295; 842)

Takes text only from right column:

```
MBS("DynaPDF.ExtractPageRectText"; $pdf; $PageIndex; 295; 0; 595; 842)
```

## 71.102 DynaPDF.ExtractPageText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ExtractPageText"; PDF; pageIndex )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### pageIndex

The number of the page. Must be within 1 and DynaPDF.GetPageCount.  
1

**Result** Returns the text or error message.

### Description

Use DynaPDF.ExtractDocumentText is you need text from whole document.

For Mac only solutions, you can also try PDFKit.GetPDFPageText instead.  
Needs DynaPDF Lite license.

### Examples

Queries page text of page 5:

```
$text = MBS( "DynaPDF.ExtractPageText"; $PDF; 5 )
```

Load PDF and extract text of page 2:

```
# initialize DynaPDF before running this:
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# load PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer";$pdf; Test::data) ]
# import all pages
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile";$pdf) ]
# extra text of page 2
Set Field [ Test::PageText; MBS("DynaPDF.ExtractPageText"; $pdf; 2) ]
# Cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
```

### See also

- [Ausgabe 1/2016, Seite 32](#)

Created 18th August 2014, last changed 8th November 2019.

## 71.103 DynaPDF.ExtractText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ExtractText"; PDF; PageNum { ; Flags; AreaLeft; AreaTop; AreaRight; AreaBottom } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### PageNum

The page number.  
1

#### Flags

Optional  
The flags for text extraction. Can include SortTextX, SortTextY, SortTextXY and/or DeleteOverlappingText.  
"SortTextXY"

#### AreaLeft

Optional  
The left coordiante of the area.

#### AreaTop

Optional  
The top coordiante of the area.

#### AreaRight

Optional  
The right coordiante of the area.

#### AreaBottom

Optional  
The bottom coordiante of the area.

**Result** Returns text or error.

### Description

The first page is denoted by 1.

Text lines can be sorted in x- and y-direction. The flag DeleteOverlappingText causes that identical text records which are placed on the same position (with a tolerance of 2 units) will be deleted. The records must occur one after the other in order to detect them.

The optional parameter Area can be set to restrict the text extraction to that rectangle. The rectangle must be defined according to the current coordinate system. That means either in bottom up or top down coor-

ordinates, see `SetPageCoords()` for further information. Note also that the function considers the orientation of the page. The width and height of the rectangle must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

If the function succeeds the return value is the text. If the function fails the return value is an error.

Special thing: If this function is called with two parameters, it redirects to old function `DynaPDF.ExtractDocumentText` to keep compatibility with existing scripts. If area parameters are not given or all zero, the area is not used.

Needs DynaPDF Lite license.

See also [ExtractText](#) function in DynaPDF manual.

### Examples

Extract some text:

```
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
Set Variable [ $r ; Value: MBS("DynaPDF.OpenPDFFromContainer";$pdf; Test::data) ]
Set Variable [ $r ; Value: MBS("DynaPDF.ImportPDFFile";$pdf) ]
Set Field [ Test::PageText ; MBS("DynaPDF.ExtractText"; $pdf; 1; 0) ]
# Cleanup
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]
```

Extract text in area:

```
Set Field [ Test::PageText ; MBS("DynaPDF.ExtractText"; $pdf; 1; "Default"; 200; 200; 400; 400) ]
```

## 71.104 DynaPDF.FileAttachAnnot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FileAttachAnnot"; PDF; PosX; PosY; Icon; Author; Description; FilePath; Compress )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate for the annotation icon

100

#### PosY

Y-Coordinate for the annotation icon

100

#### Icon

Which icon to use. Can be Graph, PaperClip, PushPin or Tag.

"Graph"

#### Author

Name of author. Can be empty.

"Christian Schmitz"

#### Description

Description text. Can be empty.

"Original File"

#### FilePath

The native file path to the file to embed.

"/Users/cs/Desktop/test.mp3"

#### Compress

If 1, the embedded file is compressed. Pass 0 for no compression.

0

**Result** Returns annotation handle or error.

### Description

If the coordinate system is bottom-up the point PosX, PosY defines the lower left point of the annotation icon. If the coordinate system is top-down it defines the upper left point. The width and height of the icon is not changeable.

The embedded file is compressed if the parameter Compress is set to 1. Otherwise it is left uncompressed. It is not always useful to compress embedded files especially if the file is already compressed, e.g. Zip files or already compressed image formats require no further compression. In the worst case the compressed files becomes larger. However, text files and most document formats should be compressed to reduce the file size.

File attachment annotations are supported since PDF 1.3 (Acrobat 4). File attachments are supported since PDF 1.4 (Acrobat 5). The difference between both attachment types is that a file attachment annotation is used as a comment that has usually a visible icon on a page, e.g. to provide additional information about a specific object.

File attachments are used to add arbitrary files to the PDF file, e.g. job options, the original document from which the file was created, or any other file (see also `DynaPDF.AttachFile`).

Note that Acrobat 7 or higher restricts access to executable files and compressed file formats such as zip, or rar. If such files must be embedded then change the file extension, e.g. to `.dat` or `.bin`. The user must then change the extension again when extracting the file.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer. See also [FileAttachAnnot](#) function in DynaPDF manual.

## 71.105 DynaPDF.FileAttachAnnotEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FileAttachAnnotEx"; PDF; PosX; PosY; Icon; Author; Description; FileName; Compress; Container )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate for the annotation icon

100

#### PosY

Y-Coordinate for the annotation icon

100

#### Icon

Which icon to use. Can be Graph, PaperClip, PushPin or Tag.

"Graph"

#### Author

Name of author. Can be empty.

"Christian Schmitz"

#### Description

Description text. Can be empty.

"Original File"

#### FileName

The file name to use.

"test.mp3"

#### Compress

If 1, the embedded file is compressed. Pass 0 for no compression.

0

#### Container

The container with the file content.

Test::MyFile

**Result** Returns annotation handle or error.

### Description

Same as DynaPDF.FileAttachAnnot, but with data from container instead of file path.

See also [FileAttachAnnotEx](#) function in DynaPDF manual.

**See also**

## 71.106 DynaPDF.FileLink

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FileLink"; PDF; PosX; PosY; Width; Height; FilePath )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of bounding rectangle

100

#### PosY

Y-Coordinate of bounding rectangle

100

#### Width

Width of bounding rectangle

100

#### Height

Height of bounding rectangle

20

#### FilePath

The file path to use.

"C:\test.pdf"

**Result** Returns number or error.

### Description

A file link annotation opens a file by using the application that is connected with the file extension (MIME type). Viewer applications may display a warning before the file is opened.

The file path can be defined as relative or absolute path. However, the usage of an absolute makes only sense if it can be guaranteed that the path exist on an arbitrary system.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.

The border of the link annotation is drawn by using the current line width, stroke color and line dash pattern. If the link should appear without a border set the line width to zero beforehand (with DynaPDF.SetLineWidth).

When clicking on a link annotation the rectangle is highlighted, that is a simple visual effect. Several highlight modes are supported, see `DynaPDF.SetLinkHighlightMode` for further information. The function does not check whether the path is valid.

If the function succeeds the return value is an annotation handle, a value greater or equal zero. If the function fails it returns an error.

Use `DynaPDF.WebLink` for web links, `DynaPDF.FileLink` for file links, `DynaPDF.PageLink` or `DynaPDF.PageLinkEx` for page links and `DynaPDF.FindText` can help to find the location where to place the link.

## 71.107 DynaPDF.FindBookmark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FindBookmark"; PDF; DestPage; Title )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### DestPage

Destination page used by the bookmark or -1.

-1

#### Title

The title of the bookmark or a part of it.

"Chapter 1"

**Result** Returns bookmark handle or error.

### Description

If the parameter DestPage is greater zero the function returns the handle of the first bookmark that uses this page number as destination page.

If DestPage is smaller 1 the function returns the handle of the first bookmark that contains the substring Title in the bookmark title. The substring Title is compared non-case-sensitive.

The parameter Title can be "", the function searches for bookmarks with no title in this case. To search for the next bookmark with the same search parameters call DynaPDF.FindNextBookmark.

It is safe to delete a found bookmark with DynaPDF.DeleteBookmark and continue the search run with DynaPDF.FindNextBookmark.

If a bookmark can be found the return value is the bookmark handle, a value greater or equal zero. If no bookmark can be found the return value is -1. If an error occurred, the return value is an error.

See also [FindBookmark](#) function in DynaPDF manual.

## 71.108 DynaPDF.FindEmbeddedFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FindEmbeddedFile"; Name )

### Parameters

#### Name

The name of the embedded file.

\$name

**Result** Returns number or error.

### Description

The file can then be extracted with DynaPDF.GetEmbeddedFile.

If the function succeeds the return value is an embedded file handle, a value greater or equal zero. If the file cannot be found the return value is -1.

See also [FindEmbeddedFile](#) function in DynaPDF manual.

**71.109 DynaPDF.FindField**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FindField"; PDF; Name )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Name**

The fully qualified field name.  
"FirstName"

**Result** Returns field handle or error.

**Description**

The fully qualified field name is constructed from the partial field name of the field and all of its ancestors. For a field with no parent group field, the partial and fully qualified names are the same. For a field that is the child of another field, the fully qualified name is formed by appending the child field's partial name to the parent's fully qualified name, separated by a period, e.g. "Company.Employee.Name".

Field names are case-sensitive; the name must be specified exactly.

## 71.110 DynaPDF.FindLinkAnnot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FindLinkAnnot"; PDF; URL )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### URL

The URL to find.  
"http://www.mbsplugins.de/"

**Result** Returns annotation handle or error.

### Description

The parameter URL must be the URL of a web link annotation or the file path of a file link annotation, exactly defined in a case sensitive manner.

See also [FindLinkAnnot](#) function in DynaPDF manual.

### See also

### 71.112.1 Blog Entries

- [MBS Filemaker Plugin, version 3.4pr2](#)

Created 18th August 2014, last changed 18th August 2014.

**71.113 DynaPDF.FindText**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.FindText"; PDF; Text { ; CaseInsensitive } )
```

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Text**

The text to search.

"Hello"

**CaseInsensitive**

Optional

Optional, if 1, the case of the letters is ignored (also umlauts).

1

**Result** Returns list of found positions.

**Description**

You need to have an open page. you can use DynaPDF.EditPage to edit an existing one.

The list of returned coordinates contains a rectangle for each found position defined by 4 coordinates. The coordinates (x1 y1 x2 y2 x3 y3 x4 y4) define the surrounding rectangle of the text area.

This function uses the parser interface in DynaPDF and needs a Lite license.

**Examples**

Find the text Apple on the current page:

```
MBS( "DynaPDF.FindText"; $PDF; "Apple"; 1 )
```

Example result: "96.001800 662.040000 168.307802 662.040000 168.307802 676.080000 96.001800 676.080000"

Find text and place weblink:

```
Set Variable [ $pos ; Value: MBS( "DynaPDF.FindText"; $pdf; Links::Text; 1) ]
```

```
If [ IsEmpty ( $pos ) ]
```

```
# not found
```

```
Else
```

```
# read positions
```

```
Set Variable [ $pos ; Value: Substitute($pos; " "; $) ]
```

```
Set Variable [ $x1 ; Value: MBS( "Math.TextToNumber"; GetValue($pos; 1)) ]
```

```
Set Variable [ $y1 ; Value: MBS( "Math.TextToNumber"; GetValue($pos; 2)) ]
```

```
Set Variable [ $x2 ; Value: MBS( "Math.TextToNumber"; GetValue($pos; 3)) ]
```

```
Set Variable [ $xy ; Value: MBS( "Math.TextToNumber"; GetValue($pos; 4)) ]
```

```

Set Variable [ $x3 ; Value: MBS( "Math.TextToNumber"; GetValue($pos; 5) ]
Set Variable [ $y3 ; Value: MBS( "Math.TextToNumber"; GetValue($pos; 6) ]
Set Variable [ $x4 ; Value: MBS( "Math.TextToNumber"; GetValue($pos; 7) ]
Set Variable [ $y4 ; Value: MBS( "Math.TextToNumber"; GetValue($pos; 8) ]
Set Variable [ $w ; Value: MBS( "Math.TextToNumber"; $x3-$x1 ) ]
Set Variable [ $h ; Value: MBS( "Math.TextToNumber"; $y3-$y1 ) ]
# place web link
Set Variable [ $r ; Value: MBS( "DynaPDF.WebLink"; $pdf; $x1; $y1; $w; $h; Links::URL ) ]
End If

```

## 71.115 DynaPDF.FlattenAnnots

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FlattenAnnots"; PDF; Flags )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Flags

The flags as text or number. Default is None. Can be None, UseViewState, MarkupAnnots or both combined as VisibleMarkupAnnots.

"UseViewState"

**Result** Returns number or error message.

### Description

Draws all annotations according to the used flags on the corresponding pages and deletes the annotations when finish. The flatten flags can be combined. The flag MarkupAnnots causes that non-markup annotations will be left intact (all kind of link, sound, and file attach annotations).

The function flattens only annotations which contain an appearance stream. The function does not create missing appearances on demand.

If the function succeeds the return value is the number of annotations which are still in memory.

By default all annotations which have an appearance stream and which have the print flag set are flattened. All annotations are deleted when the function returns with the exception of file attachment annotations. If you want to flatten the view state then set the flag affUseViewState.

See also [FlattenAnnots](#) function in DynaPDF manual.

### See also

- [71.116 DynaPDF.FlattenForm](#) 2782
- [71.294 DynaPDF.New](#) 3032

### Example Databases

- [DynaPDF/DynaPDF Highlight Text](#)

Flag Name	Flag Number	Description
None	0	Printable annotations independent of type.
UseViewState	1	If set, annotations which are visible in a viewer become flattened.
MarkupAnnots	2	If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. Such types will be left intact.
NonPDFA_1	4	If set, flatten all annotations which are not supported in PDF/A 1.
NonPDFA_2	8	If set, flatten all annotations which are not supported in PDF/A 2 or 3.
FormFields	16	If set, form fields will be flattened too.
UseFieldViewState	32	Meaningful only if affFormFields or affSigFields is set. If set, flatten the view state of form fields. Use the print state otherwise.
SigFields	64	Meaningful only if affFormFields is not set. If set, signed signature fields will be flattened.
KeepLinkAnnots	4096	If set, link annotations will be kept.
KeepFileAttach	8192	If set, file attachment annotations will be kept.
KeepTextAnnots	16384	If set, text annotations will be kept.
KeepEmptySigFields	32768	If set, signature fields which are not already signed will be kept.
PreserveZOrder	4194304	If set, preserve the z-order under any circumstances. That means visible overlapping annotations or form fields will be flattened, regardless the type.

### 71.115.1 Blog Entries

- [MBS Filemaker Plugin, version 4.2pr1](#)

Created 18th August 2014, last changed 19th November 2019.

## 71.116 DynaPDF.FlattenForm

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FlattenForm"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns OK or error message.

### Description

Draws all form fields on the corresponding pages and deletes the form fields, incl. corresponding JavaScripts and JavaScript actions. The resulting PDF pages look after flattening as if the form were printed.

Note that this function does not support XFA forms. If the form is a hybrid form, the PDF form fields will be flattened. A maybe existing XFA form will be deleted but not flattened.

Fields, which are invisible for printing, due to an absent print flag, or if the hidden flag was set, are excluded from flattening. These fields are deleted without drawing them on the page.

This function is especially useful if a large amount of Interactive Forms (which are already filled out by the user) should be prepared for printing, or if the forms should be archived without allowing further changes. Flattened forms require less disk space and can be printed faster.

XFA Forms which are created by Adobe's Designer are not fully supported. Only hybrid forms can be flatted.

Requires DynaPDF Pro license.

See also [FlattenForm](#) function in DynaPDF manual.

### Examples

Make all forms flat:

MBS( "DynaPDF.FlattenForm"; \$PDF )

## 71.117 DynaPDF.FlushPages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FlushPages"; PDF; Flags )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Flags

A combination of the flag values. Default is 0.

0

**Result** Returns OK or error message.

### Description

The function can be called every time a new page was created or whenever the pages in memory are no longer required.

Calling the function on a memory based PDF file is not meaningful. The output file must already be open before the function can be called. If no output file was set in DynaPDF.New then open the output file with DynaPDF.OpenOutputFile beforehand.

Flushed pages can no longer be accessed with DynaPDF.EditPage but it is of course possible to add further pages to the file.

By default, the function writes the content streams of all pages and referenced templates, patterns, and images to the output file. The content streams of these objects will be released but the objects remain in memory. So, all handles remain valid and it is still possible to use already flushed objects in subsequent pages. For example, a flushed image or template can still be inserted in other pages with DynaPDF.PlaceImage or DynaPDF.PlaceTemplate because the content streams or image buffers are not required for this action.

The flag ImagesOnly can be used to flush the images in memory only. This can be useful if further objects must be added to the pages in memory or if a large image was inserted.

It is allowed to call the function within an open page. In this case the function does not flush the content stream of the current open page but anything else depending on the used flags.

Calling a function like DynaPDF.DeletePage, DynaPDF.DeleteField or any other function that deletes a flushed object results in a damaged PDF file.

Default	0	Write anything to the file that is possible
ImagesOnly	1	If set, only images are written to the PDF file. All pages are still kept in memory and can be modified with DynaPDF.EditPage. Flushed images can still be referenced in other pages. The image handles remain valid.
ExclLastPage	2	If set, the last page is not flushed

See also [FlushPages](#) function in DynaPDF manual.

71.117. *DYNAPDF.FLUSHPAGES*

2785

### Examples

Do a flush:

```
MBS( "DynaPDF.FlushPages" )
```

## 71.118 DynaPDF.FontInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FontInfo"; PDF; Index; Selector { ; FileName } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Index

The font index from zero to DynaPDF.GetFontCount.

0

#### Selector

Which value to return. Can be Ascent, AvgWidth, BaseEncoding, BaseFont, CapHeight, CharSet, CharSet-Size, CIDOrdering, CIDRegistry, CIDSet, CIDSetSize, CIDSupplement, CIDToGIDMap, CMapBuf, CMapBufSize, CMapName, Encoding, FirstChar, FontBBox, Flags, FontBufSize, FontBuffer, FontFamily, FontFilePath, FontFileType, FontName, FontStretch, FontType, FontWeight, FullName, HaveEncoding, HorzWidths, HorzWidthsCount, Imported, ItalicAngle, Lang, LastChar, Leading, Length1, Length2, Length3, MaxWidth, Metadata, MetadataSize, MisWidth, Panose, PostScriptName, SpaceWidth, StemH, StemV, ToUnicode, ToUnicodeSize, VertDefPos, VertWidths, VertWidthsCount, WMode or XHeight.

"FamilyName"

#### FileName

Optional

Optional file name for values returned as container values. For CMapBuf and FontBuffer.

"test.dat"

**Result** Returns value or error.

### Description

CMapBuf and FontBuffer values are returned as container values.

HorzWidths is returned as a list of floating point numbers separated by newline character.

VertDefPos is returned as two floating point numbers for X and Y separated by space character.

VertWidths is returned as list of three floating pointing numbers. First is width, second X and third value is Y.

FontFamily, FontFilePath, FullName and PostScriptName are returned as unicode texts if possible.

For embedded fonts the FontBufSize field is >0.

### Examples

Get Family Name for first font:

MBS( "DynaPDF.FontInfo"; \$pdf; 0; "FamilyName" )

Create records with family name for each font in PDF file:

```
# Load PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; System Font Info::PDF) ]
# import a page
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]
# List fonts in PDF
Set Variable [ $FontCount; Value:MBS("DynaPDF.GetFontCount"; $pdf) ]
If [ $FontCount >0 ]
Set Variable [ $index; Value:0 ]
Loop
# Get values
New Record/Request
Set Field [ System Font Info::FontFamily; MBS("DynaPDF.FontInfo"; $pdf; $Index; "FontFamily") ]
Commit Records/Requests [ Skip data entry validation; No dialog ]
# Next
Set Variable [ $Index; Value:1 + $Index ]
Exit Loop If [ $Index >= $FontCount ]
End Loop
End If
```

## 71.119 DynaPDF.FreeTextAnnot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.FreeTextAnnot"; PDF; PosX; PosY; Width; Height; Author; Text; Textalign )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

x-coordinate

100

#### PosY

y-coordinate

100

#### Width

Stamp width

100

#### Height

Stamp height

100

#### Author

The author name. Can be empty.

"Christian Schmitz"

#### Text

The visible text of the annotation.

"Hello World"

#### Textalign

The text alignment. Can be Left, Center, Right or Justify.

"Justify"

**Result** Returns annotation handle or error.

### Description

The text of a Free Text annotation appears directly on screen such as normal text of a page. However, Free Text annotations are used to add comments. Comments can be excluded from printing if necessary (see DynaPDF.SetAnnotFlags for further information) and the contents of a Free Text annotation can be edited in Adobe's Acrobat.

The text of the annotation is printed into the bounding box by applying a formatting algorithm so that the text appears left aligned, right aligned, centered, or justified. Justified text is not directly supported by Adobe's Acrobat. However, the annotation appears correctly on screen but the alignment is set to left

aligned text if the text will be changed in Acrobat.

The border of the annotation is drawn by using the current line width, stroke color and line dash pattern. If the annotation should appear without a border set the line width to zero beforehand.

The border appears completely inside the bounding box of the annotation. This must be considered because normal vector graphics such as rectangles, ellipses and so on are measured without the line width. For instance, the real width of a rectangle is the width plus the line width.

A Free Text annotation requires a font. If no font is set beforehand Helvetica is used. The largest font size that can be used in Free Text annotations is 12 units. If the active font uses a larger font size then it will be changed to 12 units.

Text positioning issues:

Acrobat 7 or higher use a very unusual way to place text into a Free Text annotation. While the baseline of text is very well defined in practically all typo graphics systems, Acrobat uses a dynamic position depending on the height of the largest character in the first line. The baseline is placed at the annotation's height - border width - cap height as long as the first line contains no character with an accent (e.g. Ä, Ö, Ü, Å, È, Ê, Ñ). Because the cap height is not large enough for accented characters Acrobat adjusts the position of the first line if necessary. So, the text position depends on the contents of the first text line.

DynaPDF places the text at the annotation's height - border width - font size. This makes it possible to change the text of a Free Text annotation without changing its position. However, if the annotation will be edited with Adobe's Acrobat the text position will slightly change. If the text position is important then it is mostly better to use text fields instead (see `DynaPDF.CreateTextField`).

## 71.120 DynaPDF.GeneratePreview

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.GeneratePreview"; PDFContainer { ; OnlyImage; ImageName } )
```

### Parameters

#### PDFContainer

The input PDF container value. Must contain a PDF file.

MyTable::PDFContainer

#### OnlyImage

Optional

Default is 0. But if you pass 1, the plugin does not return the PDF data in the result, but only the preview.

0

#### ImageName

Optional

If OnlyImage is 1, you can specify a file name for the image result.

"preview.jpg"

**Result** Returns updated container value or error.

### Description

On Windows if you have a PDF in a container FileMaker will not show a preview due to a missing PDF rendering library. On Mac OS X the system can show PDF directly and FileMaker uses this.

This function renders first page as JPEG and add it to the container value as preview.

You need to use DynaPDF.Initialize before to load the DynaPDF library and set the license key (Pro required).

With version 5.0 optionally only creates image without passing PDF data back.

Requires DynaPDF Pro license for the raster engine to create bitmaps from PDF pages.

See also DynaPDF.RenderPage for more options on rendering.

On Mac the PDFKit.GeneratePreview function can be an alternative way, but limited to the capabilities of Apple's frameworks.

### Examples

Add a preview to PDF container

```
# does container have jpeg preview?
```

```
If [ MBS( "Container.GetTypeSIze" ; test::pdf; "JPEG" ) <= 0 ]
```

```
# Add preview to PDF in container
```

```
Set Field [ test::pdf; MBS("DynaPDF.GeneratePreview"; test::pdf) ]
```

```
End If
```

Add a preview to PDF container if needed:

```
# get a PDF somewhere
Set Variable [ $PDF ; Value: MBS( "Files.ReadFile"; "C:\Users\Christian\Desktop\test.pdf"; "auto" ) ]
# Does have PDF and no image?
Set Variable [ $types ; Value: MBS( "Container.GetTypes"; $PDF ) ]
# PDF included?
If [ Position ( $types ; "PDF " ; 1 ; 1 ) >0 ]
# Image preview missing?
If [ Position ( $types ; "JPEG" ; 1 ; 1 ) <1 and Position ( $types ; "PNGf" ; 1 ; 1 ) <1 ]
# Use DynaPDF if initialized, we can use it
If [ MBS( "DynaPDF.IsInitialized" ) ]
Set Variable [ $PDF2 ; Value: MBS( "DynaPDF.GeneratePreview"; $PDF ) ]
If [ MBS("IsError") = 0 ]
# Success, so use the new PDF
Set Variable [ $PDF ; Value: $PDF2 ]
End If
Else If [ MBS( "IsMacOSX" ) = 1 ]
# On Mac use PDFKit
Set Variable [ $PDF2 ; Value: MBS( "PDFKit.GeneratePreview"; $PDF ) ]
If [ MBS("IsError") = 0 ]
# Success, so use the new PDF
Set Variable [ $PDF ; Value: $PDF2 ]
End If
End If
End If
End If
# Store PDF with preview
Set Field [ test::Image ; $PDF ]
```

**71.121 DynaPDF.GetAnnotCount**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetAnnotCount"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns number or error.

**Description**

Note: This value includes also annotations which were deleted by DynaPDF.DeleteAnnotation because annotations are not physically deleted at runtime. This value can be used to loop over all annotations. Annotation handles are simple array indexes.

See also [GetAnnotCount](#) function in DynaPDF manual.

## 71.123 DynaPDF.GetAnnotLink

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetAnnotLink"; PDF; AnnotationHandle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

**Result** Returns text or error.

### Description

The parameter AnnotationHandle must be a valid handle of a file link, page link, or web link annotation. Imported file link or web link annotations are mostly defined as page link annotation because it is impossible to distinguish between these types during import. Use the function DynaPDF.FindLinkAnnot if you need to change an imported file link or web link annotation.

## 71.124 DynaPDF.GetAnnotType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetAnnotType"; PDF; AnnotationHandle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### AnnotationHandle

The annotation index.  
5

**Result** Returns type or error.

### Description

If the function succeeds the return value is the annotation type.

See also [GetAnnotType](#) function in DynaPDF manual.

### See also

- 71.71 DynaPDF.DeleteAnnotation 2714

- 71.343 DynaPDF.SetAnnotIcon 3141

Created 25th November 2014, last changed 25th November 2014.

Value	Description
Caret	Caret
Circle	Circle
FileLink	A Link annotation with an associated GoToR action (go to remote)
FreeText	Free text
Highlight	Highlight annotation
Ink	Ink drawing
Line	Line
PageLink	A Link annotation with an associated GoTo action
Polygon	Polygon
PolyLine	Polyline
PopUp	Popup
Square	Square
Squiggly	Highlight annotation
Stamp	Stamp
StrikeOut	Highlight annotation
Text	Also used as container to store the State Model
Underline	Highlight annotation
WebLink	A Link annotation with an associated URI action
Widget	Form Fields are handled separately
3D	3D, PDF 1.6
SoundAnnot	Sound, PDF 1.2
FileAttach	File Attachment, PDF 1.3
Redact	Redact, PDF 1.7
Watermark	Watermark, PDF 1.6
Unknown	Unknown annotation type
MovieAnnot	Movie, PDF 1.2
PrinterMark	Printer Mark, PDF 1.4
Projection	Projection, PDF 1.7 Extension Level 3
RichMedia	Rich Media, PDF 1.7 Extension Level 3
Screen	Screen, PDF 1.5
TrapNet	TrapNet, PDF 1.3

## 71.125 DynaPDF.GetAnnotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetAnnotation"; PDF; AnnotationHandle; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

#### Selector

Which value to query. Possible values: Type, Deleted, BBox, BorderWidth, BorderColor, BorderStyle, BackColor, Handle, Author, Content, Name, Subject, PageNum, HighlightMode, DestPage, DestPos, DestType, DestFile, Icon, StampName, AnnotFlags, CreateDate, ModDate, Grouped, Open, Parent, PopUp, State, StateModel, EmbeddedFile, Subtype, PageIndex, MarkupAnnot, Opacity, QuadPointCount, QuadPoints, DashPattern, DashPatternCount, Intent, LE1, LE2, Vertices, VerticesCount, Caption, CaptionOffsetX, CaptionOffsetY, CaptionPos, LeaderLineLen, LeaderLineExtend or LeaderLineOffset.

"Name"

**Result** Returns value or error.

### Description

Please check also dynapdf manual with details on the pdfGetAnnotEx function.

## 71.126 DynaPDF.GetAscent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetAscent"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns value or error.

### Description

The ascender is a typographic value that specifies the maximum extent to which characters rise above the baseline.

See also [GetAscent](#) function in DynaPDF manual.

### See also

## 71.127 DynaPDF.GetBBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetBBox"; PDF; box; Selector { ; Unit } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### box

Which box to set. Can be Art, Bleed, Crop, Trim or Media.

"Media"

#### Selector

What value to return. Can be Left, Right, Bottom or Top to get the coordinates. Can be Width and Height to get the size of page in points. Can be Exists to check if the given page bound exists. Returns 1 or 0.

"Width"

#### Unit

Optional

The unit to return values with. Default is points (72 dpi raster). You can pass "point", "cm" or "mm". If an user unit is used, we include it into the calculation for meters.

"point"

**Result** Returns value or error.

### Description

This function returns a bounding box of a PDF page. A PDF page may be prepared either for a finished medium, such as a sheet of paper, or as part of a prepress process in which the content of the page is placed on an intermediate medium, such as film or an imposed reproduction plate.

In the latter case, it is important to distinguish between the intermediate page and the finished page. The intermediate page may often include additional production-related content, such as bleeds or printer marks that falls outside the boundaries of the finished page. To handle such cases, a PDF page can define as many as five separate boundaries to control various aspects of the imaging process.

The function requires an open page because each page can use its own boundaries. Please use DynaPDF.EditPage to edit a page.

See also [GetBBox](#) function in DynaPDF manual.

### Examples

Query with of crop box in millimeter:

```
MBS( "DynaPDF.GetBBox"; $pdf; "crop"; "Width"; "mm")
```

## 71.128 DynaPDF.GetBookmark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetBookmark"; PDF; BookmarkHandle; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### BookmarkHandle

The reference number for the bookmark. Either returned by one of the add/insert functions or just counting from 0 to DynaPDF.GetBookmarkCount-1.

\$BookmarkHandle

#### Selector

Which information to query.

"Title"

**Result** Returns value or error.

### Description

Selectors can be:

Color	Bookmark color (PDF 1.4)
DestPage	Destination page
DestPos	Destination position
DestType	Destination type (see DynaPDF.SetBookmarkDest)
Open	1 if the bookmark appears open
Parent	Parent bookmark if any or -1
Style	Text style. a combination of 1 for italic and 2 for bold.
Title	Title text.
TitleLen	Title length in characters.

See also [GetBookmark](#) function in DynaPDF manual.

### Examples

query title of a bookmark:

MBS( "DynaPDF.GetBookmark"; \$PDF; \$BookmarkHandle; "Title" )

**71.133 DynaPDF.GetCheckBoxChar**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetCheckBoxChar"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns char or error.

**Description**

The checkbox char can be: Check, Circle, Cross1, Cross2, Cross3, Cross4, Diamond, Square or Star.  
See also [GetCheckBoxChar](#) function in DynaPDF manual.

**See also**

## 71.134 DynaPDF.GetCheckBoxCharEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetCheckBoxCharEx"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

**Result** Returns number or error.

### Description

See also [GetCheckBoxCharEx](#) function in DynaPDF manual.

### See also

## 71.135 DynaPDF.GetCheckBoxDefState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetCheckBoxDefState"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns 0, 1 or error.

### Description

That is 1 = checked or 0 = unchecked. The parameter Field must be a valid handle of a check box. The default state can differ from the current visible state of a check box. The default state is used when a form is reset with a Reset Form Action.

See also [GetCheckBoxDefState](#) function in DynaPDF manual.

**71.136 DynaPDF.GetColorSpace**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetColorSpace"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns current setting on success or error message.

**Description**

See also DynaPDF.SetColorSpace.

See also [GetColorSpace](#) function in DynaPDF manual.

**71.137 DynaPDF.GetColorSpaceCount**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetColorSpaceCount"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

**Description**

Color spaces can be accessed with DynaPDF.GetColorSpaceObj.

See also [GetColorSpaceCount](#) function in DynaPDF manual.

**See also**

## 71.138 DynaPDF.GetColorSpaceInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetColorSpaceInfo"; PDF; Index; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Index

The index of the colorspace. From 0 to DynaPDF.GetColorSpaceCount-1.

0

#### Selector

Which value to return.

"Type"

**Result** Returns value or error.

### Description

You can query Type, Alternate, Size (byte size of ICC Profile), Buffer (ICC Profile), NumInComponents, NumOutComponents, NumColors, ColorantsCount, Colorants (names of colorants as list), MetadataSize, Metadata (XMP metadata as text).

**71.139 DynaPDF.GetCompressionFilter**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetCompressionFilter"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns compression filter.

**Description**

Note that 1 bit images are always compressed with Flate.  
See also [GetCompressionFilter](#) function in DynaPDF manual.

**See also**

- 71.140 DynaPDF.GetCompressionLevel 2816
- 71.294 DynaPDF.New 3032
- 71.359 DynaPDF.SetCompressionFilter 3161

Created 18th August 2014, last changed 18th August 2014.

## 71.140 DynaPDF.GetCompressionLevel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetCompressionLevel"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns compression level or error.

### Description

JPEG images are compressed with optimized Huffmann tables if the compression level is Max. This results in 5% to 10% better compression ratio without losing quality. The compression level can also be used to switch the compression mode to real or integer when using the JPEG2000 compression filter (see also DynaPDF.InsertImage).

See also DynaPDF.SetCompressionLevel.

## 71.142 DynaPDF.GetDocInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetDocInfo"; PDF; key )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### key

The key to set. Can be Author, Creator, Keywords, Producer, Subject, Title, Company, PDFXVersion, PDFXConfiguration, CreationDate or ModificationDate.

"Author"

**Result** Returns value or error message.

### Description

Please note that we have DynaPDF.GetDocInfo for the current working PDF and the DynaPDF.GetImportDocInfo for the current open import PDF.

See also [GetDocInfo](#) function in DynaPDF manual.

### Examples

Query title of current PDF:

```
$r = MBS( "DynaPDF.GetDocInfo"; $PDF; "title" )
```

Queries keywords:

```
Set Variable [ $r; Value:MBS("DynaPDF.GetImportDocInfo"; $pdf; "keywords") ]
```

- [Introducing DynaPDF to MBS Filemaker Plugin](#)

Created 18th August 2014, last changed 18th June 2016.

## 71.143 DynaPDF.GetDocInfoCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetDocInfoCount"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

This function can be used in combination with GetDocInfoEx() to enumerate the document info entries of the PDF file.

See also [GetDocInfoCount](#) function in DynaPDF manual.

### See also

- 71.121 DynaPDF.GetAnnotCount 2793

## 71.144 DynaPDF.GetDocUsesTransparency

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetDocUsesTransparency"; PDF { ; Flags } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Flags

Optional

Flags for check.

**Result** Returns 1, 0 or error.

### Description

Checks whether a PDF file uses native PDF Transparency (PDF 1.4). The file uses transparency when it contains soft masks, blend modes other than Normal, or fill or stroke alpha values smaller than 1.0.

The function checks all pages, templates, extended graphics states, images, annotations, and form fields.

If the file uses transparency the return value is 1. If it uses no transparency the return value is 0.

See also [GetDocUsesTransparency](#) function in DynaPDF manual.

## 71.145 DynaPDF.GetDrawDirection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetDrawDirection"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns draw direction or error message.

### Description

You can use DynaPDF.SetDrawDirection to set the direction.  
See also [GetDrawDirection](#) function in DynaPDF manual.

#### See also

## 71.147 DynaPDF.GetEmbeddedFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetEmbeddedFile"; PDF; Index; Selector { ; Encoding } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Index

The index of the embedded file. From 0 to DynaPDF.GetEmbeddedFileCount-1.

0

#### Selector

Which value to query. Can be DataSize, FileSize, Compressed, Name, FileName, isURL, UnicodeName, Description, MimeType, CreationDate, ModificationDate or CheckSum. With value "Content" you can query the content of the embedded file as text. Optional Text encoding parameter is used in this case.

"Name"

#### Encoding

Optional

The text encoding for the content.

**Result** Returns value or error.

#### Description

See also [GetEmbeddedFile](#) function in DynaPDF manual.

#### Examples

Query name of first file:

```
MBS( "DynaPDF.GetEmbeddedFile"; $pdf; 0; "name"
```

Query content as text in UTF-8:

```
MBS( "DynaPDF.GetEmbeddedFile"; $pdf; 0; "Content"; "UTF-8" )
```

## 71.148 DynaPDF.GetEmbeddedFileAsContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetEmbeddedFileAsContainer"; PDF; Index )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Index

The index of the embedded file. From 0 to DynaPDF.GetEmbeddedFileCount-1.

0

**Result** Returns OK or error.

### Description

You can store this in a container or write it to disk using Files.WriteFile.

### Examples

Query first embedded file as container:

```
MBS( "DynaPDF.GetEmbeddedFileAsContainer"; $pdf; 0 )
```

## 71.149 DynaPDF.GetEmbeddedFileCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetEmbeddedFileCount"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

Note that the number of embedded files from an external PDF file is available after the PDF file has been imported. Depending of the used import flags embedded files can be excluded from import. See DynaPDF.SetImportFlags, or DynaPDF.ImportPDFFile for further information.  
See also [GetEmbeddedFileCount](#) function in DynaPDF manual.

## 71.149.2 FileMaker Magazin

- Ausgabe 1/2018, Seite 26

Created 11st September 2014, last changed 11st September 2014.

**71.150 DynaPDF.GetFTextHeight**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFTextHeight"; PDF; Align; Text )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Align**

The text alignment. Can be left, center, right or justify.

"left"

**Text**

The text to write.

"Hello World"

**Result** Returns height or error message.

**Description**

Before calling this function a font (see DynaPDF.SetFont) and the output rectangle must be set with the function DynaPDF.SetTextRect. The parameter Height of DynaPDF.SetTextRect should be set to -1 to avoid page breaks. Otherwise the height of the first text block is returned that fits into the given height of the rectangle.

The parameter AText must contain the same text (incl. format tags if any) as which should be printed later with DynaPDF.WriteFText.

See also DynaPDF.GetFTextHeightEx.

See also [GetFTextHeight](#) function in DynaPDF manual.

**See also**

- 71.508 DynaPDF.WriteFText 3406
- 71.509 DynaPDF.WriteFTextEx 3408

- 71.512 DynaPDF.WriteStyledTextEx

Created 18th August 2014, last changed 27th May 2017.

**71.151 DynaPDF.GetFTextHeightEx**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFTextHeightEx"; PDF; Width; Align; Text )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Width**

Width of output rectangle

\$width

**Align**

The text alignment. Can be left, center, right or justify.

"left"

**Text**

The text to write.

"Hello World"

**Result** Returns height or error message.

**Description**

The function works in the same way as DynaPDF.GetFTextHeight but the output rectangle must not be set manually beforehand.

The height of the output rectangle is set to -1 to avoid a page break during measuring.

The parameter text must contain the same text (incl. format tags if any) as which should be printed later with DynaPDF.GetFTextHeightEx.

See also DynaPDF.GetFTextHeight.

See also [GetFTextHeightEx](#) function in DynaPDF manual.

**See also**

## 71.152 DynaPDF.GetField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetField"; PDF; Field; Selector )

(old name: DynaPDF.GetFieldEx)

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name. Zero based and up to DynaPDF.GetFieldCount-1.

"FirstName"

#### Selector

What value to query. Can be Deleted, BBox, FieldType, GroupType, Handle, BackColor, BackColorSP, BorderColor, BorderColorSP, BorderStyle, BorderWidth, CharSpacing, Checked, CheckBoxChar, DefState, DefValue, EditFont, ExpValueCount, BorderColor, FieldFlags, FieldFont, FontSize, FieldName, Highlight-Mode, IsCalcField, MapName, MaxLen, KidCount, PageNum, Rotate, TextAlign, TextColor, TextColorSP, TextScaling, ToolTip, UniqueName, Value, WordSpacing, Parent or Kids.

Added ModDate, CaptionPos, DownCaption, DownImage, RollCaption, RollImage, UpCaption, UpImage, Action and ActionType for version 9.0.

"Name"

**Result** Returns field handle or error.

### Description

Field handles are simple array indexes into the field array of the global AcroForm object. To enumerate all fields of a document execute the function in a loop from 0 though DynaPDF.GetFieldCount-1.

See GetFieldEx function in DynaPDF help file for details.

See also [GetFieldEx](#) function in DynaPDF manual.

### Examples

Query bounding box of field:

MBS( "DynaPDF.GetField"; \$pdf; "FirstName"; "BBox" )

MBS( "DynaPDF.GetFieldBackColor"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns color as number or error.

**Description**

Note that color values must be defined in the current color space. See DynaPDF.SetColorSpace for further information.

If the return value is equal NO\_COLOR (4294967281) the border is transparent.

Default value = 0 for Black.

See also [GetFieldBackColor](#) function in DynaPDF manual.

## 71.154 DynaPDF.GetFieldBorderColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldBorderColor"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns color as number or error.

### Description

Note that color values must be defined in the current color space. See DynaPDF.SetColorSpace for further information.

If the return value is equal NO\_COLOR (4294967281) the border is transparent.

Default value = 0 for Black.

See also [GetFieldBorderColor](#) function in DynaPDF manual.

## 71.155 DynaPDF.GetFieldBorderStyle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldBorderStyle"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns border style or error.

### Description

It is also possible to change the style of a specific field, see DynaPDF.SetFieldBorderStyle for further information.

If the function succeeds the return value is the border style, a value greater or equal zero.

Value can be Solid, Bevelled, Inset, Underline or Dashed.

See also [GetFieldBorderStyle](#) function in DynaPDF manual.

### See also

Created 18th August 2014, last changed 18th August 2014.

## 71.156 DynaPDF.GetFieldBorderWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldBorderWidth"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns value or error.

### Description

All field types are supported by this function.

If the function succeeds the return value is the line width of the field's border (a value greater or equal zero).

See also [GetFieldBorderWidth](#) function in DynaPDF manual.

### See also

**71.157 DynaPDF.GetFieldChoiceValue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldChoiceValue"; PDF; Field; ValIndex; Selector )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Field**

The field index or field name.

"FirstName"

**ValIndex**

The value index.

0

**Selector**

Which value to return. Can be ExpValue, ExpValueLen, Value, ValueLen or Selected.

"Value"

**Result** Returns value or error.

**Description**

The parameter Field must be a valid handle of a combo or list box. ValIndex is the array index of the choice value to be retrieved. Call DynaPDF.GetFieldExpValCount to determine how many choice values are available in the combo or list box.

Choice values can be inherited from a parent group field. This is the case if the field is part of a field group. See "Interactive Forms/What is a Field Group?" Section in DynaPDF help file for further information.

See also [GetFieldChoiceValue](#) function in DynaPDF manual.

## 71.158 DynaPDF.GetFieldColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldColor"; PDF; Field; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

#### Selector

What to return. This can be ColorSpace or Color. For RGB colorspace also Red, Green or Blue to get component.  
"Color"

**Result** Returns value or error.

### Description

The parameter ColorSpace defines the color space in which the color was defined.  
See also [GetFieldColor](#) function in DynaPDF manual.

### See also

## 71.160 DynaPDF.GetFieldExpValCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldExpValCount"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns number or error.

### Description

Supported field types are combo boxes, list boxes, radio buttons, and check boxes. If the field is a radio button, the function returns the number of check boxes which are connected with the radio button. This number can be used to access the check boxes of the radio button either with DynaPDF.GetFieldExpValueEx or DynaPDF.SetFieldExpValue. If the field is a check box, the return value is always 1 because check boxes do not support multiple export values. However, this function is normally used to determine the number of available choice values within a combo box or list box because only these field types support multiple choice values. See also DynaPDF.GetFieldExpValueEx.

If the function succeeds the return value is the number of values/export values which are defined for a field. See also [GetFieldExpValCount](#) function in DynaPDF manual.

### See also

- 71.294 DynaPDF.New 3032
- 71.375 DynaPDF.SetFieldExpValue 3184
- 71.376 DynaPDF.SetFieldExpValueEx 3186

Created 18th August 2014, last changed 18th August 2014.

**71.161 DynaPDF.GetFieldExpValue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldExpValue"; PDF; Field )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Field**

The field index or field name.

"FirstName"

**Result** Returns value or error.

**Description**

The field must be a valid field handle of a check box, list box or combo box.

The export value of a check box can be either "Off" if the check box is not selected or an arbitrary string when the check box is selected.

The export value of a combo box or list box can be empty when no value is selected.

Since Acrobat 5, list boxes support multiple selected values. In this case the export values are delimited by a newline character.

The field type can be determined with the functions DynaPDF.GetFieldType, DynaPDF.GetField or DynaPDF.GetPageField.

See also [GetFieldExpValue](#) function in DynaPDF manual.

**See also**

Created 18th August 2014, last changed 18th August 2014.

## 71.162 DynaPDF.GetFieldExpValueEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldExpValueEx"; PDF; Field; ValIndex; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

#### ValIndex

The value index.  
0

#### Selector

Which value to get. Can be Value, Selected or ExpValue.  
"Value"

**Result** Returns OK on success or error on failure.

### Description

If the field is a check box, the parameter ValIndex will be ignored and the export value and selectedstate are returned.

To enumerate the choice values of a combo box or list box call GetFieldExpValCount() to determine the number of available values. The parameter ValIndex can then be used to access each value / export value pair within the array.

Beginning with PDF 1.5 choice values of combo and list boxes can be in Unicode format. Because Unicode strings are not supported by this function the function DynaPDF.GetFieldChoiceValue should be used to enumerate choice values of these field types.

The parameters Value, ExpValue, and Selected require variables so that the values can be set by the function. To change a choice value of a combo box or list box call the function DynaPDF.SetFieldExpValue.

See also [GetFieldExpValueEx](#) function in DynaPDF manual.

71.162. <i>DYNAPDF.GETFIELDEXPVALUEEX</i>	2845
• 71.375 DynaPDF.SetFieldExpValue	3184
• 71.376 DynaPDF.SetFieldExpValueEx	3186

Created 18th August 2014, last changed 18th August 2014.

## 71.163 DynaPDF.GetFieldFlags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldFlags"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

**Result** Returns value or error.

### Description

Interactive form fields and annotations support the same basic set of field flags because both object types are in fact annotations. When we talk about form fields then we talk about an extended version of annotations because form fields are annotations. However, to make the handling easier, form fields and annotations are handled separately by DynaPDF.

The flags are described in detail on the DynaPDF help file.

See also [GetFieldFlags](#) function in DynaPDF manual.

Created 18th August 2014, last changed 27th May 2017.

## 71.164 DynaPDF.GetFieldType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldType"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns type or error.

### Description

A field group is a set of fields which have all the same name. Such fields contain always the same value with exception of checkboxes. If a field group consists of checkboxes the export value is also taken into account. However, a set of fields with identical names are internally stored in a group field. The group type specifies the field type of the group, e.g. ftText if text fields are stored in the group. A field group cannot contain different field types. An indication whether a field is a child of a field group is an empty field name because the field name is taken from the parent group field in this case. Radio buttons are identically organized, but the field type is ftRadioBtn in this case.

Value can be Button, CheckBox, RadioButton, ComboBox, Listbox, Text, Signature or Group.

See also [GetFieldGroupType](#) function in DynaPDF manual.

## 71.165 DynaPDF.GetFieldHighlightMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldHighlightMode"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns mode or error.

### Description

All other field types have no property highlight mode, the function returns None in this case.

Value can be None, Invert, Outline, Push or PushUpd.

See also [GetFieldHighlightMode](#) function in DynaPDF manual.

### See also

- 71.208 DynaPDF.GetLinkHighlightMode 2900

## 71.166 DynaPDF.GetFieldIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldIndex"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns value or error.

### Description

The index of newly created fields starts at 1000. This makes it easier to set a field to another position inside the tab order. The field index can be changed with the function DynaPDF.SetFieldIndex. Note that fields must be sorted by index with the function DynaPDF.SortFieldsByIndex. Fields must be sorted for each page separately.

This is for tab order index. For index of field in the list of fields, please use DynaPDF.FindField.

See also [GetFieldIndex](#) function in DynaPDF manual.

## 71.167 DynaPDF.GetFieldMapName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldMapName"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns error or text.

### Description

The mapping name is used when interactive form field data is exported from the document.

See also [GetFieldMapName](#) function in DynaPDF manual.

## 71.173 DynaPDF.GetFieldType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFieldType"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

**Result** Returns type or error.

### Description

The type can be Button, CheckBox, RadioButton, ComboBox, Listbox, Text, Signature or Group.  
See also [GetFieldType](#) function in DynaPDF manual.

### See also

**71.174 DynaPDF.GetFontCount**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFontCount"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

**Description**

See also [GetFontCount](#) function in DynaPDF manual.

**See also**

## 71.175 DynaPDF.GetFontOrigin

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFontOrigin"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns value or error.

### Description

The font origin is automatically set to `orTopLeft` or `orDownLeft` if the coordinate system will be changed. The origin can be changed at runtime with the function `DynaPDF.SetFontOrigin`.

Returns `DownLeft` (BaseLine) or `TopLeft` (Upper left corner of the font's bounding box).

See also [GetFontOrigin](#) function in DynaPDF manual.

**71.176 DynaPDF.GetFontSelMode**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetFontSelMode"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns value or error.

**Description**

The font selection mode describes what kind of font name must be passed to DynaPDF.SetFont. Note that a font cannot be found if the wrong mode is set.

See also [GetFontSelMode](#) function in DynaPDF manual.

**See also**

## 71.178 DynaPDF.GetGStateFlags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetGStateFlags"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns number or error.

### Description

See DynaPDF.SetGStateFlags for details on flags.

Flags are returns as numeric value.

See also [GetGStateFlags](#) function in DynaPDF manual.

## 71.179 DynaPDF.GetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetImage"; PDF; Index; Selector { ; FileName; ImageFormat } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Index

The index of the image from 0 to DynaPDF.GetImageCount-1.

\$index

#### Selector

Which value to query.

"Picture"

#### FileName

Optional

In case we return a container value, the file name to use.

"test.jpg"

#### ImageFormat

Optional

Available in MBS FileMaker Plugin 10.2 or newer.

Which image file format to use for the image returned. Default is to use JPEG for JPEG images and TIFF for other formats. Value can be TIFF, JPEG, PNG, BMP or JPC.

"JPEG"

**Result** Returns OK or error.

### Description

If all image types should be decompressed set the flag pfDecompressAllImages.

Selectors include:

This function allows to extract images from PDF with DynaPDF Lite or higher license.

### Examples

Query colorspace of an image:

```
MBS( "DynaPDF.GetImage"; $pdf; $ImageIndex; "ColorSpace"
```

Loop and get all images in various formats:

```

Go to Layout [ "Start" (Start) ; Animation: None ]
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r ; Value: MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Start::SourcePDF) ]
Set Variable [ $r ; Value: MBS("DynaPDF.ImportPDFFile"; $pdf) ]
# Put result in records
Go to Layout [ "List" (List) ; Animation: None ]
Delete All Records [ With dialog: Off ]
Set Variable [ $imageCount ; Value: MBS( "DynaPDF.GetImageCount"; $PDF ) ]
Set Variable [ $imageIndex ; Value: 0 ]
If [ $imageCount >0 ]
Loop
New Record/Request
Set Field [ List::Index ; $imageIndex ]
Set Field [ List::Image ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "" ; "" ) ]
Set Field [ List::JPEG ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "test.jpg"; "JPEG") ]
Set Field [ List::BMP ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "test.bmp"; "BMP") ]
Set Field [ List::PNG ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "test.png"; "PNG") ]
Set Field [ List::TIFF ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "test.tif"; "TIFF") ]
Commit Records/Requests [ With dialog: On ]
Set Variable [ $imageIndex ; Value: $imageIndex + 1 ]
Exit Loop If [ $imageIndex >= $imageCount ]
End Loop
End If
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]

```

### 71.179.1 Blog Entries

- [MBS FileMaker Plugin, version 10.2pr1](#)
- [MBS FileMaker Plugin, version 7.5pr1](#)
- [MBS FileMaker Plugin, version 6.4pr3](#)

Created 5th August 2016, last changed 12nd March 2020.

BufSize	The size of the image buffer in bytes.
Buffer	The image data as JPEG or FILE.
Picture	The image as a picture container. Either JPEG or TIFF.
Filter	The format of image: Required decode filter if the image is compressed. Possible values are dfDCTDecode (JPEG), dfJPXDecode (JPEG2000), and dfJBIG2Decode. Other filters are already removed by DynaPDF since a conversion to a native file format is then always required.
OrgFilter	The image was compressed with this filter in the PDF file. This info is useful to determine which compression filter should be used when creating a new image file from the image buffer.
BitsPerPixel	Bit depth of the image buffer. Possible values are 1, 2, 4, 8, 24, 32, and 64.
ColorSpace	The color space refers either to the image buffer or to the color table if set.
NumComponents	The number of components stored in the image buffer.
MinIsWhite	If 1, the colors of 1 bit images are reversed.
ColorCount	The number of colors in the color table.
Width	Image width in pixel.
Height	Image height in pixel.
ScanLineLength	The length of a scanline in bytes.
InlineImage	If 1, the image is an inline image.
Interpolate	If 1, image interpolation should be performed.
Transparent	The meaning is different depending on the bit depth and whether a color table is available. If the image is a 1 bit image and if no color table is available, black pixels must be drawn with the current fill color. If the image contains a color table, ColorMask contains the range of indexes in the form min/max index which should appear transparent. If no color table is present ColorMask contains the transparent ranges in the form min/max for every color component.
Intent	The rendering intent. Default is none.
MetadataSize	Length of Metadata in bytes.
ResolutionX	Image resolution on the x-axis.
ResolutionY	Image resolution on the y-axis.
Metadata	Optional XML Metadata stream as text.
ICCProfile	ICC Color Profile of the colorspace (can be empty).
MaskImage	If set, a 1 bit image is used as a transparency mask. Returns index of that image.
SoftMask	If set, a grayscale image is used as alpha channel. Returns index of that image.

## 71.180 DynaPDF.GetImageCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetImageCount"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

Returns the number of image objects which were loaded with DynaPDF functions or imported from external PDF files. This does not include inline images.

The images can be accessed with DynaPDF.GetImage.

If you need to write all files to disk, you can use DynaPDF.ExtractImages or use DynaPDF.ListImages to list them all with details.

See also [GetImageCount](#) function in DynaPDF manual.

### Examples

Loop and get all images in various formats:

```
Go to Layout [ "Start" (Start) ; Animation: None ]
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r ; Value: MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Start::SourcePDF) ]
Set Variable [ $r ; Value: MBS("DynaPDF.ImportPDFFile"; $pdf) ]
# Put result in records
Go to Layout [ "List" (List) ; Animation: None ]
Delete All Records [ With dialog: Off ]
Set Variable [ $imageCount ; Value: MBS( "DynaPDF.GetImageCount"; $PDF ) ]
Set Variable [ $imageIndex ; Value: 0 ]
If [ $imageCount >0 ]
Loop
New Record/Request
Set Field [ List::Index ; $imageIndex ]
Set Field [ List::Image ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "" ; "" ) ]
Set Field [ List::JPEG ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "test.jpg"; "JPEG") ]
Set Field [ List::BMP ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "test.bmp"; "BMP") ]
Set Field [ List::PNG ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "test.png"; "PNG") ]
Set Field [ List::TIFF ; MBS("DynaPDF.GetImage"; $pdf; $imageIndex; "Picture"; "test.tif"; "TIFF") ]
Commit Records/Requests [ With dialog: On ]
Set Variable [ $imageIndex ; Value: $imageIndex + 1 ]
Exit Loop If [ $imageIndex >= $imageCount ]
```

71.180. *DYNAPDF.GETIMAGECOUNT* 2867  
End Loop  
End If  
Set Variable [ \$r ; Value: MBS("DynaPDF.Release"; \$pdf) ]

## 71.181 DynaPDF.GetImportDocInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetImportDocInfo"; PDF; key )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### key

The key to set. Can be Author, Creator, Keywords, Producer, Subject, Title, Company, PDFXVersion, PDFXConfiguration, CreationDate or ModificationDate.

"Author"

**Result** Returns value or error message.

### Description

Please note that we have DynaPDF.GetDocInfo for the current working PDF and the DynaPDF.GetImportDocInfo for the current open import PDF.

### Examples

Query title of import PDF:

```
$r = MBS( "DynaPDF.GetImportDocInfo"; $PDF; "title" )
```

Query creation and modification dates:

```
Set Variable [ $cd ; Value: MBS( "DynaPDF.GetImportDocInfo"; $PDF; "CreationDate" ) ]
```

```
Set Variable [ $md ; Value: MBS( "DynaPDF.GetImportDocInfo"; $PDF; "ModificationDate" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetImportFlags"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns number or error.

### Description

The flags are described in detail under DynaPDF.SetImportFlags.  
See also [GetImportFlags](#) function in DynaPDF manual.

## 71.184 DynaPDF.GetImportOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetImportOrientation"; PDF; Page )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Page

The page index from 0 to DynaPDF.GetImportPageCount-1.

0

**Result** Returns OK or error message.

### Description

The function returns the orientation of a specific page within the currently open import file.

If the function succeeds the return value is the orientation of the page in degrees. Possible values are 0, 90, 180, 270, or the same values as negative numbers. If the function fails, it returns an error.

## 71.186 DynaPDF.GetImportPageBounds

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetImportPageBounds"; PDF; PageIndex { ; Box } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### PageIndex

The page index in range from 1 to DynaPDF.GetImportPageCount.  
1

#### Box

Optional

Optional, which box to use. Default is Mediabox. You can pass MediaBox, CropBox, ArtBox, BleedBox or TrimBox.  
"MediaBox"

**Result** Returns rectangle as string with four numbers for left, top, right and bottom.

### Description

Please note that we have DynaPDF.GetPageBounds for the current working PDF and the DynaPDF.GetImportPageBounds for the current open import PDF.

### Examples

Queries crop size of page 5 from import PDF:

```
$r = MBS( "DynaPDF.GetImportPageBounds"; $PDF; 5; "CropBox" )
```

## 71.187 DynaPDF.GetImportPageCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetImportPageCount"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns page number or error message.

### Description

Please note that we have DynaPDF.GetPageCount for the current working PDF and the DynaPDF.GetImportPageCount for the current open import PDF.

### Examples

Load a PDF from container and query page count:

```
$r = MBS("DynaPDF.OpenPDFFromContainer"; $PDF; Test::data)
$pageCount = MBS("DynaPDF.GetImportPageCount"; $PDF)
```

Import selected pages from one PDF and write into a new one:

```
# New PDF
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]

# Open existing PDF file (or use DynaPDF.OpenPDFFromContainer for container)
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromFile"; $pdf; $path ) ]

# Query page count
Set Variable [ $pageCount; Value:MBS( "DynaPDF.GetImportPageCount"; $pdf ) ]

# Import the pages you need
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 2) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 3) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 2) ]

# Set output to this file path
# MBS( "DynaPDF.OpenOutputFile"; $pdf; "/Users/cs/Desktop/output.pdf" )

# Write PDF
Set Variable [ $r; Value:MBS("DynaPDF.Save"; $pdf) ]
```

71.187. *DYNAPDF.GETIMPORTPAGECOUNT* 2877

# release memory

Set Variable [ \$r1; Value:MBS("DynaPDF.Release"; \$pdf) ]

## 71.187.2 FileMaker Magazin

- Ausgabe 6/2016, Seite 24

Created 18th August 2014, last changed 4th August 2016.

**71.188 DynaPDF.GetInDocInfoCount**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInDocInfoCount"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns number or error.

**Description**

Returns the number of available document info entries of the currently opened import file or a negative error code on failure. The document info entries can be enumerated with DynaPDF.GetInDocInfoEx.

See also [GetInDocInfoCount](#) function in DynaPDF manual.

**See also**

- 71.143 DynaPDF.GetDocInfoCount 2820
- 71.294 DynaPDF.New 3032

Created 6th February 2015, last changed 6th February 2015.

## 71.189 DynaPDF.GetInFieldCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInFieldCount"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns the number of fields or error.

### Description

The number of top level fields may not match the number of fields in the PDF file. For example, interactive forms created by Adobe's Designer contain usually one top level group field that contains all other fields of the document. The return value would be 1 in this case because the children of group fields are not taken into account.

See also [GetInFieldCount](#) function in DynaPDF manual.

Created 18th August 2014, last changed 18th August 2014.

**71.190 DynaPDF.GetInIsCollection**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInIsCollection"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns 0, 1 or error.

**Description**

The PDF file must be opened with DynaPDF.OpenPDFFromContainer or DynaPDF.OpenPDFFromFile before this function can be called.

See also [GetInIsCollection](#) function in DynaPDF manual.

**See also**

## 71.191 DynaPDF.GetInIsEncrypted

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInIsEncrypted"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns 0, 1 or error.

### Description

The PDF file must be opened with DynaPDF.OpenPDFFromContainer or DynaPDF.OpenPDFFromFile before this function can be called.

See also [GetInIsEncrypted](#) function in DynaPDF manual.

### See also

**71.192 DynaPDF.GetInIsSigned**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInIsSigned"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns 0, 1 or error.

**Description**

The PDF file must be opened with DynaPDF.OpenPDFFromContainer or DynaPDF.OpenPDFFromFile before this function can be called.

See also [GetInIsSigned](#) function in DynaPDF manual.

## 71.193 DynaPDF.GetInIsTrapped

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInIsTrapped"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns 0, 1 or error.

### Description

The PDF file must be opened with DynaPDF.OpenPDFFromContainer or DynaPDF.OpenPDFFromFile beforehand. If the key is not set the return value is false.  
See also [GetInIsTrapped](#) function in DynaPDF manual.

### See also

- 71.436 DynaPDF.SetTrapped 3289

Created 18th August 2014, last changed 18th August 2014.

**71.194 DynaPDF.GetInIsXFAForm**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInIsXFAForm"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns 0, 1 or error.

**Description**

DynaPDF does not allow editing of XFA forms. If the form is a hybrid form the XFA part can be deleted and the remaining PDF form fields can be edited as usual.

The PDF file must be opened with DynaPDF.OpenPDFFromContainer or DynaPDF.OpenPDFFromFile before this function can be called.

DynaPDF.GetXFASream can be used to read the form definition and values.

See also [GetInIsXFAForm](#) function in DynaPDF manual.

**See also**

## 71.195 DynaPDF.GetInMetadata

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInMetadata"; PDF; ObjType { ; PageNum } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### ObjType

The object type. Can be Catalog, Font, Image, Page or Template.

"Catalog"

#### PageNum

Optional

Page number or -1 to access the global XMP stream.

-1

**Result** Returns text or error.

### Description

The function can be used to access the optional metadata streams of pages or the global metadata stream of the current open import file. Metadata streams are in XMP format that is a superset of XML. The PDF file must be opened with DynaPDF.OpenPDFFromFile or DynaPDF.OpenPDFFromContainer beforehand. Although the global XMP stream does usually exist in today's PDF files, metadata streams are optional and maybe not present. The function empty text, if no metadata stream is present.

See also [GetInMetadata](#) function in DynaPDF manual.

### Examples

Open PDF and get XMP metadata:

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; DynaPDF XMP::InputPDF) ]
```

```
Set Field [ DynaPDF XMP::XMP; MBS( "DynaPDF.GetInMetadata"; $pdf; "Catalog"; -1 ) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
```

## 71.196 DynaPDF.GetInPrintSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInPrintSettings"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

The PDF file must be opened with DynaPDF.OpenPDFFromContainer or DynaPDF.OpenPDFFromFile before the function can be used. The print settings are used to initialize the print dialog in a viewer application.

NumCopies, PickTrayByPDFSize and PrintRangesCount return a number (-1 if undefined). PrintRanges returns a list of values for the ranges. DuplexMode returns values like FlipShortEdge, FlipLongEdge, Simplex or None. PrintScaling returns None or AppDefault.

See also DynaPDF.GetPrintSettings and DynaPDF.SetPrintSettings.

See also [GetInPrintSettings](#) function in DynaPDF manual.

### See also

**71.197 DynaPDF.GetInRepairMode**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetInRepairMode"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns 0, 1 or error.

**Description**

When a PDF file was loaded in normal mode and if it contains damages which were not recognized when opening the file, e.g. if it is not possible to load one or more pages of it, then it is possible to load the file explicitly in repair mode to repair the damages. Not all damages can be repaired but DynaPDF contains a very robust and powerful PDF parser that is able to repair many damages in a PDF file.

See also DynaPDF.OpenImportFile.

If the current open import file was already opened in repair mode then the return value is 1. If it was loaded in normal mode then the return value is 0. If no import file is in memory the return value is a negative error code.

See also [GetInRepairMode](#) function in DynaPDF manual.

**See also**

- 71.294 DynaPDF.New

3032

Created 18th August 2014, last changed 18th August 2014.

**71.198 DynaPDF.GetIsFixedPitch**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetIsFixedPitch"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns 0, 1 or error.

**Description**

You must set a font before this function can be used (see DynaPDF.SetFont for further information).

**See also**

- 71.294 DynaPDF.New 3032

Created 18th August 2014, last changed 18th August 2014.

**71.199 DynaPDF.GetIsTaggingEnabled**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetIsTaggingEnabled"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns 1 if tagging is enabled, 0 if not or error.

**Description**

If the function is called within an open page then it checks whether tagging is enabled for this page. DynaPDF.EditPage does not fully disable tagging when the structure information of a specific page is damaged. When the function is called outside of an open page then it checks whether tagging for the entire document is enabled. Tagging can be disabled when a page of a PDF file with tagging information was imported while a structure tree was already in memory.

See also [GetIsTaggingEnabled](#) function in DynaPDF manual.

## 71.200 DynaPDF.GetJPEGQuality

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetJPEGQuality"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns JPEG quality number (0 to 100)

### Description

The function returns the current JPEG compression quality which is used when compressing images with the JPEG or JPEG2000 compression filter. The return value can be negative indicating that the pass-through mode is disabled. The absolute value represents the wished image quality in percent if the JPEG compression filter is used.

If the JPEG2000 compression filter is used the value represents a divisor of the uncompressed image size to the wished compressed image size. The absolute value ranges from 0 to 1000. If the value is 0 or 1000 then the loss-less variant of JPEG2000 compression is used (see also Dynapdf.SetJPEGQuality).

See also [GetJPEGQuality](#) function in DynaPDF manual.

## 71.201 DynaPDF.GetJavaScriptCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetJavaScriptCount"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns number or error.

### Description

See also [GetJavaScriptCount](#) function in DynaPDF manual.

#### See also

- 71.294 DynaPDF.New

3032

Created 6th February 2015, last changed 6th February 2015.

## 71.202 DynaPDF.GetLanguage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetLanguage"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns text or error.

### Description

Language tags are defined as normal ANSI string values.  
The Language identifiers are described in detail under DynaPDF.SetLanguage.  
See also [GetLanguage](#) function in DynaPDF manual.

#### See also

- 71.294 DynaPDF.New 3032

## 71.203 DynaPDF.GetLastErrorMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetLastErrorMessage"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns last error message as text.

### Description

### Examples

Opens PDF:

```
$r = MBS( "DynaPDF.OpenPDFFromContainer"; $PDF; $PDFFile )
$error = MBS( "DynaPDF.GetLastErrorMessage"; $PDF )
```

## 71.206 DynaPDF.GetLeading

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetLeading"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns leading value.

### Description

The leading is the distance between two text lines. The default leading in PDF is the font size. The property is used by the function DynaPDF.AddContinueText and DynaPDF.WriteFText. A value of 0 determines that the font size should be used as leading, this is the default behaviour.

Default value = 0

See also [GetLeading](#) function in DynaPDF manual.

**71.207 DynaPDF.GetLineWidth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetLineWidth"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns line width or error.

**Description**

The function returns the current line width used for stroked vector graphics and the border of interactive objects.

See also [GetLineWidth](#) function in DynaPDF manual.

**See also**

### 71.208.1 Blog Entries

- [MBS FileMaker Plugin, version 7.0pr1](#)

Created 18th December 2016, last changed 18th December 2016.

**71.209 DynaPDF.GetLogMetafileSize**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.3	No	Yes	Yes, Windows only	No	No

MBS( "DynaPDF.GetLogMetafileSize"; PDF; Filename )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Filename**

The native file path to the EMF file.

"C:\test.wmf"

**Result** Returns rectangle or error.

**Description**

Retrieves the logical bounding box of an enhanced or Windows metafile. The parameter FileName must be the file path to the EMF or WMF file. Returns the unscaled logical bounding box of the metafile. This bounding box is required to calculate a user defined cutting area or viewport (see the example below the description of the function).

Two WMF formats are available, the old non-portable WMF format and the newer portable WMF format. Both formats must be converted to EMF with the GDI function SetWinMetaFileBits() before the logical bounding box can be calculated (the conversion is done automatically). However, non-portable WMF files are device-dependent, they contain no size information. To get correct results, the default size must be set with the function DynaPDF.SetWMFDefExtent beforehand. The parameters Width and Height are passed to the member xExt, yExt of the structure METAFILEPICT which is required to convert WMF files to EMF. The default size is 0, 0, that means the GDI calculates the size automatically but mostly incorrect. Because the GDI function SetWinMeatFileBits() is used to convert WMF files to EMF, WMF files are not supported under Linux or UNIX.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer. See also [GetLogMetafileSize](#) function in DynaPDF manual.

## 71.212 DynaPDF.GetMetadata

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetMetadata"; PDF; ObjType { ; Handle } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### ObjType

The object type. Can be Catalog, Font, Image, Page or Template.

"Catalog"

#### Handle

Optional

Object handle or -1 for the catalog object.

-1

**Result** Returns text or error.

### Description

Reads the optional metadata streams of pages, fonts, images, pages, templates, as well as the global metadata stream that is associated with the Catalog object. Metadata streams are in XMP format that is a superset of XML.

The global metadata stream will be created when this function is called. The returned stream is a preview of the XMP stream that will be stored in the file when DynaPDF.CloseFile or DynaPDF.CloseFileEx is called. Note that the creation and modification date will be updated when the file is closed (except if the stream will be modified or replaced with DynaPDF.SetMetadata).

The original global XMP stream of external PDF files can be accessed with DynaPDF.GetInMetadata.

Metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present. The caller must also check whether the text returned has a length greater than zero to determine whether stream data was returned.

See also [GetMetadata](#) function in DynaPDF manual.

- [MBS FileMaker Plugin, version 5.2pr9](#)

71.212. *DYNAPDF.GETMETADATA*

2905

Created 29th July 2015, last changed 29th July 2015.

## 71.213 DynaPDF.GetOCG

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	9.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetOCG"; PDF; Handle; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Handle

The OCG handle.

\$OCG

#### Selector

Which value to return.

"Name"

**Result** Returns value or error.

### Description

returns the properties of the Content Usage dictionary that is associated with an OCG or layer. If the OCG is not included in an application event, then the contents in this dictionary serves as pure information.

If the OCG is included in one or more application events, then these settings control also the visibility state of the OCG. The function DynaPDF.GetOCG returns the events and categories which control the layer visibility.

If UserNamesCount is greater zero, the dictionary contains also user names. The user names can be accessed with DynaPDF.GetOCGUsageUserName.

Properties:

Handle	Handle or array index
Intent	Bitmask, see TOCGIntent. For Intent and visibility state
Name	Layer name
HaveContUsage	If 1, the layer contains a Content Usage dictionary. See DynaPDF.GetOCG-ContUsage
AppEvents	Bitmask, see TOCAppEvent. If non-zero, the layer is included in one or more app events which control the layer state.
Categories	Bitmask, see TOCGUsageCategory. The Usage Categories which control the layer state.

See also [GetOCG](#) function in DynaPDF manual.

### Examples

Find layers in PDF:

```

Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
#
# import file
Set Variable [ $r ; Value: MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Layers::Input PDF) ]
Set Variable [ $r ; Value: MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]
#
# look for layers
Set Variable [ $count ; Value: MBS ( "DynaPDF.GetOCGCount" ; $pdf ) ]
Set Variable [ $index ; Value: 0 ]
Loop
Exit Loop If [ $index $count ]
#
Set Variable [ $Name ; Value: MBS ( "DynaPDF.GetOCG" ; $pdf ; $index; "Name" ) ]
Set Variable [ $Intent ; Value: MBS ( "DynaPDF.GetOCG" ; $pdf ; $index; "Intent" ) ]
Set Variable [ $Visible ; Value: MBS( "Math.BitwiseAND"; $intent; 32 ) = 32 ]
#
New Record/Request
Set Field [ Layers::Name ; $Name ]
Set Field [ Layers::Visible ; $visible ]
Commit Records/Requests [ With dialog: Off ]
#
Set Variable [ $index ; Value: $index + 1 ]
End Loop
#
Set Variable [ $r ; Value: MBS( "DynaPDF.Release"; $pdf ) ]

```

### 71.216.1 Blog Entries

- [MBS FileMaker Plugin, version 9.1pr4](#)

Created 18th February 2019, last changed 18th February 2019.

**71.217 DynaPDF.GetOpacity**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetOpacity"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns value or error.

**Description**

A value of 1 determines that the annotation is completely opaque. If the value is zero, newly created annotations will be invisible. The opacity flag is not supported by all annotation types.

At time of publication the opacity property is used for annotations only. Later versions of DynaPDF use this property may be for other PDF objects too.

See also [GetOpacity](#) function in DynaPDF manual.

## 71.218 DynaPDF.GetOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetOrientation"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error message.

### Description

The function returns the orientation of the current open page if an open page was detected or the default orientation for newly created pages if no open page was detected.

The orientation is measured in degrees; it is also always a multiple of 90 or 0.

See also [GetOrientation](#) function in DynaPDF manual.

**71.219 DynaPDF.GetOutputIntent**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetOutputIntent"; PDF; Index; Selector { ; FileName } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Index**

The index of the output indent. From 0 to DynaPDF.GetOutputIntentCount-1.

0

**Selector**

The value to query. Possible values: Buffer, BufSize, Info, NumComponents, OutputCondition, OutputConditionID or RegistryName.

"Info"

**FileName**

Optional

Optional for the buffer option to get the ICC profile, this parameter provides the file name to include in container.

"profile.icc"

**Result** Returns OK or error.

**Description**

An output intent is an ICC profile that describes the characteristics of the output device. The profile is mostly embedded but certain standards like PDF/X 4p, for example, allow also the usage of non-embedded profiles.

The parameter Index is the array index of the output intent. To determine the number of available intents call DynaPDF.GetOutputIntentCount.

## 71.222 DynaPDF.GetPageAnnotCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPageAnnotCount"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns number of annotations or error.

### Description

The page must be opened with EditPage() before the function can be used. The annotations of the page can be accessed with DynaPDF.GetAnnotation.

Return values:

If the function succeeds the return value is the number of annotations which are used by a page. If the function fails the return value is a negative error code.

See also [GetPageAnnotCount](#) function in DynaPDF manual.

### See also

## 71.223 DynaPDF.GetPageAnnotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPageAnnotation"; PDF; AnnotationHandle; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

#### Selector

Which value to query. Possible values: Type, Deleted, BBox, BorderWidth, BorderColor, BorderStyle, BackColor, Handle, Author, Content, Name, Subject, PageNum, HighlightMode, DestPage, DestPos, DestType, DestFile, Icon, StampName, AnnotFlags, CreateDate, ModDate, Grouped, Open, Parent, PopUp, State, StateModel, EmbeddedFile, Subtype, PageIndex, MarkupAnnot, Opacity, QuadPoints, DashPattern, Intent, LE1, LE2, Vertices, Caption, CaptionOffsetX, CaptionOffsetY, CaptionPos, LeaderLineLen, LeaderLineExtend or LeaderLineOffset.

"Name"

**Result** Returns value or error.

### Description

Please check also dynapdf manual with details on the pdfGetAnnotEx function.

The parameter AnnotationHandle must be the array index of the page in which the annotation is used. To enumerate the annotations of a page execute the function in a loop from 0 to DynaPDF.GetPageAnnotCount - 1.

### See also

- 71.71 DynaPDF.DeleteAnnotation 2714

## 71.224 DynaPDF.GetPageBBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPageBBox"; PDF; PageIndex { ; Box } )

(old name: DynaPDF.GetPageBounds)

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PageIndex

The page index in range from 1 to DynaPDF.GetPageCount.

1

#### Box

Optional

Optional, which box to use. Default is Mediabox. You can pass MediaBox, CropBox, ArtBox, BleedBox or TrimBox.

"MediaBox"

**Result** Returns rectangle as string with four numbers for left, top, right and bottom.

### Description

Please note that we have DynaPDF.GetPageBBox for the current working PDF and the DynaPDF.GetImportPageBounds for the current open import PDF.

### Examples

Queries crop size of page 5 from current working PDF:

```
$r = MBS( "DynaPDF.GetPageBBox"; $PDF; 5; "CropBox" )
```

### See also

## 71.225 DynaPDF.GetPageCoords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPageCoords"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns current setting on success or error message.

### Description

The native coordinate system of the Portable Document Format is bottom-up. However, DynaPDF supports also top-down coordinates to make the usage of the library easier.

See also DynaPDF.SetPageCoords.

See also [GetPageCoords](#) function in DynaPDF manual.

### **71.228.1 FileMaker Magazin**

- Ausgabe 3/2019, Seite 37
- Ausgabe 2/2019, Seite 27

Created 18th August 2014, last changed 18th August 2014.

## 71.229 DynaPDF.GetPageLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPageLabel"; PDF; Index; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Index

Page label handle or array index.

\$index

#### Selector

What value to query. Can be StartRange, Format, FirstPageNum or Prefix.

"Prefix"

**Result** Returns value or error.

### Description

The parameter Index must be the array index of the page label. The number of available page labels can be queried with the function DynaPDF.GetPageLabelCount.

A page label is used to construct a format string. The start range identifies the first page to which this label applies. If no further page labels follow, the label is applied to all subsequent pages through DynaPDF.GetPageCount. The member FirstPageNum represents the numeric portion of the first page label in the range. Subsequent pages are numbered sequentially from this value.

Page label format can be: DecimalArabic, UppercaseRoman, LowercaseRoman, UppercaseLetters, LowercaseLetters or None.

See also [GetPageLabel](#) function in DynaPDF manual.

## 71.231 DynaPDF.GetPageLayout

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPageLayout"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns the current page layout.

### Description

The page layout can be SinglePage, OneColumn, TwoColumnLeft, TwoColumnRight, TwoPageLeft, TwoPageRight or Default.

See also [GetPageLayout](#) function in DynaPDF manual.

## 71.233 DynaPDF.GetPageNum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPageNum"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns number or error.

### Description

See also [GetPageNum](#) function in DynaPDF manual.

## 71.234 DynaPDF.GetPageWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPageWidth"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns page width value.

### Description

If no open page can be detected the return value is the default width which will be used for newly created pages.

See also [GetPageWidth](#) function in DynaPDF manual.

## 71.235 DynaPDF.GetPrintSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetPrintSettings"; PDF; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Selector

Which value to retrieve. Can be NumCopies, PickTrayByPDFSize, PrintRangesCount, PrintScaling, DuplexMode and PrintRanges.

"NumCopies"

**Result** Returns OK or error.

### Description

The print settings are used to initialize the print dialog in a viewer application.

NumCopies, PickTrayByPDFSize and PrintRangesCount return a number (-1 if undefined). PrintRanges returns a list of values for the ranges. DuplexMode returns values like FlipShortEdge, FlipLongEdge, Simplex or None. PrintScaling returns None or AppDefault.

See also DynaPDF.SetPrintSettings and DynaPDF.GetInPrintSettings.

See also [GetPrintSettings](#) function in DynaPDF manual.

## 71.236 DynaPDF.GetReplaceICCProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetReplaceICCProfile"; PDF; ICCProfileType )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### ICCProfileType

The profile type. Can be Gray, RGB, CMYK or Lab.  
"RGB"

**Result** Returns path text or error.

### Description

### Examples

Query RGB profile path:

MBS( "DynaPDF.GetReplaceICCProfile"; \$pdf; "RGB" )

### See also

Created 8th March 2016, last changed 30th September 2017.

**71.237 DynaPDF.GetReplaceICCProfileData**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetReplaceICCProfileData"; PDF; ICCProfileType )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**ICCProfileType**

The profile type. Can be Gray, RGB, CMYK or Lab.  
"RGB"

**Result** Returns container value or error.

**Description****See also**

**71.237.1 Blog Entries**

- [MBS FileMaker Plugin, version 7.5pr1](#)

Created 30th September 2017, last changed 30th September 2017.

## 71.238 DynaPDF.GetReplaceICCProfilesCounter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetReplaceICCProfilesCounter"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns number or error.

### Description

The plugin has a callback for ReplaceICCProfile for the CheckConformance function. This counter is increased for each call to the callback, so you can see how often it was called.

### See also

**71.239 DynaPDF.GetResolution**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetResolution"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns current resolution value.

**Description**

The function returns the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF. The value will be ignored if the property SaveNewImageFormat was set to false.

The default value is 150 (DPI).

See also [GetResolution](#) function in DynaPDF manual.

**71.241 DynaPDF.GetTemplCount**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetTemplCount"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns count or error.

**Description**

The page must be opened with DynaPDF.EditPage beforehand.

## 71.247 DynaPDF.GetTextRise

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetTextRise"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns rise value or error.

### Description

Text rise specifies the distance, in unscaled text space units, to move the baseline up or down from its default location. Positive values of text rise move the baseline up. Adjustments to the baseline are useful for drawing superscripts or subscripts. The default location of the baseline can be restored by setting the text rise to 0. The figure below illustrates the effect of the text rise. Text rise always applies to the vertical coordinate in text space. See also DynaPDF.SetTextRise.

The text moves around the baseline.

Default value = 0

See also DynaPDF.SetTextRise.

See also [GetTextRise](#) function in DynaPDF manual.

### Examples

Queries text rise:

MBS( "DynaPDF.GetTextRise"; \$PDF )

### See also

- 71.249 DynaPDF.GetTextWidth 2951

Created 18th August 2014, last changed 18th August 2014.

## 71.248 DynaPDF.GetTextScaling

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetTextScaling"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns value or error.

### Description

The scaling value adjusts the width of glyphs by stretching or compressing them in the horizontal direction. Its value is specified as a percentage of the normal width of the glyphs, with 100 being the normal width. See also DynaPDF.SetTextScaling.

Default value = 100

See also DynaPDF.SetTextScaling.

See also [GetTextScaling](#) function in DynaPDF manual.

### Examples

Queries text scaling:

MBS( "DynaPDF.GetTextScaling"; \$PDF )

### See also

- 71.264 DynaPDF.GetWordSpacing 2968
- 71.294 DynaPDF.New 3032
- 71.434 DynaPDF.SetTextScaling 3287

Created 18th August 2014, last changed 18th August 2014.

**71.249 DynaPDF.GetTextWidth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetTextWidth"; PDF; Text )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Text**

The text to measure.

"Hello World"

**Result** Returns width or error.

**Description**

The graphics state parameters character spacing, word spacing, text scaling, and the current font size are all considered. A font must be set before this function can be used.

The function computes the visible width of the string. This is the width excluding the last character spacing. The bounding box of the string is the text width plus the current character spacing. This behavior must be taken into account when writing right aligned text with DynaPDF.WriteFText. Due to certain formatting rules DynaPDF.WriteFText uses the bounding box of a text string to output text.

See also [GetTextWidth](#) function in DynaPDF manual.

Created 6th February 2015, last changed 6th February 2015.

**71.252 DynaPDF.GetUseExactPwd**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetUseExactPwd"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns value or error.

**Description**

If the property UseExactPwd is 0, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string. If 1, the open or owner password must be known to open the PDF file (see also DynaPDF.SetUseExactPwd).

Default value = 1

If your application should allow the modification of encrypted PDF files, you may check the access permissions to grant user rights, if the file was opened with the open password instead of the owner password (see also DynaPDF.GetUserRights).

Due to the license agreement of Adobe, all manufacturers of applications which make the treatment of encrypted PDF files possible, must respect the access permissions of a PDF file, if the file was opened with the open password.

Only if the file was opened with the owner password, all rights should be granted. See PDF Reference 1.5 for further information.

The property UseExactPwd should be 1, if the application is a commercial software product.

See also [GetUseExactPwd](#) function in DynaPDF manual.

**71.253 DynaPDF.GetUseGlobalImpFiles**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetUseGlobalImpFiles"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns value or error.

**Description**

Specifies whether import files should be loaded permanent into memory, e.g. to enable splitting of large PDF files. An open import file will not be closed when DynaPDF.CloseFile or DynaPDF.FreePDF is called when the property is true. See also DynaPDF.SetUseGlobalImpFiles.

Default value = 0

See also [GetUseGlobalImpFiles](#) function in DynaPDF manual.

**See also**

- 71.294 DynaPDF.New 3032

**71.254 DynaPDF.GetUseStdFonts**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetUseStdFonts"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns value or error.

**Description**

PDF viewer applications support 14 standard fonts, these fonts are not embedded by default, also if the parameter Embed of the function DynaPDF.SetFont is true and if the font file is available.

If a standard font should be embedded it is recommended to disable the internal fonts supported by DynaPDF. See also DynaPDF.SetFont or DynaPDF.SetUseStdFonts.

Default value = 1 (on)

See also DynaPDF.SetUseStdFonts.

See also [GetUseStdFonts](#) function in DynaPDF manual.

**Examples**

Queries standard fonts usage:

MBS( "DynaPDF.GetUseStdFonts"; \$PDF )

**See also**

Created 18th August 2014, last changed 18th August 2014.

## 71.255 DynaPDF.GetUseSystemFonts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetUseSystemFonts"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns value (0 or 1) or error.

### Description

The property specifies whether the default font directory of the operating system should be added to the list of font search paths. On Windows this is the % Windows% /Fonts directory plus additional fonts which can be named in the Registry.

On Mac OS X the following font directories will be added to the list of font search paths (in this order):

~/Library/Fonts/

/Library/Fonts/

/System/Library/Fonts/

System fonts are loaded on demand, e.g. when a function tries to load a font. To improve processing speed the internal font cache is hold in memory until the PDF instance will be deleted. Additional font search paths can be added with DynaPDF.AddFontSearchPath.

Because Linux and UNIX operating system support no default font directory the property is ignored.

See also DynaPDF.SetUseSystemFonts.

See also [GetUseSystemFonts](#) function in DynaPDF manual.

### Examples

Queries system fonts usage:

MBS( "DynaPDF.GetUseSystemFonts"; \$PDF )

### See also

**71.256 DynaPDF.GetUseTransparency**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetUseTransparency"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns current state (0 or 1) or error.

**Description**

If 1, the transparent color (see DynaPDF.SetTransparentColor is used to mask an image. The property has no effect for JPEG compressed images.

The default value is 1 (true).

See also [GetUseTransparency](#) function in DynaPDF manual.

**See also**

## 71.257 DynaPDF.GetUseVisibleCoords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetUseVisibleCoords"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

The crop box crops a page, but the paper format (media box) is left unchanged. To move the coordinates into the visible area, set the property to true. Coordinates can then be used as if no crop box was defined. The bounding boxes are described in detail at DynaPDF.SetBBox.

See also [GetUseVisibleCoords](#) function in DynaPDF manual.

#### See also

## 71.259 DynaPDF.GetUserUnit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetUserUnit"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK on success or error message.

### Description

A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch and the default user unit is 1.0. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.

The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units.

See also [GetUserUnit](#) function in DynaPDF manual.

## 71.260 DynaPDF.GetUsesTransparency

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetUsesTransparency"; PDF; PageIndex )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PageIndex

The page index in range from 1 to DynaPDF.GetPageCount.

1

**Result** Returns OK or error.

### Description

This is no quick check as DynaPDF.GetDocUsesTransparency applies. The function parses the page or pages to determine whether transparent objects are really used.

To check whether a specific page uses transparency set the parameter PageNum to the wished page number. The first page is denoted by 1. To check the entire PDF file set PageNum to -1.

The return value is a bit mask on success (a positive integer value), or a error message on failure.

The following flags are defined:

0: The page or document uses no transparency. 1: The content stream of a page contains transparent objects. 2: A page defines the blending color space (Group dictionary). 4: A page contains transparent annotations or form fields. The above values can occur in any combination. To check whether a specific flag was set use a binary and operator, e.g. Math.BitwiseAND. e.g. Value 6 means both 2 and 4 flags are set.

See also [GetUsesTransparency](#) function in DynaPDF manual.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetViewerPreferences"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns list or error.

### Description

The plugin returns a list of the values set, e.g. "HideToolBar\$HideMenuBar\$NonFullScrUseNone".  
See DynaPDF help for list of options.  
See also [GetViewerPreferences](#) function in DynaPDF manual.

## 71.265 DynaPDF.GetXFASStream

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.GetXFASStream"; PDF; Index; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Index

The index for the stream. From 0 to DynaPDF.GetXFASStreamCount-1.

0

#### Selector

Which value to query. BufSize: Size of stream in bytes. Buffer: The stream data as text. Container: The stream data as a container value. Name: The name of the stream.

"Buffer"

**Result** Returns OK or error.

### Description

The parameter Index is the array index. The function DynaPDF.GetXFASStreamCount returns the number of available streams.

An XFA form consist of several XML streams. The stream name must be used to determine which stream was returned.

See also [GetXFASStream](#) function in DynaPDF manual.

## 71.267 DynaPDF.HaveOpenDocument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.HaveOpenDocument"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns 1, 0 or error.

### Description

If an error occurred it is not always clear whether the PDF file was already deleted or if it is still in memory. Therefore, this function can be used to determine whether a PDF file is still in memory.

If an open PDF file is in memory the return value is 1. If no open PDF file is in memory the return value is 0.

### See also

**71.269 DynaPDF.HighlightAnnot**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.HighlightAnnot"; PDF; PosX; PosY; Width; Height; HighlightColor; Author; Subject; Comment )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

X-coordinate of the annotation

100

**PosY**

Y-coordinate of the annotation

100

**Width**

Width of the annotation

100

**Height**

Height of the annotation

100

**HighlightColor**

Highlight color.

200

**Author**

The author name. Can be empty.

"Christian Schmitz"

**Subject**

The subject to use. Can be empty.

**Comment**

The comment. Can be empty.

**Result** Returns annotation handle or error.

**Description**

Highlight annotations are used to mark text on a PDF page.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.

The parameter Color specifies the highlight color; it must be defined in RGB color space. The line width of a Strikout or Underline annotation is not adjustable. The line width depends on the size of the annotation

and is automatically calculated.

The active color space must be set to DeviceRGB before creating the annotation. See `DynaPDF.SetColorSpace` for further information.

See also [HighlightAnnot](#) function in DynaPDF manual.

**See also**

- 71.294 `DynaPDF.New` 3032

Created 28th November 2014, last changed 30th November 2014.

## 71.270 DynaPDF.HighlightPattern

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.HighlightPattern"; PDF; Text { ; HighlightColor; CaseInsensitive } )
```

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Text

The text to search.

"Hello"

#### HighlightColor

Optional

The highlight color. Default is yellow. Value is the RGB color as integer.  $\text{Blue} * 65536 + \text{Green} * 256 + \text{Red}$  with each color channel having a range from 0 to 255.

```
MBS( "DynaPDF.RGB"; 0; 0; 255 )
```

#### CaseInsensitive

Optional

Optional, if 1, the case of the letters is ignored (also umlauts).

1

**Result** Returns number of locations found.

### Description

You need to have an open page. you can use DynaPDF.EditPage to edit an existing one.

You can use DynaPDF.RGB function to calculate RGB color value.

This function uses the parser interface in DynaPDF and needs a Lite license.

### Examples

Highlight "Apple" with yellow:

```
MBS( "DynaPDF.HighlightPattern"; $PDF; "Apple"; MBS( "DynaPDF.RGB"; 0; 255; 255 ); 1 )
```

Same, but with color calculated ourself:

```
MBS("DynaPDF.HighlightPattern"; $pdf; "Apple"; 255+255*256; 1)
```

## 71.271 DynaPDF.ImportEncryptionSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ImportEncryptionSettings"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns OK or error.

### Description

If the PDF file is not encrypted, the function does nothing. To determine whether the open PDF file is encrypted call DynaPDF.GetInIsEncrypted.

The encryption settings should be imported to make sure that the PDF file can be saved with the same settings after it was edited. The user rights should be considered if the file was opened with the open password, also if the password was just an empty string. See DynaPDF.GetUserRights for further information.

If the file was opened with the owner password, then all editing rights should be granted. The PDF file must be closed with DynaPDF.CloseFile or DynaPDF.CloseAndSignFile for example. Don't use DynaPDF.CloseFileEx for example since this function would override the encryption settings. If the file should be saved unencrypted call DynaPDF.ResetEncryptionSettings() before closing the file. If the function succeeds the return value is 1. If the function fails the return value is 0.

See also [ImportEncryptionSettings](#) function in DynaPDF manual.

### See also

- 71.191 DynaPDF.GetInIsEncrypted 2882
- 71.258 DynaPDF.GetUserRights 2961

Created 19th January 2017, last changed 19th January 2017.

## 71.272 DynaPDF.ImportPDFFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ImportPDFFile"; PDF; DestPage )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### DestPage

The first number of the first imported page. Use this to insert pages at some position in new PDF. Default is 1.

1

**Result** Returns error message or last page number.

### Description

The function imports an external PDF file including interactive objects such as annotations, bookmarks, form fields, and so on. DynaPDF supports a large set of flags to enable import of required objects only. Unwanted objects can be removed by the function if necessary.

The parameter DestPage specifies the destination page on which the new pages will be inserted or added if the pages already exist. It is possible to import multiple PDF files on the same or overlapping destination page.

If the function succeeds the return value is the last page number that was touched. For example, if the document in memory contains already 20 pages, and if we import a PDF file with 23 pages, and if the destination page is 21 the return value should be 43 because this is the last page that was invoked during import.

If the function fails the return value is a negative error code.

To open the import PDF, please use DynaPDF.OpenPDFFromFile or DynaPDF.OpenPDFFromContainer. See also [ImportPDFFile](#) function in DynaPDF manual.

### Examples

Imports all pages from import PDF and put in current PDF starting at page 5

```
$r = MBS( "DynaPDF.ImportPDFFile"; $PDF; 5 )
```

Load PDF and extract text of page 2:

```
# initialize DynaPDF before running this:
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# load PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer";$pdf; Test::data) ]
```

```
# import all pages
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile";$pdf) ]
# extra text of page 2
Set Field [ Test::PageText; MBS("DynaPDF.ExtractPageText"; $pdf; 2) ]
# Cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
```

Import and Export PDF:

```
# Start new PDF
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# set import flags
Set Variable [ $r; Value:MBS( "DynaPDF.SetImportFlags"; $pdf; "ImportAll ImportAsPage PrepareFor-
PDFA" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetImportFlags2"; $pdf; "DuplicateCheck" ) ]
# Import PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; MyTable::InputPDF) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]
# Save back
Set Field [ MyTable::OutputPDF; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
```

## 71.273 DynaPDF.ImportPDFPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ImportPDFPage"; PDF; PageIndex )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PageIndex

The source page number from 1 to DynaPDF.GetImportPageCount.

1

**Result** Returns OK or error message.

### Description

See also pdfImportPDFPage in dynapdf manual.

To open the import PDF, please use DynaPDF.OpenPDFFromFile or DynaPDF.OpenPDFFromContainer.

Requires DynaPDF Pro license.

Use DynaPDF.SetImportFlags including AllPageObjects option to preserve links.

### Examples

Import a single page:

```
Set Variable [ $r; Value: MBS( "DynaPDF.SetImportFlags"; $pdf; "ImportAll$ImportAsPage$AllPageObjects" ) ]
```

```
Set Variable [ $r; Value: MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Invoice::PDF Template) ]
```

```
Set Variable [ $r; Value: MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]
```

Import selected pages from one PDF and write into a new one:

```
# New PDF
```

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
```

```
# Open existing PDF file (or use DynaPDF.OpenPDFFromContainer for container)
```

```
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromFile"; $pdf; $path ) ]
```

```
# Query page count
```

```
Set Variable [ $pageCount; Value:MBS( "DynaPDF.GetImportPageCount"; $pdf ) ]
```

```
# Import the pages you need
```

```
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]
```

```

Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 2) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 3) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 2) ]

```

```

# Set output to this file path
# MBS( "DynaPDF.OpenOutputFile"; $pdf; "/Users/cs/Desktop/output.pdf" )

```

```

# Write PDF
Set Variable [ $r; Value:MBS("DynaPDF.Save"; $pdf) ]

```

```

# release memory
Set Variable [ $r1; Value:MBS("DynaPDF.Release"; $pdf) ]

```

Split first page from a PDF:

```

# New PDF
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]

```

```

# Open existing PDF file (or use DynaPDF.OpenPDFFromContainer for container)
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromFile"; $pdf; $path ) ]

```

```

# Import one page
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]

```

```

# Write PDF
Set Variable [ $r; Value:MBS("DynaPDF.Save"; $pdf) ]

```

```

# release memory
Set Variable [ $r1; Value:MBS("DynaPDF.Release"; $pdf) ]

```

**71.274 DynaPDF.ImportPageAsTemplate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ImportPageAsTemplate"; PDF; PageNumber )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**PageNumber**

The page number in the open import PDF.  
1

**Result** Returns template reference number or error.

**Description**

See also pdfImportPage function in dynapdf manual.

