With plugin version 8.4 or newer, you can use `GetFieldName()` function to query field names and the plugin removes the table prefix with `::` in the field name before passing it to SQL engine.

You can use `FM.ExecuteSQL.LastSQL` function to see later what SQL was created and run.

### Examples

Update a few records:

```
MBS( "FM.UpdateRecord";
"; "Asset Management"; /* file and table name */
"Category"; "Houses"; /* ID field and value */
"Information"; "Just a test"; /* first field and value */
"Comment"; "Testing" ) /* second field and value */
```

# Chapter 82

## Folders

Functions to query special folders.

### 82.1 Folders.Applications

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	Yes	Yes	No	Yes

MBS( "Folders.Applications" )

**Result** Returns path or error.

#### Description

This is a native path. You can use `Path.NativePathToFileMakerPath` if you need to use path in a script step.

#### Examples

Queries path:

MBS( "Folders.Applications" )

#### See also

## 82.2 Folders.LocalFonts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	No	Yes, macOS only	No	No

MBS( "Folders.LocalFonts" )

**Result** Returns path or error.

### Description

This is a native path. You can use `Path.NativePathToFileMakerPath` if you need to use path in a script step.

### Examples

Queries path:

MBS( "Folders.LocalFonts" )

### See also

## 82.3 Folders.LocalPreferences

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	Yes	Yes	No	Yes

MBS( "Folders.LocalPreferences" )

**Result** Returns path or error.

### Description

This is a native path. You can use Path.NativePathToFileMakerPath if you need to use path in a script step.

### Examples

Queries path:

MBS( "Folders.LocalPreferences" )

### See also

## 82.4 Folders.SharedDocuments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "Folders.SharedDocuments" )

**Result** Returns path or error.

### Description

This is a native path. You can use Path.NativePathToFileMakerPath if you need to use path in a script step.

### Examples

Queries path:

MBS( "Folders.SharedDocuments" )

### See also

## 82.5 Folders.System

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	Yes	Yes	No	Yes

MBS( "Folders.System" )

**Result** Returns path or error.

### Description

This is a native path. You can use Path.NativePathToFileMakerPath if you need to use path in a script step.

### Examples

Queries path:

MBS( "Folders.System" )

### See also

## 82.6 Folders.SystemFonts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	Yes	Yes	No	No

MBS( "Folders.SystemFonts" )

**Result** Returns path or error.

### Description

This is a native path. You can use `Path.NativePathToFileMakerPath` if you need to use path in a script step.

### Examples

Queries path:

MBS( "Folders.SystemFonts" )

### See also

Created 18th August 2014, last changed 29th April 2016.

## 82.7 Folders.SystemTemporary

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "Folders.SystemTemporary" )

**Result** Returns path or error.

### Description

This is a native path. You can use Path.NativePathToFileMakerPath if you need to use path in a script step.

On Mac Folders.UserTemporary is in the user's home folder while the system wide temporary folder is in /var/folders and can be queried with Folders.SystemTemporary.

### Examples

Queries path:

```
MBS( "Folders.SystemTemporary" )
```

Write container to temp file and launch:

```
# get temp folder
Set Variable [ $TempFolder; Value:MBS( "Folders.SystemTemporary" ) ]
# and file name from container
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; test::myContainer ) ]
# add name to folder path
Set Variable [ $TempPath; Value:MBS( "Path.AddPathComponent"; $TempFolder; $name ) ]
# now write temp file
Set Variable [ $r; Value:MBS( "Files.WriteFile"; test::myContainer; $TempPath) ]
# and launch file
Set Variable [ $r; Value:MBS( "Files.LaunchFile"; $TempPath) ]
```

Download URL to temp file:

```
Set Variable [ $curl; Value:MBS("CURL.New") ]
# this is URL to download
Set Variable [ $url; Value:"https://www.monkeybreadsoftware.com/filemaker/test.txt" ]
# get file name from URL
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; $URL ) ]
# now make temp file path
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; MBS( "Folders.SystemTemporary" ); $name ) ]
# set URL to download
Set Variable [ $r; Value:MBS("CURL.SetOptionURL"; $curl; "https://www.monkeybreadsoftware.com/filemaker/test.txt") ]
# open destination file
```

```
Set Variable [ $r; Value:MBS("CURL.CreateOutputFile"; $curl; $path) ]
# run transfer
Set Field [ CURL Test::Result; MBS("CURL.Perform"; $curl) ]
# close destination file
Set Variable [ $r; Value:MBS("CURL.CloseOutputFile"; $curl) ]
# get debug messages
Set Field [ CURL Test::debug; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
```

## 82.8 Folders.UserDesktop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	Yes	Yes	No	Yes

MBS( "Folders.UserDesktop" )

**Result** Returns path or error.

### Description

This is a native path. You can use Path.NativePathToFileMakerPath if you need to use path in a script step.

For FileMaker Server it is possible to not have a desktop folder or to have it on a different location than normal user accounts.

### Examples

Queries path:

```
MBS( "Folders.UserDesktop" )
```

Create folder on Desktop:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDesktop" ) ]
If [ IsEmpty(Container Export::Name) ]
Set Field [ Container Export::Name; "Record " & Get(RecordID) ]
End If
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; Container Export::Name ) ]
Set Variable [ $r; Value:MBS("Files.CreateDirectory"; $path) ]
```

Get file in desktop folder:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; "test.txt" ) ]
```

## 82.9 Folders.UserDocuments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "Folders.UserDocuments" )

**Result** Returns path or error.

### Description

This is a native path. You can use Path.NativePathToFileMakerPath if you need to use path in a script step.

Version 8.5 and newer return the server documents folder for scripts running on server.

### Examples

Queries path:

```
MBS( "Folders.UserDocuments" )
```

Create folder in documents:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDocuments" ) ]
If [ IsEmpty(Container Export::Name) ]
Set Field [ Container Export::Name; "Record " & Get(RecordID) ]
End If
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; Container Export::Name ) ]
Set Variable [ $r; Value:MBS("Files.CreateDirectory"; $path) ]
```

Get file in documents folder:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDocuments" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; "test.txt" ) ]
```

## 82.10 Folders.UserDownloads

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
82 Folders	6.2	Yes	Yes	No	No	No

MBS( "Folders.UserDownloads" )

**Result** Returns path or error.

### Description

This is a native path. You can use Path.NativePathToFileMakerPath if you need to use path in a script step.

e.g. C:\Users\test\Downloads on Windows or /Users/test/Downloads on Mac.

### Examples

Query download folder path:

```
MBS( "Folders.UserDownloads" )
```

Create folder in downloads:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDownloads" ) ]
If [ IsEmpty(Container Export::Name) ]
Set Field [ Container Export::Name; "Record " & Get(RecordID) ]
End If
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; Container Export::Name ) ]
Set Variable [ $r; Value:MBS("Files.CreateDirectory"; $path) ]
```

Get file in download folder:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDownloads" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; "test.txt" ) ]
```

# Chapter 83

## Font

Font functions.

### 83.1 Font.Activate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
83 Font	2.6	Yes	Yes	No	No	No

MBS( "Font.Activate"; path; local )

#### Parameters

##### path

The native file path to the font file.  
"/Users/test/Desktop/test.ttf"

##### local

Pass 1 to activate only inside app or 0 for globally. You may need to use 0 in order to let FileMaker see the font when you restart.

0

**Result** Returns "OK" or error number from OS.

#### Description

It looks like FileMaker reads font list only on startup, so it may not react to loading this font.

#### Examples

Activate a font:

```
MBS( "Font.Activate"; "/Users/test/Desktop/test.ttf"; 1 )
```

**See also**

- 83.5 Font.Deactivate

## Example Databases

### 83.1.1 Blog Entries

- [MBS Filemaker Plugin, version 2.6pr5](#)

Created 18th August 2014, last changed 13th July 2019.