Requires DynaPDF Pro license.

**Examples**

Import 5th page:

MBS( "DynaPDF.ImportPageAsTemplate"; \$PDF; 5 )

## 71.275 DynaPDF.InitColorManagement

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.InitColorManagement"; PDF { ; DestSpace; Flags; DefInGray; DefInRGB; DefInCMYK; DeviceProfile; SoftProof } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### DestSpace

Optional

Destination color space. Can be DeviceRGB, DeviceCMYK or DeviceGray. Default is DeviceRGB. "DeviceRGB"

#### Flags

Optional

Flags for color management initialization. Can be Default or a combination of BPCompensation (1), Check-BlackPoint (2) or both (3).

"BPCompensation"

#### DefInGray

Optional

Path to gray profile. You can pass empty text if you have no gray profile.

"/Users/cs/Desktop/Generic Gray Profile.icc"

#### DefInRGB

Optional

Path to RGB profile. You can pass empty text if you have no RGB profile.

"/Users/cs/Desktop/Generic RGB Profile.icc"

#### DefInCMYK

Optional

Path to CMYK profile. You can pass empty text if you have no CMYK profile.

"/Users/cs/Desktop/Generic CMYK Profile.icc"

#### DeviceProfile

Optional

Path to Device profile, must be compatible with the output color space. Default is sRGB. You can pass empty text if you have no device profile.

#### SoftProof

Optional

Path to output profile for emulating output device. You can pass empty text if you have no soft proof profile.

**Result** Returns OK or error.

### Description

All color profiles are optional. Default profiles for DeviceGray and DeviceRGB color spaces (sRGB is default) are automatically created if not provided.

The most important color profile is the CMYK profile because it is not possible to create such a profile with build-in functions. If no CMYK profile is set DynaPDF renders CMYK only with color management if the file contains corresponding ICCBased color spaces or an embedded CMYK output intent.

The SoftProof profile specifies an arbitrary output color space that should be simulated.

Although Black Point Compensation (BPC) is not enabled by default, it is recommended to enable it because it improves the rendering quality of CMYK images a lot.

All profile paths must be absolute paths. Otherwise it is maybe not possible to reload a profile if necessary. DynaPDF must be able to reload the profiles if a PDF file contains ICCBased color spaces.

Initializing the color management requires a considerable amount of processing time. It is strongly recommended to use one PDF instance as long as possible so that it must not be initialized again when another PDF file will be rendered.

The color management can be initialized right after the PDF instance was created. If you want to initialize it on demand then make sure that you call the function before `OpenImportFile`. Otherwise it is possible that certain objects will be rendered without color management.

Returns OK on success.

See also `DynaPDF.InitColorManagementEx`.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

See also [InitColorManagement](#) function in DynaPDF manual.

### Examples

Initialize with only a CMYK profile:

```
MBS("DynaPDF.InitColorManagement"; $pdf; "DeviceCMYK"; 3; ""; ""; "/Users/cs/Desktop/PDF_to_JPEG
Test/Generic CMYK Profile.icc")
```

Initialize for output to CMYK:

```
MBS("DynaPDF.InitColorManagement"; $pdf; "DeviceCMYK";
3;
"/Users/cs/Desktop/PDF_to_JPEG Test/Generic Gray Profile.icc";
"/Users/cs/Desktop/PDF_to_JPEG Test/Generic RGB Profile.icc";
"/Users/cs/Desktop/PDF_to_JPEG Test/Generic CMYK Profile.icc";
"/Users/cs/Desktop/PDF_to_JPEG Test/Generic CMYK Profile.icc"
)
```

- [MBS FileMaker Plugin, version 5.3pr1](#)

Created 17th August 2015, last changed 21st September 2017.

## 71.276 DynaPDF.InitColorManagementEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.InitColorManagementEx"; PDF { ; DestSpace; Flags; DefInGray; DefInRGB; DefInCMYK; DeviceProfile; SoftProof } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### DestSpace

Optional

Destination color space. Can be DeviceRGB, DeviceCMYK or DeviceGray. Default is DeviceRGB.

"DeviceRGB"

#### Flags

Optional

Flags for color management initialization. Can be Default or a combination of BPCompensation (1), Check-BlackPoint (2) or both (3).

"BPCompensation"

#### DefInGray

Optional

The gray profile as Container. You can pass empty text/value if you have no gray profile.

MyTable::gDefInGray

#### DefInRGB

Optional

The RGB profile as container. You can pass empty text/value if you have no RGB profile.

MyTable::gDefInRGB

#### DefInCMYK

Optional

The CMYK profile as container. You can pass empty text/value if you have no CMYK profile.

MyTable::gDefInCMYK

#### DeviceProfile

Optional

The Device profile as container, must be compatible with the output color space. Default is sRGB. You can pass empty text/value if you have no device profile.

MyTable::gDeviceProfile

#### SoftProof

Optional

The output profile as container for emulating output device. You can pass empty text/value if you have no soft proof profile.

MyTable::gSoftProof

**Result** Returns OK or error.

### **Description**

Enables color management the functions `DynaPDF.RenderPage`, `DynaPDF.RenderPDFFile` exactly like `DynaPDF.InitColorManagement` but accepts ICC profile as containers instead of file paths. See `DynaPDF.InitColorManagement` for further information.

Initializing the color management requires a considerable amount of processing time. It is strongly recommended to use one PDF instance as long as possible so that it must not be initialized again when another PDF file will be rendered.

The color management can be initialized right after the PDF instance was created.

See also [InitColorManagementEx](#) function in DynaPDF manual.

- 71.318 `DynaPDF.RenderPDFFile` 3089

### **Example Databases**

- [DynaPDF/Optimize PDF](#)

Created 27th January 2016, last changed 27th January 2016.

## 71.277 DynaPDF.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Initialize"; LibraryPath { ; SerialNumber } )

### Parameters

#### LibraryPath

The native file path to the DynaPDF library file. Can be empty for default file name with file in same folder as plugin.

\$path

#### SerialNumber

Optional

The DynaPDF serial number. If you don't provide a serial number, you run DynaPDF in demo mode.

\$serial

### Result

#### Description

You need to pass the path to the dynapdf library and the plugin loads it.

The DynaPDF dll/dylib files are included with the plugin archive in the examples folder. Please check our example projects on sample scripts to load and initialize DynaPDF.

If you provide a serial number, the plugin will also register DynaPDF. If you need a serial number, please order one from Monkeybread Software.

Starting with version 4.4, you can pass just the filename of library and the plugin finds it in the Extensions folder or in FileMaker's application folder.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- DynaPDF.FlattenForm
- DynaPDF.ImportPageAsTemplate
- DynaPDF.ImportPDFPage
- DynaPDF.Optimize
- DynaPDF.ParseContent

- DynaPDF.Print
- DynaPDF.RenderPage
- DynaPDF.RenderPDFFile and DynaPDF.RenderPDFFileEx
- DynaPDF.SetCMapDir
- DynaPDF.SetExtColorSpace, DynaPDF.SetExtFillColorSpace and DynaPDF.SetExtStrokeColorSpace.
- DynaPDF.SetUseGlobalImpFiles
- RenderAnnotOrField
- DynaPDF.PageStatistics
- DynaPDF.ListImages
- DynaPDF.ExtractImages

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx
- GetPageText
- Create form fields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- DynaPDF.SetAlpha
- DynaPDF.InsertMetafile and DynaPDF.InsertMetafileEx
- DynaPDF.OpenPDFFromFile and DynaPDF.OpenPDFFromContainer
- DynaPDF.SetPDFVersion for PDF/A and PDF/X
- DynaPDF.FindText
- DynaPDF.HighlightPattern

And all functions relying on those functions internally.

For testing you can pass "Lite", "Pro" or "Starter" for the license key. DynaPDF runs in demo mode, but will returners if you use functions which are not covered by the license.

Windows error 193 means that 64-bit FileMaker tried to load 32-bit library or 32-bit FileMaker tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.

If you download the library files directly from dynaforms.com website, you can use the libdynapdf.dylib, libdynapdf.so or dynapdf.dll files, too.

For iOS with plugin version 7.3, you can just pass name of the dynapdf.framework or full file path. Please add the dynapdf.framework for the right platform (device vs. simulator) to your iOS SDK application and add it to the frameworks to link to in order to get it added to the app.

Starting version 9.5, the plugin will look into the same folder for the DLL as the plugin resides. And we still look for 32/64 suffixes to DLL name. If no name is provided, we look for dynapdf/dylib/so files.

If you get a crash here on MacOS, please check if crash report says Code Signature Invalid. Then you may need to code sign the dylib yourself to match the code signature of your runtime application. The dylib from MBS is normally code signed already and should work as is.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

#### **Examples**

Initialize with path for demo:

```
MBS( "DynaPDF.Initialize"; $path)
```

Initialize with path and serial for real usage:

```
MBS( "DynaPDF.Initialize"; $path; $serial)
```

Initialize on server with dynapdf.dylib in Server folder on Mac:

```
MBS( "DynaPDF.Initialize"; "/Library/FileMaker Server/dynapdf.dylib"; $serial)
```

Initialize on server with dynapdf.dylib in Server folder on Windows:

```
MBS( "DynaPDF.Initialize"; "C:\Programs\FileMaker Server\dynapdf.dll"; $serial)
```

Initialize when needed:

```
# Initialize DynaPDF
If [ MBS( "DynaPDF.IsInitialized" ) = 1 ]
If [ Get ( SystemPlatform ) = -3 ]
# iOS
```

```

Exit Script [ ]
Else If [ Get ( SystemPlatform ) = -2 ]
# Windows
Set Variable [ $path; Value: "dynapdf.dll" ]
Else
# Mac
Set Variable [ $path; Value: "dynapdf.dylib" ]
End If
Set Variable [ $r; Value: MBS( "DynaPDF.Initialize"; $path; "12345..." ) ]
If [ $r "OK" ]
Show Custom Dialog [ "DynaPDF failed to initialize"; $r ]
End If
End If

```

Initialize with check for server:

```

If [ MBS("IsServer") ]
# locate with absolute path
Set Variable [ $path; Value: "/Library/FileMaker Server/Database Server/Extensions/dynapdf.dylib" ]
Else
# locate with name in extensions folder
Set Variable [ $path; Value: "dynapdf.dylib" ]
End If

```

```

# initialize dynapdf
Set Variable [ $r; Value: MBS( "DynaPDF.Initialize"; $path ) ]

```

Write library to disk from container and initialize:

```

# your license key if you have one
Set Variable [ $SerialNumber; Value:"" ]
# where we store the library file
Set Variable [ $tempFolder; Value:MBS( "Folders.UserTemporary" ) ]
If [ MBS( "IsMacOSX" ) ]
# library for Mac from Container
Set Variable [ $container; Value:DynaPDF::DynaPDFLibMacContainer ]
Set Variable [ $filename; Value:"dynapdf.dylib" ]
Else If [ MBS( "IsWindows" ) ]
# library for Win from Container
Set Variable [ $container; Value:DynaPDF::DynaPDFLibWinContainer ]
Set Variable [ $filename; Value:"dynapdf.dll" ]
Else
Exit Script [ ]
End If
Set Variable [ $filepath; Value:MBS( "Path.AddPathComponent"; $tempFolder; $filename ) ]
# write file
Set Variable [ $r; Value:MBS( "Files.WriteFile"; $container; $filepath ) ]

```

```

If [ $r "OK" ]
Show Custom Dialog [ "Writing file failed"; $r ]
End If
# now initialize
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; $filepath; $SerialNumber) ]
If [ $r "OK" ]
Show Custom Dialog [ "DynaPDF initialization failed"; $r ]
End If

```

Register with Startup script for server and client:

Startup Script:

```

# Register for client
Perform Script [ "InitMBS" ]
# Register for server. Will be ignored if no server or no plugin installed on server
Perform Script on Server [ "InitMBS" ]

```

InitMBS script:

```

# Enable debug logging. Shows messages in DebugView/Console.app
Set Variable [ $r; Value:MBS("Trace") ]
# Register if needed for right platform
If [ MBS("IsRegistered") = 0 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Runtime"; 123; 123) ]
Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Server"; 123; 123) ]
Else If [ MBS("IsClient") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "5 Seats"; 123; 123) ]
Else
Set Variable [ $r; Value:"Unknown platform: " & MBS("Platform") ]
End If
# Show errors, so developer can fix them
If [ $r "OK" ]
Show Custom Dialog [ "InitMBS failed."; $r ]
End If
End If
# May initialize other stuff
# like dynapdf with library in extensions folder
If [ MBS("DynaPDF.IsInitialized") = 0 ]
Set Variable [ $DynaPDFLicense; Value:"1003637-16022016-3-8-12-685C57F..." ]
If [ MBS("IsWindows") ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; "dynapdf.dll"; $DynaPDFLicense) ]
Else If [ MBS("IsMacOSX") ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; "dynapdf.dylib"; $DynaPDFLicense) ]
Else

```

```

Set Variable [ $r; Value:"Unknown platform: " & MBS("Platform") ]
End If
# Show errors, so developer can fix them
If [ $r "OK" ]
Show Custom Dialog [ "InitMBS failed."; $r ]
End If
End If

```

Initialize on server with dynapdf.so in Server folder on FileMaker Cloud (Linux):

```
MBS( "DynaPDF.Initialize"; "/opt/FileMaker/FileMaker Server/dynapdf.so"; $serial)
```

Initialize in iOS:

```

MBS("DynaPDF.Initialize"; "DynaPDF.framework")
# framework or dylib in Frameworks folder inside app, name case sensitive!

```

Write DynaPDF library to same folder as plugin:

```

Goto Layout [ "MBS Update" (MBS Update) ; Animation: None ]
Go to Record/Query/Page [ First ]
Set Variable [ $folder ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $folder ; Value: MBS( "Path.RemoveLastPathComponent"; $folder ) ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "dynapdf.dylib" ) ]
Set Variable [ $Plat ; Value: MBS("Files.MoveToTrash"; $path) ]
Set Variable [ $Plat ; Value: MBS("Files.WriteFile"; MBS Update::dynaPdfMac; $path) ]

```

Initialize automatically and look in same folder as plugin for the DLL/dylib/so file:

```
MBS("DynaPDF.Initialize"; ""; $license)
```

The PDF reference returned from DynaPDF.New.

\$pdf

#### Title

Bookmark title

"Chapter 2"

#### Parent

Immediate parent bookmark

-1

#### DestPage

Destination page that should be opened.

5

#### Open

Optional

Optionally, open or close the node when it contains children. Default 0.

0

#### AddChildren

Optional

Optionally, add all bookmarks below the new one as children. Default 0.

0

**Result** Returns new bookmark handle or error.

### Description

It sets also the page mode to UseOutlines (see DynaPDF.SetPageMode). If the outline tree should not be shown when opening the document then set the page mode back to UseNone or another value before closing the document.

Parent can be the handle of the parent bookmark after the new bookmark should be inserted or -1. If Parent is set to -1 the bookmark is inserted as the first root node in the outline tree.

If the parameter AddChildren is set to true, the bookmarks below the new one are added as children to the new bookmark. This can be useful when merging PDF files and if the bookmarks from each PDF file should be separated.

Notice: When inserting a bookmark the handles of all bookmarks below the new one are incremented by one.

See also [InsertBookmark](#) function in DynaPDF manual.

**71.279 DynaPDF.InsertBookmarkEx**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.InsertBookmarkEx"; PDF; Title; Parent; NamedDest { ; Open; AddChildren } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Title**

The Bookmark title.

"Chapter 1"

**Parent**

Immediate parent bookmark. Must be a valid bookmark handle or -1.

-1

**NamedDest**

Named Destination handle

\$Dest

**Open**

Optional

Optional, whether to open or close the node when it contains children. Default is 0 to close.

1

**AddChildren**

Optional

Optionally, add all bookmarks below the new one as children. Default 0.

0

**Result** Returns new bookmark handle or error.

**Description**

It sets also the page mode to UseOutlines (see DynaPDF.SetPageMode). If the outline tree should not be shown when opening the document then set the page mode back to UseNone or another value before closing the document.

Parent can be the handle of the parent bookmark after the new bookmark should be inserted or -1. If Parent is set to -1 the bookmark is inserted as the first root node in the outline tree.

If the parameter AddChildren is set to 1, the bookmarks below the new one are added as children to the new bookmark. This can be useful when merging PDF files and if the bookmarks from each PDF file should be separated.

NamedDest must be a valid handle from a named destination, see DynaPDF.CreateNamedDest for further information. If the destination lies in another document then insert the bookmark with DynaPDF.InsertBookmark, create an extended Go To Remote Action with DynaPDF.CreateGoToRActionEx, and add the action finally to the bookmark with DynaPDF.AddActionToObj.

Notice: When inserting a bookmark the handles of all bookmarks below the new one are incremented by one.

See also [InsertBookmarkEx](#) function in DynaPDF manual.

**71.280 DynaPDF.InsertImage**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.InsertImage"; PDF; Container; PosX; PosY; ScaleWidth; ScaleHeight { ; Index } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Container**

The image container value. Pass the container field or a variable with the container content.

\$image

**PosX**

The X position (from left of page)

0

**PosY**

The Y position (from bottom of page)

0

**ScaleWidth**

The scaled width of the image.

\$width

**ScaleHeight**

The scaled height of the image.

\$height

**Index**

Optional

The index of the image for multi image files.

1

**Result** Returns image handle number or error message.

**Description**

Same as DynaPDF.InsertImageFile, but reading from container. A specific image of a multi-page image can be selected with the parameter Index; the first image is denoted by the index 1. If the image file is not a multi-page image, the parameter Index is ignored. To determine the number of images stored in an image file use the function DynaPDF.GetImageCount. The usage of the function is described in detail at DynaPDF.InsertImageFile.

See also pdfInsertImage in dynapdf manual.

Please use DynaPDF.SetCompressionFilter to define the compression of your images. Use "flate" there for no jpeg compression. Use DynaPDF.SetJPEGQuality to define JPEG compression quality. also use Dy-

naPDF.SetSaveNewImageFormat with parameter 0 to embed JPEGs to PDF without recompression. Also you should turn off transparency by key color using DynaPDF.SetUseTransparency. You can use DynaPDF.SetAlpha to set fill transparency to affect how images gain extra transparency.

Coordinates in PDF are by default in a 72dpi raster with lower left being 0/0 point. You can query page size by DynaPDF.GetPageWidth and DynaPDF.GetPageHeight functions.

### Examples

Set a few options and insert image from file:

```
MBS( "DynaPDF.SetCompressionFilter"; $PDF; "flate" )
MBS( "DynaPDF.SetSaveNewImageFormat"; $PDF; 0 )
MBS( "DynaPDF.SetResolution"; $PDF; 300 )
MBS( "DynaPDF.SetUseTransparency"; $PDF; 0 )
MBS( "DynaPDF.InsertImage"; $PDF; MyDatabase::ImageContainer; 72; 72; 300; 200; 1 )
```

Insert and reduce quality to save space:

```
MBS( "DynaPDF.SetJPEGQuality"; $PDF; 75 )
MBS( "DynaPDF.SetCompressionFilter"; $PDF; "jpeg" )
MBS( "DynaPDF.SetSaveNewImageFormat"; $PDF; 1 )
MBS( "DynaPDF.SetResolution"; $PDF; 100 )
MBS( "DynaPDF.SetUseTransparency"; $PDF; 0 )
MBS( "DynaPDF.InsertImage"; $PDF; MyDatabase::ImageContainer; 72; 72; 300; 200; 1 )
```

Loop over all pages and insert an image on each page:

```
# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ Specified: From list ; "InitDynaPDF" ; Parameter: ]
End If
# Start new PDF environment
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r ; Value: MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Watermark pages::InputPDF) ]
# import a page
Set Variable [ $r ; Value: MBS("DynaPDF.ImportPDFFile"; $pdf) ]
# now edit all pages
Set Variable [ $count ; Value: MBS("DynaPDF.GetPageCount"; $pdf) ]
Set Variable [ $index ; Value: 1 ]
Loop
Set Variable [ $r ; Value: MBS("DynaPDF.EditPage"; $pdf; $index) ]
Set Variable [ $index ; Value: $index + 1 ]
# Options for saving image
Set Variable [ $r ; Value: MBS("DynaPDF.SetSaveNewImageFormat"; $pdf; ,5) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetCompressionFilter"; $pdf; "jpeg") ]
# Insert image
```

```

Set Variable [ $w ; Value: 200 ]
Set Variable [ $h ; Value: 200 ]
Set Variable [ $x ; Value: (MBS("DynaPDF.GetPageWidth"; $pdf) - $w)/2 ]
Set Variable [ $y ; Value: (MBS("DynaPDF.GetPageHeight"; $pdf) - $h)/2 ]
Set Variable [ $r ; Value: MBS("DynaPDF.InsertImage"; $pdf; Watermark pages::WatermarkPicture; $x;
$y; $w; $h) ]
# End page
Set Variable [ $r ; Value: MBS("DynaPDF.EndPage"; $pdf) ]
Exit Loop If [ $count <$index ]
End Loop
# Set title
Set Variable [ $r ; Value: MBS("DynaPDF.SetDocInfo"; $pdf; "Title"; "Test PDF") ]
# Save
Set Variable [ $PDFData ; Value: MBS("DynaPDF.Save"; $pdf; "hello.pdf") ]
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]
# Put in Container
Set Field [ Watermark pages::OutputPDF ; $PDFData ]

```

Place an image centered on the page with border:

```

Set Variable [ $r ; Value: MBS("DynaPDF.AppendPage"; $pdf) ]
# put a background in
Set Variable [ $r ; Value: MBS("DynaPDF.SetFillColor"; $pdf; ,8; ,8; ,8) ]
Set Variable [ $r ; Value: MBS("DynaPDF.Rectangle"; $pdf; 0; 0; MBS( "DynaPDF.GetPageWidth"; $PDF
); MBS( "DynaPDF.GetPageHeight"; $PDF ); "fill") ]
# options for saving image
Set Variable [ $r ; Value: MBS("DynaPDF.SetSaveNewImageFormat"; $pdf; 0) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetResolution"; $pdf; 300) ]
# read size of image
Set Variable [ $r ; Value: MBS("DynaPDF.ReadImageFormat"; $pdf; Merge PDFs::InputImage) ]
Set Variable [ $ImageWidth ; Value: GetAsNumber (LeftValues ( $r ; 1 )) ]
Set Variable [ $ImageHeight ; Value: GetAsNumber (MiddleValues ( $r ; 2; 1 )) ]
# The destination area where to put PDF
Set Variable [ $TargetX ; Value: 50 ]
Set Variable [ $TargetY ; Value: 50 ]
Set Variable [ $TargetWidth ; Value: MBS( "DynaPDF.GetPageWidth"; $PDF ) - 100 ]
Set Variable [ $TargetHeight ; Value: MBS( "DynaPDF.GetPageHeight"; $PDF ) - 100 ]
# calculate scale factor
Set Variable [ $factor ; Value: Min( $TargetHeight / $ImageHeight; $TargetWidth / $ImageWidth) ]
# calculate output size
Set Variable [ $DestWidth ; Value: $ImageWidth * $factor ]
Set Variable [ $DestHeight ; Value: $ImageHeight * $factor ]
# Center in target area
Set Variable [ $DestX ; Value: $TargetX + ($TargetWidth-$DestWidth) / 2 ]
Set Variable [ $DestY ; Value: $TargetY + ($TargetHeight-$DestHeight) / 2 ]
# insert the image
Set Variable [ $r ; Value: MBS("DynaPDF.InsertImage"; $pdf; Merge PDFs::InputImage; $DestX; $DestY;
$DestWidth; $DestHeight) ]

```

```
# close page and move to next record  
Set Variable [ $r ; Value: MBS("DynaPDF.EndPage"; $pdf) ]
```

Created 18th August 2014, last changed 2nd December 2019.

**71.281 DynaPDF.InsertImageFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.InsertImageFile"; PDF; FilePath; PosX; PosY; ScaleWidth; ScaleHeight { ; Index } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**FilePath**

The native file path to the image file.

\$path

**PosX**

The X position (from left of page)

0

**PosY**

The Y position (from bottom of page)

0

**ScaleWidth**

The scaled width of the image.

\$width

**ScaleHeight**

The scaled height of the image.

\$height

**Index**

Optional

The index of the image for multi image files.

1

**Result** Returns image handle number or error message.

**Description**

The parameter Index specifies the image index of a multi- page image. The first image index is denoted by 1. If the image file is not a multi-page image, the parameter Index will be ignored. To determine the number of images stored in an image file call the function DynaPDF.GetImageCount.

See also DynaPDF Manual for pdfInsertImageEx function.

Positions and sizes are in PDF coordinates which normally is 72 dpi.

Please use DynaPDF.SetCompressionFilter to define the compression of your images. Use "flate" there for no jpeg compression. Use DynaPDF.SetJPEGQuality to define JPEG compression quality. also use DynaPDF.SetSaveNewImageFormat with parameter 0 to embed JPEGs to PDF without recompression. Also

you should turn off transparency by key color using `DynaPDF.SetUseTransparency`.  
You can use `DynaPDF.SetAlpha` to set fill transparency to affect how images gain extra transparency.

Coordinates in PDF are by default in a 72dpi raster with lower left being 0/0 point. You can query page size by `DynaPDF.GetPageWidth` and `DynaPDF.GetPageHeight` functions.

### Examples

Set a few options and insert image from file:

```
MBS( "DynaPDF.SetCompressionFilter"; $PDF; "flate" )
MBS( "DynaPDF.SetSaveNewImageFormat"; $PDF; 0 )
MBS( "DynaPDF.SetResolution"; $PDF; 300 )
MBS( "DynaPDF.SetUseTransparency"; $PDF; 0 )
MBS( "DynaPDF.InsertImageFile"; $PDF; "C:\test.jpg"; 72; 72; 300; 200; 1 )
```

Insert and reduce quality to save space:

```
MBS( "DynaPDF.SetJPEGQuality"; $PDF; 75 )
MBS( "DynaPDF.SetCompressionFilter"; $PDF; "jpeg" )
MBS( "DynaPDF.SetSaveNewImageFormat"; $PDF; 1 )
MBS( "DynaPDF.SetResolution"; $PDF; 100 )
MBS( "DynaPDF.SetUseTransparency"; $PDF; 0 )
MBS( "DynaPDF.InsertImageFile"; $PDF; "C:\test.jpg"; 72; 72; 300; 200; 1 )
```

**71.282 DynaPDF.InsertMetafile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.3	No	Yes	Yes, Windows only	No	No

MBS( "DynaPDF.InsertMetafile"; PDF; Filename; PosX; PosY; Width; Height { ; ViewLeft; ViewTop; ViewRight; ViewBottom } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Filename**

The native file path to the EMF file.

"C:\test.wmf"

**PosX**

X-Coordinate of output rectangle

100

**PosY**

Y-Coordinate of output rectangle.

100

**Width**

Width of output rectangle.

**Height**

Height of output rectangle.

**ViewLeft**

Optional

The left coordinate of the view rectangle.

**ViewTop**

Optional

The top coordinate of the view rectangle.

**ViewRight**

Optional

The right coordinate of the view rectangle.

**ViewBottom**

Optional

The bottom coordinate of the view rectangle.

**Result** Returns OK or error.

**Description**

The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to native PDF vector

graphics.

EMF+ files do not work.

Requires DynaPDF Lite license.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer. See also [InsertMetafile](#) function in DynaPDF manual.

## 71.284 DynaPDF.IsColorPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.IsColorPage"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns OK or error.

### Description

If the parameter GrayIsColor is true, gray shades are treated as color. The page which should be checked must be opened with the function DynaPDF.EditPage beforehand.

Complex color spaces such as Lab, Separation, DeviceN, Colored Tiling Patterns, and Shadings are always treated as color. The function does not return when a color is set, the color must be used by an object.

If an object of the page uses a color, the return value is 1. If no object uses a color the return value is 0.

See also [IsColorPage](#) function in DynaPDF manual.

### Examples

Check if first page has color:

```
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r ; Value: MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Start::SourcePDF) ]
Set Variable [ $r ; Value: MBS("DynaPDF.ImportPDFFile"; $pdf) ]
# Query image list
Set Variable [ $r ; Value: MBS("DynaPDF.EditPage"; $pdf; 1) ]
Show Custom Dialog [ MBS( "DynaPDF.IsColorPage"; $PDF ) ]
Set Variable [ $r ; Value: MBS("DynaPDF.EndPage"; $pdf) ]
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]
```

Created 6th February 2015, last changed 14th May 2019.

## 71.285 DynaPDF.IsEmptyPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.IsEmptyPage"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns 1, 0 or error.

### Description

The page which should be checked must be opened with the function DynaPDF.EditPage beforehand. The function does not check whether the buffer size of a page is zero to determine whether a page is empty. Instead, the content stream will be parsed until a visible object can be found.

If no visible object can be found the return value is 1. If a visible object can be found the return value is 0. See also [IsEmptyPage](#) function in DynaPDF manual.

### See also

**71.286 DynaPDF.IsInitialized**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.IsInitialized" )

**Result** Returns 1 or 0.

**Description**

If value is 1, everything is okay.

If value is zero, the library is not initialized and you need to call DynaPDF.Initialize function.

On a hosted database this function is better than using a global variable, as the variable can't see if initialization was made on server or client side.

**Examples**

Initialize when needed:

```
# Initialize DynaPDF
If [ MBS( "DynaPDF.IsInitialized" ) = 1 ]
If [ Get ( SystemPlatform ) = -3 ]
# iOS
Exit Script [ ]
Else If [ Get ( SystemPlatform ) = -2 ]
# Windows
Set Variable [ $path; Value: "dynapdf.dll" ]
Else
# Mac
Set Variable [ $path; Value: "dynapdf.dylib" ]
End If
Set Variable [ $r; Value: MBS( "DynaPDF.Initialize"; $path; "12345..." ) ]
If [ $r = "OK" ]
Show Custom Dialog [ "DynaPDF failed to initialize"; $r ]
End If
End If
```

2

**LineEndStyleStart**

End line style of the start point. Can be None, Butt, Circle, ClosedArrow, Diamon, OpenArrow, RClosedArrow, ROpenArrow, Slash or Square.

"Circle"

**LineEndStyleEnd**

End line style of the end point.

"Circle"

**FillColor**

Fill color for line.

200

**StrokeColor**

Stroke color for line.

255

**ColorSpace**

Color space of the fill and stroke colors.  
"RGB"

**Author**

The author name. Can be empty.  
"Christian Schmitz"

**Subject**

The subject to use. Can be empty.

**Comment**

The comment. Can be empty.

**Result** Returns annotation handle or error.

**Description**

The simplest form of a line annotation represents a simple straight line that has an associated PopUp annotation to display the string Content in a floating window.

The initial window state of the associated PopUp annotation is closed by default but the state can be changed with `DynaPDF.SetAnnotOpenState` if necessary.

The coordinates are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account.

The parameter `FillColor` is only used if the line end style of the start or end point has an interior that can be filled. The special constant `NO_COLOR` (4294967281) represents a transparent interior.

The stroke color is required and must not be set to `NO_COLOR` (4294967281).

**Measure lines**

A measure line is an extended line annotation that has additional properties. To create a measure line create first the line annotation and set then the measure line specific properties with `DynaPDF.SetLineAnnotParms`. The parameter `LineWidth` must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.

The line end styles can be changed if necessary with `DynaPDF.SetAnnotLineEndStyle`.

See also [LineAnnot](#) function in DynaPDF manual.

## 71.288 DynaPDF.LineTo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.LineTo"; PDF; PosX; PosY )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

The x-coordinate.

\$x

#### PosY

The y-coordinate.

\$y

**Result** Returns OK or error.

### Description

The start point must be set with another vector graphic function beforehand, such as DynaPDF.MoveTo or other functions which draw an open path segment.

In PDF all vector graphics are defined as paths, a path is invisible as long it was not stroked, filled or both. See also Path construction and Painting.

See also [LineTo](#) function in DynaPDF manual.

### Examples

Draw two lines in black:

```
Set Variable [ $r; Value:MBS ( "DynaPDF.SetStrokeColor" ; $pdf ; 0; 0; 0 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.SetLineWidth" ; $pdf ; 1 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 20; 20 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 20; 40 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 30; 30 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 30; 50 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.StrokePath" ; $pdf ) ]
```

Draw triangle path:

```
# blue color
Set Variable [ $r ; Value: MBS("DynaPDF.SetFillColor"; $pdf; 0; 0; 1) ]
# go to start point
Set Variable [ $r ; Value: MBS("DynaPDF.MoveTo"; $pdf; 100; 100) ]
# add more points
Set Variable [ $r ; Value: MBS("DynaPDF.LineTo"; $pdf; 200; 100) ]
Set Variable [ $r ; Value: MBS("DynaPDF.LineTo"; $pdf; 100; 200) ]
```

71.288. *DYNAPDF.LINETO* 3023

# and fill

Set Variable [ \$r ; Value: MBS("DynaPDF.ClosePath"; \$pdf; "fill") ]

## 71.289 DynaPDF.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.List" )

**Result** Returns list or error.

### Description

Returns IDs for all DynaPDF objects in memory. If this list is growing, you may have forgotten to call DynaPDF.Release in your scripts.

Normally after all scripts are done, this list should be empty.

### See also

- 71.180 DynaPDF.GetImageCount 2866

### 71.289.1 Blog Entries

- [MBS FileMaker Plugin, version 8.1pr3](#)

Created 12nd February 2018, last changed 12nd February 2018.

**71.290 DynaPDF.ListImages**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ListImages"; PDF { ; Flags; Page } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Flags**

Optional

Optional, various flags for PDF parsing.

0

**Page**

Optional

The page number to look at. If missing or empty, we process all pages.

123

**Result** Returns list or error.

**Description**

This is similar to DynaPDF.ExtractImages, but does not write to disk, but returns information. For the flags, please check the pf flags in dynapdf manual.

The result is a list of values.

First value is the number of images.

Then for each image you get

- Index of image.
- Page Numbers this image is on separated by space.
- Type of image file we would write when extracting: TIFF, JPEG or JPEG2000.
- Size of image in bytes
- Bits per Pixel, e.g. 8
- Number of Components, e.g. 3 for RGB, 4 for CMYK
- Width in Pixel
- Height in Pixel
- 1 for inline graphic, else 0.

- 1 for interpolation enabled, else 0.
- 1 for transparency enabled, else 0.
- Rendering Intent, e.g. AbsoluteColorimetric, Perceptual, RelativeColorimetric, Saturation or None.
- Size of metadata stream (XMP)
- Color Space Type, e.g. DeviceRGB
- ICC Color Profile Type if one exists, else none.
- ICC Color Profile alternate color space.
- Size of ICC Profile data
- Number of input components
- Number of output components
- Number of colors (for palettes)
- Colorants Count
- Colorants names separated by tab.
- Horizontal resolution of JPEG if available.
- Vertical resolution of JPEG if available.
- Display Width
- Display Height

The ICC Profile is often not part of the PDF as most software converts to DeviceCMYK or uses current profile set in PDF. Display width and height is calculated by the plugin. That is the size of points on the page the PDF is drawn. If Display width and pixel width are the same, the image is displayed with 72 dpi.

This function uses the parser interface in DynaPDF and needs a Pro license.

## 71.291 DynaPDF.LockLayer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.LockLayer"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

### Description

The state of a locked layer cannot be changed through the user interface of a PDF viewer. However, the state of locked layers can still be changed via Javascript or DynaPDF.SetOCGState actions. See also [LockLayer](#) function in DynaPDF manual.

### See also

- 71.23 DynaPDF.BeginLayer 2631

## 71.292 DynaPDF.MovePage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.MovePage"; PDF; SourcePage; DestPage )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### SourcePage

Source page number. From 1 to DynaPDF.PageCount.  
1

#### DestPage

Destination page number. From 1 to DynaPDF.PageCount.  
2

**Result** Returns OK or error.

### Description

Moving a page requires some processing time if the document contains many bookmarks or page links because the destinations of all links and bookmarks must be modified so that they refer still to the correct page. For example, if the first page of a document should be moved to the last page, all pages of the document must be reordered. If the document is large and if it contains a few thousands page links as well as bookmarks, this action can take a while.

The parameter Source must be a valid page number in the document. Page numbering starts at one. If the destination page is larger than the source page, the page number can be greater than the number of pages currently available in the document. The document is then filled with empty pages until the destination page becomes valid.

If the destination page is smaller than the source page number, both page numbers must already exist in the document.

It is also possible to exchange two pages with DynaPDF.ExchangePage.

See also [MovePage](#) function in DynaPDF manual.

Created 2nd September 2014, last changed 16th December 2019.

## 71.293 DynaPDF.MoveTo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.MoveTo"; PDF; PosX; PosY )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

The x-coordinate.

\$x

#### PosY

The y-coordinate.

\$y

**Result** Returns OK or error.

### Description

This function must be called before a line or curved path segment can be drawn. See also DynaPDF.LineTo, DynaPDF.Bezier\_1\_2\_3.

See also [MoveTo](#) function in DynaPDF manual.

### Examples

Draw two lines in black:

```
Set Variable [ $r; Value:MBS ( "DynaPDF.SetStrokeColor" ; $pdf ; 0; 0; 0 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.SetLineWidth" ; $pdf ; 1 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 20; 20 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 20; 40 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 30; 30 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 30; 50 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.StrokePath" ; $pdf ) ]
```

Draw triangle path:

```
# blue color
Set Variable [ $r ; Value: MBS("DynaPDF.SetFillColor"; $pdf; 0; 0; 1) ]
# go to start point
Set Variable [ $r ; Value: MBS("DynaPDF.MoveTo"; $pdf; 100; 100) ]
# add more points
Set Variable [ $r ; Value: MBS("DynaPDF.LineTo"; $pdf; 200; 100) ]
Set Variable [ $r ; Value: MBS("DynaPDF.LineTo"; $pdf; 100; 200) ]
# and fill
Set Variable [ $r ; Value: MBS("DynaPDF.ClosePath"; $pdf; "fill") ]
```

## 71.294 DynaPDF.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.New" { ; SerialNumber } )

### Parameters

#### SerialNumber

Optional

The DynaPDF serial number. If you don't provide a serial number, you run DynaPDF in demo mode. If you passed license key to DynaPDF.Initialize function already, you don't need to pass it here a second time.  
\$serial

**Result** Returns reference number or error.

### Description

This instance can only be used on one thread, so please don't use it in two scripts at the same time on a server.

Must be paired with call to DynaPDF.Release to avoid running out of memory.

If this function returns "OK", you have an older plugin version (before 3.5).

For DynaPDF, you need an extra license as this is not included in the MBS FileMaker Plugin license. You can order DynaPDF add-on for our plugin from Monkeybread Software.

Before you can create DynaPDF instances to work with the DynaPDF commands, you need to use DynaPDF.Initialize function to initialize the library.

DynaPDF context reference numbers are starting at 20000 and counting up for each new context.

Please use DynaPDF.AppendPage to create a new page.

### Examples

Work with PDF:

```
$pdf = MBS("DynaPDF.New")
# do your work
$r = MBS( "DynaPDF.Release"; $pdf )
```

## 71.295 DynaPDF.OpenOutputFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.OpenOutputFile"; PDF; Path )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Path

The file path to create the PDF. The file name should include pdf file extension.

"C:\Test.pdf"

**Result** Returns OK on success.

### Description

The PDF file must be created in memory if this function should be used. This is the case if you called DynaPDF.New without a file path.

It is strongly recommended to check with DynaPDF.HaveOpenDocument whether a PDF file is still in memory before calling this function.

If you get back an error "Cannot open file!", please check if you didn't open the file before with DynaPDF.OpenPDFFromFile. In that case a call to DynaPDF.CloseImportFile may be needed.

See also [OpenOutputFile](#) function in DynaPDF manual.

### Examples

Adds three picture pages:

```
Set Variable [ $r; Value:MBS( "DynaPDF.AppendImagePages"; $pdf; "/Users/cs/Desktop/Auto2.JPG$/Users/cs/Desktop/Auto4.JPG$/Users/cs/Desktop/Auto1.JPG" ) ]
```

Import selected pages from one PDF and write into a new one:

```
# New PDF
```

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
```

```
# Open existing PDF file (or use DynaPDF.OpenPDFFromContainer for container)
```

```
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromFile"; $pdf; $path ) ]
```

```
# Query page count
```

```
Set Variable [ $pageCount; Value:MBS( "DynaPDF.GetImportPageCount"; $pdf ) ]
```

```
# Import the pages you need
```

```

Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 2) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 3) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 2) ]

# Set output to this file path
# MBS( "DynaPDF.OpenOutputFile"; $pdf; "/Users/cs/Desktop/output.pdf" )

# Write PDF
Set Variable [ $r; Value:MBS("DynaPDF.Save"; $pdf) ]

# release memory
Set Variable [ $r1; Value:MBS("DynaPDF.Release"; $pdf) ]

```

**71.296 DynaPDF.OpenOutputFileEncrypted**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.OpenOutputFileEncrypted"; PDF; Path; OpenPwd; OwnerPwd; Encryption { ; RestrictFlags } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Path**

The file path to create the PDF. The file name should include pdf file extension.

"C:\Test.pdf"

**OpenPwd**

Open password.

""

**OwnerPwd**

Owner password.

"Hello"

**Encryption**

Which encryption to use. Can be 40bit, 128bit, 128bitEx, AES128, AES256 or AESRev6.

"AES256"

**RestrictFlags**

Optional

What restrictions to apply. See above.

4+8

**Result** Returns OK or error.

**Description**

The PDF file must be created in memory if this function should be used. This is the case if you called DynaPDF.New without a file path.

It is strongly recommended to check with DynaPDF.HaveOpenDocument whether a PDF file is still in memory before calling this function.

See also [OpenOutputFileEncrypted](#) function in DynaPDF manual.

**71.297 DynaPDF.OpenPDFFromContainer**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.OpenPDFFromContainer"; PDF; containerValue { ; PasswordType; Password } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**containerValue**

The container value to use. Should contain a PDF file.

\$PDF

**PasswordType**

Optional

The password type and flags. Flag kann be 1 for owner password and 0 for open password. You can combine this with 2 to force repair.

0

**Password**

Optional

The password to decrypt the file.

\$password

**Result** Returns number or error message.

**Description**

Requires DynaPDF Lite license.

On success returns a number 0.

**Examples**

Opens PDF:

```
$r = MBS( "DynaPDF.OpenPDFFromContainer"; $PDF; $PDFFile )
```

```
$error = MBS( "DynaPDF.GetLastErrorMessage"; $PDF )
```

Load PDF and extract text of page 2:

```
# initialize DynaPDF before running this:
```

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
```

```
# load PDF from container
```

```
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer";$pdf; Test::data) ]
```

```
# import all pages
```

```
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile";$pdf) ]
```

```
# extra text of page 2
```

```
Set Field [ Test::PageText; MBS("DynaPDF.ExtractPageText"; $pdf; 2) ]
```

```

# Cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]

Import a single page:

Set Variable [ $r; Value:MBS("DynaPDF.SetImportFlags"; $pdf; "ImportAll ImportAsPage") ]
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Invoice::PDF Template) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]

Import selected pages from one PDF and write into a new one:

# New PDF
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]

# Open existing PDF file (or use DynaPDF.OpenPDFFromContainer for container)
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromFile"; $pdf; $path ) ]

# Query page count
Set Variable [ $pageCount; Value:MBS( "DynaPDF.GetImportPageCount"; $pdf ) ]

# Import the pages you need
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 2) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 3) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 2) ]

# Set output to this file path
# MBS( "DynaPDF.OpenOutputFile"; $pdf; "/Users/cs/Desktop/output.pdf" )

# Write PDF
Set Variable [ $r; Value:MBS("DynaPDF.Save"; $pdf) ]

# release memory
Set Variable [ $r1; Value:MBS("DynaPDF.Release"; $pdf) ]

```

**71.298 DynaPDF.OpenPDFFromFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.OpenPDFFromFile"; PDF; Path { ; PasswordType; Password } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Path**

The path to use. Should contain a PDF file.

\$path

**PasswordType**

Optional

The password type and flags. Flag kann be 1 for owner password and 0 for open password. You can combine this with 2 to force repair.

0

**Password**

Optional

The password to decrypt the file.

\$password

**Result** Returns 0, file handle or error message.

**Description**

Use Path.FilemakerPathToNativePath to convert a FileMaker path to a native path if required.

Requires DynaPDF Lite license.

If the function succeeds the return value is zero or the file handle if the flag UseProxy is set (a value greater or equal zero). If the function fails the return value is an error message.

**Examples**

Import selected pages from one PDF and write into a new one:

```
# New PDF
```

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
```

```
# Open existing PDF file (or use DynaPDF.OpenPDFFromContainer for container)
```

```
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromFile"; $pdf; $path ) ]
```

```
# Query page count
```

```
Set Variable [ $pageCount; Value:MBS( "DynaPDF.GetImportPageCount"; $pdf ) ]
```

```
# Import the pages you need
```

```
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 1) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 2) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; 3) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 1) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFPage"; $pdf; $pagecount - 2) ]
```

```
# Set output to this file path
```

```
# MBS( "DynaPDF.OpenOutputFile"; $pdf; "/Users/cs/Desktop/output.pdf" )
```

```
# Write PDF
```

```
Set Variable [ $r; Value:MBS("DynaPDF.Save"; $pdf) ]
```

```
# release memory
```

```
Set Variable [ $r1; Value:MBS("DynaPDF.Release"; $pdf) ]
```

## 71.299 DynaPDF.Optimize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.Optimize"; PDF { ; Flags; Min1BitRes; MinGrayRes; MinColorRes; Res1BitImages;
ResGrayImages; ResColorImages; Filter1Bit; FilterGray; FilterColor; JPEGQuality; JP2KQuality; Min-
LineWidth } )
```

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Flags

Optional

The flags to use. Can be a number with values from dynapdf documentation, see table on this page.

"ConvertAllColors,ScaleImages"

#### Min1BitRes

Optional

Minimum resolution before scaling for one bit images. Default is 100. Can be zero to disable.

200

#### MinGrayRes

Optional

Minimum resolution before scaling for gray images. Default is 100. Can be zero to disable.

200

#### MinColorRes

Optional

Minimum resolution before scaling for color images. Default is 100. Can be zero to disable.

200

#### Res1BitImages

Optional

Resolution for 1 bit black & white images. Default is 150.

150

#### ResGrayImages

Optional

Resolution for gray images. Default is 150.

150

#### ResColorImages

Optional

Resolution for images with more than one color channel. Default is 150.

150

#### Filter1Bit

Optional

Filter for black & white images. Can be Flate, JPEG, CCITT3, CCITT4, LZW, FlateBW or JP2K. Default is JPEG.

"JPEG"

#### **FilterGray**

Optional

Filter for gray images. Can be Flate, JPEG, CCITT3, CCITT4, LZW, FlateBW or JP2K. Default is JPEG.

"JPEG"

#### **FilterColor**

Optional

Filter for multi-channel images. Can be Flate, JPEG, CCITT3, CCITT4, LZW, FlateBW or JP2K. Default is JPEG.

"JPEG"

#### **JPEGQuality**

Optional

JPEG quality. Default is 80.

80

#### **JP2KQuality**

Optional

JPEG 2000 quality Default is 80.

80

#### **MinLineWidth**

Optional

Minimum line width for lines. Zero means no hair line removal.

0

**Result** Returns OK or error.

#### **Description**

This repairs also a lot of errors in the PDF.

// If set, ignore line width operators with a value of zero (zero means one device unit).

// If set, change the line width of real hairlines only (a hairline is a one pixel width line ->LineWidth == 0).

// This flag is mainly a debug flag to compare the compression ratio with other JBIG2 implementations.

Optimizing can fix bug in FileMaker 14 with empty portals resulting in broken PDF files.

Added optimization parameters for version 4 of DynaPDF.

Requires a Pro license of DynaPDF.

Name	Value	Description
Default	0	Just rebuild the content streams.
InMemory	1	Optimize the file fully in memory. Only useful for small PDF files.
ConvertAllColors	2	If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.
IgnoreICCBased	4	If set, ICCBased color spaces will be left unchanged.
ScaleImages	8	Scale images as specified in the TOptimizeParams structure.
SkipMaskedImages	16	Meaningful only if ofScaleImages is set. If set, don't scale images with a color mask.
NewLinkNames	32	If set, rename all object links to short names like F1, F2 etc.
DeleteInvPaths	64	Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".
FlattenLayers	128	Flatten layers if any.
DeletePrivateData	256	Delete private data objects from pages, templates, and images.
DeleteThumbnails	512	Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.
DeleteAlternateImages	1024	If set, alternate images will be deleted.
NoImageSizeCheck	2048	Meaningful only if ofScaleImages is set. If set, do not check whether the scaled image is smaller as the original image.
IgnoreZeroLineWidth	4096	Meaningful only if the parameter MinLineWidth of the TOptimizeParams structure is greater zero.
AdjZeroLineWidthOnly	8192	Meaningful only if the parameter MinLineWidth of the TOptimizeParams structure is greater zero.

See also [Optimize](#) function in DynaPDF manual.

### Examples

Optimize by scaling images:

```
MBS( "DynaPDF.Optimize"; $pdf; "ScaleImages,IgnoreICCBased" )
```

Optimize with defaults:

```
MBS( "DynaPDF.Optimize"; $pdf)
```

Merge PDFs and optimize:

```
# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ "InitDynaPDF" ]
End If
# Clear current PDF document
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# For writing to file instead of container, pass path here:
// Set Variable [ $r; Value:MBS("DynaPDF.OpenOutputFile"; $pdf; "/Users/cs/Desktop/test.pdf") ]
# Load PDF from container
```

CompressWithJBIG2	16384	If set, 1 bit images are compressed with JBIG2 if not already compressed with this filter.
NoFilterCheck	32768	Meaningful only, if the flag ofCompressWithJBIG2 is set. If set, re-compress all 1 bit images, also if already compressed with JBIG2.
ConvertGrayTo1Bit	65536	Useful for scanned faxes since many scanners create gray images for black & white input. Special color spaces like Separation, DeviceN, and NChannel are ignored unless the flag ConvertAllColors is set too.
ConvertToGray	131072	If set, images, text, and vector graphics are converted to DeviceGray.
ConvertToRGB	262144	If set, images, text, and vector graphics are converted to DeviceRGB.
ConvertToCMYK	524288	If set, images, text, and vector graphics are converted to DeviceCMYK.
ReplaceJP2KWithJPEG	1048576	Meaningful only, if the flag ofConvertToGray, ofConvertToRGB, or ofConvertToCMYK is set. If set, JPEG 2000 compressed images (which are converted to another color space) will be compressed with JPEG instead JPEG 2000. JPEG 2000 compression is very slow and requires much memory. JPEG compression is around 10 times faster and produces almost identical results.

```

Go to Record/Request/Page [ First ]
Set Variable [ $destPage; Value:1 ]
Loop
# Read from file
// Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromFile"; $pdf; "/Users/cs/Desktop/input.pdf") ]
# or container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Merge PDFs::InputPDF) ]
# Import all pages
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf; $destpage) ]
If [ GetAsNumber($r) >0 ]
Set Variable [ $destPage; Value:$r+1 ]
End If
Go to Record/Request/Page [ Next; Exit after last ]
End Loop
# Repair & Optimize PDF
Set Variable [ $r; Value:MBS("DynaPDF.Optimize"; $pdf) ]
# Save to container
Set Field [ Merge PDFs::FinalPDF; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]

```

Custom function for easy optimization:

```

# Custom Function OptimizePDF(InputPDF)
#
# Optimizes PDF and returns either new one or old one in case of error.

```

```

Let ( [
PDF = MBS("DynaPDF.New");
OpenResult = MBS("DynaPDF.OpenPDFFromContainer"; PDF; InputPDF);

```

```

OpenError = MBS("IsError");
ImportResult = MBS("DynaPDF.ImportPDFFile"; PDF);
ImportError = MBS("IsError");
Options = "FlattenLayers DeleteInvPaths ScaleImages NewLinkNames DeletePrivateData IgnoreZeroLineWidth
DeleteAlternateImages DeleteThumbnails";
OptimizeResult = MBS("DynaPDF.Optimize"; PDF; Options; 50; 50; 50; 150; 150; 150; "JPEG"; "JPEG");
OptimizeError = MBS("IsError");
OutputPDF = MBS("DynaPDF.Save"; PDF; GetAsText(InputPDF));
SaveError = MBS("IsError");
ReleaseError = MBS("DynaPDF.Release"; PDF);

Result = If(
// all okay?
OpenError = 0 and ImportError = 0 and OptimizeError = 0 and SaveError = 0 and MBS( "Container.Get-
Size"; OutputPDF; "PDF " ) >0;
// than return new PDF
OutputPDF;
// return old PDF
InputPDF)

];
result )

```

Optimizes with files input/output:

```

# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ "InitDynaPDF" ]
End If
# Clear current PDF document
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r ; Value: MBS("DynaPDF.OpenPDFFromFile"; $pdf; "C:\Users\Christian\Desktop\171206Y_C24555_An-
nie_PDFs\171206Y_C24555_Annie_WOprice.pdf") ]
Set Variable [ $r ; Value: MBS("DynaPDF.OpenOutputFile"; $pdf; "C:\Users\Christian\Desktop\171206Y_C24555_An-
nie_PDFs\171206Y_C24555_Annie_WOprice.optimized.pdf") ]
Set Variable [ $r ; Value: MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]
# Optimize
Set Variable [ $r ; Value: MBS("DynaPDF.Optimize"; $pdf; "FlattenLayers$DeleteInvPaths$ScaleImages$NewLinkNames$De-
vateData$IgnoreZeroLineWidth$DeleteAlternateImages$DeleteThumbnails"; 50; 50; 50; 150; 150; 150; "JPEG";
"JPEG") ]
# Save
Set Field [ Optimize PDF::Output PDF ; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]

```

## 71.300 DynaPDF.PageLink

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.PageLink"; PDF; PosX; PosY; Width; Height; DestPage )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of bounding rectangle

100

#### PosY

Y-Coordinate of bounding rectangle

100

#### Width

Width of bounding rectangle

100

#### Height

Height of bounding rectangle

20

#### DestPage

The destination page number.

5

**Result** Returns number or error.

### Description

The parameter DestPage specifies the destination page which should be opened (the page number). The function does not check whether the destination page exists; it can be created later. If the destination page does not exist when the document is closed it will be set to the first page.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.

The border of the link annotation is drawn by using the current line width, stroke color and line dash pattern. If the link should appear without a border set the line width to zero beforehand (with DynaPDF.SetLineWidth).

When clicking on a link annotation the rectangle is highlighted, that is a simple visual effect. Several highlight modes are supported, see DynaPDF.SetLinkHighlightMode for further information.

The destination page is always opened at the top corner. More precise destinations can be created with the function DynaPDF.PageLinkEx. Page links can also be used to execute an action. The destination page is ignored in the latter case, the annotation works then like a button.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the

function fails the return value is an error message.

Use `DynaPDF.WebLink` for web links, `DynaPDF.FileLink` for file links, `DynaPDF.PageLink` or `DynaPDF.PageLinkEx` for page links and `DynaPDF.FindText` can help to find the location where to place the link.

See also [PageLink](#) function in DynaPDF manual.

### Examples

Add various links to a page:

```
# import page
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Add Page Numbers::Input) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]

# edit first page
Set Variable [ $r; Value:MBS("DynaPDF.EditPage"; $pdf; 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetFont"; $pdf; "Helvetica"; 0; 20) ]
# Add web link
Set Variable [ $r; Value:MBS("DynaPDF.WriteFTextEx"; $PDF; 100; 100; 150; 20; "left"; "Go to MBS
Blog" ) ]
Set Variable [ $r; Value:MBS("DynaPDF.Weblink"; $PDF; 100; 80; 150; 20; "http://www.mbs-plugins.com/"
) ]
# Add page link
Set Variable [ $r; Value:MBS("DynaPDF.WriteFTextEx"; $PDF; 100; 150; 150; 20; "left"; "Jump to page
3" ) ]
Set Variable [ $r; Value:MBS("DynaPDF.PageLink"; $PDF; 100; 130; 150; 20; 3) ]
# Add page link with more options
Set Variable [ $r; Value:MBS("DynaPDF.WriteFTextEx"; $PDF; 100; 200; 200; 20; "left"; "Jump to Letter
D Zoomed" ) ]
Set Variable [ $r; Value:MBS("DynaPDF.PageLinkEx"; $PDF; 100; 180; 200; 20; "FitRect"; 4; 60; 590;
135; 160) ]
# Close page
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
```

5

**a**

Optional  
First parameter for destination type.

**b**

Optional  
Second parameter for destination type.

**c**

Optional  
Third parameter for destination type.

**d**

Optional  
Forth parameter for destination type.

**Result** Returns OK or error.

### Description

The parameter `DestPage` specifies the destination page which should be opened (the page number). The function does not check whether the destination page exists; it can be created later. If the destination page is not created before the document is closed, it will be set to the first page of the document.

If the coordinate system is bottom-up the point `PosX`, `PosY` defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.

The border of the link annotation is drawn by using the current line width, stroke color and line dash pattern. If the link should appear without a border set the line width to zero beforehand (with `DynaPDF.SetLineWidth`).

When clicking on a link annotation the rectangle is highlighted, that is a simple visual effect. Several highlight modes are supported, see `DynaPDF.SetLinkHighlightMode` for further information.

The destination created by this annotation allows jumping to a specific position in a document instead of simply opening the page such as `DynaPDF.PageLink` does.

Destination type	Description
<code>XYZZoom</code>	Display the page designated by page with the coordinates (left top) positioned at the top-left corner of the window and the contents of the page magnified by the factor <code>zoom</code> . A zero value for any of the parameters <code>left top</code> or <code>zoom</code> specifies that the current value of that parameter is to be retained unchanged.
<code>Fit</code>	Display the page designated by page with its contents magnified just enough to fit the entire page within the window both horizontally and vertically. If the required horizontal and vertical magnification factors are different, use the smaller of the two, centering the page within the window in the other dimension. This destination type has no parameters.
<code>FitHTop</code>	Display the page designated by page with the vertical coordinate top positioned at the top edge of the window and the contents of the page magnified just enough to fit the entire width of the page within the window.
<code>FitVLeft</code>	Display the page designated by page with the horizontal coordinate left positioned at the left edge of the window and the contents of the page magnified just enough to fit the entire height of the page within the window.
<code>FitRect</code>	Display the page designated by page with its contents magnified just enough to fit the rectangle specified by the coordinates <code>left bottom right</code> and <code>top</code> entirely within the window both horizontally and vertically. If the required horizontal and vertical magnification factors are different, use the smaller of the two, centering the rectangle within the window in the other dimension.

The destination types `FitB`, `FitBHTop` and `FitBVLeft` use the media box of the page to fit the page into the window. All other destination types use the crop box if any.

The destination types are the same as for a go-to actions and the function creates in fact a go-to action which is executed by the link annotation. However, the action is stored in a more compact format and cannot be shared with other objects.

If a destination should be used with multiple objects such as bookmarks, create a go-to action instead and add it to a normal page link (see `DynaPDF.PageLink`). The same action can then be added to other objects.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is an error message.

See also [PageLinkEx](#) function in DynaPDF manual.

### Examples

Add various links to a page:

```
# import page
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Add Page Numbers::Input) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]

# edit first page
Set Variable [ $r; Value:MBS("DynaPDF.EditPage"; $pdf; 1) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetFont"; $pdf; "Helvetica"; 0; 20) ]
# Add web link
Set Variable [ $r; Value:MBS( "DynaPDF.WriteFTextEx"; $PDF; 100; 100; 150; 20; "left"; "Go to MBS
Blog" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.Weblink"; $PDF; 100; 80; 150; 20; "http://www.mbs-plugins.com/"
) ]
# Add page link
Set Variable [ $r; Value:MBS( "DynaPDF.WriteFTextEx"; $PDF; 100; 150; 150; 20; "left"; "Jump to page
3" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.PageLink"; $PDF; 100; 130; 150; 20; 3) ]
# Add page link with more options
Set Variable [ $r; Value:MBS( "DynaPDF.WriteFTextEx"; $PDF; 100; 200; 200; 20; "left"; "Jump to Letter
D Zoomed" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.PageLinkEx"; $PDF; 100; 180; 200; 20; "FitRect"; 4; 60; 590;
135; 160) ]
# Close page
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
```

## 71.302 DynaPDF.PageStatistics

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.PageStatistics"; PDF; PageIndex )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PageIndex

The page to check. Range is from one to DynaPDF.GetPageCount.

1

**Result** Returns statistics.

### Description

The statistics are returned as one value per line in a multi line text. The order of the values is:

- Number of patterns used.
- Number of templates
- Number of bezier curves
- Number of path clipping
- Number of path closing
- Number of shading drawings
- Number of images
- Number of lines
- Number of rectangles
- Number of texts
- Length of all texts together
- Number of layers
- Number of font loadings

This function uses the parser interface in DynaPDF and needs a Pro license.

### Examples

Query page statistics:

```

# start new
Set Variable [ $PDF; Value:MBS("DynaPDF.New") ]

# open PDF
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $PDF; Test::data) ]

# import pages
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $PDF) ]

# if query page statistics
Set Variable [ $stat; Value:MBS("DynaPDF.PageStatistics"; $PDF; Test::PageIndex) ]

# split values:
Set Variable [ $Count; Value:ValueCount ( $stat ) ]
Set Variable [ $PatternCount; Value:MiddleValues ( $stat ; 1 ; 1 ) ]
Set Variable [ $TemplateCount; Value:MiddleValues ( $stat ; 2 ; 1 ) ]
Set Variable [ $BezierCount; Value:MiddleValues ( $stat ; 3 ; 1 ) ]
Set Variable [ $ClipPathCount; Value:MiddleValues ( $stat ; 4 ; 1 ) ]
Set Variable [ $ClosePathCount; Value:MiddleValues ( $stat ; 5 ; 1 ) ]
Set Variable [ $DrawShadingCount; Value:MiddleValues ( $stat ; 6 ; 1 ) ]
Set Variable [ $ImageCount; Value:MiddleValues ( $stat ; 7 ; 1 ) ]
Set Variable [ $LineCount; Value:MiddleValues ( $stat ; 8 ; 1 ) ]
Set Variable [ $RectangleCount; Value:MiddleValues ( $stat ; 9 ; 1 ) ]
Set Variable [ $TextCount; Value:MiddleValues ( $stat ; 10 ; 1 ) ]
Set Variable [ $TextLength; Value:MiddleValues ( $stat ; 11 ; 1 ) ]
Set Variable [ $LayerCount; Value:MiddleValues ( $stat ; 12 ; 1 ) ]
Set Variable [ $FontCount; Value:MiddleValues ( $stat ; 13 ; 1 ) ]

# show in text field
Set Field [ Test::PageStats; "PatternCount: " & $PatternCount &
"TemplateCount: " & $TemplateCount &
"BezierCount: " & $BezierCount &
"ClipPathCount: " & $ClipPathCount &
"ClosePathCount: " & $ClosePathCount &
"DrawShadingCount: " & $DrawShadingCount &
"ImageCount: " & $ImageCount &
"LineCount: " & $LineCount &
"RectangleCount: " & $RectangleCount &
"TextCount: " & $TextCount &
"TextLength: " & $TextLength &
"LayerCount: " & $LayerCount &
"FontCount: " & $FontCount ]

```

## 71.303 DynaPDF.ParseContent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ParseContent"; PDF; PageIndex )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PageIndex

The page to check. Range is from one to DynaPDF.GetPageCount.

1

**Result** Returns text or error.

### Description

Returns a list of text representations of the various PDF commands founds.

Output shows entries like this:

SaveGraphicState

Rectangle X: 0.000000 Y: 0.000000 W: 842.000000 H: 595.000000

## 71.304 DynaPDF.PlaceSigFieldValidateIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.PlaceSigFieldValidateIcon"; PDF; SigField; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### SigField

Handle of a signature field

#### PosX

X-Coordinate of the icon

#### PosY

Y-Coordinate of the icon

#### Width

Icon width

#### Height

Icon height

**Result** Returns OK or error.

### Description

By default, the validation icon is scaled to the width or height of the signature field and it is horizontally and vertically centered. When creating a user defined appearance for a signature field it is sometimes required to place the validation icon on another position within the signature field so that no important contents will be overdrawn.

The unscaled size of the validation icon is 100 x 100 units. It can be scaled to every size you want but it is usually best to preserve the aspect ratio. The icon should normally be placed fully inside the signature field. If the validation icon should not be shown then place it outside the signature field.

See also DynaPDF.CreateSigFieldAP.

Please note that the position of the validation icon is no property that can be stored in the PDF file. The position and size that you set with this function can only be considered if the file will be signed later with DynaPDF (see DynaPDF.SaveAndSignFile for further information).

See also [PlaceSigFieldValidateIcon](#) function in DynaPDF manual.

## 71.305 DynaPDF.PlaceTemplate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.PlaceTemplate"; PDF; TemplateHandle; X; Y; W; H )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### TemplateHandle

The handle value returned from DynaPDF.ImportPageAsTemplate function.  
\$template

#### X

The x coordinate.  
\$x

#### Y

The y coordinate. Please notice that PDF coordinates start at bottom of page except you change that with DynaPDF.SetPageCoords functions.  
\$y

#### W

The width of the destination rectangle.  
\$w

#### H

The height of the destination rectangle.  
\$h

**Result** Returns OK or error message.

### Description

The parameter TemplateHandle must be a valid template handle that was returned by DynaPDF.BeginTemplate or DynaPDF.ImportPageAsTemplate.

Templates can be used multiple times on different pages or positions and with different sizes. Unlike images, a template can be scaled without losing quality as far as the template contains vector graphics and text objects only.

The calculation of the width and height is the same as for images:

- If Width or Height is -1 the function uses the mirrored original width or height from the template.
- If Width or Height is 0, the missing value is calculated in relation to the given value of Height or Width to preserve the template's aspect ratio. The resulting output is a template with exact proportions relative to its original size.

- If Width and Height are 0, the original size is used (same effect as -1 but the template is not mirrored).
- A negative value of Width or Height mirrors the template on the x- or y-axis.

Imported pages can contain non-normalized bounding boxes and the page can be rotated. The coordinate origin, crop box, and rotation angle of a page must be considered when placing a template on a page because templates do not support features like a crop box or individual orientation angles. The required calculations to find the correct coordinate origin and to de-rotate a template are relatively complex. Therefore, DynaPDF provides the function `DynaPDF.PlaceTemplateEx` which considers the, coordinate origin, orientation angle, and crop box automatically. `DynaPDF.PlaceTemplateEx` greatly simplifies the handling of templates. If possible, this function should be used when working with imported pages.

Remarks: A template is invisible as long it was not placed on a page, template, or pattern. Templates should not be used inside of patterns because this requires usually too much rendering time.

## 71.306 DynaPDF.PlaceTemplateEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.PlaceTemplateEx"; PDF; TemplateHandle; X; Y; W; H )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### TemplateHandle

The handle value returned from DynaPDF.ImportPageAsTemplate function.

\$template

#### X

The x coordinate.

\$x

#### Y

The y coordinate. Please notice that PDF coordinates start at bottom of page except you change that with DynaPDF.SetPageCoords functions.

\$y

#### W

The width of the destination rectangle.

\$w

#### H

The height of the destination rectangle.

\$h

**Result** Returns OK or error message.

### Description

The parameter TemplateHandle must be a valid template handle that was returned by DynaPDF.BeginTemplate, DynaPDF.ImportPageAsTemplate.

The function was specifically designed to work with templates which were created from imported pages. A PDF page is converted to a template if it was imported with DynaPDF.ImportPageAsTemplate outside of an open page.

The calculation of the width and height is the same as for images:

- If Width or Height is -1 the function uses the mirrored original width or height from the template.
- If Width or Height is 0, the missing value is calculated in relation to the given value of Height or Width to preserve the template's aspect ratio. The resulting output is a template with exact proportions

relative to its original size.

- If Width and Height are 0, the original size is used (same effect as -1 but the template is not mirrored).
- A negative value of Width or Height mirrors the template on the x- or y-axis.

A template does not support a crop box or orientation angle. When placing a template on a page that was created from a PDF page, the coordinate origin must be adjusted according to the original media or crop box. In addition, the template must maybe be drawn into a clipping path (if the original page contained a crop box), and the template must maybe also be rotated so that the original orientation can be preserved.

All these considerations complicate the handling of imported templates. To make the usage of imported templates easier the function considers the coordinate origin, it draws the template automatically into a clipping rectangle if required, and it rotates the template according to the original page orientation.

The only thing that must be considered is that the original size of the template must be calculated from the crop box if present. In addition, the so computed width and height must be exchanged if the original page orientation was 90, -90, 270, or -270 degrees.

## 71.307 DynaPDF.Print

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.4	No	Yes	Yes, Windows only	No	No

MBS( "DynaPDF.Print"; PDF { ; printerName; TempPath; DocName; PrintFlags; MarginLeft; MarginTop; MarginRight; MarginBottom; ShowDialog; MaxRes } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### printerName

Optional

Printer name. Ignored if dialog is shown. See Printer.PrinterNames function for printer names.

"myPrinter"

#### TempPath

Optional

The path to temporary folder. Can be empty for default folder.

""

#### DocName

Optional

The name of the print job.

"My PDF Print"

#### PrintFlags

Optional

The flags for printing. Can be Default, 1bit, Color, AutoRotateAndCenter, PrintAsImage or ShrinkToPrintArea. Can be just the text name of an option or the sum of the numbers.

"Color"

#### MarginLeft

Optional

The margin for the left for the page. Pass zero if you don't need an extra margin.

#### MarginTop

Optional

The margin for the top for the page.

#### MarginRight

Optional

The margin for the right for the page.

#### MarginBottom

Optional

The margin for the bottom for the page.

#### ShowDialog

Optional

Available in MBS FileMaker Plugin 6.5 or newer.

Whether to show dialog. Default is 0 as we want no dialog. Pass 1 to show a dialog here.

0

### MaxRes

Optional

The maximum resolution to use. If value is zero or empty, we use default print resolution.

300

**Result** Returns OK or error.

### Description

At time of publication the function is implemented on Windows only and pages are printed as image.

The parameter DocName is optional but should be set if possible. The document name is set to "out" if no name is provided.

#### Output color format

It is possible to determine which color formats a printer supports as input, but it is not possible to determine whether a printer outputs black & white, gray shades, or color. The default should be set to gray or 1 bit but the user should be able to configure the color format.

#### Maximum output resolution

The maximum output resolution is 600 DPI to restrict the memory usage and to reduce the amount of data that must be send to the printer.

Name	Value	Description
Default	0	Gray printing
1Bit	1	B/W printing. Recommended for b& w printers
Color	2	Color printing
AutoRotateAndCenter	4	Rotate and center pages if necessary
PrintAsImage	8	Default on Windows
ShrinkToPrintArea	16	Useful if a page contains no margins
PrintPageAsIs	256	Print page as is, ignoring paper size.

Please use PDFKit.Print for Mac OS X.

If you only want to print a selection of pages, please only import those pages via DynaPDF.ImportPDFPage function. Or use DynaPDF.DeletePage to remove the pages you don't want to print.

Requires DynaPDF Pro license.

### Examples

Prints a PDF to printer

```
MBS( "DynaPDF.Print"; $PDF; "MyPrinter")
```

Import PDF and print:

```
# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ "InitDynaPDF" ]
End If
# Clear current PDF document
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Print PDFs::InputPDF) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf; $destpage) ]
# Print
Set Variable [ $r; Value:MBS("DynaPDF.Print"; $pdf; Print PDFs::Printer Name; 2+4+16) ]
# Cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
```

Print with dialog:

```
MBS("DynaPDF.Print";
$pdf;
""; // printer name
""; // temp path
""; // job name
"Default"; // options
""; // margins
"";
"";
"";
1) // show dialog
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	No	Yes	No	No	No

MBS( "DynaPDF.Print.SetDevNames"; DeviceNames )

### Parameters

#### DeviceNames

The list of device names. First item in list is optional driver name. Second item is optional devicen name. Third item is optional output port name. Forth item is optional flags value.

**Result** Returns OK or error.

### Description

Sets the printer for printing on Windows with DynaPDF.Print function.

### Examples

Set PDF printer:

```
MBS( "DynaPDF.Print.SetDevNames"; "winspool$Microsoft Print to PDF" )
```

Created 16th January 2017, last changed 16th January 2017.

**71.312 DynaPDF.RGB**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RGB"; Red; Green; Blue )

**Parameters****Red**

The red color component from 0 to 255.

0

**Green**

The green color component from 0 to 255.

255

**Blue**

The blue color component from 0 to 255.

255

**Result** Returns color value as number.

**Description**

For use with functions which take a color as a big number.

Calculation is Blue \* 65536 + Green \* 256 + Red.

Use it only if the color space is RGB.

**Examples**

Get a blue color value:

MBS( "DynaPDF.RGB"; 0; 0; 255 )

Example result: 16711680

Get a red color value:

MBS( "DynaPDF.RGB"; 255 )

Example result: 255

Created 18th August 2014, last changed 11st December 2016.

## 71.313 DynaPDF.ReadImageFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ReadImageFormat"; PDF; Container { ; Index } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Container

The image container value. Pass the container field or a variable with the container content.  
\$image

#### Index

Optional

The index of the image for multi image files.

1

**Result** Returns image format or error message.

### Description

The function reads only the image header to improve processing speed. If the parameter BitsPerPixel is 32 the image is a CMYK image. Note that TIFF images support color depths up to 64 bits per pixel. The parameter Index specifies the array index of a multi-page image that should be read in; numbering starts at 1. The parameter is ignored for non-multi-page image formats.

Image format is returned as a text with width, height and bits per pixel separated by newline.

### Examples

Place an image centered on the page with border:

```
Set Variable [ $r ; Value: MBS("DynaPDF.AppendPage"; $pdf) ]
# put a background in
Set Variable [ $r ; Value: MBS("DynaPDF.SetFillColor"; $pdf; ,8; ,8; ,8) ]
Set Variable [ $r ; Value: MBS("DynaPDF.Rectangle"; $pdf; 0; 0; MBS( "DynaPDF.GetPageWidth"; $PDF
); MBS( "DynaPDF.GetPageHeight"; $PDF ); "fill" ) ]
# options for saving image
Set Variable [ $r ; Value: MBS("DynaPDF.SetSaveNewImageFormat"; $pdf; 0) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetResolution"; $pdf; 300) ]
# read size of image
Set Variable [ $r ; Value: MBS("DynaPDF.ReadImageFormat"; $pdf; Merge PDFs::InputImage) ]
Set Variable [ $ImageWidth ; Value: GetAsNumber (LeftValues ( $r ; 1 )) ]
Set Variable [ $ImageHeight ; Value: GetAsNumber (MiddleValues ( $r ; 2; 1 )) ]
# The destination area where to put PDF
Set Variable [ $TargetX ; Value: 50 ]
Set Variable [ $TargetY ; Value: 50 ]
Set Variable [ $TargetWidth ; Value: MBS( "DynaPDF.GetPageWidth"; $PDF ) - 100 ]
```

```

Set Variable [ $TargetHeight ; Value: MBS( "DynaPDF.GetPageHeight"; $PDF ) - 100 ]
# calculate scale factor
Set Variable [ $factor ; Value: Min( $TargetHeight / $ImageHeight; $TargetWidth / $ImageWidth) ]
# calculate output size
Set Variable [ $DestWidth ; Value: $ImageWidth * $factor ]
Set Variable [ $DestHeight ; Value: $ImageHeight * $factor ]
# Center in target area
Set Variable [ $DestX ; Value: $TargetX + ($TargetWidth-$DestWidth) / 2 ]
Set Variable [ $DestY ; Value: $TargetY + ($TargetHeight-$DestHeight) / 2 ]
# insert the image
Set Variable [ $r ; Value: MBS("DynaPDF.InsertImage"; $pdf; Merge PDFs::InputImage; $DestX; $DestY;
$DestWidth; $DestHeight) ]
# close page and move to next record
Set Variable [ $r ; Value: MBS("DynaPDF.EndPage"; $pdf) ]

```

## 71.314 DynaPDF.ReadImageResolution

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ReadImageResolution"; PDF; Container { ; Index } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Container

The image container value. Pass the container field or a variable with the container content.

\$image

#### Index

Optional

The index of the image for multi image files.

1

**Result** Returns the x and y resolution values as text separated by newline character.

### Description

The image resolution is a user defined value that can be stored in certain image formats such as Bitmap or TIFF.

The function returns zero values if the image format does not support a resolution record or if no values are stored in the image file, the image resolution is then 72 DPI.

See also [ReadImageResolution](#) function in DynaPDF manual.

## 71.315 DynaPDF.Rectangle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Rectangle"; PDF; PosX; PosY; Width; Height; FillMode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of rectangle

\$x

#### PosY

Y-Coordinate of rectangle

\$y

#### Width

Width of the rectangle

\$w

#### Height

Height of the rectangle

\$h

#### FillMode

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error message.

### Description

See also [Rectangle](#) function in DynaPDF manual.

### Examples

Fills a rectangle:

```
MBS( "DynaPDF.Rectangle"; $PDF; 100; 200; 200; 200; "fill" )
```

Draws a rectangle:

```
MBS( "DynaPDF.Rectangle"; $PDF; 100; 200; 200; 200; "stroke" )
```

## 71.317 DynaPDF.RenameSpotColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RenameSpotColor"; PDF; Colorant { ; NewName } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Colorant

Colorant name to change.

"PANTONE 376 C"

#### NewName

Optional

New name or empty.

"Cyan"

**Result** Returns number or error.

### Description

Renames the spot color Colorant to NewName in all Separation, DeviceN, and NChannel color spaces in which the colorant can be found. If the parameter NewName is set to empty, the function renames the colorant to the special value None which produces no visible output.

The representation of the colorant in the alternate color space is left unchanged, also if the colorant is set to the special value None or All.

The function returns the number of color spaces in which the colorant has been changed. If the function fails the return value is the error message.

See also [RenameSpotColor](#) function in DynaPDF manual.

**See also**

- [71.294 DynaPDF.New](#)

Created 22nd March 2017, last changed 22nd March 2017.

**71.318 DynaPDF.RenderPDFFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RenderPDFFile"; PDF; DestPath; Resolution; Flags; PixelFormat; Filter; Format )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**DestPath**

A file path for storing images. Can be folder for multiple images files or file for one file. If a folder, it must exist.

"/Users/cs/Desktop/test.jpg"

**Resolution**

The resolution you'd like to have for the image. If you pass zero, we use default resolution (72).

150

**Flags**

Flags for rendering. Use 0 for the default flags. For other values, please look into dynapdf manual. With version 6.4 of our plugin, you can also specify this by passing in text string, e.g. "Rotate90\$ClipToTrimBox"

0

**PixelFormat**

The pixel format. Can be 1bit, gray, RGB, BGR, RGBA, BGRA, ARGB, ABGR, CMYK, CMYKA and GrayA. Default is RGB.

"RGB"

**Filter**

The compression filter to use. Can be Flate, JPEG, CCITT3, CCITT4, LZW or JP2K. Default is JPEG.

"JPEG"

**Format**

The image format to use. Can be TIFF, JPEG, PNG, BMP or JPC. Default is JPEG.

"JPEG"

**Result** Returns OK or error.

**Description**

You can choose the format and filter, but please make sure they match as not all combinations are valid. This can write multipage tiff files or a folder of image files.

Requires DynaPDF Pro license for the raster engine to create bitmaps from PDF pages.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Render PDF to desktop with several JPEG pages:

```
$result = MBS( "DynaPDF.RenderPDFFile"; $PDF; "/Users/cs/Desktop"; 150; 0; "RGB"; "JPEG"; "JPEG" )
```

Render TIFF with higher resolution:

```
$result = MBS( "DynaPDF.RenderPDFFile"; $PDF; "c:\test.tif"; 150; 0; "RGB"; "Flate"; "TIFF" )
```

**71.319 DynaPDF.RenderPDFFileEx**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RenderPDFFileEx"; PDF; DestPath; Resolution; Width; Height; Flags; PixelFormat; Filter; Format )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**DestPath**

A file path for storing images. Can be folder for multiple images files or file for one file. If a folder, it must exist.

"/Users/cs/Desktop/test.jpg"

**Resolution**

The resolution you'd like to have for the image. If you pass zero, we use default resolution (72).

150

**Width**

Desired width.

600

**Height**

Desired height.

800

**Flags**

Flags for rendering. Use 0 for the default flags. For other values, please look into dynapdf manual. With version 6.4 of our plugin, you can also specify this by passing in text string, e.g. "Rotate90\$ClipToTrimBox"

0

**PixelFormat**

The pixel format. Can be 1bit, gray, RGB, BGR, RGBA, BGRA, ARGB, ABGR, CMYK, CMYKA and GrayA. Default is RGB.

"RGB"

**Filter**

The compression filter to use. Can be Flate, JPEG, CCITT3, CCITT4, LZW or JP2K. Default is JPEG.

"JPEG"

**Format**

The image format to use. Can be TIFF, JPEG, PNG, BMP or JPC. Default is JPEG.

"JPEG"

**Result** Returns OK or error.

**Description**

The pages in memory could be imported from one or more external PDF files, e.g. with `ImportPDFFile()`, created with DynaPDF functions, or a combination of both.

The parameter `DestPath` can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.

The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- Resolution  $>0$  and Width  $== 0$  and Height  $== 0$ : Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the wished resolution.
- Resolution  $>0$  and Width  $<0$  and or Height  $<0$ : Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.
- Resolution  $== 0$  and Width  $>0$  or Height  $>0$ : Pages are scaled to the given Width or Height. If Width and Height are greater zero then pages are scaled to that size independent of the original page format (not recommended). It is usually best to set the width or height to zero so that the function can calculate the missing value to preserve the aspect ratio.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

Requires DynaPDF Pro license for the raster engine to create bitmaps from PDF pages.

See also [RenderPDFFileEx](#) function in DynaPDF manual.

## 71.320 DynaPDF.RenderPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RenderPage"; PDF; PageIndex; Resolution; Width; Height; Flags; PixelFormat; Filter; Format { ; Filename; DestPath } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PageIndex

The page number between 1 and DynaPDF.GetPageCount.

1

#### Resolution

The resolution you'd like to have for the image. If you pass zero, we use default resolution (72).

150

#### Width

The width of the output image. Can be zero to use page width or to scale based on height.

800

#### Height

The height of the output image. Can be zero to use page height or to scale based on width.

600

#### Flags

Flags for rendering. Use 0 for the default flags. For other values, please look into dynapdf manual. With version 6.4 of our plugin, you can also specify this by passing in text string, e.g. "Rotate90\$ClipToTrimBox"

0

#### PixelFormat

The pixel format. Can be 1bit, gray, RGB, BGR, RGBA, BGRA, ARGB, ABGR, CMYK, CMYKA and GrayA. Default is RGB.

"RGB"

#### Filter

The compression filter to use. Can be Flate, JPEG, CCITT3, CCITT4, LZW or JP2K. Default is JPEG.

"JPEG"

#### Format

The image format to use. Can be TIFF, JPEG, PNG, BMP or JPC. Default is JPEG.

"JPEG"

#### Filename

Optional

The file name to use for the container value. Default is page with right file extensions for image. Pass any value if you use DestPath parameter.

\$name

### DestPath

Optional

Optional, a file path for storing image instead of a container.

"/Users/cs/Desktop/test.jpg"

**Result** Returns container value with image or error message.

### Description

You can choose the format and filter, but please make sure they match as not all combinations are valid.

Requires DynaPDF Pro license for the raster engine to create bitmaps from PDF pages.

Please use `DynaPDF.InitColorManagementEx` to initialize color management, so conversions to other colorspaces like CMYK work better.

### Examples

Render page 5 with default options:

```
$ImageData = MBS( "DynaPDF.RenderPage"; $PDF; 5 )
```

Render page 5 with higher resolution:

```
$ImageData = MBS( "DynaPDF.RenderPage"; $PDF; 5; 150 )
```

Render page 5 to file:

```
$result = MBS( "DynaPDF.RenderPage"; $PDF; 5; 150; 0; 0; 0; "RGB"; "JPEG"; "JPEG"; ""; "/Users/cs/Desktop/test.jpg" )
```

Open PDF and render page as image to container:

```
# Start new PDF workspace
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Test::data) ]
# Import all pages
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf) ]
# Render one page as Picture
Set Variable [ $r; Value:MBS("DynaPDF.RenderPage"; $pdf; Test::PageIndex) ]
# Put in Container
Set Field [ Test::PageImage; $r ]
# cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
```

Render in one formula:

```
// input: PDFDocumentContainer
Let (
[
~PDFObject = MBS("DynaPDF.New");
~error = MBS("IsError");

~x = MBS("DynaPDF.OpenPDFFromContainer"; ~PDFObject; PDFDocumentContainer);
~error = ~error OR MBS("IsError");

~x = MBS("DynaPDF.ImportPDFPage"; ~PDFObject; 1);
~error = ~error OR MBS("IsError");

~PageIndex = 1;
~Resolution = 150 ;
~Width = 0;
~Height = 0;
~Flags = 0;
~PixelFormat = "RGB";
~Filter = "JPEG";
~Format = "PNG";
~Result = MBS("DynaPDF.RenderPage"; ~PDFObject; ~PageIndex ; ~Resolution; ~Width; ~Height; ~Flags;
~PixelFormat; ~Filter; ~Format);
~error = ~error OR MBS("IsError");

~x = MBS("DynaPDF.Release"; ~PDFObject) ] ;
If(~error; "" ; ~Result)
```

## 71.321 DynaPDF.ReplaceImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ReplaceImage"; PDF; ImageIndex; Image { ; ImageIndex; Colorspace; ColorSpaceHandle; Flags } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### ImageIndex

The index of the image to replace. From 0 to DynaPDF.GetImageCount-1.

\$index

#### Image

The new image. Can be container or native file path.

Images::ImageContainer

#### ImageIndex

Optional

The index of the image. This is for a multi picture tiff file to pick the image. Default is 1 for first image.

1

#### Colorspace

Optional

The color space to use. Can be DeviceRGB, DeviceCMYK, DeviceGray, CalGray, CalRGB, Lab, ICCBased, Pattern, Indexed, Separation, DeviceN or NChannel. Default is DeviceRGB.

"DeviceRGB"

#### ColorSpaceHandle

Optional

The color space handle. Can be empty if you want to use device colorspace.

""

#### Flags

Optional

The flags. Can be number or text with various flags. Can be set to DeleteAltImages, DeleteMetadata, DeleteOCG and/or DeleteSoftMask.

"DeleteAltImages\$DeleteMetadata"

**Result** Returns OK or error.

### Description

The resolution, aspect ratio, color space and so on can be freely chosen. However, note that this function does not change the output position or size. If the aspect ratio of the new image is different, then it will be stretched or shrunken to fit into the output rectangle.

The parameter CS specifies the destination color space into which the image should be converted or saved,

if the image is already defined in that color space. CSHandle must be the handle of that color space if a non-device space is used. The will be ignored for devices spaces.

The function works in the very same way as DynaPDF.InsertImage with the following differences:

- The color of an image mask cannot be set or changed because this would require changes on the content stream in which the image is used. An image mask will be created if the image color depth is 1 bit and if color key masking is enabled (see SetUseTransparency()). SetUseTransparency() should normally be set to false before calling this function. \* The image will never be downscaled, independent of the current resolution, because the size of the output rectangle is not known. If the image that should be replaced is a soft mask of another base image, then make sure that the destination color space is set to DeviceGray, CalGray, or to a one channel ICC based color space because a soft mask must not contain more than one color channel. The flags UseImageColorSpace, IgnoreICCProfiles, RealPassThrough, and NoBitmapAlpha are all supported. See DynaPDF.SetGStateFlags for further information.

See also [ReplaceImage](#) function in DynaPDF manual.

### Examples

Replace image:

```
# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ "InitDynaPDF" ]
End If
# Start new PDF session
Set Variable [ $pdf ; Value: MBS("DynaPDF.New") ]
# Import pages
Set Variable [ $r ; Value: MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Replace Image::Input PDF) ]
Set Variable [ $r ; Value: MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]
# Replace Image
Set Variable [ $r ; Value: MBS("DynaPDF.ReplaceImage"; $pdf; 0; Replace Image::New Image) ]
# Save PDF
Set Field [ Replace Image::Output PDF ; MBS("DynaPDF.Save"; $pdf) ]
# Cleanup
Set Variable [ $r ; Value: MBS( "DynaPDF.Release"; $pdf ) ]
```

## 71.322 DynaPDF.ReplacePattern

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ReplacePattern"; PDF; Text; NewText { ; Alignment; NewFontSize; NewFontStyle; NewCharacterSpacing; NewTextScaling; NewTextRise; NewTextColor } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Text

The text to search.  
"Hello"

#### NewText

The text to replace the found location with.  
"World"

#### Alignment

Optional  
The new alignment you want. 0 = Left, 1 = Center and 2 = Right. May not work with rotated text.  
0

#### NewFontSize

Optional  
The new font size to use. Use -1 to keep whatever it is. Due to matrix scaling in pdf, the size here may be far off.

#### NewFontStyle

Optional  
The new font style. Use -1 to keep whatever it is. e.g. 4 for underline, 2 for bold, 1 for italic or a combination. See dynapdf manual for more values for font styles.  
0

#### NewCharacterSpacing

Optional  
The new character spacing value. See also DynaPDF.SetCharacterSpacing. If undefined, keeps current character spacing.  
2

#### NewTextScaling

Optional  
The text scaling to use.

#### NewTextRise

Optional  
The text rise to use. In percent of text height as plugin multiplies y by given factor.

**NewTextColor**

Optional

Available in MBS FileMaker Plugin 9.1 or newer.

The new stroke &amp; fill color. Pass negative number to keep existing color.

MBS( "DynaPDF.RGB"; 0; 0; 255 )

**Result** Returns number of locations found.**Description**

You need to have an open page. you can use DynaPDF.EditPage to edit an existing one.

**Examples**

Replace placeholder with text:

MBS("DynaPDF.ReplacePattern"; \$pdf; "«PLZ Ort»"; "56645 Nickenich")

Replace some texts with different alignment:

Set Variable [ \$r1 ; Value: MBS("DynaPDF.ReplacePattern"; \$pdf; "Hello1"; "Hello World"; 0) ]

Set Variable [ \$r2 ; Value: MBS("DynaPDF.ReplacePattern"; \$pdf; "Hello3"; "Hello World"; 1) ]

Set Variable [ \$r3 ; Value: MBS("DynaPDF.ReplacePattern"; \$pdf; "Hello5"; "Hello World"; 2) ]

Replace text, make it centered and underlined:

MBS("DynaPDF.ReplacePattern"; \$pdf; "Hello3"; "Hello World"; 1; -1; 4)

**71.323 DynaPDF.ResetEncryptionSettings**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ResetEncryptionSettings"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns 1, 0 or error.

**Description**

If the function succeeds the return value is 1. If the function fails the return value is 0.

See also [ResetEncryptionSettings](#) function in DynaPDF manual.

## 71.324 DynaPDF.RestoreGraphicState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RestoreGraphicState"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns OK or error message.

### Description

See also DynaPDF.SaveGraphicState.

See also [RestoreGraphicState](#) function in DynaPDF manual.

### See also

## 71.325 DynaPDF.RotateCoords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.RotateCoords"; PDF; a; x; y { ; RotateCoords } )
```

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### a

Angle alpha in degrees

30

#### x

Origin of the x-axis

\$x

#### y

Origin of the y-axis

\$y

#### RotateCoords

Optional

Whether to rotate coordinate system. This is now done by DynaPDF automatically, so for current version of the library, this must be zero. But older versions need the 1.

0

**Result** Returns OK on success and error on failure.

### Description

It is highly recommended to save the graphics state beforehand, otherwise it is very difficult or impossible to restore the coordinate system later.

After the coordinate system was changed by the function, bottom-up coordinates are active. It is not possible to use top-down coordinates with a skewed coordinate system.

To rotate a page you can use DynaPDF.SetOrientation or DynaPDF.SetOrientationEx.

See also [RotateCoords](#) function in DynaPDF manual.

### Examples

Rotate and draw rectangle:

```
MBS( "DynaPDF.SaveGraphicState"; $PDF )
MBS( "DynaPDF.RotateCoords"; $PDF; 30; 150; 450)
MBS( "DynaPDF.Rectangle"; $PDF; 0; 0; 200; 100; "stroke" )
MBS( "DynaPDF.RestoreGraphicState"; $PDF )
```

Rotate graphics system 270° for whole page:

```
MBS("DynaPDF.TranslateCoords"; $pdf; MBS("DynaPDF.GetPageWidth"; $pdf)/2; MBS("DynaPDF.GetPageHeight"; $pdf)/2)
MBS("DynaPDF.RotateCoords"; $pdf; 270; 0; 0)
MBS("DynaPDF.TranslateCoords"; $pdf; -MBS("DynaPDF.GetPageHeight"; $pdf)/2; -MBS("DynaPDF.GetPageWidth"; $pdf)/2)
```

Draw text rotated:

```
# save
Set Variable [ $r; Value: MBS("DynaPDF.SaveGraphicState"; $pdf) ]
# get page size
Set Variable [ $w; Value: MBS("DynaPDF.GetPageWidth"; $pdf) ]
Set Variable [ $h; Value: MBS("DynaPDF.GetPageHeight"; $pdf) ]
# move center to middle of page
Set Variable [ $r; Value: MBS("DynaPDF.TranslateCoords"; $PDF; $w/2; $h/2) ]
# rotate here by 30 degree
Set Variable [ $r; Value: MBS("DynaPDF.RotateCoords"; $PDF; 30; 0; 0) ]
# move center back
Set Variable [ $r; Value: MBS("DynaPDF.TranslateCoords"; $PDF; -$w/2; -$h/2) ]
# now draw some text
Set Variable [ $r; Value: MBS("DynaPDF.SetTextRect"; $pdf; 0; 500; MBS("DynaPDF.GetPageWidth"; $pdf); -1) ]
Set Variable [ $r; Value: MBS("DynaPDF.WriteFText"; $pdf; "center"; Watermark pages::WatermarkText ) ]
# restore
Set Variable [ $r; Value: MBS("DynaPDF.RestoreGraphicState"; $pdf) ]
```

### See also

Created 18th August 2014, last changed 4th December 2018.

## 71.326 DynaPDF.RotateTemplate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RotateTemplate"; PDF; Template; Rotation )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Template

The handle to the template of a page.  
\$template

#### Rotation

The rotation angle. Can be 0, 90, 180 or 270.  
90

**Result** Returns template handle or error.

### Description

Returns a new template handle.

This is a convenience function which creates a new template and draws the existing template there with rotation.

### Examples

Import, rotate and place:

```
# Create new PDF document
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; DynaPDF PlaceTemplate::InputPDF) ]
# Import first page as template
Set Variable [ $template; Value:MBS("DynaPDF.ImportPageAsTemplate"; $pdf; 1) ]
# Create 4 rotations:
Set Variable [ $template0; Value:MBS("DynaPDF.RotateTemplate"; $pdf; $template; 0) ]
Set Variable [ $template90; Value:MBS("DynaPDF.RotateTemplate"; $pdf; $template; 90) ]
Set Variable [ $template180; Value:MBS("DynaPDF.RotateTemplate"; $pdf; $template; 180) ]
Set Variable [ $template270; Value:MBS("DynaPDF.RotateTemplate"; $pdf; $template; 270) ]
# Make new page and place PDF there in original size (0/0) in position (0/0)
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.PlaceTemplate"; $pdf; $template; 100; 100; 200; 300) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetStrokeColor"; $pdf; 255; 0; 0) ]
Set Variable [ $r; Value:MBS("DynaPDF.Rectangle"; $pdf; 100-1; 100-1; 200+2; 300+2; "Stroke") ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
```

```

Set Variable [ $r; Value:MBS("DynaPDF.PlaceTemplate"; $pdf; $template0; 100; 100; 200; 300) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetStrokeColor"; $pdf; 255; 0; 0) ]
Set Variable [ $r; Value:MBS("DynaPDF.Rectangle"; $pdf; 100-1; 100-1; 200+2; 300+2; "Stroke") ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.PlaceTemplate"; $pdf; $template90; 100; 100; 300; 200) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetStrokeColor"; $pdf; 255; 0; 0) ]
Set Variable [ $r; Value:MBS("DynaPDF.Rectangle"; $pdf; 100-1; 100-1; 300+2; 200+2; "Stroke") ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.PlaceTemplate"; $pdf; $template180; 100; 100; 200; 300) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetStrokeColor"; $pdf; 255; 0; 0) ]
Set Variable [ $r; Value:MBS("DynaPDF.Rectangle"; $pdf; 100-1; 100-1; 200+2; 300+2; "Stroke") ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.PlaceTemplate"; $pdf; $template270; 100; 100; 300; 200) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetStrokeColor"; $pdf; 255; 0; 0) ]
Set Variable [ $r; Value:MBS("DynaPDF.Rectangle"; $pdf; 100-1; 100-1; 300+2; 200+2; "Stroke") ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
# done, save to container
Set Field [ DynaPDF.PlaceTemplate::OutputPDF; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]
# done, save to container
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]

```

**71.327 DynaPDF.RoundRect**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RoundRect"; PDF; PosX; PosY; Width; Height; Radius; FillMode )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

X-Coordinate of rectangle

\$x

**PosY**

Y-Coordinate of rectangle

\$y

**Width**

Width of the rectangle

\$w

**Height**

Height of the rectangle

\$h

**Radius**

Radius of rounded corners.