## 83.2 Font.CalculateTextFits

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
83 Font	8.4	Yes	Yes	Yes	No	Yes

MBS( "Font.CalculateTextFits"; Text; MaxWidth { ; Font; Size } )

### Parameters

#### Text

The text to measure.

"Hello World"

#### MaxWidth

The maximum width.

100

#### Font

Optional

The font name. Using System font in case of empty parameter.

"Arial"

#### Size

Optional

The font size to use. Default is system font size.

12

**Result** Returns number or error.

### Description

The plugin will check how long the text would be in points.

Then we reduce text to see how much text fits in the space and return the length of the reminding space.

### Examples

Checks how much fits:

MBS( "Font.CalculateTextFits"; "Hello World"; 50; "Arial"; 12)

### See also

Created 12nd September 2018, last changed 12nd September 2018.

## 83.3 Font.CalculateTextHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
83 Font	8.4	Yes	Yes	Yes	No	Yes

MBS( "Font.CalculateTextHeight"; Text; Warp Width { ; Font; Size } )

### Parameters

#### Text

The text to measure.

"Hello World"

#### Warp Width

The width of the text block to use for wrapping. If <50 will be set to 50 to avoid endless loops.  
500

#### Font

Optional

The font name. Using System font in case of empty parameter.

"Arial"

#### Size

Optional

The font size to use. Default is system font size.

12

**Result** Returns number or error.

### Description

The plugin uses system font rendering to calculate height given your wrap width. This may be different from what FileMaker renders with it's own engine.

You can use the measured size to detect if text fits a field.

Mac result in logical points, but on Windows in pixels.

### Examples

Calculates text height for a given text:

MBS( "Font.CalculateTextHeight"; "Hello World. Just a test."; 100; "Arial"; 12 )

Example result: 36

Created 3th September 2018, last changed 16th November 2018.

## 83.4 Font.CalculateTextWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
83 Font	6.5	Yes	Yes	Yes	No	Yes

MBS( "Font.CalculateTextWidth"; Text { ; Font; Size } )

### Parameters

#### Text

The text to measure.

"Hello World"

#### Font

Optional

The font name. Using System font in case of empty parameter.

"Arial"

#### Size

Optional

The font size to use. Default is system font size.

12

**Result** Returns number or error.

### Description

The plugin uses system font rendering to calculate width. This may be different from what FileMaker renders with it's own engine.

You can use the measured size to detect if text fits a field.

Mac result in logical points, but on Windows in pixels.

### Examples

Calculate width of Hello World:

```
MBS( "Font.CalculateTextWidth"; "Hello World" )
```

# e.g. 70.9 on Mac and 77 on Windows.

Calculate with Arial

```
MBS( "Font.CalculateTextWidth"; "Hello World"; "Arial"; 12 )
```

# e.g. 61 on Windows, 61,7 on Mac

## 83.5 Font.Deactivate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
83 Font	2.6	Yes	Yes	No	No	No

MBS( "Font.Deactivate"; path; local )

### Parameters

#### path

The native file path to the font file.

"C:\test.fon"

#### local

Pass 1 to activate only inside app or 0 for globally.

0

**Result** Returns "OK" or error number from OS.

### Description

### Examples

Deactivate a font:

MBS( "Font.Deactivate"; "/Users/test/Desktop/test.ttf"; 1 )

## 83.6 FontManager.FontFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
83 Font	6.2	Yes	No	No	No	No

MBS( "FontManager.FontFile"; FontName )

### Parameters

#### FontName

The name of the font.

"Helvetica"

**Result** Returns path or error.

### Description

### Examples

Queries file path for Helvetica:

MBS( "FontManager.FontFile"; "Helvetica" )

Created 27th April 2016, last changed 27th April 2016.

## 83.7 FontManager.ListFontFamilies

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
83 Font	5.1	Yes	Yes	No	No	Yes

MBS( "FontManager.ListFontFamilies" )

**Result** Returns list or error.

### Description

The list is not sorted, but you can sort it with List.Sort function.

### See also

## 83.8 FontManager.ListFonts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
83 Font	5.1	Yes	Yes	No	No	No

MBS( "FontManager.ListFonts" { ; FamilyName } )

### Parameters

#### FamilyName

Optional

The family name whose fonts to query.

"Times"

**Result** Returns list or error.

### Description

The list is not sorted, but you can sort it with List.Sort function.

### Examples

List Arial fonts:

MBS( "FontManager.ListFonts"; "Arial")

# Chapter 84

## FSEvents

File System Monitoring

Watch changes on folder or volume and get script triggered for changes. See DirectoryWatcher functions for Windows.

### 84.1 FSEvents.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

```
MBS( "FSEvents.Create"; PathList { ; sinceWhen; Flags; latency } )
```

#### Parameters

##### PathList

List of folders to watch. (or just one path)

\$path

##### sinceWhen

Optional

The event ID from where to start. Can be the latest ID you saw last time or you pass "now" to start with now.

"now"

##### Flags

Optional

The flags. Can be a combination of NoDefer, WatchRoot, IgnoreSelf, FileEvents or MarkSelf.

"IgnoreSelf,FileEvents"

##### latency

Optional

The latency.

2

**Result** Returns reference number or error.

### Description

Works on server and client.

May not work for network shared disks as most drivers don't pass through change events.

Flag values:

NoDefer = 2

Affects the meaning of the latency parameter. If you specify this flag and more than latency seconds have elapsed since the last event, your app will receive the event immediately. The delivery of the event resets the latency timer and any further events will be delivered after latency seconds have elapsed. This flag is useful for apps that are interactive and want to react immediately to changes but avoid getting swamped by notifications when changes are occurring in rapid succession. If you do not specify this flag, then when an event occurs after a period of no events, the latency timer is started. Any events that occur during the next latency seconds will be delivered as one group (including that first event). The delivery of the group of events resets the latency timer and any further events will be delivered after latency seconds. This is the default behavior and is more appropriate for background, daemon or batch processing apps.

WatchRoot = 4

Request notifications of changes along the path to the path(s) you're watching. For example, with this flag, if you watch `"/foo/bar"` and it is renamed to `"/foo/bar.old"`, you would receive a `RootChanged` event. The same is true if the directory `"/foo"` were renamed. The event you receive is a special event: the path for the event is the original path you specified, the flag `kFSEventStreamEventFlagRootChanged` is set and event ID is zero. `RootChanged` events are useful to indicate that you should rescan a particular hierarchy because it changed completely (as opposed to the things inside of it changing). If you want to track the current location of a directory, it is best to open the directory before creating the stream so that you have a file descriptor for it and can issue an `F_GETPATH` `fcntl()` to find the current path.

IgnoreSelf = 8

Don't send events that were triggered by the current process. This is useful for reducing the volume of events that are sent. It is only useful if your process might modify the file system hierarchy beneath the path(s) being monitored. Note: this has no effect on historical events, i.e., those delivered before the `HistoryDone` sentinel event. Also, this does not apply to `RootChanged` events because the `WatchRoot` feature uses a separate mechanism that is unable to provide information about the responsible process.

FileEvents = 16

Request file-level notifications. Your stream will receive events about individual files in the hierarchy you're watching instead of only receiving directory level notifications. Use this flag with care as it will generate significantly more events than without it.