20

**FillMode**

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error.

**Description**

The radius must not be greater than the half with or height of the rectangle.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the rectangle. If the coordinate system is top-down it defines the upper left corner.

The draw direction can be changed with the function DynaPDF.SetDrawDirection.

A rectangle is a closed path that can be filled, stroked or both. It is also possible to draw a rectangle invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described under DynaPDF.ClipPath. The parameter FillMode is ignored if the rectangle is drawn inside a clipping path. The fill modes are described under DynaPDF.ClosePath.

71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.RoundRectEx"; PDF; PosX; PosY; Width; Height; RadiusWidth; RadiusHeight; FillMode )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

X-Coordinate of rectangle

\$x

**PosY**

Y-Coordinate of rectangle

\$y

**Width**

Width of the rectangle

\$w

**Height**

Height of the rectangle

\$h

**RadiusWidth**

The radius for width.

20

**RadiusHeight**

The radius for height.

30

**FillMode**

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error.

**Description**

The parameter RadiusWidth must not be greater than the half width of the rectangle and the parameter RadiusHeight must not be greater than the half height of the rectangle.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the rectangle. If the coordinate system is top-down it defines the upper left corner.

The draw direction can be changed with the function DynaPDF.SetDrawDirection.

A rectangle is a closed path that can be filled, stroked or both. It is also possible to draw a rectangle invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described under `DynaPDF.ClipPath`. The parameter `FillMode` is ignored if the rectangle is drawn inside a clipping path. The fill modes are described under `DynaPDF.ClosePath`.

**71.329 DynaPDF.Save**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Save"; PDF { ; filename; Preview } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**filename**

Optional

Optionally the file name to be associated with the container value. The file name should include pdf file extension.

"hello.pdf"

**Preview**

Optional

Optional, whether to include a preview JPEG. Default is 1 for including one. Pass zero to disable preview.

1

**Result** Returns container value with PDF file.

**Description**

The plugin also renders a JPEG for preview and includes it (with DynaPDF Pro).

If you created PDF to a file path and not in memory, this method just returns OK after closing the file. Before you call this function, you can call DynaPDF.OpenOutputFile or DynaPDF.OpenOutputFileEncrypted to open a destination file for the PDF.

**Examples**

Save PDF:

```
Set Field [ MyTable::ContainerField; MBS( "DynaPDF.Save"; $PDF; "report.pdf" ) ]
```

Created 18th August 2014, last changed 9th April 2017.

**71.330 DynaPDF.SaveAndSignFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SaveAndSignFile"; PDF; CertFilePath; Password { ; Reason; Location; filename; Preview } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**CertFilePath**

File path to a PKCS# 12 certificate file.

"C:\test.pfx"

**Password**

Password to decrypt the cert's private key.

\$password

**Reason**

Optional

Optional reason string.

\$reason

**Location**

Optional

Optional signers location string

\$location

**filename**

Optional

Optionally the file name to be associated with the container value. The file name should include pdf file extension.

"hello.pdf"

**Preview**

Optional

Optional, whether to include a preview JPEG. Default is 1 for including one. Pass zero to disable preview.

1

**Result** Returns container value with PDF file.

**Description**

On success you either get back the PDF as container value (in memory PDF) or it returns OK after writing PDF to file (file based PDF).

The plugin also renders a JPEG for preview and includes it within the container value (with DynaPDF Pro).

On Windows you can use WinCrypt with DynaPDF.SaveAndSignFileWinCrypt function and optionally use dialog to pick the certificate with DynaPDF.SaveAndSignFileWinCryptDialog from the certificate store.

### Examples

Save PDF:

```
Set Field [ MyTable::ContainerField; MBS( "DynaPDF.SaveAndSignFile"; $PDF; "/Users/cs/Desktop/test.pfx";  
$password; "Test"; ""; "report.pdf" ) ]
```

Created 18th August 2014, last changed 31st January 2020.

**71.331 DynaPDF.SaveAndSignFileWinCrypt**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	10.1	No	Yes	Yes, Windows only	No	No

MBS( "DynaPDF.SaveAndSignFileWinCrypt"; PDF; SignatureContainer { ; Password; ContactInfo; Location; Reason; filename; Preview } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**SignatureContainer**

The container with the PKCS# 12 file.

**Password**

Optional

The password to read the signature. Leave empty if not encrypted.

"123456"

**ContactInfo**

Optional

Optional contact info.

**Location**

Optional

Optional signers location string

\$location

**Reason**

Optional

Optional reason string.

\$reason

**filename**

Optional

Optionally the file name to be associated with the container value. The file name should include pdf file extension.

"hello.pdf"

**Preview**

Optional

Optional, whether to include a preview JPEG. Default is 1 for including one. Pass zero to disable preview.

1

**Result** Returns OK or error.

**Description**

On success you either get back the PDF as container value (in memory PDF) or it returns OK after writing

PDF to file (file based PDF).

The plugin also renders a JPEG for preview and includes it within the container value (with DynaPDF Pro).

On Windows you can use WinCrypt with DynaPDF.SaveAndSignFileWinCrypt function and optionally use dialog to pick the certificate with DynaPDF.SaveAndSignFileWinCryptDialog from the certificate store.

Use DynaPDF.SaveAndSignFile for cross platform signing.

### Examples

Save and sign a PDF after you assembled it:

```
Set Variable [ $PDFData ; Value: MBS("DynaPDF.SaveAndSignFileWinCrypt"; $pdf; "C:\Users\Chris-
tian\Desktop\test_cert.pfx"; "123456") ]
Set Variable [ $r ; Value: MBS("DynaPDF.Release"; $pdf) ]
# Put in Container
Set Field [ Create Text::PDF ; $PDFData ]
```

- [MBS FileMaker Plugin, version 10.1pr2](#)

Created 31st January 2020, last changed 31st January 2020.

**71.333 DynaPDF.SaveGraphicState**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SaveGraphicState"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns OK or error message.

**Description**

A saved graphics state must be restored before the page, template or pattern will be closed.

see also DynaPDF.RestoreGraphicState.

See also [SaveGraphicState](#) function in DynaPDF manual.

## 71.334 DynaPDF.ScaleCoords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ScaleCoords"; PDF; x; y )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### x

Scale factor of the x-axis

\$x

#### y

Scale factor of the y-axis

\$y

**Result** Returns OK on success and error on failure.

### Description

It is highly recommended to save the graphics state beforehand, otherwise it is very difficult or impossible to restore the coordinate system later.

After scaling the coordinate system, bottom-up coordinates are active. It is not possible to use top- down coordinates inside a scaled coordinate system.

Please do not try to scale/skew/translate back later. use DynaPDF.SaveGraphicState and DynaPDF.RestoreGraphicState.

See also [ScaleCoords](#) function in DynaPDF manual.

### Examples

Scale and draw rectangle:

```
MBS( "DynaPDF.SaveGraphicState"; $PDF )
```

```
MBS( "DynaPDF.ScaleCoords"; $PDF; 2; 2)
```

```
MBS( "DynaPDF.Rectangle"; $PDF; 0; 0; 200; 100; "stroke" )
```

```
MBS( "DynaPDF.RestoreGraphicState"; $PDF )
```

Created 18th August 2014, last changed 18th August 2014.

## 71.335 DynaPDF.SetAlpha

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAlpha"; PDF; FillAlpha; StrokeAlpha )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### FillAlpha

The new alpha between 0.0 and 1.0. Value of -1 will not change fill alpha.

0.5

#### StrokeAlpha

The new alpha between 0.0 and 1.0. Value of -1 will not change stroke alpha.

0.5

**Result** Returns OK or error message.

### Description

See also DynaPDF.SaveGraphicState and DynaPDF.RestoreGraphicState.

Requires DynaPDF Lite license.

### Examples

Make all drawings 50% transparent:

```
MBS( "DynaPDF.SetAlpha"; $PDF; 0.5; 0.5 )
```

Make just lines 50% transparent and don't change fill transparency:

```
MBS( "DynaPDF.SetAlpha"; $PDF; -1; 0.5 )
```

Make fill transparency 50% , so images draw half transparent:

```
MBS( "DynaPDF.SetAlpha"; $PDF; 0.5; -1 )
```

## 71.336 DynaPDF.SetAnnotBorderStyle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotBorderStyle"; PDF; AnnotationHandle; BorderStyle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

#### BorderStyle

The new border style. Can be Solid, Bevelled, Inset, Underline, Dashed or UserDefined.

"Solid"

**Result** Returns OK or error.

### Description

Note that the border style has no effect if the border width is set to zero or if the border color is set to NO\_COLOR (=4294967281) (see DynaPDF.SetAnnotColor, DynaPDF.SetAnnotBorderWidth).

Note also that not all styles are meaningful for all annotation types. For example, while link annotations support all border styles, FreeText annotations support the styles Solid and Dashed only. File Attach, Sound, Stamp, or Text annotations for example support no border style because these annotation types contain no appearance on which a border style could be applied.

Setting the border style to an unsupported value causes no error; the value will be ignored instead.

When changing the border style of a Free Text annotation DynaPDF must rebuild the appearance stream of the annotation. The text position can slightly change especially if the border width was changed too. See also DynaPDF.FreeTextAnnot.

See also [SetAnnotBorderStyle](#) function in DynaPDF manual.

71.336. <i>DYNAPDF.SETANNOTBORDERSTYLE</i>	3131
• 71.352 DynaPDF.SetBorderStyle	3153
• 71.371 DynaPDF.SetFieldBorderStyle	3178

Created 25th November 2014, last changed 25th November 2014.

## 71.337 DynaPDF.SetAnnotBorderWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotBorderWidth"; PDF; AnnotationHandle; LineWidth )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### AnnotationHandle

The annotation index.  
5

#### LineWidth

Line width of the border.  
2

**Result** Returns OK or error.

### Description

Although the line width can be set to any positive floating point number, it should be set to full integer values between 0 through 12.

If no border should be drawn set the line width to zero.

When changing the border width of a Free Text annotation DynaPDF must rebuild the appearance stream of the annotation. The text position depends on the line width of the border. Changing the border width changes also the position of the text. See also DynaPDF.FreeTextAnnot.

See also [SetAnnotBorderWidth](#) function in DynaPDF manual.

### See also

Created 25th November 2014, last changed 25th November 2014.

**71.338 DynaPDF.SetAnnotColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotColor"; PDF; AnnotationHandle; ColorSelector; ColorSpace; ColorValue )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**AnnotationHandle**

The annotation index.

5

**ColorSelector**

Which color to change. Can be BackColor, BorderColor or TextColor.

"TextColor"

**ColorSpace**

The color space to use. Can be DeviceRGB, DeviceCMYK or DeviceGray.

"DeviceRGB"

**ColorValue**

The color value as number.

255

**Result** Returns OK or error.

**Description**

The color can be defined in any device color space. However, at time of publication the function converts the color back to DeviceRGB.

Note that not all annotation types support a background or border color. For example, link annotations support a border color but no background or text color.

When changing a color of a Free Text annotation DynaPDF must rebuild the appearance stream of the annotation. This can cause slightly changes in the text position. See also DynaPDF.FreeTextAnnot.

See also [SetAnnotColor](#) function in DynaPDF manual.

**71.339 DynaPDF.SetAnnotDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotDate"; PDF; AnnotationHandle; DateType; Value )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**AnnotationHandle**

The annotation index.  
5

**DateType**

The type of date. Can be CreationDate (Markup annotations only) or ModificationDate.  
"ModificationDate"

**Value**

The new date value. Can be a timestamp or the number of seconds from 1st Jan 1970.  
Get(CurrentHostTimeStamp)

**Result** Returns OK or error.

**Description**

The following annotation types are markup annotations:

- Care
- Circle, Square
- FileAttach
- FreeText
- Highlight, Squiggly, Strikeout, Underline
- Ink
- Line
- PolyLine, Polygon
- Projection
- Redact
- Sound

- Stamp
- Text

The function `DynaPDF.GetAnnotation` can also be used to determine whether an annotation is a markup annotation.

## 71.340 DynaPDF.SetAnnotFlags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotFlags"; PDF; Flags )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Flags

The new flags value.

4

**Result** Returns OK or error.

### Description

The parameter Flags is a bit mask; multiple flags can be set with a binary or operator (e.g. afPrint (4) + afReadOnly (64)). It is also possible to add each flag separately; the previous flags are only deleted if the flag afNone (=0) is used.

See also [SetAnnotFlags](#) function in DynaPDF manual.

### See also

- 71.343 DynaPDF.SetAnnotIcon 3141
- 71.345 DynaPDF.SetAnnotOpacity 3143
- 71.347 DynaPDF.SetAnnotString 3145
- 71.397 DynaPDF.SetGStateFlags 3218
- 71.398 DynaPDF.SetImportFlags 3220
- 71.399 DynaPDF.SetImportFlags2 3224

Created 25th November 2014, last changed 6th October 2015.

Flag	Description
afNone	No flags are set.
afInvisible	If set, do not display the annotation if it does not belong to one of the standard annotation types and no annotation handler is available.
afHidden	(PDF 1.2) If set, do not display or print the annotation or allow it to interact with the user, regardless of its annotation type or whether an annotation handler is available.
afPrint	(PDF 1.2) If set, print the annotation when the page is printed. If clear, never print the annotation, regardless of whether it is displayed on the screen. This can be useful, for example, for annotations representing interactive pushbuttons, which would serve no meaningful purpose on the printed page.
afNoZoom	(PDF 1.3) If set, do not scale the annotation's appearance to match the magnification of the page. The location of the annotation on the page (defined by the upper-left corner of its annotation rectangle) remains fixed, regardless of the page magnification.
afNoRotate	(PDF 1.3) If set, do not rotate the annotation's appearance to match the rotation of the page. The upper-left corner of the annotation rectangle remains in a fixed location on the page, regardless of the page rotation.
afNoView	(PDF 1.3) If set, do not display the annotation on the screen or allow it to interact with the user. The annotation may be printed (depending on the setting of the afPrint flag), but should be considered hidden for purposes of on-screen display and user interaction.
afReadOnly	(PDF 1.3) If set, do not allow the annotation to interact with the user. The annotation may be displayed or printed (depending on the settings of the afNoView and afPrint flags), but should not respond to mouse clicks or change its appearance in response to mouse motions.

**71.341 DynaPDF.SetAnnotFlagsEx**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotFlagsEx"; PDF; AnnotationHandle; Flags )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**AnnotationHandle**

The annotation index.  
5

**Flags**

The new flags.  
4

**Result** Returns OK or error.

**Description**

See also [SetAnnotFlagsEx](#) function in DynaPDF manual.

**See also**

- 71.122 DynaPDF.GetAnnotFlags 2794

## 71.342 DynaPDF.SetAnnotHighlightMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotHighlightMode"; PDF; AnnotationHandle; Mode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### AnnotationHandle

The annotation index.  
5

#### Mode

The new highlight mode. Can be None, Invert, Outline, Push or PushUpd.  
"Invert"

**Result** Returns OK or error.

### Description

The highlight mode is applied when clicking with the mouse on the annotation. Only link annotations support a highlight mode. However, setting the mode to other annotation types causes no error; the value will be ignored instead.

See also [SetAnnotHighlightMode](#) function in DynaPDF manual.

### See also

## 71.343 DynaPDF.SetAnnotIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotIcon"; PDF; AnnotationHandle; Icon )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### AnnotationHandle

The annotation index.  
5

#### Icon

The new icon. Can be Comment, Help, Insert, Key, NewParagraph, Note, Paragraph or UserDefined.  
"Comment"

**Result** Returns OK or error.

### Description

The parameter AnnotationHandle must be a valid handle of a Text annotation. See also DynaPDF.TextAnnot.

See also [SetAnnotIcon](#) function in DynaPDF manual.

### See also

- 71.500 DynaPDF.TextAnnot 3391

Created 25th November 2014, last changed 25th November 2014.

## 71.344 DynaPDF.SetAnnotLineEndStyle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotLineEndStyle"; PDF; AnnotationHandle; StartPointLineEndStyle; EndPointLineEndStyle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

#### StartPointLineEndStyle

Can be None, Butt, Circle, ClosedArrow, Diamond, OpenArrow, RClosedArrow, ROpenArrow, Slash or Square.

"Diamond"

#### EndPointLineEndStyle

Can be None, Butt, Circle, ClosedArrow, Diamond, OpenArrow, RClosedArrow, ROpenArrow, Slash or Square.

"Diamond"

**Result** Returns OK or error.

### Description

See also [SetAnnotLineEndStyle](#) function in DynaPDF manual.

**71.345 DynaPDF.SetAnnotOpacity**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotOpacity"; PDF; AnnotationHandle; Opacity )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**AnnotationHandle**

The annotation index.  
5

**Opacity**

The new opacity value.  
1.0

**Result** Returns OK or error.

**Description**

The function DynaPDF.GetAnnotation can be used to determine whether an annotation is a markup annotation.

See also [SetAnnotOpacity](#) function in DynaPDF manual.

## 71.346 DynaPDF.SetAnnotOpenState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotOpenState"; PDF; AnnotationHandle; State )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

#### State

The new state. Can be 0 (closed) or 1 (open)

1.

**Result** Returns OK or error.

### Description

Markup annotations can be connected with a PopUp annotation that displays additional comments in a window (like a Text annotation). The open state can only be changed if the base annotation is connected with a PopUp annotation. If the base annotation contains no PopUp annotation or if the handle refers to a non- markup annotation the function does nothing.

All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.

See also [SetAnnotOpenState](#) function in DynaPDF manual.

**71.347 DynaPDF.SetAnnotString**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotString"; PDF; AnnotationHandle; StringType; Value )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**AnnotationHandle**

The annotation index.

5

**StringType**

Which string to change. Can be Author, Comment, Name or Subject.

"Name"

**Value**

The new value.

"Joe Miller"

**Result** Returns OK or error.

**Description**

See also [SetAnnotString](#) function in DynaPDF manual.

- 71.348 DynaPDF.SetAnnotSubject 3146

Created 25th November 2014, last changed 25th November 2014.

## 71.348 DynaPDF.SetAnnotSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetAnnotSubject"; PDF; AnnotationHandle; Subject )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### AnnotationHandle

The annotation index.

5

#### Subject

The subject to be set.

"Hello World"

**Result** Returns OK or error.

### Description

The subject is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

The annotation types FileLink, PageLink, PopUp and WebLink do not support a subject string. The function returns with an error when trying to set the subject on these annotation types.

If the parameter Value an empty string the subject string is deleted in the annotation.

See also [SetAnnotSubject](#) function in DynaPDF manual.

**71.349 DynaPDF.SetBBox**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetBBox"; PDF; box; left; top; right; bottom )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**box**

Which box to set. Can be Art, Bleed, Crop, Trim or Media.  
"Media"

**left**

The lower left x value.

0

**top**

The lower left y.

0

**right**

The upper right x.

595

**bottom**

The upper right y.

895

**Result** Returns OK or error.

**Description**

A PDF page may be prepared either for a finished medium, such as a sheet of paper, or as part of a prepress process in which the content of the page is placed on an intermediate medium, such as film or an imposed reproduction plate.

See also SetBBox function in dynapdf\_help.pdf.

## 71.350 DynaPDF.SetBookmarkDest

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetBookmarkDest"; PDF; BookmarkHandle; DestType; a; b; c; d )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### BookmarkHandle

The reference number for the bookmark. Either returned by one of the add/insert functions or just counting from 0 to DynaPDF.GetBookmarkCount-1.

\$BookmarkHandle

#### DestType

The destination type. Must be XY\_Zoom, Fit, FitH\_Top, FitV\_Left, Fit\_Rect, FitB, FitBH\_Top or FitBV\_Left.

#### a

The first parameter.

\$a

#### b

The first parameter.

\$b

#### c

The first parameter.

\$c

#### d

The first parameter.

\$d

**Result** Returns OK or error.

### Description

The parameter BookmarkHandle must be a valid bookmark handle. The destination page will not be changed by this function it must be set correctly with the function DynaPDF.AddBookmark. If it should be changed use the function DynaPDF.ChangeBookmark.

The destination created by this function allows jumping to a specific position in a document instead of simply opening a page such as a normal bookmark does.

See dynapdf\_help.pdf manual file for details.

See also [SetBookmarkDest](#) function in DynaPDF manual.

### See also

- 71.129 DynaPDF.GetBookmarkCount 2805
- 71.294 DynaPDF.New 3032
- 71.351 DynaPDF.SetBookmarkStyle 3151

Created 18th August 2014, last changed 18th August 2014.

**71.351 DynaPDF.SetBookmarkStyle**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetBookmarkStyle"; PDF; BookmarkHandle; Style; RGBColor )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**BookmarkHandle**

The reference number for the bookmark. Either returned by one of the add/insert functions or just counting from 0 to DynaPDF.GetBookmarkCount-1.

\$BookmarkHandle

**Style**

The new style. Can be "none", "italic", "bold" or a numeric representation.

"italic"

**RGBColor**

The RGB color value.

MBS( "DynaPDF.RGB"; 0; 0; 255 )

**Result** Returns OK or error.

**Description**

Since Acrobat 5 bookmarks support a user defined color and the text style can be changed to italic, bold and so on. Older versions of Adobe's Acrobat ignore the style information. Bookmarks support RGB colors only. The parameter Style is a bit mask, the flags can be combined, e.g. to create a bolditalic bookmark.

You can use DynaPDF.RGB function to calculate RGB color value.

See also [SetBookmarkStyle](#) function in DynaPDF manual.

**Examples**

Set bold:

MBS( "DynaPDF.SetBookmarkStyle"; \$PDF; 1; "bold"; 45\*65536+144\*256+54 )

Set bold and italic:

MBS( "DynaPDF.SetBookmarkStyle"; \$PDF; 1; 3; 45\*65536+144\*256+54 )

## 71.352 DynaPDF.SetBorderStyle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetBorderStyle"; PDF; BorderStyle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### BorderStyle

The new border style. Can be Solid, Bevelled, Inset, Underline or Dashed.

"Solid"

**Result** Returns OK or error.

### Description

It is also possible to change the style of a specific form field, see DynaPDF.SetFieldBorderStyle for further information.

See also [SetBorderStyle](#) function in DynaPDF manual.

**71.353 DynaPDF.SetCMapDir**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetCMapDir"; PDF; Path { ; Flags } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Path**

Absolute native path to the folder.  
\$path

**Flags**

Optional  
The flags to use. Can be Default, Recursive or Delayed.  
"Default"

**Result** Returns OK or error.

**Description**

You can use Path.FilemakerPathToNativePath to convert paths if needed.

Requires DynaPDF Pro license.

See also [SetCMapDir](#) function in DynaPDF manual.

**See also**

## 71.354 DynaPDF.SetCharacterSpacing

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetCharacterSpacing"; PDF; CharacterSpacing )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### CharacterSpacing

The new value for character spacing. Default is zero.  
10

**Result** Returns OK or error.

### Description

The function requires an open page, template or pattern.  
See also [SetCharacterSpacing](#) function in DynaPDF manual.

### Examples

Set character spacing to 5:

```
MBS( "DynaPDF.SetCharacterSpacing"; $PDF; 5 )
```

### See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetCheckBoxChar"; PDF; CheckBoxChar )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### CheckBoxChar

The checkbox char to use: Check, Circle, Cross1, Cross2, Cross3, Cross4, Diamond, Square or Star.  
"check"

**Result** Returns OK or error.

### Description

Default is Check.

See also [SetCheckBoxChar](#) function in DynaPDF manual.

## 71.356 DynaPDF.SetCheckBoxDefState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetCheckBoxDefState"; PDF; Field; Checked )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

#### Checked

The new default state.

1

**Result** Returns OK or error.

### Description

It can differ from the current visible state of the check box. The default state is used when the form is reset with a Reset Form Action.

The default state of a new check box is always identical with the visible state.

See also [SetCheckBoxDefState](#) function in DynaPDF manual.

## 71.358 DynaPDF.SetColorSpace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetColorSpace"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

The new colorspace. Can be DeviceRGB, DeviceCMYK or DeviceGray.  
"DeviceGray"

**Result** Returns OK on success or error message.

### Description

All color values must be defined in the current color space. Images or EMF graphics are automatically converted to the current color space. The default color conversion rules can be modified with the function DynaPDF.SetGStateFlags.

Extended color spaces can be set with DynaPDF.SetExtColorSpace, DynaPDF.SetExtFillColorSpace, and DynaPDF.SetExtStrokeColorSpace.

See also DynaPDF.GetColorSpace.

See also [SetColorSpace](#) function in DynaPDF manual.

### Examples

Set to RGB:

```
MBS( "DynaPDF.SetColorSpace"; $PDF; "DeviceRGB" )
```

Set to CMYK:

```
MBS( "DynaPDF.SetColorSpace"; $PDF; "DeviceCMYK" )
```

Write in CMYK:

```
# switch to CMYK
Set Variable [ $r; Value:MBS( "DynaPDF.SetColorSpace"; $pdf; "DeviceCMYK" ) ]
# set color to Cyan
Set Variable [ $r; Value:MBS("DynaPDF.SetFillColor"; $pdf; 1; 0; 0; 0) ]
# Write some text
Set Variable [ $r; Value:MBS("DynaPDF.WriteText"; $pdf; 100; $x; "Some cyan text") ]
# now switch back to RGB
Set Variable [ $r; Value:MBS( "DynaPDF.SetColorSpace"; $pdf; "DeviceRGB" ) ]
```

**71.359 DynaPDF.SetCompressionFilter**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetCompressionFilter"; PDF; Filter )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Filter**

The compression filter to use: Flate, JPEG, JP2K, CCITT3, CCITT4, LZW, LZWBW, FlateBW, JBIG2. "JPEG"

**Result** Returns OK on success.

**Description**

1 bit and 4 bit images are always compressed with Flate independent of the current compression filter. The filters are described in detail at InsertImage in DynaPDF help file.

See also [SetCompressionFilter](#) function in DynaPDF manual.

**Examples**

Compress images with 75% JPEG compression:

```
MBS( "DynaPDF.SetCompressionFilter"; $PDF; "jpeg" )
```

```
MBS( "DynaPDF.SetJPEGQuality"; $PDF; 75 )
```

Disable compression for best results:

```
MBS( "DynaPDF.SetCompressionFilter"; $PDF; "flate" )
```

## 71.360 DynaPDF.SetCompressionLevel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetCompressionLevel"; PDF; CompressLevel )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### CompressLevel

The new compression level. Can be none, default, fastest or max.  
"none"

**Result** Returns OK or error.

### Description

If the compression level is None, content streams will be left uncompressed. This value is useful if a content stream must be debugged, the value will be ignored for image streams. The compression level is also used by certain image compression filters, see DynaPDF.InsertImage for further information.

See also DynaPDF.GetCompressionLevel.

See also [SetCompressionLevel](#) function in DynaPDF manual.

## 71.361 DynaPDF.SetContent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetContent"; PDF; Content )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Content

The new content data.

**Result** Returns OK or error.

### Description

If the parameter Buffer is empty the content stream of the page or template will be deleted. In the latter case page resources such as fonts, images and so on will be deleted from the page object too.

Use this function in combination with DynaPDF.GetContent if you need to change a content stream in a manner that DynaPDF does not supports. Do never change a content stream when you don't know exactly what you are doing.

See also [SetContent](#) function in DynaPDF manual.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetDocInfo"; PDF; DocInfo; value )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**DocInfo**

The key to set. Can be Author, Creator, Keywords, Producer, Subject, Title or Company.

"Author"

**value**

The new value.

"Hello"

**Result** Returns OK or error message.

**Description**

See also [SetDocInfo](#) function in DynaPDF manual.

**Examples**

Set author name:

```
MBS( "DynaPDF.SetDocInfo"; $PDF; "Author"; "Christian" )
```

Set title of document:

```
Set Variable [ $r; Value:MBS("DynaPDF.SetDocInfo"; $pdf; "Title"; "Test PDF") ]
```

Set keywords:

```
Set Variable [ $r; Value:MBS("DynaPDF.SetImportDocInfo"; $pdf; "keywords"; "test, dynapdf, filemaker") ]
```

Created 18th August 2014, last changed 28th April 2018.

**71.363 DynaPDF.SetDocInfoEx**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetDocInfoEx"; PDF; DocInfo; Key; value )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**DocInfo**

The key to set. Can be Author, Creator, Keywords, Producer, Subject, Title or Company.

"Author"

**Key**

The key name for custom keys.

"OurID"

**value**

The new value.

"Hello"

**Result** Returns OK or error.

**Description**

The function sets or changes a document info entry. This function supports also user defined keys which can be created or changed if necessary. If the parameter DocInfo is set to Custom the parameter Key must contain a unique key.

The following keywords are reserved and must not be used as user defined keys:

- Author\* CreationDate\* GTS\_PDFXVersion
- Keywords\* ModifyDate\* Producer\* Subject\* Title\* Trapped

Note that the function does not check whether a reserved key is used. Using such a key causes maybe errors which are mostly not reported in viewer applications.

User defined keys should be defined as 7 bit ASCII string and the usage of special characters like /, \, #, or character codes higher than 127 should be avoided. The value of the document info entry should not contain binary data.

Modification date can't be set and will always be updated when PDF is closed.

See also [SetDocInfoEx](#) function in DynaPDF manual.

**Examples**

Set creation date:

```
Set Variable [ $md ; Value: MBS( "DynaPDF.SetDocInfoEx"; $PDF; "CreationDate"; "" ; "D:20150418131854Z00'00"
```

) ]

71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetDrawDirection"; PDF; Direction )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Direction**

Draw direction. Can be CounterClockwise or Clockwise.

"Clockwise"

**Result** Returns OK or error message.

**Description**

The draw direction is important if a path should be filled with the nonzero winding number rule or even-odd rule. Both modes are described in detail under ClipPath().

## 71.365 DynaPDF.SetExtColorSpace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetExtColorSpace"; PDF; Handle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Handle

Handle of an extended color space.

**Result** Returns OK or error.

### Description

An extended color spaces are non-device color spaces, such as ICCBased, Lab, Separation, DeviceN, and so on. The current fill and stroke color are initialised to black after the color space has been changed. Device color spaces can be set with DynaPDF.SetColorSpace. The fill and stroke color spaces can also be set separately with DynaPDF.SetExtFillColorSpace and DynaPDF.SetExtStrokeColorSpace.

Requires DynaPDF Pro license.

See also [SetExtColorSpace](#) function in DynaPDF manual.

### Examples

Draw line in a separation color:

```
# draw line in Cut Color
Set Variable [ $cs ; Value: MBS("DynaPDF.CreateSeparationCS"; $pdf; "Through Cut"; "DeviceCMYK";
-1; MBS("DynaPDF.CMYK"; 0; 255; 0; 0)) ]
Set Variable [ $r ; Value: MBS("DynaPDF.SetExtColorSpace"; $pdf; $cs) ]
Set Variable [ $f ; Value: MBS("DynaPDF.SetFillColor"; $pdf; 1) ]
Set Variable [ $r ; Value: MBS( "DynaPDF.Rectangle"; $pdf; $x; $y; $w; $h; "Stroke" ) ]
```

## 71.366 DynaPDF.SetExtFillColorSpace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetExtFillColorSpace"; PDF; Handle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Handle

Handle of an extended color space.

**Result** Returns OK or error.

### Description

The fill color is initialized to black after the color space has been changed. See also Color Spaces.

Requires DynaPDF Pro license.

See also [SetExtFillColorSpace](#) function in DynaPDF manual.

## 71.368 DynaPDF.SetFieldBBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldBBox"; PDF; Field; Left; Top; Right; Bottom )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### Left

The top/left coordinate.

10

#### Top

The top/left coordinate.

10

#### Right

The right/bottom coordinate.

50

#### Bottom

The right/bottom coordinate.

30

**Result** Returns OK or error.

### Description

The bounding box must be defined in bottom up coordinates. The Top member of the structure BBox must be larger than Bottom as well as Right must be larger than the Left member.

See also [SetFieldBBox](#) function in DynaPDF manual.

## 71.369 DynaPDF.SetFieldBackColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldBackColor"; PDF; Color )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Color

The new color value.

MBS( "DynaPDF.RGB"; 0; 0; 255 )

**Result** Returns OK or error.

### Description

If the background should appear transparent set the color to NO\_COLOR (4294967281).

Default value = NO\_COLOR.

For RGB you can calculate color as  $\text{Blue} \times 65536 + \text{Green} \times 256 + \text{Red}$  with color channels in range 0 to 255.

You can use DynaPDF.RGB function to calculate RGB color value.

See also [SetFieldBackColor](#) function in DynaPDF manual.

### Example Databases

- [DynaPDF/Form/Form](#)

Created 18th August 2014, last changed 18th August 2014.

**71.370 DynaPDF.SetFieldBorderColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldBorderColor"; PDF; Color )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Color**

The new color value in current color space.

0

**Result** Returns OK or error.

**Description**

Normal annotations support RGB colors only. Form fields support the color spaces DeviceRGB, DeviceGray and DeviceCMYK. The color value must be defined in the current color space.

If the border should appear transparent set the color to NO\_COLOR (4294967281).

Default value = 0 // Black

See also [SetFieldBorderColor](#) function in DynaPDF manual.

## 71.371 DynaPDF.SetFieldBorderStyle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldBorderStyle"; PDF; Field; BorderStyle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

#### BorderStyle

The new border style. Can be Solid, Bevelled, Inset, Underline or Dashed.  
"Solid"

**Result** Returns OK or error.

### Description

It is not possible to change the border style of imported button fields. The global border style which is used for newly created fields can be set with the function DynaPDF.SetBorderStyle.

See also [SetFieldBorderStyle](#) function in DynaPDF manual.

### See also

### Example Databases

- [DynaPDF/Form/Form](#)

Created 18th August 2014, last changed 18th August 2014.

**71.372 DynaPDF.SetFieldBorderWidth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldBorderWidth"; PDF; Field; LineWidth )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Field**

The field index or field name.  
"FirstName"

**LineWidth**

Line width of the border.  
4

**Result** Returns OK or error.

**Description**

The parameter LineWidth must not be negative and it should either be 0, 1, 2, or 3 units (no border, thin, medium, or thick). Note that Adobe's Acrobat supports only these values. It is possible to draw a field with any border width, but if the field is repainted due to a reset action or due to other changes, the field appearance will be changed in Adobe's Acrobat and the border width is adjusted to the nearest supported value.

## 71.373 DynaPDF.SetFieldColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldColor"; PDF; Field; ColorType; CS; Color )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### ColorType

The type of color. Can be BackColor, BorderColor or TextColor.

"TextColor"

#### CS

The color space. Can be DeviceRGB, DeviceCMYK or DeviceGray.

"DeviceRGB"

#### Color

The color value to use.

MBS( "DynaPDF.RGB"; 0; 0; 255 )

**Result** Returns OK or error.

### Description

The background and border color of a form field must be defined in the same color space. The color space for the text color can be defined in a separate color space (e.g. DeviceGray for the text and DeviceRGB for the background and border).

If the border or background should appear transparent set the value to NO\_COLOR (4294967281). The text color cannot be transparent.

You can use DynaPDF.RGB function to calculate RGB color value.

See also [SetFieldColor](#) function in DynaPDF manual.

## 71.375 DynaPDF.SetFieldExpValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldExpValue"; PDF; Field; ValIndex; Value; ExpValue; Selected )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### ValIndex

The value index or -1.

-1

#### Value

The new value.

"Hello"

#### ExpValue

The export value.

"World"

#### Selected

Whether to select the value?

**Result** Returns OK or error.

### Description

In the latter case, the parameter ValIndex will be ignored. If the field handle refers to a radio button, ValIndex represents the index into the Kids array of the radio button.

To determine how many values are defined in a field call the function DynaPDF.GetFieldExpValCount or DynaPDF.GetFieldEx.

The parameter Value is ignored if the field is a check box or radio button. However, the parameter ExpValue is required for these field types.

If you don't need to change the value or export value then use the function DynaPDF.SetFieldExpValueEx instead.

If the field is either a combo box or list box, the parameter ExpValue is optional and can be empty. If the parameter Value is set to an empty string, the choice value will be deleted. Note that all choice values in a combo or list box must be unique. DynaPDF checks whether another choice value with the new name does already exist. If this is the case then the function will fail.

Combo boxes which have the field flag fEdit set accept a value that was directly typed into the field in a viewer. Such a value may or may not exist the list of choice values. In any case, a special handling is

required for this case because the value must be set as the field's value independent of whether it is already included in the list of choice value.

To achieve this, set the parameter ValIndex to PDF\_MAX\_INT (2147483647) or any index greater than the number of choice values in the field. The parameter Value can also be set to NULL or to an empty string to delete the field's value. If the string is set then it becomes the new field value but it is not added to the list of choice values if not included.

Note that the above handling is only valid for combo boxes which have the fFEEdit field flag set.

To enumerate the choice values of a combo box, list box or radio button use the function DynaPDF.GetFieldExpValueEx.

See also [SetFieldExpValue](#) function in DynaPDF manual.

## 71.376 DynaPDF.SetFieldExpValueEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldExpValueEx"; PDF; Field; ValIndex; Selected; DefSelected )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

#### ValIndex

The value index.  
0

#### Selected

The new state. Pass 1 to set or 0 to clear.  
0

#### DefSelected

New default state.  
0

**Result** Returns OK or error.

### Description

It can also be used to change the state of check boxes or the children of a radio button. The parameter ValIndex will be ignored if the field is a normal check box (no child of a radio button or field group).

To enumerate the choice values of a combo box, list box or radio button use the function DynaPDF.GetFieldExpValueEx.

See also [SetFieldExpValueEx](#) function in DynaPDF manual.

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### Flags

New field flags. You can pass a flag by name

1

#### Reset

Pass 1 to set flags to the ones you passed or pass 0 to add the flag.

1

**Result** Returns OK or error.

### Description

The parameter Flags is a bit mask, multiple flags can be set by adding the values or use a bitwise Or operator, e.g. Print + Multiline (4096+32 = 4128). If the parameter Reset is 1 the flags of the field are set to the ones specified. If Reset is 0, the flags are added by using a bitwise Or operator.

Possible flag names: ReadOnly, Required, NoExport, Invisible, Hidden, Print, NoZoom, NoRotate, NoView, Multiline, Password, NoToggleToOff, RadioIsUnion, CommitOnSelCh, Edit, Sorted, FileSelect, MultiSelect, DoNotSpellCheck, DoNotScroll or Comb.

See Dynapdf\_help.pdf for the meaning of the flags or their numerical value.

See also [SetFieldFlags](#) function in DynaPDF manual.

## 71.378 DynaPDF.SetFieldFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldFont"; PDF; Field; Name; Style; Size; Embed; CodePage )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### Name

Font name for new font to set or empty text to deactivate current font.

"Arial"

#### Style

Font style value. Can be a combination of values 1 for italic, 2 for bold, 4 for underlined and 8 for striked.

3

#### Size

Font size in points.

12

#### Embed

Whether to embed font in PDF. Can be 1 to embed or 0 to not embed.

1

#### CodePage

The code page to use. Default is 1252 for Windows ANSI. Code page can be 1250, 1251, 1252, 1253, 1254, 1255, 1256, 1257, 1258, 8859-2, 8859-3, 8859-4, 8859-5, 8859-6, 8859-7, 8859-8, 8859-9, 8859-10, 8859-13, 8859-14, 8859-15, 8859-16, Symbol, 437, 737, 775, 850, 852, 855, 857, 860, 861, 862, 863, 864, 865, 866, 869, 874, Unicode

"Unicode"

**Result** Returns OK or error.

### Description

Form fields support natively only the code pages 1252 and MacRoman.

See `dynapdf_help` manual for details.

You need to set CMap directory first with `DynaPDF.SetCMapDir`.

See also [SetFieldFont](#) function in DynaPDF manual.

### Examples

Set unicode font:

```
Variable setzen [ $r ; Wert: MBS( "DynaPDF.SetCMapDir"; $pdf; "/Users/cs/Desktop/CMap"; "Recur-
```

71.378. *DYNAPDF.SETFIELDFONT* 3191

sive" ) ]

Variable setzen [ \$r ; Wert: MBS( "DynaPDF.SetFieldFont"; \$pdf; "Test"; "Arial"; 0; 12; 1; "Unicode") ]

Variable setzen [ \$r ; Wert: MBS("DynaPDF.SetTextFieldValue"; \$pdf; "Test"; ""; ""; "Left") ]

## 71.379 DynaPDF.SetFieldFontEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldFontEx"; PDF; Field; FontHandle; FontSize )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### FontHandle

The handle of the font returned from DynaPDF.SetFieldFont.

\$Font

#### FontSize

The desired font size.

12

**Result** Returns OK or error.

### Description

The function requires a font handle that was returned by DynaPDF.SetFieldFont.

See also [SetFieldFontEx](#) function in DynaPDF manual.

## 71.382 DynaPDF.SetFieldIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldIndex"; PDF; Field )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

**Result** Returns OK or error.

### Description

All fields, independently whether they are created with DynaPDF or imported from external documents, holds in internal index which can be used to reorder or sort the fields with this index.

The start index of a new field is not zero, it is 1000 instead. This makes it easier to set a field in front of all other fields without changing all field indices. However, changing a field index changes not the tab order directly, the fields of a page must be sorted before the page will be closed with the function DynaPDF.SortFieldByIndex.

The tab order of interactive form fields must be set for each page separately.

See also [SetFieldIndex](#) function in DynaPDF manual.

- 71.384 DynaPDF.SetFieldName 3198

Created 18th August 2014, last changed 18th August 2014.

**71.383 DynaPDF.SetFieldMapName**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldMapName"; PDF; Field; Name )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Field**

The field index or field name.  
"FirstName"

**Name**

The new mapping name.  
"FirstName1"

**Result** Returns OK or error.

**Description**

The mapping is used when exporting interactive form field data from the document.  
If the mapping name of the field should be deleted set the parameter Name to empty string.  
See also [SetFieldMapName](#) function in DynaPDF manual.

**See also**

- 71.375 DynaPDF.SetFieldExpValue 3184
- 71.377 DynaPDF.SetFieldFlags 3188
- 71.384 DynaPDF.SetFieldName 3198

Created 18th August 2014, last changed 18th August 2014.

## 71.384 DynaPDF.SetFieldName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldName"; PDF; Field; NewName )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### NewName

The new name for the field.

"LastName"

**Result** Returns OK or error.

### Description

Field names must sometimes be changed when multiple interactive forms with identical field names are imported. The resulting form will be damaged if the names of such fields are not changed.

The function SetFieldName() does not check whether a field name is already in use by another field. Such a checking would not be useful, because the usage of the function would be much more complicated. Use the function DynaPDF.CheckFieldNames to check the integrity of the form after field names were changed.

Changing of field names can cause problems if the field was used in JavaScript action or global JavaScript. The JavaScript(s) must also be changed to avoid error messages in Adobe's Acrobat. Global JavaScripts can be accessed with the function DynaPDF.GetJavaScript and changed with the function DynaPDF.ChangeJavaScript. A JavaScript Action can be accessed with the function DynaPDF.GetJavaScriptAction and changed with the function DynaPDF.ChangeJavaScriptAction.

See also [SetFieldName](#) function in DynaPDF manual.

## 71.385 DynaPDF.SetFieldOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldOrientation"; PDF; Field; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Field

The field index or field name.  
"FirstName"

#### Value

The orientation value.  
90

**Result** Returns OK or error.

### Description

The parameter Value must a multiple of 90 or 0. Positive values rotate the field counter clockwise, negative values clockwise.

See also [SetFieldOrientation](#) function in DynaPDF manual.

### See also

**71.386 DynaPDF.SetFieldTextAlign**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldTextAlign"; PDF; Field; Align )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Field**

The field index or field name.

"FirstName"

**Align**

The text alignment. Can be Left, Center, Right or Justify.

"Justify"

**Result** Returns OK or error.

**Description**

The parameter Field must be a valid reference to a text field or button field.

See also [SetFieldTextAlign](#) function in DynaPDF manual.

**See also**

- 71.170 DynaPDF.GetFieldTextAlign 2853
- 71.171 DynaPDF.GetFieldTextColor 2854

- 71.385 DynaPDF.SetFieldOrientation 3200
- 71.387 DynaPDF.SetFieldTextColor 3202

Created 18th August 2014, last changed 18th August 2014.

## 71.387 DynaPDF.SetFieldTextColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFieldTextColor"; PDF; Color )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Color

The color value to use.  
MBS( "DynaPDF.RGB"; 0; 0; 255 )

**Result** Returns OK or error.

### Description

The color value must be defined in the current color space. The color space must not be changed before the fields are created which should use this color.

With RGB colorspace, you would pass 65536\*blue+256\*green+red as number.

You can use DynaPDF.RGB function to calculate RGB color value.

See also [SetFieldTextColor](#) function in DynaPDF manual.

## 71.389 DynaPDF.SetFillColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFillColor"; PDF; values )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### values

The values for the colors.  
0

**Result** Returns OK or error message.

### Description

The components of non-Lab color spaces must be in the range from 0 through 1. The \*a and \*b components of a Lab color space are typically in a range from -128 through 127. The \*L component ranges from 0 through 100.

The number of components must match the number of components of the underlying color space. You can add an alpha value on the end.

For a grayscale color, please pass 3 times the gray level for a RGB color.

See also [SetFillColor](#) function in DynaPDF manual.

### Examples

Sets color to red:

```
MBS( "DynaPDF.SetFillColor"; $PDF; 1.0; 0.0; 0.0 )
```

Sets color to blue:

```
MBS( "DynaPDF.SetFillColor"; $PDF; 0.0; 0.0; 1.0 )
```

Sets color to middle level gray:

```
MBS( "DynaPDF.SetFillColor"; $PDF; 0.5; 0.5; 0.5 )
```

Write in CMYK:

```
# switch to CMYK
Variable setzen [ $r; Wert:MBS( "DynaPDF.SetColorSpace"; $pdf; "DeviceCMYK" ) ]
# set color to Cyan
Variable setzen [ $r; Wert:MBS("DynaPDF.SetFillColor"; $pdf; 1; 0; 0; 0) ]
# Write some text
Variable setzen [ $r; Wert:MBS("DynaPDF.WriteText"; $pdf; 100; $x; "Some cyan text") ]
```

# now switch back to RGB

Variable setzen [ \$r; Wert:MBS( "DynaPDF.SetColorSpace"; \$pdf; "DeviceRGB" ) ]

Draw line in a separation color:

# draw line in Cut Color

Set Variable [ \$cs ; Value: MBS("DynaPDF.CreateSeparationCS"; \$pdf; "Through Cut"; "DeviceCMYK"; -1; MBS("DynaPDF.CMYK"; 0; 255; 0; 0)) ]

Set Variable [ \$r ; Value: MBS("DynaPDF.SetExtColorSpace"; \$pdf; \$cs) ]

Set Variable [ \$r ; Value: MBS("DynaPDF.SetFillColor"; \$pdf; 1) ]

Set Variable [ \$r ; Value: MBS( "DynaPDF.Rectangle"; \$pdf; \$x; \$y; \$w; \$h; "Stroke" ) ]

Set RGB color:

# Red 247 Green 162 Blue 53

MBS( "DynaPDF.SetFillColor"; \$PDF; 247/255; 162/255; 53/255 )

Set color to white for RGB:

MBS( "DynaPDF.SetFillColor"; \$PDF; 1.0; 1.0; 1.0 )

Set color with integer values in range of 0 to 255:

MBS( "DynaPDF.SetFillColor"; \$PDF; \$red / 255.0; \$green / 255.0; /blue / 255.0 )

### **71.389.1 FileMaker Magazin**

- Ausgabe 5/2018, Seite 28

Created 18th August 2014, last changed 6th September 2019.

**71.390 DynaPDF.SetFloatPrecision**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFloatPrecision"; NumTextDecDigits; NumVectDecDigits )

**Parameters****NumTextDecDigits**

Number decimal digits for text object.

5

**NumVectDecDigits**

Number of decimal digits for vector objects.

5

**Result** Returns OK or error.

**Description**

The default precision for text and vector graphics is two decimal digits. This corresponds to 7200 DPI. The output precision of bezier curves is one higher as for vector graphics. The maximum output precision is 5 decimal digits.

Note that higher values increase the resulting file size.

See also [SetFloatPrecision](#) function in DynaPDF manual.

Created 23th November 2016, last changed 23th November 2016.

## 71.391 DynaPDF.SetFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFont"; PDF; Name; Style; Size; Embed; CodePage )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Font name for new font to set or empty text to deactivate current font.

"Arial"

#### Style

Font style value. Can be a combination of values 1 for italic, 2 for bold, 4 for underlined and 8 for striked.

3

#### Size

Font size in points.

12

#### Embed

Whether to embed font in PDF. Can be 1 to embed or 0 to not embed.

1

#### CodePage

The code page to use. Default is 1252 for Windows ANSI. Code page can be 1250, 1251, 1252, 1253, 1254, 1255, 1256, 1257, 1258, 8859-2, 8859-3, 8859-4, 8859-5, 8859-6, 8859-7, 8859-8, 8859-9, 8859-10, 8859-13, 8859-14, 8859-15, 8859-16, Symbol, 437, 737, 775, 850, 852, 855, 857, 860, 861, 862, 863, 864, 865, 866, 869, 874, Unicode

"Unicode"

**Result** Returns font handle or error message.

### Description

See also [SetFont](#) function in DynaPDF manual.

### Examples

Sets a font:

```
MBS("DynaPDF.SetFont"; $pdf; "Zapf Dingbats"; 0; 12)
```

Sets italic font:

```
MBS("DynaPDF.SetFont"; $pdf; "Times"; 1; 40; 1; "unicode")
```

## 71.392 DynaPDF.SetFontEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFontEx"; PDF; Name; Style; Size; Embed; CodePage )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Name

Font name for new font to set or empty text to deactivate current font.

"Arial"

#### Style

Font style value. Can be a combination of values 1 for italic, 2 for bold, 4 for underlined and 8 for striked.

3

#### Size

Font size in points.

12

#### Embed

Whether to embed font in PDF. Can be 1 to embed or 0 to not embed.

1

#### CodePage

The code page to use. Default is 1252 for Windows ANSI. Code page can be 1250, 1251, 1252, 1253, 1254, 1255, 1256, 1257, 1258, 8859-2, 8859-3, 8859-4, 8859-5, 8859-6, 8859-7, 8859-8, 8859-9, 8859-10, 8859-13, 8859-14, 8859-15, 8859-16, Symbol, 437, 737, 775, 850, 852, 855, 857, 860, 861, 862, 863, 864, 865, 866, 869, 874, Unicode

**Result** Returns font handle or error message.

### Description

## 71.393 DynaPDF.SetFontOrigin

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFontOrigin"; PDF; Origin )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Origin

Which origin to use: DownLeft or TopLeft  
"TopLeft"

**Result** Returns OK or error.

### Description

The font origin is automatically set to "TopLeft" or "DownLeft" if the coordinate system will be changed (see DynaPDF.SetPageCoords for further information).

See also [SetFontOrigin](#) function in DynaPDF manual.

### See also

**71.394 DynaPDF.SetFontSearchOrder**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFontSearchOrder"; PDF { ; Type1; Type2; Type3; Type4 } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Type1**

Optional

The first type.

"TrueType"

**Type2**

Optional

The second type.

"Type1"

**Type3**

Optional

The third type.

"OpenType"

**Type4**

Optional

The forth type.

"StdFont"

**Result** Returns OK or error.

**Description**

The default search order is:

- TrueType
- OpenType (OpenType fonts with PostScript outlines)
- Type1

\* PDF Standard Fonts

Every font type can be disabled if necessary with the value "Disabled". You can pass no parameters, you reset the search order to the default order as described above. If you provide 4 types, you define a new search order.

See also [SetFontSearchOrder](#) function in DynaPDF manual.

**See also**

- 71.294 DynaPDF.New

3032

Created 21st October 2014, last changed 21st October 2014.

**71.395 DynaPDF.SetFontSelMode**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFontSelMode"; PDF; Mode )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Mode**

The new mode. Can be FamilyName, PostScriptName or FullName.

"FamilyName"

**Result** Returns OK or error.

**Description**

Note that the font names that will be passed to DynaPDF.SetFont must correspond with the current font selection mode. If you don't know which font name you have in memory then use DynaPDF.SetFontEx to select fonts. The font selection mode can be changed at runtime whenever necessary.

See also [SetFontSelMode](#) function in DynaPDF manual.

## 71.396 DynaPDF.SetFontWeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetFontWeight"; PDF; Weight )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Weight

The new weight value.

100

**Result** Returns OK or error.

### Description

The font weight specifies the thickness or boldness of a font. Not all fonts are available in a bold style; such a font style can then be emulated only. The property `FontWeight` specifies the weight that should be emulated. The visual weight of a font depends on the base weight in that the font was defined. For example, the glyphs of an ultra-light font look also light if an extrabold weight will be emulated.

However, a bold font will never be emulated if the font is already available in a bold style. To disable the emulation of bold fonts set the property to 100 or 0.

Font weights:

- 100 - 300 // Ultra-light, Light
- 400 - 500 // Standard
- 600 - 1000 // Bold, Extrabold

See also [SetFontWeight](#) function in DynaPDF manual.

## 71.397 DynaPDF.SetGStateFlags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "DynaPDF.SetGStateFlags"; PDF; Value { ; Reset } )
```

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

The new value. Can be a number or a list including one or more of the following words: Compatible, RestorePageCoords, RealTopDownCoords, NativeBlackWhite, UseImageColorSpace, IgnoreICCProfiles, AnsiStringIsUTF8, RealPassThrough, NoBitmapAlpha or NoImageDuplCheck.

3

#### Reset

Optional

If the parameter Reset is true, the new flags replace current flags. If set to false, the flags are combined with the current flags.

0

**Result** Returns OK or error.

### Description

If the parameter Reset is true, the new flags replace current flags. If set to false, the flags are combined with the current flags.

See also [SetGStateFlags](#) function in DynaPDF manual.

### Examples

Set two options:

```
MBS( "DynaPDF.SetGStateFlags"; $pdf; "RealPassThrough, UseImageColorSpace" )
```

### See also

- 71.122 DynaPDF.GetAnnotFlags 2794
- 71.178 DynaPDF.GetGStateFlags 2861
- 71.294 DynaPDF.New 3032
- 71.321 DynaPDF.ReplaceImage 3097
- 71.340 DynaPDF.SetAnnotFlags 3137
- 71.358 DynaPDF.SetColorSpace 3159

Flag	Description
RestorePageCoords	If set, the current base coordinate system like bottom or top down is saved and restored with the graphics state.
RealTopDownCoords	This flag is reserved for future extensions. It is not implemented yet.
NativeBlackWhite	If set, RGB black or white is not converted to DeviceGray. This flag affects text and vector graphics but no images.
UseImageColorSpace	If set, the active color space is ignored when inserting an image. The color space is taken from the image file instead. See also "Color spaces and Images" in DynaPDF help file.
IgnoreICCProfiles	If set, embedded ICC profiles in image files are ignored when inserting an image. The image is inserted in the base color space instead. This flag is not meaningful if the flag gfUseImageColorSpace is absent. See also "Color spaces and Images" in DynaPDF help file.
AnsiStringIsUTF8	If set, all Ansi functions interpret string parameters as UTF-8 encoded Unicode strings. Should not be used with MBS Plugin.
RealPassThrough	If set, JPEG images are inserted as is. JPEG images are normally rebuild, also in pass-through mode, to avoid issues with certain malformed JPEG images which cannot be displayed in Adobes Acrobat or Reader. If you know that your JPEG images work then set this flag to avoid unnecessary processing time.
NoBitmapAlpha	If set, the alpha channel in bitmaps files will be ignored. This is sometimes useful since many 32 bit bitmaps contain an invalid alpha channel that makes the image fully transparent.
NoImageDuplCheck	If set, no duplicate check for images will be performed. This can significantly improve processing speed especially for memory based images.
NoObjCompression	If set, object compression will be disabled.

- 71.377 DynaPDF.SetFieldFlags 3188
- 71.398 DynaPDF.SetImportFlags 3220
- 71.406 DynaPDF.SetMetaConvFlags 3236

- [MBS FileMaker Plugin, version 5.3pr1](#)

Created 21st August 2015, last changed 27th May 2017.

## 71.398 DynaPDF.SetImportFlags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetImportFlags"; PDF; Flags )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Flags

The new flags value.  
268435454

**Result** Returns OK or error.

### Description

By default the plugin uses ifImportAll combined with ifImportAsPage.

Flag Description

See also [SetImportFlags](#) function in DynaPDF manual.

### Examples

Set import flags:

```
MBS( "DynaPDF.SetImportFlags"; $PDF; 268435454 + 2147483648 )
```

Set import flags with names:

```
MBS( "DynaPDF.SetImportFlags"; $pdf; "ImportAll$ImportAsPage$PrepareForPDFA" )
```

Import and Export PDF:

```
# Start new PDF
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# set import flags
Set Variable [ $r; Value:MBS( "DynaPDF.SetImportFlags"; $pdf; "ImportAll ImportAsPage PrepareFor-
PDFA" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetImportFlags2"; $pdf; "DuplicateCheck" ) ]
# Import PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; MyTable::InputPDF) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]
# Save back
Set Field [ MyTable::OutputPDF; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]
```

71.398. *DYNAPDF.SETIMPORTFLAGS* 3221  
Set Variable [ \$r; Value:MBS("DynaPDF.Release"; \$pdf) ]

**71.398.2 FileMaker Magazin**

- Ausgabe 3/2019, Seite 36
- Ausgabe 2/2019, Seite 27
- Ausgabe 1/2018, Seite 24

Created 18th August 2014, last changed 27th May 2017.

ImportAll	268435454	If set, all objects of an external PDF file are imported.
ContentOnly	0	If set, interactive objects such as annotations, bookmarks or form fields are excluded from import.
NoContent	1	If set, the visual contents of external pages will not be imported. This flag can be used to copy interactive objects from one file into another, such as interactive form fields.
ImportAsPage	2147483648	If set, pages are not converted to templates. This flag is useful if an imported page must not be used multiple times. Conversion to templates is recommended if multiple imported pages should appear on the same page; such overlapping pages can cause resource conflicts which produces unpredictable output.
CatalogAction	2	If set, catalog actions will be imported if any. The documents catalog is the root object of a PDF file, which can trigger actions when the file will be opened, closed, or printed. See AddActionToObj() for further information.
PageActions	4	If set, page actions are imported if any. A page action is an action that was added to the page itself, not an object of a page.
Bookmarks	8	If set, bookmarks are imported if any.
Articles	16	If set, Articles are imported if any.
PageLabels	32	If set, page labels are imported if any. If multiple files are imported, DynaPDF imports the page labels of the first file only.
Thumbs	64	If set, thumb nail images are imported if any. Thumb nails can be dynamically created by Acrobat since Acrobat 5. The thumb nail images can be removed to reduce disk space.
TranspGroups	128	If set, transparency groups are imported if any. If transparency groups are removed the objects appear then opaque.
SeparationInfo	256	If set, the separation information dictionary will be imported if any.
BoxColorInfo	512	If set, the bounding boxes artbox, bleedbox and trimbox are shown in user defined color. Note that the cropbox represents the current page; the page is already cropped if a cropbox was defined.
StructureTree	1024	If set, structure trees are imported if any. A structure tree contains information about the logical structure of a document. This information can be used by screen readers and other accessibility plug-ins to enable certain features. The information of a structure tree is not required to view or print a PDF document.
Transition	2048	If set, transition settings are import. A transition dictionary contains information about how a presentation should be displayed. These settings can be removed if the document should not be used in presentation mode.
SearchIndex	4096	If set, the file path to an external search index will be imported if any.
JavaScript	8192	If set, global JavaScripts are imported if any. Note that JavaScript actions can use the functions defined in global JavaScripts. If these scripts are removed, JavaScript actions must normally also removed to avoid errors. However, it is often useful to remove the scripts for certain debug operations.
JSActions	16384	If set, JavaScript actions are imported if any. This flag is useful if an imported form contains JavaScripts which produces errors or warnings. For instance, a document can define certain scripts which may require specific settings such as a document info string and so on. It is then often difficult to determine which object produces the error or warning because it can be a JavaScript action or a global JavaScript. In such cases, JavaScript actions can be excluded temporarily to check whether the error still occurs.
DocInfo	32768	If set, document info entries are imported if any. Already existing entries are not overridden.
EmbeddedFiles	2097152	If set, embedded files are imported.
FileCollections	4194304	If set, the global definition of a collection is imported. The file attachments are still imported if the flag ifEmbeddedFiles is set. The PDF file is simply not longer marked as portable collection, also known as PDF Package. See also DynaPDF.CreateCollection.
AllAnnots	10420224	If set, all types of annotations are imported.
FreeText	65536	This flag is meaningful only if the flag ifAllAnnots is clear. If set, FreeText annotations are imported if any.
TextAnnot	131072	This flag is meaningful only if the flag ifAllAnnots is clear. If set, text annotations are imported if any.
Link	262144	This flag is meaningful only if the flag ifAllAnnots is clear. If set, link annotations are imported if any. This annotation type is used for weblinks, page links, and file links.
Stamp	524288	This flag is meaningful only if the flag ifAllAnnots is clear. If set, stamp annotations are imported if any.

## 71.399 DynaPDF.SetImportFlags2

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetImportFlags2"; flags )

### Parameters

#### flags

The new import flags.  
16

**Result** Returns OK.

### Description

Flags to pass:

MergeLayers	1	If set, layers with identical name are merged. If this flag is absent DynaPDF imports such layers separately so that each layer refers still to the pages where it was originally used.
Normalize	2	Replace LZW compression with Flate, apply limit checks, repair errors if possible
UseProxy	4	Not meaningful for PDF files which are loaded from a memory buffer. If set, all streams are loaded from the file on demand but they are never hold in memory. This reduces drastically the memory usage and enables the processing of almost arbitrary large PDF files with minimal memory usage. The corresponding PDF file must not be deleted before DynaPDF.CloseFile or DynaPDF.CloseFileEx was called.
NoMetadata	8	Ignore metadata streams which are attached to fonts, pages, images, and so on.
DuplicateCheck	16	Perform a duplicate check on color spaces, fonts, images, patterns, and templates when merging PDF files.

See also [SetImportFlags2](#) function in DynaPDF manual.

### Examples

Activate duplicate check to reduce file size:

```
MBS("DynaPDF.SetImportFlags2"; $pdf; 16)
```

Activate normalization, duplicate check and layer merge:

```
MBS( "DynaPDF.SetImportFlags2"; $pdf; "MergeLayers$Normalize$DuplicateCheck" )
```

Import and Export PDF:

```

# Start new PDF
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# set import flags
Set Variable [ $r; Value:MBS( "DynaPDF.SetImportFlags"; $pdf; "ImportAll ImportAsPage PrepareFor-
PDFA" ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetImportFlags2"; $pdf; "DuplicateCheck" ) ]
# Import PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; MyTable::InputPDF) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]
# Save back
Set Field [ MyTable::OutputPDF; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]

```

## 71.400 DynaPDF.SetJPEGQuality

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetJPEGQuality"; PDF; quality )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### quality

The new JPEG quality. From 0 to 100.  
75

**Result** Returns OK on success.

### Description

The function accepts also negative values. A negative value indicates that the pass-through mode for JPEG images should be disabled. Note that JPEG images are always recompressed if the pass-through mode is disabled.

If the JPEG2000 compression filter is used the value represents a divisor of the uncompressed image size to the wished compressed image size. The possible range is 0 to 1000. If the value is 0 or 1000 the loss-less variant of JPEG compression is used (see also DynaPDF.InsertImage). Lower values cause higher compression rates, however, worse image quality.

The default value is 70.

See also [SetJPEGQuality](#) function in DynaPDF manual.

### Examples

sets quality level:

```
MBS( "DynaPDF.SetJPEGQuality"; $PDF; 75 )
```

Save JPEG image to container as script:

```
Set Variable [ $Image ; Value: MBS("GMImage.NewFromContainer"; MyTable::BMPContainer) ]
Set Variable [ $r ; Value: MBS("GMImage.SetQuality";$Image; 90) ]
Set Field [ MyTable::JPEGContainer ; MBS("GMImage.WriteToJPEGContainer"; $Image) ]
Set Variable [ $r ; Value: MBS("GMImage.Release";$Image) ]
```

## 71.401 DynaPDF.SetLanguage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetLanguage"; PDF; Language )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Language

The new language tag.  
"en-US"

**Result** Returns OK or error.

### Description

The document's language should always be set when creating Tagged PDF files or Interactive Forms. The spell check feature in Adobe's Acrobat depends on the properly defined document language. See [dynapdf\\_help.pdf](#) manual for details.

See also [SetLanguage](#) function in DynaPDF manual.

### Examples

Set language:

```
Set Variable [ $r; Value:MBS("DynaPDF.SetLanguage"; $pdf; "en-US") ]
```

### See also

- Ausgabe 1/2018, Seite 24

Created 4th November 2014, last changed 18th June 2016.

## 71.402 DynaPDF.SetLeading

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetLeading"; PDF; leading )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### leading

New leading size or zero.

0

**Result** Returns OK or error message.

### Description

The function sets the leading that is used by the functions DynaPDF.AddContinueText and DynaPDF.WriteF-Text to calculate the distance between two text lines. The default leading in PDF is the font size. A value of 0 determines that the font size should be used as leading, this is the default behavior.

See also [SetLeading](#) function in DynaPDF manual.

### Examples

Set line height:

```
Set Variable [ $r; Value:MBS("DynaPDF.SetLeading"; $pdf; 18) ]
```

### See also

### Example Databases

- [DynaPDF/Invoice/Invoice](#)

Created 18th August 2014, last changed 27th May 2017.

**71.403 DynaPDF.SetLineStyle**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetLineStyle"; PDF; Style )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Style**

The new line join style. Can be MiterJoin, RoundJoin or BevelJoin

**Result** Returns OK or error.

**Description**

The function sets the line join style which specifies how two line segments are connected. The property must be applied inside an open page, template or pattern.

See also SetLineStyle function in dynapdf\_help.pdf.

See also [SetLineStyle](#) function in DynaPDF manual.

## 71.404 DynaPDF.SetLineWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetLineWidth"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

The new line width value.  
3

**Result** Returns OK or error message.

### Description

The line width is also used to specify the thickness of the border of annotations and interactive form fields. In the latter case, the line width should be a multiple of one (or zero) and not exceed 3 units. Larger values are still correctly rendered by Adobe's Acrobat but the appearance can be changed when a Reset Form Action is executed or when other changes are made to the document.

See also [SetLineWidth](#) function in DynaPDF manual.

### Examples

Draw two lines in black:

```
Set Variable [ $r; Value:MBS ( "DynaPDF.SetStrokeColor" ; $pdf ; 0; 0; 0 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.SetLineWidth" ; $pdf ; 1 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 20; 20 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 20; 40 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 30; 30 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 30; 50 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.StrokePath" ; $pdf ) ]
```

Created 18th August 2014, last changed 1st January 2017.

## 71.405 DynaPDF.SetLinkHighlightMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetLinkHighlightMode"; PDF; Mode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Mode

The new highlight mode. Can be None, Invert, Outline, Push or PushUpd.

"Invert"

**Result** Returns OK or error.

### Description

The highlight mode applies a visual effect when moving the mouse over a link annotation.

See also [SetLinkHighlightMode](#) function in DynaPDF manual.

### Examples

Setup drawing for links:

```
Set Variable [ $r ; Value: MBS("DynaPDF.SetLineWidth"; $pdf; 1) ]
```

```
Set Variable [ $r ; Value: MBS("DynaPDF.SetLinkHighlightMode"; $pdf; "invert") ]
```

## 71.406 DynaPDF.SetMetaConvFlags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.3	No	Yes	Yes, Windows only	No	No

MBS( "DynaPDF.SetMetaConvFlags"; PDF; Flags )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Flags

The flags.  
"Default"

**Result** Returns OK or error.

### Description

You can pass flags as text list of flag names or calculate the flag values.

See also [SetMetaConvFlags](#) function in DynaPDF manual.

### See also

- 71.211 DynaPDF.GetMetaConvFlags 2903
- 71.294 DynaPDF.New 3032
- 71.397 DynaPDF.SetGStateFlags 3218

Created 18th May 2017, last changed 18th May 2017.

Flag name	Hex Number value	Description
Default	00000000	Default conversion
Debug	00000001	Write debug information into the content stream
ShowBounds	00000002	Show the bounding boxes of text strings
NoTextScaling	00000004	Do not scale text
ClipView	00000008	Draw the file into a clipping rectangle
UseRclBounds	00000010	Use rclBounds instead of rclFrame
NoClippingRgn	00000040	Disables SelectClippingRegion, IntersectClipRect, and SelectClipPath
NoFontEmbedding	00000080	Do not embed fonts ->Fonts should be embedded!!!
NoImages	00000100	Ignore image records
NoStdPatterns	00000200	Ignore standard patterns
NoBmpPatterns	00000400	Ignore bitmap patterns
NoText	00000800	Ignore text records
UseUnicode	00001000	Ignore ANSI_CHARSET
UseTextScaling	00004000	Scale text instead of using the intercharacter spacing array
NoUnicode	00008000	Avoid usage of Unicode fonts ->recommended to enable PDF 1.2 compability
FullScale	00010000	Recommended if 32 bit coordinates are used
UseRclFrame	00020000	This flag should be set if the rclFrame rectangle is not properly set
DefBkModeTransp	00040000	Initialize the background mode to transparent (SetBkMode() overrides this state).
ApplyBidiAlgo	00080000	Apply the bidirectional algorithm on Unicode strings
GDIFontSelection	00100000	Use the GDI to select fonts
RclFrameEx	00200000	If set, and if the rclBounds rectangle is larger than rclFrame, the function extends the output rectangle according to rclBounds and uses the resulting bounding box to calculate the image size (rclBounds represents the unscaled image size). This is probably the correct way to calculate the image size. However, to preserve backward compatibility the default calculation cannot be changed.
NoTextClipping	00400000	If set, the ETO_CLIPPED flag in text records is ignored.
SrcCopy_Only	00800000	If set, images which use a ROP code other than SRCCOPY are ignored. This is useful when processing Excel 2007 spool files.
ClipRclBounds	01000000	If set, the graphic is drawn into a clipping path with the size of rclBounds. This flag is useful if the graphic contains content outside of its bounding box.
DisableRasterEMF	02000000	If set, EMF files which use unsupported ROP codes are not rastered.
NoBBoxCheck	04000000	If set, the rclBounds and rclFrame rectangles are used as is. DynaPDF uses normally the rclBounds rectangle to calculate the picture size if the resolution of the EMF file seems to be larger than 1800 DPI since this is mostly an indication that the rclFrame rectangle was incorrectly calculated. If you process EMF files in such a high resolution then this flag must be set. The flag can be set by default.
IgnoreEmbFonts	08000000	If set, embedded fonts in GDIComment records will be ignored. This flag must be set if the fonts of an EMF spool file were pre-loaded with ConvertEMF-Spool(). Spool fonts must always be loaded in a pre-processing step since required fonts are not necessarily embedded in the EMF files.

## 71.407 DynaPDF.SetMetadata

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetMetadata"; PDF; ObjType; Handle; XMP )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### ObjType

The object type. Can be Catalog, Font, Image, Page or Template.

"Catalog"

#### Handle

Object handle or -1 for the catalog object.

-1

#### XMP

The XMP metadata as text.

**Result** Returns OK or error.

### Description

The function deletes the XMP stream if no buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with DynaPDF.SetPDFVersion.
- Get a preview of the XMP stream with DynaPDF.GetMetadata.
- Modify the returned stream as needed and save it with DynaPDF.SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and modification date will not be changed when closing the file.

See also [SetMetadata](#) function in DynaPDF manual.

### Examples

Read, change and write XMP metadata:

```
Variable setzen [ $pdf ; Wert: MBS("DynaPDF.New") ]
# Load PDF from container
Variable setzen [ $r ; Wert: MBS("DynaPDF.OpenPDFFromContainer"; $pdf; Merge PDFs::InputPDF) ]
Variable setzen [ $r ; Wert: MBS("DynaPDF.ImportPDFFile"; $pdf; 1) ]
#
# get current XMP
```

## 71.407. DYNAPDF.SETMETADATA

3239

```
Variable setzen [ $xmp ; Wert: MBS("DynaPDF.GetMetaData"; $pdf; "catalog"; -1) ]  
#  
# delete XMP metadata  
// Variable setzen [ $r ; Wert: MBS("DynaPDF.SetMetaData"; $pdf; "") ]  
#  
# or write new XMP metadata  
Variable setzen [ $r ; Wert: MBS("DynaPDF.SetMetaData"; $pdf; "catalog"; -1; $XMP) ]  
#  
# save  
Feldwert setzen [ Merge PDFs::FinalPDF ; MBS("DynaPDF.Save"; $pdf; "Merged.pdf") ]  
Variable setzen [ $r ; Wert: MBS("DynaPDF.Release"; $pdf) ]
```

## 71.408 DynaPDF.SetMiterLimit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetMiterLimit"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

The new miter limit.  
10.0

**Result** Returns OK or error.

### Description

When two line segments meet at a sharp angle and mitered joins have been specified as the line join style (see `SetLineJoinStyle()`), it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miter limit imposes a maximum on the ratio of the miter length to the line width (see Figure below). When the limit is exceeded, the join is converted from a miter to a bevel.

Default value = 10.0

See also `SetMiterLimit` function in `dynapdf_help.pdf`.

See also [SetMiterLimit](#) function in DynaPDF manual.

## 71.409 DynaPDF.SetNumberFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetNumberFormat"; PDF; Field; Sep; DecPlaces; NegStyle { ; CurrStr; Prepend } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### Sep

The decimal separator. Can be CommaDot, NoneDot, DotComma or NoneComma.

"CommaDot"

#### DecPlaces

Number of decimal places

2

#### NegStyle

Negative number format. Can be MinusBlack, Red, ParensBlack or ParensRed.

"ParensRed"

#### CurrStr

Optional

The currency string. Or empty for no currency.

"€"

#### Prepend

Optional

Position of Currency string. Pass 1 to prepend or 0 to append.

0

**Result** Returns OK or error.

### Description

The function restricts the allowed input characters of a text field to numbers and formats the resulting string as specified. A number format is represented as two separate JavaScript Actions in PDF which are automatically created and added to the text field by this function.

The same formats can also be applied manually by creating two JavaScript actions: one for the OnKeyStroke event, and one for the OnFormat event of the text field. See DynaPDF.AddActionToObj() for a description of the events.

DynaPDF uses the JavaScript functions AFDate\_Keystroke() / AFDate\_KeystrokeEx() or AFDate\_Format() / AFDate\_FormatEx() to apply a number or date format. The functions are described in the JavaScript scripting reference which is available at <http://www.adobe.com>.

See also [SetNumberFormat](#) function in DynaPDF manual.

### Examples

Create field for numbers:

```
Set Variable [ $f; Value:MBS("DynaPDF.CreateTextField"; $pdf; Create Form::Name; -1; Create Form::Multiline; Create Form::MaxLen; Create Form::PosX; Create Form::PosY; Create Form::Width; Create Form::Height) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetTextFieldValue"; $pdf; $f; Create Form::Value; Create Form::DefaultValue) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetNumberFormat"; $pdf; $f; "CommaDot"; 2; "Red"; "€"; 0) ]
```

Created 16th August 2016, last changed 16th August 2016.

**71.410 DynaPDF.SetOCGState**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	9.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetOCGState"; PDF; Handle; On { ; SaveState } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Handle**

The OCG handle. Index from 0 to DynaPDF.GetOCGCount-1.  
\$OCG

**On**

Wished state: 1 = visible, 0 = invisible  
1

**SaveState**

Optional  
Whether to save the state in the PDF file? Pass 1 to save or 0 to only switch temporarily. Default 0.  
1

**Result** Returns OK or error.

**Description**

If the parameter SaveState is 1, the new state is also saved in the PDF file. Otherwise, the state is only changed temporarily so that the wished state can be rendered with DynaPDF.RenderPage or DynaPDF.RenderPDFFile for example.

Note that only the new state of the current OCG will be saved. If the state of other OCGs were changed beforehand, while SaveState was set to 0, then these changes will not be considered.

See also [SetOCGState](#) function in DynaPDF manual.

**71.411 DynaPDF.SetOpacity**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetOpacity"; PDF; Value )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Value**

The new value. 1.0 = opaque, 0.0 = invisible.  
0.5

**Result** Returns OK or error.

**Description**

The parameter Value must be in the range 0.0 to 1.0. If Value is zero the annotation is invisible, if Value is 1.0, the annotation is completely opaque.

At time of publication the opacity property is used for text annotations only. Later versions of DynaPDF use this property may be for other PDF objects too.

Default value = 1.0

See also [SetOpacity](#) function in DynaPDF manual.

**See also**

## 71.412 DynaPDF.SetOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetOrientation"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

The new roatation value. From -360 to 360 in 90 degree steps.

90

**Result** Returns OK or error message.

### Description

The function sets the orientation of a page. The parameter Value must be a multiple of 90 or 0. Positive values rotate the page clockwise, negative counter counter clockwise.

Note that the page will be rotated entirely incl. all objects. The width and height of the page are left unchanged, including the coordinates. Creating landscape paper formats require further such as changing the coordinate system. This can be done with DynaPDF.SetOrientationEx. Another way to create a landscape paper format is to change the bounding box of the page, see DynaPDF.SetBBox.

Default is 0.

See also DynaPDF.SetOrientationEx.

See also [SetOrientation](#) function in DynaPDF manual.

- 71.385 DynaPDF.SetFieldOrientation 3200
- 71.413 DynaPDF.SetOrientationEx 3247

Created 18th August 2014, last changed 22nd January 2015.

## 71.413 DynaPDF.SetOrientationEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetOrientationEx"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

The new roatation value. From -360 to 360 in 90 degree steps.  
90

**Result** Returns OK or error message.

### Description

The function changes the orientation of a page, incl. important page properties such as the width and height, and the coordinate system. The parameter Value must be a multiple of 90 or 0. Positive values rotate the page clockwise, negative values counter clockwise.

The zero point of the coordinate system is set to the upper left or down left point depending on the current page coordinate system (top down or bottom up).

When using a landscape paper format the functions DynaPDF.GetPageWidth and DynaPDF.GetPageHeight return the logical width and height of the page. While the real paper format is not changed the functions return the paper format as if the page would have a landscape paper format (the width and height are exchanged).

The coordinate system is also changed so that you can work with the page as if it were not rotated. Form fields and annotations are automatically rotated with the page; there is no need to rotate them manually.

Pages which are rotated with this function appear in a viewer application always in the right orientation. Also if the page is rotated, e.g. by 180 degrees the page is shown as if it were not rotated.

Notice:

Since landscape or rotated paper formats require a changed coordinate system, care must be taken into account if further coordinate transformations must be applied. DynaPDF makes sure that one transformation can be applied without causing errors, e.g. rotating or translating the coordinate system, but coordinate transformations must not be nested.

See also DynaPDF.SetOrientation.

See also [SetOrientationEx](#) function in DynaPDF manual.

### Examples

Rotate page 1 of current PDF:

```
Set Variable [ $r; Value:MBS("DynaPDF.EditPage"; $pdf; 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetOrientationEx"; $pdf; 180) ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
```

Rotate a PDF to 90°:

```

Let ( [
# start new PDF
PDF = MBS("DynaPDF.New");
# read in existing PDF
OpenResult = MBS("DynaPDF.OpenPDFFromContainer"; PDF; Test::InputPDF);
OpenError = MBS("IsError");
ImportResult = MBS("DynaPDF.ImportPDFFile"; PDF );
ImportError = MBS("IsError");

# edit page and rotate
r = MBS("DynaPDF.EditPage"; PDF; 1) ;
r = MBS("DynaPDF.SetOrientationEx"; PDF; 90) ;
r = MBS("DynaPDF.EndPage"; PDF) ;

# save PDF
OutputPDF = MBS("DynaPDF.Save"; PDF; GetAsText(Test::InputPDF));
SaveError = MBS("IsError");
ReleaseError = MBS("DynaPDF.Release"; PDF);

Result = If(
// all okay?
OpenError = 0 and ImportError = 0 and /*rotateError = 0 UND*/ SaveError = 0 and MBS( "Con-
tainer.GetSize"; OutputPDF; "PDF " ) >0;
// than return new PDF
OutputPDF;
// return old PDF
Test::InputPDF)
];
result )

```

## 71.414 DynaPDF.SetPDFVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetPDFVersion"; PDF; version )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### version

The version number. Can be 1.0, 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8, PDF/X-1a:2001, PDF/X-1a:2003, PDF/X-3:2002, PDF/X-3:2003, PDF/A-1b and other values.

"1.3"

**Result** Returns OK or error message.

### Description

The function changes the output PDF file version. The default output version is PDF 1.4. If a PDF 1.5 or higher file will be opened for import, the output version will be changed if necessary to the version that the file requires.

Possible values in plugin version 4.4: 1.0, 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 2.0, PDF/X-1a:2001, PDF/X-1a:2002, PDF/X-3:2002, PDF/X-3:2003, PDF/A-1b 2005, PDF/X-4, PDF/A 1a 2005, PDF/A 2a, PDF/A 2b, PDF/A 2u, PDF/A 3a, PDF/A 3b or PDF/A 3u.

DynaPDF Version 4.0 also supports ZUGFeRD Basic, ZUGFeRD Comfort and ZUGFeRD Extended.

DynaPDF Version 4.0.28.81 defines new formats: FacturX Minimum, FacturX Basic, FacturX Basic WL, FacturX Comfort, FacturX Extended, ZUGFeRD2 Minimum, ZUGFeRD2 Basic, ZUGFeRD2 Basic WL, ZUGFeRD2 Comfort and ZUGFeRD2 Extended.

Requires DynaPDF Lite license for PDF/A and PDF/X versions.

See also [SetPDFVersion](#) function in DynaPDF manual.

### Examples

Set PDF Version 1.3:

```
Set Variable [ $r; Value:MBS("DynaPDF.SetPDFVersion"; $pdf; "1.3") ]
```

Set basic ZUGFeRD version:

```
Set Variable [ $r; Value:MBS("DynaPDF.SetPDFVersion"; $pdf; "ZUGFeRD Basic") ]
```

# with PDF/A 3b

## 71.415 DynaPDF.SetPageBBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetPageBBox"; PDF; PageIndex; Box; Left; Bottom; Right; Top )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PageIndex

The page index in range from 1 to DynaPDF.GetPageCount.

1

#### Box

Optional, which box to use. Default is Mediabox. You can pass MediaBox, CropBox, ArtBox, BleedBox or TrimBox.

"MediaBox"

#### Left

The left coordinate of the rectangle.

0

#### Bottom

The bottom coordinate of the page.

0

#### Right

The right coordinate of the page.

595

#### Top

The top coordinate of the page.

842

**Result** Returns OK or error.

### Description

This function is intended to be fast as possible. It requires no open page like DynaPDF.SetBBox, it does not change the default media or crop box, and it does not adjust the current coordinate system if the media box will be changed.

The function is useful if only one or more bounding boxes must be changed, without editing a page, or when a specific area of a page should be rendered. In the latter case change the crop box and restore it to the previous value when finish.

To delete a bounding box set the bounding box to 0, 0, 0, 0.

See also [SetPageBBox](#) function in DynaPDF manual.

- [MBS FileMaker Plugin, version 8.2pr6](#)

Created 4th May 2018, last changed 4th May 2018.

## 71.416 DynaPDF.SetPageCoords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetPageCoords"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

The new setting. Can be BottomUp or TopDown.

"TopDown"

**Result** Returns OK on success or error message.

### Description

The native coordinate system of the Portable Document Format is bottom-up. However, DynaPDF supports also top-down coordinates to make the usage of the library easier. Top-down coordinates are then converted to bottom-up coordinates by DynaPDF, the coordinate system in the PDF file will not be changed by this function.

When changing the coordinate system to top-down, the coordinate origin of text (font origin) will also be changed to the top-left corner (see also DynaPDF.SetFontOrigin()). If the coordinate system will be changed to bottom-up, the font origin is also changed to the down-left corner too.

Default value is BottomUp.

The property PageCoords is a global property which can be changed at any time. When transforming the coordinate system, bottom-up coordinates must be used.

See also DynaPDF.GetPageCoords.

See also [SetPageCoords](#) function in DynaPDF manual.

### Examples

Set to top down:

MBS( "DynaPDF.SetPageCoords"; \$PDF; "TopDown" )

## 71.417 DynaPDF.SetPageFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetPageFormat"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

The new value.  
"DIN A4"

**Result** Returns OK on success or error message.

### Description

If an open page can be detected the format of the page will be changed, the new format will also be used for newly created pages. If no open page is detected, the default format for new pages will be set only. This function changes the media box of a page (see DynaPDF.SetBBox for further information).

Valid values are: DIN A3, DIN A4, DIN A5, DIN B4, DIN B5, DIN B6, DIN C3, DIN C4, DIN C5, DIN C6, DIN C65, DIN DL, DIN E4, DIN E5, DIN E6, DIN E65, DIN M5, DIN M65, US Legal or US Letter.

See also DynaPDF.GetPageWidth, DynaPDF.GetPageHeight, DynaPDF.SetPageHeight and DynaPDF.SetPageWidth.

Common paper formats and sizes in points:

See also [SetPageFormat](#) function in DynaPDF manual.

### Examples

Set to DIN A3:

```
MBS( "DynaPDF.SetPageFormat"; $PDF; "A3" )
```

Set to US letter:

```
MBS( "DynaPDF.SetPageFormat"; $PDF; "US Letter" )
```

## 71.418 DynaPDF.SetPageHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetPageHeight"; PDF; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Height

The new page height.

1000

**Result** Returns OK on success or error.

### Description

The function changes the height of the currently open page if any, or the default height for newly created pages. This function changes the media box of a page (see also DynaPDF.SetBBox). The page height must be greater zero. You can change the page of current page or outside a page the size of new pages.

10cm is about 283 points, unless you changed units (DynaPDF.SetUserUnit). Calculate with cm value divided by 2.54 cm/inch and multiplied with 72 points per inch.

See also DynaPDF.SetPageFormat and DynaPDF.SetPageWidth.

Common paper formats and sizes in points:

See also [SetPageHeight](#) function in DynaPDF manual.

### Examples

Sets page size:

```
Set Variable [ $r; Value:MBS("DynaPDF.SetPageWidth"; $pdf; 500) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.SetPageHeight"; $pdf; 500) ]
```

Created 18th August 2014, last changed 18th October 2016.

## 71.422 DynaPDF.SetPrintSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetPrintSettings"; PDF; DuplexMode; PickTrayByPDFSize; NumCopies; PrintScaling; PrintRanges )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### DuplexMode

The duplex mode. Can be FlipShortEdge, FlipLongEdge, Simplex or None.  
"FlipLongEdge"

#### PickTrayByPDFSize

Whether to pick tray by PDF size. Can be 1 = true, 0 = false or -1 = app default.  
1

#### NumCopies

The number of copies between 1 and 5. 0 is app default.  
2

#### PrintScaling

Can be None or AppDefault currently.  
"None"

#### PrintRanges

Defines the print ranges. For this pass one parameter for start number and one for end number with as many parameters as you want to pass arguments.

**Result** Returns OK or error.

### Description

Viewer applications use the print settings to initialize the print dialog. Print ranges, if set, consist of two numbers which define the start and end page number that should be printed. See also DynaPDF.GetPrintSettings and DynaPDF.GetInPrintSettings.

This settings are for Adobe Reader, not for printing the PDF in FileMaker!  
See also [SetPrintSettings](#) function in DynaPDF manual.

### Examples

Set to print duplex and from page 3 to 8 and 12 to 15.

```
MBS( "DynaPDF.SetPrinterSettings"; $PDF; "FlipLongEdge"; -1; 1; "None"; 3; 8; 12; 15 )
```

## 71.423 DynaPDF.SetReplaceICCProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetReplaceICCProfile"; PDF; ICCProfileType; Path )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### ICCProfileType

The profile type. Can be Gray, RGB, CMYK or Lab.  
"Gray"

#### Path

The new native path.  
"c:/Windows/System32/spool/drivers/color/gray\_gamma2.2.icm"

**Result** Returns OK or error.

### Description

The plugin manages a list of replacement profiles which the DynaPDF library can query with the OnReplaceICCProfile callback. Needed for DynaPDF.CheckConformance.

This function fills the list, so the plugin can return the right profile for the right type when needed.

### Examples

Set gray profile:

```
MBS( "DynaPDF.SetReplaceICCProfile"; $pdf; "gray"; "c:/Windows/System32/spool/drivers/color/gray_gamma2.2.icm" )
```

Set RGB profile:

```
MBS( "DynaPDF.SetReplaceICCProfile"; $pdf; "RGB"; "c:/Windows/System32/spool/drivers/color/sRGB Color Space Profile.icm" )
```

Set CMYK profile:

```
MBS( "DynaPDF.SetReplaceICCProfile"; $pdf; "gray"; "c:/Windows/System32/spool/drivers/color/EuropeISOCoatedFOGRA27.icc" )
```

## 71.424 DynaPDF.SetReplaceICCProfileData

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetReplaceICCProfileData"; PDF; ICCProfileType; ProfileData )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### ICCProfileType

The profile type. Can be Gray, RGB, CMYK or Lab.  
"Gray"

#### ProfileData

The container value with the profile data.  
MyTable::RGBProfile

**Result** Returns OK or error.

### Description

The plugin manages a list of replacement profiles which the DynaPDF library can query with the OnReplaceICCProfile callback. Needed for DynaPDF.CheckConformance.

This function fills the list, so the plugin can return the right profile for the right type when needed.

### Examples

Set replacements for missing ICC profiles:

```
Set Variable [ $r ; Value: MBS("DynaPDF.SetReplaceICCProfileData"; $pdf; "rgb"; Create Text::RGB ICC Profile) ]
```

```

## 71.425 DynaPDF.SetResolution

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetResolution"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

Image resolution in DPI.  
150

**Result** Returns OK on success.

### Description

The function sets the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF. The property will be ignored if the property SaveNewImageFormat was set to false. 1 bit images are always stored in the original resolution. The image resolution must be in the range 72 to 2048 DPI.

Default value = 150 (DPI)

See also [SetResolution](#) function in DynaPDF manual.

### Examples

Limit images to a maximum of 300 dpi:

```
MBS( "DynaPDF.SetResolution"; $PDF; 300 )
```

### See also

- [71.125 DynaPDF.GetAnnotation](#) 2798

Created 18th August 2014, last changed 18th August 2014.

## 71.426 DynaPDF.SetSaveNewImageFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetSaveNewImageFormat"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

Whether to recompress images. Value can be 0 or 1.

0

**Result** Returns OK on success.

### Description

The property SaveNewImageFormat specifies whether images should be downscaled if the original resolution of the image is higher than the value of the property resolution (see also DynaPDF.SetResolution). If the property SaveNewImageFormat is false, JPEG compressed images will be inserted in pass-through mode as long as the image is not a CMYK JPEG (such images must be converted because Acrobat viewer require another byte order).

Default value = true

See also [SetSaveNewImageFormat](#) function in DynaPDF manual.

### Examples

Pass through JPEGs if possible:

```
MBS( "DynaPDF.SetSaveNewImageFormat"; $PDF; 0 )
```

Maximum 300 dpi, pass through preferred and otherwise 90% JPEG compression:

```
MBS( "DynaPDF.SetJPEGQuality"; $PDF; 90 )
MBS( "DynaPDF.SetCompressionFilter"; $PDF; "jpeg" )
MBS( "DynaPDF.SetSaveNewImageFormat"; $PDF; 0 )
MBS( "DynaPDF.SetResolution"; $PDF; 300 )
MBS( "DynaPDF.SetUseTransparency"; $PDF; 0 )
```

## 71.427 DynaPDF.SetSeparationInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetSeparationInfo"; PDF; Handle )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Handle

Separation color space handle.

**Result** Returns OK or error.

### Description

The parameter Handle must be a valid handle of a Separation color space.

In high-end printing workflows, pages are ultimately produced as sets of separations, one per colorant. Ordinarily, each page in a PDF file is treated as a composite page that paints graphics objects using all the process colorants and perhaps some spot colorants as well. In other words, all separations for a page are generated from a single PDF description of that page.

In some workflows, however, pages are pre-separated before generating the PDF file. In a pre-separated PDF file, the separations for a page are described as separate page objects, each painting only a single colorant (usually specified in the DeviceGray color space). When this is done, additional information is needed to identify the actual colorant associated with each separation and to group together the page objects representing all the separations for a given page. This information is contained in the separation info of each page object.

See also [SetSeparationInfo](#) function in DynaPDF manual.

## 71.428 DynaPDF.SetStrokeColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetStrokeColor"; PDF; values )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### values

The values for the colors.  
0

**Result** Returns OK or error message.

### Description

The components of non-Lab color spaces must be in the range from 0 through 1. The \*a and \*b components of a Lab color space are typically in a range from -128 though 127. The \*L component ranges from 0 through 100.

The number of components must match the number of components of the underlying color space.

See also DynaPDF.SetFillColor.

See also [SetStrokeColor](#) function in DynaPDF manual.

### Examples

Sets color to red:

```
MBS( "DynaPDF.SetStrokeColor"; $PDF; 1.0; 0.0; 0.0 )
```

Sets color to blue:

```
MBS( "DynaPDF.SetStrokeColor"; $PDF; 0.0; 0.0; 1.0 )
```

Draw two lines in black:

```
Set Variable [ $r; Value:MBS ( "DynaPDF.SetStrokeColor" ; $pdf ; 0; 0; 0 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.SetLineWidth" ; $pdf ; 1 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 20; 20 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 20; 40 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 30; 30 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 30; 50 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.StrokePath" ; $pdf ) ]
```

Set color with integer values in range of 0 to 255:

MBS( "DynaPDF.SetStrokeColor"; \$PDF; \$red / 255.0; \$green / 255.0; /blue / 255.0 )

### See also

## 71.429 DynaPDF.SetTextDrawMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetTextDrawMode"; PDF; Mode )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Mode

The new text draw mode.

"Invisible"

**Result** Returns OK or error.

### Description

The text draw mode specifies how text should be rendered. Texts can be used as clipping paths such as normal vector graphics; however, the usage is not the same. To use a text as clipping path save the graphics state, set the text draw mode to a clipping mode, paint the objects which should be clipped into the path and restore the graphics state.

Note that the functions DynaPDF.BeginClipPath and DynaPDF.ClipPath can not be used to define a text as clipping path.

Default value = Normal

See also [SetTextDrawMode](#) function in DynaPDF manual.

### Examples

Set stroke draw text mode:

```
MBS( "DynaPDF.SetTextDrawMode"; $pdf; "Stroke" )
```

### See also

- [71.43 DynaPDF.ClipPath](#) 2657

### 71.429.1 Blog Entries

- [MBS FileMaker Plugin, version 6.0pr8](#)

Created 22nd January 2016, last changed 22nd January 2016.

Draw Mode	Description
Normal	Default, render the text in the usual way. The fill color is used as the text's color.
Stroke	Tread the glyph outlines as path to be stroked. The current line width and stroke color are used to paint the path.
FillStroke	Tread the glyph outlines as path to be stroked and filled. The current line width, fill color, and stroke color are used to paint the path.
Invisible	Neither fill nor stroke the text, the text is invisible.
FillClip	Tread the glyph outlines as path to be filled and add this path to the current clipping path. The settings of the current line width and fill color are used to paint the path.
StrokeClip	Tread the glyph outlines as path to be stroked and add this path to the current clipping path. The settings of the current line width and stroke color are used to paint the path.
FillStrokeClip	Tread the glyph outlines as path to be stroked and filled and add this path to the current clipping path. The settings of the current line width, fill color and stroke color are used to paint the path.
Clipping	Tread the glyph outlines as path and add this path to the current clipping path.

## 71.430 DynaPDF.SetTextFieldValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetTextFieldValue"; PDF; Field; Value; DefValue; Align )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### Value

The new text field value.

"Andreas"

#### DefValue

The new default text field value.

""

#### Align

The text alignment. Can be Left, Center, Right or Justify.

"Justify"

**Result** Returns OK or error.

### Description

The parameters Value and DefValue can both be empty, if both values should be deleted. The parameter DefValue defines the default value of the field, this value is shown in Adobe's Acrobat as long as the field has no value; it will be hidden when entering the field.

The strings are drawn with the font that is associated with the field. The font size is taken from the field settings. If set to "auto", the font size is computed from the field's bounding box.

See also [SetTextFieldValue](#) function in DynaPDF manual.

### Examples

Sets text field value:

```
MBS( "DynaPDF.SetTextFieldValue"; $PDF; "FirstName"; "Geoff"; ""; "Left" )
```

### See also

## 71.431 DynaPDF.SetTextFieldValueEx

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetTextFieldValueEx"; PDF; Field; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Field

The field index or field name.

"FirstName"

#### Value

New value or "" to delete it.

"Andreas"

**Result** Returns OK or error.

### Description

If the value is set to empty, the field's value will be deleted.

The strings are drawn with the font that is associated with the field. The font size is taken from the field settings. If set to "auto", the font size is computed from the field's bounding box.