MarkSel = 32

Tag events that were triggered by the current process with the "OwnEvent" flag. This is only useful if your process might modify the file system hierarchy beneath the path(s) being monitored and you wish to know which events were triggered by your process. Note: this has no effect on historical events, i.e., those delivered before the HistoryDone sentinel event.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Initializes FSEvents:

```

Delete All Records [ No dialog ]
Set Variable [ $path; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $sinceWhen; Value:"now" ]
If [ not IsEmpty(FSEvents::LastID) ]
Set Variable [ $sinceWhen; Value:FSEvents::LastID ]
End If
Set Variable [ $fstream; Value:MBS("FSEvents.Create"; $path; $sinceWhen; "IgnoreSelf, FileEvents, Watch-
Root"; 2) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; "Failed to create file system event monitor." ]
Else
Set Variable [ $r; Value:MBS("FSEvents.SetFilename"; $fstream; Get(FileName)) ]
Set Variable [ $r; Value:MBS("FSEvents.SetScriptName"; $fstream; "FSEventsNotification") ]
Set Variable [ $r; Value:MBS("FSEvents.Start"; $fstream) ]
If [ $r = 1 ]
Set Field [ FSEvents::StreamRef; $fstream ]
Else
Show Custom Dialog [ "Error"; "Failed to start file system event monitor." ]
Set Variable [ $r; Value:MBS("FSEvents.Release"; $fstream) ]
End If
End If

```

## 84.2 FSEvents.CreateRelativeToDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	6.0	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.CreateRelativeToDevice"; DeviceID; PathList; sinceWhen { ; Flags; latency } )

### Parameters

#### DeviceID

The device ID. Either a number or the path to a file/folder of that device.

"/"

#### PathList

List of folders to watch. (or just one path)

\$path

#### sinceWhen

The event ID from where to start. Can be the latest ID you saw last time or you pass "now" to start with now.

"now"

#### Flags

Optional

The flags. Can be a combination of NoDefer, WatchRoot, IgnoreSelf, FileEvents or MarkSelf.

"IgnoreSelf,FileEvents"

#### latency

Optional

The latency.

2

**Result** Returns reference number or error.

### Description

You can only pass one path in the pathList. Pass empty text there to watch the root of the device.

### Examples

Watch root device with root folder since now:

```
MBS("FSEvents.CreateRelativeToDevice"; "/" ; "" ; "now")
```

### See also

### 84.3 FSEvents.CurrentEventId

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.CurrentEventId" )

**Result** Returns ID or error.

#### Description

Fetches the most recently generated event ID, system-wide (not just for one stream). By the time it is returned to your application even newer events may have already been generated.

#### Examples

Show current event ID:

Show Custom Dialog [ "Current event ID"; MBS( "FSEvents.CurrentEventId" ) ]

#### See also

- 84.16 FSEvents.LatestEventId

## 84.4 FSEvents.Description

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.Description" )

**Result** Returns text or error.

### Description

For debugging only.

Created 18th November 2015, last changed 19th November 2015.

## 84.5 FSEvents.DeviceBeingWatched

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	6.0	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.DeviceBeingWatched"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns number or error.

### Description

Only useful if created with FSEvents.CreateRelativeToDevice.

### See also

## 84.6 FSEvents.DeviceID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	6.0	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.DeviceID"; Path )

### Parameters

#### Path

The path to the disk.

"/"

**Result** Returns ID or error.

### Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Query ID for root:

```
MBS( "FSEvents.DeviceID"; "/" )
```

Query ID for volume Test:

```
MBS( "FSEvents.DeviceID"; "/Volumes/Test" )
```

### See also

## 84.7 FSEvents.EventCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.EventCount"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns number or error.

### Description

#### Examples

Shows event count:

```
Show Custom Dialog [ "Current event count"; MBS( "FSEvents.EventCount"; $fsEvents ) ]
```

Created 18th November 2015, last changed 12nd August 2017.

## 84.8 FSEvents.FlushASync

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.FlushASync"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$stream

**Result** Returns ID or error.

### Description

Asks the FS Events service to flush out any events that have occurred but have not yet been delivered, due to the latency parameter that was supplied when the stream was created. This flushing occurs asynchronously – do not expect the events to have already been delivered by the time this call returns. FSEvents.FlushASync can only be called after the stream has been started, via FSEvents.Start.

### See also

- 84.9 FSEvents.FlushSync 4274
- 84.25 FSEvents.Start 4293

Created 18th November 2015, last changed 19th November 2015.

## 84.9 FSEvents.FlushSync

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.FlushSync"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns OK or error.

### Description

Asks the FS Events service to flush out any events that have occurred but have not yet been delivered, due to the latency parameter that was supplied when the stream was created. This flushing occurs synchronously – by the time this call returns, your callback will have been invoked for every event that had already occurred at the time you made this call. FSEvents.FlushSync can only be called after the stream has been started, via FSEvents.Start.

### Examples

Flush events:

MBS( "FSEvents.FlushSync"; \$FSEvents )

### See also

- 84.8 FSEvents.FlushASync 4273

## 84.11 FSEvents.GetExclusionPaths

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	6.0	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.GetExclusionPaths"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns list or error.

### Description

### See also

- 84.21 FSEvents.SetExclusionPaths

4289

Created 29th November 2015, last changed 29th November 2015.

## 84.12 FSEvents.GetFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.GetFileName"; FSEventsRef )

### Parameters

#### **FSEventsRef**

The reference number for this FSEvents object.  
\$fstream

**Result** Returns text or error.

### Description

#### See also

- 84.13 FSEvents.GetScriptName 4278
- 84.22 FSEvents.SetFileName 4290

Created 18th November 2015, last changed 18th November 2015.

## 84.13 FSEvents.GetScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.GetScriptName"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns text or error.

### Description

### See also

- 84.12 FSEvents.GetFileName 4277
- 84.23 FSEvents.SetScriptName 4291

## 84.14 FSEvents.HasNextEvent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.HasNextEvent"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns 0 or 1 or error.

### Description

Returns 1 if there is an event in the queue or zero if no event is there.

### See also

- [84.16 FSEvents.LatestEventId](#) 4281
- [84.17 FSEvents.NextEvent](#) 4282

### Example Databases

- [Mac only/FSEvents](#)

Created 18th November 2015, last changed 18th November 2015.

## 84.15 FSEvents.LastEventIdForDeviceBeforeTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	6.0	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.LastEventIdForDeviceBeforeTime"; Path; TimeStamp )

### Parameters

#### Path

The path to the disk.

"/"

#### TimeStamp

The timestamp to use.

**Result** Returns ID or error.

### Description

Gets the last event ID for the given device that was returned before the given time. This is conservative in the sense that if you then use the returned event ID as the sinceWhen parameter of FSEvents.CreateRelativeToDevice that you will not miss any events that happened since that time. On the other hand, you might receive some (harmless) extra events.

Beware: there are things that can cause this to fail to be accurate. For example, someone might change the system's clock (either backwards or forwards). Or an external drive might be used on different systems without perfectly synchronized clocks.

### Examples

Queries event ID for root device:

```
MBS( "FSEvents.LastEventIdForDeviceBeforeTime"; "/" ; Date( 1 ; 1 ; 2015 ) )
```

### See also

- 84.1 FSEvents.Create 4263
- 84.2 FSEvents.CreateRelativeToDevice 4267

Created 29th November 2015, last changed 12nd August 2017.

**84.16 FSEvents.LatestEventId**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.LatestEventId"; FSEventsRef )

**Parameters****FSEventsRef**

The reference number for this FSEvents object.

\$fstream

**Result** Returns ID or error.

**Description**

Fetches the sinceWhen property of the stream. Upon receiving an event (and just before invoking the client's callback) this attribute is updated to the highest-numbered event ID mentioned in the event.

**Examples**

Query last event ID:

MBS( "FSEvents.LatestEventId"; \$FSE )

**See also**

- 84.3 FSEvents.CurrentEventId 4268
- 84.14 FSEvents.HasNextEvent 4279

Created 18th November 2015, last changed 13th March 2016.

## 84.17 FSEvents.NextEvent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.NextEvent"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns event data or error.

### Description

Returns a list of values. First entry is the path, second entry the ID number for this event. Third is the flags value as number and forth as text values. This allows you to check for some values like "ItemCreated".

Flags that are returned for file system events.

It is important to note that event flags are simply hints about the sort of operations that occurred at that path.

Furthermore, the FSEvent stream should NOT be treated as a form of historical log that could somehow be replayed to arrive at the current state of the file system.

The FSEvent stream simply indicates what paths changed; and clients need to reconcile what is really in the file system with their internal data model - and recognize that what is actually in the file system can change immediately after you check it.

MustScanSubDirs = 1

Your application must rescan not just the directory given in the event, but all its children, recursively. This can happen if there was a problem whereby events were coalesced hierarchically. For example, an event in /Users/jsmith/Music and an event in /Users/jsmith/Pictures might be coalesced into an event with this flag set and path=/Users/jsmith. If this flag is set you may be able to get an idea of whether the bottleneck happened in the kernel (less likely) or in your client (more likely) by checking for the presence of the informational flags UserDropped or KernelDropped.

UserDropped = 2

KernelDropped = 4

The UserDropped or KernelDropped flags may be set in addition to the MustScanSubDirs flag to indicate that a problem occurred in buffering the events (the particular flag set indicates where the problem occurred) and that the client must do a full scan of any directories (and their subdirectories, recursively) being monitored by this stream. If you asked to monitor multiple paths with this stream then you will be notified about all of them. Your code need only check for the MustScanSubDirs flag; these flags (if present) only provide information to help you diagnose the problem.

EventIdsWrapped = 8

If `EventIdsWrapped` is set, it means the 64-bit event ID counter wrapped around. As a result, previously-issued event ID's are no longer valid arguments for the `sinceWhen` parameter of the `FSEvent.Create` function.

`HistoryDone = 16`

Denotes a sentinel event sent to mark the end of the "historical" events sent as a result of specifying a `sinceWhen` value in the `FSEvents.Create...`() call that created this event stream. (It will not be sent if `kFSEventStreamEventIdSinceNow` was passed for `sinceWhen`.) After invoking the client's callback with all the "historical" events that occurred before now, the client's callback will be invoked with an event where the `HistoryDone` flag is set. The client should ignore the path supplied in this callback.

`RootChanged = 32`

Denotes a special event sent when there is a change to one of the directories along the path to one of the directories you asked to watch. When this flag is set, the event ID is zero and the path corresponds to one of the paths you asked to watch (specifically, the one that changed). The path may no longer exist because it or one of its parents was deleted or renamed. Events with this flag set will only be sent if you passed the flag `kFSEvents.CreateFlagWatchRoot` to `FSEvents.Create` when you created the stream.

`Mount = 64`

Denotes a special event sent when a volume is mounted underneath one of the paths being monitored. The path in the event is the path to the newly-mounted volume. You will receive one of these notifications for every volume mount event inside the kernel (independent of `DiskArbitration`). Beware that a newly-mounted volume could contain an arbitrarily large directory hierarchy. Avoid pitfalls like triggering a recursive scan of a non-local filesystem, which you can detect by checking for the absence of the `MNT_LOCAL` flag in the `f_flags` returned by `statfs()`. Also be aware of the `MNT_DONTBROWSE` flag that is set for volumes which should not be displayed by user interface elements.

`Unmount = 128`

Denotes a special event sent when a volume is unmounted underneath one of the paths being monitored. The path in the event is the path to the directory from which the volume was unmounted. You will receive one of these notifications for every volume unmount event inside the kernel. This is not a substitute for the notifications provided by the `DiskArbitration` framework; you only get notified after the unmount has occurred. Beware that unmounting a volume could uncover an arbitrarily large directory hierarchy, although Mac OS X never does that.

`ItemCreated = 256`

A file system object was created at the specific path supplied in this event.  
(This flag is only ever set if you specified the `FileEvents` flag when creating the stream.)

`ItemRemoved = 512`

A file system object was removed at the specific path supplied in this event.  
(This flag is only ever set if you specified the `FileEvents` flag when creating the stream.)

`ItemInodeMetaMod = 1024`

A file system object at the specific path supplied in this event had its metadata modified.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemRenamed = 2048

A file system object was renamed at the specific path supplied in this event.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemModified = 4096

A file system object at the specific path supplied in this event had its data modified.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemFinderInfoMod = 8192

A file system object at the specific path supplied in this event had its FinderInfo data modified.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemChangeOwner = 16384

A file system object at the specific path supplied in this event had its ownership changed.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemXattrMod = 32768

A file system object at the specific path supplied in this event had its extended attributes modified.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemIsFile = 65536

The file system object at the specific path supplied in this event is a regular file.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemIsDir = 131072

The file system object at the specific path supplied in this event is a directory.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemIsSymlink = 262144

The file system object at the specific path supplied in this event is a symbolic link.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

OwnEvent = 524288

Indicates the event was triggered by the current process.

(This flag is only ever set if you specified the MarkSelf flag when creating the stream.)

ItemIsHardlink = 1048576

Indicates the object at the specified path supplied in this event is a hard link.

(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

#### 84.17. *FSEVENTS.NEXTEVENT*

4285

ItemIsLastHardlink = 2097152

Indicates the object at the specific path supplied in this event was the last hard link.  
(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

ItemCloned = 4194304

The file system object at the specific path supplied in this event is a clone or was cloned.  
(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

## 84.18 FSEvents.PathsBeingWatched

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.PathsBeingWatched"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns path list or error.

### Description

#### Examples

Query paths being watched:

```

Delete All Records [ No dialog ]
Set Variable [ $path; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $sinceWhen; Value:"now" ]
If [ not IsEmpty(FSEvents::LastID) ]
Set Variable [ $sinceWhen; Value:FSEvents::LastID ]
End If
Set Variable [ $fstream; Value:MBS("FSEvents.Create"; $path; $sinceWhen; "IgnoreSelf, FileEvents, Watch-Root"; 2) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Error"; "Failed to create file system event monitor." ]
Else
Show Custom Dialog [ "Paths"; MBS( "FSEvents.PathsBeingWatched"; $fstream ) ]
....
End If

```

## 84.19 FSEvents.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.Release"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns OK or error.

### Description

### Examples

Release FSEvents object:

```
Set Variable [ $r; Value:MBS("FSEvents.Release"; $fstream) ]
```

### See also

## 84.20 FSEvents.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	6.2	Yes	No	No	No	No

MBS( "FSEvents.SetEvaluate"; FSEventsRef; Expression )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let ( \$\$Done = 1 ; 1 )"

**Result** Returns OK or error.

### Description

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the FSEventsRef, so you can pass it to other functions if needed.

## 84.21 FSEvents.SetExclusionPaths

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	6.0	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.SetExclusionPaths"; FSEventsRef; Paths )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

#### Paths

The list of directories to filter.

**Result** Returns 1, 0 or error.

### Description

A maximum of 8 directories maybe specified.

Requires OS X 10.9 or newer.

Returns 1 on success or 0 on failure.

### Examples

Pass two paths to ignore:

```
Set Variable [ $r; Value:MBS( "FSEvents.SetExclusionPaths"; $FSEvents; "/Backups$/Data/Temp" ) ]
```

### See also

- 84.11 FSEvents.GetExclusionPaths

## 84.22 FSEvents.SetFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	No	No	No

MBS( "FSEvents.SetFileName"; FSEventsRef; Filename )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

#### Filename

The database file name where the script is located.

"test.fmp12"

**Result** Returns OK or error.

### Description

### Examples

Sets script to trigger:

```
Set Variable [ $r; Value:MBS("FSEvents.SetFilename"; $fstream; Get(FileName)) ]
```

```
Set Variable [ $r; Value:MBS("FSEvents.SetScriptName"; $fstream; "FSEventsNotification") ]
```

### See also

Created 18th November 2015, last changed 29th March 2016.

## 84.23 FSEvents.SetScriptName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	No	No	No

MBS( "FSEvents.SetScriptName"; FSEventsRef; Scriptname )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

#### Scriptname

The new script name.

""

**Result** Returns OK or error.

### Description

The script trigger feature does not work with FileMaker server. Please schedule a script there to check regularly.

### Examples

Sets script to trigger:

```
Set Variable [ $r; Value:MBS("FSEvents.SetFilename"; $fstream; Get(FileName)) ]
```

```
Set Variable [ $r; Value:MBS("FSEvents.SetScriptName"; $fstream; "FSEventsNotification") ]
```

## 84.24 FSEvents.Show

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.Show"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns OK or error.