See also [SetTextFieldValueEx](#) function in DynaPDF manual.

### Examples

Sets text field value:

MBS( "DynaPDF.SetTextFieldValueEx"; \$PDF; "FirstName"; "Jack" )

### See also

## 71.432 DynaPDF.SetTextRect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetTextRect"; PDF; PosX; PosY; Width; Height )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of output rectangle

\$x

#### PosY

Y-Coordinate of output rectangle

\$y

#### Width

Width of output rectangle

\$w

#### Height

Height of output rectangle or -1.

\$h

**Result** Returns OK or error message.

### Description

See also [SetTextRect](#) function in DynaPDF manual.

### Examples

Write some text in a rectangle area:

```
# Add page with some text
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetTextRect"; $pdf; 100; 100; 400; 200) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetFont"; $pdf; "Times"; 1; 40; 1; "cp1252") ]
Set Variable [ $r; Value:MBS("DynaPDF.WriteFText"; $pdf; "Center"; "Just a test PDF.") ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
```

## 71.433 DynaPDF.SetTextRise

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetTextRise"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

The Text rise in units.  
10

**Result** Returns OK or error.

### Description

Text rise specifies the distance, to move the baseline up or down from its default location. Positive values of text rise move the baseline up. Adjustments to the baseline are useful for drawing superscripts or subscripts. The default location of the baseline can be restored by setting the text rise to 0. The figure below illustrates the effect of the text rise. Text rise always applies to the vertical coordinate in text space. The text moves around the baseline.  
Default value = 0

See also DynaPDF.GetTextRise.

See also [SetTextRise](#) function in DynaPDF manual.

### Examples

Set text rise:

MBS( "DynaPDF.SetTextRise"; \$PDF; 10 )

### See also

- 71.247 DynaPDF.GetTextRise 2949

## 71.434 DynaPDF.SetTextScaling

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetTextScaling"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

The Horizontal text scaling.  
100

**Result** Returns OK or error.

### Description

The scaling value adjusts the width of glyphs by stretching or compressing them in the horizontal direction. Its value is specified as a percentage of the normal width of the glyphs, with 100 being the normal width. Default value = 100

See also DynaPDF.GetTextScaling.

See also [SetTextScaling](#) function in DynaPDF manual.

### Examples

Set scaling to 200%

MBS( "DynaPDF.SetTextScaling"; \$PDF; 200 )

### See also

- 71.248 DynaPDF.GetTextScaling 2950
- 71.294 DynaPDF.New 3032

## 71.435 DynaPDF.SetTransparentColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetTransparentColor"; PDF; ColorValue )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### ColorValue

Color value defined in current color space

MBS("DynaPDF.RGB"; 255; 0; 0)

**Result** Returns OK or error.

### Description

Due to color interpolation during decompression of JPEG images, it not always possible to mask JPEG compressed images correctly.

Default value = 16777215 (RGB White)

See also [SetTransparentColor](#) function in DynaPDF manual.

### See also

- 71.250 DynaPDF.GetTransparentColor 2953
- 71.256 DynaPDF.GetUseTransparency 2959

Created 6th February 2015, last changed 6th February 2015.

## 71.436 DynaPDF.SetTrapped

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetTrapped"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

1 or 0 to enable or disable.

1

**Result** Returns OK or error.

### Description

Trapping is a technique to avoid unwanted visual artifacts such as brightly colored gaps or bands around the edges of printed objects. In high- quality reproduction of color documents, such artifacts are commonly avoided by creating an overlap, called a trap, between areas of adjacent color.

The trapped key determines whether the document was trapped. The default value is unknown that means no value is written to the file. The trapped key should be set if possible.

See also [SetTrapped](#) function in DynaPDF manual.

### See also

- 71.193 DynaPDF.GetInIsTrapped 2884

Created 6th February 2015, last changed 6th February 2015.

## 71.437 DynaPDF.SetUseExactPwd

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetUseExactPwd"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

The new setting. Pass 1 or 0.

1

**Result** Returns OK or error.

### Description

If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string. If 1, the open or owner password must be known to open the PDF file.

Default value = 1

If your application should allow the modification of encrypted PDF files, you may check the access permissions to grant user rights, if the file was opened with the open password instead of the owner password (see also DynaPDF.GetUserRights).

Due to the license agreement of Adobe, all manufacturers of applications which make the treatment of encrypted PDF files possible, must respect the access permissions of a PDF file, if the file was opened with the open password.

Only if the file was opened with the owner password, all rights should be granted. See PDF Reference 1.5 for further information. This document is available at [www.adobe.com](http://www.adobe.com).

The property UseExactPwd should be 1, if the application is a commercial product.

See also [SetUseExactPwd](#) function in DynaPDF manual.

### See also

**71.438 DynaPDF.SetUseGlobalImpFiles**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetUseGlobalImpFiles"; PDF )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**Result** Returns OK or error.

**Description**

The property can be used to load one or more external PDF files permanent into memory, e.g. to split a large PDF file into smaller pieces. The next PDF file that will be opened with the function DynaPDF.OpenPDFFromFile or DynaPDF.OpenPDFFromContainer will not be closed when DynaPDF.CloseFile or DynaPDF.FreePDF is called. When creating a new PDF file the previously opened import file is still open and it is possible to import pages from this file without loading the file again.

If more than one file should be loaded permanent into memory then set also the flag if2UseProxy with DynaPDF.SetImportFlags2. PDF files which are no longer needed can be closed with DynaPDF.CloseImportFile or DynaPDF.CloseImportFileEx.

Requires DynaPDF Pro license.

See also [SetUseGlobalImpFiles](#) function in DynaPDF manual.

**See also**

- 71.44 DynaPDF.CloseImportFile 2659

- 71.398 DynaPDF.SetImportFlags 3220
- 71.399 DynaPDF.SetImportFlags2 3224

Created 6th February 2015, last changed 1st April 2015.

## 71.439 DynaPDF.SetUseStdFonts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetUseStdFonts"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

the new setting. Can be 0 to turn off or 1 to turn on.  
1

**Result** Return OK or error.

### Description

PDF viewer applications support 14 standard fonts, these fonts are not embedded by default, also if the parameter Embed of the function DynaPDF.SetFont is true.

If certain standard fonts are available on the system, then they have typically a higher search priority but it is still possible to select a standard font. This can occur, for example, when the font weight of the system font does not exactly match the requested weight. If a standard font represents a better match, then this font would be selected.

To avoid unwanted font selections it is possible to disable the standard fonts from font selection. The value can be changed whenever necessary.

Default value = 1 (on)

See also DynaPDF.GetUseStdFonts.

See also [SetUseStdFonts](#) function in DynaPDF manual.

### Examples

Enable standard fonts:

MBS( "DynaPDF.SetUseStdFonts"; \$PDF; 1 )

### See also

<i>71.439. DYNAPDF.SETUSESTDFONTS</i>	3293
• 71.391 DynaPDF.SetFont	3208
• 71.440 DynaPDF.SetUseSystemFonts	3294

Created 18th August 2014, last changed 18th August 2014.

## 71.440 DynaPDF.SetUseSystemFonts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetUseSystemFonts"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

The new setting, can be 0 or 1.

1

**Result** Returns OK or error.

### Description

On Windows all fonts in the Windows/Fonts directory will be loaded as well as shared fonts listed in the Registry. On Mac OS X the following font paths will be added to the list of font search paths:

/System/Library/Fonts

/Library/Fonts

~/Library/Fonts

Additional font paths can be added with DynaPDF.AddFontSearchPath. Default value = 1 (true)

The fonts are loaded when DynaPDF.SetFont is called the first time. The property is ignored on Linux or UNIX.

Please note that the internal font list is not automatically updated when the system's font pool changes. Windows operating systems send a WM\_FONTCHANGE message if the font pool was modified. In this case, the application should call DynaPDF.ClearHostFonts before calling SetFont() the next time so that the list of available system fonts can be updated.

On Mac OS X there is no notification when the font database changes. Mac OS X applications need to use functions of the font manager to determine whether font database has been modified.

See also DynaPDF.GetUseSystemFonts.

See also [SetUseSystemFonts](#) function in DynaPDF manual.

### Examples

Enable system fonts

```
MBS( "DynaPDF.SetUseSystemFonts"; $PDF; 1 )
```

## 71.441 DynaPDF.SetUseTransparency

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetUseTransparency"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

Whether to use transparency. Can be 0 to 1.

1

**Result** Returns OK on success or error.

### Description

The default transparent color is white. Please note that the color is changed to the appropriate value when changing the color space.

Alpha based transparency can be applied with an extended graphics state that must be active before inserting an image. See [CreateExtGState](#) for further information.

Default value = 1 (true)

Requires DynaPDF Lite license.

See also [SetUseTransparency](#) function in DynaPDF manual.

### Examples

Don't try to apply transparency by key color:

MBS( "DynaPDF.SetUseTransparency"; \$PDF; 0 )

### See also

Created 18th August 2014, last changed 9th February 2015.

## 71.442 DynaPDF.SetUseVisibleCoords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetUseVisibleCoords"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

The new setting. Can be 1 or 0.

1

**Result** Returns OK or error.

### Description

The crop box crops a page, but the paper format (media box) is left unchanged. To move the coordinates into the visible area, set the property to true. Coordinates can then be used as if no crop box were defined.

The bounding boxes are described in detail under DynaPDF.SetBBox.

Default value = 0

See also [SetUseVisibleCoords](#) function in DynaPDF manual.

### See also

- 71.257 DynaPDF.GetUseVisibleCoords 2960

## 71.443 DynaPDF.SetUserUnit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetUserUnit"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Value

The new scale.  
10.0

**Result** Returns OK on success or error message.

### Description

A user unit is a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14,400 units or 200 inches. This limit can be extended with the user unit.

The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units. Note that all functions which return page coordinates or page properties do not consider the user unit.

The page format must still be in the range 3..14400 units. It is also strongly recommended to set the user unit only if necessary. This is only the case if the required page format is larger 14400 units.

Default value = 1.0

See also [SetUserUnit](#) function in DynaPDF manual.

### See also

- 71.259 DynaPDF.GetUserUnit 2962

## 71.444 DynaPDF.SetViewerPreferences

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetViewerPreferences"; PDF; Value { ; AddVal } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

The preference to set. Can be number value or list of names.

"HideToolBar, HideMenuBar"

#### AddVal

Optional

Additional value for the preference.

**Result** Returns OK or error.

### Description

This controls certain features in PDF viewers, such as hiding the toolbar or menu bar.

The parameters Value and AddVal are both bitmasks or lists. Multiple values can be set by using a Math.BitwiseOR. It is also possible to call the function multiple times to set each preference separately; the flags are combined with already existing one in this case. Already defined flags can be deleted with the flag UseNone (0). A few flags require an additional parameter that must be added to AddVal.

See DynaPDF help for possible values.

See also [SetViewerPreferences](#) function in DynaPDF manual.

### Examples

Remove toolbar:

```
MBS( "DynaPDF.SetViewerPreferences"; $PDF; "HideToolBar" )
```

### See also

**71.445 DynaPDF.SetWMFDefExtent**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.3	No	Yes	Yes, Windows only	No	No

MBS( "DynaPDF.SetWMFDefExtent"; PDF; Width; Height )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Width**

Width in 0.01 millimetres

**Height**

Height in 0.01 millimetres

**Result** Returns OK or error.

**Description**

DynaPDF uses a corrected value to get exact proportions. See `InsertMetafile()` for further information. The value must be in the range 2000 to 3000.

Default value = 2400

See also [SetWMFDefExtent](#) function in DynaPDF manual.

**See also**

## 71.446 DynaPDF.SetWMFPixelPerInch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.3	No	Yes	Yes, Windows only	No	No

MBS( "DynaPDF.SetWMFPixelPerInch"; PDF; Value )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Value

Pixels per inch of the y-axis

**Result** Returns OK or error.

### Description

DynaPDF uses a corrected value to get exact proportions. See `InsertMetafile()` for further information. The value must be in the range 2000 to 3000.

Default value = 2400

See also [SetWMFPixelPerInch](#) function in DynaPDF manual.

## 71.448 DynaPDF.SetXFASStream

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	9.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SetXFASStream"; PDF; Index; XML )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### Index

The index for the stream. From 0 to DynaPDF.GetXFASStreamCount-1.  
0

#### XML

The XML to use.

**Result** Returns OK or error.

### Description

Index must be a valid XFA resource index. XFA streams can be enumerated with DynaPDF.GetXFASStream / DynaPDF.GetXFASStreamCount.

The function does not check whether the provided XFA buffer is valid. The buffer is written to the stream as is.

### See also

## 71.449 DynaPDF.ShowDifferences

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.ShowDifferences"; PDF; pageIndex1; OtherPDF; pageIndex2 { ; CheckMoving; HighlightColor; Scale; ColorTolerance; Debug } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### pageIndex1

The page index in first PDF context.

1

#### OtherPDF

The other PDF reference. Can be same as PDF parameter, but allows you to use PDF imported in other PDF context.

\$pdf2

#### pageIndex2

The page index in second PDF context.

1

#### CheckMoving

Optional

Whether to check for moving parts, e.g. the big part of the page shifted up one line. Default is zero.

1

#### HighlightColor

Optional

Default is 65535 for yellow (Full red and green).

#### Scale

Optional

Scale of the raster. Default is to compare at 72dpi. If you pass 2 here, we use 144dpi.

1

#### ColorTolerance

Optional

The tolerance for color comparison. Colors where red, green or blue components are within given tolerance are considered equal. So FFFFFFF and FFFFFFFD are equal. Default is 3.

3

#### Debug

Optional

Whether to write debug images to temp folder. If 1, we write png files to temp folder. One image is before the check, one with all similar lines removed and one with result of comparison. Red pixels show you the

raster, green equal pixels.

0

**Result** Returns number of annotations or error.

### **Description**

Returns OK on success which means that highlight annotations have been added to both pages.

You can then render a page to show differences to user.

Requires a DynaPDF Pro license. Without a license, the DynaPDF watermark will reduce the accuracy.

## 71.450 DynaPDF.SkewCoords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SkewCoords"; PDF; a; b; x; y )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### a

Angle alpha in degrees

10

#### b

Angle beta in degrees

10

#### x

Origin of the x-axis

\$x

#### y

Origin of the y-axis

\$y

**Result** Returns OK on success and error on failure.

### Description

It is highly recommended to save the graphics state beforehand, otherwise it is very difficult or impossible to restore the coordinate system later.

After the coordinate system was changed by the function, bottom-up coordinates are active. It is not possible to use top-down coordinates with a skewed coordinate system.

Please do not try to scale/skew/translate back later. use DynaPDF.SaveGraphicState and DynaPDF.RestoreGraphicState.

See also [SkewCoords](#) function in DynaPDF manual.

### Examples

Skew and draw rectangle:

```
MBS( "DynaPDF.SaveGraphicState"; $PDF )
MBS( "DynaPDF.SkewCoords"; $PDF; 20; 20; 200;200)
MBS( "DynaPDF.Rectangle"; $PDF; 0; 0; 200; 100; "stroke" )
MBS( "DynaPDF.RestoreGraphicState"; $PDF )
```

**See also**

- 71.329 DynaPDF.Save 3116
- 71.333 DynaPDF.SaveGraphicState 3125
- 71.334 DynaPDF.ScaleCoords 3126

### Example Databases

- [DynaPDF/DynaPDF Coordinates](#)

Created 18th August 2014, last changed 18th August 2014.

**71.451 DynaPDF.SquareAnnot**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SquareAnnot"; PDF; PosX; PosY; Width; Height; LineWidth; FillColor; StrokeColor; ColorSpace; Author; Subject; Comment )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

X-coordinate of the annotation

100

**PosY**

Y-coordinate of the annotation

100

**Width**

Width of the annotation

100

**Height**

Height of the annotation

100

**LineWidth**

Line width of the circle or ellipse

2

**FillColor**

Fill color for square.

200

**StrokeColor**

Stroke color for square.

255

**ColorSpace**

Color space of the fill and stroke colors.

"RGB"

**Author**

The author name. Can be empty.

"Christian Schmitz"

**Subject**

The subject to use. Can be empty.

**Comment**

The comment. Can be empty.

**Result** Returns annotation handle or error.

**Description**

If the parameters `Width` and `Height` are equal the function draws a square, a rectangle otherwise. If the annotation should be drawn without a border, set the parameter `LineWidth` to zero or `StrokeColor` to the special constant `NO_COLOR` (4294967281).

If the interior should be transparent set `FillColor` to the special constant `NO_COLOR` (4294967281).

Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

See also [SquareAnnot](#) function in DynaPDF manual.

**Examples**

Add a rectangle annotation:

```
Set Variable [ $r ; Value: MBS("DynaPDF.EditPage"; $pdf;1) ]
Set Variable [ $r ; Value: MBS( "DynaPDF.SquareAnnot"; /* Draws a square annotation on the current
open page. */
$PDF; /* The PDF reference returned from DynaPDF.New. */
100; /* X-coordinate of the annotation.e.g. 100 */
100; /* Y-coordinate of the annotation.e.g. 100 */
300; /* Width of the annotation.e.g. 100 */
200; /* Height of the annotation.e.g. 100 */
5; /* Line width of the circle or ellipse.e.g. 2 */
4294967281; /* Fill color for square.e.g. 200 */
MBS( "DynaPDF.RGB"; 255; 0; 0 ); /* Stroke color for square.e.g. 255 */
"RGB"; /* Color space of the fill and stroke colors.e.g. "RGB" */
"Christian Schmitz"; /* The author name. Can be empty. */
"Hello World"; /* The subject to use. Can be empty. */
"Just testing") /* The comment. Can be empty. */ ]
```

- 71.452 DynaPDF.StampAnnot 3311

Created 28th November 2014, last changed 19th October 2019.

**71.452 DynaPDF.StampAnnot**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.StampAnnot"; PDF; PosX; PosY; Width; Height; Author; Subject; Comment; SubType )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

x-coordinate

100

**PosY**

y-coordinate

100

**Width**

Stamp width

100

**Height**

Stamp height

100

**Author**

The author name. Can be empty.

"Christian Schmitz"

**Subject**

The subject to use. Can be empty.

**Comment**

The comment. Can be empty.

**SubType**

The type of stamp. Can be Approved, AsIs, Confidential, Departmental, Draft, Experimental, Expired, Final, ForComment, ForPublicRelease, NotApproved, NotForPublicRelease, Sold, TopSecret or UserDefined.

"Approved"

**Result** Returns annotation handle or error.

**Description**

PDF viewers support a large set of predefined stamp types but it is also possible to create user defined stamps. A user defined stamp can be created as follows:

- Create the stamp with the SubType UserDefined.

- Call `DynaPDF.CreateAnnotAP` with the handle of the stamp annotation to create a user defined appearance stream.
- Draw arbitrary contents to the appearance stream and close it finally with `EndTemplate`, finish!

## 71.453 DynaPDF.StrokePath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.StrokePath"; PDF )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns OK or error.

### Description

If no open path can be detected the function returns with a warning.

See also [StrokePath](#) function in DynaPDF manual.

### Examples

Draw two lines in black:

```
Set Variable [ $r; Value:MBS ( "DynaPDF.SetStrokeColor" ; $pdf ; 0; 0; 0 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.SetLineWidth" ; $pdf ; 1 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 20; 20 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 20; 40 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.MoveTo" ; $pdf ; 30; 30 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.LineTo" ; $pdf ; 30; 50 ) ]
Set Variable [ $r; Value:MBS ( "DynaPDF.StrokePath" ; $pdf ) ]
```

## 71.454 DynaPDF.SysFontInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.SysFontInfo"; PDF; Handle; Selector )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Handle

Font Handle or zero for first call

0

#### Selector

Which value to return. Can be Result, BaseType, CIDOrdering, CIDRegistry, CIDSupplement, DataOffset, FamilyName, FilePath, FileSize, Flags, Embeddable, Editable, FullName, Length1, Length2, PostScriptName, Index, IsFixedPitch, Style, UnicodeRange1, UnicodeRange2, UnicodeRange3 or UnicodeRange4. "FamilyName"

**Result** Returns value or error.

### Description

For first call, please use zero for the handle. Than you can get with Selector "Result" the handle of the next font. Loop until this next handle is zero.

Embeddable returns 1 or 0 depending on whether the font can be embedded or not.

FamilyName, FullName, FilePath and PostScriptName are returned in unicode text if possible.

### Examples

Get Family name of first font:

```
MBS( "DynaPDF.SysFontInfo"; $pdf; 0; "FamilyName" )
```

List System Fonts by adding records to a table with font names:

```
Set Variable [ $Handle; Value:0 ]
```

```
Loop
```

```
# Get values
```

```
Set Variable [ $NextHandle; Value:MBS("DynaPDF.SysFontInfo"; $pdf; $Handle; "Result") ]
```

```
Exit Loop If [ $NextHandle = 0 ]
```

```
New Record/Request
```

```
Set Field [ System Font Info::FamilyName; MBS("DynaPDF.SysFontInfo"; $pdf; $Handle; "FamilyName")
```

```
]
```

```
Set Field [ System Font Info::Embeddable; MBS("DynaPDF.SysFontInfo"; $pdf; $Handle; "Embeddable") ]
```

```
Commit Records/Requests [ Skip data entry validation; No dialog ]
```

```
# Next
```

```
Set Variable [ $Handle; Value:$NextHandle ]
```

End Loop

Created 21st March 2015, last changed 23th March 2015.

**71.455 DynaPDF.Table.AddColumn**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.AddColumn"; Table; Left; Width )

**Parameters****Table**

The identifier for the table.

\$Table

**Left**

Add the column on the left or right side?

0

**Width**

The new column width.

100

**Result** Returns number of columns or error.

**Description**

In most cases it is required to change the table width and the widths of the remaining columns after a new column was added. This can be done with `DynaPDF.Table.SetTableWidth` and `DynaPDF.Table.SetColWidth`.

If possible, create the table directly with the required number of columns.

If the function succeeds, the return value is new number of columns. If the function fails, the return value is a negative error code.

## 71.456 DynaPDF.Table.AddRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.AddRow"; Table; Height )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Height

Minimum height or -1 for default height.

10

**Result** Returns error or new row index.

### Description

The parameter Height can be set to a negative value to indicate that the default row height should be used. The default row height was specified in DynaPDF.Table.Create.

The specified height represents the minimum height of the row. If the height of a foreground object is larger than the height will be adjusted.

The height is sometimes required. This is the case when a cell is rotated by 90 or a multiple of 90 degrees and if the height cannot be computed from the cell contents, e.g. if a cell contains text and if the flag NoLineBreak is absent. See DynaPDF.Table.SetCellOrientation for further information.

If the function succeeds, the return value is the row index, a value greater or equal zero. If the function fails, the return value is a negative error code.

### Examples

Adds a row:

```
MBS("DynaPDF.Table.AddRow"; $table)
```

Adds a header row:

```
# Add header row
Set Variable [ $row; Value:MBS("DynaPDF.Table.AddRow"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 0; "right"; "top"; "Index") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 1; "left"; "top"; "Product") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 2; "right"; "top"; "Price") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 3; "right"; "top"; "Quantity") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 4; "right"; "top"; "Total Price") ]
]
# set flag for header row
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetFlags"; $table; $row; -1; "HeaderRow") ]
# make row bold
```

71.456. *DYNAPDF.TABLE.ADDROW* 3319  
Set Variable [ \$r; Value:MBS("DynaPDF.Table.SetFont"; \$table; \$row; -1; "Helvetica"; 2; 1; "unicode") ]

## 71.457 DynaPDF.Table.AddRows

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.AddRows"; Table; Count; Height )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Count

Number of rows.

1

#### Height

The default height of the row. or -1 to

-1

**Result** If the function succeeds, the return value is new number of rows in the table. If the function fails, the return value is a negative error code.

### Description

The parameter Height can be set to a negative value to indicate that the default row height should be used. The default row height was specified in DynaPDF.Table.Create.

The specified height represents the minimum height of each row. If the height of a foreground object is larger, then the row height will be adjusted.

The height is sometimes required. This is the case if a cell is rotated by 90 or a multiple of 90 degrees and if the height cannot be computed from the cell contents, e.g. if a cell contains text and if the flag NoLineBreak is absent. See DynaPDF.Table.SetCellOrientation for further information.

**71.458 DynaPDF.Table.ClearColumn**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.ClearColumn"; Table; Col; Types )

**Parameters****Table**

The identifier for the table.

\$Table

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1.

0

**Types**

What to clear. Can be Text, Template, Action, Table, ForeGround, BackGround, AllCont or Both. Or you pass numeric values combined from the hex values in the table below.

"AllCont"

**Description**

The parameter Types is described in DynaPDF.Table.ClearContent below.

Type	Hex Number	Description
Text	0x00000001	Text is always a foreground object
Image	0x00000002	Images
Template	0x00000004	Templates
Table	0x00000008	Sub tables are always foreground objects
AllCont	0x0000001F	Delete all content types
ForeGround	0x10000000	Only foreground objects?
BackGround	0x20000000	Only background objects?
Both	0x30000000	Delete both fore- and background objects

**See also**

## 71.459 DynaPDF.Table.ClearContent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.ClearContent"; Table; Types )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Types

What to clear. Can be Text, Template, Table, Action, ForeGround, BackGround, AllCont or Both. Or you pass numeric values combined from the hex values in the table below.

"AllCont"

**Result** Returns OK or error.

### Description

The parameter Types is a bit mask. The content types and the fore- and background flags can be combined with a binary or operator. If the foreground and background flags are both absent, then nothing will be deleted!

Other programming languages require no type cast.

Note that it is not required to explicitly clear the contents of a table. Existing contents can be overridden at any time. However, when it is not known whether all cells get new values, then it is recommended to clear the table beforehand.

It is also possible to clear the contents of specific rows or columns only. See DynaPDF.Table.ClearColumn and DynaPDF.Table.ClearRow for further information.

Type	Hex Number	Description
Text	0x00000001	Text is always a foreground object
Image	0x00000002	Images
Template	0x00000004	Templates
Table	0x00000008	Sub tables are always foreground objects
AllCont	0x0000001F	Delete all content types
ForeGround	0x10000000	Only foreground objects?
BackGround	0x20000000	Only background objects?
Both	0x30000000	Delete both fore- and background objects

## 71.460 DynaPDF.Table.ClearRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.ClearRow"; Table; Row; Types )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1.

0

#### Types

What to clear. Can be Text, Template, Table, Action, ForeGround, BackGround, AllCont or Both. Or you pass numeric values combined from the hex values in the table below.

"AllCont"

**Result** Returns OK or error.

### Description

The parameter Types is described in DynaPDF.Table.ClearContent.

Type	Hex Number	Description
Text	0x00000001	Text is always a foreground object
Image	0x00000002	Images
Template	0x00000004	Templates
Table	0x00000008	Sub tables are always foreground objects
AllCont	0x0000001F	Delete all content types
ForeGround	0x10000000	Only foreground objects?
BackGround	0x20000000	Only background objects?
Both	0x30000000	Delete both fore- and background objects

## 71.461 DynaPDF.Table.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.Create"; PDF; AllocRows; NumCols; Width; DefRowHeight )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.  
\$pdf

#### AllocRows

The number of rows to preallocate.  
10

#### NumCols

The number of columns.  
5

#### Width

The width of table.  
500

#### DefRowHeight

The default row height for a new row.  
30

**Result** Returns table identifier or error.

### Description

The parameter AllocRows specifies the number of rows which should be pre-allocated. The value should be large enough to avoid unnecessary memory reallocations. Note that this is just the size of the array that holds the rows which will be added later. Unused rows require 4 or 8 bytes memory (32 bit / 64 bit).

The default row height is used if the parameter Height of AddRow() or AddRows() is set to a negative value.

The widths of the columns is set to the table width divided by the number of columns (Width / NumCols).

The table must be deleted with DynaPDF.Table.Release when finish to avoid a memory leak.

DynaPDF table reference numbers are starting at 21000 and counting up for each new table.

### Examples

Create table with 10 preallocated rows, 2 columns, 500 point width and 10 point default row height:

```
MBS("DynaPDF.Table.Create"; $pdf; 10; 2; 500; 10)
```

Create table and set some properties:

```
Set Variable [ $table; Value:MBS("DynaPDF.Table.Create"; $pdf; 10; 2; 500; 10) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetBorderWidth"; $table; -1; -1; 1; 1; 1; 1) ]
```

```
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetRGBColor"; $table; -1; -1; "BorderColor"; 255; 255; 255) ]
```

```

Set Variable [ $r; Value:MBS("DynaPDF.Table.SetRGBColor"; $table; -1; -1; "GridHorzColor"; 255; 255; 255) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetRGBColor"; $table; -1; -1; "GridVertColor"; 255; 255; 255) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetRGBColor"; $table; -1; -1; "TextColor"; 0; 0; 0) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetGridWidth"; $table; 10; 10) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetColWidth"; $table; 0; 200;1) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetColWidth"; $table; 1; 300;1) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetFont"; $table; -1; -1; "Helvetica"; 0; 1; "unicode") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetFontSize"; $table; -1; -1; 10) ]

```

Complete example using a simple table on one page:

```

# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ "InitDynaPDF" ]
End If

# Clear current PDF document
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# coordinates top down instead the default Bottom Up
Set Variable [ $r; Value:MBS("DynaPDF.SetPageCoords"; $pdf; "TopDown") ]

# Create Table
Set Variable [ $table; Value:MBS("DynaPDF.Table.Create"; $pdf; 3; 3; 500; 100) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetBorderWidth"; $table; -1; -1; 1; 1; 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetGridWidth"; $table; 1; 1) ]

# Add Rows
Set Variable [ $text; Value:"The cell alignment can be set for text, images, and templates..." ]
Set Variable [ $rowNum; Value:MBS("DynaPDF.Table.AddRow"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 0; "left"; "top"; $text) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 1; "center"; "top"; $text) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 2; "right"; "top"; $text) ]
Set Variable [ $rowNum; Value:MBS("DynaPDF.Table.AddRow"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 0; "left"; "center"; $text) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 1; "center"; "center"; $text) ]
]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 2; "right"; "center"; $text) ]
]
Set Variable [ $rowNum; Value:MBS("DynaPDF.Table.AddRow"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 0; "left"; "bottom"; $text) ]
]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 1; "center"; "bottom"; $text) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 2; "right"; "bottom"; $text) ]
]

```

```

# Draw Table (just one page without loop)
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.Draw"; $table; 50; 50; 742) ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]

# Cleanup
Set Field [ Tables::OutputPDF; MBS("DynaPDF.Save"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.Release"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]

```

**71.462 DynaPDF.Table.DeleteCol**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.DeleteCol"; Table; Col )

**Parameters****Table**

The identifier for the table.

\$Table

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1.

0

**Result** Returns OK or error.

**Description**

The new table width is the table width minus the width of the deleted column. It is not possible to delete all columns. One column must be left in the table.

If the column index is invalid or if the table contains only one column then the function does nothing.

**71.465 DynaPDF.Table.Draw**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.Draw"; Table; x; y; MaxHeight )

**Parameters****Table**

The identifier for the table.

\$Table

**x**

The x position where to draw the table.

100

**y**

The y position where to draw the table.

100

**MaxHeight**

The maximum height to use for the table.

600

**Result** Returns height or error.

**Description**

The x/y-coordinates specify the top left corner of the table. The table flows always from top to bottom.

The function must be executed in a while statement if the parameter MaxHeight is set to a value greater zero:

The function draws the header rows if any and at least one row to avoid an endless loop if the maximum height would be smaller as the first row height.

If the function succeeds the return value is the height of the table that was drawn so that additional contents can be drawn below the table if necessary. If the function fails the return value is -1.

**Examples**

Loop to draw table and add pages as needed:

```
Set Variable [ $h; Value:300 ]
Set Variable [ $y; Value:200 ]
Loop
# Draw something on page
Set Variable [ $r; Value:MBS("DynaPDF.Table.Draw"; $table; 58; $y; $h) ]
Set Variable [ $y; Value:$y + $r + 5 ]
# Add another page
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
Set Variable [ $h; Value:580 ]
```

```
Set Variable [ $y; Value:120 ]
End Loop
```

Complete example using a simple table on one page:

```
# Initialize DynaPDF if needed
If [ MBS("DynaPDF.IsInitialized") 1 ]
Perform Script [ "InitDynaPDF" ]
End If

# Clear current PDF document
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# coordinates top down instead the default Bottom Up
Set Variable [ $r; Value:MBS("DynaPDF.SetPageCoords"; $pdf; "TopDown") ]

# Create Table
Set Variable [ $table; Value:MBS("DynaPDF.Table.Create"; $pdf; 3; 3; 500; 100) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetBorderWidth"; $table; -1; -1; 1; 1; 1) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetGridWidth"; $table; 1; 1) ]

# Add Rows
Set Variable [ $text; Value:"The cell alignment can be set for text, images, and templates..." ]
Set Variable [ $rowNum; Value:MBS("DynaPDF.Table.AddRow"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 0; "left"; "top"; $text) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 1; "center"; "top"; $text) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 2; "right"; "top"; $text) ]
Set Variable [ $rowNum; Value:MBS("DynaPDF.Table.AddRow"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 0; "left"; "center"; $text) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 1; "center"; "center"; $text) ]
]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 2; "right"; "center"; $text) ]
]
Set Variable [ $rowNum; Value:MBS("DynaPDF.Table.AddRow"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 0; "left"; "bottom"; $text) ]
]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 1; "center"; "bottom"; $text) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $rowNum; 2; "right"; "bottom"; $text) ]
]

- [Merge PDF with table of contents](#)

Created 18th August 2014, last changed 17th January 2019.

**71.466 DynaPDF.Table.GetFirstRow**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.GetFirstRow"; Table )

**Parameters****Table**

The identifier for the table.

\$Table

**Result** Returns row number or error.

**Description**

The function returns the index of the first row that was drawn in the previous DrawTable() call. DynaPDF.Table.GetNextRow returns the next row index that will be drawn in the next DynaPDF.Table.Draw call. If the next row index equals the number of rows then the table was fully drawn.

## 71.467 DynaPDF.Table.GetNextHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.GetNextHeight"; Table; MaxHeight )

### Parameters

#### Table

The identifier for the table.

\$Table

#### MaxHeight

Maximum height for the table.

500

**Result** Returns calculated height or error.

### Description

If the parameter MaxHeight is zero, then the full height will be returned. If MaxHeight is greater zero, then the height of the table is calculated that fits into the output height. This is the same height that DrawTable() would produce when drawing the table with the same parameters. This function can be useful if the height of the table must be known before it can be drawn. The function caches the result so that multiple calls with a different max height can be computed fast as possible.

The function must be called within an open page.

### See also

**71.468 DynaPDF.Table.GetNextHeightRow**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.GetNextHeightRow"; Table; MaxHeight )

**Parameters****Table**

The identifier for the table.

\$Table

**MaxHeight**

Maximum height for the table.

500

**Result** Returns next row or error.

**Description**

If the parameter MaxHeight is zero, then the full height will be returned. If MaxHeight is greater zero, then the height of the table is calculated that fits into the output height. This is the same height that DrawTable() would produce when drawing the table with the same parameters. This function can be useful if the height of the table must be known before it can be drawn. The function caches the result so that multiple calls with a different max height can be computed fast as possible.

The function must be called within an open page.

This function can be used together with DynaPDF.Table.GetNextHeight. While DynaPDF.Table.GetNextHeight returns the height, this function will return the next row after the given height has been used.

## 71.469 DynaPDF.Table.GetNextRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.GetNextRow"; Table )

### Parameters

#### Table

The identifier for the table.

\$Table

**Result** Returns row number or error.

### Description

The function returns the index of the next row that will be drawn when DynaPDF.Table.Draw is called the next time. DynaPDF.Table.GetFirstRow returns the first row index that was drawn in the previous DynaPDF.Table.Draw call. If the next row index equals the number of rows then the table was fully drawn.

## 71.477 DynaPDF.Table.SetBorderWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetBorderWidth"; Table; Row; Col; Left; Right; Top; Bottom )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

#### Left

Value for the left side.

0

#### Right

Value for the right side.

0

#### Top

Value for the top side.

0

#### Bottom

Value for the bottom side.

0

**Result** Returns OK or error.

### Description

The properties can be set to the table, rows, columns, and cells as follows:

Row	Col	Applies to
-1	-1	Table
-1	>=0	Column
>=0	-1	Row
>=0	>=0	Cell

The border with is inherited from columns and rows (in this order), but not from the table since the table has its own border.

Individual values can be set to each side of a cell. Note that the properties will be not be rotated with a cell. The left side is always left, independent of the cell orientation.

**Examples**

Set border width to 1 point:

```
MBS("DynaPDF.Table.SetBorderWidth"; $table; -1; -1; 1; 1; 1; 1)
```

Created 18th August 2014, last changed 18th August 2014.

## 71.478 DynaPDF.Table.SetBoxProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetBoxProperty"; Table; Row; Col; Type; Left; Right; Top; Bottom )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

#### Type

Can be BorderWidth, CellSpacing or CellPadding.

"CellPadding"

#### Left

Value for the left side.

0

#### Right

Value for the right side.

0

#### Top

Value for the top side.

0

#### Bottom

Value for the bottom side.

0

**Result** Returns OK or error.

### Description

The properties can be set to the table, rows, columns, and cells as follows:

Cell padding and cell spacing are inherited from the table, columns, and rows, in this order.

The border with is inherited from columns and rows (in this order), but not from the table since the table has its own border.

Individual values can be set to each side of a cell. Note that the properties will be not be rotated with a cell. The left side is always left, independent of the cell orientation.

71.478. *DYNAPDF.TABLE.SETBOXPROPERTY* 3349

Row	Col	Applies to
-1	-1	Table
-1	$\geq 0$	Column
$\geq 0$	-1	Row
$\geq 0$	$\geq 0$	Cell

## 71.479 DynaPDF.Table.SetCellAction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	9.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetCellAction"; Table; Row; Col; ActionHandle; Mode )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

#### ActionHandle

The action handle

\$action

#### Mode

The new highlight mode. Can be None, Invert, Outline, Push or PushUpd.

"Invert"

**Result** Returns OK or error.

### Description

Creates an invisible link annotation for the specified cell or table and associates the provided action with that annotation. The result is an interactive area that executes the action if the user clicks on cell or table. A cell action is always a background object that is created in the size of the background area when the table is drawn.

Unlike other cell objects like images, text, and so on, a cell link is no persistent object because the action will be deleted when then PDF file in memory will be closed or when DynaPDF.Release will be called.

If the table should be drawn into more than one PDF file then re-create the actions and cell action before drawing the table into the next PDF file.

Actions can be created with functions like DynaPDF.CreateGoToAction, DynaPDF.CreateGoToRAction, and so on.

### Examples

Adds a go-to action for a cell in the table:

```
Set Variable [ $NamedDest ; Value: MBS( "DynaPDF.CreateNamedDest"; $pdf; "test"; 2; "Fit" ) ]
```

```
Set Variable [ $Action ; Value: MBS( "DynaPDF.CreateGoToActionEx"; $PDF; $NamedDest ) ]
```

```
Set Variable [ $r ; Value: MBS( "DynaPDF.Table.SetCellAction"; $Table; $rowNum; 0; $action; "Invert" ) ]
```

71.479. *DynaPDF.Table.SetCellAction* 3351

## 71.480 DynaPDF.Table.SetCellImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetCellImage"; Table; Row; Col; ForeGround; HAlign; VAlign; Width; Height; ImagePath { ; Index } )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

#### ForeGround

If 1, the cell will be expanded if necessary.

1

#### HAlign

The horizontal alignment. Can be left, center or right.

"center"

#### VAlign

The vertical alignment. Can be bottom, center or top.

"center"

#### Width

The image width. Must be greater or equal zero.

50

#### Height

The image height. Must be greater or equal zero.

50

#### ImagePath

The native path to the image file.

\$Path

#### Index

Optional

The index of the image in the file.

1

**Result** Returns OK or error.

**Description**

The image will be loaded when the table is drawn. Therefore, please use an absolute path.

If the image is inserted as a background object, then it will be clipped if it does not fit into the cell boundary.

A cell can contain a background and a foreground object.

An image can also be added to the table as background object.

Foreground objects have a strong width and height. That means the cell will be expanded if necessary.

Image formats which support no transparency are inserted opaque. Transparent GIF images are inserted transparent and alpha channels in images will be considered. Images should normally be inserted in the native image color space. To achieve this, set the flag UseImageCS with `DynaPDF.Table.SetFlags`.

Images can be scaled into the cell as follows:

- Width = 0 and Height = 0 ->The image is scaled to the cell width or height depending on the cell orientation. The aspect ratio will be preserved. If the flag `tfScaleToRect` is set, the image is scaled so that both sides fit into the cell width and height. The row height must be greater zero to achieve a meaningful result.
- Width >0 and Height = 0 or Width = 0 and Height >0 ->The image is scaled to the given width or height. The aspect ratio will be preserved. If the flag `tfScaleToRect` is set, the image is scaled so that both sides fit into the given width or height and into cell width or height depending on which side is missing. If the parameter Height and the row height are zero then the flag `tfScaleToRect` has no effect.
- Width >0 and Height >0 ->The image is scaled to the given width and height. The aspect ratio is not preserved. If the flag `tfScaleToRect` is set, the image is scaled so that both sides fit into the given width and height and the aspect ratio is preserved.

The parameters Width and Height are not exchanged if the cell uses a landscape orientation.

This function needs a native path. Please use `Path.FilemakerPathToNativePath` function in order to convert a FileMaker style path to a native path.

**Examples**

Add row and insert picture:

```
Set Variable [ $subrow; Value:MBS("DynaPDF.Table.AddRow"; $subtable) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellImageEx"; $subtable; $subrow; 0; 1; "left"; "top"; 200; 0; Images::Image) ]
```

Created 18th August 2014, last changed 18th August 2014.

**71.482 DynaPDF.Table.SetCellOrientation**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetCellOrientation"; Table; Row; Col; Orientation )

**Parameters****Table**

The identifier for the table.

\$Table

**Row**

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

**Orientation**

The new orientation.

90

**Result** Returns OK or error.

**Description**

The cell orientation is inherited from the table, column, row, and finally from the cell. The contents in a cell can be rotated in 90 degrees steps. Positive values rotate the cell content counter clockwise and negative values clockwise.

The row height should be set to value greater zero if a cell uses a landscape orientation. This is important if the height cannot be computed from the cell contents. This is the case if a cell contains text and if the flag NoLineBreak was not set.

The orientation can be set to the table, rows, columns, and cells as follows:

Row	Col	Applies to
-1	-1	Table
-1	>= 0	Column
>= 0	-1	Row
>= 0	>= 0	Cell

**See also**

Created 18th August 2014, last changed 18th August 2014.

**71.483 DynaPDF.Table.SetCellPadding**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetCellPadding"; Table; Row; Col; Left; Right; Top; Bottom )

**Parameters****Table**

The identifier for the table.

\$Table

**Row**

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

**Left**

Value for the left side.

0

**Right**

Value for the right side.

0

**Top**

Value for the top side.

0

**Bottom**

Value for the bottom side.

0

**Result** Returns OK or error.

**Description**

The properties can be set to the table, rows, columns, and cells as follows:

Row	Col	Applies to
-1	-1	Table
-1	>=0	Column
>=0	-1	Row
>=0	>=0	Cell

Cell padding and cell spacing are inherited from the table, columns, and rows, in this order. Individual values can be set to each side of a cell. Note that the properties will be not be rotated with a cell. The left side is always left, independent of the cell orientation.

**Examples**

Set the cell padding for the whole table:

```
MBS("DynaPDF.Table.SetCellPadding"; $dtable; -1; -1; 1; 1; 1; 1)
```

**71.484 DynaPDF.Table.SetCellSpacing**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetCellSpacing"; Table; Row; Col; Left; Right; Top; Bottom )

**Parameters****Table**

The identifier for the table.

\$Table

**Row**

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

**Left**

Value for the left side.

0

**Right**

Value for the right side.

0

**Top**

Value for the top side.

0

**Bottom**

Value for the bottom side.

0

**Result** Returns OK or error.

**Description**

The properties can be set to the table, rows, columns, and cells as follows:

Row	Col	Applies to
-1	-1	Table
-1	>=0	Column
>=0	-1	Row
>=0	>=0	Cell

Cell padding and cell spacing are inherited from the table, columns, and rows, in this order.

Individual values can be set to each side of a cell. Note that the properties will be not be rotated with a cell. The left side is always left, independent of the cell orientation.

**71.485 DynaPDF.Table.SetCellTable**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetCellTable"; Table; Row; Col; HAlign; VAlign; SubTable )

**Parameters****Table**

The identifier for the table.

\$Table

**Row**

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1.

0

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1.

0

**HAlign**

The horizontal alignment. Can be left, center or right.

"center"

**VAlign**

The vertical alignment. Can be bottom, center or top.

"center"

**SubTable**

The identifier for the subtable.

\$SubTable

**Result** Returns OK or error.

**Description**

Note that the function creates no copy of the table. But the plugin keeps a reference from subtable attached to parent table.

**Examples**

Sets a table to be used as content of a bigger table:

MBS("DynaPDF.Table.SetCellTable"; \$table; \$row; \$col; "left"; "top"; \$subtable)

## 71.486 DynaPDF.Table.SetCellTemplate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetCellTemplate"; Table; Row; Col; ForeGround; HAlign; VAlign; TmplHandle { ; Width; Height } )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Or -1 for whole table.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Or -1 for whole table.

0

#### ForeGround

1 = foreground, 0 = background.

1

#### HAlign

The horizontal alignment. Can be left, center or right.

"center"

#### VAlign

The vertical alignment. Can be bottom, center or top.

"center"

#### TmplHandle

The template handle as returned by DynaPDF.ImportPageAsTemplate function.

\$template

#### Width

Optional

The desired width.

0

#### Height

Optional

The desired height

0

**Result** Returns OK or error.

### Description

A template can contain contents from external sources like PDF or EMF pages as well as anything that can

be drawn on a page (with exception of interactive objects like form fields or annotations).

Please note that the table creates no copy of the template. Template handles are bound on the PDF instance in which they were created and all templates will be deleted when the PDF file in memory is closed or when `DynaPDF.Release` will be called.

Therefore, it is not possible to draw a table with templates into different PDF files.

If the template is inserted as a background object, then it will be clipped if it does not fit into the cell boundary. A cell can contain a background and a foreground object.

A template can also be added to the table as background object.

Foreground objects have a strong width and height. That means the cell will be expanded if necessary.

Templates can be scaled into the cell as follows:

- Width = 0 and Height = 0 ->The template is scaled to the cell width or height depending on the cell orientation. The aspect ratio will be preserved. If the flag `tfScaleToRect` is set, the template is scaled so that both sides fit into the cell width and height. The row height must be greater zero to achieve a meaningful result.
- Width >0 and Height = 0 or Width = 0 and Height >0 ->The template is scaled to the given width or height. The aspect ratio will be preserved. If the flag `tfScaleToRect` is set, the template is scaled so that both sides fit into the given width or height and into cell width or height depending on which side is missing. If the parameter Height and the row height are zero then the flag `tfScaleToRect` has no effect.
- Width >0 and Height >0 ->The template is scaled to the given width and height. The aspect ratio is not preserved. If the flag `tfScaleToRect` is set, the template is scaled so that both sides fit into the given width and height and the aspect ratio is preserved.

The parameters Width and Height are not exchanged if the cell uses a landscape orientation.

### Examples

Import a page as template and use it as content in a table:

```
Set Variable [ $tmpl; Value:MBS("DynaPDF.ImportPageAsTemplate"; $pdf; $i) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellTemplate"; $table; $rowNum; $x; 1; "center"; "center"; $tmpl; 0; 0) ]
```

### **Example Databases**

- [DynaPDF/Tables](#)

Created 18th August 2014, last changed 18th October 2016.

## 71.487 DynaPDF.Table.SetCellText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetCellText"; Table; Row; Col; HAlign; VAlign; Text )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1.

0

#### HAlign

The horizontal alignment. Can be left, center or right.

"center"

#### VAlign

The vertical alignment. Can be bottom, center or top.

"center"

#### Text

The text for the cell.

"Hello World"

**Result** Returns OK or error.

### Description

Text is always a foreground object. The cell will be expanded if necessary.

Text can be processed in different ways. By default the text is output with WriteFText. WriteFText supports a lot of format tags. These tags are also supported in a table with exception of a page break tag.

To avoid line breaks it is possible to set the flag NoLineBreak with DynaPDF.Table.SetFlags. The flag is inherited from the table, column, row, and cell, in this order. If set, the text is output with WriteText instead. Since this function doesn't support format tags, the text is processed as plain text.

The font and font size can be set with DynaPDF.Table.SetFont and with DynaPDF.Table.SetFontSize. Note that a table has its own versions of these functions.

If the cell uses a landscape orientation then the text flows to left or to right depending on the orientation and if the flag NoLineBreak is not set. The row height must be set to value greater zero in this case. If the text does not fit into the cell then the column width will be expanded. If the flag NoLineBreak is set, then the height of the row will be expanded if necessary.

If the cell uses a portrait orientation and if the flag NoLineBreak is not set, then text flows from top to

71.487. *DYNAPDF.TABLE.SETCELLTEXT* 3369

bottom or bottom to top, depending on the orientation. The row height will be expanded if necessary. If the flag NoLineBreak is set, then the column width will be expanded if necessary.

#### Examples

Sets the cell text:

```
MBS("DynaPDF.Table.SetCellText"; $table; $row; $col; "left"; "top"; Articles::Description1)
```

Created 18th August 2014, last changed 18th August 2014.

## 71.488 DynaPDF.Table.SetColWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetColWidth"; Table; Col; Width; ExtTable )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1.

0

#### Width

The new width.

100

#### ExtTable

Extend the table or adjust the other columns?

0

**Result** Returns OK or error.

### Description

The width of a column can be changed in two different ways. If the parameter ExtTable is set to 1, then the difference of the current and new column width is added to the table width and the widths of all other columns is left unchanged.

If ExtTable is set to 0, the difference is subtracted from the next columns until the gap is zero. If the width of the column is larger as the table width then the table width is adjusted too. All other columns get a zero width in this case.

The column widths should be set from lower to higher indexes and no value should be set for the last column. No column width should exceed the table width if ExtTable is set to false. Otherwise the widths of all other columns must be changed again. Change first the table width and then the column widths in such a case.

### Examples

Sets the column width for first column to 200 point:

```
MBS("DynaPDF.Table.SetColWidth"; $table; 0; 200; 1)
```

## 71.489 DynaPDF.Table.SetColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetColor"; Table; Row; Col; Type; CS; Color )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

#### Type

Which table color. Can be BackColor, BorderColor, GridHorzColor, GridVertColor, ImageColor or TextColor.

"TextColor"

#### CS

The colorspace to use. Can be DeviceRGB, DeviceCMYK, DeviceGray.

"DeviceRGB"

#### Color

The color value.

255

**Result** Returns OK or error.

### Description

Colors of an extended color space can be set with DynaPDF.Table.SetColorFloat.

The text color is inherited from the table, column, and row, in this order. The border color is inherited from columns and rows but not from the table since the table has its own border.

### Examples

Set green text color:

```
MBS( "DynaPDF.Table.SetColor"; $table; $Row; $Col; "TextColor"; "DeviceRGB"; 255*256 )
```

• 71.496 DynaPDF.Table.SetPDF	3385

Created 18th August 2014, last changed 18th August 2014.

**71.490 DynaPDF.Table.SetColorFloat**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetColorFloat"; Table; Row; Col; Type; CS; Colors )

**Parameters****Table**

The identifier for the table.

\$Table

**Row**

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

**Type**

Which table color. Can be BackColor, BorderColor, GridHorzColor, GridVertColor, ImageColor or TextColor.

"TextColor"

**CS**

The colorspace to use. Can be DeviceRGB, DeviceCMYK, DeviceGray.

"DeviceRGB"

**Colors**

Color values. Pass as many parameters as needed. Range from 0 to 1.

0

**Result** Returns OK or error.

**Description**

The number of color components must match the number of components of the color space. The text color is inherited from the table, column, and row, in this order. The border color is inherited from columns and rows but not from the table since the table has its own border.

Extended color spaces will be deleted when the PDF file in memory is closed or when DynaPDF.Release was called. The color spaces must be recreated when the table should be drawn in another PDF file. Color space handles may change when recreated in another PDF file. All such colors should be set again to avoid issues with invalid color space handles.

Width exception of Lab colors, color values are in the range 0 through 1. Lab colors support different ranges for the L\*, a\*, and b\* components:

L\* -> 0..100

a\* -> -128 .. 127

b\* -> -128 .. 127

**Examples**

71.490. *DYNAPDF.TABLE.SETCOLORFLOAT* 3375

Set green text color:

```
MBS( "DynaPDF.Table.SetColorFloat"; $table; $Row; $Col; "TextColor"; "DeviceRGB"; 0; 1; 0 )
```

## 71.491 DynaPDF.Table.SetFlags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetFlags"; Table; Row; Col; Flags )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

#### Flags

The flags to set. Can be string identifier or the numerical values.

"HeaderRow"

**Result** Returns OK or error message.

### Description

Flags are inherited from the table, column, and rows, in this order.

Static	This flag avoids the deletion of cell contents when DynaPDF.Table.ClearContent, DynaPDF.Table.ClearColumn or DynaPDF.Table.ClearRow is called. The flag can be set to rows, columns, and cells.
HeaderRow	Header rows are the first rows which are drawn after a page break occurred. It is possible to mark more than one row as header row.
NoLineBreak	This flag avoids line breaks in cells which contain text. The flag is inherited from the table, columns, and rows. Text is output with WriteText() if this flag is set. See DynaPDF.Table.SetCellText for further information.
ScaleToRect	If set, images and templates are scaled into the cell so that both sides fit into the given width and height. The aspect ratio will be preserved. The flag is inherited from the table, columns, and rows.
UseImageCS	If set, images are inserted in the native image color space and embedded ICC profiles will be considered. The flag is inherited from the table, columns, and rows.

### Examples

Sets the HeaderRow flag for a row:

```
MBS("DynaPDF.Table.SetFlags"; $table; $row; -1; "HeaderRow")
```

Adds a header row:

```
# Add header row
Set Variable [ $row; Value:MBS("DynaPDF.Table.AddRow"; $table) ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 0; "right"; "top"; "Index") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 1; "left"; "top"; "Product") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 2; "right"; "top"; "Price") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 3; "right"; "top"; "Quantity") ]
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetCellText"; $table; $row; 4; "right"; "top"; "Total Price") ]
]
# set flag for header row
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetFlags"; $table; $row; -1; "HeaderRow") ]
# make row bold
Set Variable [ $r; Value:MBS("DynaPDF.Table.SetFont"; $table; $row; -1; "Helvetica"; 2; 1; "unicode") ]
```

## 71.492 DynaPDF.Table.SetFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetFont"; Table; Row; Col; Name; Style; Embed; CodePage )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

#### Name

The font name.

"Arial"

#### Style

The font style.

0

#### Embed

Whether to embed font. Can be 1 to embed or 0 to not embed font.

1

#### CodePage

The code page to use.

"Unicode"

**Result** Returns OK or error message.

### Description

The font is inherited from the table, column, and row, in this order. The font will be loaded when the table is drawn. The default font size is 10 units. It can be changed with DynaPDF.Table.SetFontSize. The default font selection mode is FamilyName. It can be changed with DynaPDF.Table.SetFontSelMode.

See also DynaPDF.SetFont for more details.

### Examples

Sets font for all cells to Helvetica:

```
MBS("DynaPDF.Table.SetFont"; $table; -1; -1; "Helvetica"; 0; 1; "unicode")
```

Sets row to bold:

## 71.492. *DYNAPDF.TABLE.SETFONT*

3379

Set Variable [ \$r; Value:MBS("DynaPDF.Table.SetFont"; \$table; \$row; -1; "Helvetica"; 2; 1; "unicode") ]

## 71.493 DynaPDF.Table.SetFontSelMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetFontSelMode"; Table; Row; Col; FontSelMode )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

#### Col

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

#### FontSelMode

The font selection mode. Can be FamilyName, PostscriptName or FullName.

"FamilyName"

**Result** Returns OK or error.

### Description

The font names used in the corresponding DynaPDF.Table.SetFont calls must coincide with the font selection mode. The font selection mode is inherited from the table, column, and row, in this order.

### See also

- 71.492 DynaPDF.Table.SetFont 3378
- 71.494 DynaPDF.Table.SetFontSize 3381

Created 18th August 2014, last changed 18th August 2014.

**71.494 DynaPDF.Table.SetFontSize**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetFontSize"; Table; Row; Col; Value )

**Parameters****Table**

The identifier for the table.

\$Table

**Row**

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

**Value**

The new font size.

14

**Result** Returns OK or error.

**Description**

The font size is inherited from the table, column, and row, in this order.

**Examples**

Sets the font size to 10 for all cells:

```
MBS("DynaPDF.Table.SetFontSize"; $table; -1; -1; 10)
```

Created 18th August 2014, last changed 18th August 2014.

**71.495 DynaPDF.Table.SetGridWidth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetGridWidth"; Table; Horz; Vert )

**Parameters****Table**

The identifier for the table.

\$Table

**Horz**

Horizontal grid width or zero.

0

**Vert**

Vertical grid width or zero.

0

**Result** Returns OK or error.

**Description**

The table grid consists of horizontal and vertical lines which are drawn in the middle of two rows or columns. The grid lines cover always the entire width or height of the table. The line widths can be set to different values for the horizontal and vertical lines. If no lines should be drawn then set the value to zero. The colors of horizontal and vertical grid lines can be set with DynaPDF.Table.SetRGBColor, DynaPDF.Table.SetColor or DynaPDF.Table.SetColorFloat.

Only the table supports grid lines. The parameters Row and Col of DynaPDF.Table.SetRGBColor, DynaPDF.Table.SetColor or DynaPDF.Table.SetColorFloat must be set to -1.

**Examples**

Set grid width:

```
MBS("DynaPDF.Table.SetGridWidth"; $table; 1; 1)
```

**See also**

### Example Databases

- [DynaPDF/Catalog with tables](#)
- [DynaPDF/Invoice/Invoice](#)
- [DynaPDF/Merge PDFs](#)
- [DynaPDF/Report](#)
- [DynaPDF/Tables](#)

Created 18th August 2014, last changed 18th August 2014.

**71.496 DynaPDF.Table.SetPDF**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetPDF"; Table; PDF )

**Parameters****Table**

The identifier for the table.

\$Table

**PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Result** Returns OK or error.

**Description**

The PDF instance must be changed if the table should be drawn into another PDF instance as the one for which the table was created.

Note that extended color spaces and templates depend on the PDF instance in which these objects were created. If the table contains such objects then it is normally not possible to change the PDF instance.

**71.497 DynaPDF.Table.SetRGBColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetRGBColor"; Table; Row; Col; Type; Red; Green; Blue )

**Parameters****Table**

The identifier for the table.

\$Table

**Row**

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1. Pass -1 for all rows.

0

**Col**

The column number. Range from 0 to DynaPDF.Table.GetNumCols-1. Pass -1 for all columns.

0

**Type**

Which table color. Can be BackColor, BorderColor, GridHorzColor, GridVertColor, ImageColor or TextColor.

"TextColor"

**Red**

The red color component. Range is from 0 to 255.

0

**Green**

The green color component. Range is from 0 to 255.

0

**Blue**

The blue color component. Range is from 0 to 255.

0

**Result** Returns OK or error.

**Description**

See also DynaPDF.Table.SetColorFloat.

**Examples**

Set green text color:

```
MBS( "DynaPDF.Table.SetRGBColor"; $table; $Row; $Col; "TextColor"; 0; 255; 0 )
```

Set white border color:

```
MBS("DynaPDF.Table.SetRGBColor"; $table; -1; -1; "BorderColor"; 255; 255; 255)
```

## 71.498 DynaPDF.Table.SetRowHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetRowHeight"; Table; Row; Height )

### Parameters

#### Table

The identifier for the table.

\$Table

#### Row

The row number. Range from 0 to DynaPDF.Table.GetNumRows-1.

0

#### Height

The new height.

20

**Result** Returns OK or error.

### Description

The value must be greater or equal zero. Foreground objects expand the height if necessary. The height must be greater zero if a cell uses a landscape orientation and if the height cannot be computed from the cell content. This is the case if a cell contains text and if the flag ScaleToRect is not set.

### See also

- 71.467 DynaPDF.Table.GetNextHeight 3336

- 71.473 DynaPDF.Table.GetTableHeight 3342
- 71.477 DynaPDF.Table.SetBorderWidth 3346
- 71.488 DynaPDF.Table.SetColWidth 3370
- 71.494 DynaPDF.Table.SetFontSize 3381
- 71.495 DynaPDF.Table.SetGridWidth 3383
- 71.499 DynaPDF.Table.SetTableWidth 3389

Created 18th August 2014, last changed 18th August 2014.

**71.499 DynaPDF.Table.SetTableWidth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Table.SetTableWidth"; Table; Value; AdjustType; MinColWidth )

**Parameters****Table**

The identifier for the table.

\$Table

**Value**

The new value for the table width.

500

**AdjustType**

The adjustment type. Can be UniqueWidth, AdjLeft or AdjRight.

"AdjLeft"

**MinColWidth**

The optional minimum column width.

100

**Result** Returns OK on succes.

**Description**

At least one column must be modified when the width will be changed. The parameter AdjustType specifies how the column widths should be modified. If the new width is larger, then the difference can be added to the left or right column, or all columns can get a unique width (TableWidth / NumColumns). The parameter MinColWidth is ignored in this case.

If the new width is smaller, then the difference must be subtracted from the columns. The parameter MinColWidth specifies in this case the minimum width of columns that must be adjusted. It is only used if AdjustType is not set to coaUniqueWidth. The column widths are adjusted starting from the left or right side as specified. If the width of the first column is not large enough to subtract the entire difference, then the minimum width is set to the column and the adjustment continues with the next column until the gap is zero.

If the new table width is smaller as MinColWidth \* NumColumns then the widths of the remaining columns will be set to zero. Such cases should be avoided since the column widths must be adjusted again when the table is drawn.

**71.500 DynaPDF.TextAnnot**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.TextAnnot"; PDF; PosX; PosY; Width; Height; Author; Text; Icon; Open )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

X-Coordinate of the annotation

100

**PosY**

Y-Coordinate of the annotation

100

**Width**

Width of the window in open state

100

**Height**

Height of the window in open state

100

**Author**

The author name. Can be empty.

"Christian Schmitz"

**Text**

The text for the annotation.

"Hello World"

**Icon**

Which icon to use. Can be Help, Insert, Key, NewParagraph, Note, Paragraph or UserDefined.

"Help"

**Open**

Should the annotation appear open or closed? Pass 1 for open or 0 for close.

1

**Result** Returns annotation handle or error.

**Description**

The parameters Width and Height define the size of the annotation's window. The window is shown in the open state of the annotation.

If the parameter Open is true, the annotation appears in its open state when opening the document. If the annotation is closed, the annotation's icon appears on screen.

The parameters Author and Text are optional, they can be empty. DynaPDF does not embed the annotation icon. However, since Acrobat 5 they are available in Adobe's Acrobat or Reader.

See also [TextAnnot](#) function in DynaPDF manual.

### Examples

Add text annotation:

```
Set Variable [ $r ; Value: MBS( "DynaPDF.TextAnnot"; $pdf; 50; 50; 300; 200; "Christian Schmitz"; "Hello World"; "Help"; 1) ]
```

### See also

**71.501 DynaPDF.TranslateCoords**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.TranslateCoords"; PDF; x; y )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.  
\$pdf

**x**

New coordinate origin of the x-axis  
\$x

**y**

New coordinate origin of the y-axis  
\$y

**Result** Returns OK on success and error on failure.

**Description**

Save the graphics state beforehand and restore it when finish.

After the coordinate system was changed by the function, bottom-up coordinates are active. It is not possible to use top-down coordinates with a transformed coordinate system.

Please do not try to scale/skew/translate back later. use DynaPDF.SaveGraphicState and DynaPDF.RestoreGraphicState.

See also [TranslateCoords](#) function in DynaPDF manual.

**Examples**

Translate and draw rectangle:

```
MBS( "DynaPDF.SaveGraphicState"; $PDF )
MBS( "DynaPDF.TranslateCoords"; $PDF; 200;200)
MBS( "DynaPDF.Rectangle"; $PDF; 0; 0; 200; 100; "stroke" )
MBS( "DynaPDF.RestoreGraphicState"; $PDF )
```

**71.502 DynaPDF.Triangle**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.Triangle"; PDF; x1; y1; x2; y2; x3; y3; FillMode )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**x1**

X-Coordinate of the first point

**y1**

Y-Coordinate of the first point

**x2**

X-Coordinate of the second point

**y2**

y-Coordinate of the second point

**x3**

X-Coordinate of the third point

**y3**

Y-Coordinate of the third point

**FillMode**

Fill mode. Can be FillNoClose, StrokeNoClose, FillStrokeNoClose, Fill, Stroke, FillStroke, FillEvOdd, FillStrokeEvOdd, FillEvOddNoClose, FillStrokeEvOddNoClose, NoFill or Close.

"fill"

**Result** Returns OK or error message.

**Description**

The draw direction can be changed with the function DynaPDF.SetDrawDirection.

A triangle is a closed path that can be filled, stroked or both. It is also possible to draw a triangle invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described under ClipPath(). The parameter FillMode is ignored if the triangle is drawn inside a clipping path. The fill modes are described under ClosePath().

**71.505 DynaPDF.WatermarkAnnot**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.WatermarkAnnot"; PDF; PosX; PosY; Width; Height )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

The x position.

**PosY**

The y position.

**Width**

The width of the watermark annotation.

**Height**

The height of the watermark annotation.

**Result** Returns annotation index or error.

**Description**

Watermark annotations have no interactive elements like other annotation types. This property is useful in many cases because it is usually not possible to select or change the contents of a watermark annotation in viewer applications.

The annotation has no appearance after it was created. Call DynaPDF.CreateAnnotAP to create an appearance template for the annotation. After the appearance template was created you can draw text, images or vector graphics into it. The template must be closed with DynaPDF.EndTemplate when finished. It is also possible to import an external page or EMF contents into the template.

Watermark annotations can be shared on multiple pages. To place the annotation on other pages call DynaPDF.AddAnnotToPage.

If the function succeeds the return value is the annotation handle, a value greater or equal zero.

If the function fails the function returns an error.

See also [WatermarkAnnot](#) function in DynaPDF manual.

- [MBS FileMaker Plugin, version 7.0pr1](#)

Created 13th December 2016, last changed 13th December 2016.

**71.506 DynaPDF.WebLink**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.WebLink"; PDF; PosX; PosY; Width; Height; URL )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

X-Coordinate of bounding rectangle

100

**PosY**

Y-Coordinate of bounding rectangle

100

**Width**

Width of bounding rectangle

100

**Height**

Height of bounding rectangle

20

**URL**

URL defined as null-terminated 7 bit ASCII string.

"http://www.mbsplugins.de"

**Result** Returns new handle or error.

**Description**

The parameter URL holds the URL defined as 7 bit ASCII string. A uniform resource locator (URL) is a string that resolves to a resource on the internet - typically a file that is the destination of a hypertext link, although it can also resolve to a query or other entity. A web link opens the standard browser to view the resource by default. The full version of Adobes Acrobat enables you also to embed a reverenced html resource in your document.

If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.

The border of the link annotation is drawn by using the current line width, stroke color and line dash pattern. If the link should appear without a border set the line width to zero beforehand (with DynaPDF.SetLineWidth).

When clicking on a link annotation the rectangle is highlighted, that is a simple visual effect. Several highlight modes are supported, see `DynaPDF.SetLinkHighlightMode` for further information.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is an error.

Please use `DynaPDF.WriteText` if you first want to add text to the page before you make it a clickable link.

Use `DynaPDF.WebLink` for web links, `DynaPDF.FileLink` for file links, `DynaPDF.PageLink` or `DynaPDF.PageLinkEx` for page links and `DynaPDF.FindText` can help to find the location where to place the link.

See also [WebLink](#) function in DynaPDF manual.

### Examples

Add a link to MBS Blog:

```
MBS( "DynaPDF.WebLink"; $PDF; 100; 100; 100; 20; "http://www.mbsplugins.de" )
```

Add various links to a page:

```
# import page

## 71.507 DynaPDF.WriteDemoText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.WriteDemoText"; PDF; Text { ; Font } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Text

The text to use.

"Hello World"

#### Font

Optional

The font to use. If the font used does not support all characters, the text may not show. Default is Helvetica.

"Arial Unicode MS"

**Result** Returns OK or error.

### Description

This allows you to watermark PDFs with a text like "Confidential".

If you use DynaPDF.SetAlpha, you can change the transparency. With DynaPDF.SetStrokeColor you can change the color.

### Examples

Add chinese text:

```
Set Variable [ $r ; Value: MBS("DynaPDF.WriteDemoText"; $pdf; "" ; "Arial Unicode MS" ) ]
```

### See also

**71.508 DynaPDF.WriteFText**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.WriteFText"; PDF; Align; Text { ; PlainText } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**Align**

The text alignment. Can be left, center, right or justify.

"left"

**Text**

The text to write.

"Hello World"

**PlainText**

Optional

Available in MBS FileMaker Plugin 9.1 or newer.

Pass 1 to ignore formatting commands and treat text as plain text. Default is 0 to interpret commands in text.

0

**Result** Returns OK or error message.

**Description**

Use DynaPDF.GetFTextHeightEx or DynaPDF.GetFTextHeight to calculate the space needed for the text if you want to create a matching text rectangle for vertical alignment.

See DynaPDF.AllowPageBreak for whether to do page breaks or not.

Please set a font first with DynaPDF.SetFont function before you write on the page.

See DynaPDF.WriteStyledText and DynaPDF.WriteStyledTextEx to convert FileMaker styles to DynaPDF commands.

See also [WriteFText](#) function in DynaPDF manual.

**Examples**

Writes some text:

```
MBS( "DynaPDF.WriteFText"; $PDF; "center"; "Hello World" )
```

Write text with font changing:

```
# Write some formatted text
```

## 71.508. DYNAPDF.WRITEFTEXT

**71.509 DynaPDF.WriteFTextEx**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.WriteFTextEx"; PDF; PosX; PosY; Width; Height; Align; Text { ; PlainText } )

**Parameters****PDF**

The PDF reference returned from DynaPDF.New.

\$pdf

**PosX**

X-Coordinate of output rectangle

\$x

**PosY**

Y-Coordinate of output rectangle

\$y

**Width**

Width of output rectangle

\$w

**Height**

Height of output rectangle or -1.

\$h

**Align**

The text alignment. Can be left, center, right or justify.

"left"

**Text**

The text to write.

"Hello World"

**PlainText**

Optional

Available in MBS FileMaker Plugin 9.1 or newer.

Pass 1 to ignore formatting commands and treat text as plain text. Default is 0 to interpret commands in text.

0

**Result** Returns OK or error message.

**Description**

Use DynaPDF.GetFTextHeightEx or DynaPDF.GetFTextHeight to calculate the space needed for the text if you want to create a matching text rectangle for vertical alignment.

See DynaPDF.AllowPageBreak for whether to do page breaks or not.

Please set a font first with DynaPDF.SetFont function before you write on the page.  
 See DynaPDF.WriteStyledTextEx to convert FileMaker styles to DynaPDF commands.  
 See also [WriteFTextEx](#) function in DynaPDF manual.

### Examples

Write text in a rectangle:

```
MBS( "DynaPDF.WriteFTextEx"; $PDF; 100; 500; 100; 100; "left"; "Hello World" )
```

Loop over pages and add page numbers:

```
Set Variable [ $PageCount; Value:MBS( "DynaPDF.GetPageCount"; $pdf ) ]
Set Variable [ $PageNumber; Value:1 ]
Set Variable [ $pageWidth; Value:MBS("DynaPDF.GetPageWidth"; $pdf) ]
Set Variable [ $pageHeight; Value:MBS("DynaPDF.GetPageHeight"; $pdf) ]
Loop
Set Variable [ $r; Value:MBS("DynaPDF.EditPage"; $pdf; $PageNumber) ]
Set Variable [ $r; Value:MBS( "DynaPDF.SetFont"; $pdf; "Helvetica"; 0; 12) ]
Set Variable [ $r; Value:MBS( "DynaPDF.WriteFTextEx"; $pdf; 50; $pageHeight - 50; $pageWidth-100; 30;
"right"; GetAsText($PageNumber) & " of " & $PageCount) ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
Set Variable [ $PageNumber; Value:$PageNumber + 1 ]
Exit Loop If [ $PageNumber >$PageCount ]
End Loop
```

Annotate PDF page with text on top center:

```
# make pdf
Set Field [ PDF::Annotated PDF; PDF::Original PDF ]
# Clear current PDF document
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# Load PDF from container
Set Variable [ $r; Value:MBS("DynaPDF.OpenPDFFromContainer"; $pdf; PDF::Original PDF) ]
Set Variable [ $r; Value:MBS("DynaPDF.ImportPDFFile"; $pdf) ]
# write on each page a header
Set Variable [ $index; Value:1 ]
Set Variable [ $count; Value:MBS("DynaPDF.GetPageCount"; $pdf) ]
Loop
Set Variable [ $r; Value:MBS("DynaPDF.EditPage"; $pdf; $index) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetPageCoords"; $pdf; "topdown") ]
Set Variable [ $r; Value:MBS("DynaPDF.SetFont"; $pdf; "Arial"; 0; 10; 1; "unicode") ]
Set Variable [ $pageWidth; Value:MBS("DynaPDF.GetPageWidth"; $pdf) ]
Set Variable [ $print; Value:MBS("DynaPDF.WriteFTextEx"; $pdf; 0; 20; $pageWidth; -1; "center"; "Doc
- " & PDF::PK & "" ) ]
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
Set Variable [ $index; Value:$index + 1 ]
Exit Loop If [ $index >$count ]
```

```

End Loop
# save
Set Field [ PDF::Annotated PDF; MBS( "DynaPDF.Save"; $PDF; "print.pdf" ) ]
# Cleanup
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]

```

Created 18th August 2014, last changed 6th February 2019.

## 71.510 DynaPDF.WriteFTextExRotated

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.WriteFTextExRotated"; PDF; PosX; PosY; Width; Height; Align; Text; Alpha { ; PlainText } )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### PosX

X-Coordinate of output rectangle

\$x

#### PosY

Y-Coordinate of output rectangle

\$y

#### Width

Width of output rectangle

\$w

#### Height

Height of output rectangle or -1.

\$h

#### Align

The text alignment. Can be left, center, right or justify.

"left"

#### Text

The text to write.

"Hello World"

#### Alpha

The rotation angle in degrees. From 0 to 360 degrees.

90

#### PlainText

Optional

Available in MBS FileMaker Plugin 9.1 or newer.

Pass 1 to ignore formatting commands and treat text as plain text. Default is 0 to interpret commands in text.

0

**Result** Returns OK or error message.

### Description

71.510. *DYNAPDF.WRITEFTEXTEXROTATED* 3413

Same as DynaPDF.WriteFTextEx, but with additional rotation in center of box.

See DynaPDF.WriteStyledTextExRotated to convert FileMaker styles to DynaPDF commands.

**See also**

## 71.511 DynaPDF.WriteStyledText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
71 DynaPDF	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "DynaPDF.WriteStyledText"; PDF; Align; Text )

### Parameters

#### PDF

The PDF reference returned from DynaPDF.New.

\$pdf

#### Align

The text alignment. Can be left, center, right or justify.

"left"

#### Text

The text to write.

"Hello World"

**Result** Returns OK or error.

### Description

Converts for you the styled text to the formatted text commands from DynaPDF.

Use DynaPDF.GetFTextHeightEx or DynaPDF.GetFTextHeight to calculate the space needed for the text if you want to create a matching text rectangle for vertical alignment.

See DynaPDF.AllowPageBreak for whether to do page breaks or not.

Please set a font first with DynaPDF.SetFont function before you write on the page. As this function uses font settings from FileMaker field, it may ignore whatever font or style you loaded before.

Internally calls DynaPDF.ConvertStyledText and DynaPDF.WriteFText.

### Examples

Write some styled text on a PDF page:

```
Set Variable [ $pdf; Value:MBS("DynaPDF.New") ]
# Add page
Set Variable [ $r; Value:MBS("DynaPDF.AppendPage"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetFont"; $pdf; "Helvetica"; 0; 12) ]
# Write some text
Set Variable [ $pw; Value:MBS("DynaPDF.GetPageWidth"; $pdf) ]
Set Variable [ $ph; Value:MBS("DynaPDF.GetPageHeight"; $pdf) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetFillColor"; $pdf; 0; 0; 0) ]
Set Variable [ $r; Value:MBS("DynaPDF.SetTextRect"; $pdf; 100; $ph-100; $pw-200; $ph-200) ]
Set Variable [ $r; Value:MBS("DynaPDF.WriteStyledText"; $pdf; "left"; Create Text::Text) ]
```

71.511. *DYNAPDF.WRITESTYLEDTEXT* 3415

```
# End page
Set Variable [ $r; Value:MBS("DynaPDF.EndPage"; $pdf) ]
# Render one page as Picture
Set Variable [ $PDFData; Value:MBS("DynaPDF.Save"; $pdf; "hello.pdf") ]
Set Variable [ $r; Value:MBS("DynaPDF.Release"; $pdf) ]
# Put in Container
Set Field [ Create Text::PDF; $PDFData ]
```

# Chapter 72

## EIDSDK

Functions to read eID cards with zetes bluetooth card reader on iOS.

### 72.1 EIDSDK.Address

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Address" )

**Result** Returns text or error.

#### Description

String containing street and number.

Created 13th November 2019, last changed 13th November 2019.

## 72.2 EIDSDK.BeginTransaction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.BeginTransaction" )

**Result** Returns OK or error.

**Description**

**See also**

- 72.12 EIDSDK.EndTransaction

3434

Created 13th November 2019, last changed 13th November 2019.

## 72.3 EIDSDK.CardDeliveryMunicipality

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.CardDeliveryMunicipality" )

**Result** Returns text or error.

### Description

This method reads the address data file from card and decodes municipality of delivery of the card.  
Created 13th November 2019, last changed 13th November 2019.

## 72.4 EIDSDK.CardNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.CardNumber" )

**Result** Returns text or error.

### Description

This method reads eID data file from card and decodes cardnumber.

### See also

- 72.7 EIDSDK.ChipNumber 3429
- 72.18 EIDSDK.NatNumber 3440

Created 13th November 2019, last changed 13th November 2019.

## 72.5 EIDSDK.CardValidFrom

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.CardValidFrom" )

**Result** Returns text or error.

### Description

String containing start of validity period for eID card data.

### See also

- 72.6 EIDSDK.CardValidTo

3428

Created 13th November 2019, last changed 13th November 2019.

## 72.6 EIDSDK.CardValidTo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.CardValidTo" )

**Result** Returns text or error.

### Description

String containing end of validity period for eID card data.

### See also

- 72.5 EIDSDK.CardValidFrom

3427

Created 13th November 2019, last changed 13th November 2019.

## 72.7 EIDSDK.ChipNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.ChipNumber" )

**Result** Returns text or error.

### Description

String containing chipnumber of eID card.

### See also

- 72.4 EIDSDK.CardNumber 3426
- 72.18 EIDSDK.NatNumber 3440

Created 13th November 2019, last changed 13th November 2019.

## 72.8 EIDSDK.Close

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Close" )

**Result** Returns OK or error.

### Description

Created 13th November 2019, last changed 13th November 2019.

**72.9 EIDSDK.DateOfBirth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.DateOfBirth" { ; asDate } )

**Parameters****asDate**

Optional

Whether to return as date or text. Pass 1 for date (default). Pass 0 for text.

1

**Result** Returns OK or error.

**Description**

String containing the date of birth of eID Card owner. This string contains the string data as it is encoded on card.

**See also**

- 72.24 EIDSDK.PlaceOfBirth

3446

Created 13th November 2019, last changed 28th November 2019.

## 72.10 EIDSDK.DocTypeInt

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

```
MBS( "EIDSDK.DocTypeInt" { ; asText } )
```

### Parameters

#### asText

Optional

Whether to return as text instead of numeric value. Pass 1 for text or 0 for number. Default is 0.

1

**Result** Returns number, text or error.

### Description

Created 13th November 2019, last changed 13th November 2019.

## 72.11 EIDSDK.Duplicate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Duplicate" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if flag is set.

Created 13th November 2019, last changed 13th November 2019.

## 72.12 EIDSDK.EndTransaction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.EndTransaction" )

**Result** Returns OK or error.

**Description**

**See also**

- 72.2 EIDSDK.BeginTransaction

3424

Created 13th November 2019, last changed 13th November 2019.

## 72.13 EIDSDK.FirstName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.FirstName" )

**Result** Returns text or error.

### Description

This method reads the ID data file from card and decodes the first name of the eID.

### Examples

Query full name:

```
Set Variable [ $Name ; Value: MBS( "EIDSDK.FirstName" ) & " from " & MBS( "EIDSDK.LastName" ) ]
```

### See also

- 72.15 EIDSDK.LastName 3437
- 72.35 EIDSDK.ThirdName 3457

Created 13th November 2019, last changed 13th November 2019.

## 72.14 EIDSDK.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Initialize" )

**Result** Returns OK or error.

### Description

This is for Zetes bluetooth card reader.

Please embed libeID-SDK.a into your FileMaker iOS SDK project.

Add bluetooth accessory devices to the provision profile, NSBluetoothPeripheralUsageDescription to info.plist as well as UISupportedExternalAccessoryProtocols with entry for "com.zetes.sipirom".

If needed we could add more functions to read certificates and raw ID files.

### Examples

Initialize in start script:

```
Set Variable [ $r ; Value: MBS( "EIDSDK.Initialize" ) ]
```

### See also

- 77.60 Events.Initialize

3626

Created 13th November 2019, last changed 13th November 2019.

## 72.15 EIDSDK.LastName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.LastName" )

**Result** Returns text or error.

### Description

This method reads the ID data file from card and decodes the last name of the eID.

### Examples

Query full name:

Set Variable [ \$Name ; Value: MBS( "EIDSDK.FirstName" ) & " from " & MBS( "EIDSDK.LastName" ) ]

### See also

- 72.13 EIDSDK.FirstName

3435

Created 13th November 2019, last changed 13th November 2019.

## 72.16 EIDSDK.MemberOfFamily

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.MemberOfFamily" )

**Result** Returns text or error.

### Description

Created 13th November 2019, last changed 13th November 2019.

## 72.17 EIDSDK.Municipality

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Municipality" )

**Result** Returns text or error.

### Description

String containing the municipality of the eID card owner.  
Created 13th November 2019, last changed 13th November 2019.

**72.18 EIDSDK.NatNumber**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.NatNumber" )

**Result** Returns text or error.

**Description**

The National security number should be used with caution.

Special permission from Belgian government is needed to use/store this number in databases related applications!

Returns string containing the national security number of the eID card owner.

**See also**

- 72.4 EIDSDK.CardNumber 3426
- 72.7 EIDSDK.ChipNumber 3429

Created 13th November 2019, last changed 13th November 2019.

## 72.19 EIDSDK.Nationality

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Nationality" )

**Result** Returns text or error.

### Description

This method reads the id data of eID card and decodes the nationality of eID card owner. This string can be encoded in different languages, mostly depending on card delivery municipality. (e.g. België - Belgiëën - Belgique)  
Created 13th November 2019, last changed 13th November 2019.

## 72.20 EIDSDK.NobleCondition

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.NobleCondition" )

**Result** Returns text or error.

### Description

Created 13th November 2019, last changed 13th November 2019.

## 72.21 EIDSDK.Open

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Open" )

**Result** Returns OK or error.

### Description

Created 13th November 2019, last changed 13th November 2019.

## 72.22 EIDSDK.PhotoDigest

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.PhotoDigest" )

**Result** Returns text or error.

### Description

Digest is returned base64 encoded.

Created 13th November 2019, last changed 13th November 2019.

## 72.23 EIDSDK.Picture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Picture" )

**Result** Returns container or error.

### Description

This is a JPEG picture returned as container value.

If no picture exists, we return empty result.

Picture in black and white is stored on eID card and is around 3kb in size.

Created 13th November 2019, last changed 13th November 2019.

## 72.24 EIDSDK.PlaceOfBirth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.PlaceOfBirth" )

**Result** Returns text or error.

### Description

String containing place of birth of eID card owner.

### See also

- 72.9 EIDSDK.DateOfBirth

3431

Created 13th November 2019, last changed 13th November 2019.

## 72.25 EIDSDK.PostalCode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.PostalCode" )

**Result** Returns text or error.

### Description

String containing the postal code of the eID card owner.  
Created 13th November 2019, last changed 13th November 2019.

## 72.26 EIDSDK.SDKReleaseDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.SDKReleaseDate" )

**Result** Returns text or error.

### Description

### Examples

Query version:

```
Set Variable [ $Version ; Value: MBS( "EIDSDK.SDKVersion" ) & " from " & MBS( "EIDSDK.SDKReleaseDate" ) ]
```

### See also

- 72.27 EIDSDK.SDKVersion

3449

Created 13th November 2019, last changed 13th November 2019.

**72.27 EIDSDK.SDKVersion**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.SDKVersion" )

**Result** Returns text or error.

**Description****Examples**

Query version:

```
Set Variable [ $Version ; Value: MBS( "EIDSDK.SDKVersion" ) & " from " & MBS( "EIDSDK.SDKReleaseDate" ) ]
```

**See also**

- [72.26 EIDSDK.SDKReleaseDate](#) 3448
- [72.36 EIDSDK.Version](#) 3458

Created 13th November 2019, last changed 13th November 2019.

## 72.28 EIDSDK.SetTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.SetTrigger"; FileName; ScriptName )

### Parameters

#### FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

#### ScriptName

The name of the script to run.

"MyScript"

**Result** Returns OK or error.

### Description

Parameter to the script is CardFound, CardGone, ReaderFound or ReaderGone.

Created 13th November 2019, last changed 13th November 2019.

## 72.29 EIDSDK.Sex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Sex" )

**Result** Returns text or error.

### Description

String containing sex of eID card owner.

Created 13th November 2019, last changed 13th November 2019.

## 72.30 EIDSDK.SpecialOrganisation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.SpecialOrganisation" )

**Result** Returns text or error.

### Description

Created 13th November 2019, last changed 13th November 2019.

## 72.31 EIDSDK.SpecialStatus

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.SpecialStatus" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if flag is set.

Created 13th November 2019, last changed 13th November 2019.

## 72.32 EIDSDK.StartScan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.StartScan" )

**Result** Returns OK or error.

**Description**

**See also**

- 72.33 EIDSDK.StopScan

3455

Created 13th November 2019, last changed 13th November 2019.

## 72.33 EIDSDK.StopScan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.StopScan" )

**Result** Returns OK or error.

**Description**

**See also**

- 72.32 EIDSDK.StartScan

3454

Created 13th November 2019, last changed 13th November 2019.

## 72.34 EIDSDK.SupportsPinPad

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.SupportsPinPad" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if supported, otherwise 0.

Created 13th November 2019, last changed 28th November 2019.

**72.35 EIDSDK.ThirdName**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.ThirdName" )

**Result** Returns text or error.

**Description**

This method reads the ID data file from card and decodes the first character of the third name of the eID.

**See also**

- 72.13 EIDSDK.FirstName

3435

Created 13th November 2019, last changed 13th November 2019.

## 72.36 EIDSDK.Version

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
72 EIDSDK	10.0	No	No	No	No	Yes

MBS( "EIDSDK.Version" )

**Result** Returns text or error.

**Description**

**See also**

- 72.27 EIDSDK.SDKVersion

3449

Created 13th November 2019, last changed 13th November 2019.

# Chapter 73

## EmailParser

Functions to parse emails and extract text, addresses and attachments.

Use CURL functions to query POP and IMAP servers to obtain the email content or load it from eml/emlx files.

You can send or receive emails with our CURL functions. For sending the SendMail functions help to build an email and send it, while EmailParser functions help to parse an email.

### 73.1 EmailParser.Address

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.Address"; EmailID; Index; Selector )

#### Parameters

##### EmailID

The ID fo the email parser.

\$Email

##### Index

The index from 0 to EmailParser.AddressCount-1.

0

##### Selector

Which value to return. Can be type, name or email.

"name"

**Result** Returns value or error.

#### Description

An address has a type which can be TO, CC, BCC, ReplyTo, Sender or From.  
Name is the label which can be empty. Email is the email address.

### Examples

Copy all addresses into records:

```
# find all addresses
Set Variable [ $EmailRecordID; Value:Get(RecordID) ]
Set Variable [ $i; Value:0 ]
Set Variable [ $c; Value:MBS("EmailParser.AddressCount"; $email) ]
If [ $c > 0 ]
Go to Related Record [ Show only related records; From table: "Address"; Using layout: "Address" (Address) ]
Go to Layout [ "Address" (Address) ]
Delete All Records [ No dialog ]
Loop
Set Variable [ $Name; Value:MBS("EmailParser.Address"; $email; $i; "name") ]
Set Variable [ $EmailAddress; Value:MBS("EmailParser.Address"; $email; $i; "email") ]
Set Variable [ $type; Value:MBS("EmailParser.Address"; $email; $i; "type") ]
New Record/Request
Set Field [ Address::Type; $type ]
Set Field [ Address::Email; $EmailAddress ]
Set Field [ Address::Name; $name ]
Set Field [ Address::EmailID; $EmailRecordID ]
Commit Records/Requests [ Skip data entry validation; No dialog ]
# next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i = $c ]
End Loop
End If
```

## 73.2 EmailParser.AddressCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.AddressCount"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns number or error.

### Description

This includes TO, CC, BCC, FROM, Reply-To and Sender entries.

### See also

- [73.1 EmailParser.Address](#) 3459
- [73.12 EmailParser.HeaderCount](#) 3475

## 73.3 EmailParser.AttachedEmails

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	9.4	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.AttachedEmails"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns list or error.

### Description

Sometimes Outlook may embed one email into another and this function returns the reference numbers for any email we got while parsing the email.

The list is empty usually, but may have one or more entries, if there are embedded emails with mime type message/rfc822.

If eml files are attached, they may show up as normal attachments.

### Example Databases

- [CURL/Email/IMAP Email](#)

### 73.3.1 Blog Entries

## 73.4 EmailParser.Attachment

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.Attachment"; EmailID; Index; Selector { ; Extra } )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

#### Index

The index from 0 to EmailParser.AttachmentCount-1.

0

#### Selector

Which value to return. Can be Filename, MimeType, MimeVersion, ContentType, ContentTransferEncoding, ContentDisposition, ContentDescription, contentId, text or container.

"Filename"

#### Extra

Optional

For selector = container, you can pass an alternative file name. For selector = text, you can pass text encoding here.

**Result** Returns value or error.

### Description

You can query for example the file name or the mime type.

For storing in a container, you can query the container property. The attachment is decoded by the plugin.

If you need to directly write to a file, you can use the EmailParser.WriteAttachment function.

You can use Text.MimeTypeToFileExtension to find the file extension for mime type.

### Examples

Copy all attachments into records:

```
# find all attachments
Set Variable [ $i; Value:0 ]
Set Variable [ $c; Value:MBS("EmailParser.AttachmentCount"; $email) ]
If [ $c >0 ]
Go to Related Record [ Show only related records; From table: "Attachment"; Using layout: "Attachment"
(Attachment) ]
Go to Layout [ "Attachment" (Attachment) ]
Delete All Records [ No dialog ]
Loop
Set Variable [ $Name; Value:MBS("EmailParser.attachment"; $email; $i; "filename") ]
Set Variable [ $content; Value:MBS("EmailParser.attachment"; $email; $i; "container") ]
```

```
New Record/Request
Set Field [ Attachment::Content; $content ]
Set Field [ Attachment::FileName; $name ]
Set Field [ Attachment::EmailID; $EmailRecordID ]
Commit Records/Requests [ Skip data entry validation; No dialog ]
# next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i = $c ]
End Loop
End If
```

## 73.5 EmailParser.AttachmentCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.AttachmentCount"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns number or error.

### Description

#### See also

## 73.6 EmailParser.Free

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.Free"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns OK or error.

### Description

Please call this function always with the reference numbers you got from `CURL.GetResultAsEmail` or `EmailParser.Parse`.

### Examples

Parse Subject, PlainText and HTMLText from email:

```
Set Variable [ $email; Value:MBS("EmailParser.Parse"; Email Parser::Input) ]
If [ MBS("IsError") = 1 ]
Show Custom Dialog [ "Failed to parse email."; Middle($email; 7; Length($email)) ]
Exit Script [ ]
End If
# Show text:
Set Field [ Email Parser::Subject; MBS("EmailParser.Subject"; $email) ]
Set Field [ Email Parser::PlainText; MBS("EmailParser.plainText"; $email) ]
Set Field [ Email Parser::HTMLText; MBS("EmailParser.HTMLText"; $email) ]
# cleanup
Set Variable [ $r; Value:MBS("EmailParser.Free"; $email) ]
```

## 73.7 EmailParser.HTMLText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.HTMLText"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns text or error.

### Description

May be empty for text only emails.

### Examples

Parse Subject, PlainText and HTMLText from email:

```
Set Variable [ $email; Value:MBS("EmailParser.Parse"; Email Parser::Input) ]
If [ MBS("IsError") = 1 ]
Show Custom Dialog [ "Failed to parse email."; Middle($email; 7; Length($email)) ]
Exit Script [ ]
End If
# Show text:
Set Field [ Email Parser::Subject; MBS("EmailParser.Subject"; $email) ]
Set Field [ Email Parser::PlainText; MBS("EmailParser.plainText"; $email) ]
Set Field [ Email Parser::HTMLText; MBS("EmailParser.HTMLText"; $email) ]
# cleanup
Set Variable [ $r; Value:MBS("EmailParser.Free"; $email) ]
```

## 73.8 EmailParser.HTMLToPlainText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.HTMLToPlainText"; HTML )

### Parameters

#### HTML

The HTML text to convert.

"<p>Hello World</p>"

**Result** Returns text or error.

### Description

This is used internally for HTML only emails.

Does not convert formatting. Just removes html tags, adds new line characters and translates html entities.

See also `Text.DecodeFromHTML` for just removing html entities.

### See also

## 73.9 EmailParser.HasHeader

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.HasHeader"; EmailID; HeaderName )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

#### HeaderName

The name of the header to look for.

"X-Priority"

**Result** Returns 1, 0 or error.

### Description

#### See also

- [73.11 EmailParser.Header](#)

## 73.10 EmailParser.Hash

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.Hash"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns text or error.

### Description

You can use this hash to identify an email and check for duplicates.

### See also

## 73.11 EmailParser.Header

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.Header"; EmailID; Index; Selector )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

#### Index

The index from 0 to EmailParser.HeaderCount-1.

0

#### Selector

Which value to return. Can be "name" or "value".

"name"

**Result** Returns text or error.

### Description

Common header values include Date, Subject, From and X-Mailer.

### Examples

Query first header entry:

```
$name = MBS( "EmailParser.Header"; $EmailID; 0; "name" )
```

```
$value = MBS( "EmailParser.Header"; $EmailID; 0; "value" )
```

Find a header value by name:

```
Set Variable [ $i; Value:0 ]
```

```
Set Variable [ $c; Value:MBS("EmailParser.HeaderCount"; $email) ]
```

```
If [ $c >0 ]
```

```
Loop
```

```
Set Variable [ $HeaderName; Value:MBS("EmailParser.Header"; $email; $i; "name") ]
```

```
If [ $HeaderName = "X-Mailer" ]
```

```
Set Variable [ $HeaderValue; Value:MBS("EmailParser.Header"; $email; $i; "value") ]
```

```
Set Field [ Email Parser::Mailer; $HeaderValue ]
```

```
End If
```

```
# next
```

```
Set Variable [ $i; Value:$i + 1 ]
```

```
Exit Loop If [ $i = $c ]
```

```
End Loop
```

```
End If
```

Copy all headers into records:

```

Set Variable [ $i ; Value: 0 ]
Set Variable [ $c ; Value: MBS("EmailParser.HeaderCount"; $email) ]
If [ $c >0 ]
Loop
Set Variable [ $HeaderName ; Value: MBS("EmailParser.Header"; $email; $i; "name") ]
Set Variable [ $HeaderValue ; Value: MBS("EmailParser.Header"; $email; $i; "value") ]
New Record/Request
Set Field [ EmailHeaders::EmailID ; $EmailRecordID ]
Set Field [ EmailHeaders::HeaderName ; $HeaderName ]
Set Field [ EmailHeaders::HeaderValue ; $HeaderValue ]
Commit Records/Requests [ With dialog: Off ]
# next
Set Variable [ $i ; Value: $i + 1 ]
Exit Loop If [ $i = $c ]
End Loop
End If

```

## 73.13 EmailParser.HeaderValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.HeaderValue"; EmailID; HeaderName )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

#### HeaderName

The name of the header to look for.

"X-Priority"

**Result** Returns value or error.

### Description

Returns empty value if header is not found.

Queries of course only first value in case the header is there multiple times!

### Examples

Query priority:

```
Set Variable [ $HeaderValue ; Value: MBS("EmailParser.HeaderValue"; $email; "X-Priority") ]
Show Custom Dialog [ "Subject" ; $HeaderValue ]
```

### See also

## 73.14 EmailParser.Inline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.Inline"; EmailID; Index; Selector { ; Extra } )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

#### Index

The index from 0 to EmailParser.InlineCount-1.