### Description

For debugging only.

### See also

- 84.27 FSEvents.Stop

4295

Created 18th November 2015, last changed 19th November 2015.

## 84.25 FSEvents.Start

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.Start"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns 1, 0 or error.

### Description

Returns 1 on success or 0 on failure.

Attempts to register with the FS Events service to receive events per the parameters in the stream.

Once started, the stream can be stopped via FSEvents.Stop.

### Examples

Start FSEvents:

```
Set Variable [ $r; Value:MBS("FSEvents.Start"; $fstream) ]
```

### See also

- [84.1 FSEvents.Create](#) 4263

- [84.9 FSEvents.FlushSync](#) 4274
- [84.26 FSEvents.Started](#) 4294
- [84.27 FSEvents.Stop](#) 4295

### Example Databases

- [Mac only/FSEvents](#)

Created 18th November 2015, last changed 13th March 2016.

## 84.26 FSEvents.Started

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.Started"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$fstream

**Result** Returns 0, 1 or error.

### Description

Returns 1 if started, 0 if stopped.

### See also

- 84.25 FSEvents.Start

4293

Created 18th November 2015, last changed 18th November 2015.

## 84.27 FSEvents.Stop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	5.4	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.Stop"; FSEventsRef )

### Parameters

#### FSEventsRef

The reference number for this FSEvents object.

\$stream

**Result** Returns OK or error.

### Description

Unregisters with the FS Events service. The trigger will not be called for this stream while it is stopped. Stop can only be called if the stream has been started, via FSEvents.Start. Once stopped, the stream can be restarted via FSEvents.Start, at which point it will resume receiving events from where it left off ("sinceWhen").

### See also

- 84.24 FSEvents.Show 4292
- 84.25 FSEvents.Start 4293

Created 18th November 2015, last changed 19th November 2015.

## 84.28 FSEvents.UUIDForDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
84 FSEvents	6.0	Yes	No	Yes, macOS only	No	No

MBS( "FSEvents.UUIDForDevice" )

**Result** Returns UUID or error.

### Description

Returns empty text if not possible (for example, on read-only device).

A (non-empty) UUID uniquely identifies a given stream of FSEvents. If this (non-empty) UUID is different than one that you stored from a previous run then the event stream is different (for example, because FSEvents were purged, because the disk was erased, or because the event ID counter wrapped around back to zero). An empty return value indicates that "historical" events are not available, i.e., you should not supply a "sinceWhen" value to FSEvents.Create other than "now".

The UUID is returned as 32 hex characters.

### Examples

Queries UUID for root:

```
MBS( "FSEvents.UUIDForDevice"; "/" )
```

# Chapter 85

## GameKit

Functions for Game Center on MacOS and iOS

Please read documentation from Apple on the concept of Game Center. Your iOS/Mac app needs to be setup with Apple and get entitlements and signature.

### 85.1 GameKit.Achievement.Completed

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Achievement.Completed"; AchievementRef )

#### Parameters

##### AchievementRef

The identifier for the achievement.

\$Achievement

**Result** Returns 1, 0 or error.

#### Description

A Boolean value that states whether the player has completed the achievement.

The value of this property is 1 if the percentComplete property is equal to 100.0; otherwise, it is 0.

#### See also

- 85.6 GameKit.Achievement.Player

4302

Created 5th November 2018, last changed 8th November 2018.

## 85.2 GameKit.Achievement.GetPercentComplete

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Achievement.GetPercentComplete"; AchievementRef )

### Parameters

#### AchievementRef

The identifier for the achievement.

\$Achievement

**Result** Returns number or error.

### Description

A percentage value that states how far the player has progressed on this achievement.

The default value for a newly initialized achievement object is 0.0. The range of legal values is between 0.0 and 100.0, inclusive. You decide how that percentage is calculated and when it changes. For example, if the player earns an achievement simply for discovering a location in your game, then you would simply report the achievement as 100 percent complete the first time you report progress to Game Center. On the other hand, for an achievement like “Capture 10 pirates”, your reporting mechanism increments by 10 percent each time the player captures a pirate.

### See also

- 85.7 GameKit.Achievement.SetPercentComplete 4303

Created 5th November 2018, last changed 8th November 2018.

## 85.3 GameKit.Achievement.GetShowsCompletionBanner

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Achievement.GetShowsCompletionBanner"; AchievementRef )

### Parameters

#### AchievementRef

The identifier for the achievement.

\$Achievement

**Result** Returns 1, 0 or error.

### Description

A Boolean value that states whether a banner is displayed when the achievement is completed.

When an achievement is completed and the value of this property is 1, a notification banner is displayed to the player to inform them of the completed achievement. If the value of this property is 0, there is no visual indication that the achievement is completed. Your game should set this property to 0 to provide its own visual indicator that the achievement was earned. The default value is 0.

### See also

- 85.8 GameKit.Achievement.SetShowsCompletionBanner

4304

Created 5th November 2018, last changed 8th November 2018.

## 85.4 GameKit.Achievement.LastReportedDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Achievement.LastReportedDate"; AchievementRef )

### Parameters

#### AchievementRef

The identifier for the achievement.

\$Achievement

**Result** Returns timestamp or error.

### Description

The last time that progress on the achievement was successfully reported to Game Center.

On a newly initialized achievement object, this property holds the current date.

### Examples

Query last reported date:

MBS( "GameKit.Achievement.LastReportedDate"; "de.mbsplugins.test")

Created 5th November 2018, last changed 8th November 2018.

## 85.5 GameKit.Achievement.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Achievement.New"; Identifier { ; Player } )

### Parameters

#### Identifier

The identifier for the achievement.

#### Player

Optional

The identifier for the player.

**Result** Returns achievement identifier or error.

### Description

Your game initializes a new achievement object only when it has not previously reported progress for that achievement. If your game has previously reported progress on an achievement, you should first retrieve the current progress by calling the GameKit.LoadAchievements function.

The identifier string should be a reverse DNS style string, such as "com.mycompany.myapplication.myactivity". Zero-length strings are not allowed.

### Examples

Make new achievement:

```
MBS( "GameKit.Achievement.New"; "de.mbsplugins.test")
```

### See also

Created 5th November 2018, last changed 8th November 2018.

## 85.6 GameKit.Achievement.Player

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Achievement.Player"; AchievementRef )

### Parameters

#### AchievementRef

The identifier for the achievement.

\$Achievement

**Result** Returns player identifier or error.

### Description

#### See also

- 85.1 GameKit.Achievement.Completed 4297
- 85.5 GameKit.Achievement.New 4301

Created 5th November 2018, last changed 8th November 2018.

## 85.7 GameKit.Achievement.SetPercentComplete

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Achievement.SetPercentComplete"; AchievementRef; Value )

### Parameters

#### AchievementRef

The identifier for the achievement.

\$Achievement

#### Value

The new percent value.

100

**Result** Returns OK or error.

### Description

A percentage value that states how far the player has progressed on this achievement.

The default value for a newly initialized achievement object is 0.0. The range of legal values is between 0.0 and 100.0, inclusive. You decide how that percentage is calculated and when it changes. For example, if the player earns an achievement simply for discovering a location in your game, then you would simply report the achievement as 100 percent complete the first time you report progress to Game Center. On the other hand, for an achievement like “Capture 10 pirates”, your reporting mechanism increments by 10 percent each time the player captures a pirate.

## 85.8 GameKit.Achievement.SetShowsCompletionBanner

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Achievement.SetShowsCompletionBanner"; AchievementRef; Value )

### Parameters

#### AchievementRef

The identifier for the achievement.

\$Achievement

#### Value

The new boolean value. Pass 1 to show or 0 to hide banner.

**Result** Returns OK or error.

### Description

A Boolean value that states whether a banner is displayed when the achievement is completed.