0

#### Selector

Which value to return. Can be Filename, MimeType, MimeVersion, ContentType, ContentTransferEncoding, ContentDisposition, ContentDescription, contentId, text or container.

"Filename"

#### Extra

Optional

For selector = container, you can pass an alternative file name. For selector = text, you can pass text encoding here.

**Result** Returns value or error.

### Description

You can query for example the file name or the mime type.

For storing in a container, you can query the container property. The inline graphics is decoded by the plugin.

You can use Text.MimeTypeToFileExtension to find the file extension for mime type.

### Examples

Copy all inline graphics into records:

```
# find all inline graphics
Set Variable [ $i; Value:0 ]
Set Variable [ $c; Value:MBS("EmailParser.InlineCount"; $email) ]
If [ $c >0 ]
Go to Related Record [ Show only related records; From table: "InlineGraphics"; Using layout: "Inline-
Graphics" (InlineGraphics) ]
Go to Layout [ "InlineGraphics" (InlineGraphics) ]
Delete All Records [ No dialog ]
Loop
Set Variable [ $Name; Value:MBS("EmailParser.inline"; $email; $i; "filename") ]
Set Variable [ $content; Value:MBS("EmailParser.Inline"; $email; $i; "container") ]
New Record/Request
```

```
Set Field [ InlineGraphics::Content; $content ]
Set Field [ InlineGraphics::FileName; $name ]
Set Field [ InlineGraphics::EmailID; $EmailRecordID ]
Commit Records/Requests [ Skip data entry validation; No dialog ]
# next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i = $c ]
End Loop
End If
```

MBS( "EmailParser.InlineCount"; EmailID )

**Parameters****EmailID**

The ID fo the email parser.

\$Email

**Result** Returns number or error.

**Description**

Inline graphics are stored by plugin as inlines while attachments are stored separately.

**See also**

## 73.17 EmailParser.MessageID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.MessageID"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns message ID or error.

### Description

#### 73.17.1 Blog Entries

- [MBS FileMaker Plugin, version 10.2pr7](#)

Created 24th September 2015, last changed 24th September 2015.

## 73.18 EmailParser.Parse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.Parse"; EmailSource { ; Encoding } )

### Parameters

#### EmailSource

The source code of an email as text. e.g. as downloaded via IMAP/POP3 functions in CURL.

\$EmailContent

#### Encoding

Optional

The text encoding for text parameter. Default is native.

UTF8

**Result** Returns Reference number or error.

### Description

If no error occurs, the parser will separate subject, html and plain text, attachments and inline graphics, all addresses and header entries. You can then use other functions to query values.

If you expect UTF-8 and you have the text in a field already, you may want to pass UTF-8 here for encoding.

If you have EMLX files, please use Text.ReadEMLXFile function first to unpack them and pass the email source to EmailParser.Parse function.

### Examples

Parse an email and copy data into records:

```
Set Variable [ $email; Value:MBS("EmailParser.Parse"; Email Parser::Input) ]
If [ MBS("IsError") = 1 ]
Show Custom Dialog [ "Failed to parse email."; Middle($email; 7; Length($email)) ]
Exit Script [ ]
End If
# Show text:
Set Field [ Email Parser::Subject; MBS("EmailParser.Subject"; $email) ]
Set Field [ Email Parser::PlainText; MBS("EmailParser.plainText"; $email) ]
Set Field [ Email Parser::HTMLText; MBS("EmailParser.HTMLText"; $email) ]
# find all addresses
Set Variable [ $EmailRecordID; Value:Get(RecordID) ]
Set Variable [ $i; Value:0 ]
Set Variable [ $c; Value:MBS("EmailParser.AddressCount"; $email) ]
If [ $c >0 ]
Go to Related Record [ Show only related records; From table: "Address"; Using layout: "Address" (Address) ]
```

```

Go to Layout [ "Address" (Address) ]
Delete All Records [ No dialog ]
Loop
Set Variable [ $Name; Value:MBS("EmailParser.Address"; $email; $i; "name") ]
Set Variable [ $emailAddress; Value:MBS("EmailParser.Address"; $email; $i; "email") ]
Set Variable [ $type; Value:MBS("EmailParser.Address"; $email; $i; "type") ]
New Record/Request
Set Field [ Address::Type; $type ]
Set Field [ Address::Email; $emailAddress ]
Set Field [ Address::Name; $name ]
Set Field [ Address::EmailID; $EmailRecordID ]
Commit Records/Requests [ Skip data entry validation; No dialog ]
# next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i = $c ]
End Loop
End If
# find all attachments
Set Variable [ $i; Value:0 ]
Set Variable [ $c; Value:MBS("EmailParser.AttachmentCount"; $email) ]
If [ $c >0 ]
Go to Related Record [ Show only related records; From table: "Attachment"; Using layout: "Attachment"
(Attachment) ]
Go to Layout [ "Attachment" (Attachment) ]
Delete All Records [ No dialog ]
Loop
Set Variable [ $Name; Value:MBS("EmailParser.attachment"; $email; $i; "filename") ]
Set Variable [ $content; Value:MBS("EmailParser.attachment"; $email; $i; "container") ]
New Record/Request
Set Field [ Attachment::Content; $content ]
Set Field [ Attachment::FileName; $name ]
Set Field [ Attachment::EmailID; $EmailRecordID ]
Commit Records/Requests [ Skip data entry validation; No dialog ]
# next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i = $c ]
End Loop
End If
# find all inline graphics
Set Variable [ $i; Value:0 ]
Set Variable [ $c; Value:MBS("EmailParser.InlineCount"; $email) ]
If [ $c >0 ]
Go to Related Record [ Show only related records; From table: "InlineGraphics"; Using layout: "Inline-
Graphics" (InlineGraphics) ]
Go to Layout [ "InlineGraphics" (InlineGraphics) ]
Delete All Records [ No dialog ]
Loop
Set Variable [ $Name; Value:MBS("EmailParser.inline"; $email; $i; "filename") ]

```

```

Set Variable [ $content; Value:MBS("EmailParser.Inline"; $email; $i; "container") ]
New Record/Request
Set Field [ InlineGraphics::Content; $content ]
Set Field [ InlineGraphics::FileName; $name ]
Set Field [ InlineGraphics::EmailID; $EmailRecordID ]
Commit Records/Requests [ Skip data entry validation; No dialog ]
# next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i = $c ]
End Loop
End If
Go to Layout [ original layout ]
# find a header
Set Variable [ $i; Value:0 ]
Set Variable [ $c; Value:MBS("EmailParser.HeaderCount"; $email) ]
If [ $c >0 ]
Loop
Set Variable [ $HeaderName; Value:MBS("EmailParser.Header"; $email; $i; "name") ]
If [ $HeaderName = "X-Mailer" ]
Set Variable [ $HeaderValue; Value:MBS("EmailParser.Header"; $email; $i; "value") ]
Set Field [ Email Parser::Mailer; $HeaderValue ]
End If
# next
Set Variable [ $i; Value:$i + 1 ]
Exit Loop If [ $i = $c ]
End Loop
End If
# cleanup
Set Variable [ $r; Value:MBS("EmailParser.Free"; $email) ]

```

Extract email text:

```

Set Variable [ $EmailID; Value:MBS( "EmailParser.Parse"; email::raw) ]
Set Field [ email::raw_plainText; MBS( "EmailParser.PlainText"; $EmailID ) ]
Set Field [ email::raw_htmltext; MBS( "EmailParser.HTMLText"; $EmailID ) ]
Set Variable [ $r; Value:MBS( "EmailParser.Free"; $EmailID) ]

```

## 73.19 EmailParser.ParseContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.ParseContainer"; EmailSource )

### Parameters

#### EmailSource

The container field that holds the EML file to be parsed.

The container value, which embeds the email text as FILE data. e.g. you imported the eml file into the container with our plugin or Filemaker's import script step.

MyTable::myContainer

**Result** Returns OK or error.

### Description

Parses an email file stored in container and returns a reference that can be used by other EmailParser functions to extract specific data elements (e.g. EmailParser.subject to extract the email subject).

This function applies only to EML files. For EMLX files, please use the Text.ReadEMLXFile function to extract the source of the email file and then use the EmailParser.Parse function to get a reference for further parsing).

Be sure to use EmailParser.Free to release the reference once you have finished processing the email file. This frees up memory that is holding the parsed email.

If no error occurs, the parser will separate subject, html and plain text, attachments and inline graphics, all addresses and header entries. You can then use other EmailParser functions to query values.

## 73.20 EmailParser.ParseFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.ParseFile"; Path )

### Parameters

#### Path

Native file path.

"C:\Documents\Test.eml"

**Result** Returns Reference number or error.

### Description

This is for emails stored as text file with eml file name extension.

If no error occurs, the parser will separate subject, html and plain text, attachments and inline graphics, all addresses and header entries. You can then use other functions to query values.

If you have EMLX files, please use Text.ReadEMLXFile function first to unpack them and pass the email source to EmailParser.Parse function.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

## 73.21 EmailParser.PlainText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.PlainText"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns text or error.

### Description

For HTML only email, the plugin will extract text. This text may be okay for full text search, but not necessarily good to display to user.

### Examples

Parse Subject, PlainText and HTMLText from email:

```
Set Variable [ $email; Value:MBS("EmailParser.Parse"; Email Parser::Input) ]
If [ MBS("IsError") = 1 ]
Show Custom Dialog [ "Failed to parse email."; Middle($email; 7; Length($email)) ]
Exit Script [ ]
End If
# Show text:
Set Field [ Email Parser::Subject; MBS("EmailParser.Subject"; $email) ]
Set Field [ Email Parser::PlainText; MBS("EmailParser.plainText"; $email) ]
Set Field [ Email Parser::HTMLText; MBS("EmailParser.HTMLText"; $email) ]
# cleanup
Set Variable [ $r; Value:MBS("EmailParser.Free"; $email) ]
```

## 73.22 EmailParser.ProcessImageReferences

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.ProcessImageReferences"; HTMLText )

### Parameters

#### HTMLText

The HTML text from the email containing image references with "cid:" in the address.

**Result** Returns html or error.

### Description

All cid: links are found. : and / are replaced with dash.

You can write all inline graphics files to a directory with html and rename the files the same way.

Now you can point a webviewer to the html file and load it.

(see example database)

### Example Databases

- [CURL/Email/Email Parser and Preview](#)

Created 3th July 2016, last changed 4th July 2016.

## 73.23 EmailParser.ReceiveDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.ReceiveDate"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns timestamp or error.

### Description

Can be empty. This is for received time at server.

The plugin looks in email headers for a receive: header and parses the date.

The returned date is normalized to current time zone.

### Examples

Show dates:

```
Set Field [ Email Parser::Date1; MBS("EmailParser.SentDate"; $email) ]
```

```
Set Field [ Email Parser::Date2; MBS("EmailParser.ReceiveDate"; $email) ]
```

## 73.24 EmailParser.SentDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.SentDate"; EmailID )

(old name: EmailParser.Date)

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns timestamp or error.

### Description

Can be empty. This is the sent date from email client.

The plugin looks in email headers for a Date: header and parses the date.

The returned date is normalized to current time zone.

### Examples

Show dates:

```
Set Field [ Email Parser::Date1; MBS("EmailParser.SentDate"; $email) ]
```

```
Set Field [ Email Parser::Date2; MBS("EmailParser.ReceiveDate"; $email) ]
```

## 73.26 EmailParser.SourceWithoutAttachments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.SourceWithoutAttachments"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns text or error.

### Description

The plugin passes the email, removes attachments and produces this source for you.

Can be useful to archive emails without attachments.

### Example Databases

- [CURL/Email/Email Client](#)

### 73.26.1 Blog Entries

- [MBS FileMaker Plugin, version 9.4pr8](#)
- [MBS FileMaker Plugin, version 5.4pr1](#)

## 73.27 EmailParser.Subject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.Subject"; EmailID )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

**Result** Returns text or error.

### Description

### Examples

Parse Subject, PlainText and HTMLText from email:

```
Set Variable [ $email; Value:MBS("EmailParser.Parse"; Email Parser::Input) ]
If [ MBS("IsError") = 1 ]
Show Custom Dialog [ "Failed to parse email."; Middle($email; 7; Length($email)) ]
Exit Script [ ]
End If
# Show text:
Set Field [ Email Parser::Subject; MBS("EmailParser.Subject"; $email) ]
Set Field [ Email Parser::PlainText; MBS("EmailParser.plainText"; $email) ]
Set Field [ Email Parser::HTMLText; MBS("EmailParser.HTMLText"; $email) ]
# cleanup
Set Variable [ $r; Value:MBS("EmailParser.Free"; $email) ]
```

Created 24th September 2015, last changed 16th October 2015.

## 73.28 EmailParser.WriteAttachment

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.WriteAttachment"; EmailID; Index; Path )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

#### Index

The index from 0 to EmailParser.AttachmentCount-1.

0

#### Path

Native file path.

C:\Documents\Test.Txt

**Result** Returns OK or error.

### Description

Our plugin decodes attachments for you, so the file should be directly useable.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

## 73.29 EmailParser.WriteInline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
73 EmailParser	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "EmailParser.WriteInline"; EmailID; Index; Path )

### Parameters

#### EmailID

The ID fo the email parser.

\$Email

#### Index

The index from 0 to EmailParser.InlineCount-1.

0

#### Path

Native file path.

C:\Documents\Test.Txt

**Result** Returns OK or error.

### Description

Our plugin decodes inline graphics for you, so the file should be directly useable.

# Chapter 74

## Encryption

Encrypt or Decrypt with AES or Blowfish

### 74.1 Encryption.Cipher

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.Cipher"; Direction; Algorithm; KeyType; KeyData; KeyEncoding; InputType; InputData; InputEncoding; OutputType { ; OutputInfo; IVType; IVData; IVEncoding; Padding } )

#### Parameters

##### Direction

Whether to encrypt or decrypt. Pass encrypt or decrypt.  
"encrypt"

##### Algorithm

Which algorithm to use. Can be for example RC2, blowfish, AES128, AES192, AES256.  
"AES-128-CFB"

##### KeyType

The type of input for key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.  
"Text"

##### KeyData

The actual input data for the key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes. If the key is text, please check what type of line ending you use and whether to trim the key.  
"Hello World"

##### KeyEncoding

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

**InputType**

The type of input. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

**InputData**

The actual input data. Text, container or file path.

"Hello World"

**InputEncoding**

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

**OutputType**

The output type. Can be Base64, Hex, Text, File, Path. Can be Auto in plugin version 7.3 to detect type for container from OutputInfo parameter.

"Hex"

**OutputInfo**

Optional

The addition info for output. For text it is the text encoding, for file container the file name and for path the actual native file path.

""

**IVType**

Optional

The type of input. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex. In version 6.0 and newer you can pass Input here to take IV from input data.

"Text"

**IVData**

Optional

The actual input data for the IV. Text, container or file path. Must not be longer than the maximum IV length of the given algorithm. If IV is too short, we pad it with zero bytes.

"Hello World"

**IVEncoding**

Optional

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

**Padding**

Optional

Whether to use padding. Pass 1 to enable padding (default). Pass 0 to disable.

0

**Result** Returns encrypted/decrypted value or text.

**Description**

Input can be one of different types:

- Text, you pass "text", your text and the text encoding. If no or invalid encoding name is passed, the native one is used. The encoding can be one of the following strings: ansi, windows, mac, latin1, utf8, dos or native.
- PDF, you pass the container with the PDF file inside.
- Image, you pass the container with an image file.
- Data, you pass container and plugin looks for the file data inside.
- Hex, you pass a hex encoded text.
- Base64, you pass a base64 encoded text.
- Path, you pass the file path to a file to read.
- Container, you pass a container which is serialized with all its content.
- JPEG, a container with a JPEG image.
- GIF, a container with a GIF image.
- TIFF, a container with a TIFF image.
- PNG, a container with a PNG image.

Now for output we can return the data in various ways:

- Text, we return the data as text in the encoding. This is not recommended for encrypted data. `OutputInfo` parameter is text encoding.
- Base64, the data is returned as base64 encoded text.
- Hex, the data is returned as hex encoded text.
- File, the data is returned as a container value with a file inside containing the data. `OutputInfo` parameter is the filename to be stored in the container value.
- Path, the data is written to a file. In the `OutputInfo` parameter you provide a native file path.
- Container, the data is unpacked as a container value (serialized container).
- GIF, the data is returned as a container with GIF image inside.
- TIFF, the data is returned as a container with TIFF image inside.
- JPEG, the data is returned as a container with JPEG image inside.
- PNG, the data is returned as a container with PNG image inside.
- PDF, the data is returned as a container with PDF document inside.
- Auto, only for returning data and detecting type by provided file name. (new in 7.3)

Encrypt with AES 256bit Counter (CTR) mode:

```
# Make a 256 bit key with a hash
Set Variable [ $hash; Value:MBS( "Hash.Digest"; "SHA256"; "Text"; "My Secret Password"; "UTF-8";
"Hex" ) ]
# now encrypt some text
Set Variable [ $encrypted; Value:MBS( "Encryption.Cipher"; "encrypt"; "AES-256-CTR"; "Hex"; $hash; "";
"Text"; "Hello World"; "UTF-8"; "Hex"; "" ) ]
# and show encrypted text
Show Custom Dialog [ $encrypted ]
```

Encrypt Umsatzzähler für Registrierkasse mit AES ICM/CTR:

```
MBS( "Encryption.Cipher"; "encrypt"; "AES-128-CTR"; "TEXT"; $Schlüssel; "UTF-8"; "Hex"; $KodierterUm-
satzzählers; ""; "Hex"; ""; "Text"; $Kassenidentifikationsnummer & $Belegnummer; "UTF-8" )
```

Decrypt Blowfish ECB:

```
MBS( "Encryption.Cipher"; "decrypt"; "bf-ecb"; "TEXT"; "strunzhasensalat"; "UTF-8"; "base64"; "TkfrF-
BRE0pkp3lzEX7YibCVnz+S79ckp"; ""; "Text"; "UTF-8" )
```

## 74.2 Encryption.CipherNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	8.5	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.CipherNames" )

**Result** Returns list or error.

### Description

The list is not the same for Mac/iOS, Windows and Linux.

### See also

- [74.1 Encryption.Cipher](#) 3499
- [74.7 Encryption.DigestNames](#) 3514

### 74.2.1 Blog Entries

Created 25th September 2018, last changed 25th September 2018.

## 74.3 Encryption.DecryptAES

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.DecryptAES"; key; text { ; iv } )

### Parameters

#### key

The key you want to use.

"Hello"

#### text

The text to decrypt. Should be hex encoded bytes from Encryption.EncryptAES.

"1234567809ABCDEF"

#### iv

Optional

The initial vector as a text with up to 16 bytes length.

"1234567890ABCDEF"

**Result** Returns decrypted text.

### Description

This function uses UTF-8 for key, text and iv parameters.

Keys shorter than 128 bit, 192 bit or 256 bit length are padded with null bytes to right size. This means that only the first 32 characters are used at most.

The plugin has no idea to verify if the key is correct. You need to make sure that you check if result is correct, e.g. by using a hash to verify if result is the expected value.

Deprecated. Please move to Encryption.Cipher for new projects.

### Examples

Simply decrypt a text:

MBS( "Encryption.DecryptAES"; \$key; \$encrypted )

## 74.4 Encryption.DecryptBlowfish

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.DecryptBlowfish"; key; text { ; iv } )

### Parameters

#### key

The key you want to use.

"Hello"

#### text

The text to decrypt. Should be hex encoded bytes from Encryption.EncryptAES.

"1234567809ABCDEF"

#### iv

Optional

The initial vector as a text with up to 16 bytes length.

"1234567890ABCDEF"

**Result** Returns decrypted text.

### Description

This function uses UTF-8 for key, text and iv parameters.

For blowfish the key length is limited to 72 characters.

The plugin has no idea to verify if the key is correct. You need to make sure that you check if result is correct, e.g. by using a hash to verify if result is the expected value.

Deprecated. Please move to Encryption.Cipher for new projects.

### Examples

Simply decrypt a text:

MBS( "Encryption.DecryptBlowfish"; \$key; \$encrypted )

### See also

Created 18th August 2014, last changed 24th October 2018.

## 74.5 Encryption.DecryptContainerAES

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.DecryptContainerAES"; key; value { ; iv } )

### Parameters

#### key

The key you want to use.

"Hello"

#### value

The container value to use.

\$inputData

#### iv

Optional

The initial vector as a text with up to 16 bytes length.

"1234567890ABCDEF"

**Result** Returns error or decrypted container value.

### Description

The function expects you to use the same key as encryption and a container value produced by the Encryption.EncryptContainerAES function. The function does not store the key, but once the data is decrypted it can decide if they make sense and return an error about a wrong key if data is looking strange.

Keys shorter than 128 bit, 192 bit or 256 bit length are padded with null bytes to right size. This means that only the first 32 characters are used at most.

The plugin has no idea to verify if the key is correct. You need to make sure that you check if result is correct, e.g. by using a hash to verify if result is the expected value.

Deprecated. Please move to Encryption.Cipher for new projects.

### Examples

Encrypt and Decrypt:

```
set variable $key to "Hello"
```

```
set variable $encryptedData to MBS( "Encryption.EncryptContainerAES"; $key; $inputData )
```

```
set variable $decryptedData to MBS( "Encryption.DecryptContainerAES"; $key; $encryptedData )
```

## 74.6 Encryption.DecryptContainerBlowfish

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.DecryptContainerBlowfish"; key; value { ; iv } )

### Parameters

#### key

The key you want to use.  
"Hello"

#### value

The container value to use.  
\$inputData

#### iv

Optional  
The initial vector as a text with up to 16 bytes length.  
"1234567890ABCDEF"

**Result** Returns error or decrypted container value.

### Description

The function expects you to use the same key as encryption and a container value produced by the Encryption.EncryptContainerBlowfish function. The function does not store the key, but once the data is decrypted it can decide if they make sense and return an error about a wrong key if data is looking strange.

For blowfish the key length is limited to 72 characters.

The plugin has no idea to verify if the key is correct. You need to make sure that you check if result is correct, e.g. by using a hash to verify if result is the expected value.

Deprecated. Please move to Encryption.Cipher for new projects.

### Examples

Encrypt and Decrypt:

```
set variable $key to "Hello"
set variable $encryptedData to MBS( "Encryption.EncryptContainerBlowfish"; $key; $inputData )
set variable $decryptedData to MBS( "Encryption.DecryptContainerBlowfish"; $key; $encryptedData )
```

## 74.8 Encryption.EncryptAES

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.EncryptAES"; key; text { ; iv } )

### Parameters

#### key

The key you want to use.

"Hello"

#### text

The text to encrypt.

"Hello World"

#### iv

Optional

The initial vector as a text with up to 16 bytes length.

"1234567890ABCDEF"

**Result** Returns encrypted text encoded as hex.

### Description

This function uses UTF-8 for key, text and iv parameters.

Keys shorter than 128 bit, 192 bit or 256 bit length are padded with null bytes to right size. This means that only the first 32 characters are used at most.

Deprecated. Please move to Encryption.Cipher for new projects.

## 74.10 Encryption.EncryptContainerAES

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.EncryptContainerAES"; key; value { ; iv } )

### Parameters

#### key

The key you want to use.

"Hello"

#### value

The container value to use.

\$inputData

#### iv

Optional

The initial vector as a text with up to 16 bytes length.

"1234567890ABCDEF"

**Result** Returns error or encrypted container value.

### Description

Input must be a container value (picture, file, PDF, movie or whatever you have). The encrypted data is returned as container value without file name.

Keys shorter than 128 bit, 192 bit or 256 bit length are padded with null bytes to right size. This means that only the first 32 characters are used at most.

Deprecated. Please move to Encryption.Cipher for new projects.

### Examples

Encrypt and Decrypt:

```
set variable $key to "Hello"
```

```
set variable $encryptedData to MBS( "Encryption.EncryptContainerAES"; $key; $inputData )
```

```
set variable $decryptedData to MBS( "Encryption.DecryptContainerAES"; $key; $encryptedData )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Encryption.EncryptContainerBlowfish"; key; value { ; iv } )

### Parameters

#### key

The key you want to use.

"Hello"

#### value

The container value to use.

\$inputData

#### iv

Optional

The initial vector as a text with up to 16 bytes length.

"1234567890ABCDEF"

**Result** Returns error or encrypted container value.

### Description

Input must be a container value (picture, file, PDF, movie or whatever you have). The encrypted data is returned as container value without file name.

For blowfish the key length is limited to 72 characters.

Deprecated. Please move to Encryption.Cipher for new projects.

### Examples

Encrypt and Decrypt:

```
set variable $key to "Hello"
```

```
set variable $encryptedData to MBS( "Encryption.EncryptContainerBlowfish"; $key; $inputData )
```

```
set variable $decryptedData to MBS( "Encryption.DecryptContainerBlowfish"; $key; $encryptedData )
```

## 74.12 RSA.DecryptPrivateKey

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	7.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "RSA.DecryptPrivateKey"; KeyType; KeyData; KeyEncoding; PasswordType; PasswordData { ; PasswordEncoding } )
```

### Parameters

#### KeyType

The type of input for private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.  
"Path"

#### KeyData

The actual input data for the key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.  
"/Users/cs/desktop/test.pem"

#### KeyEncoding

The text encoding for text input for the key. Parameter is ignored for other cases.

#### PasswordType

The type of input for optional password. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.  
"Text"

#### PasswordData

The actual input data for the password. Text, container or file path.  
"Hello World"

#### PasswordEncoding

Optional

The text encoding for text input. Parameter is ignored for other cases.  
"UTF-8"

**Result** Returns key as text or error.

### Description

Returns error if key could not be read, e.g. due to invalid password.

### Examples

Encrypt private key and decrypt it:

```
Set Variable [ $key1 ; Value: MBS( "RSA.GeneratePrivateKey" ) ]
Set Variable [ $key2 ; Value: MBS( "RSA.EncryptPrivateKey"; "Text"; $key1; "UTF-8"; "AES-128-CFB"; "text"; "Hello" ) ]
Set Variable [ $key3 ; Value: MBS( "RSA.DecryptPrivateKey"; "Text"; $key1; "UTF-8"; "text"; "Hello" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "RSA.EncryptPrivateKey"; KeyType; KeyData; KeyEncoding; Algorithm; PasswordType; PasswordData { ; PasswordEncoding } )

### Parameters

#### KeyType

The type of input for private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.  
"Path"

#### KeyData

The actual input data for the key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.

"/Users/cs/desktop/test.pem"

#### KeyEncoding

The text encoding for text input for the key. Parameter is ignored for other cases.

#### Algorithm

Which algorithm to use. Can be for example RC2, blowfish, AES128, AES192, AES256. See Encryption.Cipher.

"AES-128-CFB"

#### PasswordType

The type of input for optional password. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.  
"Text"

#### PasswordData

The actual input data for the password. Text, container or file path.

"Hello World"

#### PasswordEncoding

Optional

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

**Result** Returns key as text or error.

### Description

Returns error if key could not be read, e.g. because it is already encrypted.

### Examples

Encrypt private key and decrypt it:

```
Set Variable [ $key1 ; Value: MBS( "RSA.GeneratePrivateKey" ) ]
Set Variable [ $key2 ; Value: MBS( "RSA.EncryptPrivateKey"; "Text"; $key1; "UTF-8"; "AES-128-CFB"; "text"; "Hello" ) ]
Set Variable [ $key3 ; Value: MBS( "RSA.DecryptPrivateKey"; "Text"; $key1; "UTF-8"; "text"; "Hello" ) ]
```

## 74.14 RSA.PrivateDecrypt

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
74 Encryption	6.2	Yes	Yes	Yes	Yes	Yes

MBS( "RSA.PrivateDecrypt"; InputType; InputData; InputEncoding; KeyType; KeyData; KeyEncoding; OutputType { ; OutputInfo; PasswordType; PasswordData; PasswordEncoding; Padding } )

### Parameters

#### InputType

The type of input data. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.  
"base64"

#### InputData

The actual input data. Text, container or file path.  
\$EncryptedData

#### InputEncoding

The text encoding for text input. Parameter is ignored for other cases.  
""

#### KeyType

The type of input for private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.  
"Path"

#### KeyData

The actual input data for the key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.  
"/Users/cs/desktop/test.pem"

#### KeyEncoding

The text encoding for text input for the key. Parameter is ignored for other cases.

#### OutputType

The output type. Can be Base64, Hex, Text, File, Path.  
"Text"

#### OutputInfo

Optional

The addition info for output. For text it is the text encoding, for file container the file name and for path the actual native file path.  
"UTF-8"

#### PasswordType

Optional

The type of input for the password of the private key. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.  
"Text"

#### PasswordData

Optional

The actual input data for the password of the private key. Text, container or file path. Must not be longer than the maximum key length of the given algorithm. If key is too short, we pad it with zero bytes.  
"Hello World"

### PasswordEncoding

Optional

The text encoding for text input. Parameter is ignored for other cases.  
"UTF-8"

### Padding

Optional

Which padding to use. 1: PKCS # 1 v1.5 padding. This currently is the most widely used mode. 2: PKCS # 1 v1.5 padding with an SSL-specific modification that denotes that the server is SSL3 capable. 3: Raw RSA encryption. This mode should only be used to implement cryptographically sound padding modes in the application code. Encrypting user data directly with RSA is insecure. 4: EME-OAEP as defined in PKCS # 1 v2.0 with SHA-1, MGF1 and an empty encoding parameter. This mode is recommended for all new applications. 5: X931 padding. Default if not specified is 1.

1

**Result** Returns decrypted data or error.

### Description

Using RSA keys with any key size.  
Password is optional for decrypting encrypted keys.

You can decrypt the data here after encrypting it with `RSA.PublicEncrypt`.  
You can create a new private key using `RSA.GeneratePrivateKey` function.

### Examples

Decrypt with private key:

```
Set Variable [ $r; Value:MBS( "RSA.PrivateDecrypt"; "base64"; RSA Public Private Encryption::EncryptedText; ""; "Text"; RSA Public Private Encryption::PrivateKey; "UTF-8"; "Text"; "UTF-8" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; $r ]
Else
Set Field [ RSA Public Private Encryption::DecryptedText; $r ]
End If
```

# Chapter 75

## Environment Variables

Set and query environment variables from operation system.

### 75.1 EnvironmentVariables.ClearValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
75 EnvironmentVariables	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "EnvironmentVariables.ClearValue"; Name )

#### Parameters

##### Name

The name of the environment variable.

"test"

**Result** Returns OK or error.

#### Description

Only visible within FileMaker application and subprocesses launched after the change.

#### Examples

Clear a variable:

MBS( "EnvironmentVariables.ClearValue"; "test" )

#### See also

- 75.5 EnvironmentVariables.SetValue 3544
- 75.6 EnvironmentVariables.Value 3545

**Example Databases**

- [Utility functions/Environment Variables](#)

Created 8th April 2015, last changed 8th April 2015.

## 75.2 EnvironmentVariables.Count

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
75 EnvironmentVariables	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "EnvironmentVariables.Count" )

**Result** Returns number or error.

### Description

### Examples

Query count:

Set Variable [ \$count; Value:MBS("EnvironmentVariables.Count") ]

### See also

- [75.3 EnvironmentVariables.Name](#) 3542
- [75.4 EnvironmentVariables.Names](#) 3543
- [75.6 EnvironmentVariables.Value](#) 3545

### Example Databases

Created 8th April 2015, last changed 8th April 2015.

## 75.3 EnvironmentVariables.Name

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
75 EnvironmentVariables	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "EnvironmentVariables.Name"; Index )

### Parameters

#### Index

The zero based index of the environment variable in range 0 to EnvironmentVariables.Count-1.

0

**Result** Returns text or error.

### Description

### Examples

Query name of first variable:

```
Set Variable [ $name; Value:MBS("EnvironmentVariables.Name"; 0) ]
```

### See also

- 75.2 EnvironmentVariables.Count 3541
- 75.4 EnvironmentVariables.Names 3543

## 75.4 EnvironmentVariables.Names

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
75 EnvironmentVariables	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "EnvironmentVariables.Names" )

**Result** Returns list or error.

### Description

Returns empty list on Linux as the environment variables are not publicly listable. You can still query some, if you know the names.

### Examples

Query list of names:

MBS( "EnvironmentVariables.Names" )

### See also

- [75.2 EnvironmentVariables.Count](#) 3541

## 75.5 EnvironmentVariables.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
75 EnvironmentVariables	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "EnvironmentVariables.SetValue"; Name; Value )

### Parameters

#### Name

The name of the environment variable.

"test"

#### Value

The new value as text.

"Hello"

**Result** Returns OK or error.

### Description

Only visible within FileMaker application and subprocesses launched after the change.

### Examples

Set a new Variable:

MBS( "EnvironmentVariables.SetValue"; "test"; "Hello World" )

### See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
75 EnvironmentVariables	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "EnvironmentVariables.Value"; Name )

### Parameters

#### Name

The name of the environment variable.

"test"

**Result** Returns text or error.

### Description

#### Examples

Query user name on Mac:

MBS( "EnvironmentVariables.Value"; "USER" )

Query user name on Windows:

MBS( "EnvironmentVariables.Value"; "USERNAME" )

Query app data path on Windows:

MBS( "EnvironmentVariables.Value"; "APPDATA" )

Query language on FileMaker Cloud:

MBS( "EnvironmentVariables.Value"; "LANG" )

# Chapter 76

## EventMonitor

Watch events and query mouse button of last mouse click.

### 76.1 EventMonitor.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
76 EventMonitor	5.2	Yes	Yes	No	No	No

MBS( "EventMonitor.Clear" )

**Result** Returns OK or error.

#### Description

You should not need to call this, except maybe on the end of the script to make sure you clear the last event for next script call.

This includes which button was last clicked. Plugin version 9.4 also forgets whether it was a double click.

#### See also

- [76.2 EventMonitor.ClearCardWindow](#) 3548

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
76 EventMonitor	5.2	Yes	Yes	No	No	No

MBS( "EventMonitor.LastMouseClickedIsDoubleClick" )

**Result** Returns 0, 1 or error.

### Description

Returns 0 for single click and 1 for double click.

Please call EventMonitor.Install earlier in your scripts once on startup of solution.

Call this function in a script triggered by a mouse click (e.g. on a button) to see if mouse event triggering the script was a double click.

**76.7 EventMonitor.LastMousePositionX**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
76 EventMonitor	7.3	Yes	Yes	No	No	No

MBS( "EventMonitor.LastMousePositionX"; PerWindow )

**Parameters****PerWindow**

Pass 1 to get coordinates relative to the window at mouse position (Mac) or front window (Win). Or pass 0 to get screen coordinates. (default)

1

**Result** Returns value or error.

**Description**

Relative to top/left of main screen.

See also RemoteControl.MouseX.

## 76.8 EventMonitor.LastMousePositionY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
76 EventMonitor	7.3	Yes	Yes	No	No	No

MBS( "EventMonitor.LastMousePositionY"; PerWindow )

### Parameters

#### PerWindow

Pass 1 to get coordinates relative to the window at mouse position (Mac) or front window (Win). Or pass 0 to get screen coordinates. (default)

1

**Result** Returns value or error.

### Description

Relative to top/left of main screen.

See also RemoteControl.MouseY.

### See also

## 76.9 EventMonitor.SetCardWindow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
76 EventMonitor	7.3	Yes	Yes	No	No	No

MBS( "EventMonitor.SetCardWindow"; WindowRef; X; Y; Width; Height; FileName; ScriptName { ; ScriptParameter; ScriptControl } )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### X

X position of the card in the parent window. Can be negative for automatic center position.

-1

#### Y

Y position of the card in the parent window. Can be negative for automatic center position. You may need to include space for formatting, status toolbar and menu bar (inside window on Windows).

-1

#### Width

The width of the card window.

600

#### Height

The height of the card window.

400

#### FileName

The file name where to find the script.

Get(FileName)

#### ScriptName

The name of the script to trigger when a click is received outside the card area.

"Close Card Script"

#### ScriptParameter

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The text parameter to pass to the script.

"Close"

#### ScriptControl

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The script control mode. Can be Pause, Halt, Exit or Resume. Default is Pause.

"pause"

**Result** Returns OK or error.

### Description

You can show a card and have the MBS Plugin watch for mouse clicks outside the card area. The plugin can trigger a script. As script triggers are queued up, please make sure you handle various cases like several clicks queue up.

Please call `EventMonitor.Install` once before and make sure it's enabled.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Install trigger:

```
Set Variable [ $r ; Value: MBS( "EventMonitor.Install" ) ]
Set Variable [ $$cardShowing ; Value: 1 ]
Set Variable [ $r ; Value: MBS( "EventMonitor.SetCardWindow"; Get(WindowName); -1; -1; 600; 400;
Get(FileName); "Close Script" ) ]
New Window [ Style: Card ; Name: "Card" ; Using layout: "Tabelle" ; Height: 400 ; Width: 600 ]
```

Close script:

```
If [ $$cardShowing ]
Set Variable [ $$cardShowing ; Value: 0 ]
Close Window [ Name: "Card" ; Current file ]
Set Variable [ $r ; Value: MBS("EventMonitor.ClearCardWindow") ]
End If
```

## 76.10 EventMonitor.SetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
76 EventMonitor	6.3	Yes	Yes	Yes	No	No

MBS( "EventMonitor.SetEnabled"; Value )

### Parameters

#### Value

The new setting. Pass 1 to enable or 0 to disable.

0

**Result** Returns OK or error.

### Description

This way you can temporary disable it and later enable it again.

You also need to call EventMonitor.Install once.

### Examples

Enable event monitor:

```
MBS("EventMonitor.SetEnabled"; 1)
```

Disable event monitor:

```
MBS("EventMonitor.SetEnabled"; 0)
```

# Chapter 77

## Events

Newer OS X event functions to work with events and reminders.

You may have events or todo items in your FileMaker database. Our plugin can help you sync them into the calendar database on Mac, e.g. create events and reminders into specific calendars. If one Mac has a calendar subscribed for each member of staff and those sync via iCloud/Google/Exchange to their mobile phones, your solution can push events or reminders to your staff on one central routine.

Require 64-bit application, so use with FileMaker 14 and newer.

On Server you can only use calendar functions if you got a calendar for the user account where the server runs. Normally the server user account has no calendars.

Use this functions to sync events to iCal/Calendar app.

Please do not mix Calendar and Events calls as they use different IDs.

### 77.1 Events.Alarm.Copy

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.Copy"; EKAlarm )

#### Parameters

##### EKAlarm

The reference to the alarm.

\$Alarm

**Result** Returns alarm ID or error.

#### Description

3560

CHAPTER 77. EVENTS

Returns a new alarm's ID.

**See also**

- 77.17 Events.Alarm.Type

3579

Created 10th March 2016, last changed 12nd March 2016.

**77.2 Events.Alarm.GetAbsoluteDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.GetAbsoluteDate"; EKAlarm )

**Parameters****EKAlarm**

The reference to the alarm.

\$Alarm

**Result** Returns timestamp or error.

**Description****Examples**

Queries absolute date:

MBS( "Events.Alarm.GetAbsoluteDate"; \$r )

**See also**

- 77.9 Events.Alarm.SetAbsoluteDate 3568

Created 10th March 2016, last changed 10th March 2016.

## 77.3 Events.Alarm.GetEmailAddress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.GetEmailAddress"; EKAlarm )

### Parameters

#### EKAlarm

The reference to the alarm.

\$Alarm

**Result** Returns text or error.

### Description

An email address that is the recipient of an email alarm, which is an alarm that triggers an email message.

### See also

- 48.5 Calendar.Alarm.GetEmailAddress 1268
- 48.13 Calendar.Alarm.SetEmailAddress 1276

**77.4 Events.Alarm.GetProximity**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.GetProximity"; EKAlarm )

**Parameters****EKAlarm**

The reference to the alarm.

\$Alarm

**Result** Returns OK or error.

**Description**

Defines whether this alarm triggers via entering/exiting a geofence as defined by structuredLocation.

**Examples**

Query proximity:

MBS( "Events.Alarm.GetProximity"; "56001" )

**See also**

- 77.11 Events.Alarm.SetProximity

3570

Created 10th March 2016, last changed 13th March 2016.

## 77.5 Events.Alarm.GetRelativeOffset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.GetRelativeOffset"; EKAlarm )

### Parameters

#### EKAlarm

The reference to the alarm.

\$Alarm

**Result** Returns number or error.

### Description

Value is in seconds.

### Examples

Query relative offset:

MBS( "Events.Alarm.GetRelativeOffset"; \$alarm )

### See also

- 77.12 Events.Alarm.SetRelativeOffset 3571

Created 10th March 2016, last changed 10th March 2016.

**77.6 Events.Alarm.GetSound**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.GetSound"; EKAlarm )

**Parameters****EKAlarm**

The reference to the alarm.

\$Alarm

**Result** Returns text or error.

**Description****See also**

- [48.8 Calendar.Alarm.GetSound](#) 1271

## 77.7 Events.Alarm.GetStructuredLocation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.GetStructuredLocation"; EKAlarm )

### Parameters

#### EKAlarm

The reference to the alarm.

\$Alarm

**Result** Returns structured location reference number or error.

### Description

Allows you to set a structured location (a location with a potential geo-coordinate) on an alarm. This is used in conjunction with proximity to do geofence-based triggering of reminders.

### See also

- 77.14 Events.Alarm.SetStructuredLocation 3575

## 77.8 Events.Alarm.GetURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.GetURL"; EKAlarm )

### Parameters

#### EKAlarm

The reference to the alarm.

\$Alarm

**Result** Returns URL or error.

### Description

#### See also

- [77.6 Events.Alarm.GetSound](#) 3565
- [77.15 Events.Alarm.SetURL](#) 3577
- [77.73 Events.Item.GetURL](#) 3641
- [77.86 Events.Item.SetURL](#) 3658

Created 10th March 2016, last changed 13th August 2016.

## 77.9 Events.Alarm.SetAbsoluteDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.SetAbsoluteDate"; EKAlarm; TimeStamp )

### Parameters

#### EKAlarm

The reference to the alarm.

\$Alarm

#### TimeStamp

The timestamp to fire the alarm.

Get(CurrentHostTimeStamp) + 24 \* 60 \* 60

**Result** Returns OK or error.

### Description

Set this property to a date to establish an absolute alarm trigger. Setting this clears any relative interval trigger.

### See also

- 77.2 Events.Alarm.GetAbsoluteDate 3561
- 77.90 Events.NewAlarmWithAbsoluteDate 3664

Created 10th March 2016, last changed 10th March 2016.

**77.10 Events.Alarm.SetEmailAddress**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.SetEmailAddress"; EKAlarm; Email )

**Parameters****EKAlarm**

The reference to the alarm.

\$Alarm

**Email**

The new email address.

"alarm@test.test"

**Result** Returns OK or error.

**Description**

An email address that is the recipient of an email alarm, which is an alarm that triggers an email message. When you set the emailAddress, the type is set to Email, and the soundName and url are cleared.

**See also**

- 48.5 Calendar.Alarm.GetEmailAddress 1268

## 77.11 Events.Alarm.SetProximity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.SetProximity"; EKAlarm; Proximity )

### Parameters

#### EKAlarm

The reference to the alarm.

\$Alarm

#### Proximity

The proximity. Can be None, Leave or Enter.

"Leave"

**Result** Returns OK or error.

### Description

Defines whether this alarm triggers via entering/exiting a geofence as defined by structuredLocation.

#### See also

Created 10th March 2016, last changed 10th March 2016.

## 77.12 Events.Alarm.SetRelativeOffset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.SetRelativeOffset"; EKAlarm; TimeOffset )

### Parameters

#### EKAlarm

The reference to the alarm.

\$Alarm

#### TimeOffset

The relative time offset in seconds.

-15\*60

**Result** Returns OK or error.

### Description

Set this property to an appropriate negative value to establish an alarm trigger relative to the start date/time of an event. Setting this clears any existing date trigger.

Value is in seconds.

### Examples

Add an alarm with relative offset:

```
Set Variable [ $alarm ; Value: MBS( "Events.NewAlarm" ) ]
If [ not IsEmpty(Test::AlarmSound) ]
Set Variable [ $r ; Value: MBS( "Events.Alarm.SetSound"; $alarm; Test::AlarmSound ) ]
End If
If [ not IsEmpty(Test::AlarmLocationTitle) ]
Set Variable [ $l ; Value: MBS( "Events.StructuredLocation.NewLocationWithTitle"; Test::AlarmLocation-
Title ) ]
Set Variable [ $r ; Value: MBS( "Events.StructuredLocation.SetRadius"; $l; Test::AlarmLocationRadius ) ]
Set Variable [ $r ; Value: MBS( "Events.StructuredLocation.SetGeoLocation"; $l; Test::AlarmLocationGeo-
Lat; Test::AlarmLocationGeoLong ) ]
Set Variable [ $r ; Value: MBS( "Events.Alarm.SetStructuredLocation"; $alarm; $l ) ]
Set Variable [ $r ; Value: MBS( "Events.Alarm.SetProximity"; $alarm; Test::AlarmProximity ) ]
End If
# e.g. AlarmRelativeOffsetSeconds contains -9 * 60
Set Variable [ $r ; Value: MBS( "Events.Alarm.SetRelativeOffset"; $alarm; Evaluate( Test::AlarmRelative-
OffsetSeconds ) ) ]
Set Variable [ $r ; Value: MBS( "Events.Item.AddAlarm"; $item; $alarm ) ]
```

**77.13 Events.Alarm.SetSound**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.SetSound"; EKAlarm; Sound )

**Parameters****EKAlarm**

The reference to the alarm.

\$Alarm

**Sound**

The name of the sound file. See /Library/Sounds and /System/Library/Sounds folders.

"Submarine"

**Result** Returns OK or error.

**Description**

The value of this property is the name of a system sound. When you set the soundName property, the action property is set to Audio, and the emailAddress and url properties are cleared.

**Examples**

Add alarm with sound 15 minutes before event:

```
Set Variable [ $alarm2; Value:MBS( "Events.NewAlarmWithRelativeOffset"; -15*60 ) ]
Set Variable [ $r; Value:MBS( "Events.Alarm.SetSound"; $alarm2; "Submarine" ) ]
Set Variable [ $r; Value:MBS("Events.Item.AddAlarm"; $c; $alarm2) ]
```

**77.14 Events.Alarm.SetStructuredLocation**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.SetStructuredLocation"; EKAlarm; EKStructuredLocation )

**Parameters****EKAlarm**

The reference to the alarm.

\$Alarm

**EKStructuredLocation**

The reference to the structured location.

\$StructuredLocation

**Result** Returns OK or error.

**Description****Examples**

Create structured location for alarm:

```
Set Variable [ $l; Value:MBS( "Events.StructuredLocation.NewLocationWithTitle"; Events Create Reminder::Alarm-LocationTitle ) ]
```

```
Set Variable [ $r; Value:MBS( "Events.StructuredLocation.SetRadius"; $l; Events Create Reminder::Alarm-LocationRadius ) ]
```

```
Set Variable [ $r; Value:MBS( "Events.StructuredLocation.SetGeoLocation"; $l; Events Create Reminder::Alarm-LocationGeoLat; Events Create Reminder::AlarmLocationGeoLong ) ]
```

```
Set Variable [ $r; Value:MBS( "Events.Alarm.SetStructuredLocation"; $alarm; $l) ]
```

```
Set Variable [ $r; Value:MBS( "Events.Alarm.SetProximity"; $alarm; Events Create Reminder::AlarmProximity ) ]
```

**77.15 Events.Alarm.SetURL**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.SetURL"; EKAlarm )

**Parameters****EKAlarm**

The reference to the alarm.

\$Alarm

**Result** Returns OK or error.

**Description**

When you set the url property, the action property is set to Procedure, and the emailAddress and soundName properties are cleared.

Note: Starting with OS X 10.9, it is not possible to create new procedure alarms or view URLs for existing procedure alarms.

Trying to save or modify a procedure alarm will result in a save error.

Editing other aspects of events or reminders that have existing procedure alarms is allowed as long as the alarm isn't modified.

## 77.16 Events.Alarm.TriggerDateRelativeTo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.TriggerDateRelativeTo"; EKAlarm { ; Timestamp } )

### Parameters

#### EKAlarm

The reference to the alarm.

\$Alarm

#### Timestamp

Optional

The timestamp to use for finding next trigger time. Default is now.

Get(CurrentHostTimeStamp)

**Result** Returns OK or error.

### Description

You can pass a timestamp to calculate relative to it.

### Examples

Query next alarm time:

```
MBS( "Events.Alarm.TriggerDateRelativeTo"; "56004"; Get(CurrentHostTimeStamp) )
```

### See also

- 48.18 Calendar.Alarm.TriggerDateRelativeTo

1281

Created 10th March 2016, last changed 10th March 2016.

**77.17 Events.Alarm.Type**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Alarm.Type"; EKAlarm )

**Parameters****EKAlarm**

The reference to the alarm.

\$Alarm

**Result** Returns text or error.

**Description**

Can be Display, Email, Procedure or Sound.

Display The alarm displays a message.

Sound The alarm plays a sound.

URL The alarm opens a URL.

Email The alarm sends an email.

This field is read-only; to change the type of alarm, set emailAddress, sound or URL.

Setting all of those to empty text will change it to type Display.

## 77.18 Events.AuthorizationStatusForEntityType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.AuthorizationStatusForEntityType"; Type )

### Parameters

#### Type

Which entity type you like to check: Event or Reminder.

"Event"

**Result** Returns status or error.

### Description

You can check and see if your solution is allowed to use the calendar.

Value is NotDetermined, Restricted, Denied or Authorized.

You can use Events.requestAccessToEntityType to request access.

### Examples

Query authorization:

```

Set Variable [ $r; Value:MBS("Events.AuthorizationStatusForEntityType"; "Reminder") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "We have a problem"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Else If [ $r = "NotDetermined" ]
Set Variable [ $r; Value:MBS( "Events.requestAccessToEntityType"; "Reminder" ) ]
If [ $r = "Wait" ]
# dialog is showing.
Else If [ $r = "OK" ]
Show Custom Dialog [ "Success"; "We are authorized and ready to go." ]
Else
Show Custom Dialog [ "We have a problem"; $r ]
End If
Else If [ $r = "Restricted" ]
Show Custom Dialog [ "Success"; "We are authorized for a restricted access and ready to go." ]
Else If [ $r = "Denied" ]
Show Custom Dialog [ "Problem"; "We are denied for calendar access. Please go to system preferences and enable us." ]
Else If [ $r = "Authorized" ]
Show Custom Dialog [ "Success"; "We are authorized and ready to go." ]
Else
Show Custom Dialog [ "We have a problem"; $r ]
End If

```

#### **77.18.1 Blog Entries**

- [Calendar access in FileMaker 18](#)

Created 10th March 2016, last changed 13th March 2016.

## 77.19 Events.Calendar.AllowsContentModifications

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.AllowsContentModifications"; EKCalendar )

### Parameters

#### EKCalendar

The id of the calendar to query.

\$calendar

**Result** Returns 1, 0 or error.

### Description

Returns 1 if you can modify the calendar.

Created 10th March 2016, last changed 12nd March 2016.

## 77.20 Events.Calendar.CalendarIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.CalendarIdentifier"; EKCalendar )

### Parameters

#### EKCalendar

The id of the calendar to query.

\$calendar

**Result** Returns ID or error.

### Description

It is not sync-proof in that a fullsync will lose this identifier, so you should always have a back up plan for dealing with a calendar that is no longer fetchable by this property, e.g. by title, type, color, etc.

This function should not needed unless you want to map a plugin given ID to a real calendar ID.

### Examples

Query ID by name:

MBS( "Events.Calendar.CalendarIdentifier"; "Firma" )

Created 10th March 2016, last changed 22nd May 2016.

## 77.21 Events.Calendar.Duplicate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.Duplicate"; EKCalendar )

### Parameters

#### EKCalendar

The id of the calendar to query.

\$calendar

**Result** Returns ID or error.

### Description

Returns a new ID for the new calendar.

### See also

- 48.22 Calendar.Calendar.Duplicate 1285
- 77.24 Events.Calendar.GetTitle 3588
- 77.29 Events.Calendar.SetTitle 3593

Created 10th March 2016, last changed 12nd March 2016.

**77.22 Events.Calendar.GetColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.GetColor"; EKCalendar { ; ReturnAsNumbers } )

**Parameters****EKCalendar**

The id of the calendar to query.

\$calendar

**ReturnAsNumbers**

Optional

Available in MBS FileMaker Plugin 8.3 or newer.

Pass 1 to return color as list of red, green and blue, e.g. "123§234§56" Pass 0 (default) for return as hex value, e.g. "7788FF".

0

**Result** Returns color value or error.

**Description****Examples**

Returns color for calendar:

```
MBS( "Events.Calendar.GetColor"; "Firma" )
```

Returns for calendar identified by ID:

```
MBS( "Events.Calendar.GetColor"; "51AC6CC1-C4AB-40D0-BB30-A8AAFB280ABD")
```

### 77.22.1 Blog Entries

- [MBS FileMaker Plugin, version 8.3pr2](#)

Created 10th March 2016, last changed 13th June 2018.

**77.23 Events.Calendar.GetSource**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.GetSource"; EKCalendar )

**Parameters****EKCalendar**

The id of the calendar to query.

\$calendar

**Result** Returns OK or error.

**Description**

The source representing the 'account' this calendar belongs to.

This is only settable when initially creating a calendar and then effectively read-only after that. That is, you can create a calendar, but you cannot move it to another source.

**Examples**

Query source title for calendar:

```
MBS( "Events.Source.Title"; MBS( "Events.Calendar.GetSource"; "Firma" ) )
```

## 77.25 **Events.Calendar.GetType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.GetType"; EKCalendar )

### Parameters

#### **EKCalendar**

The id of the calendar to query.

\$calendar

**Result** Returns text or error.

### Description

This is actually based on what source the calendar is in, as well as whether it is a subscribed calendar.

CalDAV subscribed calendars have type CalDAV with isSubscribed being true.

Type can be: Local, CalDAV, Exchange, Birthday or Subscription.

### Examples

Query calendar type by ID:

MBS( "Events.Calendar.GetType"; "51AC6CC1-C4AB-40D0-BB30-A8AAFB280ABD")

### See also

- [48.26 Calendar.Calendar.GetType](#) 1291

- [77.23 Events.Calendar.GetSource](#) 3587
- [77.24 Events.Calendar.GetTitle](#) 3588
- [77.27 Events.Calendar.SetColor](#) 3591
- [77.28 Events.Calendar.SetSource](#) 3592
- [77.29 Events.Calendar.SetTitle](#) 3593

### Example Databases

- [Mac and iOS/Events/Events Sync](#)

Created 10th March 2016, last changed 22nd May 2016.

## 77.26 Events.Calendar.Immutable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.Immutable"; EKCalendar )

### Parameters

#### EKCalendar

The id of the calendar to query.

\$calendar

**Result** Returns 0, 1 or error.

### Description

If this is set to 1, it means you cannot modify any attributes of the calendar or delete it.

It does NOT imply that you cannot add events or reminders to the calendar.

### Examples

Query immutable status:

MBS( "Events.Calendar.Immutable"; "51AC6CC1-C4AB-40D0-BB30-A8AAFB280ABD")

### See also

- 77.24 Events.Calendar.GetTitle 3588

Created 10th March 2016, last changed 22nd May 2016.

**77.27 Events.Calendar.SetColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.SetColor"; EKCalendar; Color )

**Parameters****EKCalendar**

The id of the calendar to query.

\$calendar

**Color**

The color to use. Can be a color name or hex notation like in HTML.

"red"

**Result** Returns OK or error.

**Description**

You need to save the changes to be persistent.

**See also**

- 77.29 Events.Calendar.SetTitle 3593

Created 10th March 2016, last changed 6th June 2019.

## 77.28 Events.Calendar.SetSource

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.SetSource"; EKCalendar; EKSource )

### Parameters

#### EKCalendar

The id of the calendar to query.

\$calendar

#### EKSource

The reference to the source.

\$Source

**Result** Returns OK or error.

### Description

You need to save the changes to be persistent.

### See also

Created 12nd March 2016, last changed 12nd March 2016.

**77.29 Events.Calendar.SetTitle**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.SetTitle"; EKCalendar )

**Parameters****EKCalendar**

The id of the calendar to query.

\$calendar

**Result** Returns OK or error.

**Description**

You need to save the changes to be persistent.

**See also**

## 77.30 Events.Calendar.Subscribed

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.Subscribed"; EKCalendar )

### Parameters

#### EKCalendar

The id of the calendar to query.

\$calendar

**Result** Returns 0, 1 or error.

### Description

Returns 1 if this calendar is a subscribed calendar.

Created 10th March 2016, last changed 12nd March 2016.

**77.31 Events.Calendar.allowedEntityTypes**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.allowedEntityTypes"; EKCalendar )

**Parameters****EKCalendar**

The id of the calendar to query.

\$calendar

**Result** Returns value or error.

**Description**

While Apple API only allows creation of single-entity calendars, other servers might allow mixed-entity calendars.

Returns list which can contain Event and/or Reminder.

**Examples**

Queries entities types by ID:

MBS( "Events.Calendar.allowedEntityTypes"; "51AC6CC1-C4AB-40D0-BB30-A8AAFB280ABD")

Created 10th March 2016, last changed 22nd May 2016.

## 77.32 Events.Calendar.supportedEventAvailabilities

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendar.supportedEventAvailabilities"; EKCalendar )

### Parameters

#### EKCalendar

The id of the calendar to query.

\$calendar

**Result** Returns list or error.

### Description

Returns empty list if this calendar does not support setting availability on an event.

Values include: Busy, Free, Tentative and Unavailable.

Created 10th March 2016, last changed 12nd March 2016.

## 77.33 Events.CalendarCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.CalendarCount"; entityType )

### Parameters

#### entityType

The entity type that this calendar may support. Event or Reminder  
"Event"

**Result** Returns number or error.

### Description

### Examples

Query all calendar count:

MBS( "Events.CalendarCount"; "events" ) + MBS( "Events.CalendarCount"; "reminder" )

Created 10th March 2016, last changed 24th March 2016.

## 77.34 Events.CalendarItemsWithExternalIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.CalendarItemsWithExternalIdentifier"; externalIdentifier )

### Parameters

#### externalIdentifier

The external identifier. As returned by Events.Item.CalendarItemExternalIdentifier.  
\$identifier

**Result** Returns list or error.

### Description

Returns either matching items or the first occurrences of any events matching the given external identifier. There may be more than one matching calendar item.

### See also

- [77.65 Events.Item.CalendarItemExternalIdentifier](#) 3632

### Example Databases

- [Mac and iOS/Events/Events Sync](#)

Created 10th March 2016, last changed 10th March 2016.

## 77.35 Events.Calendars

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Calendars" { ; Type } )

### Parameters

#### Type

Optional

Which entity type you like to check: Event or Reminder.

"Event"

**Result** Returns list of calendar identifiers or error.

### Description

Type can be Event or Reminder.

### Examples

Get list of all calendars for events:

```
MBS( "Events.calendars" ; "Events" )
```

Get list of all calendars for reminders:

```
MBS( "Events.calendars" ; "Reminder" )
```

### See also

## 77.36 Events.ClearNotification

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.ClearNotification" )

**Result** Returns OK or error.

**Description**

**See also**

- 77.157 Events.SetNotification

3743

Created 10th March 2016, last changed 12nd March 2016.

**77.37 Events.Commit**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Commit" )

**Result** Returns OK or error.

**Description**

If you use saveCalendar/saveEvent/removeCalendar/removeEvent, etc. and you pass 0 to their commit parameter, you are batching changes for a later commit. This method does that commit. This allows you to save the database only once for many additions or changes. If you pass 1 to methods' commit parameter, then you don't need to call this method.

This method will return OK as long as nothing went awry, even if nothing was actually committed. Else it returns an error.

**See also**

- 77.149 Events.RemoveCalendar 3732
- 77.150 Events.RemoveEvent 3733
- 77.151 Events.RemoveReminder 3734

- 77.154 Events.SaveEvent 3737
- 77.155 Events.SaveReminder 3739

Created 10th March 2016, last changed 10th March 2016.

## 77.38 Events.CompletedReminders

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.CompletedReminders" { ; StartDate; EndDate; Calendars } )

### Parameters

#### StartDate

Optional

The start date to search from. Can be empty.

#### EndDate

Optional

The end date to search before.

#### Calendars

Optional

The identifier for the calendar you want to search. Leave empty to search all.

**Result** Returns list of reminder IDs or error.

### Description

You can use this method to search for reminders completed between a range of dates.

You can pass nothing for start date to find all reminders completed before endDate.

You can pass nothing for both start and end date to get all completed reminders in the specified calendars.

You can pass nothing for calendars to fetch from all available calendars.

### See also

- 77.59 Events.IncompleteReminders

3625

Created 10th March 2016, last changed 13th March 2016.

## 77.39 Events.DelegateSources

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.DelegateSources" )

**Result** Returns list or error.

### Description

By default, delegates are not included in an event store's sources. To work with delegates, you can create a new event store and pass in the sources, including sources returned from this method, that you're interested in.

Created 10th March 2016, last changed 13th August 2016.

## 77.40 Events.Event.BirthdayPersonUniqueID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.BirthdayPersonUniqueID"; EKEvent )

### Parameters

#### EKEvent

The reference to the event.

\$event

**Result** Returns ID or error.

### Description

This property is only valid for events in the built-in Birthdays calendar. It specifies the Address Book unique ID of the person this event was created for. For any other type of event, this property returns nothing.

Created 10th March 2016, last changed 12nd March 2016.

**77.41 Events.Event.GetAllDay**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.GetAllDay"; EKEvent )

**Parameters****EKEvent**

The reference to the event.

\$event

**Result** Returns 0, 1 or error.

**Description****See also**

- [77.43 Events.Event.GetEndDate](#) 3607

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.GetAvailability"; EKEvent )

### Parameters

#### EKEvent

The reference to the event.

\$event

**Result** Returns value or error.

### Description

Can be NotSupported, Busy, Free, Tentative or Unavailable.

### See also

- [77.50 Events.Event.SetAvailability](#)

Created 10th March 2016, last changed 12nd March 2016.

**77.43 Events.Event.GetEndDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.GetEndDate"; EKEvent )

**Parameters****EKEvent**

The reference to the event.

\$event

**Result** Returns timestamp or error.

**Description****See also**

- [77.41 Events.Event.GetAllDay](#) 3605
- [77.44 Events.Event.GetStartDate](#) 3608

**Example Databases**

- [Mac and iOS/Events/Events Import](#)
- [Mac and iOS/Events/Events Sync](#)

Created 10th March 2016, last changed 12nd March 2016.

## 77.44 Events.Event.GetStartDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.GetStartDate"; EKEvent )

### Parameters

#### EKEvent

The reference to the event.

\$event

**Result** Returns timestamp or error.

### Description

This property represents the start date for this event. Floating events (such as all-day events) are currently always returned in the default time zone.

### See also

- [77.43 Events.Event.GetEndDate](#) 3607

Created 10th March 2016, last changed 12nd March 2016.

**77.45 Events.Event.GetStructuredLocation**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.GetStructuredLocation"; EKEvent )

**Parameters****EKEvent**

The reference to the event.

\$event

**Result** Returns structured location ID or error.

**Description**

Allows you to set a structured location (a location with a potential geo-coordinate) on an event. The getter for Event's location property just returns the structured location's title. The setter for event's location property is equivalent to creating a new structured location with just a title.

Requires OS X 10.11 or newer.

**See also**

- [77.7 Events.Alarm.GetStructuredLocation](#) 3566
- [77.14 Events.Alarm.SetStructuredLocation](#) 3575
- [77.53 Events.Event.SetStructuredLocation](#) 3619

Created 10th March 2016, last changed 12nd March 2016.

## 77.46 Events.Event.IsDetached

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.IsDetached"; EKCalendarItem )

### Parameters

#### EKCalendarItem

The reference to the calendar item: an event or reminder.

\$item

**Result** Returns 1, 0 or error.

### Description

If this event is an instance of a repeating event, and an attribute of this event has been changed from the default value generated by the repeating event, `isDetached` will return 1. If the `EKEvent` is unchanged from its default state, or is not a repeating event, `isDetached` returns 0.

Created 10th March 2016, last changed 12nd March 2016.

**77.47 Events.Event.OccurrenceDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.OccurrenceDate"; EKEvent )

**Parameters****EKEvent**

The reference to the event.

\$event

**Result** Returns OK or error.

**Description**

This is only set if the event is part of a recurring series. It returns the date on which this event was originally scheduled to occur. For occurrences that are unmodified from the recurring series, this is the same as the start date. This value will remain the same even if the event has been detached and its start date has changed. Floating events (such as all-day events) are currently returned in the default time zone.

Created 10th March 2016, last changed 12nd March 2016.

## 77.48 Events.Event.Refresh

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.Refresh"; EKEvent )

### Parameters

#### EKEvent

The reference to the event.

\$event

**Result** Returns 1, 0 or error.

### Description

When the database changes, your application is sent an notification note and the plugin may trigger the notification script. You should generally consider all event instances to be invalid as soon as you receive the notification. However, for events you truly care to keep around, you can call this method. It ensures the record is still valid by ensuring the event and start date are still valid. It also attempts to refresh all properties except those you might have modified. If this method returns 0, the record has been deleted or is otherwise invalid. You should not continue to use it. If it returns 1, all is still well, and the record is ready for continued use. You should only call this method on events that are more critical to keep around if possible, such as an event that is being actively edited, as this call is fairly heavyweight. Do not use it to refresh the entire selected range of events you might have had selected. It is mostly pointless anyway, as recurrence information may have changed.

## 77.50 Events.Event.SetAvailability

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.SetAvailability"; EKEEvent; availability )

### Parameters

#### EKEEvent

The reference to the event.

\$event

#### availability

The availability setting. Pass Busy, Free, Tentative or Unavailable.

"Busy"

**Result** Returns OK or error.

### Description

#### Examples

Set busy:

```
Set Variable [ $r; Value:MBS("Events.Event.SetAvailability"; $c; "busy") ]
```

### See also

**77.51 Events.Event.SetEndDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.SetEndDate"; EKEvent; Date )

**Parameters****EKEvent**

The reference to the event.

\$event

**Date**

The time stamp for end date.

Get(CurrentHostTimeStamp) + 3600

**Result** Returns OK or error.

**Description****Examples**

Update dates:

```
Set Variable [ $c; Value:CalendarTest::ItemUID ]
```

```
Set Variable [ $r; Value:MBS("Events.Event.SetEndDate"; $c; CalendarTest::ItemEndDate) ]
```

```
Set Variable [ $r; Value:MBS("Events.Event.SetStartDate"; $c; CalendarTest::ItemStartDate) ]
```

```

**77.53 Events.Event.SetStructuredLocation**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.SetStructuredLocation"; EKEvent; EKStructuredLocation )

**Parameters****EKEvent**

The reference to the event.

\$event

**EKStructuredLocation**

The reference to the structured location.

\$StructuredLocation

**Result** Returns OK or error.

**Description**

This allows you to pass title and geo coordinates with a radius to describe location exactly.

See also [Events.Item.SetLocation](#).

Requires OS X 10.11 or newer.

**See also**

- [77.7 Events.Alarm.GetStructuredLocation](#) 3566
- [77.14 Events.Alarm.SetStructuredLocation](#) 3575

## 77.54 Events.Event.Status

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.Status"; EKEvent )

### Parameters

#### EKEvent

The reference to the event.

\$event

**Result** Returns value or error.

### Description

While the status offers four different values in the enumeration, in practice, the only actionable and reliable status is canceled. Any other status should be considered informational at best. You cannot set this property. If you wish to cancel an event, you should simply remove it using `removeEvent`.

Value can be None, Confirmed, Tentative or Canceled.

Created 10th March 2016, last changed 12nd March 2016.

## 77.55 **Events.Event.compareStartDateWithEvent**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.compareStartDateWithEvent"; EKEvent; OtherEvent )

### **Parameters**

#### **EKEvent**

The reference to the event.

\$event

#### **OtherEvent**

The reference to the event.

\$otherEvent

**Result** Returns -1, 0, 1 or error.

### **Description**

Allows you to sort events.

Returns 1 if one second event is bigger, -1 if smaller or 0 if equal.

Created 10th March 2016, last changed 12nd March 2016.

## 77.56 Events.Event.organizer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Event.organizer"; EKEvent )

### Parameters

#### EKEvent

The reference to the event.

\$event

**Result** Returns participant ID or error.

### Description

Returns a participant ID or nothing.

The plugin can't set the organizer as Apple doesn't provide API for this.

Created 10th March 2016, last changed 12nd March 2016.

**77.57 Events.EventStoreIdentifier**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.EventStoreIdentifier" )

**Result** Returns identifier or error.

**Description**

If this changes, your database got moved to a different Mac or the user started with a new calendar database. So existing identifiers for events are invalidated.

Created 10th March 2016, last changed 10th March 2016.

## 77.58 Events.Events

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Events" { ; StartDate; EndDate; Calendars } )

### Parameters

#### StartDate

Optional

The start date to search from. Can be empty.

#### EndDate

Optional

The end date to search before.

#### Calendars

Optional

The identifier for the calendar you want to search. Leave empty to search all.

**Result** Returns OK or error.

### Description

You can use this function to search for events between a range of dates.

You can pass nothing for start date to find all events before endDate.

You can pass nothing for both start and end date to get all events in the specified calendars.

You can pass nothing for calendars to fetch from all available calendars.

OS X Only: For performance reasons, this method will only return events within a four year timespan.

If the date range between the startDate and endDate is greater than four years, then it will be shortened to the first four years.

**77.59 Events.IncompleteReminders**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.IncompleteReminders" { ; StartDate; EndDate; Calendars } )

**Parameters****StartDate**

Optional

The start date to search from. Can be empty.

**EndDate**

Optional

The end date to search before.

**Calendars**

Optional

The identifier for the calendar you want to search. Leave empty to search all.

**Result** Returns list of reminder IDs or error.

**Description**

You can use this method to search for reminders uncompleted between a range of dates.

You can pass nothing for start date to find all reminders due before endDate.

You can pass nothing for both start and end date to get all uncompleted reminders in the specified calendars.

You can pass nothing for calendars to fetch from all available calendars.

**See also**

- 77.38 Events.CompletedReminders

3602

Created 10th March 2016, last changed 13th March 2016.

## 77.60 Events.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Initialize"; Types )

### Parameters

#### Types

What entity types to use. Can be "Events", "Reminder" or both. "Events, Reminders"

**Result** Returns OK or error.

### Description

This is done internally automatically for reminders and events. You can here initialize it for only reminder or events.

Users are able to grant or deny access to event and reminder data on a per-app basis. To request access to event and/or reminder data, instantiate an event store using this method. This call will not block the program while the user is being asked to grant or deny access. Until access has been granted for an entity type, this event store will not contain any calendars for that entity type, and any attempt to save entities of that entity type will fail. If access is later granted or declined, the event store will broadcast a notification. You can check the current access status for an entity type using `Events.AuthorizationStatusForEntityType`. The user will only be prompted the first time access is requested; any subsequent instantiations of event store will use the existing permissions.

**77.61 Events.Item.AddAlarm**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.AddAlarm"; EKCalendarItem; EKAlarm )

**Parameters****EKCalendarItem**

The reference to the calendar item: an event or reminder.

\$item

**EKAlarm**

The reference to the alarm.

\$Alarm

**Result** Returns OK or error.

**Description**

This function add an alarm to an item. Be warned that some calendars can only allow a certain maximum number of alarms. When this item is saved, it will truncate any extra alarms from the array.

**Examples**

Add alarm:

```
Set Variable [ $alarm; Value:MBS( "Events.NewAlarm" ) ]
If [ not IsEmpty(Events Create Reminder::AlarmSound) ]
Set Variable [ $r; Value:MBS( "Events.Alarm.SetSound"; $alarm; Events Create Reminder::AlarmSound ) ]
End If
If [ not IsEmpty(Events Create Reminder::AlarmLocationTitle) ]
Set Variable [ $l; Value:MBS( "Events.StructuredLocation.NewLocationWithTitle"; Events Create Reminder::Alarm-
LocationTitle ) ]
Set Variable [ $r; Value:MBS( "Events.StructuredLocation.SetRadius"; $l; Events Create Reminder::Alarm-
LocationRadius ) ]
Set Variable [ $r; Value:MBS( "Events.StructuredLocation.SetGeoLocation"; $l; Events Create Reminder::Alarm-
LocationGeoLat; Events Create Reminder::AlarmLocationGeoLong ) ]
Set Variable [ $r; Value:MBS( "Events.Alarm.SetStructuredLocation"; $alarm; $l) ]
Set Variable [ $r; Value:MBS( "Events.Alarm.SetProximity"; $alarm; Events Create Reminder::AlarmProx-
imity ) ]
End If
Set Variable [ $r; Value:MBS( "Events.Item.AddAlarm"; $reminder; $alarm ) ]
```

## 77.65 Events.Item.CalendarItemExternalIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.CalendarItemExternalIdentifier"; EKCalendarItem )

### Parameters

#### EKCalendarItem

The reference to the calendar item: an event or reminder.

\$item

**Result** Returns ID or error.

### Description

This identifier, provided by the server, allows you to reference the same event or reminder across multiple devices. For calendars stored locally on the device, including the birthday calendar, it simply passes through to calendarItemIdentifier.

This identifier is unique as of creation for every calendar item. However, there are some cases where duplicate copies of a calendar item can exist in the same database, including:

- A calendar item was imported from an ICS file into multiple calendars
- An event was created in a calendar shared with the user and the user was also invited to the event
- The user is a delegate of a calendar that also has this event
- A subscribed calendar was added to multiple accounts In such cases, you should choose between calendar items based on other factors, such as the calendar or source.

This identifier is the same for all occurrences of a recurring event. If you wish to differentiate between occurrences, you may want to use the start date.

In addition, there are two caveats for Exchange-based calendars:

- This identifier will be different between EventKit on iOS versus OS X
- This identifier will be different between devices for Reminders

## 77.66 Events.Item.CalendarItemIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.CalendarItemIdentifier"; EKCalendarItem )

### Parameters

#### EKCalendarItem

The reference to the calendar item: an event or reminder.

\$item

**Result** Returns ID or error.

### Description

Item identifiers are not sync-proof in that a full sync will lose this identifier, so you should always have a back up plan for dealing with a reminder that is no longer fetchable by this property, e.g. by title, etc..

You only need this function to match a reference number from our plugin to the UUID used by calendar identifier.

**77.77 Events.Item.HasRecurrenceRules**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.HasRecurrenceRules"; EKCalendarItem )

**Parameters****EKCalendarItem**

The reference to the calendar item: an event or reminder.  
\$item

**Result** Returns 1, 0 or error.

**Description**

Returns 1 if recurrence rules exists, else 0.

**See also**

## 77.78 Events.Item.RecurrenceRules

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.RecurrenceRules"; EKCalendarItem )

### Parameters

#### EKCalendarItem

The reference to the calendar item: an event or reminder.  
\$item

**Result** Returns list or error.

### Description

Can be empty.

### See also

- 77.62 Events.Item.AddRecurrenceRule 3629

**77.79 Events.Item.RemoveAlarm**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.RemoveAlarm"; EKCalendarItem; EKAlarm )

**Parameters****EKCalendarItem**

The reference to the calendar item: an event or reminder.  
\$item

**EKAlarm**

The reference to the alarm.  
\$Alarm

**Result** Returns OK or error.

**Description****See also**

- 48.61 Calendar.Item.RemoveAlarm

1328

Created 10th March 2016, last changed 12nd March 2016.

## 77.80 Events.Item.RemoveRecurrenceRule

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.RemoveRecurrenceRule"; EKCalendarItem; EKRecurrenceRule )

### Parameters

#### EKCalendarItem

The reference to the calendar item: an event or reminder.  
\$item

#### EKRecurrenceRule

The reference to the recurrence rule.  
\$RecurrenceRule

**Result** Returns OK or error.

### Description

#### See also

Created 10th March 2016, last changed 12nd March 2016.

**77.81 Events.Item.SetCalendar**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.SetCalendar"; EKCalendarItem; EKCalendar )

**Parameters****EKCalendarItem**

The reference to the calendar item: an event or reminder.  
\$item

**EKCalendar**

The id of the calendar.  
\$calendar

**Result** Returns OK or error.

**Description**

You can pass calendar by ID or by name.

**Examples**

Set calendar:

Set Variable [ \$r; Value:MBS( "Events.Item.SetCalendar"; \$reminder; \$calendar ) ]

**See also**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.SetLocation"; EKCalendarItem; Location )

**Parameters****EKCalendarItem**

The reference to the calendar item: an event or reminder.  
\$item

**Location**

The text for the location field.  
"Hamburg, Germany"

**Result** Returns OK or error.

**Description****Examples**

Set location:

Set Variable [ \$r; Value:MBS( "Events.Item.SetLocation"; \$reminder; Events Create Reminder::Location ) ]

**See also**

**77.84 Events.Item.SetTimeZone**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.SetTimeZone"; EKCalendarItem; TimeZone )

**Parameters****EKCalendarItem**

The reference to the calendar item: an event or reminder.

\$item

**TimeZone**

The new Timezone. Value of "System" sets to system time zone. Value of "Default" sets to default time zone.

"GMT"

**Result** Returns OK or error.

**Description****Examples**

Set time zone:

```
If [ IsEmpty(Events Create Reminder::TimeZone) ]
```

```
# we don't set it
```

```
Else
```

```
Set Variable [ $r; Value:MBS( "Events.Item.SetTimezone"; $reminder; Events Create Reminder::TimeZone ) ]

MBS( "Events.Item.SetTitle"; EKCalendarItem; Title )

### Parameters

#### EKCalendarItem

The reference to the calendar item: an event or reminder.  
\$item

#### Title

The new title.  
"Joe's birthday"

**Result** Returns OK or error.

### Description

### Examples

Set Title:

```
Set Variable [ $r; Value:MBS( "Events.Item.SetTitle"; $reminder; Events Create Reminder::Title ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.SetURL"; EKCalendarItem; URL )

### Parameters

#### EKCalendarItem

The reference to the calendar item: an event or reminder.  
\$item

#### URL

The new URL.  
"http://www.mbsplugins.de"

**Result** Returns OK or error.

### Description

### Examples

Set URL:

```
Set Variable [ $r; Value:MBS( "Events.Item.SetURL"; $reminder; Events Create Reminder::URL ) ]
```

## 77.87 Events.Item.creationDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.creationDate"; EKCalendarItem )

### Parameters

#### **EKCalendarItem**

The reference to the calendar item: an event or reminder.  
\$item

**Result** Returns timestamp or error.

### Description

Can be empty for never saved calendar items.  
Created 10th March 2016, last changed 12nd March 2016.

## 77.88 Events.Item.lastModifiedDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Item.lastModifiedDate"; EKCalendarItem )

### Parameters

#### EKCalendarItem

The reference to the calendar item: an event or reminder.  
\$item

**Result** Returns timestamp or error.

### Description

Can be empty for never saved calendar items.

### Example Databases

- [Mac and iOS/Events/Events Sync](#)

Created 10th March 2016, last changed 12nd March 2016.

## 77.89 Events.NewAlarm

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.NewAlarm" )

**Result** Returns reference number or error.

### Description

### Examples

Add alarm:

```
Set Variable [ $alarm; Value:MBS( "Events.NewAlarm" ) ]
If [ not IsEmpty(Events Create Reminder::AlarmSound) ]
Set Variable [ $r; Value:MBS( "Events.Alarm.SetSound"; $alarm; Events Create Reminder::AlarmSound ) ]
End If
If [ not IsEmpty(Events Create Reminder::AlarmLocationTitle) ]
Set Variable [ $l; Value:MBS( "Events.StructuredLocation.NewLocationWithTitle"; Events Create Reminder::Alarm-
LocationTitle ) ]
Set Variable [ $r; Value:MBS( "Events.StructuredLocation.SetRadius"; $l; Events Create Reminder::Alarm-
LocationRadius ) ]
Set Variable [ $r; Value:MBS( "Events.StructuredLocation.SetGeoLocation"; $l; Events Create Reminder::Alarm-
LocationGeoLat; Events Create Reminder::AlarmLocationGeoLong ) ]
Set Variable [ $r; Value:MBS( "Events.Alarm.SetStructuredLocation"; $alarm; $l) ]
Set Variable [ $r; Value:MBS( "Events.Alarm.SetProximity"; $alarm; Events Create Reminder::AlarmProx-
imity ) ]
End If
Set Variable [ $r; Value:MBS( "Events.Item.AddAlarm"; $reminder; $alarm ) ]
```

- [Mac and iOS/Events/Events Create Reminder](#)

Created 10th March 2016, last changed 13th March 2016.

**77.90 Events.NewAlarmWithAbsoluteDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.NewAlarmWithAbsoluteDate"; EndDate )

**Parameters****EndDate**

The timestamp the alarm should fire.

**Result** Returns reference number or error.

**Description****Examples**

Create a new alarm:

MBS( "Events.NewAlarmWithAbsoluteDate"; "03.04.2016 13:45:00" )

**See also**

- 77.2 Events.Alarm.GetAbsoluteDate 3561

**77.91 Events.NewAlarmWithRelativeOffset**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.NewAlarmWithRelativeOffset"; Offset )

**Parameters****Offset**

The offset from the event start that the alarm should fire. in Seconds.

3\*60

**Result** Returns reference number or error.

**Description****Examples**

New alarm in 3 minutes:

MBS( "Events.NewAlarmWithRelativeOffset"; 3 \* 60 )

Add display alarm:

Set Variable [ \$alarm1; Value:MBS( "Events.NewAlarmWithRelativeOffset"; 0 ) ]

Set Variable [ \$r; Value:MBS("Events.Item.AddAlarm"; \$c; \$alarm1) ]

Add alarm with sound 15 minutes before event:

Set Variable [ \$alarm2; Value:MBS( "Events.NewAlarmWithRelativeOffset"; -15\*60 ) ]

Set Variable [ \$r; Value:MBS( "Events.Alarm.SetSound"; \$alarm2; "Submarine" ) ]

Set Variable [ \$r; Value:MBS("Events.Item.AddAlarm"; \$c; \$alarm2) ]

## 77.92 Events.NewCalendar

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.NewCalendar"; entityType )

### Parameters

#### entityType

The entity type that this calendar may support. Event or Reminder  
"Event"

**Result** Returns calendar reference number or error.

### Description

You can only create calendars that accept either reminders or events via our API. However, other servers might allow mixing the two (though it is not common).

### See also

**77.95 Events.Object.HasChanges**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Object.HasChanges"; EKObject )

**Parameters****EKObject**

The reference to the object. This can be an alarm, source, participant, structured location, recurrence rule, calendar or calendar item.

\$item

**Result** Returns 1, 0 or error.

**Description**

Returns 1 if this object or any sub-object (alarm, etc.) has uncommitted changes.

Created 10th March 2016, last changed 13th March 2016.

## 77.96 Events.Object.IsNew

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Object.IsNew"; EKObject )

### Parameters

#### EKObject

The reference to the object. This can be an alarm, source, participant, structured location, recurrence rule, calendar or calendar item.

\$item

**Result** Returns 1, 0 or error.

### Description

#### Examples

Check if an alarm is new:

MBS( "Events.Object.IsNew"; "56001" )

77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Object.Refresh"; EKObject )

**Parameters****EKObject**

The reference to the object. This can be an alarm, source, participant, structured location, recurrence rule, calendar or calendar item.

\$item

**Result** Returns 1, 0 or error.

**Description**

Determines if the object is still valid (i.e. it still exists in the database), and unloads all properties that have not been modified. If this ever returns 0, it indicates the record was deleted and this instance should be discarded and no longer referenced.

Returns 1 if still valid.

**Examples**

Refresh an object:

MBS( "Events.Object.Refresh"; "3E802BF6-BE7C-42EA-BA4A-16CCF824AA31" )

- 77.48 Events.Event.Refresh 3612
- 77.98 Events.Object.Reset 3674
- 77.157 Events.SetNotification 3743
- 77.158 Events.SetNotificationEvaluate 3745

Created 10th March 2016, last changed 13th March 2016.

## 77.98 Events.Object.Reset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Object.Reset"; EKObject )

### Parameters

#### EKObject

The reference to the object. This can be an alarm, source, participant, structured location, recurrence rule, calendar or calendar item.

\$item

**Result** Returns OK or error.

### Description

If this object is not new, this method will unload all loaded properties and clear any dirty state

#### See also

- 77.96 Events.Object.IsNew 3672
- 77.97 Events.Object.Refresh 3673

Created 10th March 2016, last changed 13th March 2016.

**77.99 Events.Object.Rollback**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Object.Rollback"; EKObject )

**Parameters****EKObject**

The reference to the object. This can be an alarm, source, participant, structured location, recurrence rule, calendar or calendar item.

\$item

**Result** Returns OK or error.

**Description**

If this object is not new, this method will unload dirty state only.  
Created 10th March 2016, last changed 13th March 2016.

**77.100 Events.Participant.GetName**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Participant.GetName"; EKParticipant )

**Parameters****EKParticipant**

The reference to the participant.

\$Participant

**Result** Returns text or error.

**Description****See also**

- 77.101 Events.Participant.GetStatus 3677

## 77.102 Events.Participant.IsCurrentUser

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Participant.IsCurrentUser"; EKParticipant )

### Parameters

#### EKParticipant

The reference to the participant.

\$Participant

**Result** Returns 1, 0 or error.

### Description

A boolean indicating whether this participant represents the owner of this account.

Returns 1 if true or 0 if not.

Created 10th March 2016, last changed 13th March 2016.

**77.103 Events.Participant.Name**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Participant.Name"; EKParticipant )

**Parameters****EKParticipant**

The reference to the participant.

\$Participant

**Result** Returns name or error.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Participant.Person"; EKParticipant )

### Parameters

#### EKParticipant

The reference to the participant.

\$Participant

**Result** Returns person identifier or error.

### Description

This method returns the ABPerson that represents this participant, if a match can be found based on email address in the shared address book passed. If we cannot find the participant, empty result is returned.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceDayOfWeek.Copy"; EKRecurrenceDayOfWeek )

**Parameters****EKRecurrenceDayOfWeek**

The reference to the recurrence day of week.

\$RecurrenceDayOfWeek

**Result** Returns new identifier or error.

**Description**

You can create a copy to use the same day of week setting with a new recurrence rule.

Created 10th March 2016, last changed 13th March 2016.

## 77.110 Events.RecurrenceDayOfWeek.DayOfTheWeek

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceDayOfWeek.DayOfTheWeek"; EKRecurrenceDayOfWeek )

### Parameters

#### EKRecurrenceDayOfWeek

The reference to the recurrence day of week.

\$RecurrenceDayOfWeek

**Result** Returns number or error.

### Description

#### See also

- 77.111 Events.RecurrenceDayOfWeek.NewWithDayOfWeek 3687

Created 10th March 2016, last changed 13th March 2016.

**77.111 Events.RecurrenceDayOfWeek.NewWithDayOfWeek**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceDayOfWeek.NewWithDayOfWeek"; dayOfTheWeek { ; WeekNumber } )

**Parameters****dayOfTheWeek**

The day of the week.

1

**WeekNumber**

Optional

The number of the week.

5

**Result** Returns day of week reference ID or error.

**Description**

EKRecurrenceDayOfWeek specifies either a simple day of the week, or the nth instance of a particular day of the week, such as the third Tuesday of every month. The week number is only valid when used with monthly or yearly recurrences, since it would be otherwise meaningless.

Valid values for dayOfTheWeek are integers 1-7, which correspond to days of the week with Sunday = 1. Valid values for weekNumber portion are (+/-)1-53, where a negative value indicates a value from the end of the range. For example, in a yearly event -1 means last week of the year. -1 in a Monthly recurrence indicates the last week of the month.

The value 0 also indicates the weekNumber is irrelevant (every Sunday, etc.).

Day-of-week weekNumber values that are out of bounds for the recurrence type will result in an exception when trying to initialize the recurrence. In particular, weekNumber must be zero when passing EKRecurrenceDayOfWeek objects to initialize a weekly recurrence.

**Examples**

Pick Sunday:

MBS( "Events.RecurrenceDayOfWeek.NewWithDayOfWeek"; 1)

**77.115 Events.RecurrenceEnd.NewWithEndDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceEnd.NewWithEndDate"; EndDate )

**Parameters****EndDate**

The new end date as timestamp or date.

Get(CurrentHostTimeStamp) + 3600

**Result** Returns recurrence end ID or error.

**Description**

EKRecurrenceEnd is an attribute of EKRecurrenceRule that defines how long the recurrence is scheduled to repeat. The recurrence can be defined either with a number that indicates the total number times it repeats, or with a date, after which it no longer repeats. An event which is set to never end should have its EKRecurrenceEnd set to empty. If the end of the pattern is defined with a date, the client must pass a valid date. If the end of the pattern is defined as terms of a number of occurrences, the occurrenceCount passed to the initializer must be positive, it cannot be 0.

**See also**

## 77.120 Events.RecurrenceRule.DaysOfTheMonth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceRule.DaysOfTheMonth"; EKRecurrenceRule )

### Parameters

#### EKRecurrenceRule

The reference to the recurrence rule.

\$RecurrenceRule

**Result** Returns list or error.

### Description

This property is valid for rules whose frequency is monthly, and that were initialized with one or more specific days of the month (not with a day of the week and week of the month). This property can be accessed as an list containing one or more numbers corresponding to the days of the month the event recurs. For all other rules, this property is empty. This property corresponds to BYMONTHDAY in the iCalendar specification.

## 77.124 Events.RecurrenceRule.FirstDayOfTheWeek

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceRule.FirstDayOfTheWeek"; EKRecurrenceRule )

### Parameters

#### EKRecurrenceRule

The reference to the recurrence rule.

\$RecurrenceRule

**Result** Returns number or error.

### Description

Recurrence patterns can specify which day of the week should be treated as the first day. Possible values for this property are integers 0 and 1-7, which correspond to days of the week with Sunday = 1. Zero indicates that the property is not set for this recurrence. The first day of the week only affects the way the recurrence is expanded for weekly recurrence patterns with an interval greater than 1. For those types of recurrence patterns, the Calendar framework will set firstDayOfTheWeek to be 2 (Monday). In all other cases, this property will be set to zero. The iCalendar spec stipulates that the default value is Monday if this property is not set.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceRule.GetRecurrenceEnd"; EKRecurrenceRule )

### Parameters

#### EKRecurrenceRule

The reference to the recurrence rule.

\$RecurrenceRule

**Result** Returns recurrence end id, empty or error.

### Description

Can be empty.

### See also

- 77.131 Events.RecurrenceRule.SetRecurrenceEnd

3709

Created 10th March 2016, last changed 13th March 2016.

**77.127 Events.RecurrenceRule.Interval**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceRule.Interval"; EKRecurrenceRule )

**Parameters****EKRecurrenceRule**

The reference to the recurrence rule.

\$RecurrenceRule

**Result** Returns number or error.

**Description**

The interval of a rules is an integer value which specifies how often the recurrence rule repeats over the unit of time described by the frequency. For example, if the frequency is weekly, then an interval of 1 means the pattern is repeated every week. A value of 2 indicates it is repeated every other week, 3 means every third week, and so on. The value must be a positive integer; 0 is not a valid value, and nil will be returned if the client attempts to initialize a rule with a negative or zero interval.

Created 10th March 2016, last changed 13th March 2016.

**77.128 Events.RecurrenceRule.MonthsOfTheYear**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK

- 77.124 Events.RecurrenceRule.FirstDayOfTheWeek 3700
- 77.132 Events.RecurrenceRule.WeeksOfTheYear 3710

Created 10th March 2016, last changed 13th March 2016.

**77.129 Events.RecurrenceRule.NewWithFrequency**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceRule.NewWithFrequency"; Frequency; Interval; EKRecurrenceEnd { ; daysOfTheWeek; daysOfTheMonth; monthsOfTheYear; weeksOfTheYear; daysOfTheYear; setPositions } )

**Parameters****Frequency**

The frequency. Can be Yearly, Monthly, Daily or Weekly.  
"Weekly"

**Interval**

The interval to use. Must be >0  
1

**EKRecurrenceEnd**

The reference to the recurrence end. Can be empty.  
\$RecurrenceEnd

**daysOfTheWeek**

Optional

The days of the week list. An list of EKRecurrenceDayOfWeek object identifiers. Valid for all recurrence types except daily. Ignored otherwise. Corresponds to the BYDAY value in the iCalendar specification. Version 7.1 accepts here also week days, not just RecurrenceDayOfWeek IDs returned from Events.RecurrenceDayOfWeek.NewWithDayOfWeek.

**daysOfTheMonth**

Optional

The days of the month. An list of numbers ( [ +/- ] 1 to 31). Negative numbers infer counting from the end of the month. For example, -1 means the last day of the month. Valid only for monthly recurrences. Ignored otherwise. Corresponds to the BYMONTHDAY value in the iCalendar specification.

**monthsOfTheYear**

Optional

The list of months in the year. An list of numbers (1 to 12). Valid only for yearly recurrences. Ignored otherwise. Corresponds to the BYMONTH value in the iCalendar specification.

**weeksOfTheYear**

Optional

The list of weeks in the year. An list of numbers ( [ +/- ] 1 to 53). Negative numbers infer counting from the end of the year. For example, -1 means the last week of the year. Valid only for yearly recurrences. Ignored otherwise. Corresponds to the BYWEEKNO value in the iCalendar specification.

**daysOfTheYear**

Optional

The days of the year. An list of numbers ( [ +/- ] 1 to 366). Negative numbers infer counting from the end of the year. For example, -1 means the last day of the year. Valid only for yearly recurrences. Ignored otherwise. Corresponds to the BYYEARDAY value in the iCalendar specification.

**setPositions**

Optional

The list of set positions. An list of numbers ( [ +/1 ] 1 to 366). Used at the end of recurrence computation to filter the list to the positions specified. Negative numbers indicate starting at the end, i.e. -1 indicates taking the last result of the set. Valid when daysOfTheWeek, daysOfTheMonth, monthsOfTheYear, weeksOfTheYear, or daysOfTheYear is passed. Ignored otherwise. Corresponds to the BYSETPOS value in the iCalendar specification.

**Result** Returns OK or error.

**Description**

This can be used to build any kind of recurrence rule. But be aware that certain combinations make no sense and will be ignored. For example, if you pass daysOfTheWeek for a daily recurrence, they will be ignored.

**Examples**

Create rule to repeat each year:

```
MBS( "Events.RecurrenceRule.NewWithFrequency"; "Yearly";"1" )
```

Create rule to repeat each week:

```
MBS( "Events.RecurrenceRule.NewWithFrequency"; "Weekly";"1"; "" ; MBS( "Events.RecurrenceDayOfWeek.NewWithDayOfWeek"; 1) )
```

Create event in summer only:

```
MBS( "Events.RecurrenceRule.NewWithFrequency";
"Monthly"; // by mont
"1"; // every
""; // no end date
"";
"";
"45678910" ) // only this months
```

Every week Tuesday and Wednesday:

```
MBS( "Events.RecurrenceRule.NewWithFrequency"; "Weekly";"1"; "" ; "34" )
```

77.129. *EVENTS.RECURRENCERULE.NEWWITHFREQUENCY*

3707

Created 10th March 2016, last changed 14th March 2017.

## 77.130 Events.RecurrenceRule.SetPositions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceRule.SetPositions"; EKRecurrenceRule )

### Parameters

#### EKRecurrenceRule

The reference to the recurrence rule.

\$RecurrenceRule

**Result** Returns list or error.

### Description

This property is valid for rules which have a valid `daysOfTheWeek`, `daysOfTheMonth`, `weeksOfTheYear`, or `monthsOfTheYear` property. It allows you to specify a set of ordinal numbers to help choose which objects out of the set of selected events should be included. For example, setting the `daysOfTheWeek` to Monday-Friday and including a value of -1 in the array would indicate the last weekday in the recurrence range (month, year, etc). This value corresponds to the iCalendar BYSETPOS property.

3699

Created 10th March 2016, last changed 13th March 2016.

**77.131 Events.RecurrenceRule.SetRecurrenceEnd**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceRule.SetRecurrenceEnd"; EKRecurrenceRule; EKRecurrenceEnd )

**Parameters****EKRecurrenceRule**

The reference to the recurrence rule.

\$RecurrenceRule

**EKRecurrenceEnd**

The reference to the recurrence end.

\$RecurrenceEnd

**Result** Returns OK or error.

**Description**

This property defines when the the repeating event is scheduled to end. The end date can be specified by a number of occurrences, or with an end date.

**See also**

- 77.126 Events.RecurrenceRule.GetRecurrenceEnd

3702

Created 10th March 2016, last changed 13th March 2016.

**77.132 Events.RecurrenceRule.WeeksOfTheYear**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RecurrenceRule.WeeksOfTheYear"; EKRecurrenceRule )

**Parameters****EKRecurrenceRule**

The reference to the recurrence rule.

\$RecurrenceRule

**Result** Returns list or error.

**Description**

This property is valid for rules whose frequency is yearly. This property can be accessed as an list containing one or more numbers corresponding to the weeks of the year the event recurs. For all other rules, this property is empty. This property corresponds to BYWEEK in the iCalendar specification. It should contain integers from 1 to 53 or -1 to -53.

**See also**

- 77.121 Events.RecurrenceRule.DaysOfTheWeek 3697
- 77.122 Events.RecurrenceRule.DaysOfTheYear 3698
- 77.128 Events.RecurrenceRule.MonthsOfTheYear 3704

Created 10th March 2016, last changed 13th March 2016.