When an achievement is completed and the value of this property is 1, a notification banner is displayed to the player to inform them of the completed achievement. If the value of this property is 0, there is no visual indication that the achievement is completed. Your game should set this property to 0 to provide its own visual indicator that the achievement was earned. The default value is 0.

## 85.9 GameKit.AchievementDescription.AchievedDescription

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.AchievedDescription"; AchievementDescriptionRef )

### Parameters

#### AchievementDescriptionRef

The identifier for the achievement description.

\$AchievementDescription

**Result** Returns text or error.

### Description

A localized description to be used after the local player has completed the achievement.

### See also

- 85.18 GameKit.AchievementDescription.UnachievedDescription

4314

### Example Databases

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.10 GameKit.AchievementDescription.GroupIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.GroupIdentifier"; AchievementDescriptionRef )

### Parameters

#### AchievementDescriptionRef

The identifier for the achievement description.

\$AchievementDescription

**Result** Returns group identifier or error.

### Description

The identifier for the group the achievement description is part of.

If your game is configured to be part of a game group in App Store Connect, this property holds the identifier you assigned to the achievement in the game group. If the game is not part of a game group, this property is empty.

Created 5th November 2018, last changed 8th November 2018.

## 85.11 GameKit.AchievementDescription.Hidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.Hidden"; AchievementDescriptionRef )

### Parameters

#### AchievementDescriptionRef

The identifier for the achievement description.

\$AchievementDescription

**Result** Returns 1, 0 or error.

### Description

A Boolean value that states whether this achievement is initially visible to players.

If the value of this property is 0, this achievement is always visible to the player. If 1, the achievement is not displayed in any of the standard achievement user interface screens. It remains hidden until the first time your game reports progress towards completing this achievement.

## 85.12 GameKit.AchievementDescription.Image

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.Image"; AchievementDescriptionRef { ; Filename; Type } )

### Parameters

#### AchievementDescriptionRef

The identifier for the achievement description.

\$AchievementDescription

#### Filename

Optional

For PDF or image files returned an optional file name.

"test.jpg"

#### Type

Optional

For images the type you like to get. Can be JPEG, TIFF, PNG, GIF, BMP or PDF.

"JPEG"

**Result** Returns image container or error.

### Description

Loading and displaying achievements using a custom interface is a two-step process, with the first step being to call the GameKit.LoadAchievementDescriptions function. The second step is to call the GameKit.AchievementDescription.Image function for each achievement the user has completed. Your game should display the placeholder image until the image is successfully downloaded.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.MaximumPoints"; AchievementDescriptionRef )

### Parameters

#### AchievementDescriptionRef

The identifier for the achievement description.

\$AchievementDescription

**Result** Returns number or error.

### Description

The number of points the player earns by completing this achievement.

### See also

- 85.11 GameKit.AchievementDescription.Hidden

4307

Created 5th November 2018, last changed 8th November 2018.

## 85.15 GameKit.AchievementDescription.PlaceholderCompletedAchievementImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.PlaceholderCompletedAchievementImage" { ; Filename; Type } )

### Parameters

#### Filename

Optional

For PDF or image files returned an optional file name.

"test.jpg"

#### Type

Optional

For images the type you like to get. Can be JPEG, TIFF, PNG, GIF, BMP or PDF.

"JPEG"

**Result** Returns image container or error.

### Description

When an achievement is completed, your game can display this image until the custom image for an achievement finishes loading.

### See also

- 85.13 GameKit.AchievementDescription.IncompleteAchievementImage

4309

Created 5th November 2018, last changed 8th November 2018.

## 85.16 GameKit.AchievementDescription.Replayable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.Replayable"; AchievementDescriptionRef )

### Parameters

#### AchievementDescriptionRef

The identifier for the achievement description.

\$AchievementDescription

**Result** Returns 1, 0 or error.

### Description

A Boolean value that states whether this achievement can be earned multiple times.

If the value of this property is 0, then the achievement may only be earned once. After the achievement is earned, Game Center ignores any further progress submitted for it. If the value of this property is 1, then the achievement is considered earned each time your game reports progress to Game Center that completes the achievement. This means that any appropriate banners are displayed to the player again, challenges based on the achievement are completed, and so on.

## 85.17 GameKit.AchievementDescription.Title

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.Title"; AchievementDescriptionRef )

### Parameters

#### AchievementDescriptionRef

The identifier for the achievement description.

\$AchievementDescription

**Result** Returns title text or error.

### Description

#### See also

- 85.11 GameKit.AchievementDescription.Hidden 4307
- 85.12 GameKit.AchievementDescription.Image 4308
- 85.16 GameKit.AchievementDescription.Replayable 4312
- 85.60 GameKit.LoadAchievementDescriptions 4356

### Example Databases

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.18 GameKit.AchievementDescription.UnachievedDescription

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AchievementDescription.UnachievedDescription"; AchievementDescriptionRef )

### Parameters

#### AchievementDescriptionRef

The identifier for the achievement description.

\$AchievementDescription

**Result** Returns text or error.

### Description

A localized description of the achievement to be used when the local player has not completed the achievement.

### See also

- 85.9 GameKit.AchievementDescription.AchievedDescription 4305

Created 5th November 2018, last changed 8th November 2018.

## 85.19 GameKit.AnonymousGuestPlayer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.AnonymousGuestPlayer"; guestIdentifier )

### Parameters

#### guestIdentifier

A developer created text used to identify the guest player.  
"OtherPlayer"

**Result** Returns player identifier or error.

### Description

This method is used to create a new player object for a guest player. Treat the guest player the same as a authenticated user in regards to matchmaking services.

Created 5th November 2018, last changed 8th November 2018.

## 85.20 GameKit.Challenge.Achievement

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Challenge.Achievement"; ChallengeRef )

### Parameters

#### ChallengeRef

The identifier for the challenge.

\$challenge

**Result** Returns achievement identifier or error.

### Description

A challenge sent to another player urging them to complete a specific achievement.

Only for achievement challenges.

Created 5th November 2018, last changed 8th November 2018.

## 85.21 GameKit.Challenge.CompletionDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Challenge.CompletionDate"; ChallengeRef )

### Parameters

#### ChallengeRef

The identifier for the challenge.

\$challenge

**Result** Returns date or error.

### Description

If the challenge is not complete, this value is empty.

Created 5th November 2018, last changed 8th November 2018.

## 85.22 GameKit.Challenge.Decline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Challenge.Decline"; ChallengeRef )

### Parameters

#### ChallengeRef

The identifier for the challenge.

\$challenge

**Result** Returns OK or error.

### Description

If your game implements a custom user interface to display challenges, it should include controls that allow a player to decline a challenge. If the player uses your user interface to decline a challenge, call this method.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Challenge.State"; ChallengeRef )

### Parameters

#### ChallengeRef

The identifier for the challenge.

\$challenge

**Result** Returns state or error.

### Description

Possible values:

Invalid	An error occurred. The state of this challenge is not valid.
Pending	The challenge has been issued, but is not yet completed nor declined.
Completed	The receiving player successfully completed the challenge.
Declined	The receiving player declined the challenge.

Created 5th November 2018, last changed 8th November 2018.

## 85.33 GameKit.GameCenterView.GetViewState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.GameCenterView.GetViewState" )

**Result** Returns state or error.

### Description

The content displayed by the Game Center controller.

When you first present the Game Center view controller, the content displayed by the view controller is determined by this property. If the player navigates to different content, the view state is automatically updated. For example, to preserve the player's selections, you can read the viewState property after the screen is dismissed, and set that value the next time you initialize the view controller.

Value can be Default, Leaderboards, Achievements or Challenges.

### See also

- 85.39 GameKit.GameCenterView.SetViewState 4335

Created 5th November 2018, last changed 8th November 2018.

## 85.34 GameKit.GameCenterView.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.GameCenterView.Initialize" )

**Result** Returns OK or error.

### Description

The Game Center view provides a single user interface used to display achievements and leaderboards supported by Game Center.