## 77.133 Events.RefreshSourcesIfNecessary

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RefreshSourcesIfNecessary" )

**Result** Returns OK or error.

### Description

You can call this method to pull new data from remote sources. This only updates the event store's data. If you want to update your objects after refreshing the sources, you should call refresh on each of them afterwards. On iOS, this sync only occurs if deemed necessary. On OS X, this will occur regardless of necessity, but may change in a future release to match the iOS behavior. On WatchOS, initiating sync is not available. Sync will occur automatically with the paired iOS device.

**77.134 Events.Reminder.GetCompleted**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Reminder.GetCompleted"; EKReminder )

**Parameters****EKReminder**

The reference to the reminder.

\$Reminder

**Result** Returns 1, 0 or error.

**Description**

Returns 1 if completed, else 0.

**Examples**

Query completed status for a given reminder:

MBS( "Events.Reminder.GetCompleted"; "3E802BF6-BE7C-42EA-BA4A-16CCF824AA31" )

**See also**

**77.135 Events.Reminder.GetCompletionDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Reminder.GetCompletionDate"; EKReminder )

**Parameters****EKReminder**

The reference to the reminder.

\$Reminder

**Result** Returns timestamp or error.

**Description**

Note, you may encounter the case where Events.Reminder.GetCompleted is 1, but completionDate is empty, if the reminder was completed using a different client.

**Examples**

Query completion date for a given reminder:

MBS( "Events.Reminder.GetCompletionDate"; "3E802BF6-BE7C-42EA-BA4A-16CCF824AA31" )

**See also**

**77.136 Events.Reminder.GetDueDate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Reminder.GetDueDate"; EKReminder )

**Parameters****EKReminder**

The reference to the reminder.

\$Reminder

**Result** Returns list or error.

**Description**

This may include a date and a time.

Returns a list with key=value list of the defined date components.

**Examples**

Query due date:

MBS( "Events.Reminder.GetDueDate"; "3E802BF6-BE7C-42EA-BA4A-16CCF824AA31")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Reminder.SetDueDate"; EKReminder; DueDate )

**Parameters****EKReminder**

The reference to the reminder.

\$Reminder

**DueDate**

The new due date as timestamp.

Get(CurrentHostTimeStamp)

**Result** Returns OK or error.

**Description****Examples**

Set due date in an hour and save:

```
MBS( "Events.Reminder.SetStartDate"; "3E802BF6-BE7C-42EA-BA4A-16CCF824AA31"; Get(CurrentHost-
TimeStamp) + 3600 ) &
```

```
MBS( "Events.SaveReminder"; "3E802BF6-BE7C-42EA-BA4A-16CCF824AA31")
```

Set due date:

```
If [ not IsEmpty(Events Create Reminder::DueDate) ]
```

```
Set Variable [ $r; Value:MBS( "Events.Reminder.SetDueDate"; $reminder; Events Create Reminder::Due-
Date ) ]
```

```
End If
```

### Example Databases

- [Mac and iOS/Events/Events Create Reminder](#)

Created 10th March 2016, last changed 13th March 2016.

**77.144 Events.Reminder.SetDueDateComponents**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Reminder.SetDueDateComponents"; EKReminder { ; Year; Month; Day; Hour; Minute; Second; TimeZone } )

**Parameters****EKReminder**

The reference to the reminder.

\$Reminder

**Year**

Optional

The year number. If missing or negative, no year is defined.

2016

**Month**

Optional

The month number. If missing or negative, no month is defined.

12

**Day**

Optional

The day number. If missing or negative, no day is defined.

12

**Hour**

Optional

The hour number. If missing or negative, no hour is defined.

16

**Minute**

Optional

The minute number. If missing or negative, no minute is defined.

12

**Second**

Optional

The second number. If missing or negative, no second is defined.

0

**TimeZone**

Optional

The time zone to use. Value of "System" sets to system time zone. Value of "Default" sets to default time zone.

"GMT"

**Result** Returns OK or error.

**Description**

The use of date components allows the due date and its time zone to be represented in a single property. A undefined time zone represents a floating date. Setting a date component without a hour, minute and second component will set `allDay` to true.

**See also**

- 77.147 `Events.Reminder.SetStartDateComponents` 3729

Created 10th March 2016, last changed 13th March 2016.

**77.145 Events.Reminder.SetPriority**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Reminder.SetPriority"; EKReminder; Priority )

**Parameters****EKReminder**

The reference to the reminder.

\$Reminder

**Priority**

The new priority. Number from 0 to 9. Or texts high, medium, low or none.

"medium"

**Result** Returns OK or error.

**Description**

Priorities run from 1 (highest) to 9 (lowest). A priority of 0 means no priority.

Saving a reminder with any other priority will fail.

Per RFC 5545, priorities of 1-4 are considered "high," a priority of 5 is "medium," and priorities of 6-9 are "low."

**Examples**

Set priority:

```
Set Variable [ $r; Value:MBS( "Events.Reminder.SetPriority"; $reminder; Events Create Reminder::Priority ) ]
```

Set high priority:

```
MBS( "Events.Reminder.SetPriority"; $Reminder; "high" )
```

## 77.148 Events.Reminders

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Reminders" { ; Calendars } )

### Parameters

#### Calendars

Optional

The identifier for the calendar you want to search. Leave empty to search all.

**Result** Returns list of reminder identifiers or error.

### Description

You can pass nothing for calendars to fetch from all available calendars.

### Examples

Query all reminders from all calendars:

MBS( "Events.Reminders" )

### See also

## 77.149 Events.RemoveCalendar

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RemoveCalendar"; EKCalendar { ; Commit } )

### Parameters

#### EKCalendar

The id of the calendar to query.

\$calendar

#### Commit

Optional

Whether to commit. Pass 1 to commit or 0 to not commit. Default is 1. Pass 0 to batch changes together and commit with Events.Commit later.

1

**Result** Returns OK or error.

### Description

This function attempts to delete the given calendar from the calendar database. It returns OK if successful and error otherwise.

If the calendar supports multiple entity types (allowedEntityTypes), but the user has not granted you access to all those entity types, then we will delete all of the entity types for which you have access and remove that entity type from the allowedEntityTypes. For example: If a calendar supports both events and reminders, but you only have access to reminders, we will delete all the reminders and make the calendar only support events.

If you have access to all of its allowedEntityTypes, then it will delete the calendar and all of the events and reminders in the calendar.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RemoveEvent"; EKEvent; Span { ; Commit } )

**Parameters****EKEvent**

The reference to the event.

\$event

**Span**

The span to use. This event, or this and future events. Pass "This" or "Future" here.

"This"

**Commit**

Optional

Whether to commit. Pass 1 to commit or 0 to not commit. Default is 1. Pass 0 to batch changes together and commit with Events.Commit later.

1

**Result** Returns OK or error.

**Description**

This function attempts to remove the event from the calendar database. It returns OK if successful and error otherwise. It's possible for this function to return failed. This occurs if the event wasn't ever added and didn't need removing.

After an event is removed, it is no longer tied to this calendar store, and all data in the event is cleared except for the eventIdentifier.

**Examples**

Remove event:

```
Set Variable [ $r; Value:MBS("Events.RemoveEvent"; CalendarTest::ItemUID; "this"; 1) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.RemoveReminder"; EKReminder { ; Commit } )

**Parameters****EKReminder**

The reference to the reminder.

\$Reminder

**Commit**

Optional

Whether to commit. Pass 1 to commit or 0 to not commit. Default is 1. Pass 0 to batch changes together and commit with Events.Commit later.

1

**Result** Returns OK or error.

**Description**

This function attempts to remove the reminder from the event store database. It returns OK if successful and Failed otherwise.

After a reminder is removed, it is no longer tied to this event store.

## 77.152 Events.Reset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.Reset" )

**Result** Returns OK or error.

### Description

You can use this method to forget ALL changes made to the event store (all additions, all fetched objects, etc.). It essentially is as if you released the store and then created a new one. It brings it back to its initial state. All objects ever created/fetched, etc. using this store are no longer connected to it and are considered invalid.

## 77.154 Events.SaveEvent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.SaveEvent"; EKEvent; Span { ; Commit } )

### Parameters

#### EKEvent

The reference to the event.

\$event

#### Span

The span to use. This event, or this and future events. Pass "This" or "Future" here.

"This"

#### Commit

Optional

Whether to commit. Pass 1 to commit or 0 to not commit. Default is 1. Pass 0 to batch changes together and commit with Events.Commit later.

1

**Result** Returns OK or error.

### Description

This function attempts to save the event to the calendar database. It returns OK if successful and error otherwise. It's possible for this function to return failed. This occurs if the event wasn't dirty and didn't need saving.

After an event is successfully saved, it is also put into sync with the database, meaning that all fields you did not change will be updated to the latest values. If you save the event, but it was deleted by a different store/process, you will effectively recreate the event as a new event.

### Examples

Update dates:

```
Set Variable [ $c; Value:CalendarTest::ItemUID ]
Set Variable [ $r; Value:MBS("Events.Event.SetEndDate"; $c; CalendarTest::ItemEndDate) ]
Set Variable [ $r; Value:MBS("Events.Event.SetStartDate"; $c; CalendarTest::ItemStartDate) ]
Set Variable [ $r; Value:MBS("Events.SaveEvent"; $c; "this"; 1 ) ]
```

Create event:

```
Set Variable [ $c; Value:MBS("Events.NewEvent") ]
Set Variable [ $r; Value:MBS("Events.Item.SetTitle"; $c; CalendarTest::ItemTitle) ]
Set Variable [ $r; Value:MBS("Events.Item.SetNotes"; $c; CalendarTest::ItemNotes) ]
Set Variable [ $r; Value:MBS("Events.Item.SetURL"; $c; CalendarTest::ItemURL) ]
Set Variable [ $r; Value:MBS("Events.Item.SetLocation"; $c; CalendarTest::ItemLocation) ]
Set Variable [ $r; Value:MBS("Events.Event.SetStartDate"; $c; CalendarTest::ItemStartDate) ]
Set Variable [ $r; Value:MBS("Events.Event.SetEndDate"; $c; CalendarTest::ItemEndDate) ]
```

```

Set Variable [ $r; Value:MBS("Events.Event.SetAllDay"; $c;CalendarTest::ItemAllDay) ]
Set Variable [ $r; Value:MBS("Events.Event.SetAvailability"; $c; "busy") ]
Set Variable [ $r; Value:MBS("Events.Item.SetCalendar"; $c; CalendarTest::CalendarUID) ]
Set Variable [ $r; Value:MBS("Events.SaveEvent"; $c; "this"; 1 ) ]
Set Field [ CalendarTest::ItemUID; MBS("Events.Item.CalendarItemIdentifier"; $c) ]

```

**77.155 Events.SaveReminder**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.SaveReminder"; EKReminder { ; Commit } )

**Parameters****EKReminder**

The reference to the reminder.

\$Reminder

**Commit**

Optional

Whether to commit. Pass 1 to commit or 0 to not commit. Default is 1. Pass 0 to batch changes together and commit with Events.Commit later.

1

**Result** Returns OK or error.

**Description**

This function attempts to save the reminder to the event store database. It returns OK if successful and error otherwise.

After a reminder is successfully saved, its fields are updated to the latest values in the database.

**Examples**

Create Reminder:

```

Set Variable [ $reminder; Value:MBS( "Events.NewReminder" ) ]
Set Variable [ $calendar; Value:Events Create Reminder::Calendar ]
If [ IsEmpty(Events Create Reminder::Calendar) ]
Set Variable [ $calendar; Value:MBS( "Events.defaultCalendarForNewReminders" ) ]
End If
Set Variable [ $r; Value:MBS( "Events.Item.SetCalendar"; $reminder; $calendar ) ]
Set Variable [ $r; Value:MBS( "Events.Item.SetLocation"; $reminder; Events Create Reminder::Location ) ]
Set Variable [ $r; Value:MBS( "Events.Item.SetTitle"; $reminder; Events Create Reminder::Title ) ]
Set Variable [ $r; Value:MBS( "Events.Item.SetURL"; $reminder; Events Create Reminder::URL ) ]

**77.156 Events.SelectEvent**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.SelectEvent"; ID )

**Parameters****ID**

the ID for the calendar entry.

**Result** Returns ID or error.

**Description**

This function takes a calendar ID, either internal or external identifier for events or reminders and finds it. Returns the internal ID. Result is empty if nothing is found.

**Examples**

Select an event by ID:

MBS( "Events.SelectEvent"; "2D8DD2DD-766C-4E1D-A9FB-A36C6082CED2" )

**77.157 Events.SetNotification**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.SetNotification"; FileName; ScriptName )

**Parameters****FileName**

The name of the FileMaker File that contains the script.

"test.fp7"

**ScriptName**

The name of the script to run.

"MyScript"

**Result** Returns OK or error.

**Description**

This script is called whenever something in the calendar database changed.

Notification is sent out when the database is changed by either an external process, another event store in the same process, or by calling `saveEvent:` or `removeEvent:` on a store you are managing. When you receive this notification, you should consider all objects instances you have to be invalid. If you had selected events for a date range using `Events.Events`, etc. for display, you should release them and re-fetch the events again. If you have an event you are actively using (e.g. you are currently viewing details for it or editing it), you can call `Events.Object.Refresh` to try to revalidate it against the latest state of the database. If that method returns 1, you can continue to use the event, otherwise, you should release it and abandon what you were doing with it.

This script trigger will also be posted if access to events or reminders is changed by the user.

**Examples**

Installs notification script:

MBS( "Events.SetNotification"; "test.fmp12"; "MyScript" )

**77.158 Events.SetNotificationEvaluate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.SetNotificationEvaluate"; Expression )

**Parameters****Expression**

The expression to evaluate.

"Let ( \$\$Done = 1 ; 1 )"

**Result** Returns OK or error.

**Description**

This expression is evaluated whenever something in the calendar database changed.

Notification is sent out when the database is changed by either an external process, another event store in the same process, or by calling `saveEvent:` or `removeEvent:` on a store you are managing. When you receive this notification, you should consider all objects instances you have to be invalid. If you had selected events for a date range using `Events.Events`, etc. for display, you should release them and re-fetch the events again. If you have an event you are actively using (e.g. you are currently viewing details for it or editing it), you can call `Events.Object.Refresh` to try to revalidate it against the latest state of the database. If that method returns 1, you can continue to use the event, otherwise, you should release it and abandon what you were doing with it.

This expression will also be evaluated if access to events or reminders is changed by the user.

## 77.167 Events.StructuredLocation.NewLocationWithTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.StructuredLocation.NewLocationWithTitle"; Title )

### Parameters

#### Title

The new title of location.

"Hamburg, Germany"

**Result** Returns reference ID or error.

### Description

Returns reference ID which you can pass to Events.Event.SetStructuredLocation function.

### Examples

Create structured location for alarm:

```
Set Variable [ $l; Value:MBS( "Events.StructuredLocation.NewLocationWithTitle"; Events Create Reminder::Alarm-LocationTitle ) ]
```

```
Set Variable [ $r; Value:MBS( "Events.StructuredLocation.SetRadius"; $l; Events Create Reminder::Alarm-LocationRadius ) ]
```

```
Set Variable [ $r; Value:MBS( "Events.StructuredLocation.SetGeoLocation"; $l; Events Create Reminder::Alarm-LocationGeoLat; Events Create Reminder::AlarmLocationGeoLong ) ]
```

```
Set Variable [ $r; Value:MBS( "Events.Alarm.SetStructuredLocation"; $alarm; $l) ]
```

```
Set Variable [ $r; Value:MBS( "Events.Alarm.SetProximity"; $alarm; Events Create Reminder::AlarmProximity ) ]
```

**77.171 Events.defaultCalendarForNewEvents**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.defaultCalendarForNewEvents" )

**Result** Returns calendar identifier or error.

**Description****Examples**

Query name of default calendar:

MBS("Events.Calendar.GetTitle"; MBS( "Events.defaultCalendarForNewEvents" ))

**See also**

- 77.24 Events.Calendar.GetTitle 3588
- 77.172 Events.defaultCalendarForNewReminders 3760

**Example Databases**

## 77.172 Events.defaultCalendarForNewReminders

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.defaultCalendarForNewReminders" )

**Result** Returns calendar identifier or error.

### Description

### Examples

Query title of calendar for new reminders:

```
MBS("Events.Calendar.GetTitle"; MBS( "Events.defaultCalendarForNewReminders" ))
```

Get calendar:

```
Set Variable [ $calendar; Value:Events Create Reminder::Calendar ]
If [ IsEmpty(Events Create Reminder::Calendar) ]
Set Variable [ $calendar; Value:MBS( "Events.defaultCalendarForNewReminders" ) ]
End If
```

**77.173 Events.requestAccessToEntityType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
77 Events	6.2	Yes	No	No	No	Yes

MBS( "Events.requestAccessToEntityType"; Type )

**Parameters****Type**

Which entity type you like to request: Event or Reminder.  
"Event"

**Result** Returns Wait, OK or error.

**Description**

Users are able to grant or deny access to event and reminder data on a per-app basis. To request access to event and/or reminder data, call `Events.requestAccessToEntityType`. This will not block the app while the user is being asked to grant or deny access.

Until access has been granted for an entity type, the event store will not contain any calendars for that entity type, and any attempt to save will fail. The user will only be prompted the first time access is requested; any subsequent instantiations of `EKEventStore` will use the existing permissions.

You can later check status with `Events.AuthorizationStatusForEntityType`.

The function may return OK if access is granted directly or Wait if user will be asked.

**Examples**

Request access for reminder:

```
MBS( "Events.requestAccessToEntityType"; "Reminder" )
```

Query authorization:

```
Set Variable [ $r; Value:MBS("Events.AuthorizationStatusForEntityType"; "Reminder") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "We have a problem"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Else If [ $r = "NotDetermined" ]
Set Variable [ $r; Value:MBS( "Events.requestAccessToEntityType"; "Reminder" ) ]
If [ $r = "Wait" ]
# dialog is showing.
Else If [ $r = "OK" ]
Show Custom Dialog [ "Success"; "We are authorized and ready to go." ]
Else
Show Custom Dialog [ "We have a problem"; $r ]
End If
Else If [ $r = "Restricted" ]
Show Custom Dialog [ "Success"; "We are authorized for a restricted access and ready to go." ]
Else If [ $r = "Denied" ]
```

```
Show Custom Dialog [ "Problem"; "We are denied for calendar access. Please go to system preferences and enable us." ]
Else If [ $r = "Authorized" ]
Show Custom Dialog [ "Success"; "We are authorized and ready to go." ]
Else
Show Custom Dialog [ "We have a problem"; $r ]
End If
```

# Chapter 78

## FileDialog

Show dialogs to select files or folders.

### 78.1 DocumentPicker.Dismiss

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.Dismiss" )

**Result** Returns OK or error.

**Description**

Does nothing if dialog is not visible.

**See also**

- 78.5 DocumentPicker.Files

3767

Created 28th January 2019, last changed 28th January 2019.

## 78.2 DocumentPicker.Export

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.Export"; Paths )

### Parameters

#### Paths

Native file path list for the documents to pass.

"/Containers/testApp/Documents/test.txt"

**Result** Returns OK or error.

### Description

The user selects an external destination. The document picker copies the document, leaving the original unchanged.

On success, we store the list of file paths and trigger script. Script is trigger with parameter "Pick" or "Cancel".

The file paths refer to new copies of the exported documents at the selected destination.

Warning: Function returns immediately and dialog shows after function returned asynchronously.

### See also

- 78.8 DocumentPicker.Move 3770
- 78.9 DocumentPicker.Open 3771

Created 28th January 2019, last changed 28th January 2019.

## 78.3 DocumentPicker.File

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.File"; Index )

### Parameters

#### Index

The index of the file to query.

0

**Result** Returns file path or error.

### Description

Pass index from 0 to DocumentPicker.FileCount-1.

Example path you may see for import:

```
"/Containers/Data/Application/2E993ED8-F5AA-4A18-877C-F0CB72485337/tmp/de.monkeybreadsoftware.test-Inbox/IMG_0005.JPG"
```

And for open without inbox:

```
"/Containers/Data/Application/2E993ED8-F5AA-4A18-877C-F0CB72485337/Documents/IMG_0005.JPG"
```

Created 28th January 2019, last changed 28th January 2019.

## 78.4 DocumentPicker.FileCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.FileCount" )

**Result** Returns number or error.

**Description**

**See also**

Created 28th January 2019, last changed 28th January 2019.

## 78.5 DocumentPicker.Files

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.Files" )

**Result** Returns list or error.

### Description

### See also

Created 28th January 2019, last changed 29th January 2019.

## 78.6 DocumentPicker.Import

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.Import"; AllowedUTIs; allowsMultipleSelection )

### Parameters

#### AllowedUTIs

The list of allowed universal types.

"public.jpeg\$public.png"

#### allowsMultipleSelection

Whether to allow multiple files to be selected. Pass 1 to allow and 0 to disallow.

1

**Result** Returns OK or error.

### Description

The user selects an external document. The document picker copies the document, leaving the original unchanged.

On success, we store the list of file paths and trigger script. Script is trigger with parameter "Pick" or "Cancel".

The path list refers to a copy of the selected documents. These documents are temporary files. They remain available only until your application terminates. To keep a permanent copy, move these files to a permanent location inside your sandbox.

Warning: Function returns immediately and dialog shows after function returned asynchronously.

### See also

Created 28th January 2019, last changed 28th January 2019.

## 78.7 DocumentPicker.IsVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.IsVisible" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if visible or 0 if not.

Created 28th January 2019, last changed 28th January 2019.

## 78.8 DocumentPicker.Move

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.Move"; Paths )

### Parameters

#### Paths

Native file path list for the documents to pass.

"/Containers/testApp/Documents/test.txt"

**Result** Returns OK or error.

### Description

The user selects an external destination. The document picker moves the document; however, the user can still access the document as an external document, and the user can edit the document in place.

On success, we store the list of file paths and trigger script. Script is trigger with parameter "Pick" or "Cancel".

The path list refers to the documents' new locations.

Warning: Function returns immediately and dialog shows after function returned asynchronously.

### See also

- 78.9 DocumentPicker.Open 3771

Created 28th January 2019, last changed 28th January 2019.

## 78.9 DocumentPicker.Open

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.Open"; AllowedUTIs; allowsMultipleSelection )

### Parameters

#### AllowedUTIs

The list of allowed universal types.

"public.jpeg\$public.png"

#### allowsMultipleSelection

Whether to allow multiple files to be selected. Pass 1 to allow and 0 to disallow.

1

**Result** Returns OK or error.

### Description

The user selects an external document. The document picker provides access to the document, and the user can edit the document in place.

On success, we store the list of file paths and trigger script. Script is trigger with parameter "Pick" or "Cancel".

The paths list refers to the selected documents.

Warning: Function returns immediately and dialog shows after function returned asynchronously. For FileMaker database files, please use com.filemaker.doc.fmp12 as UTI or simply public.data.

## 78.10 DocumentPicker.SetTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	9.1	No	No	No	No	Yes

MBS( "DocumentPicker.SetTrigger"; FileName; ScriptName )

### Parameters

#### FileName

The file name of the script.

Get(FileName)

#### ScriptName

The script to trigger.

"FilesSelected"

**Result** Returns OK or error.

### Description

### Example Databases

- [iOS/DocumentPicker iOS](#)

Created 28th January 2019, last changed 28th January 2019.

## 78.11 FileDialog.GetAllowMulti

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.GetAllowMulti" )

**Result** Returns 0 or 1.

**Description**

**See also**

- 78.32 FileDialog.SetAllowMulti

3803

Created 18th August 2014, last changed 18th August 2014.

## 78.12 FileDialog.GetAllowsOtherFileTypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	4.3	Yes	No	No	No	No

MBS( "FileDialog.GetAllowsOtherFileTypes" )

**Result** Returns value.

**Description**

**See also**

- 78.33 FileDialog.SetAllowsOtherFileTypes 3805

Created 18th August 2014, last changed 17th June 2018.

## 78.13 FileDialog.GetCanSelectHiddenExtension

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	No	No	No	No

MBS( "FileDialog.GetCanSelectHiddenExtension" )

**Result** Returns 1 when the panel allows the user to hide or show extensions; otherwise, 0.

### Description

### See also

- 78.34 FileDialog.SetCanSelectHiddenExtension

3806

Created 18th August 2014, last changed 18th August 2014.

## 78.14 FileDialog.GetFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	4.3	Yes	Yes	No	No	No

MBS( "FileDialog.GetFilter"; Selector )

### Parameters

#### Selector

Which value to query. Can be MacFilter, WinFilter or WinLabels.  
"MacFilter"

**Result** Returns filter or error.

### Description

#### See also

- 78.19 FileDialog.GetPath 3781

Created 18th August 2014, last changed 18th August 2014.

## 78.15 FileDialog.GetInitialDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.GetInitialDirectory" )

**Result** Returns path for initial directory.

### Description

Use Path.NativePathToFileMakerPath to convert to a FileMaker path if required.

### See also

- 78.36 FileDialog.SetInitialDirectory 3809
- 124.7 Path.NativePathToFileMakerPath 6255

Created 18th August 2014, last changed 29th April 2016.

## 78.16 FileDialog.GetMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.GetMessage" )

**Result** Returns the message text.

### Description

### See also

- 64.14 Dialog.GetMessage 2395

Created 18th August 2014, last changed 17th June 2018.

## 78.17 FileDialog.GetNameFieldLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.GetNameFieldLabel" )

**Result** Returns initial text for the name field.

### Description

### See also

- 78.38 FileDialog.SetNameFieldLabel

3813

Created 18th August 2014, last changed 24th May 2018.

## 78.18 FileDialog.GetNameFieldStringValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.GetNameFieldStringValue" )

**Result** Returns the text.

**Description**

**See also**

## 78.19 FileDialog.GetPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.GetPath" { ; index } )

### Parameters

#### index

Optional

The index of the path.

0

**Result** Returns native path.

### Description

Use Path.NativePathToFileMakerPath to convert to a FileMaker path if required.

Please note that in sheet mode (FileDialog.SetUseSheet with 1), you need to wait for the trigger to be called before you can query paths.

### Examples

Export all containers to one folder:

```
# Ask for folder?
Set Variable [ $r; Value:MBS("FileDialog.Reset") ]
Set Variable [ $r; Value:MBS("FileDialog.SetMessage"; "Export folder?" ) ]
Set Variable [ $r; Value:MBS("FileDialog.SelectFolderDialog") ]
If [ $r = "OK" ]
# get path from dialog:
Set Variable [ $npath; Value:MBS( "FileDialog.GetPath"; 0 ) ]
# convert to FileMaker path for Export Field Contents
Set Variable [ $fpath; Value:MBS( "Path.NativePathToFilemakerPath"; $npath ) ]
# Loop over all records:
Go to Record/Request/Page [ First ]
Loop
# Export files from this record
# figure out file name
Set Variable [ $name; Value:GetAsText ( Container Batch Export::Test1 ) ]
Set Variable [ $name; Value:GetValue($name; 1) ]
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; $name ) ]
Set Variable [ $dpath; Value:MBS( "Path.AddPathComponent"; $fpath; $name ) ]
Export Field Contents [ Container Batch Export::Test1; "$dpath" ]
# Next record
Go to Record/Request/Page [ Next; Exit after last ]
End Loop
End If
```

Select folder in one expression:

```
Let( [
r = MBS("FileDialog.Reset");
r = MBS("FileDialog.SelectFolderDialog");
folder = If ( r = "OK" ; MBS("FileDialog.GetPath"; 0); "" )
] ; folder)
```

## 78.28 FileDialog.Reset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.Reset" )

**Result** Returns OK.

### Description

Clears all text values and sets boolean values to false except ResolvesAliases which is set to true.

### Examples

Resets file dialog options:

```
Set Variable [ $r; Value:MBS("FileDialog.Reset") ]
```

## 78.29 FileDialog.SaveFileDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SaveFileDialog" )

**Result** Returns "OK", "Cancel" or an error.

### Description

If dialog finishes well, you can query paths.

### Examples

Run Save Dialog:

```

Delete All Records [ No dialog ]
Set Variable [ $r; Value:MBS("FileDialog.Reset") ]
Set Variable [ $r; Value:MBS("FileDialog.SetShowHidden"; FileDialog::ShowHidden) ]
Set Variable [ $r; Value:MBS("FileDialog.SetAllowMulti"; FileDialog::AllowMulti) ]
Set Variable [ $r; Value:MBS("FileDialog.SetResolvesAliases"; FileDialog::ResolvesAliases) ]
Set Variable [ $r; Value:MBS("FileDialog.SetTreatsFilePackagesAsDirectories"; FileDialog::TreatsFilePack-
agesAsDirectories) ]
Set Variable [ $r; Value:MBS("FileDialog.SetCanSelectHiddenExtension"; FileDialog::CanSelectHiddenEx-
tension) ]
Set Variable [ $r; Value:MBS("FileDialog.SetWindowTitle"; FileDialog::WindowTitle) ]
Set Variable [ $r; Value:MBS("FileDialog.SetInitialDirectory"; FileDialog::InitialDirectory) ]
Set Variable [ $r; Value:MBS("FileDialog.SetNameFieldLabel"; FileDialog::NameFieldLabel) ]
Set Variable [ $r; Value:MBS("FileDialog.SetPrompt"; FileDialog::Prompt) ]
Set Variable [ $r; Value:MBS("FileDialog.SetMessage"; FileDialog::Message) ]
Set Variable [ $r; Value:MBS("FileDialog.SetNameFieldStringValue"; FileDialog::NameFieldStringValue) ]
Set Variable [ $r; Value:MBS("FileDialog.SaveFileDialog") ]
If [ $r = "OK" ]
Set Variable [ $index; Value:0 ]
Set Variable [ $count; Value:MBS("FileDialog.GetPathCount") ]
Loop
New Record/Request
Set Field [ FileDialog::Path; MBS("FileDialog.GetPath"; $index) ]
Commit Records/Requests [ ]
Set Variable [ $index; Value:$index + 1 ]
Exit Loop If [ $index = $count ]
End Loop
End If

```

## 78.30 FileDialog.SelectFolderDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SelectFolderDialog" )

**Result** Returns "OK", "Cancel" or an error.

### Description

If dialog finishes well, you can query paths.

Added support for multiple selection on Windows with plugin version for 6.4.

### Examples

Run Select Folder Dialog:

```

Delete All Records [ No dialog ]
Set Variable [ $r; Value:MBS("FileDialog.Reset") ]
Set Variable [ $r; Value:MBS("FileDialog.SetShowHidden"; FileDialog::ShowHidden) ]
Set Variable [ $r; Value:MBS("FileDialog.SetAllowMulti"; FileDialog::AllowMulti) ]
Set Variable [ $r; Value:MBS("FileDialog.SetResolvesAliases"; FileDialog::ResolvesAliases) ]
Set Variable [ $r; Value:MBS("FileDialog.SetTreatsFilePackagesAsDirectories"; FileDialog::TreatsFilePack-
agesAsDirectories) ]
Set Variable [ $r; Value:MBS("FileDialog.SetCanSelectHiddenExtension"; FileDialog::CanSelectHiddenEx-
tension) ]
Set Variable [ $r; Value:MBS("FileDialog.SetWindowTitle"; FileDialog::WindowTitle) ]
Set Variable [ $r; Value:MBS("FileDialog.SetInitialDirectory"; FileDialog::InitialDirectory) ]
Set Variable [ $r; Value:MBS("FileDialog.SetNameFieldLabel"; FileDialog::NameFieldLabel) ]
Set Variable [ $r; Value:MBS("FileDialog.SetPrompt"; FileDialog::Prompt) ]
Set Variable [ $r; Value:MBS("FileDialog.SetMessage"; FileDialog::Message) ]
Set Variable [ $r; Value:MBS("FileDialog.SetNameFieldStringValue"; FileDialog::NameFieldStringValue) ]
Set Variable [ $r; Value:MBS("FileDialog.SelectFolderDialog") ]
If [ $r = "OK" ]
Set Variable [ $index; Value:0 ]
Set Variable [ $count; Value:MBS("FileDialog.GetPathCount") ]
Loop
New Record/Request
Set Field [ FileDialog::Path; MBS("FileDialog.GetPath"; $index) ]
Commit Records/Requests [ ]
Set Variable [ $index; Value:$index + 1 ]
Exit Loop If [ $index = $count ]
End Loop
End If

```

Export all containers to one folder:

```
# Ask for folder?
```

```

Set Variable [ $r; Value:MBS("FileDialog.Reset") ]
Set Variable [ $r; Value:MBS("FileDialog.SetMessage"; "Export folder?") ]
Set Variable [ $r; Value:MBS("FileDialog.SelectFolderDialog") ]
If [ $r = "OK" ]
# get path from dialog:
Set Variable [ $npath; Value:MBS( "FileDialog.GetPath"; 0 ) ]
# convert to FileMaker path for Export Field Contents
Set Variable [ $fpath; Value:MBS( "Path.NativePathToFilemakerPath"; $npath ) ]
# Loop over all records:
Go to Record/Request/Page [ First ]
Loop
# Export files from this record
# figure out file name
Set Variable [ $name; Value:GetAsText ( Container Batch Export::Test1 ) ]
Set Variable [ $name; Value:GetValue($name; 1) ]
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; $name ) ]
Set Variable [ $dpath; Value:MBS( "Path.AddPathComponent"; $fpath; $name ) ]
Export Field Contents [ Container Batch Export::Test1; "$dpath" ]
# Next record
Go to Record/Request/Page [ Next; Exit after last ]
End Loop
End If

```

Select folder in one expression:

```

Let( [
r = MBS("FileDialog.Reset");
r = MBS("FileDialog.SelectFolderDialog");
folder = If ( r = "OK" ; MBS("FileDialog.GetPath"; 0); "" )
] ; folder)

```

## 78.31 FileDialog.SelectItemDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SelectItemDialog" )

**Result** Returns "OK", "Cancel" or an error.

### Description

If dialog finishes well, you can query paths.

To select just a file, please use FileDialog.OpenFileDialog function.

Calls FileDialog.OpenFileDialog on Windows.

### Examples

Run Select Item Dialog:

```

Delete All Records [ No dialog ]
Set Variable [ $r; Value:MBS("FileDialog.Reset") ]
Set Variable [ $r; Value:MBS("FileDialog.SetShowHidden"; FileDialog::ShowHidden) ]
Set Variable [ $r; Value:MBS("FileDialog.SetAllowMulti"; FileDialog::AllowMulti) ]

## 78.32 FileDialog.SetAllowMulti

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetAllowMulti"; value )

### Parameters

#### value

Whether to allow multiple selection. Set to 0 to disallow and 1 to allow.

1

**Result** Returns OK.

### Description

Default is disallowed (0).

Selecting folder may not allow multiple selection.

But selection files or items may do.

### Examples

Allow multi file selection:

```
Set Variable [ $r; Value:MBS("FileDialog.SetAllowMulti"; 1) ]
```

## 78.33 FileDialog.SetAllowsOtherFileTypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	4.3	Yes	Yes	No	No	No

MBS( "FileDialog.SetAllowsOtherFileTypes"; value )

### Parameters

#### value

The new setting. Pass 1 to enable other file types or 0 to disable.

1

**Result** Returns OK.

### Description

Only for save panel to allow saving in other file types.

Added Windows support in plugin version 8.3 for Windows Vista or newer.

### See also

- 78.12 FileDialog.GetAllowsOtherFileTypes

3774

Created 18th August 2014, last changed 12nd January 2019.

## 78.34 FileDialog.SetCanSelectHiddenExtension

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	No	No	No	No

MBS( "FileDialog.SetCanSelectHiddenExtension"; value )

### Parameters

#### value

The new setting.

1

**Result** Returns OK.

### Description

#### See also

- 78.13 FileDialog.GetCanSelectHiddenExtension 3775
- 78.27 FileDialog.OpenFileDialog 3791

## 78.35 FileDialog.SetFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	4.3	Yes	Yes	No	No	No

MBS( "FileDialog.SetFilter"; MacFilter; WinFilter; WinLabels )

### Parameters

#### MacFilter

The filter specification for Mac. Can be file extension (Without dot) or UTI (Uniform Type Identifier). Can be a list.

"jpg"

#### WinFilter

The filter specification for Windows. This is normally star dot file extension and can be a list.

"\*.JPG"

#### WinLabels

The list of labels for the file types.

"JPEG files"

**Result** Returns OK or error.

### Description

Mac filter works in FileMaker 12 or newer, but seems not to work in FileMaker 11.

If you like to select any file, please don't define a filter at all.

### Examples

Set Mac filter with file extension as filter

```
MBS("FileDialog.SetFilter"; "jpg"; "*.JPG"; "JPEG files")
```

Set Mac filter with UTI as filter:

```
MBS("FileDialog.SetFilter"; "public.jpeg"; "*.JPG"; "JPEG files")
```

Select only FileMaker files:

```
MBS("FileDialog.SetFilter"; "fmp12"; "*.FMP12"; "FileMaker files")
```

Select tiff or jpeg files with various extensions:

```
MBS("FileDialog.SetFilter"; "tif$jpg$jpeg$stiff"; "*.TIF;*.TIFF$*.JPG;*.JPEG"; "Tiff files$JPEG files")
```

Allow PNG and JPEG:

```
MBS("FileDialog.SetFilter"; "jpg$png"; "*.JPG$*.PNG"; "JPEG files$PNG Files")
```

Allow text files:

```
MBS("FileDialog.SetFilter"; "public.text"; "*.TXT"; "TXT files")
```

## 78.36 FileDialog.SetInitialDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetInitialDirectory"; path )

### Parameters

#### path

The new path.

"/Users/Shared"

**Result** Returns OK.

### Description

The path argument must be an absolute native path.

Use Path.FilemakerPathToNativePath to convert a FileMaker path to a native path if required.

### Examples

Sets path on Mac:

```
MBS( "FileDialog.SetInitialDirectory"; "/Users/cs/Desktop" )
```

Set path with space inside:

```
MBS( "FileDialog.SetInitialDirectory"; "/Users/cs/Desktop/Test Folder")
```

Sets path on Mac with extra volume:

```
MBS( "FileDialog.SetInitialDirectory"; "/Volumes/Daten/Test Folder/Images" )
```

Sets path on Windows:

```
MBS( "FileDialog.SetInitialDirectory"; "d:\Test Daten\Bilder" )
```

## 78.37 FileDialog.SetMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetMessage"; text )

### Parameters

#### text

The new message text.

"Please select folder to store backups."

**Result** Returns OK.

### Description

This prompt appears on all Mac dialogs, but not on Windows.

The default message text is an empty string.

### Examples

Sets name:

MBS( "FileDialog.SetMessage"; "Where to put backup files?" )

## 78.38 FileDialog.SetNameFieldLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetNameFieldLabel"; text )

### Parameters

#### text

String to set as the text displayed in front of the panel's text field.

"Save file as:"

**Result** Returns OK.

### Description

By default the label is "Save As:".

Added Windows support in plugin version 8.3 for Windows Vista or newer.

### Examples

Sets name label:

```
MBS( "FileDialog.SetNameFieldLabel"; "Database name:" )
```

### See also

## 78.39 FileDialog.SetNameFieldStringValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetNameFieldStringValue"; text )

### Parameters

#### text

The initial text for the name field.

**Result** Returns OK.

### Description

This value is only used for save dialogs.

Added Windows support in plugin version 8.3 for Windows Vista or newer.

### Examples

Sets name:

MBS( "FileDialog.SetNameFieldStringValue"; "test.txt" )

### See also

- [78.18 FileDialog.GetNameFieldStringValue](#) 3780

## 78.40 FileDialog.SetPrompt

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetPrompt"; text )

### Parameters

#### text

String to set as the prompt of the panel's default button.

"Use"

**Result** Returns OK.

### Description

This prompt appears on all dialogs in your application. By default, the text in the default button is "Open" for an Open panel and "Save" for a Save panel.

It is intended that short words or phrases, such as "Open", "Save", "Set", or "Choose", be used on the button. The button is not resized to accommodate long prompts.

Added Windows support in plugin version 8.3 for Windows Vista or newer.

### Examples

Sets name:

MBS( "FileDialog.SetPrompt"; "Export" )

## 78.41 FileDialog.SetResolvesAliases

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetResolvesAliases"; value )

### Parameters

#### value

Whether to resolve alias files. Pass 0 to disable alias resolving or 1 to enable it.

1

**Result** Returns OK.

### Description

If 1, the dialog will resolve alias files on Mac OS X and Link files (\*.lnk) on Windows for you.

Default is enabled (1).

### Examples

Set to resolve aliases:

```
Set Variable [ $r; Value:MBS("FileDialog.SetResolvesAliases"; 1) ]
```

## 78.42 FileDialog.SetSheetScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	8.5	Yes	No	No	No	No

MBS( "FileDialog.SetSheetScriptTrigger"; FileName; ScriptName )

### Parameters

#### FileName

The name of the FileMaker file that contains the script  
Get(FileName)

#### ScriptName

The name of the script to run

**Result** Returns OK or error.

### Description

Trigger is only for Mac and you need to enable it with FileDialog.SetUseSheet.

#### See also

- [78.45 FileDialog.SetUseSheet](#)

## 78.43 FileDialog.SetShowHidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetShowHidden"; value )

### Parameters

#### value

Whether to show hidden files. Pass 0 to hide invisible files and 1 to show invisible files.

1

**Result** Returns OK.

### Description

Default is 0.

Available in Mac OS X v10.6 and later. The flag is ignored on older Mac OS X versions.

### Examples

Show hidden files:

```
Set Variable [ $r; Value:MBS("FileDialog.SetShowHidden"; 1) ]
```

### See also

## 78.44 FileDialog.SetTreatsFilePackagesAsDirectories

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	No	No	No	No

MBS( "FileDialog.SetTreatsFilePackagesAsDirectories"; value )

### Parameters

#### value

If 1, the panel will display file packages as directories; if 0, it will not.

1

**Result** Returns OK.

### Description

Default is off (0).

This setting has no effect on Windows.

### Examples

Look inside of bundles:

```
Set Variable [ $r; Value:MBS("FileDialog.SetTreatsFilePackagesAsDirectories"; 1) ]
```

### See also

- [78.24 FileDialog.GetTreatsFilePackagesAsDirectories](#) 3788

Created 18th August 2014, last changed 18th October 2016.

## 78.45 FileDialog.SetUseSheet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	8.5	Yes	No	No	No	No

MBS( "FileDialog.SetUseSheet"; Value )

### Parameters

#### Value

The new sheet setting.

1

**Result** Returns OK or error.

### Description

See FileDialog.SetSheetScriptTrigger for setting script name to trigger.

#### See also

## 78.46 FileDialog.SetWindowTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.7	Yes	Yes	No	No	No

MBS( "FileDialog.SetWindowTitle"; text )

### Parameters

#### text

The new window title.

"Select database"

**Result** Returns OK.

### Description

Keep empty or don't assign a title to use the default text.

Not used for Select Folder Dialog on Windows, but in all other dialogs.

### Examples

Sets window title:

```
Set Variable [ $r; Value:MBS("FileDialog.SetWindowTitle"; "Please select picture") ]
```

## 78.47 FileDialogWatcher.GetLastPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.6	Yes	No	No	No	No

MBS( "FileDialogWatcher.GetLastPath" )

**Result** Returns OK or error.

### Description

This returns native path like `"/Users/cs/Desktop/test.jpg"`.

Use `Path.NativePathToFileMakerPath` to convert to a FileMaker path if you plan to use `"filemac:"` for an insert file script step.

Does not work with FileMaker 8.5, 9 or 10. Works with FileMaker 11 and 12.

### See also

## 78.48 FileDialogWatcher.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
78 FileDialog	2.6	Yes	No	No	No	No

MBS( "FileDialogWatcher.Install" )

**Result** Returns OK or error.

### Description

You need to call this method before FileDialogWatcher.GetLastPath reports something useful. Does not work with FileMaker 8.5, 9 or 10. Works with FileMaker 11 and 12.

### See also

# Chapter 79

## Files

Functions to work with files and folders.

### 79.1 Files.AccessDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.9	Yes	Yes	Yes	Yes	Yes

```
MBS( "Files.AccessDate"; Path )
```

#### Parameters

##### Path

Native path to the file to check.

```
"C:\test\me.jpg"
```

**Result** Returns timestamp or error.

#### Description

Although the function is named date, it does return the time, too. Result is a timestamp.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

#### Examples

Queries access date of a file

```
MBS( "Files.AccessDate"; "C:\test.txt" )
```

Show files Dates:

MBS( "Files.CreationDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " created" & §&

MBS( "Files.ModificationDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " modified" & §&

MBS( "Files.AccessDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " accessed"

### See also

- 79.13 Files.CreationDate 3844
- 79.40 Files.ModificationDate 3888
- 124.2 Path.FileMakerPathToNativePath 6247

### Example Databases

- [Files/FileInfo](#)

#### 79.1.1 Blog Entries

- [MBS Filemaker Plugin, version 2.9pr3](#)

Created 18th August 2014, last changed 17th July 2017.

## 79.2 Files.AddedToDirectoryDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.4	Yes	No	Yes, macOS only	No	No

MBS( "Files.AddedToDirectoryDate"; Path )

### Parameters

#### Path

Native path to the file to check.

"C:\test\me.jpg"

**Result** Returns timestamp or error.

### Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Query date:

MBS("Files.AddedToDirectoryDate"; "/Users/cs/Desktop/Image Scaling.fmp12")

### See also

- 124.2 Path.FileMakerPathToNativePath

6247

### 79.2.1 Blog Entries

- [MBS FileMaker Plugin, version 6.4pr3](#)

Created 29th July 2016, last changed 29th July 2016.

## 79.3 Files.AppPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Files.AppPath" )

**Result** The application path.

### Description

So either the path to FileMaker application or path to your runtime solution.

Use Path.NativePathToFileMakerPath to convert to a FileMaker path if you plan to use "filemac:" on a built in FileMaker function.

Returns on FileMaker Cloud (Linux) usually this path: "/opt/FileMaker/FileMaker Server/Database Server/bin/fm-sased"

### Examples

Shows app path:

Show Custom Dialog [ "App Path"; MBS( "Files.AppPath" ) ]

### See also

- [79.35 Files.Launch](#) 3877

## 79.4 Files.AudioTags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	9.4	Yes	Yes	Yes	No	No

MBS( "Files.AudioTags"; FilePath )

### Parameters

#### FilePath

The native file path to the audio file.

"/Users/cs/Desktop/test.mp3"

**Result** Returns JSON or error.

### Description

Returns JSON object with usual two sub objects. One is AudioProperties with length (in seconds), bitrate (in bits per second), sampleRate (in Hz) and channels as numbers.

The Properties object contains all the properties with various tags. Values are texts for the given keys.

Uses TagLib, an open source library to read metadata from audio files, e.g. ID3 tags.

Currently it supports both ID3v1 and ID3v2 for MP3 files, Ogg Vorbis comments and ID3 tags and Vorbis comments in FLAC, MPC, Speex, WavPack, TrueAudio, WAV, AIFF, MP4 and ASF files.

List of ID3v2 tag names:

ALBUM, ALBUMARTIST, ALBUMARTISTSORT, ALBUMSORT, ARTIST, ARTISTSORT, ARTISTWEBPAGE, AUDIOSOURCEWEBPAGE, BPM, COMMENT, COMPOSER, CONDUCTOR, CONTENTGROUP, COPYRIGHT, COPYRIGHTURL, DATE, DISCNUMBER, ENCODEDBY, ENCODING, ENCODINGTIME, FILETYPE, FILEWEBPAGE, GENRE, INITIALKEY, INVOLVEDPEOPLE, ISRC, LABEL, LANGUAGE, LENGTH, LYRICIST, LYRICS, MEDIA, MOOD, MUSICIANCREDITS, ORIGINALALBUM, ORIGINALARTIST, ORIGINALDATE, ORIGINALFILENAME, ORIGINALLYRICIST, OWNER, PAYMENTWEBPAGE, PLAYLISTDELAY, PODCAST, PODCASTCATEGORY, PODCASTDESC, PODCASTID, PODCASTURL, PRODUCEDNOTICE, PUBLISHERWEBPAGE, RADIOSTATION, RADIOSTATIONOWNER, RADIOSTATIONWEBPAGE, RELEASEDATE, REMIXER, SUBTITLE, TAGGINGDATE, TITLE, TITLESORT, TRACKNUMBER, URL.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Query MP3 tags:

MBS("Files.AudioTags"; "/Users/cs/Desktop/test.mp3")

Example result: {  
"AudioProperties": {

```

"length": 282,
"bitrate": 128,
"sampleRate": 44100,
"channels": 2
},
"Tags": {
"ARTIST": "John Doe",
"COMMENT": "test comment",
"TITLE": "Hello World"
}
}

```

Read tags and show JSON in field:

```

If [ Length ( AudioTags::FilePath ) >0 ]
Set Variable [ $r ; Value: MBS("Files.AudioTags"; AudioTags::FilePath) ]
If [ MBS("IsError") = 0 ]
Set Field [ AudioTags::JSON ; MBS("JSON.Colorize"; MBS("JSON.Format"; $r)) ]
End If
End If

```

## 79.5 Files.CanOpenFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "Files.CanOpenFile"; Path )

### Parameters

#### Path

The native file path to the file.

\$path

**Result** Returns 1, 0 or error.

### Description

The plugin tries to open file exclusive. If that fails another application or FileMaker has the file open. Returns 1 if open was okay, 0 if file is busy or an error like permissions denied.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Check if file exists:

```
Show Custom Dialog [ "File exists"; MBS( "Files.CanOpenFile"; "/Users/cs/Desktop/test.rtf" ) ]
```

### See also

## 79.6 Files.CopyFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.8	Yes	Yes	Yes	Yes	Yes

```
MBS( "Files.CopyFile"; SourcePath; DestPath { ; Overwrite; SkipSourcePermissionErrors; ProgressTitle }
)
```

### Parameters

#### SourcePath

The native path to the file or folder to be copied.

"/Users/John/Desktop/test.txt"

#### DestPath

The native path to the destination folder or file.

"/Users/John/Desktop/Backup/"

#### Overwrite

Optional

Mac only: Whether to allow overwriting existing files. Default is off. Pass 1 to enable and 0 to disable. (ignored on other platforms)

1

#### SkipSourcePermissionErrors

Optional

Mac only: Whether to skip files with permission errors. Default is off. Pass 1 to enable and 0 to disable.

1

#### ProgressTitle

Optional

Title for the progress window. For Windows only and the text may not be visible in your version of Windows.

"Copying FileMake files"

**Result** Returns OK or error message.

### Description

SourcePath and DestPath must be valid and exist. So pass destination folder for the destination.

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

The Linux implementation copies file to dest. You need to have read permissions for source file. We try to preserve extended attributes and file permissions.

On Windows the 5th parameter can be 1 to use alternative copy function from Windows. This one is for copying one file only, but may be more successful in some cases.

### Examples

Copy a file:

## 79.6. FILES.COPYFILE

3833

MBS( "Files.CopyFile"; "/Users/cs/Desktop/test.pdf"; "/Users/cs/Desktop/copy.pdf")

Copy file on Windows with alternative copy method:

MBS( "Files.CopyFile"; "D:\Arbeitsunterlagen\Problemloesungsbericht\_SDAG\_WM.xlsx"; "D:\Files\_for\_ZIP/CC\_\_8D\_\_0; 0; 1)

Copy a file from desktop to a network volume:

MBS( "Files.CopyFile"; "C:\Users\Christian\Desktop\test.mov"; "Z:\Files\test.mov")

## 79.8 Files.CreateAlias

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	8.4	Yes	Yes	Yes	No	Yes

```
MBS( "Files.CreateAlias"; AliasFilePath; TargetPath { ; RelativeTo or WorkingPath; IconPathAndIndex }
)
```

### Parameters

#### AliasFilePath

The path for the alias file path.

```
"/Users/cs/Desktop/test"
```

#### TargetPath

The target path to have the alias point to.

```
"/Users/cs/Desktop"
```

#### RelativeTo or WorkingPath

Optional

The folder path to use relative resolution for Mac or the working directory for Windows.

```
"/Users/cs"
```

#### IconPathAndIndex

Optional

The icon file path to use. Optionally with an index as second item in a value list.

For Windows must reference an exe, ico, dll or similar file containing resources with icons.

For MacOS a path to an image file where we load image and use it for the icon.

```
"C:\Program Files\Mozilla Firefox\firefox.exe$4"
```

**Result** Returns OK or error.

### Description

If relative path is provided, the alias will include the relative path from that folder to the target item. When resolved later and the full path is invalid, the relative path may find it.

See Files.CreateSymbolicLink for creating symbol links and Files.CreateHardLink for hard links.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Create Alias:

```
MBS( "Files.CreateAlias"; "/Users/cs/Desktop/test"; "/Users/cs/Desktop" )
```

Creates link files on Windows:

```
MBS("Files.CreateAlias"; "C:\Users\Christian\Desktop\test.lnk"; "cmd.exe")
```

Create link for image file:

```
MBS("Files.CreateAlias"; "C:\Users\Christian\Desktop\test.lnk"; "C:\Users\Christian\Pictures\test.jpg")
```

Create link file with icon:

```
MBS("Files.CreateAlias"; "C:\Users\Christian\Desktop\test.lnk"; "cmd.exe"; ""; "C:\Program Files\Mozilla Firefox\firefox.exe§4")
```

## 79.9 Files.CreateBookmark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.1	Yes	No	Yes, macOS only	No	Yes

MBS( "Files.CreateBookmark"; Path { ; RelativePath; PreferFileIDResolution; MinimalBookmark } )

### Parameters

#### Path

The native path to file or folder where the bookmark refers to.

\$path

#### RelativePath

Optional

Optional the path of a file/folder being the relative path. This can be the native path to your database. This way you can later find the file again if database and target file moved together.

"/Data/ImageFiles"

#### PreferFileIDResolution

Optional

Optional, whether you prefer FileID resolution later over path resolution. Can be 1 or 0. Default is 0.

1

#### MinimalBookmark

Optional

Optional, whether to request a minimal bookmark. Creates bookmark data with "less" information, which may be smaller but still be able to resolve in certain ways.

1

**Result** Returns bookmark data text or error message.

### Description

This is like an alias file in Finder, but as text, so you can store it in a text field in your database.

#### See also

- [79.51 Files.ResolveBookmark](#) 3911

## 79.10 Files.CreateDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Files.CreateDirectory"; Path )

(old name: Files.CreateFolder)

### Parameters

#### Path

Native path to the new directory to be created.

"C:\Test"

**Result** Returns "OK" or error message.

### Description

Returns "OK" if the directory already exists.

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

For MacOS & iOS creates folders recursively as needed.

In the Mac world we call it a folder, in the Windows world a directory. This function works cross platform and got the name with Directory years ago.

You can use Files.DeleteFolder to delete a folder with its content.

### Examples

Create folder on Desktop:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDesktop" ) ]
If [ IsEmpty(Container Export::Name) ]
Set Field [ Container Export::Name; "Record " & Get(RecordID) ]
End If
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; Container Export::Name ) ]
Set Variable [ $r; Value:MBS("Files.CreateDirectory"; $path) ]
```

Creates directory and shows error:

```
Set Variable [ $r; Value:MBS("Files.CreateDirectory"; $path) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to create directory"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ ]
End If
```

Create a folder:

MBS( "Files.CreateDirectory"; "/"Users/cs/Documents/FolderName" )

## 79.11 Files.CreateHardLink

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "Files.CreateHardLink"; DestPath; TargetPath )

### Parameters

#### DestPath

The path where to create the hard link file.

"/Users/cs/Desktop/test.rtf"

#### TargetPath

The target path for the link.

"/Users/cs/Desktop/todo.rtf"

**Result** Returns OK or error.

### Description

On success, you get two directory entries which point to same data on disk.

For Macs works with file and folders.

Be aware that not all applications are aware to handle hard links for folders correctly!

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Creates a hard link:

```
MBS( "Files.CreateHardLink"; "/Users/cs/Desktop/test.rtf"; "/Users/cs/Desktop/todo.rtf" )
```

Creates a hard link on Windows:

```
MBS( "Files.CreateHardLink"; "C:\Users\Christian\Desktop\other.jpg"; "C:\Users\Christian\Desktop\test.jpg"
```

## 79.12 Files.CreateSymbolicLink

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "Files.CreateSymbolicLink"; DestPath; TargetPath )

### Parameters

#### DestPath

The path where to create the symbolic link file.

"/Users/cs/Desktop/test.rtf"

#### TargetPath

The target path for the link.

"/Users/cs/Desktop/todo.rtf"

**Result** Returns OK or error.

### Description

For Macs works with file and folders.

On success, you get a new link file which point to other file.

### Examples

Creates symbolic link:

MBS( "Files.CreateSymbolicLink"; "/Users/cs/Desktop/test.rtf"; "/Users/cs/Desktop/todo.rtf" )

### See also

## 79.13 Files.CreationDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Files.CreationDate"; Path )

### Parameters

#### Path

Native path to the file to check.

"C:\test\me.jpg"

**Result** Returns timestamp or error.

### Description

Although the function is named date, it does return the time, too. Result is a timestamp.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Queries creation date of a file

MBS( "Files.CreationDate"; "C:\test.txt" )

Show files Dates:

MBS( "Files.CreationDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " created" & \$&

MBS( "Files.ModificationDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " modified" & \$&

MBS( "Files.AccessDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " accessed"

### See also

## 79.14 Files.Delete

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "Files.Delete"; Path )

### Parameters

#### Path

The native file path to the file to be deleted.

"/Users/John/Desktop/test.txt"

**Result** Returns OK or error message.

### Description

Works also for directories and can easily remove whole directory hierarchies! Be careful and make backups.

Use Files.MoveToTrash to move files to trash which is often better as it allows users to undo the operation. Also Files.MoveToTrash usually works on files in use.

It is possible that the OS decides to not delete the file and fail (e.g. due to permission errors).

Version 6.3 and newer support deleting a list of files. So you can pass a list of paths instead of just one. Stops at the first error.

Warning: If you pass path to a folder hierarchy, the whole folder hierarchy gets deleted!

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Delete a file on desktop on Mac:

```
$r = MBS("Files.Delete"; "/Users/cs/Desktop/testing.fp7")
```

Delete a file on desktop on Windows:

```
$r = MBS("Files.Delete"; "C:\Users\Christian\Desktop\testing.fp7")
```

Delete two files:

```
MBS("Files.Delete"; "/Users/cs/Desktop/test1.txt$/Users/cs/Desktop/test2.txt")
```

Delete two files on Windows:

79.14. *FILES.DELETE* 3847  
MBS("Files.Delete"; "C:\Users\Christian\Desktop\test1.txt&C:\Users\Christian\Desktop\test2.txt")

## 79.15 Files.DeleteFolder

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "Files.DeleteFolder"; Path )

### Parameters

#### Path

The native folder path to the item to be deleted.

"/Users/John/Desktop/test"

**Result** Returns OK or error message.

### Description

Use Files.MoveToTrash to move files to trash which is often better as it allows users to undo the operation. Also Files.MoveToTrash usually works on files in use.

It is possible that the OS decides to not delete the file and fail (e.g. due to permission errors). Folders are deleted recursively.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Delete a folder on desktop on Mac:

```
$r = MBS("Files.Delete"; "/Users/cs/Desktop/testing")
```

Delete a folder on desktop on Windows:

```
$r = MBS("Files.Delete"; "C:\Users\Christian\Desktop\testing")
```

## 79.16 Files.DirectoryExists

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Files.DirectoryExists"; Path )

### Parameters

#### Path

Native path to the item to check.

"C:\Windows"

**Result** Returns 1 if directory exists and 0 if not.

### Description

If item exists at the path Files.itemExists returns 1. If it's a directory, Files.DirectoryExists also returns 1 and Files.FileExists returns 0. With a file, Files.FileExists returns 1 and Files.DirectoryExists returns 0. This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

### Examples

Checks whether directory exists:

```
Set Variable [ $r; Value:MBS( "Files.DirectoryExists"; "/Users/cs/Desktop" ) ]
```

## 79.17 Files.DiskInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Files.DiskInfo"; Mode; PathToVolume )

### Parameters

#### Mode

What to return. Can be totalBytes or freeBytes. On Windows you can also pass DriveType for type or FreeBytesAvailable to learn available space for current user. On Mac OS X you can query also fileCount, folderCount, blockSize, totalBlocks or freeBlocks.

"freeBytes"

#### PathToVolume

The path to volume. e.g. C:\, \\MyServer\MyDisk\ or /Volumes/testDisk/ or / for root volume on OS X.  
/

**Result** Returns value or error.

### Description

Please pass native path to volume.

For Windows network volumes with \\syntax, please include trailing backslash.

DriveType	Description
Unknown	The drive type cannot be determined.
Removable	The drive has removable media; for example, a floppy drive, thumb drive, or flash card reader.
Fixed	The drive has fixed media; for example, a hard disk drive or flash drive.
Remote	The drive is a remote (network) drive.
CDROM	The drive is a CD-ROM drive.
RAMDisk	The drive is a RAM disk.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Query free bytes on Mac OS X root volume:

```
MBS("Files.DiskInfo"; "FreeBytes"; "/" )
```

Query total size of a mounted volume on Mac:

```
MBS("Files.DiskInfo"; "TotalBytes"; "/Volumes/Ablage1" )
```

Query number of files and folders on Mac:

```
MBS("Files.DiskInfo"; "FileCount"; "/" ) & " files and " & MBS("Files.DiskInfo"; "FolderCount"; "/" ) & " folders."
```

Query available free bytes on C: for Windows:

```
MBS("Files.DiskInfo"; "FreeBytesAvailable"; "C:")
```

Queries size of shared folder in VMWare on Windows:

```
MBS("Files.DiskInfo"; "TotalBytes"; "\\vmware-host\Shared Folders\Downloads")  
// please note the double quoting for backslashes in string constants!
```

Check drive type on Windows:

```
MBS( "Files.DiskInfo"; "DriveType"; "C:" )
```

## 79.18 Files.FileDisplayName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Files.FileDisplayName"; Path )

### Parameters

#### Path

Native path to the file to check.

"C:\test\me.jpg"

### Description

This name may be localized and may not include file extension. Only for displaying.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Queries display name of a file

MBS( "Files.FileDisplayName"; "C:\test.txt" )

Query localized name for desktop folder:

MBS( "Files.FileDisplayName" ; "/Users/cs/Desktop" )

Example result: "Schreibtisch"

## 79.19 Files.FileExists

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Files.FileExists"; Path )

### Parameters

#### Path

Native path to the file to check.

"C:\Windows"

**Result** Returns 1 if file exists and 0 if not.

### Description

If item exists at the path Files.itemExists returns 1. If it's a directory, Files.DirectoryExists also returns 1 and Files.FileExists returns 0. With a file, Files.FileExists returns 1 and Files.DirectoryExists returns 0. This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

For applications on Mac OS X, this function returns 0 as those are directories.

### Examples

Checks whether file exists:

```
Set Variable [ $r; Value:MBS( "Files.FileExists"; "/Users/cs/Desktop/test.rtf" ) ]
```

Test relative folder path by passing relative path after setting starting folder:

```
MBS("Process.SetCurrentDirectory"; "C:\Program Files (x86)\FileMaker\FileMaker Pro 18 Advanced/Extensions") &
MBS( "Files.FileExists"; "../Extensions/MBS.fmx")
```

## 79.20 Files.FileExtension

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "Files.FileExtension"; Path )

### Parameters

#### Path

Native path to the file to check.

"C:\test\me.jpg"

**Result** Returns text or error.

### Description

Returns file extension without dot.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Queries file extension of a file

MBS( "Files.FileExtension"; "C:\test.txt" )

## 79.21 Files.FileInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	4.3	Yes	Yes	Yes	No	Yes

MBS( "Files.FileInfo"; Path; Selector )

### Parameters

#### Path

The native file path to the application.

\$Path

#### Selector

Which value to query.

"Version"

**Result** Returns value or error.

### Description

This is intended for bundled app/plugin/framework files on Mac and on Windows for EXE/DLL files.

Possible selectors on Mac:

Version	Version
ShortVersion	Short version
MinimumSystemVersion	Minimum OS X version required to launch app.
InfoString	Finder Info string.
ExecutableName	Name of executable file in bundle.
Identifier	Bundle Identifier

Possible selectors on Win:

Description	The file description.
Version	The file version.
InternalName	The internal name.
CompanyName	The company name.
LegalCopyright	The legal copyright string.
OriginalFilename	The original filename.
ProductName	The product name.
ProductVersion	The product version.
Copyright	Human readable copyright string. (New in 7.5)

The file information is cached to queries with same file path will not reload values from file.

**Examples**

Queries information about FileMaker on Mac:

```
MBS("Files.FileInfo"; "/Applications/FileMaker Pro 13 Advanced/FileMaker Pro Advanced.app"; "Version")
```

```
MBS("Files.FileInfo"; "/Applications/FileMaker Pro 13 Advanced/FileMaker Pro Advanced.app"; "MinimumSystemVersion")
```

```
MBS("Files.FileInfo"; "/Applications/FileMaker Pro 13 Advanced/FileMaker Pro Advanced.app"; "ExecutableName")
```

```
MBS("Files.FileInfo"; "/Applications/FileMaker Pro 13 Advanced/FileMaker Pro Advanced.app"; "Identifier")
```

Queries some information about DebugView on Windows:

```
MBS("Files.FileInfo"; "C:\Users\Christian\Desktop\Dbgview.exe"; "Version")
```

```
MBS("Files.FileInfo"; "C:\Users\Christian\Desktop\Dbgview.exe"; "Description")
```

## 79.22 Files.FileKind

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.9	Yes	Yes	Yes	No	No

MBS( "Files.FileKind"; Path )

### Parameters

#### Path

Native path to the file to check.

"C:\test\me.jpg"

**Result** Returns file kind text or error.

### Description

This is the file type displayed by the Finder or Explorer. Like "FileMaker Pro Database" for a .fp7 file. This string can be localized.

### Examples

Queries file kind of a file

MBS( "Files.FileKind"; "C:\test.txt" )

## 79.24 Files.FileSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Files.FileSize"; Path { ; Options } )

### Parameters

#### Path

Native path to the file to check.

"C:\test\me.jpg"

#### Options

Optional

Optionally specifies on Mac OS X what size is returned. Default is total logical file size. Pass datafork or resourcefork to limit query to only size of given fork. And pass physical or logical to query logical size or the physical size, defined by blocks used on Disk.

"physical datafork"

**Result** Returns file size in bytes.

### Description

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

With 2.9 plugins you can set parameter to query only size of resource fork or data fork on Mac OS X. And you can define if you want to query size on disk (rounded up to block size) or the logical size.

### Examples

Queries file size of a file

```
MBS( "Files.FileSize"; "C:\test.txt" )
```

Queries logical data fork size of a file on Mac OS X:

```
MBS( "Files.FileSize"; "/Users/Shared/Test.txt"; "datafork" )
```

Queries physical size of a file on Mac OS X:

```
MBS( "Files.FileSize"; "/Users/Shared/Test.txt"; "physical" )
```

Queries physical resource fork size of a file on Mac OS X:

```
MBS( "Files.FileSize"; "/Users/Shared/Test.txt"; "physical-resourcefork" )
```

Queries physical data fork size of a file on Mac OS X:

```
MBS( "Files.FileSize"; "/Users/Shared/Test.txt"; "physical datafork" )
```

## 79.25 Files.FileUTITypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.9	Yes	No	Yes, macOS only	No	No

MBS( "Files.FileUTITypes"; Path )

### Parameters

#### Path

Native path to the file to check.

"C:\test\me.jpg"

**Result** Returns file types as text or error.

### Description

For example a rtf file has the type public.rtf and going up the chain of types, it also has "public.text, public.data, public.item and public.content. A jpg image has types public.jpeg, public.image, public.data, public.item and public.content. So if you look for "public.image" in the types, you can identify that the file is an image file.

### Examples

Queries types of a file

MBS( "Files.FileUTITypes"; "C:\test.txt" )

### Example Databases

- [Files/FileInfo](#)

#### 79.25.1 Blog Entries

- [MBS Filemaker Plugin, version 2.9pr3](#)

Created 18th August 2014, last changed 18th August 2014.

## 79.26 Files.FolderSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.2	Yes	Yes	Yes	Yes	Yes

MBS( "Files.FolderSize"; Path { ; RecursionLimit; IgnoreHiddenFolderContent; CountBundlesAsItem } )

### Parameters

#### Path

Native file path to folder.

"C:\Test"

#### RecursionLimit

Optional

The limit for the recursion. Default is -1 for no limit. Pass zero to only look in files in that folder and not subfolders.

0

#### IgnoreHiddenFolderContent

Optional

Do not count items in hidden subfolders. Pass 1 to ignore or 0 to count. Default is 0.

0

#### CountBundlesAsItem

Optional

Count bundles as items. Default is 0 to look inside those bundles, e.g. apps. Pass 1 to count bundles as files.

1

**Result** Returns values or error.

### Description

On success returns a list of values. Please calculate ones, save result in variable and pick the values you need. It's quite efficient for us to query all those values in one run as disk access is the slowest part here, not summing up the values.

Windows doesn't know about resource fork, so the resource fork sizes are zero there always.

Currently block size calculation for Windows is not done, so logical and physical sizes are identical.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Calculate my desktop size:

```
MBS( "Files.FolderSize"; "/Users/cs/Desktop" )
```

Caluclate on Windows:

Name	Position	Description	Example
ItemCount	1	Total number of items	153
FilesCount	2	Total number of files	140
FolderCount	3	Total number of folders.	13
VisibleItemCount	4	Number of visible items.	143
HiddenItemCount	5	Number of hidden items.	10
VisibleFilesCount	6	Number of visible files.	130
HiddenFilesCount	7	Number of hidden files.	10
VisibleFolderCount	8	Number of visible folders.	13
HiddenFolderCount	9	Number of hidden folders.	0
PhysicalTotalSize	10	Total physical byte size.	186777600
LogicalTotalSize	11	Total logical byte size.	186581344
VisiblePhysicalTotalSize	12	Total physical byte size for visible files.	186679296
VisibleLogicalTotalSize	13	Total logical byte size for visible files.	186507445
HiddenPhysicalTotalSize	14	Total physical byte size for hidden files.	98304
HiddenLogicalTotalSize	15	Total logical byte size for hidden files.	73899
PhysicalDataForkSize	16	Total physical byte size.	172150784
LogicalDataForkSize	17	Total logical byte size.	171970091
VisiblePhysicalDataForkSize	18	Total physical data fork byte size for visible files.	172052480
VisibleLogicalDataForkSize	19	Total logical data fork byte size for visible files.	171896192
HiddenPhysicalDataForkSize	20	Total physical data fork byte size for hidden files.	98304
HiddenLogicalDataForkSize	21	Total logical data fork byte size for hidden files.	73899
PhysicalResourceForkSize	22	Total physical resource fork byte size.	14626816
LogicalResourceForkSize	23	Total logical resource fork byte size.	14611253
VisiblePhysicalResourceForkSize	24	Total physical resource fork byte size for visible files.	14626816
VisibleLogicalResourceForkSize	25	Total logical resource fork byte size for visible files.	14611253
HiddenPhysicalResourceForkSize	26	Total physical resource fork byte size for hidden files.	0
HiddenLogicalResourceForkSize	27	Total logical resource fork byte size for hidden files.	0
RecursionMaxLevel	28	Maximum recursion level we had.	3

MBS( "Files.FolderSize"; "/Users/cs/Desktop" )

## 79.27 Files.GetComment

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.2	Yes	No	Yes, macOS only	No	No

MBS( "Files.GetComment"; Path )

### Parameters

#### Path

The native path to the file.

"/Users/John/Desktop/test.txt"

**Result** Returns OK or error.

### Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Queries file comment:

MBS( "Files.GetComment"; "/Users/cs/Desktop/Wifi.rtf" )

### See also

- 79.54 Files.SetComment 3916
- 124.2 Path.FileMakerPathToNativePath 6247

## 79.28 Files.GetFinderLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.2	Yes	No	Yes, macOS only	No	No

MBS( "Files.GetFinderLabel"; Path )

### Parameters

#### Path

The native path to the file.

"/Users/cs/Desktop/test.txt"

**Result** Returns number or error.

### Description

Value is 0 for no label or 1 to 7 for different colors.

Please use Files.GetTagNames to query tag names.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Query color:

MBS("Files.GetFinderLabel"; "/Users/cs/Desktop/test.rtf")

### See also

## 79.29 Files.GetNodeID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.1	Yes	Yes	Yes	No	No

MBS( "Files.GetNodeID"; Path )

### Parameters

#### Path

The native file/folder path.

\$path

**Result** Returns file ID as number.

### Description

On Mac OS X, every file usually has an unique ID on the hard disk.

Not all volumes support NodeIDs, but if they do, you can later find the file back on that volume using Files.GetPathFromNodeID.

Added Windows support in plugin version 8.5.

While node id is currently a 64-bit integer, it could change in future to an UUID or 128bit number.

### Examples

Queries node ID:

```
Set Variable [ $r; Value:MBS( "Files.GetNodeID"; "/Users/cs/Desktop/todo.rtf" ) ]
```

Test ID functions:

```
Set Variable [ $path ; Value: "/Users/cs/Desktop/test.rtf" ]
Set Variable [ $id ; Value: MBS( "Files.GetNodeID"; $Path ) ]
Set Variable [ $NewPath ; Value: MBS( "Files.GetPathFromNodeID"; "/" ; $id ) ]
Show Custom Dialog [ "Both Paths should be same" ; $Path & $& $newPath ]
```

Test on Windows:

```
Set Variable [ $node ; Value: MBS( "Files.GetNodeID"; "C:\Users\Christian\Desktop\DbgView.exe" ) ]
Set Variable [ $path ; Value: MBS( "Files.GetPathFromNodeID"; "C:" ; $node ) ]
Show Custom Dialog [ "NodeID" ; $node & $& $path ]
```

## 79.30 Files.GetPathFromNodeID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.1	Yes	Yes	Yes	No	No

MBS( "Files.GetPathFromNodeID"; VolumePath; NodeID )

### Parameters

#### VolumePath

The native path to the volume.

"/"

#### NodeID

The node ID for the file, a number.

\$nodeID

**Result** Returns the path for the file or error message.

### Description

You need to pass the path to the volume where this NodeID belongs to.

This does not work well for most network mounts.

The plugin may run a search which can take a while.

Added Windows support in plugin version 8.5.

### Examples

Resolve node on system volume:

```
MBS( "Files.GetPathFromNodeID"; "/" ; $NodeID )
```

Resolve node on mounted volume named USBStick:

```
MBS( "Files.GetPathFromNodeID"; "/Volumes/USBStick"; $NodeID )
```

Test ID functions:

```
Set Variable [ $path ; Value: "/Users/cs/Desktop/test.rtf" ]
```

```
Set Variable [ $id ; Value: MBS( "Files.GetNodeID"; $Path ) ]
```

```
Set Variable [ $NewPath ; Value: MBS( "Files.GetPathFromNodeID"; "/" ; $id ) ]
```

```
Show Custom Dialog [ "Both Paths should be same" ; $Path & $& $newPath ]
```

Test on Windows:

```
Set Variable [ $node ; Value: MBS( "Files.GetNodeID"; "C:\Users\Christian\Desktop\DbgView.exe" ) ]
```

```
Set Variable [ $path ; Value: MBS( "Files.GetPathFromNodeID"; "C:" ; $node ) ]
```

```
Show Custom Dialog [ "NodeID" ; $node & $& $path ]
```

## 79.31 Files.GetPosixPermissions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	4.3	Yes	No	Yes	Yes	Yes

MBS( "Files.GetPosixPermissions"; Path )

### Parameters

#### Path

The native path to the file or folder.

"/Users/John/Desktop/test.txt"

**Result** Returns OK or error message.

### Description

Path must be valid and exist.

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

See chmod command manual page. The plugin converts parameter to string and parses it as octal number.

This way you can pass 777 as number and it's interpreted as expected.

### Examples

Query permissions:

MBS( "Files.GetPosixPermissions"; "/Users/cs/Desktop/test" )

# shows for example 755

### See also

- 79.59 Files.SetPosixPermissions 3921

## 79.32 Files.GetTagNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.5	Yes	No	Yes, macOS only	No	No

MBS( "Files.GetTagNames"; Path )

### Parameters

#### Path

The native path to the file.

"/Users/cs/Desktop/test.txt"

**Result** Returns OK or error.

### Description

Requires Mac OS X 10.9.

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions. Those appear escaped as \n in the result.

You can use Files.GetFinderLabel to read label number.

### Examples

Queries tag names:

```
Set Variable [ $r; Value:MBS( "Files.GetTagNames"; "/Users/cs/Desktop/todo.rtf" ) ]
```

### See also

## 79.33 Files.IsHidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	7.1	Yes	Yes	Yes	No	No

MBS( "Files.IsHidden"; Path )

### Parameters

#### Path

The native path to the file or folder to be checked.

"/Users/John/Desktop/test.txt"

**Result** Returns 1, 0 or error.

### Description

### See also

- 79.57 Files.SetHidden

## 79.34 Files.ItemExists

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Files.ItemExists"; Path )

### Parameters

#### Path

Native path to the item to check.

"C:\Windows"

**Result** Returns 1 if item exists and 0 if not.

### Description

If item exists at the path Files.itemExists returns 1. If it's a directory, Files.DirectoryExists also returns 1 and Files.FileExists returns 0. With a file, Files.FileExists returns 1 and Files.DirectoryExists returns 0.

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

### Examples

Checks whether item exists:

```
Set Variable [ $r; Value:MBS( "Files.ItemExists"; "/Users/cs/Desktop/test.rtf" ) ]
```

### See also

## 79.35 Files.Launch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	Yes	No	No

```
MBS( "Files.Launch"; AppPath { ; DocPath; NewInstance } )
```

### Parameters

#### AppPath

Native path to the application to launch.

```
"/Applications/TextEdit.app"
```

#### DocPath

Optional

Optional, Native path to the document to pass as argument. Must be text to distinguish from flag, which are numbers.

```
"/Users/cs/Desktop/Notes.rtf"
```

#### NewInstance

Optional

Available in MBS FileMaker Plugin 7.2 or newer.

Whether to launch new app instance on Mac. Default is 0.

```
1
```

**Result** Returns "OK" or error.

### Description

The OS will lookup what application is associated with the file type and launch the application asking it to open the document.

You can use this function to open a database file with FileMaker or your runtime solution. Query with Files.AppPath the path to your application. Then call Launch with that application path and your database file path.

Please use Files.LaunchFile to open a file and Files.Launch to open a file in a specific application.

Version 5.3 supports passing several DocPath parameters.

With version 7.2 the last parameter can be a number with 0 or 1 to define whether to run a new app instance.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Launch two text files in Textedit:

```
MBS( "Files.Launch"; "/Applications/TextEdit.app"; "/Users/cs/Desktop/filme.rtf"; "/Users/cs/Desktop/test.rtf" )
```

Run notepad on Windows with a text file:

```
MBS( "Files.Launch"; "notepad.exe"; "C:\Users\Christian\Desktop\test2.txt")
```

Launch iMessages app:

```
MBS( "Files.Launch"; "/Applications/Messages.app")
```

Launch Mail application:

```
MBS( "Files.Launch"; "/Applications/Mail.app")
```

Restart FileMaker with same database:

```
Set Variable [ $dbpath; Value:Get ( FilePath ) ]
Set Variable [ $dbpath; Value:MBS( "Path.FileMakerPathToNativePath"; $dbpath ) ]
Set Variable [ $apppath; Value:MBS( "App.GetProcessPath" ) ]
Set Variable [ $r; Value:MBS( "Files.Launch"; $apppath; $dbpath; 1 ) ]
Exit Application
```

Open Website in Firefox on Windows:

```
MBS( "Files.Launch"; "C:\Program Files\Mozilla Firefox\Firefox.exe"; "http://www.mbsplugins.de" )
```

Open website in Google Chrome on Windows:

```
MBS( "Files.Launch"; "C:\Program Files (x86)\Google\Chrome\Application\Chrome.exe"; "http://www.mbsplugins.de" )
```

## 79.36 Files.LaunchFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	Yes	No	No

```
MBS( "Files.LaunchFile"; Path { ; NewInstance } )
```

### Parameters

#### Path

Native path to the item to reveal.

```
"/Users/cs/Desktop/Notes.rtf"
```

#### NewInstance

Optional

Available in MBS FileMaker Plugin 7.2 or newer.

Whether to launch new app instance on Mac. Default is 0.

```
1
```

**Result** Returns "OK" or error.

### Description

The OS will lookup what application is associated with the file type and launch the application asking it to open the document.

See also Files.Launch if you need to pass application and document.

If you launch a folder path, the folder will open in Finder/Explorer.

Please use Files.LaunchFile to open a file and Files.Launch to open a file in a specific application.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Shows a folder in Finder on Mac:

```
MBS( "Files.LaunchFile"; "/Users" )
```

Write container to temp file and launch:

```
# get temp folder
Set Variable [ $TempFolder; Value:MBS( "Folders.SystemTemporary" ) ]
# and file name from container
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; test::myContainer ) ]
# add name to folder path
Set Variable [ $TempPath; Value:MBS( "Path.AddPathComponent"; $TempFolder; $name ) ]
# now write temp file
```

```
Set Variable [ $r; Value:MBS( "Files.WriteFile"; test::myContainer; $TempPath) ]  
# and launch file  
Set Variable [ $r; Value:MBS( "Files.LaunchFile"; $TempPath) ]
```

Launch new copy of same app:

```
MBS("Files.LaunchFile"; "/Applications/FileMaker Pro 15 Advanced/FileMaker Pro Advanced.app"; 1)
```

## 79.37 Files.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.8	Yes	Yes	Yes	Yes	Yes

MBS( "Files.List"; Path { ; filter; ExtensionFilter } )

### Parameters

#### Path

Native path to the directory.

"C:\Test"

#### filter

Optional

Optional, limits what is returned. Default is 0 to report all files. Pass a combination of 1 for showing only files, 2 for showing only directories and 4 for showing only visible items. Add 8 if the path includes the file name specification with wildcards. Combined pass 4+1 for visible files or 2+1 for visible directories.

5

#### ExtensionFilter

Optional

Optional, a filter for getting only files with matching file extension.

".txt"

**Result** Returns list of files separated by return.

### Description

The list of names is separated by new line character.

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

With filter parameter being 8 on Windows, you can pass a path with wildcards directly and ExtensionFilter parameter is ignored. This is not supported on Mac OS X.

See also Files.ListRecursive. You can filter result with List.MatchesPostfix to get list with one file extension only.

If you need sorting, please check List.Sort function.

### Examples

Queries files in Users folder on Mac:

```
$files = MBS("Files.List"; "/Users")
```

Queries visible files in windows folder:

```
$files = MBS("Files.List"; "c:\\Windows\\"); 5)
```

### 79.37. FILES.LIST

3883

Queries DLL files in windows folder:

```
$files = MBS("Files.List"; "c:\\Windows\\"; 0; ".dll")
```

Queries Applications with name starting with e in windows folder:

```
$files = MBS("Files.List"; "c:\\Windows\\e*.exe"; 8)
```

Find FileMaker databases in a folder:

```
MBS("Files.List"; "c:\\Users\\Christian\\Desktop"; 0; ".fmp12")
```

- [Ausgabe 1/2017, Seite 10](#)

Created 18th August 2014, last changed 17th March 2020.

## 79.38 Files.ListRecursive

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Files.ListRecursive"; Path { ; filter; Timeout } )

### Parameters

#### Path

Native path to the directory.

"C:\Test\"

#### filter

Optional

Optional, limits what is returned. Default is 0 to report all files. Pass a combination of 1 for showing only files, 2 for showing only directories and 4 for showing only visible files. Add 16 to include package file content on Mac. Add 32 to treat packages as files. In v7.3 you can add 64 to not list content of invisible directories.  
5

#### Timeout

Optional

the timeout in seconds. Default is 5.

5.0

**Result** Returns list of files separated by return.

### Description

This function is recursive and will look in all subfolders. Due to very large file systems you can pass a timeout. Default is 5 seconds. FileMaker will not respond to user input while the query runs.

The list of names is separated by new line character.

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

You can decide on Mac on whether files inside a package (e.g. application) are listed or not. By default we ignore those files, but you can include package content with adding 16 to the filter parameter.

See also Files.List.

If input path ends with / on Windows, we use slash for adding path components in v8.4 or newer. Otherwise we use the default on Windows, which is a backslash.

### Examples

Queries files in Users folder on Mac:

```
$files = MBS("Files.List"; "/Users")
```

Queries visible files in windows folder:

```
$files = MBS("Files.List"; "c:\Windows\"; 5)
```

Queries visible files in windows folder, limit for 10 seconds:

```
$files = MBS("Files.List"; "c:\Windows\"; 5; 10)
```

List only visible files in visible directories:

```

## 79.39 Files.ListVolumes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.5	Yes	Yes	Yes	No	No

MBS( "Files.ListVolumes" { ; ShowMore } )

### Parameters

#### ShowMore

Optional

Whether to show volumes we'd normally not show. e.g. invisible volumes on Mac or drives on Windows without disk.

0

**Result** Returns paths or error.

### Description

Returns a list of paths to mounted volumes.

e.g. on Mac: `"/§/Volumes/MBSFMPlugin64"`, so first volume is normally `/` for the boot volume.

### Examples

List volumes:

```
MBS("Files.ListVolumes")
```

List all volumes:

```
MBS("Files.ListVolumes";1)
```

## 79.40 Files.ModificationDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Files.ModificationDate"; Path )

### Parameters

#### Path

Native path to the file to check.

"C:\test\me.jpg"

**Result** Returns timestamp or error.

### Description

Although the function is named date, it does return the time, too. Result is a timestamp.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Queries modification date of a file

```
MBS( "Files.ModificationDate"; "C:\test.txt" )
```

Show files Dates:

```
MBS( "Files.CreationDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " created" & §&
```

```
MBS( "Files.ModificationDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " modified" & §&
```

```
MBS( "Files.AccessDate"; "C:\Users\Christian\Desktop\ddd.rtf" ) & " accessed"
```

### See also

## 79.41 Files.Mount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	5.1	Yes	Yes	Yes	Yes	No

MBS( "Files.Mount"; URL { ; Dest; Username; Password; Interactive; Prompt } )

### Parameters

#### URL

The URL for the network resource.

#### Dest

Optional

The destination path to mount to. If you leave this empty, the system decides. On Mac this can be the path to a folder where to mount new disk inside, e.g. to make a private mount.

""

#### Username

Optional

The user name. If none is provided, system can take credentials from keychain.

"test"

#### Password

Optional

The password to use.

"test"

#### Interactive

Optional

Default is 0 for no dialogs. But you can pass 1 to have a dialog show up.

1

#### Prompt

Optional

Pass 1 on Windows to show dialog always to enter password.

0

**Result** Returns path or error.

### Description

Use on Server may require extra work as server runs with a different user account than you being logged in on the server machine. Permissions don't always allow things to be done.

When used on Linux the parameters are a little bit different:

Please pass source (URL), target (Dest), type (Username) and data (Password).

The dest path may need to be created first as new folder.

### Examples

Mount Ablage1 on Mac:

```
MBS("Files.Mount"; "afp://Ablage1.local"; ""; ""; "")
```

Mount Ablage1 on Mac with password:

```
MBS("Files.Mount"; "afp://Ablage1.local"; ""; "root"; "xxx")
```

Mount something on Windows:

```
MBS("Files.Mount"; "\\myServer\public"; "X:"; ""; "")
```

Mount Ablage 2 on Windows:

```
MBS( "Files.Mount"; "\\Ablage2.local\Ablage2"; "H:" )
# password already known to Windows
```

Mount Ablage 2 on Windows with password:

```
MBS( "Files.Mount"; "\\Ablage2.local\Ablage2"; "H:"; "root"; "xxx" )
```

Unmount drive:

```
MBS("Files.Unmount"; "H:")
```

Mounts AFP volume with space in name:

```
MBS( "Files.Mount"; "afp://192.168.168.250/Customer% 20Data" )
```

Mount on Linux:

```
MBS( "Files.Mount"; "//192.168.101.100/sales"; "/mnt/test"; "cifs"; "username=shareuser,password=sharepass-
word,domain=nixcraft")
```

Mount SMB share from Windows Server 2012:

```
MBS("Files.Mount"; "\\192.168.0.242\ERP"; ""; "SRV2012\bob"; "test")
```

# please note the SRV2012\prefix for the user name for this Windows server.

## 79.42 Files.MountPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	8.3	Yes	Yes	Yes	No	No

MBS( "Files.MountPath"; Disk )

### Parameters

#### Disk

Path native path to disk drive.

"E:"

**Result** Returns mount URL, empty or error.

### Description

For a network mounted disk, you can query the original mount point.

May not work on Mac for AFP shares, but for SMB shares.

Returns empty path if no path is known.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Query mount path on MacOS:

MBS( "Files.MountPath"; "/Volumes/Macbook Pro" )

Example result: "smb://cs@Server.\_smb.\_tcp.local/Macbook% 20Pro"

Query mount path on Windows:

MBS( "Files.MountPath"; "Z:")

Example result: "\\vmware-host\Shared Folders"

## 79.43 Files.MoveFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.8	Yes	Yes	Yes	Yes	Yes

```
MBS( "Files.MoveFile"; SourcePath; DestPath { ; Overwrite; SkipSourcePermissionErrors; ProgressTitle }
)
```

### Parameters

#### SourcePath

The native path to the file or folder to be moved.

"/Users/John/Desktop/test.txt"

#### DestPath

The native path to the destination folder or file.

"/Users/John/Desktop/Backup/"

#### Overwrite

Optional

Mac only: Whether to allow overwriting existing files. Default is off. Pass 1 to enable and 0 to disable. On Windows, it overwrites always.

1

#### SkipSourcePermissionErrors

Optional

Mac only: Whether to skip files with permission errors. Default is off. Pass 1 to enable and 0 to disable.

1

#### ProgressTitle

Optional

Title for the progress window. For Windows only and the text may not be visible in your version of Windows.

"Copying FileMake files"

**Result** Returns OK or error message.

### Description

SourcePath and DestPath must be valid and exist. So pass destination folder for the destination.

The Linux implementation does only move files within the same file system.

On Mac you may get error -43 for file not found if you refer to a file in a folder, where you don't have file permissions to look inside the folder.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Move a file:

### 79.43. *FILES.MOVEFILE*

3895

MBS( "Files.MoveFile"; "C:\Users\Christian\Desktop\test1.txt"; "C:\Users\Christian\Desktop\test2.txt")

## 79.44 Files.MoveToTrash

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.8	Yes	Yes	Yes	Yes	Yes

MBS( "Files.MoveToTrash"; Path )

### Parameters

#### Path

The native file path to the file or folder to be deleted.

"/Users/John/Desktop/test.txt"

**Result** Returns OK or error message.

### Description

Use this functions to move files and folders to the trash.

It is possible that the OS decides to not delete the file and fail (e.g. due to permission errors) or that the medium does not have a trash, so the file is deleted right away.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Delete a file on desktop on Mac by moving it to trash:

```
$r = MBS("Files.MoveToTrash"; "/Users/cs/Desktop/testing.fp7")
```

Delete a file on desktop on Windows by moving it to trash:

```
$r = MBS("Files.MoveToTrash"; "C:\Users\Christian\Desktop\testing.fp7")
```

Delete a file to trash with path in variable:

```
$r = MBS("Files.MoveToTrash"; $Path)
```

## 79.45 Files.ReadFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.5	Yes	Yes	Yes	Yes	Yes

MBS( "Files.ReadFile"; FilePath { ; mode; filename } )

### Parameters

#### FilePath

The native file path. Something like `"/Users/cs/desktop/test.txt"` on Mac and `"C:\Programs\Data\test.txt"` on Windows. Files without path end in the root directory on Mac.  
`"test.txt"`

#### mode

Optional

Can be `base64` to encode data first to base64 encoding. Or can be `Hex` to encode to hex encoding. If filter is `"container"`, the result is returned as a container with a `FILE` stream inside. Version 5.3 supports filter `"auto"` to auto detect the type of container.

`"Base64"`

#### filename

Optional

If filter is container, this defines the file name to use.

`"test.txt"`

**Result** Returns container value or error.

### Description

Reads the data in the file and returns as text with native encoding. This may truncate the string at the first null byte.

You can optionally define a mode like `base64` or `Hex` to read any bytes including null bytes.

See also `Text.ReadTextFile` for reading text files with specific encoding.

Reading files over 1 GB is not supported.

Added new modes with version 5.3: `auto`, `compressed`, `pdf`, `png`, `jpg`, `tif`, `gif`, `bmp` or `psd`.

For reading simple text files, please use `Text.ReadTextFile`.

See also `Files.ReadJPEG`, `Files.ReadPDF`, `Files.ReadPNG`, `Text.ReadTextFile` and `RichText.ReadFile`.

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Read file with some data:

#### 79.45. FILES.READFILE

3899

MBS("Files.ReadFile"; \$Path )

Read file with some data and encode base64:

MBS("Files.ReadFile"; "/Users/cs/Desktop/test.txt"; "base64")

Read as compressed container:

Set Field [ Container Compression::SomeContainer; MBS("Files.ReadFile"; "/Users/cs/Desktop/test.jpg"; "compressed"; "test.jpg") ]

Read file on Server:

MBS( "Files.ReadFile"; "C:\Programs\FileMaker Server\Data\Documents\test.pdf")

## 79.46 Files.ReadJPEG

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "Files.ReadJPEG"; Path { ; FileName } )

### Parameters

#### Path

The native file system path to the file.

"/Users/cs/Desktop/test.jpg"

#### FileName

Optional

Optional the file name to use.

"test.jpg"

**Result** Returns container value or error.

### Description

This function does not verify if the file you ask to load is actually a valid JPEG image.

Reading files over 1 GB is not supported.

See also Files.ReadFile, Files.ReadPDF, Files.ReadPNG, Text.ReadTextFile and RichText.ReadFile.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Read JPEG file:

```
MBS( "Files.ReadJPEG"; "/Users/cs/Desktop/test.jpg"; "test.jpg")
```

## 79.47 Files.ReadPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "Files.ReadPDF"; Path { ; FileName; DontRenderPreview } )

### Parameters

#### Path

The native file system path to the file.

"/Users/cs/Desktop/test.pdf"

#### FileName

Optional

Optional the file name to use.

"test.pdf"

#### DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

**Result** Returns container value or error.

### Description

This function does not verify if the file you ask to load is actually a valid PDF.

Reading files over 1 GB is not supported.

See also Files.ReadJPEG, Files.ReadFile, Files.ReadPNG, Text.ReadTextFile and RichText.ReadFile.

If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Read a PDF file:

```
Set Variable [ $r; Value:MBS( "Files.ReadPDF"; "/Users/cs/Desktop/todo.pdf" ) ]
```

## 79.48 Files.ReadPNG

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "Files.ReadPNG"; Path { ; FileName } )

### Parameters

#### Path

The native file system path to the file.

"/Users/cs/Desktop/test.png"

#### FileName

Optional

Optional the file name to use.

"test.png"

**Result** Returns container value or error.

### Description

This function does not verify if the file you ask to load is actually a valid PNG image.

Reading files over 1 GB is not supported.

See also Files.ReadJPEG, Files.ReadPDF, Files.ReadFile, Text.ReadTextFile and RichText.ReadFile.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Read a png file:

```
Set Variable [ $r; Value:MBS( "Files.ReadPNG"; "/Users/cs/Desktop/todo.png" ) ]
```

## 79.49 Files.RenameFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.8	Yes	Yes	Yes	Yes	Yes

MBS( "Files.RenameFile"; Path; NewName )

### Parameters

#### Path

The native path to the file or folder to be renamed.

"/Users/John/Desktop/test.txt"

#### NewName

The new name.

"testfile.txt"

**Result** Returns OK or error message.

### Description

Path must be valid and exist.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Rename file on Windows with full path:

```
MBS( "Files.RenameFile"; "\\FileServer\Dokumente\VK\123456\RG249388345.pdf"; "\\FileServer\Dokumente\VK\123456\Rechnung_249388345.pdf" )
```

Rename file on OS X:

```
MBS( "Files.RenameFile"; "/Users/cs/Desktop/test"; "Hello World, just a test!" )
```

Rename on Windows:

```
MBS( "Files.RenameFile"; "C:\Users\Administrator\Desktop\alt.fmp12"; "neu.fmp12" )
```

## 79.50 Files.ResolveAlias

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	8.4	Yes	Yes	Yes	No	Yes

MBS( "Files.ResolveAlias"; AliasFilePath { ; RelativeTo } )

### Parameters

#### AliasFilePath

The path for the alias file path.

"/Users/cs/Desktop/test"

#### RelativeTo

Optional

The folder path to use relative resolution.

"/Users/cs"

**Result** Returns file path or error.

### Description

See Files.CreateAlias to create alias files on Mac or link files on Windows, Files.CreateHardLink and Files.CreateSymbolicLink for creating links in file system.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Resolve Alias:

```
MBS( "Files.ResolveAlias"; "/Users/cs/Desktop/test")
```

Resolve link file on Windows:

```
MBS("Files.ResolveAlias"; "C:\Users\Christian\Desktop\test.lnk")
```

## 79.51 Files.ResolveBookmark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.1	Yes	No	Yes, macOS only	No	Yes

MBS( "Files.ResolveBookmark"; Bookmark { ; RelativePath; NoUI; NoMounting } )

### Parameters

#### Bookmark

The bookmark data created by Files.CreateBookmark function.

\$data

#### RelativePath

Optional

Optional the path of a file/folder being the relative path. This can be the native path to your database. This way you can later find the file again if database and target file moved together.

"/Data/ImageFiles"

#### NoUI

Optional

If 1 the plugin doesn't show any dialogs or progress windows.

1

#### NoMounting

Optional

If 1 the plugin will not mount a volume during bookmark resolution.

1

**Result** Returns the native file path resolved from bookmark.

### Description

Use this function to find the file/folder back where you stored a reference in the database.

**See also**

- 79.9 Files.CreateBookmark

3838

### Example Databases

## 79.52 Files.RevealFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	2.7	Yes	Yes	No	No	No

MBS( "Files.RevealFile"; Path )

### Parameters

#### Path

Native path to the item to reveal.

"C:\Windows"

**Result** Returns "OK" or error.

### Description

Shows file or folder in Finder or opens directory in Explorer.  
With version 6.3 the Mac plugin can take a list of paths here.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

### Examples

Reveal 3 items:

```
MBS( "Files.RevealFile"; "/Users/cs/Public$/Users/cs/Music$/Users/cs/Library" )
```

Open desktop folder on Windows:

```
MBS("Files.RevealFile"; "C:\Users\Administrator\Desktop")
```

## 79.53 Files.SetAudioTags

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	9.4	Yes	Yes	Yes	Yes	No

MBS( "Files.SetAudioTags"; FilePath; JSON )

### Parameters

#### FilePath

The native file path to the audio file.

"/Users/cs/Desktop/test.mp3"

#### JSON

The JSON object with new properties.

**Result** Returns OK or error.

### Description

Please provide JSON object with new tags. If tags are NULL values, we remove them. If they are text values, we update the texts.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Write tags back to field:

```
Set Variable [ $r ; Value: MBS("Files.SetAudioTags"; AudioTags::FilePath; AudioTags::JSON) ]
Show Custom Dialog [ "Tags written" ; $r ]
```

## 79.54 Files.SetComment

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.2	Yes	No	Yes, macOS only	No	No

MBS( "Files.SetComment"; Path; Comment )

### Parameters

#### Path

The native path to the file.

"/Users/John/Desktop/test.txt"

#### Comment

The new comment text.

"Hello World"

**Result** Returns OK or error.

### Description

The comment text is used by Spotlight when searching, so you can place useful information there.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Set comment:

```
MBS( "Files.SetComment"; "/Users/cs/Desktop/Wifi.rtf"; "Hello World")
```

### See also

## 79.55 Files.SetCreationDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	7.2	Yes	Yes	Yes	No	Yes

MBS( "Files.SetCreationDate"; Path; TimeStamp )

### Parameters

#### Path

The native path to the file.

"/Users/cs/Desktop/test.txt"

#### TimeStamp

The new creation date and time.

Get(CurrentTimeStamp)

**Result** Returns OK or error.

### Description

### Examples

Set timestamp to now:

MBS( "Files.SetCreationDate"; "C:\Users\Administrator\Desktop\test.png"; Get(CurrentHostTimeStamp))

### See also

## 79.56 Files.SetFinderLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	6.2	Yes	No	Yes, macOS only	No	No

MBS( "Files.SetFinderLabel"; Path; Label )

### Parameters

#### Path

The native path to the file.

"/Users/cs/Desktop/test.txt"

#### Label

The new label number. 0 = no label 1 to 7 give different colors.

1

**Result** Returns OK or error.

### Description

Value is from 0 to 7. Zero is no label. Numbers 1 to 7 are mapped to colors and tags.

Currently the list is 1 = gray, 2 = green, 3 = purple, 4 = blue, 5 = yellow, 6 = red, 7 = orange.

Please use Files.SetTagNames to set tag names if needed.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Set color to green:

```
MBS("Files.SetFinderLabel"; "/Users/cs/Desktop/test.rtf"; 2)
```

### See also

## 79.57 Files.SetHidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	7.1	Yes	Yes	Yes	No	No

MBS( "Files.SetHidden"; Path; Value )

### Parameters

#### Path

The native path to the file or folder to be checked.

"/Users/John/Desktop/test.txt"

#### Value

The new state. Pass 1 to hide file or 0 to unhide file.

1

**Result** Returns OK or error.

### Description

If a file is hidden due to having a "." at the beginning of a name on macOS, you can't unhide it by this function. You need to rename the file in this case.

### Examples

Hide a file:

MBS("Files.SetHidden"; "/Users/cs/Desktop/Changes.rtf"; 1)

### See also

## 79.58 Files.SetModificationDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "Files.SetModificationDate"; Path; TimeStamp )

### Parameters

#### Path

The native path to the file.

"/Users/cs/Desktop/test.txt"

#### TimeStamp

The new modification date and time.

Get(CurrentTimeStamp)

**Result** Returns OK or error.

### Description

#### Examples

Set time to now minus 24h:

```
MBS( "Files.SetModificationDate"; "/Users/cs/Desktop/test.rtf"; Hole ( HostZeitstempel ) - 24*3600 )
```

Set timestamp to now:

```
MBS( "Files.SetModificationDate"; "C:\Users\Administrator\Desktop\logo.png"; Get(CurrentHostTimeStamp))
```

## 79.59 Files.SetPosixPermissions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	4.3	Yes	No	Yes	Yes	Yes

MBS( "Files.SetPosixPermissions"; Path; Mode )

### Parameters

#### Path

The native path to the file or folder.

"/Users/John/Desktop/test.txt"

#### Mode

The new mode.

"777"

**Result** Returns OK or error message.

### Description

Path must be valid and exist.

See chmod command man page in Terminal. The plugin converts parameter to string and parses it as octal number. This way you can pass 777 as number and it's interpreted as expected.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Set permissions

MBS( "Files.SetPosixPermissions"; "/Users/cs/Desktop/test"; 777 )

### See also

## 79.60 Files.SetTagNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.5	Yes	No	Yes, macOS only	No	No

MBS( "Files.SetTagNames"; Path; Taglist )

### Parameters

#### Path

The native path to the file.

"/Users/cs/Desktop/test.txt"

#### Taglist

The list of tags names, separated by newline character.

"Hello World"

**Result** Returns OK or error.

### Description

Requires Mac OS X 10.9.

This function needs a native path. Please use Path.FilemakerPathToNativePath function in order to convert a FileMaker style path to a native path.

Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions. Those should appear escaped as \n in the taglist.

### See also

## 79.61 Files.Unmount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	5.1	Yes	Yes	Yes	Yes	No

MBS( "Files.Unmount"; Path { ; Force } )

### Parameters

#### Path

The local path of the volume.

"/Volumes/Test"

#### Force

Optional

Pass 1 to force unmount, even if files are still open.

0

**Result** Returns OK or error.

### Description

Use on Server may require extra work as server runs with a different user account than you being logged in on the server machine. Permissions don't always allow things to be done.

### Examples

Unmounts Ablage1 on Mac:

```
MBS("Files.Unmount"; "/Volumes/Ablage1")
```

Unmount Y: on Windows:

```
MBS("Files.Unmount"; "Y:")
```

### See also

## 79.62 Files.WriteFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	3.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "Files.WriteFile"; Data; FilePath { ; filter } )
```

### Parameters

#### Data

The data to save. Can be text or container.

```
"Hello World"
```

#### FilePath

The native file path. Something like `"/Users/cs/desktop/test.txt"` on Mac and `"C:\Programs\Data\test.txt"` on Windows. Files without path end in the root directory on Mac.

```
"test.txt"
```

#### filter

Optional

Can be `base64` to decode text first from base64 encoding. Or can be `Hex` to decode from hex encoding.

```
"Base64"
```

**Result** Returns `"OK"` or an error message.

### Description

You provide either a container value or some text. For text you can optionally define a filter like `base64` or `Hex`.

See also `Text.WriteTextFile` for writing text files with specific encoding.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Write file with some text:

```
MBS("Files.WriteFile"; "Hello World"; $Path )
```

Write file with some text and decode base64:

```
MBS("Files.WriteFile"; "SGVsbG8gV29ybGQ="; "/Users/cs/Desktop/test.txt"; "base64")
```

Write container to temp file and launch:

```
# get temp folder
```

```
Set Variable [ $TempFolder; Value:MBS( "Folders.SystemTemporary" ) ]
```

```
# and file name from container
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; test::myContainer ) ]
# add name to folder path
Set Variable [ $TempPath; Value:MBS( "Path.AddPathComponent"; $TempFolder; $name ) ]
# now write temp file
Set Variable [ $r; Value:MBS( "Files.WriteFile"; test::myContainer; $TempPath) ]
# and launch file
Set Variable [ $r; Value:MBS( "Files.LaunchFile"; $TempPath) ]
```

Write PDF to disk:

```
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); Invoice::Invoice ID & ".pdf" ) ]
Set Variable [ $r; Value:MBS("Files.WriteFile"; Invoice::PDF Output; $path) ]
```

Write DynaPDF Library to disk and use it:

```
Set Variable [ $path; Value:MBS( "Plugin.Path" ) ]
Set Variable [ $folderpath; Value:MBS( "Path.RemoveLastPathComponent"; $path ) ]
Set Variable [ $libPath; Value:MBS( "Path.AddPathComponent"; $folderpath; "dynapdf.dll" ) ]
Set Variable [ $r; Value:MBS( "Files.WriteFile"; test::DynaPDFContainer; $libPath ) ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; $libPath ) ]
```

## 79.63 Icon.ClearIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 QuickLook 79 Files	2.7	Yes	No	Yes, macOS only	No	No

MBS( "Icon.ClearIcon"; Path )

### Parameters

#### Path

The path to the file or folder.  
"/Applications"

**Result** Returns OK on success.

### Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Clears icon of a file on the desktop:

```
MBS("Icon.ClearIcon"; "/Users/Christian/Desktop/test.pdf")
```

### See also

- [124.2 Path.FileMakerPathToNativePath](#) 6247

- [MBS Filemaker Plugin, version 2.7pr8](#)

Created 18th August 2014, last changed 24th May 2017.

**79.64 Icon.GetIcon**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 QuickLook 79 Files	2.3	Yes	Yes	Yes	No	No

MBS( "Icon.GetIcon"; Path; Size )

**Parameters****Path**

The path to the file or folder.

"/Applications"

**Size**

The size of the icon picture you'd like to have. Suggested range is from 16 to 512 pixel.

512

**Result** Container value.

**Description**

Size specifies the icon size from 16 to 512 pixel. The container value returned includes PNG data with alpha, JPEG preview, filename and size.

Added Windows support in plugin version 4.2.

On Mac Server this may not work well as the Server user account has no icon database.

See also [Icon.GetIconWithQuickLook](#).

**Examples**

Queries icon of iPhoto app:

MBS( "Icon.GetIcon"; "/Applications/iPhoto.app"; 512 )

**See also**

- [137.3 Icon.GetIconWithQuickLook](#) 6733

Created 18th August 2014, last changed 29th October 2018.

**79.65 Icon.GetIconWithQuickLook**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 QuickLook 79 Files	2.3	Yes	Yes	Yes	No	No

MBS( "Icon.GetIconWithQuickLook"; Path; Size )

**Parameters****Path**

The path to the file or folder.  
"/Applications"

**Size**

The size of the icon picture you'd like to have. Suggested range is from 16 to 512 pixel.  
512

**Result** Container value.

**Description**

This method tries first to get QuickLook preview for the file, before it tries the icon. QuickLook requires Mac OS X 10.5. Size specifies the icon size from 16 to 512 pixel. The container value returned includes PNG data with alpha, JPEG preview, filename and size.

Version 4.3 adds support for Windows. We now query same thumbnail as explorer uses.  
See also Icon.GetIcon.

**Examples**

Queries preview on iPhoto app:

MBS( "Icon.GetIconWithQuickLook"; "/Applications/iPhoto.app"; 512 )

**See also**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
137 QuickLook 79 Files	2.7	Yes	No	Yes, macOS only	No	No

MBS( "Icon.SetIcon"; Path; image )

**Parameters****Path**

The path to the file or folder.

"/Applications"

**image**

A container value with some picture. Can be JPEG, GIF, BMP, PNG or TIFF.

\$image

**Result** Returns OK on success.

**Description**

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

**Examples**

Sets icon of a file on the desktop:

```
MBS("Icon.SetIcon"; "/Users/Christian/Desktop/test.pdf"; Data::image)
```

## 79.67 MountNotification.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
79 Files	5.0	Yes	Yes	No	No	No

MBS( "MountNotification.Install"; FileName; ScriptName )

### Parameters

#### FileName

The name of the FileMaker File that contains the script.

"test.fp7"

#### ScriptName

The name of the script to run.

"MyScript"

**Result** Returns OK or error.

### Description

Parameter to the script will contain details in a list with several values.

First value is typ of call, "mount" or "unmount".

Second value is native path, on Mac e.g. "/Volumes/TestDisk" and on Windows a drive letter like "E:\".

On Mac third value is user visible name and forth parameter is URL for mount point.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Installs notification script:

MBS( "MountNotification.Install"; "test.fp7"; "MyScript" )

# Chapter 80

## FM

Functions for FileMaker core functions like running scripts.

### 80.1 FM.AllowFileDragDrop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	7.0	Yes	No	No	No	No

MBS( "FM.AllowFileDragDrop"; Enable { ; TempFolder; DeleteTempFiles } )

#### Parameters

##### Enable

Whether to enable or disable. Pass 1 to enable or 0 to disable. Default if no parameter is given is enable.

1

##### TempFolder

Optional

Available in MBS FileMaker Plugin 8.1 or newer.

The native path of temp folder to use. Leave empty for standard one.

MBS("Folders.UserDesktop")

##### DeleteTempFiles

Optional

Available in MBS FileMaker Plugin 8.1 or newer.

Whether to delete temp files. Default is 1 to delete last file then when next file is to be dragged.

1

**Result** Returns OK or error.

#### Description

When we have a container in FileMaker with e.g. a zip file and drag the file content to the Finder, nothing

happens. This plugin functions installs some code which intercepts those file drags and makes them work. Internally the file data is obtained and written to temporary folder. The finder can copy the file there and our plugin can later delete the temp file.

Works better with non interactive containers.  
This does not change drag & drop of images.

With plugin version 7.1, PDF drag and drop is also supported.

### Examples

Allow file drops from container to Finder:

```
Set Variable [ $r; Value:MBS( "FM.AllowFileDragDrop" ) ]
```

### Example Databases

- [Mac only/Allow File Drags](#)
- [Mac only/Drag File Fix](#)

## 80.2 FM.Argument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.Argument"; index )

### Parameters

#### index

The index of the argument to retrieve. From 0 to FM.ArgumentCount-1.

0

**Result** Returns text or error.

### Description

You can pass arguments to FileMaker when launching it from command line. Or on Windows pass them from a link to FileMaker on desktop or in the start menu. This way you can query argument from your scripts and react on them, e.g. decide to set more buttons visible for a debug or advanced mode.

The arguments can include on Windows file path to a database which was opened to launch FileMaker.

## 80.3 FM.ArgumentCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ArgumentCount" )

**Result** Returns number or error.

### Description

Those arguments are passed when FileMaker is launched from command line, a batch file or a link on windows.

## 80.4 FM.Beep

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	8.2	Yes	Yes	Yes	No	No

MBS( "FM.Beep" )

**Result** Returns OK.

### Description

Plays standard system sound or beep.

### 80.4.1 Blog Entries

- [MBS FileMaker Plugin, version 8.2pr1](#)

Created 27th March 2018, last changed 27th March 2018.

## 80.5 FM.ChooseDictionary

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	9.4	Yes	No	No	No	No

MBS( "FM.ChooseDictionary" { ; DictionaryName } )

### Parameters

#### DictionaryName

Optional

The dictionary to pick. Pass empty text to just let the plugin show dialog and query current settings.

**Result** Returns OK or error.

### Description

The plugin runs menu command to show spelling dialog, changes menu and presses OK button for you. After this function run, you can check FM.GetDictionary to get current selection or FM.GetDictionaryList to get the list of dictionaries available.

## 80.6 FM.CompareTables

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	9.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "FM.CompareTables"; FileName1; TableName1; IDField1; FileName2; TableName2; IDField2 { ;
Options } )
```

### Parameters

#### FileName1

The file name of where the table is inside. Can be empty to look for the table in all files. File extension is optional for file name.

Get(FileName)

#### TableName1

The name of the first table (newer). Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField1

The name of the ID field in first table. Can be a text or numeric field.

"Identifier"

#### FileName2

The file name of where the table is inside. Can be empty to look for the table in all files.

"other.fmp12"

#### TableName2

The name of the second table (older). Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField2

The name of the ID field in second table. Can be a text or numeric field.

"Identifier"

### Options

Optional

Pass options. Add 1 to include details. Add 2 to include all the IDs found in both.

1+2

**Result** Returns JSON or error.

### Description

We compare the field names for both tables and report added, removed and common field names.

Then we check the record identifiers to report added, changed and common IDs.

If IDField1 and IDField2 names are the same in both tables, we compare the common records to report the changed record identifiers.

Does not compare the internal FileMaker row IDs.

Records are compared in 100 records block to limit memory usage.

### Examples

Compares two tables in two files:

```
MBS( "FM.CompareTables"; "Anlagen1.fmp12"; "Anlagen"; "Primärschlüssel"; "Anlagen2.fmp12"; "Anlagen"; "Primärschlüssel" )
```

Compare tables:

```
Show Custom Dialog [ MBS( "FM.CompareTables"; "Anlagen1.fmp12"; "Anlagen"; "Primärschlüssel"; "Anlagen2.fmp12"; "Anlagen"; "Primärschlüssel"; 1 ) ]
```

Example result: {

```
"Messages": [ ] ,
"TableName1": "Anlagen",
"TableName2": "Anlagen",
"FileName1": "Anlagen1.fmp12",
"FileName2": "Anlagen2.fmp12",

## 80.7 FM.CurrentLayoutID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.CurrentLayoutID" )

**Result** Returns number or error.

### Description

See also FM.CurrentLayoutName.

### Examples

Show layout ID and name:

```
Show Custom Dialog [ "Layout" ; MBS( "FM.CurrentLayoutID" ) & " " & MBS( "FM.CurrentLayoutName" ) ]
```

### See also

- 80.8 FM.CurrentLayoutName 3948

### 80.7.1 Blog Entries

- [MBS FileMaker Plugin, version 10.2pr3](#)

Created 8th April 2020, last changed 19th April 2020.

## 80.8 FM.CurrentLayoutName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.CurrentLayoutName" )

**Result** Returns layout name.

### Description

Result is empty if no layout is running.

### Examples

Show layout ID and name:

```
Show Custom Dialog [ "Layout" ; MBS( "FM.CurrentLayoutID" ) & " " & MBS( "FM.CurrentLayoutName" ) ]
```

### See also

- [80.7 FM.CurrentLayoutID](#) 3947

## 80.9 FM.CurrentScriptID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.CurrentScriptID" )

**Result** Returns number or error.

### Description

See also FM.CurrentScriptName.

### Examples

Query ID for current script:

```
MBS( "FM.CurrentScriptID" )
```

Query script name and ID:

```
MBS( "FM.CurrentScriptName" ) & " " & MBS( "FM.CurrentScriptID" )
```

### See also

## 80.10 FM.CurrentScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.CurrentScriptName" )

**Result** Returns script name.

### Description

Result is empty if no script is running.

### Examples

Query script name and ID:

```
MBS( "FM.CurrentScriptName" ) & " " & MBS( "FM.CurrentScriptID" )
```

### See also

- 80.8 FM.CurrentLayoutName 3948

## 80.12 FM.DataType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.DataType"; Value )

### Parameters

#### Value

The value to check.

\$test

**Result** Returns type or error.

### Description

The type can be container, boolean, date, empty, number, text, time, timestamp or unknown.

Empty variables show as text.

You should never see unknown. Empty is really rare as it would be a value without anything, not even empty text.

### Examples

Checks variable data type:

```
MBS( "FM.DataType"; "Hello" )
```

Checks data type for timestamp:

```
MBS( "FM.DataType"; get(CurrentTimeStamp) )
```

## 80.13 FM.DataViewerContent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	6.3	Yes	No	No	No	No

MBS( "FM.DataViewerContent" )

**Result** Returns text or error.

### Description

This is useful to capture values from data viewer automatically while debugging and storing it somewhere, e.g. a log file.

### Examples

Sets variables and copies their content:

```
Set Variable [ $r; Value:"Hello" ]
Set Variable [ $$r; Value:"Hello global" ]
Set Variable [ $l; Value:MBS( "FM.DataViewerContent" ) ]
Show Custom Dialog [ "Data Viewer"; $l ]
```

Write to log file:

```
MBS( "Text.AppendTextFile"; Get ( CurrentTimeStamp ) & ": " & MBS( "FM.DataViewerContent" ) &
$; "/tmp/dataviewer.log"; "UTF8" )
```

## 80.14 FM.DeleteRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.DeleteRecord"; FileName; TableName; IDField; IDValue { ; IDField2; IDValue2; IDField3; IDValue3 } )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to delete record from. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField

The name of the first field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue

The value for the first ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### IDField2

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The name of the second field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"PersonID"

#### IDValue2

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The value for second ID field to identify the record. Data type of parameter must match the data type of the field.

\$PersonID

#### IDField3

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The name of the third field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"CompanyID"

### IDValue3

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The value for third ID field to identify the record. Data type of parameter must match the data type of the field.

\$CompanyID

**Result** Returns OK or error.

### Description

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Please note that FM.DeleteRecord and FM.DeleteRecords are nearly identical. Just FM.DeleteRecord provides the check to make sure only one record matches while FM.DeleteRecords allows several records to be deleted. So with FM.DeleteRecords you can easily erase a lot of data if you pass wrong ID!

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime.

Version 8.2 allows to specify up to 3 ID parameters.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### Examples

Delete a record based on values:

```
Set Variable [ $r ; Value: MBS( "FM.DeleteRecord"; Get(FileName); "Contacts"; "First"; "Christian";
"Last"; "Schmitz"; "Company"; "Test Inc." ) ]
```

## 80.15 FM.DeleteRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.DeleteRecords"; FileName; TableName; IDField; IDValue { ; IDField2; IDValue2; IDField3; IDValue3 } )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to delete records from. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### IDField2

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The name of the second field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"PersonID"

#### IDValue2

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The value for second ID field to identify the record. Data type of parameter must match the data type of the field.

\$PersonID

#### IDField3

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The name of the third field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"CompanyID"

### **IDValue3**

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The value for third ID field to identify the record. Data type of parameter must match the data type of the field.

\$CompanyID

**Result** Returns OK or error.

### **Description**

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must not be unique, so several records can be updated at once.

Please note that FM.DeleteRecord and FM.DeleteRecords are nearly identical. Just FM.DeleteRecord provides the check to make sure only one record matches while FM.DeleteRecords allows several records to be deleted. So with FM.DeleteRecords you can easily erase a lot of data if you pass wrong ID!

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

Version 8.2 allows to specify up to 3 ID parameters.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### **Examples**

Delete records based on values:

```
Set Variable [ $r ; Value: MBS( "FM.DeleteRecords"; Get(FileName); "Contacts"; "First"; "Christian"; "Last"; "Schmitz"; "Company"; "Test Inc." ) ]
```

## 80.16 FM.DisableMouseWheel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.1	No	Yes	No	No	No

MBS( "FM.DisableMouseWheel" )

**Result** Returns OK or error.

### Description

Some clients prefer to disable mouse wheel to not go from record to record while editing a record.

This is no longer needed for FileMaker 15.

### See also

- 80.18 FM.EnableMouseWheel

## 80.17 FM.DisableRuntimeEndWindow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	4.3	Yes	No	No	No	No

MBS( "FM.DisableRuntimeEndWindow" )

**Result** Returns OK or error.

### Description

The plugin simply watches and terminates the runtime application when the end screen is shown. You can modify IDB\_FMDRUNTIME\_CLOSELOGO2.tiff image inside the application resources to show your own logo in this end screen if you don't disable it. Deleting IDD\_FMDRUNTIME\_CLOSESPASH.nib file on Mac can also prevent the dialog.

Deprecated as runtimes are deprecated.

## 80.19 FM.Evaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	1.3	Yes	Yes	Yes	Yes	Yes

MBS( "FM.Evaluate"; Expression )

### Parameters

#### Expression

any valid FileMaker Expression Can be in local language of FileMaker Pro or english. For Server must always be in english.

### Description

### Examples

Evaluate an expression:

MBS( "FM.Evaluate"; "1+2" )

## 80.20 FM.ExecuteFileSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	3.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "FM.ExecuteFileSQL"; FileName; SQL Statement { ; Column Delimiter; Record Delimiter; Params
} )
```

### Parameters

#### FileName

The target database name. Can be empty to not limit query to one database.

””

#### SQL Statement

SQL Statement as a Text string

#### Column Delimiter

Optional

Columns Separator, only used with SELECT statement. Default is tab character, which has unicode code point 9. You can pass delimiter as text or as unicode code point.

9

#### Record Delimiter

Optional

Record Separator, only used with SELECT statement. Default is return character, which has unicode code point 13. You can pass delimiter as text or as unicode code point.

13

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns result of SQL expression or error.

### Description

This function requires FileMaker 11 or newer. Please use FM.ExecuteSQL on FileMaker 10 or older.

There must be an occurrence of the Table on the current tables' Graph in the file you specified. If filename is empty, you use current file. SELECT returns the the records in as a tabbed delimited text string. All other SQL commands return ””.

Use FM.ExecuteSQL.LastError to check for errors.

Supported Commands: SELECT UPDATE (see limitation below) DELETE INSERT CREATE TABLE DROP TABLE CREATE INDEX DROP INDEX WHERE

String comparisons are Case Sensitive! WHERE First\_Name="todd" will not find records that have "Todd" in the first Name Field. You can wrap the field you are searching for with "lower" like this WHERE

lower(First\_Name)="todd" KNOWN LIMITATIONS Schema editing Record Locking Errors are Not Reported! This means you must exercise caution when using UPDATE. CAUTION! This is a very powerful function!

You can put field names in double quotes and string values in single quotes.

Use FM.ExecuteSQLOnIdle for special commands which change database like ALTER TABLE.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Error 8309 means you did pass wrong data type, like string for a number.

You can make queries against FILEMAKER\_TABLES and FILEMAKER\_FIELDS to query information about fields in your solution. The functions FM.QueryBaseTableNames, FM.QueryFieldsForBaseTableName, FM.QueryFieldsForTableName and FM.QueryTableNames provide simplified functions for some queries.

FILEMAKER\_TABLES table contains:

1. TableName
2. TableID
3. BaseTableName
4. BaseFileName
5. ModCount

FILEMAKER\_FIELDS table contains:

1. TableName
2. FieldName
3. FieldType (the SQL data type, not the FileMaker data type)
4. FieldID
5. FieldClass (Normal, Summary, Calculated)
6. FieldReps
7. ModCount

Some standard SQL functions work in FileMaker including CHR, COALESCE, LEFT, LENGTH, LOWER, LTRIM, MID, RIGHT, RTRIM, SPACE, SUBSTR, SUBSTRING, TRIM and UPPER. There may be more!

### Examples

SELECT records

```
MBS("FM.ExecuteFileSQL"; "";"select * from Contacts")
```

INSERT record

```
MBS("FM.ExecuteFileSQL"; "";"INSERT INTO Contacts (FirstName, LastName) Values('Todd', 'Geist')")
```

Select records using delimiters

```
MBS("FM.ExecuteFileSQL"; "";"select * from Contacts"; "# "; " | ")
```

SELECT records with a Where clause

```
MBS("FM.ExecuteFileSQL"; ""); "SELECT First_Name, Last_Name from Contacts WHERE ID_Contact_PK ='CN10013'" )
```

Insert records with parameters 2 and 3:

```
MBS("FM.ExecuteFileSQL"; ""); "INSERT INTO \OtherTable\ (\ID\, \ID Job\ ) Values(?,?)"; 9; 13; 2; 3 )
```

Create Record with values via SQL

```
Set Variable [ $FirstName; Value:"First test" ]
Set Variable [ $LastName; Value:"Last test" ]
Set Variable [ $Street; Value:"Street test" ]
Set Variable [ $Zip; Value:"Zip test" ]
Set Variable [ $City; Value:"City test" ]
Set Variable [ $Country; Value:"Country test" ]
Set Variable [ $Phone; Value:"Phone test" ]
```

```
Set Variable [ $r; Value:MBS( "FM.ExecuteFileSQL"; ""); "INSERT INTO \Export records\ (\First Name\, \Last Name\, \Street\, \Zip\, \City\, \Country\, \Phone\ ) VALUES (?,?,?,?,?)"; 9; 13; $FirstName; $LastName; $Street; $Zip; $City; $City; $Country; $Phone ]
If [ MBS("IsError") ]
Show Custom Dialog [ MBS( "FM.ExecuteSQL.LastErrorMessage" ) ]
End If
```

Set value for all records of a table:

```
MBS( "FM.ExecuteFileSQL"; "test.fmp12"; "UPDATE \My Table\ SET \My Field\ = 'Hello' ")
```

Set timestamp to today:

```
MBS( "FM.ExecuteFileSQL"; "test.fmp12"; "UPDATE \my Table\ SET \Change Time\ = TODAY WHERE \ID\ = '12345' ")
```

Update 5 fields:

```
MBS( "FM.ExecuteFileSQL"; "test.fmp12"; "UPDATE \my Table\ SET \Number Field\ = 1, \Text Field\ = 'test', \Dest Field\ = \Source Field\, \Hour Field\ = CAST(HOUR(curtime) AS VARCHAR), \Empty Field\ = NULL WHERE \ID\ = '12345' ")
```

Create an index:

```
MBS( "FM.ExecuteFileSQL"; ""; "CREATE INDEX ON tablename.fieldname" )
```

Select with parameter:

```
MBS("FM.ExecuteFileSQL"; "";"select Menge from Boxen where Artikel_Nr=? ORDER BY Menge
DESC"; 9; 13; "ABC123")
```

Query value of a repeating field with [ ] :

```
MBS( "FM.ExecuteFileSQL"; "";"SELECT test [ 2 ] FROM Kontakte")
```

Set value of repeating field:

```
MBS( "FM.ExecuteFileSQL"; "";"UPDATE Kontakte SET test [ 2 ] = 'test'")
```

Query only first row:

```
MBS( "FM.ExecuteFileSQL"; "";"SELECT * FROM ProductImages FETCH FIRST 1 ROWS ONLY")
```

Insert with parameters:

```
MBS("FM.ExecuteFileSQL"; "";"INSERT INTO AttachmentsActions (RecID, Container) VALUES (?, ?)";
9; 13; $recid; files::container)
```

Set repeating global field values:

```
MBS( "FM.ExecuteFileSQL"; "";"UPDATE \ "Meine Tabelle\ " SET test [ 1 ] =", test [ 2 ] =", test [ 3 ] =" ")
```

Set timestamp field:

# via CURRENT\_TIMESTAMP constant:

```
MBS( "FM.ExecuteFileSQL"; "";"UPDATE Kontakte SET Datum = CURRENT_TIMESTAMP ")
```

# or cast text to timestamp:

```
MBS( "FM.ExecuteFileSQL"; "";"UPDATE Kontakte SET Datum = CAST('2017-04-12 14:14:14' AS
TIMESTAMP) ")
```

# via CURTIMESTAMP constant:

```
MBS( "FM.ExecuteFileSQL"; "";"UPDATE Kontakte SET Datum = CURTIMESTAMP ")
```

# or to now plus one hour:

```
MBS( "FM.ExecuteFileSQL"; "";"UPDATE Kontakte SET Datum = CURTIMESTAMP + 3600 ")
```

Query tables and fields metadata:

```
MBS( "FM.ExecuteFileSQL"; "";"SELECT FILEMAKER_TABLES.TableName, FILEMAKER_TABLES.TableID,
FILEMAKER_TABLES.BaseTableName, FILEMAKER_TABLES.BaseFileName, FILEMAKER_TABLES.Mod-
Count, FILEMAKER_FIELDS.FieldName, FILEMAKER_FIELDS.FieldType, FILEMAKER_FIELDS.Fiel-
dID, FILEMAKER_FIELDS.FieldClass, FILEMAKER_FIELDS.FieldReps, FILEMAKER_FIELDS.Mod-
Count from FILEMAKER_TABLES, FILEMAKER_FIELDS where FILEMAKER_FIELDS.TableName =
FILEMAKER_TABLES.TableName" )
```

Get list of fields in all tables:

```
MBS( "FM.ExecuteFileSQL"; "" ; "SELECT * FROM FileMaker_Fields")
```

Query list of table names and IDs:

```
MBS( "FM.ExecuteFileSQL"; "" ; "SELECT TableName, TableID FROM Filemaker_Tables")
```

Find table name for a given table ID:

```
MBS( "FM.ExecuteFileSQL"; "" ; "SELECT TableName FROM Filemaker_Tables WHERE TableID=?";
9; 13; 1065089)
```

Query field type of a field:

```
MBS( "FM.ExecuteFileSQL"; "" ; "SELECT FieldType FROM FILEMAKER_FIELDS WHERE Table-
Name=? AND FieldName=? "; 9; 13; "Contacts"; "gtest")
```

// could return "global varchar", if gtest is a global field in table Contacts

Query list of record IDs for a given table:

```
MBS("FM.ExecuteFileSQL"; "" ; "SELECT ROWID FROM MyTable")
```

Look for a control character in the text and return record IDs:

```
MBS("FM.ExecuteFileSQL"; Get(FileName); "SELECT ROWID from \"MyTable\" WHERE \"MyField\"
like '%'+CHR(1)+'%' ")
```

Update all values in a field based on a query:

```
MBS("FM.ExecuteFileSQL"; "" ; "UPDATE \"Invoices\" SET \"Sum\" = (SELECT SUM(\"Quantity\" *
\"Price\") FROM Positions WHERE Invoices.CustomerID = Positions.CustomerID AND Invoices.InvoiceID
= Positions.InvoiceID)")
```

## 80.21 FM.ExecuteFileSQLOnIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteFileSQLOnIdle"; SQL Statement; FileName { ; Column Delimiter; Record Delimiter; Params } )

### Parameters

#### SQL Statement

the SQL statement

#### FileName

The file name of the database.

Get(FileName)

#### Column Delimiter

Optional

Columns Separator, only used with SELECT statement. Default is TAB

9

#### Record Delimiter

Optional

Record Separator, only used with SELECT statement, Default is Return

13

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

### Description

You run a script pause after using this function to give it time to execute.

See the other function for more info.

Seems like on FileMaker 11 you get LastError 8310 if you use fields with underscore in the name. You avoid that by placing the field names in quotes.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

### Examples

Create a new text field in a table:

```
MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable ADD MyField varchar")
```

Create in a script and check error:

```
# set command to run
```

```
Set Variable [ $r ; Value: MBS("FM.ExecuteFileSQLOnIdle"; "ALTER TABLE Kontakte ADD MyField
```

```

varchar"; "Kontakte.fmp12" ) ]
# Make pause to run it
Pause/Resume Script [ Duration (seconds): ,1 ]
# Check error status
Set Variable [ $errorNumber ; Value: MBS( "FM.ExecuteSQL.LastError" ) ]
Set Variable [ $errorMessage ; Value: MBS( "FM.ExecuteSQL.LastErrorMessage" ) ]

```

Create a field:

```

Set Variable [ $r ; Value: MBS("FM.ExecuteFileSQLOnIdle";"ALTER TABLE TestTable ADD MyField
varchar"; Get(FileName)) ]
Pause/Resume Script [ Duration (seconds): ,1 ]
If [ MBS("FM.ExecuteSQL.LastError") = 0 ]
Show Custom Dialog [ "Error adding column" ; MBS("FM.ExecuteSQL.LastError") & ": " & MBS("FM.Ex-
ecuteSQL.LastErrorMessage") ]
Else
Show Custom Dialog [ "Removed Column" ; "OK" ]
End If

```

Create a new text field in a table with variables for the names:

```

MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE \" & $TableName & "\" ADD \" & $FieldName & "\"
\" & $FieldType & "\"")

```

## 80.22 FM.ExecuteSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	1.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteSQL"; SQL Statement { ; Column Delimiter; Record Delimiter } )

### Parameters

#### SQL Statement

SQL Statement as a Text string

#### Column Delimiter

Optional

Columns Separator, only used with SELECT statement. Default is TAB  
""

#### Record Delimiter

Optional

Record Separator, only used with SELECT statement, Default is Return

**Result** Returns result of SQL expression or error.

### Description

There must be an occurrence of the Table on the current tables' Graph. SELECT returns the the records in as a tabbed delimited text string. All other SQL commands return "".

Use FM.ExecuteSQL.LastError to check for errors.

Supported Commands: SELECT UPDATE (see limitation below) DELETE INSERT CREATE TABLE DROP TABLE CREATE INDEX DROP INDEX WHERE

String comparisons are Case Sensitive! WHERE First\_Name="todd" will not find records that have "Todd" in the first Name Field. You can wrap the field you are searching for with "lower" like this WHERE lower(First\_Name)="todd" KNOWN LIMITATIONS Schema editing SQL functions are not supported in FileMaker 8 and 8.5.

Record Locking Errors are Not Reported! This means you must exercise caution when using UPDATE. CAUTION! This is a very powerful function! It is relying on very new and relatively untested resources made available by the release of FileMaker 8.

Seems like on FileMaker 11 you get LastError 8310 for any syntax error, like bad braces or missing quotes.

You can put field names in double quotes and string values in single quotes.

Use FM.ExecuteSQLOnIdle for special commands which change database like ALTER TABLE.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Error 8309 means you did pass wrong data type, like string for a number.

If you need to pass parameters, please use FM.ExecuteFileSQL.

You can make queries against FILEMAKER\_TABLES and FILEMAKER\_FIELDS to query information about fields in your solution. The functions FM.QueryBaseTableNames, FM.QueryFieldsForBaseTableName, FM.QueryFieldsForTableName and FM.QueryTableNames provide simplified functions for some queries.

FILEMAKER\_TABLES table contains:

1. TableName
2. TableID
3. BaseTableName
4. BaseFileName
5. ModCount

FILEMAKER\_FIELDS table contains:

1. TableName
2. FieldName
3. FieldType (the SQL data type, not the FileMaker data type)
4. FieldID
5. FieldClass (Normal, Summary, Calculated)
6. FieldReps
7. ModCount

Some standard SQL functions work in FileMaker including CHR, COALESCE, LEFT, LENGTH, LOWER, LTRIM, MID, RIGHT, RTRIM, SPACE, SUBSTR, SUBSTRING, TRIM and UPPER. There may be more!

### Examples

SELECT records

```
MBS("FM.ExecuteSQL";"select * from Contacts")
```

INSERT record

```
MBS("FM.ExecuteSQL";"INSERT INTO Contacts (FirstName, LastName) Values('Bob', 'Miller')")
```

Select records using delimiters

```
MBS("FM.ExecuteSQL";"select * from Contacts"; "# "; " | ")
```

SELECT records with a Where clause

```
MBS("FM.ExecuteSQL"; "SELECT First_Name, Last_Name from Contacts WHERE ID_Contact_PK = 'CN10013'")
```

Get list of fields in all tables:

```
MBS("FM.ExecuteSQL";"SELECT * FROM FileMaker_Fields")
```

Create Record with values via SQL

```
Set Variable [ $r; Value:MBS( "FM.ExecuteSQL"; "INSERT INTO \"Export records\" (\"First Name\", \"Last Name\", \"Street\", \"Zip\", \"City\", \"Country\", \"Phone\") VALUES ('MyFirst', 'MyLast',
```

```
'MyStreet', 'MyZip', 'MyCity', 'MyCountry', 'MyPhone')" ]
If [ MBS("IsError") ]
Show Custom Dialog [ MBS( "FM.ExecuteSQL.LastErrorMessage" ) ]
End If
```

Set value for all records of a table:

```
MBS( "FM.ExecuteSQL"; "UPDATE \"My Table\" SET \"My Field\" = 'Hello' ")
```

Set timestamp to today:

```
MBS( "FM.ExecuteSQL"; "UPDATE \"my Table\" SET \"Change Time\" = TODAY WHERE \"ID\" = '12345' ")
```

Update 5 fields:

```
MBS( "FM.ExecuteSQL"; "UPDATE \"my Table\" SET \"Number Field\" = 1, \"Text Field\" = 'test',
\"Dest Field\" = \"Source Field\", \"Hour Field\" = CAST(HOUR(curtime) AS VARCHAR), \"Empty
Field\" = NULL WHERE \"ID\" = '12345' ")
```

Select with passing variable as part of expression:

```
MBS("FM.ExecuteSQL"; "SELECT First_Name, Last_Name from Contacts WHERE ID_Contact_PK
='\" & $Variable & \"'")
```

Update date field:

```
MBS( "FM.ExecuteSQL"; "UPDATE myTable SET myDateField = CAST('2015-08-15' as DATE) ")
```

Delete all data in a table:

```
$Result = MBS( "FM.ExecuteSQL"; "DELETE FROM \"Prova\";")
```

Create an index:

```
MBS( "FM.ExecuteSQL"; "CREATE INDEX ON tablename.fieldname" )
```

Drop an index:

```
MBS( "FM.ExecuteSQL"; "DROP INDEX ON tablename.fieldname" )
```

Value in List of values:

```
MBS( "FM.ExecuteSQL"; "select * from \"Anlagen\" where \"Modell\" in ('test', 'abc')")
```

Delete all records from Table People:

```
# no where condition, so deletes all records!
MBS( "FM.ExecuteSQL"; "DELETE FROM \"People\"")
```

Query value of a repeating field with [ ] :

```
MBS( "FM.ExecuteSQL"; "SELECT test [ 2 ] FROM Kontakte")
```

Set value of repeating field:

```
MBS( "FM.ExecuteSQL"; "UPDATE Kontakte SET test [ 2 ] = 'test'")
```

Query only first row:

```
MBS( "FM.ExecuteSQL"; "SELECT * FROM ProductImages FETCH FIRST 1 ROWS ONLY")
```

Truncates table in FileMaker 15 or newer:

```
MBS( "FM.ExecuteSQL"; "TRUNCATE TABLE Kontakte")
```

Query field ID for a field with given name and table name:

```
MBS("FM.ExecuteSQL"; "SELECT FieldID FROM FileMaker__Fields WHERE FieldName='Vorname' and
TableName='Kontakte' ")
```

Query repetition count of global field by name:

```
MBS("FM.ExecuteSQL"; "SELECT FieldReps FROM FILEMAKER__FIELDS WHERE FieldName='Wieder-
holen' ")
```

Query field name and repetition count for all fields in a table:

```
MBS("FM.ExecuteSQL"; "SELECT FieldReps, FieldName FROM FILEMAKER__FIELDS WHERE Table-
Name='Aufgaben' AND FieldType like '% global%' ")
```

Query list of record IDs for a given table:

```
MBS("FM.ExecuteSQL"; "SELECT ROWID FROM MyTable")
```

Concat two texts with plus and use CAST to make number to text:

```
MBS( "FM.ExecuteSQL"; "SELECT 'A' + CAST(123 AS VARCHAR) FROM Contacts")
```

## 80.23 FM.ExecuteSQL.LastError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	1.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteSQL.LastError" )

### Description

Set by FM.InsertRecord, FM.SQL.Execute, FM.ExecuteSQL, FM.ExecuteFileSQL or FM.ExecuteSQLOnIdle. The Errors number s are the same ones as the ones returned by Native FileMaker function "Get(LastError)" Examples: 1200 - "Generic Calculation Error" 200 - "Access Denied" 106 - "Missing Table" Known Limitations: Record Locking Errors are Not Reported! This means you must exercise caution when using UPDATE. There is no way to determine if an update actually occurs unless you check the value again after the update occurred.

In general error 8309 is a semantic error, so something is wrong in your SQL. 8310 is a syntax error, something in the SQL is not correctly parsed.

Error 8309 means you did pass wrong data type, like string for a number.

See also FM.ExecuteSQL.LastErrorMessage.

### Examples

Get Last SQL Error

MBS( "FM.ExecuteSQL.LastError" )

## 80.24 FM.ExecuteSQL.LastErrorMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteSQL.LastErrorMessage" )

**Result** Returns error message.

### Description

Set by FM.InsertRecord, FM.SQL.Execute, FM.ExecuteSQL, FM.ExecuteFileSQL, FM.ExecuteSQLOnIdle and other SQL using functions.

If last error code was 0 (no error), you get an empty string.

Error may be something like this:

ERROR: FQL0007/(1:7): The column named "fieldname" does not exist in any table in the column reference's scope.

See also FM.ExecuteSQL.LastError. Use FM.ExecuteSQL.LastSQL to get the SQL command.

Error	Message
FQL0001	There is an error in the syntax of the query.
FQL0002	The table named "?0" does not exist.
FQL0003	The table named "?0" already exists in this query.
FQL0004	The query is too complex. The maximum number of tables has been exceeded.
FQL0005	Expressions involving aggregations are not supported.
FQL0006	"The column named "?0" appears in more than one table in the column reference's scope."
FQL0007	The column named "?0" does not exist in any table in the column reference's scope.
FQL0008	The table named "?0" does not exist in the column reference's scope.
FQL0009	The column named "?1" does not exist in table "?0".
FQL0010	The literal value "?0" is not a valid DATE, TIME or TIMESTAMP.
FQL0011	Predicate must contain a logical operation (=, <, OR, AND, IS NULL, ...).
FQL0012	The ordinal reference "?0" in the ORDER BY clause is not valid.
FQL0013	Incompatible types in assignment.
FQL0014	The number of values in a VALUES row value constructor does not match the number of values in the target.
FQL0015	The number of values in an INSERT...SELECT statement does not match the number of values in the target.
FQL0016	A subquery contains an illegal outer reference to a column in the INSERT's target table.
FQL0017	An expression contains data types that cannot be compared.
FQL0018	An expression contains incompatible data types.
FQL0019	The result data type of a CASE expression cannot be inferred; they are all NULL.
FQL0020	An invalid number of parameters was supplied to the function "?0"
FQL0021	Parameter number ?0 to the function "?1" is not of the correct type.
FQL0022	A subquery expression must have exactly one value in the SELECT list.
FQL0023	A CAST expression requested an invalid data type conversion.
FQL0024	A reference to ROWID must be qualified if more than one table is present in the query.
FQL0025	All non-aggregated column references in the SELECT list and HAVING clause must be in the GROUP BY clause.
FQL0026	The number of columns in both inputs to a UNION operation must be the same.
FQL0027	The data types of corresponding columns in the inputs to a UNION operation must be the same.
FQL0028	Field repetitions must be numeric and between 1 and ?0.
FQL0029	A field repetition in the SET clause of an UPDATE statement must be a constant.
FQL0030	"?0" is an invalid function.
FQL0031	The the parameter's type cannot be inferred in this context. At least one query parameter must be an expression, a column or a constant.
FQL0032	A query may contain either named parameters or dynamic parameters, but not both.
FQL0033	Column names in FROM clause subqueries must be unique.
FQL0034	The number of output columns in a FROM clause subquery must match the number of columns in the table's name list.
FQL0035	Cursor support is not enabled for this query.
FQL0036	A cursor with the name "?0" already exists.
FQL0037	There is no cursor with the name "?0"

## 80.25 FM.ExecuteSQL.LastSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteSQL.LastSQL" )

**Result** Returns text or error.

### Description

This is for executing SQL in FileMaker and provides you the last SQL command as run by the plugin.

### See also

## 80.26 FM.ExecuteSQLOnIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	1.2	Yes	Yes	No	No	No

MBS( "FM.ExecuteSQLOnIdle"; SQL Statement { ; Column Delimiter; Record Delimiter; Params } )

### Parameters

#### SQL Statement

the SQL statement

#### Column Delimiter

Optional

Optional column delimiter

#### Record Delimiter

Optional

Optional record delimiter

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

### Description

You run a script pause after using this function to give it time to execute.

See the other function for more info.

Seems like on FileMaker 11 you get LastError 8310 if you use fields with underscore in the name. You avoid that by placing the field names in quotes.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message. Use FM.ExecuteFileSQL if you want to specify the file name.

When you create fields, you can use the following types. Add global on the end to make it a global field.

FileMaker Type	SQL Type
Text	varchar
Number	decimal
Date	date
Time	time
Timestamp	timestamp
Container	binary

### Examples

Create a new text field in a table:

```
MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable ADD MyField varchar")
```

And delete the field:

```
MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable DROP COLUMN MyField")
```

Create new table:

```
MBS("FM.ExecuteSQLOnIdle";"CREATE TABLE `MyTABLE` (test varchar)")
```

Create new index:

```
MBS("FM.ExecuteSQLOnIdle";"CREATE INDEX `IndexLastname` ON `Persons` (`LastName`);")
```

Add a global field:

```
MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable ADD MyGlobalField varchar global")
```

Create a field:

```
Set Variable [ $r ; Value: MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable ADD MyField var-
char") ]
Pause/Resume Script [ Duration (seconds): ,1 ]
If [ MBS("FM.ExecuteSQL.LastError") 0 ]
Show Custom Dialog [ "Error adding column" ; MBS("FM.ExecuteSQL.LastError") & ": " & MBS("FM.Ex-
ecuteSQL.LastErrorMessage") ]
Else
Show Custom Dialog [ "Removed Column" ; "OK" ]
End If
```

Remove a field:

```
Set Variable [ $r ; Value: MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable DROP COLUMN
MyField") ]
Pause/Resume Script [ Duration (seconds): 0.1 ]
If [ MBS("FM.ExecuteSQL.LastError") 0 ]
Show Custom Dialog [ "Error removing column" ; MBS("FM.ExecuteSQL.LastError") & ": " & MBS("FM.Ex-
ecuteSQL.LastErrorMessage") ]
Else
Show Custom Dialog [ "Removed Column" ; "OK" ]
End If
```

Change default value:

```
Set Variable [ $r ; Wert: MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE myTable ALTER myField SET
```

80.26. *FM.EXECUTESQLONIDLE* 3987  
DEFAULT 'FileMaker'”) ]

## 80.31 FM.InitMessageFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	8.3	No	Yes	Yes, Windows only	No	No

MBS( "FM.InitMessageFilter" )

**Result** Returns OK or error.

### Description

If a COM message can't be handled right away, COM may show a standard dialog to retry, switch task or cancel, which may bring your app in an endless dialog series. MBS Plugin implements a message filter which delays messages till the current processing is done and avoids the dialog. So long running options can perform well.

Call this once if you see "server busy" error dialogs from COM subsystem on Windows.

## 80.32 FM.InsertOrUpdateRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertOrUpdateRecord"; FileName; TableName; IDField1; IDValue1; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField1

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue1

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### FieldName

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

If the insert fails due to duplicate ID, we will update the record values.

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Then you pass one pair of field name and value for each field you like to set in the new record.

This function combines FM.InsertRecord and FM.UpdateRecord. If the ID is already used, we update, else we insert a new record.

For one ID field, please use `FM.InsertOrUpdateRecord`, for 2 ID fields `FM.InsertOrUpdateRecord2` and for three ID fields `FM.InsertOrUpdateRecord3`.

This function is broken in version 6.4 as it returns always a SQL error for insert. Please use 6.5 or newer. With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use `GetFieldName()` function to query field names and the plugin removes the table prefix with `::` in the field name before passing it to SQL engine.

You can use `FM.ExecuteSQL.LastSQL` function to see later what SQL was created and run.

### Examples

Update a record:

```
MBS( "FM.InsertOrUpdateRecord";
""; "Asset Management"; /* file and table name */
"Asset ID"; "1"; /* ID field and value */
"Information"; "Just a test"; /* first field and value */
"Category"; "BestItems" ) /* second field and value */
```

## 80.33 FM.InsertOrUpdateRecord2

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertOrUpdateRecord2"; FileName; TableName; IDField1; IDValue1; IDField2; IDValue2; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.  
Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.  
"Assets"

#### IDField1

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.  
"ID1"

#### IDValue1

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.  
\$RecordID

#### IDField2

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.  
"ID2"

#### IDValue2

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.  
\$RelatedRecordID

#### FieldName

A field name to set.  
"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.  
"Test"

**Result** Returns OK or error.

**Description**

Same as FM.InsertOrUpdateRecord, but with 2 ID fields to locate record.

If the insert fails due to duplicate ID, we will update the record values.

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Then you pass one pair of field name and value for each field you like to set in the new record.

This function combines FM.InsertRecord and FM.UpdateRecord. If the ID is already used, we update, else we insert a new record.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

**Examples**

Insert or update:

```
MBS( "FM.InsertOrUpdateRecord2";
  ""; "Assets"; /* file and table name */
  "Asset ID Match Field"; 2; /* first ID field and value */
  "Internal ID"; "2"; /* second ID field and value */
  "Model"; "Just a test"; /* first field and value */
  "Category"; "BestItems2" ) /* second field and value */
```

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID1"

#### IDValue1

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### IDField2

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID2"

#### IDValue2

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RelatedRecordID

#### IDField3

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID3"

#### IDValue3

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$OtherRecordID

**FieldName**

A field name to set.  
"Model"

**FieldValue**

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.  
"Test"

**Result** Returns OK or error.

**Description**

Same as FM.InsertOrUpdateRecord, but with 3 ID fields to locate record.

If the insert fails due to duplicate ID, we will update the record values.

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Then you pass one pair of field name and value for each field you like to set in the new record.

This function combines FM.InsertRecord and FM.UpdateRecord. If the ID is already used, we update, else we insert a new record.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

**Examples**

Insert a record:

```
MBS( "FM.InsertOrUpdateRecord3"; "" ; "Kontakte"; "Vorname"; "Christian"; "Nachname"; "Schmitz";
"Firma"; "MBS"; "Titel"; "Herr" )
```

## 80.35 FM.InsertOrUpdateRecordQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	8.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertOrUpdateRecordQuery"; InsertFileName; InsertTableName; FieldNames; KeyFieldMapping; QueryFileName; SQL Statement { ; Params } )

### Parameters

#### InsertFileName

The file name of where the target table. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into (target). Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### KeyFieldMapping

The list of field names with index to map keys. Please specify a list of key name=key index. The key name is the name of the field in the target table and the index gives zero-based position in result set from query.

Field order in source and destination does not need to be the same.

ID=0

#### QueryFileName

The file name for the database to run the query against (source). Can be empty to look for the table in all files.

Get(FileName)

#### SQL Statement

SQL Statement as a Text string to query records from the source table.

#### Params

Optional

Pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

#### Description

This function allows to easily copy a lot of records from one table to another table.

Copy can be from one database to other or within same database. Also from one table to other or within

a table. Due to passing in new field names, you can even rearrange values from one column to other while copying. In the SQL you can use functions for sums or join data from several tables together to fill a new table. Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.  
Reports an error if field name list doesn't match column count of the query result.

Please remove from SQL statement and field names all fields which are globals or unstored calculations.

For inserting records from other database (e.g. MySQL), please use SQL.InsertRecords function.

You can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

You can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

#### Examples

Copies records from Contacts to ContactsCopy:

```
Set Variable [ $r ; Value: MBS( "FM.InsertOrUpdateRecordQuery"; "" ; "ContactsCopy"; "ID$First$Last$Mobile"; "ID=0"; "" ; "SELECT \"ID\", \"First\", \"Last\", \"Mobile\" FROM \"Contacts\"") ]
```

## 80.36 FM.InsertRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecord"; FileName; TableName; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldName

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

You pass to this function table name (and optional filename).

Then you pass one pair of field name and value for each field you like to set in the new record.

As we can't know the new ID assigned for the record, you can help yourself by passing in an UUID for a field and later select that to get the auto assigned primary key (or have the UUID be the primary key, so you don't need a query).

See also FM.UpdateRecord to insert new record and FM.InsertOrUpdateRecord to update or insert record. With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### Examples

Insert a record into Assets table:

```
MBS("FM.InsertRecord"; ""; "Assets"; "Model"; "TestModell"; "Item"; "MyItem"; "Serial Number"; "1234";
    "In Service Date"; GetAsDate( "31.05.1996"))
```

Insert a record with 5 fields:

```
MBS("FM.InsertRecord"; $filename; $tablename; $field1; $value1; $field2; $value2; $field3; $value3; $field4;
$value4; $field5; $value5)
```

Insert with table and field ID instead of names:

```
Set Variable [ $r ; Value: MBS("FM.InsertRecord"; Get(FileName); "1065089"; "3"; "Hello") ]
```

Insert with using GetFieldName for field names:

```
MBS( "FM.InsertRecord"; ""; "Contacts";
GetFieldName ( Contacts::First ); "Joe";
GetFieldName ( Contacts::Last ); "Miller";
GetFieldName ( Contacts::Group ); "Best Customers" )
```

Build dynamically the evaluate statement with parameters:

```
# Our input parameters with field name list
Set Variable [ $FieldNames ; Value: FieldNames ( Get(FileName) ; Get(LayoutName) ) ]
#
# We build parameters for our Evaluate call
Set Variable [ $Params ; Value: "" ]
Set Variable [ $ParamIndex ; Value: 0 ]
#
Set Variable [ $ParamIndex ; Value: $ParamIndex + 1 ]
Set Variable [ $P [ $ParamIndex ] ; Value: Get(FileName) ]
Set Variable [ $Params ; Value: $Params & "; $P [ " & $ParamIndex & " ] " ]
#
Set Variable [ $ParamIndex ; Value: $ParamIndex + 1 ]
Set Variable [ $P [ $ParamIndex ] ; Value: Get(LayoutTableName) ]
Set Variable [ $Params ; Value: $Params & "; $P [ " & $ParamIndex & " ] " ]
#
# We loop over feidl list
Set Variable [ $Count ; Value: ValueCount ( $FieldNames ) ]
Set Variable [ $FieldIndex ; Value: 0 ]
Set Variable [ $Types ; Value: "" ]
#
Loop
# get field name and value
Set Variable [ $FieldIndex ; Value: $FieldIndex + 1 ]
Set Variable [ $Fieldname ; Value: GetValue($FieldNames; $FieldIndex) ]
Set Variable [ $Value ; Value: GetField ( $Fieldname) ]
#
# Check typ to filter fields we don't want
Set Variable [ $Typ ; Value: FieldType ( Get(FileName) ; $Fieldname ) ]
If [ Position ( $Typ; "Global"; 1; 1 ) = 1 or Position ( $Typ; "Summary"; 1; 1 ) = 1 or Position($Typ; "stored-
Calc"; 1; 1 ) = 1 or $Fieldname = "ID" ]
```

```

# ignore global, statistic and unsaved formula field
// Show Custom Dialog [ "Typ" ; $FieldName & ": " & $typ ]
Else
# We store in $P [ ] our parameters for evaluate and in $Params the parameters for Evaluate
Set Variable [ $Types ; Value: $Types & $& $FieldName & ": " & $Typ ]
Set Variable [ $ParamIndex ; Value: $ParamIndex + 1 ]
Set Variable [ $P [ $ParamIndex ] ; Value: $Fieldname ]
Set Variable [ $Params ; Value: $Params & "; $P [ " & $ParamIndex & " ] " ]
Set Variable [ $ParamIndex ; Value: $ParamIndex + 1 ]
Set Variable [ $P [ $ParamIndex ] ; Value: $Value ]
Set Variable [ $Params ; Value: $Params & "; $P [ " & $ParamIndex & " ] " ]
End If
#
Exit Loop If [ $FieldIndex = $count ]
End Loop
#
# now build Evaluate command and show it
// Show Custom Dialog [ "Types" ; $Types ]
Set Variable [ $Function ; Value: "FM.InsertRecord" ]
Set Variable [ $command ; Value: "MBS($Function" & $params & ")" ]
Show Custom Dialog [ "Command" ; $Command ]
If [ Get ( LastMessageChoice ) = 1 ]
# And run it!
Set Variable [ $result ; Value: Evaluate($Command) ]
Show Custom Dialog [ "Result" ; $Result ]
End If

```

Insert with automatic table name:

```

MBS("FM.InsertRecord";
""; // empty for current file
""; // empty as given with first field
GetFieldName ( Anlagen::Seriennummer ); // field name queried
"12345") // and value

```

## 80.37 FM.InsertRecordCSV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecordCSV"; InsertFileName; InsertTableName; FieldNames; Text { ; Delimiter; FieldName; FieldValue } )

### Parameters

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model"

#### Text

The text to import in TSV/CSV format. This means tab, comma or semicolon character between fields and newline character for new records. Use Files.ReadTextFile if needed to read this from a file on disk.

"Bob;Miller;12345;New York"

#### Delimiter

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The delimiter to use. If empty, we auto detect it.

","

#### FieldName

Optional

A field name to set.

"Model"

#### FieldValue

Optional

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

This function allows for easy importing of text to create a log of records.

Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result. Since version 8.2 we can fill text, number, time, timestamp and date fields and let FileMaker convert the values with your current locale.

Returns number of records added.

CSV is automatically parsed per line with List.CSVSplit function internally.

You can pass one pair of field name and value for each extra field you like to set in the new records. e.g. a reference ID.

You can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

Version 8.5 adds Delimiter parameter, which may break scripts, but we need to have that parameter for people with older version.

#### Examples

Import some contacts with passing import ID/timestamp:

```
MBS( "FM.InsertRecordCSV"; "Contacts.fmp12"; "Contacts"; "FirstName$LastName$City"; $tsv; "ImportID"; $importID; "ImportDate"; Get(CurrentHostTimeStamp))
```

Import CSV:

```
MBS( "FM.InsertRecordCSV"; "Kontakte.fmp12"; "Kontakte"; "Vorname$Nachname$Firma$Position"; "Vorname;Nachname;Firma;Position")
```

## 80.38 FM.InsertRecordQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecordQuery"; InsertFileName; InsertTableName; FieldNames; QueryFileName; SQL Statement { ; Params } )

### Parameters

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### QueryFileName

The file name for the database to run the query against. Can be empty to look for the table in all files.

Get(FileName)

#### SQL Statement

SQL Statement as a Text string

#### Params

Optional

Pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

#### Description

This function allows to easily copy a lot of records from one table to another table.

Copy can be from one database to other or within same database. Also from one table to other or within a table. Due to passing in new field names, you can even rearrange values from one column to other while copying. In the SQL you can use functions for sums or join data from several tables together to fill a new table. Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

Please remove from SQL statement and field names all fields which are globals or unstored calculations.

For inserting records from other database (e.g. MySQL), please use `SQL.InsertRecords` function.

Using `FM.SetSQLBatchMode` you can let the plugin insert e.g. 50 rows in one chunk which can speed up insert a lot.

Due to memory usage it can be useful to segment copy queries to only copy one GB at a time and avoid heavy memory pressure.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use `GetFieldName()` function to query field names and the plugin removes the table prefix with `::` in the field name before passing it to SQL engine.

### Examples

Copy records within one table in same file:

```
MBS( "FM.InsertRecordQuery"; ""; "Contacts"; "First$Last$Company"; ""; "SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Copy records from a table from one database to other (production to development)

```
MBS( "FM.InsertRecordQuery"; "ContactsDev.fmp12"; "Contacts"; "First$Last$Company"; "Contacts.fmp12"; "SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Copy data to other table:

```
MBS( "FM.InsertRecordQuery"; ""; "Test"; "FirstName$LastName$CompanyName"; ""; "SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Query sum of sales grouped by customers in a sales report table:

```
MBS( "FM.InsertRecordQuery"; ""; "SalesReport"; "SumSales$CustomerID"; ""; "SELECT sum(\"Invoice-Total\"), \"CustomerID\" FROM Clients, Invoices WHERE Invoices.CustomerID = Clients.CustomerID GROUP by CustomerID" )
```

Copy two fields from one table to other:

```
MBS( "FM.InsertRecordQuery"; ""; "ASC Apple Script"; "Name$Script"; ""; "select * from \"Apple-Script\"" )
```

Copy from Anlagen example (in German) to copy of same file:

```
MBS( "FM.InsertRecordQuery";
```

```

/* InsertFileName */
"Anlagen2";
/* InsertTableName */
"Anlagen";
/* FieldNames */
"Abschreibung Jahre$Anzahl Diagramme$Ausgewählte Datei$Datei 1 Container$Datei 2 Container$Datei
3 Container$Datei 4 Container$Datei 5 Container$Datum Ausgang$Datum Ausgang Popover$Datum Ein-
gang$Erstellungsdatum$Fälligkeit$Fälligkeit Popover$Gekauft von$Geprüft durch$In Betrieb seit$Interne
ID$Kategorie$Kaufdatum$Kosten$Modell$Notizen$Ort$Position$Prüfdatum$Seriennummer$Signatur Con-
tainer$Zugewiesen an$Zustand";
/* QueryFileName */
"Anlagen";
/* SQL Statement */
"SELECT \"Abschreibung Jahre\", \"Anzahl Diagramme\", \"Ausgewählte Datei\", \"Datei 1 Container\",
\"Datei 2 Container\", \"Datei 3 Container\", \"Datei 4 Container\", \"Datei 5 Container\", \"Datum Aus-
gang\", \"Datum Ausgang Popover\", \"Datum Eingang\", \"Erstellungsdatum\", \"Fälligkeit\", \"Fäl-
ligkeit Popover\", \"Gekauft von\", \"Geprüft durch\", \"In Betrieb seit\", \"Interne ID\", \"Kategorie\",
\"Kaufdatum\", \"Kosten\", \"Modell\", \"Notizen\", \"Ort\", \"Position\", \"Prüfdatum\", \"Serien-
nummer\", \"Signatur Container\", \"Zugewiesen an\", \"Zustand\" FROM Anlagen"
)

```

Copy data to other table with parameter:

```

MBS( "FM.InsertRecordQuery"; ""; "Test"; "FirstName$LastName$CompanyName"; ""; "SELECT \"First\",
\"Last\", \"Company\" FROM Contacts WHERE City=?"; "Hamburg" )

```

Copy from file to fill clone with order and two fields to filter:

```

MBS( "FM.InsertRecordQuery"; "Aufgaben Clone"; "Aufgaben"; "Aufgabe$Fälligkeit$Beschreibung$Sta-
tus$Kategorie"; ""; "SELECT Aufgabe, \"Fälligkeit\", Beschreibung, Status, Kategorie FROM Aufgaben
WHERE IDField=? AND OtherThing=? ORDER BY \"Fälligkeit\" "; 123; "Haus" )

```

## 80.39 FM.InsertRecordQueryIgnoreDuplicates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecordQueryIgnoreDuplicates"; InsertFileName; InsertTableName; FieldNames; QueryFileName; SQL Statement { ; Params } )

### Parameters

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### QueryFileName

The file name for the database to run the query against. Can be empty to look for the table in all files.

Get(FileName)

#### SQL Statement

SQL Statement as a Text string

#### Params

Optional

Pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

### Description

Same as FM.InsertRecordQuery, but ignores duplicate records.

On success returns the number of duplicate records instead of OK if there were any.

This function allows to easily copy a lot of records from one table to another table.

Copy can be from one database to other or within same database. Also from one table to other or within a table. Due to passing in new field names, you can even rearrange values from one column to other while copying. In the SQL you can use functions for sums or join data from several tables together to fill a new table. Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

Does not copy text styles, only plain text for text fields.

The duplicate check is based on FileMaker checking if a field is unique, e.g. the record ID.  
For inserting records from other database (e.g. MySQL), please use `SQL.InsertRecords` function.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

### Examples

Copy records within one table in same file:

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; ""; "Contacts"; "First$Last$Company"; ""; "SELECT \
\"First\", \"Last\", \"Company\" FROM Contacts" )
```

Copy records from a table from one database to other (production to development)

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; "ContactsDev.fmp12"; "Contacts"; "First$Last$Company";
"Contacts.fmp12"; "SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Copy data to other table:

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; ""; "Test"; "FirstName$LastName$CompanyName"; "";
"SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Query sum of sales grouped by customers in a sales report table:

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; ""; "SalesReport"; "SumSales$CustomerID"; ""; "SE-
LECT sum(\"InvoiceTotal\"), \"CustomerID\" FROM Clients, Invoices WHERE Invoices. CustomerID
= Clients.CustomerID GROUP by CustomerID" )
```

Copy two fields from one table to other:

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; ""; "ASC Apple Script"; "Name$Script"; ""; "select *
from \"AppleScript\"" )
```

## 80.40 FM.InsertRecordTSV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "FM.InsertRecordTSV"; InsertFileName; InsertTableName; FieldNames; Text { ; FieldName; Field-Value } )
```

### Parameters

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### Text

The text to import in TSV format. This means tab character between fields and newline character for new records

"Bob Miller 12345 New York"

#### FieldName

Optional

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

Optional

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns number or error.

### Description

This function allows for easy importing of text to create a log of records.

Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result. Since version 8.2 we can fill text, number, time, timestamp and date fields and let FileMaker convert the values with your current locale.

Returns number of records added.

For XML, please check XML.Import function. For splitting values with delimiter into a list, please use QuickList.New which also works with comma, tab, newline or other characters.

With plugin version 6.2 or newer you can pass one pair of field name and value for each extra field you like to set in the new records. e.g. a reference ID.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

### Examples

Import records from text:

```
Delete All Records [ No dialog ]
Set Variable [ $fields; Value:"FirstName$LastName$City" ]
Set Variable [ $r; Value:MBS("FM.InsertRecordTSV"; ""; "Contacts"; $fields; Import::ImportText) ]
```

Import some contacts with passing import ID/timestamp:

```
MBS( "FM.InsertRecordTSV"; "Contacts.fmp12"; "Contacts"; "FirstName$LastName$City"; $tsv; "ImportID"; $importID; "ImportDate"; Get(CurrentHostTimeStamp))
```

Created 8th September 2015, last changed 1st May 2020.

## 80.41 FM.InsertSetUpdateProgressDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.2	Yes	Yes	No	No	No

MBS( "FM.InsertSetUpdateProgressDialog"; Update { ; Base; Factor } )

### Parameters

#### Update

Pass 1 to update Progress Dialog. Pass 0 to disable feature.

1

#### Base

Optional

The progress base in percent. Default is 0.

25

#### Factor

Optional

The factor to apply for progress update. Default is 1.

0.5

**Result** Returns OK or error.

### Description

If you enable progress dialog updates, the functions FM.InsertRecordQuery, FM.InsertRecordQueryIgnoreDuplicates and FM.InsertRecordTSV will update progress dialog.

If cancel button is clicked, the functions may cancel and return an error. Depending on event handling a cancel button may not work while a plugin function runs!

You can use Base/Factor to adjust updates in progress dialog. e.g. if you have 4 things to do and FM.InsertRecordTSV is 2nd one, you can use a base of 25 (so 25% is for first thing to do) and factor of 0.25. Our progress will go from 25 to 50% than.

### Examples

Import tab return text data as records with progress dialog:

```
Set Variable [ $r; Value:MBS( "ProgressDialog.SetTitle"; "Please wait." ) ]
```

```
Set Variable [ $r; Value:MBS( "ProgressDialog.SetShowButton"; 0 ) ]
```

```
Set Variable [ $r; Value:MBS( "ProgressDialog.SetTopText"; "Importing text file..." ) ]
```

```
Set Variable [ $r; Value:MBS( "ProgressDialog.Show" ) ]
```

```
Set Variable [ $r; Value:MBS( "FM.InsertSetUpdateProgressDialog"; 1 ) ]
```

```
Set Variable [ $r; Value:MBS( "FM.InsertRecordTSV"; "" ; "TSV Import"; "First$Last$Street$City$State$Zip$Country"; TSV Import::Text to Import ) ]
```

```
Set Variable [ $r; Value:MBS( "ProgressDialog.Hide" ) ]
```

## 80.43 FM.LayoutIDForLayoutName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.LayoutIDForLayoutName"; LayoutName { ; FileName } )

### Parameters

#### LayoutName

The name of the layout.

"Test"

#### FileName

Optional

The name of the file to look inside. If empty, we default to current file.

**Result** Returns number or error.

### Description

### Examples

Query ID for contacts layout:

MBS( "FM.LayoutIDForLayoutName"; "Contacts" )

### 80.43.1 Blog Entries

## 80.44 FM.LayoutNameForLayoutID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.LayoutNameForLayoutID"; LayoutID { ; FileName } )

### Parameters

#### LayoutID

The ID of the layout.

"123"

#### FileName

Optional

The name of the file to look inside. If empty, we default to current file.

**Result** Returns name or error.

### Description

### Examples

Query name for ID:

MBS( "FM.LayoutNameForLayoutID"; 2 )

### 80.44.1 Blog Entries

- [MBS FileMaker Plugin, version 10.2pr3](#)

Created 8th April 2020, last changed 8th April 2020.

## 80.45 FM.LayoutNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.LayoutNames" )

**Result** Returns list or error.

### Description

Same as calling `LayoutNames(Get(FileName))`.

### Examples

Show layout names:

```
Show Custom Dialog [ "Layouts" ; MBS( "FM.LayoutNames" ) ]
```

### 80.45.1 Blog Entries

- [MBS FileMaker Plugin, version 10.2pr3](#)

Created 8th April 2020, last changed 19th April 2020.

## 80.46 FM.Loop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.Loop"; Variable Name; Start Value; End Value; Step Value; Expression { ; ExitIfExpression } )

### Parameters

#### Variable Name

The name of the variable to use. Can be with zero, one or zwei \$ on the start.  
"index"

#### Start Value

The start value of the loop.

1

#### End Value

The end value of the loop.

12

#### Step Value

The number to add on each loop. Must not be zero. Can be positive to count forward or negative to count backwards.

1

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

" MBS(\ "Log\"; index) "

#### ExitIfExpression

Optional

The expression to evaluate to check for exit early. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"index >= 10"

**Result** Returns list of results or error.

### Description

Counts number up/down from start to end value. Evaluates each time the formula with new variable value.

If trace is enabled and plugin writes log entries for each evaluate, things are slower than without tracing.

For best performance, do not use trace with this function. e.g. call Trace.Off function.

Returns empty text if End value is zero and step is positive to allow for 0 time loops.

Similar to the While() function in FileMaker 18.

### Examples

Loop to place month names in a PDF table:

```

MBS("FM.Loop";
/* variable */ "index";
/* start */ 1;
/* end */ 12;
/* step */ 1;
/* formula */
"MBS(\\"DynaPDF.Table.SetCellText\\"; $table; $rowNum; index; \\"center\\"; \\"center\\"; GetValue($months;
index))")

```

Loop with Let for multiple commands

```

MBS("FM.Loop";
/* variable */ "index";
/* start */ 1;
/* end */ 31;
/* step */ 1;
/* formula */
"Let( [ $rowNum = MBS(\\"DynaPDF.Table.AddRow\\"; $table);
r = MBS(\\"DynaPDF.Table.SetCellText\\"; $table; $rowNum; 0; \\"center\\"; \\"center\\"; index) ] ; r)")

```

Counts upward from 2 to 24:

```

MBS("FM.Loop";
/* variable */ "index";
/* start */ 1;
/* end */ 12;
/* step */ 1;
/* formula */
"index*2")

```

Example result: 2

```

4
6
8
10
12
14
16
18
20
22
24

```

Counts downwards from 1.0 to 0.0 in 11 steps:

```

MBS("FM.Loop";
/* variable */ "index";
/* start */ 10;

```

```
/* end */ 0;
/* step */ -1;
/* formula */
"index/10")
```

Example result: 1

```
.9
.8
.7
.6
.5
.4
.3
.2
.1
0
```

Inner and outer loop:

```
Let( [
```

```
$Expression1 = "MBS(\"FM.Loop\"; \"j\"; 1; 3; 1; $Expression2)";
$Expression2 = "$i & \" * \" & j & \" = \" & ($i * j)"
// $i in outer loop must be with $ so it's valid in the inner loop
];
```

```
MBS("FM.Loop"; "$i"; 1; 4; 1; $Expression1))
```

Example result: 1 \* 1 = 1

```
1 * 2 = 2
1 * 3 = 3
2 * 1 = 2
2 * 2 = 4
2 * 3 = 6
3 * 1 = 3
3 * 2 = 6
3 * 3 = 9
4 * 1 = 4
4 * 2 = 8
4 * 3 = 12
```

With an exit early expression:

```
MBS("FM.Loop";
/* variable */ "index";
/* start */ 1;
/* end */ 12;
/* step */ 1;
/* formula */
```

```
"index*2"; // calculate this  
"index >= 10") // exit if index gets big
```

## 80.48 FM.MouseWheelScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	6.3	Yes	Yes	No	No	No

MBS( "FM.MouseWheelScriptTrigger"; FileName; ScriptName { ; MinDelay; IgnoreRectangleX; IgnoreRectangleY; IgnoreRectangleW; IgnoreRectangleH } )

### Parameters

#### FileName

The file name for the script.

Get(Filename)

#### ScriptName

The name of the script to trigger. Can be empty to disable feature.

"WheelScriptTrigger"

#### MinDelay

Optional

The minimum delay between script triggers. Default is 1. Could be 0.5 for a quicker reaction.

1

#### IgnoreRectangleX

Optional

Available in MBS FileMaker Plugin 7.1 or newer.

The X position of the rectangle where scroll action is ignored if the mouse is inside. Relative to the parent window. Default is -1 to have no such rectangle.

Rectangle area is Windows only.

135

#### IgnoreRectangleY

Optional

Available in MBS FileMaker Plugin 7.1 or newer.

The Y position of the rectangle where scroll action is ignored if the mouse is inside. Relative to the parent window. Default is -1 to have no such rectangle.

55

#### IgnoreRectangleW

Optional

Available in MBS FileMaker Plugin 7.1 or newer.

The width of the rectangle where scroll action is ignored if the mouse is inside. Relative to the parent window. Default is -1 to have no such rectangle.

400

#### IgnoreRectangleH

Optional

Available in MBS FileMaker Plugin 7.1 or newer.

The height of the rectangle where scroll action is ignored if the mouse is inside. Relative to the parent window. Default is -1 to have no such rectangle.

500

**Result** Returns OK or error.**Description**

If you like to have a script triggered to switch records on Windows with mouse wheel, you can use this function.

The script parameter is the delta on mouse wheel usage. 120 is one tick down and negative value means movement up.

The script is called at most once every second (by default).

Turn off by calling again with empty script name. This setting is global, so you may just install once in start script.

Add option to ignore a rectangle for plugin version 7.1.

Implemented for Mac and FileMaker 16 or newer with MBS Plugin 9.1.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

**Examples**

Installs trigger:

```
MBS("FM.MouseWheelScriptTrigger"; Get(FileName); "MouseTrigger")
```

Sample MouseTrigger script to move between records:

```
If [ Get ( ActiveFieldName ) = "" ]
Set Variable [ $r; Value:Round(Get(ScriptParameter) / 120; 0) ]
Go to Record/Request/Page [ No dialog; Get ( RecordNumber ) + $r ]
// Set Variable [ $r; Value:MBS("Log"; "MouseWheel " & $r) ]
End If
```

## 80.49 FM.NULL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.NULL" )

**Result** Returns empty container.

### Description

FileMaker doesn't really have a NULL value, but other databases make a difference between empty text ("" ) and no value (NULL).

This function returns a special container value with no content.

SQL.SetParamValue and SQL.SetParamValues can use this value to pass NULL to the database.

### Examples

get null value:

```
MBS("FM.NULL")
```

### See also

## 80.50 FM.PatchNotificationProblem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	8.1	Yes	No	No	No	No

MBS( "FM.PatchNotificationProblem" )

**Result** Returns OK or error.

### Description

FileMaker 16.0.4 on MacOS 10.13.3 has a bug that can cause crashes with scroll gestures.

Crash reports show message about "terminating with uncaught exception" and stack trace shows `_beginScrollGesture` method called which posts a notification to a non-existing observer.

The plugin, if activated with this function will watch for those notifications and just ignore them, so the observer is not called and the crash does not happen.

## 80.51 FM.QueryBaseTableNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.QueryBaseTableNames" { ; FileName } )

### Parameters

#### FileName

Optional

The database file name to look into. If empty or missing, we look in current database. (new in 6.2)  
"Contacts"

**Result** Returns names of tables separated by return.

### Description

See also FM.QueryTableNames.

### Examples

Query tables in database Kontakte:

MBS( "FM.QueryBaseTableNames"; "Kontakte" )

### See also

## 80.52 FM.QueryFieldsForBaseTableName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.QueryFieldsForBaseTableName"; BaseTableName { ; FileName } )

(old name: FM.QueryFields)

### Parameters

#### BaseTableName

The base table name to query.  
"test"

#### FileName

Optional

The database file name to look into. If empty or missing, we look in current database. (new in 6.2)  
"Contacts"

**Result** Returns field names of fields separated by return.

### Description

See also FM.QueryFieldsForTableName.

### Examples

Query fields in table Kontakte in file Kontakte:

```
MBS( "FM.QueryFieldsForBaseTableName"; "Kontakte"; "Kontakte" )
```

## 80.55 FM.RunDatabaseDesignReport

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.0	Yes	Yes	No	No	No

MBS( "FM.RunDatabaseDesignReport"; UseXML { ; Path; OpenWhenDone; FileNames } )

(old name: FM.RunDataDesignReport)

### Parameters

#### UseXML

Pass 1 to use XML or 0 to use HTML for the report.

1

#### Path

Optional

The path where to save for MacOS. If you don't specify a path, the last one used in the dialogs will be used.

No longer used on MacOS Mojave/Catalina due to raised security by Apple which prevents us changing the dialog.

"/tmp"

#### OpenWhenDone

Optional

Whether to open file when done. Pass 1 to open file after creating DDR or 0 to not open. Default is 0.

0

#### FileNames

Optional

Available in MBS FileMaker Plugin 9.4 or newer.

The list of filenames to set checkmarks for. Names must match exactly to be checked. MacOS only.

"test.fmp12\$other.fmp12"

**Result** Returns OK or error.

### Description

This must be the last step in a script, because it triggers an asynchronously process to make a report. So the plugin will run the menu command, set the options, press the create button and the save button for you. If you like to run other things later, simply run a script 5 seconds later with FM.RunScriptLater.

FileMaker and the dialogs may need to be frontmost to have this work well.

May not work if debugger window is visible.

See also FM.RunSaveAsXML for FileMaker 18.

Needs accessibility permissions in system preferences to click save button for MacOS Catalina and may not set path there.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

**Examples**

Make a XML report to temp folder on Mac:

```
Set Variable [ $r; Value:MBS( "FM.RunDataDesignReport"; 1; "/tmp" ) ]
```

Export to desktop:

```
Set Variable [ $r; Value:MBS( "FM.RunDataDesignReport"; 1; "/Users/cs/Desktop" ) ]  
// please change path!
```

- [MBS FileMaker Plugin, version 9.2pr6](#)

Created 15th November 2014, last changed 16th March 2020.

## 80.56 FM.RunSaveAsXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	9.2	Yes	Yes	No	No	No

MBS( "FM.RunSaveAsXML"; Path )

### Parameters

#### Path

The path where to save for MacOS. If you don't specify a path, the last one used in the dialogs will be used.

No longer used on MacOS Mojave/Catalina due to raised security by Apple which prevents us changing the dialog.

"/Users/cs/Desktop/test.xml"

**Result** Returns OK or error.

### Description

This requires FileMaker Pro Advanced 18 and performs the relevant menu command for you.

This must be the last step in a script, because it triggers an asynchronously process to make a report. So the plugin will run the menu command, enters the file name and the save button for you.

If you like to run other things later, simply run a script 5 seconds later with FM.RunScriptLater.

May not work if debugger window is visible.

### Examples

Save as XML on desktop:

Set Variable [ \$r ; Value: MBS( "FM.RunSaveAsXML"; "/Users/cs/Desktop/test.xml" ) ]

### See also

## 80.57 FM.RunScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	1.2	Yes	Yes	No	No	Yes

MBS( "FM.RunScript"; FileName; ScriptName { ; ScriptParameter; ScriptControl } )

### Parameters

#### FileName

The name of the FileMaker File that contains the script

#### ScriptName

The name of the script to run.

#### ScriptParameter

Optional

The Parameter to Pass to the script.

#### ScriptControl

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The script control mode. Can be Pause, Halt, Exit or Resume. Default is Pause.

"pause"

### Description

You can also pass a text string to the Script as a Parameter. The parameter can be retrieved by using Get(ScriptParameter) in the script that plug-in is calling. The basic concept behind triggering scripts with a plug-in is as follows. In order for the Plug-in to call a script it must be part of a calculation that is evaluated. For example to cause a script to run when a field is exited, you place the MBS function call in the auto-enter calculation of the field you want to serve as the trigger. When the field is exited the Auto-enter calculation is evaluated and the MBS function is fired off.. Placing the function call in the Field Validation calculation of the trigger field will cause the script to run on Record Exit. NOT on field Exit. This is because Validations by calculation happen at when the record is exited. Anywhere you have access to the calculation dialog you can place a Script trigger function. When the calculation is evaluated the script will run. This includes the new conditional formatting calculations that can be placed on many layout objects. While this opens up new opportunities, you might find that your script is being called continuously.

see also FM.RunScriptIdle, FM.RunScriptLater and Schedule functions.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Trigger a script

```
Let(
[
```

```
trigger = MBS("FM.RunScript"; Get(FileName); "Triggered Script"; "")
];
1
)
```

Trigger script by ID:

```
MBS( "FM.RunScript"; "test.fmp12"; "12" /* PrintRecords */; "Hello World")
```

## 80.58 FM.RunScriptIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	3.3	Yes	Yes	No	No	No

MBS( "FM.RunScriptIdle"; DelaySeconds; FileName; ScriptName { ; ScriptParameter } )

### Parameters

#### DelaySeconds

The Number of Seconds to wait before running the script. Moving the mouse or using keyboard will reset the counter.

10

#### FileName

The name of the file that contains the script to be run

Get(FileName)

#### ScriptName

The exact name of the script to run

"TestScript"

#### ScriptParameter

Optional

The Script Parameter to pass to the script

**Result** Returns OK on success or error message on failure.

### Description

This script is called in FileMaker whenever no user activity has been for the given amount of time.

You can also pass a text string to the Script as a Parameter. The parameter can be retrieved by using Get(ScriptParameter) in the script that plug-in is calling.

see also Schedule.StartScriptOnIdle, FM.StopScriptIdle, FM.RunScript, FM.RunScriptLater and Schedule functions.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Start idle script:

```
Set Variable [ $r; Value:MBS( "FM.RunScriptIdle"; 10; Get(FileName); "Trigger" ) ]
```

## 80.59 FM.RunScriptLater

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	1.2	Yes	Yes	No	No	Yes

MBS( "FM.RunScriptLater"; DelaySeconds; FileName; ScriptName { ; ScriptParameter } )

### Parameters

#### DelaySeconds

The Number of Seconds to wait before running the script.

10

#### FileName

The name of the file that contains the script to be run

Get(FileName)

#### ScriptName

The exact name of the script to run

"TestScript"

#### ScriptParameter

Optional

Optional, the Script Parameter to pass to the script

**Result** Returns OK on success or error message on failure.

### Description

You can also pass a text string to the Script as a Parameter. The parameter can be retrieved by using Get(ScriptParameter) in the script that plug-in is calling.

see also Schedule.StartScriptAfterDelay, FM.RunScriptIdle, FM.RunScript and Schedule functions.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Trigger a script later

```
Let(
[
/*-----PARAMETERS-----*/
DelaySeconds = 5;
FileName = Get ( FileName );
ScriptName = "Triggered Script Demo 2";
ScriptParameter = "Some Data"
];
/*-----FUNCTION-----*/
```

```
MBS(  
"FM.RunScriptLater";  
DelaySeconds;  
FileName;  
ScriptName;  
ScriptParameter  
)  
)
```

**80.60 FM.SQL.Avg**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	9.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Avg"; SQLref; Column { ; firstRow; lastRow } )

**Parameters****SQLref**

The reference number returned by FM.SQL.Execute function.

\$SQLRef

**Column**

The index of the column. Default is 0.

0

**firstRow**

Optional

The index of first row. Default is 0.

0

**lastRow**

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**Result** Returns number or error.

**Description**

You got a record set in memory and we can walk over a column in a given row range to add the sum value and later divide by number of values.

**Examples**

Query once and make several calculations:

```
# let FileMaker query data once
Set Variable [ $Records ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT Price FROM Produkte" ) ]
# Now get sum, min, max and avg
Set Variable [ $sum ; Value: MBS( "FM.SQL.Sum"; $records; 0 ) ]
Set Variable [ $min ; Value: MBS( "FM.SQL.Min"; $records; 0 ) ]
Set Variable [ $max ; Value: MBS( "FM.SQL.Max"; $records; 0 ) ]
Set Variable [ $avg ; Value: MBS( "FM.SQL.Avg"; $records; 0 ) ]
Set Variable [ $text ; Value: MBS( "FM.SQL.Text"; $records; "" /* firstRow */; "" /* lastRow */; "" /* firstCol */; "" /* lastCol */; ", " /* rowSep */ ) ]
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $records ) ]
Show Custom Dialog [ "Sum: " & $sum & §& "Min: " & $min & §& "Max: " & $max & §& "Avg: " & $avg & §& "text: " & $text ]
```

**See also**

**80.61 FM.SQL.CSV**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.CSV"; SQLref { ; firstRow; lastRow; firstCol; lastCol; rowSeparator; colSeparator } )

**Parameters****SQLref**

The reference number returned by FM.SQL.Execute function.

\$\$SQLRef

**firstRow**

Optional

The index of first row. Default is 0.

0

**lastRow**

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**firstCol**

Optional

The index of first column. Default is 0.

0

**lastCol**

Optional

The index of last column. Default is FM.SQL.FieldCount-1.

6

**rowSeparator**

Optional

The row separator. Default is CR.

Char(13)

**colSeparator**

Optional

The column separator. Default is semicolon.

”;"

**Result** Returns text or error.

**Description**

You can use this method to quickly get all fields in a given area as text.

If needed, we put values in quotes and escape quotes and newlines.

For numeric values we ask FileMaker to provide text representation, so FileMaker may use dot or comma as

decimal divider depending on your locale.

Please use `Text.WriteTextFile` to write to text file if you need CSV export.

### Examples

Query fields and export as text and CSV:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; "" ; "select * from Clients" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error"; $sql ]
Else
Show Custom Dialog [ "SQL result"; "got " & MBS( "FM.SQL.RowCount"; $sql ) & " rows with each " &
MBS( "FM.SQL.FieldCount"; $sql ) & " ..." ]
# Write to text file
Set Variable [ $text; Value:MBS( "FM.SQL.Text"; $sql ) ]
Set Variable [ $desktopFolder; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $desktopFolder; "fields.txt" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
# Write to text file
Set Variable [ $text; Value:MBS( "FM.SQL.CSV"; $sql ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $desktopFolder; "fields.csv" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
# Cleanup
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $sql ) ]
End If
```

## 80.62 FM.SQL.Execute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Execute"; FileName; SQL Statement { ; Params } )

### Parameters

#### FileName

The target database name. Can be empty to not limit query to one database.

""

#### SQL Statement

SQL Statement as a Text string

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns reference number or error.

### Description

This function requires FileMaker 11 or newer. Please use FM.ExecuteSQL on FileMaker 10 or older.

Returns a SQL Reference, so you can use functions like FM.SQL.RowCount, FM.SQL.FieldCount, FM.SQL.Field and FM.SQL.FieldType to query result. Don't forget to use FM.SQL.Release to release the result from memory when you are done with it.

### Examples

Query only first row:

```
MBS( "FM.SQL.Execute"; ""; "SELECT * FROM ProductImages FETCH FIRST 1 ROWS ONLY")
```

SELECT records

```
MBS("FM.SQL.Execute"; ""; "select * from Contacts")
```

Select with parameter:

```
MBS("FM.SQL.Execute"; ""; "select Menge from Boxen where Artikel_Nr=? ORDER BY Menge DESC"; "ABC123")
```

Query some values:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; ""; "select * from Clients" ) ]
```

```
If [ MBS("IsError" ) ]
```

```
Show Custom Dialog [ "SQL error"; $sql ]
```

```

Else
Show Custom Dialog [ "SQL result"; "got " & MBS( "FM.SQL.RowCount"; $sql ) & " rows with each " &
MBS( "FM.SQL.FieldCount"; $sql ) & " ..." ]
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $sql ) ]
End If

```

Query record as JSON:

```

Let ( [
fields = MBS( "FM.QueryFieldsForTableName"; "Contacts");
Records = MBS( "FM.SQL.Execute"; ""; "SELECT \" & substitute(fields; $; "\", \") & "\" FROM
\"Contacts\" WHERE \"First\" = ?"; "Joe");

json = MBS( "FM.SQL.JSONRecord"; Records; 0; fields);
r = MBS( "FM.SQL.Release"; Records ) ]
; json )

```

Make a JSON query in one Let statment:

```

Let (
[
$sdatt = "10/1/2019 00:00";
$edatt = "10/10/2019 00:00";
sku = "'PARbh50','PARgy50'";
sql1 = MBS("FM.SQL.Execute"; ""; "Select docnum,linetotal,db from \"MyTable\" where ItemCode in (\"
& sku & ") and DocDate between ? and ?"; $sdatt; $edatt);
json = MBS( "FM.SQL.JSONRecords"; sql1; "DocNum$LineTotal$DB"; 1);
r = MBS( "FM.SQL.Release"; sql1 )
]; json
)

```

Query related records as JSON:

```

# get related teams
Set Variable [ $r; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT \"UUID\", \"ID\", \"ID_De-
partment\", \"Team.Name\", \"MemberCount\" FROM \"Teams\" WHERE ID_Department=?"; Depart-
ment::ID ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error" ; $r ]
Else
# fill as json in field
Set Field [ Department::JSON_Department ; MBS( "FM.SQL.JSONRecords"; $r; "UUID$ID$ID_Depart-
ment$Team.Name$MemberCount" ) ]
Set Variable [ $e ; Value: MBS( "FM.SQL.Release"; $r ) ]
End If

```

## 80.63 FM.SQL.Field

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Field"; SQLref; Row; Column )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.  
\$SQLRef

#### Row

The row number from 0 to FM.SQL.RowCount-1.  
\$row

#### Column

The column number from 0 to FM.SQL.FieldCount-1.  
\$col

**Result** Returns value or error.

### Description

Native data type is preserved so this function can returns styled text, number, time, date, timestamp and container.

### Examples

Query field values:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; "" ; "select * from Clients" ) ]
# query first field of first row:
Set Variable [ $value; MBS( "FM.SQL.Field"; $sql; 0; 0 ) ]
# query other field
Set Variable [ $value; MBS( "FM.SQL.Field"; $sql; $row; $col ) ]
Set Variable [ $r; MBS( "FM.SQL.Release"; $sql ) ]
```

## 80.66 FM.SQL.InsertRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "FM.SQL.InsertRecords"; SQLref; InsertFileName; InsertTableName; FieldNames { ; StartRow; EndRow } )
```

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$\$SQLRef

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model"

#### StartRow

Optional

The index of the start row in the current recordset. First row is 0.

0

#### EndRow

Optional

The index of the end row in the current recordset. First row is 0. Last Row would be FM.SQL.RowCount-1.

0

**Result** Returns OK or error.

### Description

This function allows to easily copy a lot of records from a query in FileMaker database into a FileMaker table.

Please provide field names in FileMaker. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

Function will fail if data types in source and dest fields do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For insert from SQL Connection into FileMaker database, please use SQL.InsertRecords.

**Examples**

Copy records:

```
# select some data
Set Variable [ $Records; Value:MBS( "FM.SQL.Execute"; "" ; "SELECT FirstName, LastName, Birthday
FROM test" ) ]
# now insert them somewhere else
Set Variable [ $r; Value:MBS( "FM.SQL.InsertRecords"; $Records; "" ; "test"; "FirstName$LastName$Birth-
Day" ) ]
# and free record set
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $Records ) ]
```

## 80.67 FM.SQL.InsertRecordsToSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL 159 SQL	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.InsertRecordsToSQL"; SQLref; Connection; InsertTableName; FieldNames { ; StartRow; EndRow; Replace } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

#### InsertTableName

The name of the table to insert record into.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model\$Names"

#### StartRow

Optional

The index of the start row. First row is 0. Pass -1 or nothing for default which is starting with row 0.

-1

#### EndRow

Optional

The index of the end row. First row is 0. Last Row would be FM.SQL.RowCount-1. Pass -1 to use all rows and the plugin will internally use RowCount-1.

-1

#### Replace

Optional

Available in MBS FileMaker Plugin 7.1 or newer.

Set to 1 to replace existing entries. Currently available for MySQL and databases with same syntax.

0

**Result** Returns OK or error.

### Description

This function allows to easily copy a lot of records from a query in FileMaker database into a SQL database. Please provide field names in other table. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Reports an error if field name list doesn't match column count of the query result.

Function will fail if data types in source and dest fields do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For insert within FileMaker, please use FM.SQL.InsertRecords.