### See also

- 85.30 GameKit.GameCenterView.Dismiss 4326

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.35 GameKit.GameCenterView.Present

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.GameCenterView.Present" )

**Result** Returns OK or error.

### Description

For iOS this is full screen and for MacOS on the current window.

### See also

- 85.30 GameKit.GameCenterView.Dismiss

4326

### Example Databases

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.36 GameKit.GameCenterView.SetLeaderboardIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.GameCenterView.SetLeaderboardIdentifier"; leaderboardIdentifier )

### Parameters

#### leaderboardIdentifier

The leaderboard identifier for the leaderboard to use.

**Result** Returns OK or error.

### Description

The named leaderboard that is displayed by the view controller.

The leaderboardIdentifier property must either be empty or it must match a leaderboard identifier you defined when you created your leaderboards in App Store Connect. If empty, the view displays scores for the aggregate leaderboard. Default is empty.

When the leaderboard is presented, the value of this property determines which leaderboard content is displayed to the player. As the player changes which leaderboard content they view, the leaderboardIdentifier property is automatically updated. For example, to preserve the player's selections, you can read the leaderboardIdentifier property after the screen is dismissed, and set that value the next time you initialize the view controller.

### See also

- 85.31 GameKit.GameCenterView.GetLeaderboardIdentifier 4327

Created 5th November 2018, last changed 8th November 2018.

## 85.37 GameKit.GameCenterView.SetLeaderboardTimeScope

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.GameCenterView.SetLeaderboardTimeScope"; Scope )

### Parameters

#### Scope

The new time scope. Can be Today, Week or AllTime.

"Week"

**Result** Returns OK or error.

### Description

A filter used to restrict the search to scores that were showed within a specific period of time.

Can be "Week", "Today" or "AllTime".

This property determines which tab view of the scores screen is displayed to the player. The default value is AllTime, which shows the best score each player has earned. For more information on time scopes, see Leaderboard functions.

When the leaderboard is presented, the value of this property determines the initial tab that is displayed to the player. As the player changes which tab they view, the leaderboardTimeScope property is automatically updated. For example, to preserve the player's selections, you can read the leaderboardTimeScope property after the screen is dismissed, and set that value the next time you initialize the view controller.

### See also

Created 5th November 2018, last changed 8th November 2018.

## 85.38 GameKit.GameCenterView.SetScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.GameCenterView.SetScriptTrigger"; Filename; ScriptName { ; Parameter } )

### Parameters

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

#### Parameter

Optional

The script parameter.

**Result** Returns OK or error.

### Description

#### Example Databases

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.39 GameKit.GameCenterView.SetViewState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.GameCenterView.SetViewState"; ViewState )

### Parameters

#### ViewState

The view state to use. Can be Leaderboards, Achievements, Challenges or Default. "Leaderboards"

**Result** Returns OK or error.

### Description

The content displayed by the Game Center controller.

When you first present the Game Center view controller, the content displayed by the view controller is determined by this property. If the player navigates to different content, the view state is automatically updated. For example, to preserve the player's selections, you can read the viewState property after the screen is dismissed, and set that value the next time you initialize the view controller.

Value can be Default, Leaderboards, Achievements or Challenges.

### See also

## 85.40 GameKit.GameCenterView.ShowBannerWithTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.GameCenterView.ShowBannerWithTitle"; Title; Message { ; Duration } )

### Parameters

#### Title

The title for the banner.

#### Message

A secondary message to be displayed.

#### Duration

Optional

The amount of time that the banner should be displayed to the player. In seconds.

5

**Result** Returns OK or error.

### Description

Optional for a specified period of time.

Created 5th November 2018, last changed 8th November 2018.

## 85.41 GameKit.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Initialize" )

**Result** Returns OK or error.

### Description

Loads the framework, setups script triggers and loads local player.  
Must be called once before doing any other method.

### Examples

Initialize GameKit:

```
# Try to init GameKit
Set Variable [ $r ; Value: MBS( "GameKit.Initialize" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Failed to initialize GameKit." ; $r ]
Exit Script [ Text Result: ]
End If
# Set script to call when player changes
Set Variable [ $r ; Value: MBS( "GameKit.SetPlayerDidChangeScriptTrigger"; Get(FileName); "Player-Changed" ) ]
# Login if needed
If [ MBS( "GameKit.LocalPlayer.isAuthenticated" ) = 0 ]
# Show Login dialog
Set Variable [ $r ; Value: MBS( "GameKit.LocalPlayer.Authenticate" ) ]
End If
```

## 85.42 GameKit.Leaderboard.GetPlayerScope

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.GetPlayerScope"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns value or error.

### Description

A filter used to restrict the search to a subset of the players on Game Center.

The `playerScope` property is ignored if the leaderboard request was initialized using the player identifiers list. Otherwise, the `playerScope` property determines which players are included in the request for high scores. The default is `Global`.

Value can be `FriendsOnly` or `Global`.

## 85.43 GameKit.Leaderboard.GetRange

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.GetRange"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns range values or error.

### Description

Returns list of two values, first is start value and second is length.

### See also

## 85.44 GameKit.Leadersboard.GetTimeScope

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leadersboard.GetTimeScope"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns value or error.

### Description

A filter used to restrict the search to scores that were posted within a specific period of time. Can be "Week", "Today" or "AllTime".

### See also

## 85.45 GameKit.Leaderboard.GroupIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.GroupIdentifier"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns group identifier or error.

### Description

If your game was configured to be part of a group in App Store Connect, this property holds the identifier you assigned to the group.

### See also

- 85.57 GameKit.LeaderboardSet.GroupIdentifier 4353

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.Image"; LeaderboardIdentifier { ; Filename; Type } )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

#### Filename

Optional

For PDF or image files returned an optional file name.

"test.jpg"

#### Type

Optional

For images the type you like to get. Can be JPEG, TIFF, PNG, GIF, BMP or PDF.

"JPEG"

**Result** Returns image container or error.

## 85.48 GameKit.Leaderboard.Loading

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.Loading"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns 1, 0 or error.

### Description

A Boolean value that indicates whether the leaderboard object is retrieving scores.

The value of the loading property is 1 if the leaderboard object has any pending requests for scores.

### See also

## 85.49 GameKit.Leaderboard.LocalPlayerScore

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.LocalPlayerScore"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns score identifier or error.

### Description

This property is invalid until a call to GameKit.Leaderboard.LoadScores is completed. Afterward, it contains a score object representing the local player's score on the leaderboard given the filters you applied to the query.

### See also

## 85.50 GameKit.Leaderboard.MaxRange

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.MaxRange"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns number or error.

### Description

This property is invalid until a call to GameKit.Leaderboard.LoadScores is completed. Afterward, it contains the total number of entries available to return to your game given the filters you applied to the query.

## 85.51 GameKit.Leaderboard.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.New" { ; playerIdentifiers } )

### Parameters

#### playerIdentifiers

Optional

The list of player identifiers.

**Result** Returns leaderboard identifier or error.

### Description

If player list is given, returns an identifier for the leaderboard object initialized with this method ignores the playerScope and range properties. Instead, it retrieves scores for the specific list of players whose player identifiers are included in the players parameter.

If no player list is given, a leaderboard object initialized with this method uses the playerScope, timeScope, and range properties to search Game Center for scores.

## 85.52 GameKit.Leaderboard.Scores

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.Scores"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns list of score identifiers or error.

### Description

An array of score objects that contains the scores returned by the search.

This property is invalid until a call to GameKit.Leaderboard.LoadScores is completed. Afterward, it contains the same score objects that were returned to the completion handler.

### See also

- 85.46 GameKit.Leaderboard.Image 4342

## 85.53 GameKit.Leadersboard.SetPlayerScope

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leadersboard.SetPlayerScope"; LeaderboardIdentifier; Value )

### Parameters

#### LeaderboardIdentifier

The identifier of the leadersboard.