### Examples

Insert Records to SQL database:

```
Set Variable [ $InsertResult; Value:MBS( "FM.SQL.InsertRecordsToSQL"; $Records; $connection; $BaseTableName; $FieldNames ) ]
```

Copy records to SQLite:

```
Set Variable [ $Connection ; Value: MBS("SQL.NewConnection") ]
# Tell plugin where SQLite library is
Set Variable [ $result ; Value: MBS("SQL.InternalSQLiteLibrary.Activate") ]
# Tell plugin we want to use SQLite
Set Variable [ $result ; Value: MBS("SQL.SetClient"; $Connection; "SQLite") ]
# Connect to database in read/write/create mode. Creates new file if none exists.
Set Variable [ $result ; Value: MBS("SQL.Connect"; $Connection; "/Users/cs/Desktop/mydatabase.sqlite") ]
]
If [ $result = "OK" ]
# Query records in FileMaker
Set Variable [ $Records ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT FirstName, LastName, Birthday FROM People" ) ]
# Transfer to other database
Set Variable [ $Records ; Value: MBS( "FM.SQL.InsertRecordsToSQL"; $Records; $Connection; "People"; "FirstName$LastName$Birthday" ) ]
# Cleanup
Set Variable [ $result2 ; Value: MBS("SQL.Commit"; $Connection) ]
Set Variable [ $result2 ; Value: MBS( "FM.SQL.Release"; $Records ) ]
If [ $result = "OK" ]
Show Custom Dialog [ "Error: " & $result ]
Else
Show Custom Dialog [ "Record exported." ]
End If
End If
Set Variable [ $result2 ; Value: MBS("SQL.FreeConnection"; $Connection) ]
```

## 80.68 FM.SQL.JSONRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL 102 JSON	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.JSONRecord"; SQLref; Row; FieldNames { ; Flags } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### Row

The row you like to get.

1

#### FieldNames

A list of field names for the JSON.

"Model\$Names"

#### Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

**Result** Returns JSON text or error.

### Description

You provide list of field names, which should be in same order as fields in SQL result.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

### Examples

Query JSON record:

```
Set Variable [ $sql ; Value: MBS( "FM.SQL.Execute"; "" ; "SELECT \"First\", \"Last\", Birthday, \"Photo Container\" FROM Contacts" ) ]
```

```
Set Variable [ $json ; Value: MBS( "FM.SQL.JSONRecord"; $sql; 0; "First$Last$Birthday$Photo"; 2) ]
```

```
Show Custom Dialog [ "JSON" ; $json ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $sql ) ]
```

Query record as JSON:

```
Let ( [
```

```
fields = MBS( "FM.QueryFieldsForTableName"; "Contacts");
```

```
Records = MBS( "FM.SQL.Execute"; "" ; "SELECT \"\" & substitute(fields; $; \"\", \") & \"\" FROM \"Contacts\" WHERE \"First\" = ?"; "Joe");
```

```
json = MBS( "FM.SQL.JSONRecord"; Records; 0; fields);  
r = MBS( "FM.SQL.Release"; Records ) ]  
; json )
```

## 80.69 FM.SQL.JSONRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL 102 JSON	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.JSONRecords"; SQLref; FieldNames { ; Flags } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### FieldNames

A list of field names for the JSON.

"Model\$Names"

#### Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

**Result** Returns JSON text or error.

### Description

You provide list of field names, which should be in same order as fields in SQL result.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

### Examples

Query JSON:

```
Set Variable [ $sql ; Value: MBS( "FM.SQL.Execute"; "" ; "SELECT \"First\", \"Last\", Birthday, \"Photo Container\" FROM Contacts" ) ]
```

```
Set Variable [ $json ; Value: MBS( "FM.SQL.JSONRecords"; $sql; "First$Last$Birthday$Photo"; 2 ) ]
```

```
Show Custom Dialog [ "JSON" ; $json ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $sql ) ]
```

Make a JSON query in one Let statment:

```
Let (
```

```
[
```

```
$sdat = "10/1/2019 00:00";
```

```
$edat = "10/10/2019 00:00";
```

```
sku = "'PARbh50','PARgy50'";
```

```
sql1 = MBS("FM.SQL.Execute"; "" ; "Select docnum,linetotal,db from \"MyTable\" where ItemCode in (\" & sku & \") and DocDate between ? and ?"; $sdat; $edat);
```

```
json = MBS( "FM.SQL.JSONRecords"; sql1; "DocNum$LineTotal$DB"; 1);
```

```
r = MBS( "FM.SQL.Release"; sql1 )
```

```
] ; json
)
```

Query related records as JSON:

```
# get related teams
Set Variable [ $r ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT \"UUID\", \"ID\", \"ID_De-
partment\", \"Team.Name\", \"MemberCount\" FROM \"Teams\" WHERE ID_Department=?"; Depart-
ment::ID) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error" ; $r ]
Else
# fill as json in field
Set Field [ Department::JSON_Department ; MBS( "FM.SQL.JSONRecords"; $r; "UUID$ID$ID_Depart-
ment$Team.Name$MemberCount") ]
Set Variable [ $e ; Value: MBS( "FM.SQL.Release"; $r ) ]
End If
```

## 80.70 FM.SQL.Max

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	9.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Max"; SQLref; Column { ; firstRow; lastRow } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### Column

The index of the column. Default is 0.

0

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**Result** Returns number or error.

### Description

You got a record set in memory and we can walk over a column in a given row range to find the maximum value.

### Examples

Query once and make several calculations:

```
# let FileMaker query data once
Set Variable [ $Records ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT Price FROM Produkte" ) ]
# Now get sum, min, max and avg
Set Variable [ $sum ; Value: MBS( "FM.SQL.Sum"; $records; 0 ) ]
Set Variable [ $min ; Value: MBS( "FM.SQL.Min"; $records; 0 ) ]
Set Variable [ $max ; Value: MBS( "FM.SQL.Max"; $records; 0 ) ]
Set Variable [ $avg ; Value: MBS( "FM.SQL.Avg"; $records; 0 ) ]
Set Variable [ $text ; Value: MBS( "FM.SQL.Text"; $records; "" /* firstRow */; "" /* lastRow */; "" /* firstCol */; "" /* lastCol */; ", " /* rowSep */ ) ]
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $records ) ]
Show Custom Dialog [ "Sum: " & $sum & §& "Min: " & $min & §& "Max: " & $max & §& "Avg: " & $avg & §& "text: " & $text ]
```

## 80.71 FM.SQL.Min

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	9.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Min"; SQLref; Column { ; firstRow; lastRow } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### Column

The index of the column. Default is 0.

0

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**Result** Returns number or error.

### Description

You got a record set in memory and we can walk over a column in a given row range to find the minimum value.

### Examples

Query once and make several calculations:

```
# let FileMaker query data once
Set Variable [ $Records ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT Price FROM Produkte" ) ]
# Now get sum, min, max and avg
Set Variable [ $sum ; Value: MBS( "FM.SQL.Sum"; $records; 0 ) ]

**80.72 FM.SQL.Release**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Release"; SQLref )

**Parameters****SQLref**

The reference number returned by FM.SQL.Execute function.

\$\$SQLRef

**Result** Returns OK or error.

**Description****Examples**

Run command and free it later:

```
$ref = MBS( "FM.SQL.Execute"; "" ; "SELECT * FROM ProductImages FETCH FIRST 1 ROWS ONLY")
```

...

```
$r = MBS( "FM.SQL.Release"; $ref )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.RowCount"; SQLref )

**Parameters****SQLref**

The reference number returned by FM.SQL.Execute function.

\$SQLRef

**Result** Returns number or error.

**Description****Examples**

Query some values:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; "" ; "select * from Clients" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error"; $sql ]
Else
Show Custom Dialog [ "SQL result"; "got " & MBS( "FM.SQL.RowCount"; $sql ) & " rows with each " &
MBS( "FM.SQL.FieldCount"; $sql ) & " ..." ]

## 80.74 FM.SQL.Sum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	9.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Sum"; SQLref; Column { ; firstRow; lastRow } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### Column

The index of the column. Default is 0.

0

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**Result** Returns number or error.

### Description

You got a record set in memory and we can walk over a column in a given row range to add the sum value.

### Examples

Query once and make several calculations:

```
# let FileMaker query data once
```

```
Set Variable [ $Records ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT Price FROM Produkte") ]
```

```
# Now get sum, min, max and avg
```

```
Set Variable [ $sum ; Value: MBS( "FM.SQL.Sum"; $records; 0 ) ]
```

```
Set Variable [ $min ; Value: MBS( "FM.SQL.Min"; $records; 0 ) ]
```

```
Set Variable [ $max ; Value: MBS( "FM.SQL.Max"; $records; 0 ) ]
```

```
Set Variable [ $avg ; Value: MBS( "FM.SQL.Avg"; $records; 0 ) ]
```

```
Set Variable [ $text ; Value: MBS( "FM.SQL.Text"; $records; "" /* firstRow */; "" /* lastRow */; "" /* firstCol */; "" /* lastCol */; ", " /* rowSep */ ) ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $records ) ]
```

```
Show Custom Dialog [ "Sum: " & $sum & $& "Min: " & $min & $& "Max: " & $max & $& "Avg: " & $avg & $& "text: " & $text ]
```

**80.75 FM.SQL.Text**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Text"; SQLref { ; firstRow; lastRow; firstCol; lastCol; rowSeparator; colSeparator } )

**Parameters****SQLref**

The reference number returned by FM.SQL.Execute function.

\$\$SQLref

**firstRow**

Optional

The index of first row. Default is 0.

0

**lastRow**

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**firstCol**

Optional

The index of first column. Default is 0.

0

**lastCol**

Optional

The index of last column. Default is FM.SQL.FieldCount-1.

6

**rowSeparator**

Optional

The row separator. Default is CR.

Char(13)

**colSeparator**

Optional

The column separator. Default is tab character.

Char(9)

**Result** Returns text or error.

**Description**

You can use this method to quickly get all fields in a given area as text.

**Examples**

Query fields and export as text and CSV:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; "" ; "select * from Clients" ) ]
```

```

If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error"; $sql ]
Else
Show Custom Dialog [ "SQL result"; "got " & MBS( "FM.SQL.RowCount"; $sql ) & " rows with each " &
MBS( "FM.SQL.FieldCount"; $sql ) & " ..." ]
# Write to text file
Set Variable [ $text; Value:MBS( "FM.SQL.Text"; $sql ) ]
Set Variable [ $desktopFolder; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $desktopFolder; "fields.txt" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
# Write to text file
Set Variable [ $text; Value:MBS( "FM.SQL.CSV"; $sql ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $desktopFolder; "fields.csv" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
# Cleanup
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $sql ) ]
End If

```

## 80.76 FM.ScriptIDForScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ScriptIDForScriptName"; ScriptName { ; FileName } )

### Parameters

#### ScriptName

The name of the script.

"Test"

#### FileName

Optional

Available in MBS FileMaker Plugin 7.5 or newer.

The name of the file to look inside. If empty, we default to current file.

**Result** Returns number or error.

### Description

### Examples

Query script ID:

MBS("FM.ScriptIDForScriptName"; "Send Campaign")

### 80.76.1 Blog Entries

## 80.77 FM.ScriptNameForScriptID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ScriptNameForScriptID"; ScriptID { ; FileName } )

### Parameters

#### ScriptID

The ID of the script.

"123"

#### FileName

Optional

Available in MBS FileMaker Plugin 7.5 or newer.

The name of the file to look inside. If empty, we default to current file.

**Result** Returns name or error.

### Description

### Examples

Query script name:

MBS( "FM.ScriptNameForScriptID"; 146 )

### 80.77.1 Blog Entries

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ScriptNames" { ; FileName } )

### Parameters

#### FileName

Optional

Available in MBS FileMaker Plugin 7.5 or newer.

The name of the file to look inside. If empty, we default to current file.

**Result** Returns list or error.

### Description

Same as calling ScriptNames(Get(FileName)).

## 80.79 FM.SetDisableContextualMenus

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	10.1	Yes	Yes	No	No	No

MBS( "FM.SetDisableContextualMenus"; Value )

### Parameters

#### Value

Whether to disable the context menu via plugin. Pass 1 to disable or 0 to enable.

1

**Result** Returns OK or error.

### Description

Can be set to 1 to disable contextual menu.

You may want to use layout triggers to disable menus when entering layout and enable when leaving.

### See also

## 80.80 FM.SetSQLBatchMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SetSQLBatchMode"; Value )

### Parameters

#### Value

The chunk size. Default is 1, but 10 or 50 is usually faster.

1

**Result** Returns OK or error.

### Description

For use in FM.InsertRecordQuery.  
(others could be added)

Our plugin can send several SQL commands in one chunk which makes some operation much faster.

### Examples

Move records, 50 inserts per chunk:

```
Set Variable [ $r ; Value: MBS( "ProgressDialog.Reset" ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.SetTitle"; "Please wait." ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.SetTopText"; "Copying records..." ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.Show" ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.SetProgress"; 0 ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.Update" ) ]

Set Variable [ $r ; Value: MBS( "FM.SetSQLBatchMode"; 50 ) ]
Set Variable [ $r ; Value: MBS( "FM.InsertSetUpdateProgressDialog"; 1 ) ]
Set Variable [ $r ; Value: MBS( "FM.InsertRecordQuery"; "" ; "dest"; $FieldNames; "" ; "SELECT \"f1\", \"f2\", \"f3\", \"f4\", \"f5\", \"f6\", \"f7\",... ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.Hide" ) ]
```

### **80.80.1 Blog Entries**

- [MBS FileMaker Plugin, version 6.4pr8](#)

Created 17th September 2016, last changed 12nd November 2018.

## 80.81 FM.SetThreadName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SetThreadName"; Name )

### Parameters

#### Name

The new name for the thread.

"MyScript"

**Result** Returns OK or error.

### Description

On FileMaker Server each script is performed in a thread. You can use this function to name this thread. Than on a crash report you may find this name and than you can see which script may cause the problem. Created 13th December 2015, last changed 13th December 2015.

## 80.82 FM.StopScriptIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	5.0	Yes	Yes	Yes	Yes	No

MBS( "FM.StopScriptIdle" )

**Result** Returns OK or error.

### Description

See also Schedule.StartScriptOnIdle, FM.RunScriptIdle and Schedule functions.  
Does not stop scripts registered with Schedule.StartScriptIdle

### Examples

Stop idle scripts:

Set Variable [ \$r; Value:MBS( "FM.StopScriptIdle" ) ]

### See also

## 80.83 FM.TableStatistics

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.TableStatistics"; FileName; TableName )

### Parameters

#### FileName

The target database name. Can be empty to not limit query to one database.  
""

#### TableName

The name of the table to check.  
"Contacts"

**Result** Returns JSON or error.

### Description

The plugin will walk over all records and count fields with various data types and how many empty fields are there.

We sum up the length of all text in text fields as well as the text content of all fields.

We sum up the size of all internal containers, so ContainerByteSize + AllTextLengths\*2 plus some metadata is the size of the database file.

For internal containers we also count the streams inside, so you know how many JPEGs and other file types are in the table.

e.g.

```
{
}
```

This function can take a long time for huge tables with millions of records. 64-bit FileMaker version recommended for better memory handling.

Does not handle globals correctly and counts them for each record!  
Version 10.0 or newer will ignore globals and un-stored calculations.

### Examples

Check statistics:

```
MBS( "FM.TableStatistics"; "Contacts.fmp12"; "Contacts" )
```

### Example Databases

- [Utility functions/TableStatistic](#)

```

"FileName":      "",

Key	Value
FileName	The file name for the table.
TableName	The table name for this statistics.
RecordCount	The number of records.
MinRowID	The smallest record ID.
MaxRowID	The biggest record ID.
ColumnCount	Number of columns.
CountText	Number of fields containing text.
CountEmpty	Number of fields being empty.
CountNumber	Number of fields containing numeric values.
CountDate	Number of fields containing dates.
CountTime	Number of fields containing times.
CountTimestamp	Number of fields containing time stamps.
CountContainer	Number of all fields containing containers (includes CountExternalContainer).
CountExternalContainer	Number of fields containing external containers.
TextLengths	Length of text in text fields only.
AllTextLengths	Length of all text in all fields seen including numbers, times, dates, timestamps and containers read as text.
CountDPI_	Count of containers with DPI information.
SizeDPI_	Size of all DPI informations in containers.
CountFNAM	Count of containers with file name information.
SizeFNAM	Size of all filename informations in containers.
CountSIZE	Count of containers with image dimension information.
SizeSIZE	Size of all image dimension informations in containers.
CountMAIN	Count of all main item informations in containers.
SizeMAIN	Size of all main item informations in containers.
CountTIFF	Count of all TIFF images in containers.
SizeTIFF	Size of all TIFF images in containers.
CountPDF	Count of all PDF documents in containers.
SizePDF	Size of all PDF documents in containers.
CountPNGf	Count of all PNG images in containers.
SizePNGf	Size of all PNG images in containers.
CountGIFf	Count of all GIF images in containers.
SizeGIFf	Size of all GIF images in containers.
CountBMPf	Count of all BMP images in containers.
SizeBMPf	Size of all BMP images in containers.
CountEPS	Count of all PostScript documents in containers.
SizeEPS	Size of all PostScript documents in containers.
CountPICT	Count of all PICT images in containers.
SizePICT	Size of all PICT images in containers.
CountM4V	Count of all MPEG4 videos in containers.
SizeM4V	Size of all MPEG4 videos in containers.
CountWAV	Count of all Windows audio sounds in containers.
SizeWAV	Size of all Windows audio sounds in containers.
CountM4A	Count of all MEPEG 4 sounds in containers.
SizeM4A	Size of all MEPEG 4 sounds in containers.
CountMOV	Count of all QuickTime movies in containers.
SizeMOV	Size of all QuickTime movies in containers.
CountAVI	Count of all Windows movies in containers.
SizeAVI	Size of all Windows movies in containers.
CountAU	Count of all Unix sounds in containers.
SizeAU	Size of all Unix sounds in containers.
CountMP3	Count of all MP3 sounds in containers.
SizeMP3	Size of all MP3 sounds in containers.
CountMPEG	Count of all MPEG movies in containers.
SizeMPEG	Size of all MPEG movies in containers.
CountMPG4	Count of all MPEG 4 movies in containers.
SizeMPG4	Size of all MPEG 4 movies in containers.
CountAIFF	Count of all AIFF sounds in containers.
SizeAIFF	Size of all AIFF sounds in containers.

## 80.84 FM.UpdateRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.UpdateRecord"; FileName; TableName; IDField; IDValue; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField

The name of the field which provides an unique ID for each record, so we can identify the field. Can be RecordID for the record ID.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### FieldName

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Then you pass one pair of field name and value for each field you like to set in the new record.

Please note that FM.UpdateRecord and FM.UpdateRecords are nearly identical. Just FM.UpdateRecord

provides the check to make sure only one record matches while FM.UpdateRecords allows several records to be updated. So with FM.UpdateRecords you can easily erase a lot of data if you pass wrong ID!

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### Examples

Update a record:

```
MBS( "FM.UpdateRecord";
""; "Asset Management"; /* file and table name */
"Asset ID"; "1"; /* ID field and value */
"Information"; "Just a test"; /* first field and value */
"Category"; "BestItems" ) /* second field and value */
```

Update a record:

```
MBS( "FM.UpdateRecord"; Get(FileName); "Kontakte"; "Vorname"; "Joe"; "Firma"; "Test" )
```

Update a repeating field:

```
Set Variable [ $r ; Value: MBS( "FM.UpdateRecord"; "" ; "Contacts"; "RowID"; 1; "repeating [ 5 ] "; "Hello"
) ]
Show Custom Dialog [ Get ( RecordID ) & ": " & Contacts::repeating [ 5 ] ]
```

## 80.85 FM.UpdateRecord2

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM	8.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.UpdateRecord2"; FileName; TableName; IDField1; IDValue1; IDField2; IDValue2; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField1

The name of the field which provides an unique ID for each record, so we can identify the field.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID1"

#### IDValue1

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### IDField2

The name of the field which provides an unique ID for each record, so we can identify the field.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID2"

#### IDValue2

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RelatedRecordID

#### FieldName

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

Same as FM.UpdateRecord, but with two key fields.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### Examples

Update record with two key fields:

```
MBS( "FM.UpdateRecord2"; Get(FileName); "Kontakte";  
"Vorname"; "Joe"; // first key  
"Nachname"; "Miller"; // second key  
"Firma"; "Test Company" )
```

the name of the variable  
"test"

#### Value

the value to add to the variable  
5

**Result** Returns new value or error.

### Description

Internally does similar to FM.VariableGet to read value, then adds given parameter and stores like FM.VariableSet, all in one operation, so no other script or calculation can get between.

Creates variable, if it's not existing yet.

### Examples

Sets \$ID and counts up with each call:

```
Set Variable [ $ID ; Value: MBS( "FM.VariableAdd"; "ID"; 1 ) ]
```

## 80.91 FM.VariableAppend

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 181 Variables	9.5	Yes	Yes	Yes	Yes	Yes

MBS( "FM.VariableAppend"; Name; Value )

### Parameters

#### Name

the name of the variable

"test"

#### Value

the value to add to the variable

5

**Result** Returns new value or error.

### Description

Internally does similar to FM.VariableGet to read value, then adds given parameter and stores like FM.VariableSet, all in one operation, so no other script or calculation can get between.

Creates variable, if it's not existing yet.

### Examples

Test append function:

```
Let ( [
r1 = MBS( "FM.VariableAppend"; "hello"; "Line 1" & $);
r2 = MBS( "FM.VariableAppend"; "hello"; "Line 2" & $);
r3 = MBS( "FM.VariableAppend"; "hello"; "Line 3" & $)
]; MBS( "FM.VariableGet"; "hello" ) )
```

## 80.92 FM.VariableClear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 181 Variables	1.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.VariableClear"; Name )

### Parameters

#### Name

The name of the variable to destroy

**Result** Returns OK.

### Description

### Examples

Destroy a variable

MBS( "FM.VariableClear" ; "MyVar" )

## 80.95 FM.VariableGet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 181 Variables	1.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.VariableGet"; Name )

### Parameters

#### Name

The Name of the variable

### Description

Unlike the variables that were introduced in FileMaker 8 these variables are not limited to the File or Script. In other words they can be retrieved from any file in the system regardless of where they were declared.

You can check with FM.VariableExists whether a variable exists.

### Examples

Retrieve a variable

MBS( "FM.VariableGet" ; "myVar" )

### See also

## 80.96 FM.VariableList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 181 Variables	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.VariableList" { ; Delimiter } )

### Parameters

#### Delimiter

Optional

Optionally, the delimiter to use. Default is tab character.

”.”

**Result** Returns list.

### Description

Container values or multiline texts will probably not be handled correctly for the result. So works best if you have just single line values.

### See also

## 80.97 FM.VariableNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 181 Variables	8.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.VariableNames" )

**Result** Returns list or error.

### Description

### Examples

Test functions:

```
MBS( "FM.VariableClearAll" ) &
MBS( "FM.VariableSet"; "Hello"; "World" ) &
MBS( "FM.VariableSet"; "other"; "value" ) &
§&
MBS( "FM.VariableList" ) &
§&
MBS( "FM.VariableNames" )
```

Example result: OKOKOK

other value

Hello World

other

Hello

## 80.99 FM.VariableSet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 181 Variables	1.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.VariableSet"; Name; Value )

### Parameters

#### Name

the name of the variable

#### Value

the value to assign to the variable

### Description

Unlike the variables that were introduced in FileMaker 8 these variables are not limited to the File or Script. In other words they can be retrieved from any file in the system regardless of where they were declared. All values are stored in their native data types (up to version 4.4 only text).

Use FM.VariableClear to clear the variables or FM.VariableClearAll to clear them all. FM.VariableList returns list of all defined variables.

On server, the variables are shared by all users connected to the server. So e.g. on Web Direct all users have the same set of global variables via plugin. You can prefix variables with user ID/Name to make them per use unique.

### Examples

Set a variable

```
MBS( "FM.VariableSet" ; "myVar"; "Hello" )
```

# Chapter 81

## FMSQL

SQL inside FileMaker databases

This functions help you execute SQL within the FileMaker database on client and server.

If you look for SQL functions to other databases (like MySQL), please check our SQL functions.

### 81.1 Dictionary.AddSQLRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary 81 FMSQL	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.AddSQLRecord"; DictionaryRef; Keys; SQL Statement; FileName { ; Params } )

#### Parameters

##### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.  
\$dic

##### Keys

The list of keys for the dictionary. Could be the same as the field list.  
"FirstName\$LastName\$Company"

##### SQL Statement

SQL Statement as a Text string

##### FileName

The target database name. Can be empty to not limit query to one database.  
""

##### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the

SQL statement.

123

**Result** Returns OK or error.

### Description

From the result set, the first record is used for values and given key list for the keys.

Returns error in case of SQL error with error message.

As we only use first record, you can use `FETCH FIRST 1 ROWS ONLY` in the SQL command to only query first record.

This function is currently only supported for FileMaker 11 and newer. If you need it for older versions, please contact us.

### Examples

Query record and get JSON:

```
Set Variable [ $dic ; Value: MBS("Dictionary.Create") ]
```

```
Set Variable [ $r ; Value: MBS( "Dictionary.AddSQLRecord"; $dic; "Vorname$Nachname$Firma"; "SELECT Vorname, Nachname, Firma FROM Kontakte"; "Kontakte" ) ]
```

```
Set Variable [ $json ; Value: MBS( "Dictionary.ToJSON"; $dic ) ]
```

```
Set Variable [ $r ; Value: MBS( "Dictionary.Release"; $dic ) ]
```

- 81.2 Dictionary.AddSQLRecords 4125
- 66.7 Dictionary.Create 2449
- 66.14 Dictionary.Release 2459
- 102.1 Dictionary.ToJSON 5303

### 81.1.1 Blog Entries

- [MBS FileMaker Plugin, version 7.4pr8](#)

Created 21st September 2017, last changed 20th February 2018.

## 81.2 Dictionary.AddSQLRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary 81 FMSQL	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.AddSQLRecords"; DictionaryRef; Keys; SQL Statement; FileName { ; Params } )

### Parameters

#### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.  
\$dic

#### Keys

The list of keys for the dictionary. Could be the same as the field list.  
"FirstName\$LastName\$Company"

#### SQL Statement

SQL Statement as a Text string

#### FileName

The target database name. Can be empty to not limit query to one database.  
""

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

### Description

From the result set, the records are used for values and given key list for the keys.  
If you have multiple records, you get all values collected per field in a list.  
Returns error in case of SQL error with error message.

This function is currently only supported for FileMaker 11 and newer. If you need it for older versions, please contact us.

### Examples

Query record and get JSON:

```
Set Variable [ $dic ; Value: MBS("Dictionary.Create") ]
Set Variable [ $r ; Value: MBS( "Dictionary.AddSQLRecords"; $dic; "Vorname$Nachname$Firma"; "SELECT Vorname, Nachname, Firma FROM Kontakte"; "Kontakte" ) ]
Set Variable [ $json ; Value: MBS( "Dictionary.ToJSON"; $dic ) ]
Set Variable [ $r ; Value: MBS( "Dictionary.Release"; $dic ) ]
```

### See also

- 66.7 Dictionary.Create 2449
- 66.14 Dictionary.Release 2459
- 102.1 Dictionary.ToJSON 5303

Created 23th September 2017, last changed 20th February 2018.

## 81.3 FM.CompareTables

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	9.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "FM.CompareTables"; FileName1; TableName1; IDField1; FileName2; TableName2; IDField2 { ;
Options } )
```

### Parameters

#### FileName1

The file name of where the table is inside. Can be empty to look for the table in all files. File extension is optional for file name.

Get(FileName)

#### TableName1

The name of the first table (newer). Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField1

The name of the ID field in first table. Can be a text or numeric field.

"Identifier"

#### FileName2

The file name of where the table is inside. Can be empty to look for the table in all files.

"other.fmp12"

#### TableName2

The name of the second table (older). Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField2

The name of the ID field in second table. Can be a text or numeric field.

"Identifier"

### Options

Optional

Pass options. Add 1 to include details. Add 2 to include all the IDs found in both.

1+2

**Result** Returns JSON or error.

### Description

We compare the field names for both tables and report added, removed and common field names.

Then we check the record identifiers to report added, changed and common IDs.

If IDField1 and IDField2 names are the same in both tables, we compare the common records to report the changed record identifiers.

Does not compare the internal FileMaker row IDs.

Records are compared in 100 records block to limit memory usage.

### Examples

Compares two tables in two files:

```
MBS( "FM.CompareTables"; "Anlagen1.fmp12"; "Anlagen"; "Primärschlüssel"; "Anlagen2.fmp12"; "Anlagen"; "Primärschlüssel" )
```

Compare tables:

```
Show Custom Dialog [ MBS( "FM.CompareTables"; "Anlagen1.fmp12"; "Anlagen"; "Primärschlüssel"; "Anlagen2.fmp12"; "Anlagen"; "Primärschlüssel"; 1 ) ]
```

Example result: {

```
"Messages": [ ] ,
"TableName1": "Anlagen",
"TableName2": "Anlagen",
"FileName1": "Anlagen1.fmp12",
"FileName2": "Anlagen2.fmp12",
"RemovedFields": [ "Anlage1feld" ] ,

## 81.4 FM.DeleteRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.DeleteRecord"; FileName; TableName; IDField; IDValue { ; IDField2; IDValue2; IDField3; IDValue3 } )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to delete record from. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField

The name of the first field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue

The value for the first ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### IDField2

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The name of the second field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"PersonID"

#### IDValue2

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The value for second ID field to identify the record. Data type of parameter must match the data type of the field.

\$PersonID

#### IDField3

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The name of the third field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"CompanyID"

### **IDValue3**

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The value for third ID field to identify the record. Data type of parameter must match the data type of the field.

\$CompanyID

**Result** Returns OK or error.

### **Description**

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Please note that FM.DeleteRecord and FM.DeleteRecords are nearly identical. Just FM.DeleteRecord provides the check to make sure only one record matches while FM.DeleteRecords allows several records to be deleted. So with FM.DeleteRecords you can easily erase a lot of data if you pass wrong ID!

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime.

Version 8.2 allows to specify up to 3 ID parameters.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### **Examples**

Delete a record based on values:

```
Set Variable [ $r ; Value: MBS( "FM.DeleteRecord"; Get(FileName); "Contacts"; "First"; "Christian"; "Last"; "Schmitz"; "Company"; "Test Inc." ) ]
```

## 81.5 FM.DeleteRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.DeleteRecords"; FileName; TableName; IDField; IDValue { ; IDField2; IDValue2; IDField3; IDValue3 } )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to delete records from. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### IDField2

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The name of the second field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"PersonID"

#### IDValue2

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The value for second ID field to identify the record. Data type of parameter must match the data type of the field.

\$PersonID

#### IDField3

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The name of the third field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"CompanyID"

### IDValue3

Optional

Available in MBS FileMaker Plugin 8.2 or newer.

The value for third ID field to identify the record. Data type of parameter must match the data type of the field.

\$CompanyID

**Result** Returns OK or error.

### Description

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must not be unique, so several records can be updated at once.

Please note that FM.DeleteRecord and FM.DeleteRecords are nearly identical. Just FM.DeleteRecord provides the check to make sure only one record matches while FM.DeleteRecords allows several records to be deleted. So with FM.DeleteRecords you can easily erase a lot of data if you pass wrong ID!

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

Version 8.2 allows to specify up to 3 ID parameters.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### Examples

Delete records based on values:

```
Set Variable [ $r ; Value: MBS( "FM.DeleteRecords"; Get(FileName); "Contacts"; "First"; "Christian"; "Last"; "Schmitz"; "Company"; "Test Inc." ) ]
```

## 81.6 FM.ExecuteFileSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	3.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "FM.ExecuteFileSQL"; FileName; SQL Statement { ; Column Delimiter; Record Delimiter; Params
} )
```

### Parameters

#### FileName

The target database name. Can be empty to not limit query to one database.

””

#### SQL Statement

SQL Statement as a Text string

#### Column Delimiter

Optional

Columns Separator, only used with SELECT statement. Default is tab character, which has unicode code point 9. You can pass delimiter as text or as unicode code point.

9

#### Record Delimiter

Optional

Record Separator, only used with SELECT statement. Default is return character, which has unicode code point 13. You can pass delimiter as text or as unicode code point.

13

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns result of SQL expression or error.

### Description

This function requires FileMaker 11 or newer. Please use FM.ExecuteSQL on FileMaker 10 or older.

There must be an occurrence of the Table on the current tables' Graph in the file you specified. If filename is empty, you use current file. SELECT returns the the records in as a tabbed delimited text string. All other SQL commands return ””.

Use FM.ExecuteSQL.LastError to check for errors.

Supported Commands: SELECT UPDATE (see limitation below) DELETE INSERT CREATE TABLE DROP TABLE CREATE INDEX DROP INDEX WHERE

String comparisons are Case Sensitive! WHERE First\_Name="todd" will not find records that have "Todd" in the first Name Field. You can wrap the field you are searching for with "lower" like this WHERE

lower(First\_Name)="todd" KNOWN LIMITATIONS Schema editing Record Locking Errors are Not Reported! This means you must exercise caution when using UPDATE. CAUTION! This is a very powerful function!

You can put field names in double quotes and string values in single quotes.

Use FM.ExecuteSQLOnIdle for special commands which change database like ALTER TABLE.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Error 8309 means you did pass wrong data type, like string for a number.

You can make queries against FILEMAKER\_TABLES and FILEMAKER\_FIELDS to query information about fields in your solution. The functions FM.QueryBaseTableNames, FM.QueryFieldsForBaseTableName, FM.QueryFieldsForTableName and FM.QueryTableNames provide simplified functions for some queries.

FILEMAKER\_TABLES table contains:

1. TableName
2. TableID
3. BaseTableName
4. BaseFileName
5. ModCount

FILEMAKER\_FIELDS table contains:

1. TableName
2. FieldName
3. FieldType (the SQL data type, not the FileMaker data type)
4. FieldID
5. FieldClass (Normal, Summary, Calculated)
6. FieldReps
7. ModCount

Some standard SQL functions work in FileMaker including CHR, COALESCE, LEFT, LENGTH, LOWER, LTRIM, MID, RIGHT, RTRIM, SPACE, SUBSTR, SUBSTRING, TRIM and UPPER. There may be more!

### Examples

SELECT records

```
MBS("FM.ExecuteFileSQL"; ""); "select * from Contacts")
```

INSERT record

```
MBS("FM.ExecuteFileSQL"; ""); "INSERT INTO Contacts (FirstName, LastName) Values('Todd', 'Geist')")
```

Select records using delimiters

```
MBS("FM.ExecuteFileSQL"; ""); "select * from Contacts"; "# "; " | ")
```

SELECT records with a Where clause

```
MBS("FM.ExecuteFileSQL"; ""); "SELECT First_Name, Last_Name from Contacts WHERE ID_Contact_PK ='CN10013'"
```

Insert records with parameters 2 and 3:

```
MBS("FM.ExecuteFileSQL"; ""); "INSERT INTO \OtherTable\ (\ID\, \ID Job\ ) Values(?,?)"; 9; 13; 2; 3 )
```

Create Record with values via SQL

```
Set Variable [ $FirstName; Value:"First test" ]
Set Variable [ $LastName; Value:"Last test" ]
Set Variable [ $Street; Value:"Street test" ]
Set Variable [ $Zip; Value:"Zip test" ]
Set Variable [ $City; Value:"City test" ]
Set Variable [ $Country; Value:"Country test" ]
Set Variable [ $Phone; Value:"Phone test" ]
```

```
Set Variable [ $r; Value:MBS( "FM.ExecuteFileSQL"; ""); "INSERT INTO \Export records\ (\First Name\, \Last Name\, \Street\, \Zip\, \City\, \Country\, \Phone\ ) VALUES (?,?,?,?,?,?)"; 9; 13; $FirstName; $LastName; $Street; $Zip; $City; $City; $Country; $Phone ]
If [ MBS("IsError") ]
Show Custom Dialog [ MBS( "FM.ExecuteSQL.LastErrorMessage" ) ]
End If
```

Set value for all records of a table:

```
MBS( "FM.ExecuteFileSQL"; "test.fmp12"; "UPDATE \My Table\ SET \My Field\ = 'Hello' ")
```

Set timestamp to today:

```
MBS( "FM.ExecuteFileSQL"; "test.fmp12"; "UPDATE \my Table\ SET \Change Time\ = TODAY WHERE \ID\ = '12345' ")
```

Update 5 fields:

```
MBS( "FM.ExecuteFileSQL"; "test.fmp12"; "UPDATE \my Table\ SET \Number Field\ = 1, \Text Field\ = 'test', \Dest Field\ = \Source Field\, \Hour Field\ = CAST(HOUR(curtime) AS VARCHAR), \Empty Field\ = NULL WHERE \ID\ = '12345' ")
```

Create an index:

```
MBS( "FM.ExecuteFileSQL"; ""; "CREATE INDEX ON tablename.fieldname" )
```

Select with parameter:

```
MBS("FM.ExecuteFileSQL"; ""); "select Menge from Boxen where Artikel_Nr=? ORDER BY Menge
DESC"; 9; 13; "ABC123")
```

Query value of a repeating field with [ ] :

```
MBS( "FM.ExecuteFileSQL"; ""; "SELECT test [ 2 ] FROM Kontakte")
```

Set value of repeating field:

```
MBS( "FM.ExecuteFileSQL"; ""; "UPDATE Kontakte SET test [ 2 ] = 'test'")
```

Query only first row:

```
MBS( "FM.ExecuteFileSQL"; ""; "SELECT * FROM ProductImages FETCH FIRST 1 ROWS ONLY")
```

Insert with parameters:

```
MBS("FM.ExecuteFileSQL"; ""; "INSERT INTO AttachmentsActions (RecID, Container) VALUES (?, ?)";
9; 13; $recid; files::container)
```

Set repeating global field values:

```
MBS( "FM.ExecuteFileSQL"; ""; "UPDATE \ "Meine Tabelle\ " SET test [ 1 ] =", test [ 2 ] =", test [ 3 ] =" ")
```

Set timestamp field:

# via CURRENT\_TIMESTAMP constant:

```
MBS( "FM.ExecuteFileSQL"; ""; "UPDATE Kontakte SET Datum = CURRENT_TIMESTAMP ")
```

# or cast text to timestamp:

```
MBS( "FM.ExecuteFileSQL"; ""; "UPDATE Kontakte SET Datum = CAST('2017-04-12 14:14:14' AS
TIMESTAMP) ")
```

# via CURTIMESTAMP constant:

```
MBS( "FM.ExecuteFileSQL"; ""; "UPDATE Kontakte SET Datum = CURTIMESTAMP ")
```

# or to now plus one hour:

```
MBS( "FM.ExecuteFileSQL"; ""; "UPDATE Kontakte SET Datum = CURTIMESTAMP + 3600 ")
```

Query tables and fields metadata:

```
MBS( "FM.ExecuteFileSQL"; ""; "SELECT FILEMAKER_TABLES.TableName, FILEMAKER_TABLES.TableID,
FILEMAKER_TABLES.BaseTableName, FILEMAKER_TABLES.BaseFileName, FILEMAKER_TABLES.Mod-
Count, FILEMAKER_FIELDS.FieldName, FILEMAKER_FIELDS.FieldType, FILEMAKER_FIELDS.Fiel-
dID, FILEMAKER_FIELDS.FieldClass, FILEMAKER_FIELDS.FieldReps, FILEMAKER_FIELDS.Mod-
Count from FILEMAKER_TABLES, FILEMAKER_FIELDS where FILEMAKER_FIELDS.TableName =
FILEMAKER_TABLES.TableName" )
```

Get list of fields in all tables:

```
MBS( "FM.ExecuteFileSQL"; "" ; "SELECT * FROM FileMaker_Fields")
```

Query list of table names and IDs:

```
MBS( "FM.ExecuteFileSQL"; "" ; "SELECT TableName, TableID FROM Filemaker_Tables")
```

Find table name for a given table ID:

```
MBS( "FM.ExecuteFileSQL"; "" ; "SELECT TableName FROM Filemaker_Tables WHERE TableID=?";  
9; 13; 1065089)
```

Query field type of a field:

```
MBS( "FM.ExecuteFileSQL"; "" ; "SELECT FieldType FROM FILEMAKER_FIELDS WHERE Table-  
Name=? AND FieldName=? "; 9; 13; "Contacts"; "gtest")
```

// could return "global varchar", if gtest is a global field in table Contacts

Query list of record IDs for a given table:

```
MBS("FM.ExecuteFileSQL"; "" ; "SELECT ROWID FROM MyTable")
```

Look for a control character in the text and return record IDs:

```
MBS("FM.ExecuteFileSQL"; Get(FileName); "SELECT ROWID from \"MyTable\" WHERE \"MyField\"  
like '%'+CHR(1)+'%' ")
```

Update all values in a field based on a query:

```
MBS("FM.ExecuteFileSQL"; "" ; "UPDATE \"Invoices\" SET \"Sum\" = (SELECT SUM(\"Quantity\" *  
\"Price\") FROM Positions WHERE Invoices.CustomerID = Positions.CustomerID AND Invoices.InvoiceID  
= Positions.InvoiceID)")
```

## 81.7 FM.ExecuteFileSQLOnIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteFileSQLOnIdle"; SQL Statement; FileName { ; Column Delimiter; Record Delimiter; Params } )

### Parameters

#### SQL Statement

the SQL statement

#### FileName

The file name of the database.

Get(FileName)

#### Column Delimiter

Optional

Columns Separator, only used with SELECT statement. Default is TAB

9

#### Record Delimiter

Optional

Record Separator, only used with SELECT statement, Default is Return

13

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

### Description

You run a script pause after using this function to give it time to execute.

See the other function for more info.

Seems like on FileMaker 11 you get LastError 8310 if you use fields with underscore in the name. You avoid that by placing the field names in quotes.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

### Examples

Create a new text field in a table:

```
MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable ADD MyField varchar")
```

Create in a script and check error:

```
# set command to run
```

```
Set Variable [ $r ; Value: MBS("FM.ExecuteFileSQLOnIdle"; "ALTER TABLE Kontakte ADD MyField
```

```

varchar"; "Kontakte.fmp12" ]
# Make pause to run it
Pause/Resume Script [ Duration (seconds): ,1 ]
# Check error status
Set Variable [ $errorNumber ; Value: MBS( "FM.ExecuteSQL.LastError" ) ]
Set Variable [ $errorMessage ; Value: MBS( "FM.ExecuteSQL.LastErrorMessage" ) ]

```

Create a field:

```

Set Variable [ $r ; Value: MBS("FM.ExecuteFileSQLOnIdle";"ALTER TABLE TestTable ADD MyField
varchar"; Get(FileName)) ]
Pause/Resume Script [ Duration (seconds): ,1 ]
If [ MBS("FM.ExecuteSQL.LastError") = 0 ]
Show Custom Dialog [ "Error adding column" ; MBS("FM.ExecuteSQL.LastError") & ": " & MBS("FM.Ex-
ecuteSQL.LastErrorMessage") ]
Else
Show Custom Dialog [ "Removed Column" ; "OK" ]
End If

```

Create a new text field in a table with variables for the names:

```

MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE \" & $TableName & "\" ADD \" & $FieldName & "\"
\" & $FieldType & "\"")

```

## 81.8 FM.ExecuteSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	1.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteSQL"; SQL Statement { ; Column Delimiter; Record Delimiter } )

### Parameters

#### SQL Statement

SQL Statement as a Text string

#### Column Delimiter

Optional

Columns Separator, only used with SELECT statement. Default is TAB  
""

#### Record Delimiter

Optional

Record Separator, only used with SELECT statement, Default is Return

**Result** Returns result of SQL expression or error.

### Description

There must be an occurrence of the Table on the current tables' Graph. SELECT returns the the records in as a tabbed delimited text string. All other SQL commands return "".

Use FM.ExecuteSQL.LastError to check for errors.

Supported Commands: SELECT UPDATE (see limitation below) DELETE INSERT CREATE TABLE DROP TABLE CREATE INDEX DROP INDEX WHERE

String comparisons are Case Sensitive! WHERE First\_Name="todd" will not find records that have "Todd" in the first Name Field. You can wrap the field you are searching for with "lower" like this WHERE lower(First\_Name)="todd" KNOWN LIMITATIONS Schema editing SQL functions are not supported in FileMaker 8 and 8.5.

Record Locking Errors are Not Reported! This means you must exercise caution when using UPDATE. CAUTION! This is a very powerful function! It is relying on very new and relatively untested resources made available by the release of FileMaker 8.

Seems like on FileMaker 11 you get LastError 8310 for any syntax error, like bad braces or missing quotes.

You can put field names in double quotes and string values in single quotes.

Use FM.ExecuteSQLOnIdle for special commands which change database like ALTER TABLE.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Error 8309 means you did pass wrong data type, like string for a number.

If you need to pass parameters, please use FM.ExecuteFileSQL.

You can make queries against FILEMAKER\_TABLES and FILEMAKER\_FIELDS to query information about fields in your solution. The functions FM.QueryBaseTableNames, FM.QueryFieldsForBaseTableName, FM.QueryFieldsForTableName and FM.QueryTableNames provide simplified functions for some queries.

FILEMAKER\_TABLES table contains:

1. TableName
2. TableID
3. BaseTableName
4. BaseFileName
5. ModCount

FILEMAKER\_FIELDS table contains:

1. TableName
2. FieldName
3. FieldType (the SQL data type, not the FileMaker data type)
4. FieldID
5. FieldClass (Normal, Summary, Calculated)
6. FieldReps
7. ModCount

Some standard SQL functions work in FileMaker including CHR, COALESCE, LEFT, LENGTH, LOWER, LTRIM, MID, RIGHT, RTRIM, SPACE, SUBSTR, SUBSTRING, TRIM and UPPER. There may be more!

#### Examples

SELECT records

```
MBS("FM.ExecuteSQL";"select * from Contacts")
```

INSERT record

```
MBS("FM.ExecuteSQL";"INSERT INTO Contacts (FirstName, LastName) Values('Bob', 'Miller')")
```

Select records using delimiters

```
MBS("FM.ExecuteSQL";"select * from Contacts"; "# "; " | ")
```

SELECT records with a Where clause

```
MBS("FM.ExecuteSQL"; "SELECT First_Name, Last_Name from Contacts WHERE ID_Contact_PK = 'CN10013'")
```

Get list of fields in all tables:

```
MBS("FM.ExecuteSQL";"SELECT * FROM FileMaker_Fields")
```

Create Record with values via SQL

```
Set Variable [ $r; Value:MBS( "FM.ExecuteSQL"; "INSERT INTO \"Export records\" (\\"First Name\", \\"Last Name\", \\"Street\", \\"Zip\", \\"City\", \\"Country\", \\"Phone\") VALUES ('MyFirst', 'MyLast',
```

```
'MyStreet', 'MyZip', 'MyCity', 'MyCountry', 'MyPhone')") ]
If [ MBS("IsError") ]
Show Custom Dialog [ MBS( "FM.ExecuteSQL.LastErrorMessage" ) ]
End If
```

Set value for all records of a table:

```
MBS( "FM.ExecuteSQL"; "UPDATE \my Table\ SET \my Field\ = 'Hello' ")
```

Set timestamp to today:

```
MBS( "FM.ExecuteSQL"; "UPDATE \my Table\ SET \Change Time\ = TODAY WHERE \ID\ = '12345' ")
```

Update 5 fields:

```
MBS( "FM.ExecuteSQL"; "UPDATE \my Table\ SET \Number Field\ = 1, \Text Field\ = 'test',
\Dest Field\ = \Source Field\", \Hour Field\ = CAST(HOUR(curtime) AS VARCHAR), \Empty
Field\ = NULL WHERE \ID\ = '12345' ")
```

Select with passing variable as part of expression:

```
MBS("FM.ExecuteSQL"; "SELECT First_Name, Last_Name from Contacts WHERE ID_Contact_PK
=" & $Variable & "'")
```

Update date field:

```
MBS( "FM.ExecuteSQL"; "UPDATE myTable SET myDateField = CAST('2015-08-15' as DATE) ")
```

Delete all data in a table:

```
$Result = MBS( "FM.ExecuteSQL"; "DELETE FROM \Prova\";")
```

Create an index:

```
MBS( "FM.ExecuteSQL"; "CREATE INDEX ON tablename.fieldname" )
```

Drop an index:

```
MBS( "FM.ExecuteSQL"; "DROP INDEX ON tablename.fieldname" )
```

Value in List of values:

```
MBS( "FM.ExecuteSQL"; "select * from \Anlagen\ where \Modell\ in ('test', 'abc')")
```

Delete all records from Table People:

```
# no where condition, so deletes all records!  
MBS( "FM.ExecuteSQL"; "DELETE FROM \"People\"")
```

Query value of a repeating field with [ ] :

```
MBS( "FM.ExecuteSQL"; "SELECT test [ 2 ] FROM Kontakte")
```

Set value of repeating field:

```
MBS( "FM.ExecuteSQL"; "UPDATE Kontakte SET test [ 2 ] = 'test'")
```

Query only first row:

```
MBS( "FM.ExecuteSQL"; "SELECT * FROM ProductImages FETCH FIRST 1 ROWS ONLY")
```

Truncates table in FileMaker 15 or newer:

```
MBS( "FM.ExecuteSQL"; "TRUNCATE TABLE Kontakte")
```

Query field ID for a field with given name and table name:

```
MBS("FM.ExecuteSQL"; "SELECT FieldID FROM FileMaker__Fields WHERE FieldName='Vorname' and  
TableName='Kontakte' ")
```

Query repetition count of global field by name:

```
MBS("FM.ExecuteSQL"; "SELECT FieldReps FROM FILEMAKER__FIELDS WHERE FieldName='Wieder-  
holen' ")
```

Query field name and repetition count for all fields in a table:

```
MBS("FM.ExecuteSQL"; "SELECT FieldReps, FieldName FROM FILEMAKER__FIELDS WHERE Table-  
Name='Aufgaben' AND FieldType like '% global%' ")
```

Query list of record IDs for a given table:

```
MBS("FM.ExecuteSQL"; "SELECT ROWID FROM MyTable")
```

Concat two texts with plus and use CAST to make number to text:

```
MBS( "FM.ExecuteSQL"; "SELECT 'A' + CAST(123 AS VARCHAR) FROM Contacts")
```

## 81.9 FM.ExecuteSQL.LastError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	1.2	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteSQL.LastError" )

### Description

Set by FM.InsertRecord, FM.SQL.Execute, FM.ExecuteSQL, FM.ExecuteFileSQL or FM.ExecuteSQLOnIdle. The Errors number s are the same ones as the ones returned by Native FileMaker function "Get(LastError)" Examples: 1200 - "Generic Calculation Error" 200 - "Access Denied" 106 - "Missing Table" Known Limitations: Record Locking Errors are Not Reported! This means you must exercise caution when using UPDATE. There is no way to determine if an update actually occurs unless you check the value again after the update occurred.

In general error 8309 is a semantic error, so something is wrong in your SQL. 8310 is a syntax error, something in the SQL is not correctly parsed.

Error 8309 means you did pass wrong data type, like string for a number.

See also FM.ExecuteSQL.LastErrorMessage.

### Examples

Get Last SQL Error

MBS( "FM.ExecuteSQL.LastError" )

## 81.10 FM.ExecuteSQL.LastErrorMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteSQL.LastErrorMessage" )

**Result** Returns error message.

### Description

Set by FM.InsertRecord, FM.SQL.Execute, FM.ExecuteSQL, FM.ExecuteFileSQL, FM.ExecuteSQLOnIdle and other SQL using functions.

If last error code was 0 (no error), you get an empty string.

Error may be something like this:

ERROR: FQL0007/(1:7): The column named "fieldname" does not exist in any table in the column reference's scope.

See also FM.ExecuteSQL.LastError. Use FM.ExecuteSQL.LastSQL to get the SQL command.

Error	Message
FQL0001	There is an error in the syntax of the query.
FQL0002	The table named "?0" does not exist.
FQL0003	The table named "?0" already exists in this query.
FQL0004	The query is too complex. The maximum number of tables has been exceeded.
FQL0005	Expressions involving aggregations are not supported.
FQL0006	"The column named "?0" appears in more than one table in the column reference's scope."
FQL0007	The column named "?0" does not exist in any table in the column reference's scope.
FQL0008	The table named "?0" does not exist in the column reference's scope.
FQL0009	The column named "?1" does not exist in table "?0".
FQL0010	The literal value "?0" is not a valid DATE, TIME or TIMESTAMP.
FQL0011	Predicate must contain a logical operation (=, <, OR, AND, IS NULL, ...).
FQL0012	The ordinal reference "?0" in the ORDER BY clause is not valid.
FQL0013	Incompatible types in assignment.
FQL0014	The number of values in a VALUES row value constructor does not match the number of values in the target.
FQL0015	The number of values in an INSERT...SELECT statement does not match the number of values in the target.
FQL0016	A subquery contains an illegal outer reference to a column in the INSERT's target table.
FQL0017	An expression contains data types that cannot be compared.
FQL0018	An expression contains incompatible data types.
FQL0019	The result data type of a CASE expression cannot be inferred; they are all NULL.
FQL0020	An invalid number of parameters was supplied to the function "?0"
FQL0021	Parameter number ?0 to the function "?1" is not of the correct type.
FQL0022	A subquery expression must have exactly one value in the SELECT list.
FQL0023	A CAST expression requested an invalid data type conversion.
FQL0024	A reference to ROWID must be qualified if more than one table is present in the query.
FQL0025	All non-aggregated column references in the SELECT list and HAVING clause must be in the GROUP BY clause.
FQL0026	The number of columns in both inputs to a UNION operation must be the same.
FQL0027	The data types of corresponding columns in the inputs to a UNION operation must be the same.
FQL0028	Field repetitions must be numeric and between 1 and ?0.
FQL0029	A field repetition in the SET clause of an UPDATE statement must be a constant.
FQL0030	"?0" is an invalid function.
FQL0031	The the parameter's type cannot be inferred in this context. At least one query parameter must be an expression, a column or a constant.
FQL0032	A query may contain either named parameters or dynamic parameters, but not both.
FQL0033	Column names in FROM clause subqueries must be unique.
FQL0034	The number of output columns in a FROM clause subquery must match the number of columns in the table's name list.
FQL0035	Cursor support is not enabled for this query.
FQL0036	A cursor with the name "?0" already exists.
FQL0037	There is no cursor with the name "?0"

## 81.11 FM.ExecuteSQL.LastSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.ExecuteSQL.LastSQL" )

**Result** Returns text or error.

### Description

This is for executing SQL in FileMaker and provides you the last SQL command as run by the plugin.

## 81.12 FM.ExecuteSQLOnIdle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	1.2	Yes	Yes	No	No	No

MBS( "FM.ExecuteSQLOnIdle"; SQL Statement { ; Column Delimiter; Record Delimiter; Params } )

### Parameters

#### SQL Statement

the SQL statement

#### Column Delimiter

Optional

Optional column delimiter

#### Record Delimiter

Optional

Optional record delimiter

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

### Description

You run a script pause after using this function to give it time to execute.

See the other function for more info.

Seems like on FileMaker 11 you get LastError 8310 if you use fields with underscore in the name. You avoid that by placing the field names in quotes.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message. Use FM.ExecuteFileSQL if you want to specify the file name.

When you create fields, you can use the following types. Add global on the end to make it a global field.

FileMaker Type	SQL Type
Text	varchar
Number	decimal
Date	date
Time	time
Timestamp	timestamp
Container	binary

### Examples

Create a new text field in a table:

```
MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable ADD MyField varchar")
```

And delete the field:

```
MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable DROP COLUMN MyField")
```

Create new table:

```
MBS("FM.ExecuteSQLOnIdle";"CREATE TABLE `MyTABLE` (test varchar)")
```

Create new index:

```
MBS("FM.ExecuteSQLOnIdle";"CREATE INDEX `IndexLastname` ON `Persons` (`LastName`);")
```

Add a global field:

```
MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable ADD MyGlobalField varchar global")
```

Create a field:

```
Set Variable [ $r ; Value: MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable ADD MyField var-
char") ]
Pause/Resume Script [ Duration (seconds): ,1 ]
If [ MBS("FM.ExecuteSQL.LastError") 0 ]
Show Custom Dialog [ "Error adding column" ; MBS("FM.ExecuteSQL.LastError") & ": " & MBS("FM.Ex-
ecuteSQL.LastErrorMessage") ]
Else
Show Custom Dialog [ "Removed Column" ; "OK" ]
End If
```

Remove a field:

```
Set Variable [ $r ; Value: MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE TestTable DROP COLUMN
MyField") ]
Pause/Resume Script [ Duration (seconds): 0.1 ]
If [ MBS("FM.ExecuteSQL.LastError") 0 ]
Show Custom Dialog [ "Error removing column" ; MBS("FM.ExecuteSQL.LastError") & ": " & MBS("FM.Ex-
ecuteSQL.LastErrorMessage") ]
Else
Show Custom Dialog [ "Removed Column" ; "OK" ]
End If
```

Change default value:

```
Set Variable [ $r ; Wert: MBS("FM.ExecuteSQLOnIdle";"ALTER TABLE myTable ALTER myField SET
```

```
DEFAULT 'FileMaker'") ]
```

## 81.14 FM.InsertOrUpdateRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertOrUpdateRecord"; FileName; TableName; IDField1; IDValue1; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField1

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue1

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### FieldName

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

If the insert fails due to duplicate ID, we will update the record values.

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Then you pass one pair of field name and value for each field you like to set in the new record.

This function combines FM.InsertRecord and FM.UpdateRecord. If the ID is already used, we update, else we insert a new record.

For one ID field, please use FM.InsertOrUpdateRecord, for 2 ID fields FM.InsertOrUpdateRecord2 and for three ID fields FM.InsertOrUpdateRecord3.

This function is broken in version 6.4 as it returns always a SQL error for insert. Please use 6.5 or newer. With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### Examples

Update a record:

```
MBS( "FM.InsertOrUpdateRecord";
  ""; "Asset Management"; /* file and table name */
  "Asset ID"; "1"; /* ID field and value */
  "Information"; "Just a test"; /* first field and value */
  "Category"; "BestItems" ) /* second field and value */
```

## 81.15 FM.InsertOrUpdateRecord2

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertOrUpdateRecord2"; FileName; TableName; IDField1; IDValue1; IDField2; IDValue2; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.  
Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.  
"Assets"

#### IDField1

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.  
"ID1"

#### IDValue1

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.  
\$RecordID

#### IDField2

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.  
"ID2"

#### IDValue2

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.  
\$RelatedRecordID

#### FieldName

A field name to set.  
"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.  
"Test"

**Result** Returns OK or error.

**Description**

Same as FM.InsertOrUpdateRecord, but with 2 ID fields to locate record.

If the insert fails due to duplicate ID, we will update the record values.

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Then you pass one pair of field name and value for each field you like to set in the new record.

This function combines FM.InsertRecord and FM.UpdateRecord. If the ID is already used, we update, else we insert a new record.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

**Examples**

Insert or update:

```
MBS( "FM.InsertOrUpdateRecord2";
  ""; "Assets"; /* file and table name */
  "Asset ID Match Field"; 2; /* first ID field and value */
  "Internal ID"; "2"; /* second ID field and value */
  "Model"; "Just a test"; /* first field and value */
  "Category"; "BestItems2" ) /* second field and value */
```

## 81.16 FM.InsertOrUpdateRecord3

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertOrUpdateRecord3"; FileName; TableName; IDField1; IDValue1; IDField2; IDValue2; IDField3; IDValue3; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField1

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID1"

#### IDValue1

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### IDField2

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID2"

#### IDValue2

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RelatedRecordID

#### IDField3

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID3"

#### IDValue3

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$OtherRecordID

**FieldName**

A field name to set.  
"Model"

**FieldValue**

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.  
"Test"

**Result** Returns OK or error.

**Description**

Same as FM.InsertOrUpdateRecord, but with 3 ID fields to locate record.

If the insert fails due to duplicate ID, we will update the record values.

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Then you pass one pair of field name and value for each field you like to set in the new record.

This function combines FM.InsertRecord and FM.UpdateRecord. If the ID is already used, we update, else we insert a new record.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

**Examples**

Insert a record:

```
MBS( "FM.InsertOrUpdateRecord3"; "" ; "Kontakte"; "Vorname"; "Christian"; "Nachname"; "Schmitz";
"Firma"; "MBS"; "Titel"; "Herr" )
```

## 81.17 FM.InsertOrUpdateRecordQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	8.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertOrUpdateRecordQuery"; InsertFileName; InsertTableName; FieldNames; KeyFieldMapping; QueryFileName; SQL Statement { ; Params } )

### Parameters

#### InsertFileName

The file name of where the target table. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into (target). Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### KeyFieldMapping

The list of field names with index to map keys. Please specify a list of key name=key index. The key name is the name of the field in the target table and the index gives zero-based position in result set from query.

Field order in source and destination does not need to be the same.

ID=0

#### QueryFileName

The file name for the database to run the query against (source). Can be empty to look for the table in all files.

Get(FileName)

#### SQL Statement

SQL Statement as a Text string to query records from the source table.

#### Params

Optional

Pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

#### Description

This function allows to easily copy a lot of records from one table to another table.

Copy can be from one database to other or within same database. Also from one table to other or within

a table. Due to passing in new field names, you can even rearrange values from one column to other while copying. In the SQL you can use functions for sums or join data from several tables together to fill a new table. Filename parameters can be empty.

Use `FM.ExecuteSQL.LastErrorMessage` and `FM.ExecuteSQL.LastError` to see error message. Reports an error if field name list doesn't match column count of the query result.

Please remove from SQL statement and field names all fields which are globals or unstored calculations.

For inserting records from other database (e.g. MySQL), please use `SQL.InsertRecords` function.

You can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

You can use `GetFieldName()` function to query field names and the plugin removes the table prefix with `::` in the field name before passing it to SQL engine.

### Examples

Copies records from `Contacts` to `ContactsCopy`:

```
Set Variable [ $r ; Value: MBS( "FM.InsertOrUpdateRecordQuery"; "" ; "ContactsCopy"; "ID$First$Last$Mobile"; "ID=0"; "" ; "SELECT \"ID\", \"First\", \"Last\", \"Mobile\" FROM \"Contacts\" ) ]
```

Created 27th July 2018, last changed 19th February 2020.

## 81.18 FM.InsertRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecord"; FileName; TableName; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldName

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

You pass to this function table name (and optional filename).

Then you pass one pair of field name and value for each field you like to set in the new record.

As we can't know the new ID assigned for the record, you can help yourself by passing in an UUID for a field and later select that to get the auto assigned primary key (or have the UUID be the primary key, so you don't need a query).

See also FM.UpdateRecord to insert new record and FM.InsertOrUpdateRecord to update or insert record. With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### Examples

Insert a record into Assets table:

```
MBS("FM.InsertRecord"; ""; "Assets"; "Model"; "TestModell"; "Item"; "MyItem"; "Serial Number"; "1234"; "In Service Date"; GetAsDate( "31.05.1996"))
```

Insert a record with 5 fields:

```
MBS("FM.InsertRecord"; $filename; $tablename; $field1; $value1; $field2; $value2; $field3; $value3; $field4;
$value4; $field5; $value5)
```

Insert with table and field ID instead of names:

```
Set Variable [ $r ; Value: MBS("FM.InsertRecord"; Get(FileName); "1065089"; "3"; "Hello") ]
```

Insert with using GetFieldName for field names:

```
MBS( "FM.InsertRecord"; ""; "Contacts";
GetFieldName ( Contacts::First ); "Joe";
GetFieldName ( Contacts::Last ); "Miller";
GetFieldName ( Contacts::Group ); "Best Customers" )
```

Build dynamically the evaluate statement with parameters:

```
# Our input parameters with field name list
Set Variable [ $FieldNames ; Value: FieldNames ( Get(FileName) ; Get(LayoutName) ) ]
#
# We build parameters for our Evaluate call
Set Variable [ $Params ; Value: "" ]
Set Variable [ $ParamIndex ; Value: 0 ]
#
Set Variable [ $ParamIndex ; Value: $ParamIndex + 1 ]
Set Variable [ $P [ $ParamIndex ] ; Value: Get(FileName) ]
Set Variable [ $Params ; Value: $Params & "; $P [ " & $ParamIndex & " ] " ]
#
Set Variable [ $ParamIndex ; Value: $ParamIndex + 1 ]
Set Variable [ $P [ $ParamIndex ] ; Value: Get(LayoutTableName) ]
Set Variable [ $Params ; Value: $Params & "; $P [ " & $ParamIndex & " ] " ]
#
# We loop over feidl list
Set Variable [ $Count ; Value: ValueCount ( $FieldNames ) ]
Set Variable [ $FieldIndex ; Value: 0 ]
Set Variable [ $Types ; Value: "" ]
#
Loop
# get field name and value
Set Variable [ $FieldIndex ; Value: $FieldIndex + 1 ]
Set Variable [ $Fieldname ; Value: GetValue($FieldNames; $FieldIndex) ]
Set Variable [ $Value ; Value: GetField ( $Fieldname) ]
#
# Check typ to filter fields we don't want
Set Variable [ $Typ ; Value: FieldType ( Get(FileName) ; $Fieldname ) ]
If [ Position ( $Typ; "Global"; 1; 1 ) = 1 or Position ( $Typ; "Summary"; 1; 1 ) = 1 or Position($Typ; "stored-
Calc"; 1; 1 ) = 1 or $Fieldname = "ID" ]
```

```

# ignore global, statistic and unsaved formula field
// Show Custom Dialog [ "Typ" ; $FieldName & ": " & $typ ]
Else
# We store in $P [ ] our parameters for evaluate and in $Params the parameters for Evaluate
Set Variable [ $Types ; Value: $Types & $& $FieldName & ": " & $Typ ]
Set Variable [ $ParamIndex ; Value: $ParamIndex + 1 ]
Set Variable [ $P [ $ParamIndex ] ; Value: $Fieldname ]
Set Variable [ $Params ; Value: $Params & "; $P [ " & $ParamIndex & " ] " ]
Set Variable [ $ParamIndex ; Value: $ParamIndex + 1 ]
Set Variable [ $P [ $ParamIndex ] ; Value: $Value ]
Set Variable [ $Params ; Value: $Params & "; $P [ " & $ParamIndex & " ] " ]
End If
#
Exit Loop If [ $FieldIndex = $count ]
End Loop
#
# now build Evaluate command and show it
// Show Custom Dialog [ "Types" ; $Types ]
Set Variable [ $Function ; Value: "FM.InsertRecord" ]
Set Variable [ $command ; Value: "MBS($Function" & $params & ")" ]
Show Custom Dialog [ "Command" ; $Command ]
If [ Get ( LastMessageChoice ) = 1 ]
# And run it!
Set Variable [ $result ; Value: Evaluate($Command) ]
Show Custom Dialog [ "Result" ; $Result ]
End If

```

Insert with automatic table name:

```

MBS("FM.InsertRecord";
""; // empty for current file
""; // empty as given with first field
GetFieldName ( Anlagen::Seriennummer ); // field name queried
"12345") // and value

```

## 81.19 FM.InsertRecordCSV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecordCSV"; InsertFileName; InsertTableName; FieldNames; Text { ; Delimiter; FieldName; FieldValue } )

### Parameters

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model"

#### Text

The text to import in TSV/CSV format. This means tab, comma or semicolon character between fields and newline character for new records. Use Files.ReadTextFile if needed to read this from a file on disk.

"Bob;Miller;12345;New York"

#### Delimiter

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The delimiter to use. If empty, we auto detect it.

","

#### FieldName

Optional

A field name to set.

"Model"

#### FieldValue

Optional

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

This function allows for easy importing of text to create a log of records.

Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result. Since version 8.2 we can fill text, number, time, timestamp and date fields and let FileMaker convert the values with your current locale.

Returns number of records added.

CSV is automatically parsed per line with List.CSVSplit function internally.

You can pass one pair of field name and value for each extra field you like to set in the new records. e.g. a reference ID.

You can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

Version 8.5 adds Delimiter parameter, which may break scripts, but we need to have that parameter for people with older version.

### Examples

Import some contacts with passing import ID/timestamp:

```
MBS( "FM.InsertRecordCSV"; "Contacts.fmp12"; "Contacts"; "FirstName$LastName$City"; $tsv; "ImportID"; $importID; "ImportDate"; Get(CurrentHostTimeStamp))
```

Import CSV:

```
MBS( "FM.InsertRecordCSV"; "Kontakte.fmp12"; "Kontakte"; "Vorname$Nachname$Firma$Position"; "Vorname;Nachname;Firma;Position")
```

## 81.20 FM.InsertRecordQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecordQuery"; InsertFileName; InsertTableName; FieldNames; QueryFileName; SQL Statement { ; Params } )

### Parameters

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### QueryFileName

The file name for the database to run the query against. Can be empty to look for the table in all files.

Get(FileName)

#### SQL Statement

SQL Statement as a Text string

#### Params

Optional

Pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

### Description

This function allows to easily copy a lot of records from one table to another table.

Copy can be from one database to other or within same database. Also from one table to other or within a table. Due to passing in new field names, you can even rearrange values from one column to other while copying. In the SQL you can use functions for sums or join data from several tables together to fill a new table. Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

Please remove from SQL statement and field names all fields which are globals or unstored calculations.

For inserting records from other database (e.g. MySQL), please use SQL.InsertRecords function.

Using FM.SetSQLBatchMode you can let the plugin insert e.g. 50 rows in one chunk which can speed up insert a lot.

Due to memory usage it can be useful to segment copy queries to only copy one GB at a time and avoid heavy memory pressure.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

### Examples

Copy records within one table in same file:

```
MBS( "FM.InsertRecordQuery"; ""; "Contacts"; "First$Last$Company"; ""; "SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Copy records from a table from one database to other (production to development)

```
MBS( "FM.InsertRecordQuery"; "ContactsDev.fmp12"; "Contacts"; "First$Last$Company"; "Contacts.fmp12"; "SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Copy data to other table:

```
MBS( "FM.InsertRecordQuery"; ""; "Test"; "FirstName$LastName$CompanyName"; ""; "SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Query sum of sales grouped by customers in a sales report table:

```
MBS( "FM.InsertRecordQuery"; ""; "SalesReport"; "SumSales$CustomerID"; ""; "SELECT sum(\"InvoiceTotal\"), \"CustomerID\" FROM Clients, Invoices WHERE Invoices.CustomerID = Clients.CustomerID GROUP by CustomerID" )
```

Copy two fields from one table to other:

```
MBS( "FM.InsertRecordQuery"; ""; "ASC Apple Script"; "Name$Script"; ""; "select * from \"AppleScript\"" )
```

Copy from Anlagen example (in German) to copy of same file:

```
MBS( "FM.InsertRecordQuery";
```

```

/* InsertFileName */
"Anlagen2";
/* InsertTableName */
"Anlagen";
/* FieldNames */
"Abschreibung Jahre$Anzahl Diagramme$Ausgewählte Datei$Datei 1 Container$Datei 2 Container$Datei
3 Container$Datei 4 Container$Datei 5 Container$Datum Ausgang$Datum Ausgang Popover$Datum Ein-
gang$Erstellungsdatum$Fälligkeit$Fälligkeit Popover$Gekauft von$Geprüft durch$In Betrieb seit$Interne
ID$Kategorie$Kaufdatum$Kosten$Modell$Notizen$Ort$Position$Prüfdatum$Seriennummer$Signatur Con-
tainer$Zugewiesen an$Zustand";
/* QueryFileName */
"Anlagen";
/* SQL Statement */
"SELECT \"Abschreibung Jahre\", \"Anzahl Diagramme\", \"Ausgewählte Datei\", \"Datei 1 Container\",
\"Datei 2 Container\", \"Datei 3 Container\", \"Datei 4 Container\", \"Datei 5 Container\", \"Datum Aus-
gang\", \"Datum Ausgang Popover\", \"Datum Eingang\", \"Erstellungsdatum\", \"Fälligkeit\", \"Fäl-
ligkeit Popover\", \"Gekauft von\", \"Geprüft durch\", \"In Betrieb seit\", \"Interne ID\", \"Kategorie\",
\"Kaufdatum\", \"Kosten\", \"Modell\", \"Notizen\", \"Ort\", \"Position\", \"Prüfdatum\", \"Serien-
nummer\", \"Signatur Container\", \"Zugewiesen an\", \"Zustand\" FROM Anlagen"
)

```

Copy data to other table with parameter:

```

MBS( "FM.InsertRecordQuery"; ""; "Test"; "FirstName$LastName$CompanyName"; ""; "SELECT \"First\",
\"Last\", \"Company\" FROM Contacts WHERE City=?"; "Hamburg" )

```

Copy from file to fill clone with order and two fields to filter:

```

MBS( "FM.InsertRecordQuery"; "Aufgaben Clone"; "Aufgaben"; "Aufgabe$Fälligkeit$Beschreibung$Sta-
tus$Kategorie"; ""; "SELECT Aufgabe, \"Fälligkeit\", Beschreibung, Status, Kategorie FROM Aufgaben
WHERE IDField=? AND OtherThing=? ORDER BY \"Fälligkeit\" "; 123; "Haus" )

```

## 81.21 FM.InsertRecordQueryIgnoreDuplicates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecordQueryIgnoreDuplicates"; InsertFileName; InsertTableName; FieldNames; QueryFileName; SQL Statement { ; Params } )

### Parameters

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### QueryFileName

The file name for the database to run the query against. Can be empty to look for the table in all files.

Get(FileName)

#### SQL Statement

SQL Statement as a Text string

#### Params

Optional

Pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns OK or error.

### Description

Same as FM.InsertRecordQuery, but ignores duplicate records.

On success returns the number of duplicate records instead of OK if there were any.

This function allows to easily copy a lot of records from one table to another table.

Copy can be from one database to other or within same database. Also from one table to other or within a table. Due to passing in new field names, you can even rearrange values from one column to other while copying. In the SQL you can use functions for sums or join data from several tables together to fill a new table. Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

Does not copy text styles, only plain text for text fields.

The duplicate check is based on FileMaker checking if a field is unique, e.g. the record ID.  
For inserting records from other database (e.g. MySQL), please use SQL.InsertRecords function.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

### Examples

Copy records within one table in same file:

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; ""; "Contacts"; "First$Last$Company"; ""; "SELECT \
\"First\", \"Last\", \"Company\" FROM Contacts" )
```

Copy records from a table from one database to other (production to development)

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; "ContactsDev.fmp12"; "Contacts"; "First$Last$Company";
"Contacts.fmp12"; "SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Copy data to other table:

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; ""; "Test"; "FirstName$LastName$CompanyName"; "";
"SELECT \"First\", \"Last\", \"Company\" FROM Contacts" )
```

Query sum of sales grouped by customers in a sales report table:

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; ""; "SalesReport"; "SumSales$CustomerID"; ""; "SE-
LECT sum(\"InvoiceTotal\"), \"CustomerID\" FROM Clients, Invoices WHERE Invoices. CustomerID
= Clients.CustomerID GROUP by CustomerID" )
```

Copy two fields from one table to other:

```
MBS( "FM.InsertRecordQueryIgnoreDuplicates"; ""; "ASC Apple Script"; "Name$Script"; ""; "select *
from \"AppleScript\"" )
```

## 81.22 FM.InsertRecordTSV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.3	Yes	Yes	Yes	Yes	Yes

MBS( "FM.InsertRecordTSV"; InsertFileName; InsertTableName; FieldNames; Text { ; FieldName; Field-Value } )

### Parameters

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### Text

The text to import in TSV format. This means tab character between fields and newline character for new records

"Bob Miller 12345 New York"

#### FieldName

Optional

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

Optional

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns number or error.

### Description

This function allows for easy importing of text to create a log of records.

Filename parameters can be empty.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result. Since version 8.2 we can fill text, number, time, timestamp and date fields and let FileMaker convert the values with your current locale.

Returns number of records added.

For XML, please check XML.Import function. For splitting values with delimiter into a list, please use QuickList.New which also works with comma, tab, newline or other characters.

With plugin version 6.2 or newer you can pass one pair of field name and value for each extra field you like to set in the new records. e.g. a reference ID.

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

### Examples

Import records from text:

```
Delete All Records [ No dialog ]
Set Variable [ $fields; Value:"FirstName$LastName$City" ]
Set Variable [ $r; Value:MBS("FM.InsertRecordTSV"; ""; "Contacts"; $fields; Import::ImportText) ]
```

Import some contacts with passing import ID/timestamp:

```
MBS( "FM.InsertRecordTSV"; "Contacts.fmp12"; "Contacts"; "FirstName$LastName$City"; $tsv; "ImportID"; $importID; "ImportDate"; Get(CurrentHostTimeStamp))
```

## 81.23 FM.InsertSetUpdateProgressDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.2	Yes	Yes	No	No	No

MBS( "FM.InsertSetUpdateProgressDialog"; Update { ; Base; Factor } )

### Parameters

#### Update

Pass 1 to update Progress Dialog. Pass 0 to disable feature.

1

#### Base

Optional

The progress base in percent. Default is 0.

25

#### Factor

Optional

The factor to apply for progress update. Default is 1.

0.5

**Result** Returns OK or error.

### Description

If you enable progress dialog updates, the functions FM.InsertRecordQuery, FM.InsertRecordQueryIgnoreDuplicates and FM.InsertRecordTSV will update progress dialog.

If cancel button is clicked, the functions may cancel and return an error. Depending on event handling a cancel button may not work while a plugin function runs!

You can use Base/Factor to adjust updates in progress dialog. e.g. if you have 4 things to do and FM.InsertRecordTSV is 2nd one, you can use a base of 25 (so 25% is for first thing to do) and factor of 0.25. Our progress will go from 25 to 50% than.

### Examples

Import tab return text data as records with progress dialog:

```
Set Variable [ $r; Value:MBS( "ProgressDialog.SetTitle"; "Please wait." ) ]
```

```
Set Variable [ $r; Value:MBS( "ProgressDialog.SetShowButton"; 0 ) ]
```

```
Set Variable [ $r; Value:MBS( "ProgressDialog.SetTopText"; "Importing text file.." ) ]
```

```
Set Variable [ $r; Value:MBS( "ProgressDialog.Show" ) ]
```

```
Set Variable [ $r; Value:MBS( "FM.InsertSetUpdateProgressDialog"; 1 ) ]
```

```
Set Variable [ $r; Value:MBS( "FM.InsertRecordTSV"; "" ; "TSV Import"; "First$Last$Street$City$State$Zip$Country"; TSV Import::Text to Import ) ]
```

```
Set Variable [ $r; Value:MBS( "ProgressDialog.Hide" ) ]
```

## 81.24 FM.NULL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.NULL" )

**Result** Returns empty container.

### Description

FileMaker doesn't really have a NULL value, but other databases make a difference between empty text ("" ) and no value (NULL).

This function returns a special container value with no content.

SQL.SetParamValue and SQL.SetParamValues can use this value to pass NULL to the database.

### Examples

get null value:

```
MBS("FM.NULL")
```

### See also

Created 20th April 2015, last changed 14th September 2015.

## 81.25 FM.SQL.CSV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.CSV"; SQLref { ; firstRow; lastRow; firstCol; lastCol; rowSeparator; colSeparator } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$\$SQLRef

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

#### firstCol

Optional

The index of first column. Default is 0.

0

#### lastCol

Optional

The index of last column. Default is FM.SQL.FieldCount-1.

6

#### rowSeparator

Optional

The row separator. Default is CR.

Char(13)

#### colSeparator

Optional

The column separator. Default is semicolon.

”;"

**Result** Returns text or error.

### Description

You can use this method to quickly get all fields in a given area as text.

If needed, we put values in quotes and escape quotes and newlines.

For numeric values we ask FileMaker to provide text representation, so FileMaker may use dot or comma as

decimal divider depending on your locale.

Please use `Text.WriteTextFile` to write to text file if you need CSV export.

### Examples

Query fields and export as text and CSV:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; "" ; "select * from Clients" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error"; $sql ]
Else
Show Custom Dialog [ "SQL result"; "got " & MBS( "FM.SQL.RowCount"; $sql ) & " rows with each " &
MBS( "FM.SQL.FieldCount"; $sql ) & " ..." ]
# Write to text file
Set Variable [ $text; Value:MBS( "FM.SQL.Text"; $sql ) ]
Set Variable [ $desktopFolder; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $desktopFolder; "fields.txt" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
# Write to text file
Set Variable [ $text; Value:MBS( "FM.SQL.CSV"; $sql ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $desktopFolder; "fields.csv" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
# Cleanup
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $sql ) ]
End If
```

## 81.26 FM.SQL.Execute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Execute"; FileName; SQL Statement { ; Params } )

### Parameters

#### FileName

The target database name. Can be empty to not limit query to one database.

""

#### SQL Statement

SQL Statement as a Text string

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns reference number or error.

### Description

This function requires FileMaker 11 or newer. Please use FM.ExecuteSQL on FileMaker 10 or older.

Returns a SQL Reference, so you can use functions like FM.SQL.RowCount, FM.SQL.FieldCount, FM.SQL.Field and FM.SQL.FieldType to query result. Don't forget to use FM.SQL.Release to release the result from memory when you are done with it.

### Examples

Query only first row:

```
MBS( "FM.SQL.Execute"; ""; "SELECT * FROM ProductImages FETCH FIRST 1 ROWS ONLY")
```

SELECT records

```
MBS("FM.SQL.Execute"; ""; "select * from Contacts")
```

Select with parameter:

```
MBS("FM.SQL.Execute"; ""; "select Menge from Boxen where Artikel_Nr=? ORDER BY Menge DESC"; "ABC123")
```

Query some values:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; ""; "select * from Clients" ) ]
```

```
If [ MBS("IsError" ) ]
```

```
Show Custom Dialog [ "SQL error"; $sql ]
```

```

Else
Show Custom Dialog [ "SQL result"; "got " & MBS( "FM.SQL.RowCount"; $sql ) & " rows with each " &
MBS( "FM.SQL.FieldCount"; $sql ) & " ..." ]
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $sql ) ]
End If

```

Query record as JSON:

```

Let ( [
fields = MBS( "FM.QueryFieldsForTableName"; "Contacts");
Records = MBS( "FM.SQL.Execute"; ""; "SELECT \" & substitute(fields; $; "\", \") & "\" FROM
\"Contacts\" WHERE \"First\" = ?"; "Joe");

json = MBS( "FM.SQL.JSONRecord"; Records; 0; fields);
r = MBS( "FM.SQL.Release"; Records ) ]
; json )

```

Make a JSON query in one Let statment:

```

Let (
[
$sdatt = "10/1/2019 00:00";
$edatt = "10/10/2019 00:00";
sku = "'PARbh50','PARgy50'";
sql1 = MBS("FM.SQL.Execute"; ""; "Select docnum,linetotal,db from \"MyTable\" where ItemCode in (\"
& sku & \") and DocDate between ? and ?"; $sdatt; $edatt);
json = MBS( "FM.SQL.JSONRecords"; sql1; "DocNum$LineTotal$DB"; 1);
r = MBS( "FM.SQL.Release"; sql1 )
]; json
)

```

Query related records as JSON:

```

# get related teams
Set Variable [ $r; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT \"UUID\", \"ID\", \"ID_De-
partment\", \"Team.Name\", \"MemberCount\" FROM \"Teams\" WHERE ID_Department=?"; Depart-
ment::ID ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error" ; $r ]
Else
# fill as json in field
Set Field [ Department::JSON_Department ; MBS( "FM.SQL.JSONRecords"; $r; "UUID$ID$ID_Depart-
ment$Team.Name$MemberCount" ) ]
Set Variable [ $e ; Value: MBS( "FM.SQL.Release"; $r ) ]
End If

```

## 81.27 FM.SQL.Field

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Field"; SQLref; Row; Column )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.  
\$SQLRef

#### Row

The row number from 0 to FM.SQL.RowCount-1.  
\$row

#### Column

The column number from 0 to FM.SQL.FieldCount-1.  
\$col

**Result** Returns value or error.

### Description

Native data type is preserved so this function can returns styled text, number, time, date, timestamp and container.

### Examples

Query field values:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; "" ; "select * from Clients" ) ]
# query first field of first row:
Set Variable [ $value; MBS( "FM.SQL.Field"; $sql; 0; 0 ) ]
# query other field
Set Variable [ $value; MBS( "FM.SQL.Field"; $sql; $row; $col ) ]
Set Variable [ $r; MBS( "FM.SQL.Release"; $sql ) ]
```

## 81.30 FM.SQL.InsertRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "FM.SQL.InsertRecords"; SQLref; InsertFileName; InsertTableName; FieldNames { ; StartRow; EndRow } )
```

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$\$SQLRef

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model"

#### StartRow

Optional

The index of the start row in the current recordset. First row is 0.

0

#### EndRow

Optional

The index of the end row in the current recordset. First row is 0. Last Row would be FM.SQL.RowCount-1.

0

**Result** Returns OK or error.

### Description

This function allows to easily copy a lot of records from a query in FileMaker database into a FileMaker table.

Please provide field names in FileMaker. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

Function will fail if data types in source and dest fields do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For insert from SQL Connection into FileMaker database, please use SQL.InsertRecords.

**Examples**

Copy records:

```
# select some data
Set Variable [ $Records; Value:MBS( "FM.SQL.Execute"; "" ; "SELECT FirstName, LastName, Birthday
FROM test" ) ]
# now insert them somewhere else
Set Variable [ $r; Value:MBS( "FM.SQL.InsertRecords"; $Records; "" ; "test"; "FirstName$LastName$Birth-
Day" ) ]
# and free record set
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $Records ) ]
```

## 81.31 FM.SQL.InsertRecordsToSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL 159 SQL	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.InsertRecordsToSQL"; SQLref; Connection; InsertTableName; FieldNames { ; StartRow; EndRow; Replace } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

#### InsertTableName

The name of the table to insert record into.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model\$Names"

#### StartRow

Optional

The index of the start row. First row is 0. Pass -1 or nothing for default which is starting with row 0.

-1

#### EndRow

Optional

The index of the end row. First row is 0. Last Row would be FM.SQL.RowCount-1. Pass -1 to use all rows and the plugin will internally use RowCount-1.

-1

#### Replace

Optional

Available in MBS FileMaker Plugin 7.1 or newer.

Set to 1 to replace existing entries. Currently available for MySQL and databases with same syntax.

0

**Result** Returns OK or error.

### Description

This function allows to easily copy a lot of records from a query in FileMaker database into a SQL database. Please provide field names in other table. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Reports an error if field name list doesn't match column count of the query result.

Function will fail if data types in source and dest fields do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For insert within FileMaker, please use FM.SQL.InsertRecords.

### Examples

Insert Records to SQL database:

```
Set Variable [ $InsertResult; Value:MBS( "FM.SQL.InsertRecordsToSQL"; $Records; $connection; $BaseTableName; $FieldNames ) ]
```

Copy records to SQLite:

```
Set Variable [ $Connection ; Value: MBS("SQL.NewConnection") ]
# Tell plugin where SQLite library is
Set Variable [ $result ; Value: MBS("SQL.InternalSQLiteLibrary.Activate") ]
# Tell plugin we want to use SQLite
Set Variable [ $result ; Value: MBS("SQL.SetClient"; $Connection; "SQLite") ]
# Connect to database in read/write/create mode. Creates new file if none exists.
Set Variable [ $result ; Value: MBS("SQL.Connect"; $Connection; "/Users/cs/Desktop/mydatabase.sqlite") ]
]
If [ $result = "OK" ]
# Query records in FileMaker
Set Variable [ $Records ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT FirstName, LastName, Birthday FROM People") ]
# Transfer to other database
Set Variable [ $Records ; Value: MBS( "FM.SQL.InsertRecordsToSQL"; $Records; $Connection; "People"; "FirstName$LastName$Birthday") ]
# Cleanup
Set Variable [ $result2 ; Value: MBS("SQL.Commit"; $Connection) ]
Set Variable [ $result2 ; Value: MBS( "FM.SQL.Release"; $Records ) ]
If [ $result "OK" ]
Show Custom Dialog [ "Error: " & $result ]
Else
Show Custom Dialog [ "Record exported." ]
End If
End If
Set Variable [ $result2 ; Value: MBS("SQL.FreeConnection"; $Connection) ]
```

## 81.32 FM.SQL.JSONRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL 102 JSON	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.JSONRecord"; SQLref; Row; FieldNames { ; Flags } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### Row

The row you like to get.

1

#### FieldNames

A list of field names for the JSON.

"Model\$Names"

#### Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

**Result** Returns JSON text or error.

### Description

You provide list of field names, which should be in same order as fields in SQL result.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

### Examples

Query JSON record:

```
Set Variable [ $sql ; Value: MBS( "FM.SQL.Execute"; "" ; "SELECT \"First\", \"Last\", Birthday, \"Photo Container\" FROM Contacts" ) ]
```

```
Set Variable [ $json ; Value: MBS( "FM.SQL.JSONRecord"; $sql; 0; "First$Last$Birthday$Photo"; 2) ]
```

```
Show Custom Dialog [ "JSON" ; $json ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $sql ) ]
```

Query record as JSON:

```
Let ( [
```

```
fields = MBS( "FM.QueryFieldsForTableName"; "Contacts");
```

```
Records = MBS( "FM.SQL.Execute"; "" ; "SELECT \"\" & substitute(fields; $; \"\", \") & \"\" FROM \"Contacts\" WHERE \"First\" = ?"; "Joe");
```

```
json = MBS( "FM.SQL.JSONRecord"; Records; 0; fields);  
r = MBS( "FM.SQL.Release"; Records ) ]  
; json )
```

## 81.33 FM.SQL.JSONRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL 102 JSON	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.JSONRecords"; SQLref; FieldNames { ; Flags } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### FieldNames

A list of field names for the JSON.

"Model\$Names"

#### Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

**Result** Returns JSON text or error.

### Description

You provide list of field names, which should be in same order as fields in SQL result.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

### Examples

Query JSON:

```
Set Variable [ $sql ; Value: MBS( "FM.SQL.Execute"; "" ; "SELECT \"First\", \"Last\", Birthday, \"Photo Container\" FROM Contacts" ) ]
```

```
Set Variable [ $json ; Value: MBS( "FM.SQL.JSONRecords"; $sql ; "First$Last$Birthday$Photo"; 2 ) ]
```

```
Show Custom Dialog [ "JSON" ; $json ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $sql ) ]
```

Make a JSON query in one Let statment:

```
Let (
```

```
[
```

```
$sdat = "10/1/2019 00:00";
```

```
$edat = "10/10/2019 00:00";
```

```
sku = "'PARbh50','PARgy50'";
```

```
sql1 = MBS("FM.SQL.Execute"; "" ; "Select docnum,linetotal,db from \"MyTable\" where ItemCode in (\" & sku & ") and DocDate between ? and ?"; $sdat; $edat);
```

```
json = MBS( "FM.SQL.JSONRecords"; sql1 ; "DocNum$LineTotal$DB"; 1);
```

```
r = MBS( "FM.SQL.Release"; sql1 )
```

```
] ; json
)
```

Query related records as JSON:

```
# get related teams
Set Variable [ $r ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT \"UUID\", \"ID\", \"ID_De-
partment\", \"Team.Name\", \"MemberCount\" FROM \"Teams\" WHERE ID_Department=?"; Depart-
ment::ID) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error" ; $r ]
Else
# fill as json in field
Set Field [ Department::JSON_Department ; MBS( "FM.SQL.JSONRecords"; $r; "UUID$ID$ID_Depart-
ment$Team.Name$MemberCount") ]
Set Variable [ $e ; Value: MBS( "FM.SQL.Release"; $r ) ]
End If
```

## 81.34 FM.SQL.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Release"; SQLref )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$\$SQLRef

**Result** Returns OK or error.

### Description

### Examples

Run command and free it later:

```
$ref = MBS( "FM.SQL.Execute"; "" ; "SELECT * FROM ProductImages FETCH FIRST 1 ROWS ONLY")
```

...

```
$r = MBS( "FM.SQL.Release"; $ref )
```

**81.35 FM.SQL.RowCount**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.RowCount"; SQLref )

**Parameters****SQLref**

The reference number returned by FM.SQL.Execute function.

\$SQLRef

**Result** Returns number or error.

**Description****Examples**

Query some values:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; "" ; "select * from Clients" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error"; $sql ]
Else
Show Custom Dialog [ "SQL result"; "got " & MBS( "FM.SQL.RowCount"; $sql ) & " rows with each " &
MBS( "FM.SQL.FieldCount"; $sql ) & " ..." ]
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $sql ) ]
End If
```

## 81.36 FM.SQL.Text

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.Text"; SQLref { ; firstRow; lastRow; firstCol; lastCol; rowSeparator; colSeparator } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$\$SQLref

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

#### firstCol

Optional

The index of first column. Default is 0.

0

#### lastCol

Optional

The index of last column. Default is FM.SQL.FieldCount-1.

6

#### rowSeparator

Optional

The row separator. Default is CR.

Char(13)

#### colSeparator

Optional

The column separator. Default is tab character.

Char(9)

**Result** Returns text or error.

### Description

You can use this method to quickly get all fields in a given area as text.

### Examples

Query fields and export as text and CSV:

```
Set Variable [ $sql; Value:MBS( "FM.SQL.Execute"; "" ; "select * from Clients" ) ]
```

```

If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error"; $sql ]
Else
Show Custom Dialog [ "SQL result"; "got " & MBS( "FM.SQL.RowCount"; $sql ) & " rows with each " &
MBS( "FM.SQL.FieldCount"; $sql ) & " ..." ]
# Write to text file
Set Variable [ $text; Value:MBS( "FM.SQL.Text"; $sql ) ]
Set Variable [ $desktopFolder; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $desktopFolder; "fields.txt" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
# Write to text file
Set Variable [ $text; Value:MBS( "FM.SQL.CSV"; $sql ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $desktopFolder; "fields.csv" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; $text; $path; "UTF8" ) ]
# Cleanup
Set Variable [ $r; Value:MBS( "FM.SQL.Release"; $sql ) ]
End If

```

## 81.37 FM.SetSQLBatchMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SetSQLBatchMode"; Value )

### Parameters

#### Value

The chunk size. Default is 1, but 10 or 50 is usually faster.

1

**Result** Returns OK or error.

### Description

For use in FM.InsertRecordQuery.  
(others could be added)

Our plugin can send several SQL commands in one chunk which makes some operation much faster.

### Examples

Move records, 50 inserts per chunk:

```
Set Variable [ $r ; Value: MBS( "ProgressDialog.Reset" ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.SetTitle"; "Please wait." ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.SetTopText"; "Copying records..." ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.Show" ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.SetProgress"; 0 ) ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.Update" ) ]

Set Variable [ $r ; Value: MBS( "FM.SetSQLBatchMode"; 50 ) ]
Set Variable [ $r ; Value: MBS( "FM.InsertSetUpdateProgressDialog"; 1 ) ]
Set Variable [ $r ; Value: MBS( "FM.InsertRecordQuery"; "" ; "dest"; $FieldNames; "" ; "SELECT \"f1\", \"f2\", \"f3\", \"f4\", \"f5\", \"f6\", \"f7\",... ]
Set Variable [ $r ; Value: MBS( "ProgressDialog.Hide" ) ]
```

## 81.38 FM.UpdateRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.UpdateRecord"; FileName; TableName; IDField; IDValue; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField

The name of the field which provides an unique ID for each record, so we can identify the field. Can be RecordID for the record ID.

Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### FieldName

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must be unique.

Then you pass one pair of field name and value for each field you like to set in the new record.

Please note that FM.UpdateRecord and FM.UpdateRecords are nearly identical. Just FM.UpdateRecord

provides the check to make sure only one record matches while FM.UpdateRecords allows several records to be updated. So with FM.UpdateRecords you can easily erase a lot of data if you pass wrong ID!

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.

With plugin version 8.4 or newer, you can use GetFieldName() function to query field names and the plugin removes the table prefix with :: in the field name before passing it to SQL engine.

You can use FM.ExecuteSQL.LastSQL function to see later what SQL was created and run.

### Examples

Update a record:

```
MBS( "FM.UpdateRecord";
""; "Asset Management"; /* file and table name */
"Asset ID"; "1"; /* ID field and value */
"Information"; "Just a test"; /* first field and value */
"Category"; "BestItems" ) /* second field and value */
```

Update a record:

```
MBS( "FM.UpdateRecord"; Get(FileName); "Kontakte"; "Vorname"; "Joe"; "Firma"; "Test" )
```

Update a repeating field:

```
Set Variable [ $r ; Value: MBS( "FM.UpdateRecord"; ""; "Contacts"; "RowID"; 1; "repeating [ 5 ] "; "Hello"
) ]
Show Custom Dialog [ Get ( RecordID ) & ": " & Contacts::repeating [ 5 ] ]
```

## 81.39 FM.UpdateRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "FM.UpdateRecords"; FileName; TableName; IDField; IDValue; FieldName; FieldValue )

### Parameters

#### FileName

The file name of where the table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### TableName

The name of the table to insert record into. Can be ID of table, so we lookup name by ID. Can be result of GetFieldName() function as we remove field name automatically.

"Assets"

#### IDField

The name of the field which provides an unique ID for each record, so we can identify the field. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"ID"

#### IDValue

The value for the ID field to identify the record. Data type of parameter must match the data type of the field.

\$RecordID

#### FieldName

A field name to set. Can be ID of field, so we lookup name by ID. Can be result of GetFieldName() function as we remove table name automatically.

"Model"

#### FieldValue

A field value to use for setting the field in the parameter before. Data type of parameter must match the data type of the field.

"Test"

**Result** Returns OK or error.

### Description

You pass to this function table name (and optional filename).

To identify the record you pass the name of the ID field and the value for the record. The ID field must not be unique, so several records can be updated at once.

Then you pass one pair of field name and value for each field you like to set in the new record.

Please note that FM.UpdateRecord and FM.UpdateRecords are nearly identical. Just FM.UpdateRecord provides the check to make sure only one record matches while FM.UpdateRecords allows several records to be updated. So with FM.UpdateRecords you can easily erase a lot of data if you pass wrong ID!

With plugin version 7.2 or later, you can specify fields and table via IDs and the plugin will lookup them for you at runtime. Table IDs and table names must be unique across all open files for this to work correctly.