#### Value

The new scope value. Can be Global or FriendsOnly.  
"global"

**Result** Returns OK or error.

### Description

#### See also

- 85.42 GameKit.Leadersboard.GetPlayerScope 4338
- 85.44 GameKit.Leadersboard.GetTimeScope 4340

## 85.54 GameKit.Leaderboard.SetRange

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.SetRange"; LeaderboardIdentifier; Start; Length )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

#### Start

The new start value of the range.

1

#### Length

The new length value of the range.

10

**Result** Returns OK or error.

### Description

The range property is ignored if the leaderboard request was initialized using the player list option. Otherwise, the range property is used to filter which scores are returned to your game. For example, if you specified a range of [ 1,10 ] , after the search is complete, your game receives the best ten scores. The default range is [ 1,25 ] .

The minimum index is 1. The maximum length is 100.

## 85.55 GameKit.Leaderboard.SetTimeScope

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.SetTimeScope"; LeaderboardIdentifier; TimeScope )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

#### TimeScope

Can be "Week", "Today" or "AllTime".

"Week"

**Result** Returns OK or error.

### Description

A filter used to restrict the search to scores that were posted within a specific period of time.

Can be "Week", "Today" or "AllTime".

### See also

## 85.56 GameKit.Leaderboard.Title

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Leaderboard.Title"; LeaderboardIdentifier )

### Parameters

#### LeaderboardIdentifier

The identifier of the leaderboard.

**Result** Returns text or error.

### Description

If you initialized a new leaderboard object, this property is invalid until a call to `GameKit.Leaderboard.LoadScores` is complete. Afterward, it contains the localized title for the leaderboard identified by the category property.

## 85.63 GameKit.LoadLeaderboards

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.LoadLeaderboards"; LeaderboardSetIdentifier )

### Parameters

#### LeaderboardSetIdentifier

The identifier of the leaderboard set.

**Result** Returns leaderboard identifier list or error.

### Description

#### See also

- 85.62 GameKit.LoadLeaderboardSets

4358

Created 5th November 2018, last changed 27th January 2019.

## 85.64 GameKit.LoadPlayers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.LoadPlayers" )

**Result** Returns list of player identifiers or error.

**Description**

**See also**

- 85.66 GameKit.LocalPlayer

4362

Created 5th November 2018, last changed 8th November 2018.

## 85.65 GameKit.LoadReceivedChallenges

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.LoadReceivedChallenges" )

**Result** Returns list or error.

### Description

Returns list of challenge identifiers or error.

Created 5th November 2018, last changed 8th November 2018.

## 85.66 GameKit.LocalPlayer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.LocalPlayer" )

**Result** Returns player identifier or error.

### Description

You never directly create a local player object. Instead, you retrieve the Singleton object by calling this function.

Identifier changes when authenticated, but the plugin can always use local player if you pass "localplayer" as player identifier.

### Example Databases

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.67 GameKit.LocalPlayer.Authenticate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.LocalPlayer.Authenticate" )

**Result** Returns OK or error.

### Description

Your game should authenticate the player as early as possible after launching, ideally as soon as you can present a user interface to the player. For example, your game may be launched because the player accepted an invitation to join a match or to take a turn in a turn-based match, so you want your game to authenticate the player and process the match invitation as quickly as possible. After you set a handler, authentication begins automatically and is repeated when your game moves to the background and then back to the foreground.

Check later status via `GameKit.LocalPlayer.isAuthenticated` and `GameKit.LocalPlayer.AuthenticateError` functions.

### Examples

Login if needed:

```
If [ MBS( "GameKit.LocalPlayer.isAuthenticated" ) = 0 ]
# Show Login dialog
Set Variable [ $r ; Value: MBS( "GameKit.LocalPlayer.Authenticate" ) ]
End If
```

### Example Databases

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.69 GameKit.LocalPlayer.ClearAuthenticateHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.LocalPlayer.ClearAuthenticateHandler" )

**Result** Returns OK or error.

### Description

Once cleared, the authenticate dialog is no longer coming when needed. You can call GameKit.LocalPlayer.Authenticate again to authenticate later.

### See also

- 85.66 GameKit.LocalPlayer 4362
- 85.67 GameKit.LocalPlayer.Authenticate 4363

## 85.70 GameKit.LocalPlayer.isAuthenticated

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.LocalPlayer.isAuthenticated" )

**Result** Returns 1, 0 or error.

### Description

A Boolean value that indicates whether a local player is currently signed in to Game Center.

### Examples

Login if needed:

```
If [ MBS( "GameKit.LocalPlayer.isAuthenticated" ) = 0 ]
# Show Login dialog
Set Variable [ $r ; Value: MBS( "GameKit.LocalPlayer.Authenticate" ) ]
End If
```

### See also

### Example Databases

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.71 GameKit.LocalPlayer.isUnderage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.LocalPlayer.isUnderage" )

**Result** Returns 1, 0 or error.

### Description

A Boolean value that declares whether the local player is underage.

Some Game Center features are disabled if the local player is underage. Your game can also test this property if it wants to disable some of its own features based on the player's age.

### Example Databases

- [iOS/GameCenter](#)

Created 5th November 2018, last changed 8th November 2018.

## 85.72 GameKit.Player.Alias

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Player.Alias"; PlayerID )

### Parameters

#### PlayerID

The player identifier.

\$player

**Result** Returns alias name or error.

### Description

A string chosen by the player to identify themselves to other players.

### See also

- 85.75 GameKit.Player.Photo

4371

Created 5th November 2018, last changed 8th November 2018.

## 85.73 GameKit.Player.DisplayName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Player.DisplayName"; PlayerID )

### Parameters

#### PlayerID

The player identifier.

\$player

**Result** Returns name or error.

### Description

Returns the string to display for the player.

The display name for a player depends on whether the player is a friend of the local player authenticated on the device. If the player is a friend of the local player, then the display name is the actual name of the player. If the player is not a friend, then the display name is the player's alias.

Created 5th November 2018, last changed 8th November 2018.

## 85.74 GameKit.Player.GuestIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Player.GuestIdentifier"; PlayerID )

### Parameters

#### PlayerID

The player identifier.

\$player

**Result** Returns text or error.

### Description

A developer created string used to identify a guest player.

Created 5th November 2018, last changed 8th November 2018.

## 85.75 GameKit.Player.Photo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Player.Photo"; PlayerID { ; Filename; Type } )

### Parameters

#### PlayerID

The player identifier.

\$player

#### Filename

Optional

For PDF or image files returned an optional file name.

"test.jpg"

#### Type

Optional

For images the type you like to get. Can be JPEG, TIFF, PNG, GIF, BMP or PDF.

"JPEG"

**Result** Returns image container or error.

### Description

### See also

- 85.72 GameKit.Player.Alias

Created 5th November 2018, last changed 8th November 2018.

## 85.76 GameKit.RecentPlayers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.RecentPlayers" )

**Result** Returns player identifiers or error.

### Description

This method retrieves an array of players who have previously played with the local player or any players that are on the local player's legacy friends list.

Created 5th November 2018, last changed 8th November 2018.

## 85.77 GameKit.ReportAchievements

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.ReportAchievements"; achievementIdentifiers )

### Parameters

#### achievementIdentifiers

The list of achievement identifiers.

**Result** Returns OK or error.

### Description

Use this class method whenever you need to submit one or more achievement updates at the same time. Calling this method reports each of the achievements in the array. Processing multiple achievements at once allows the entire operation to be processed more efficiently.

### See also

- 85.61 GameKit.LoadAchievements 4357

## 85.78 GameKit.ReportAchievementsWithEligibleChallenges

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.ReportAchievementsWithEligibleChallenges"; challengeIdentifiers; achievementIdentifiers )

### Parameters

#### **challengeIdentifiers**

The list of challenge identifiers.

#### **achievementIdentifiers**

The list of achievement identifiers.

**Result** Returns OK or error.

### Description

Reports a list of achievements and limits the challenges those achievements may complete.

### See also

- 85.80 GameKit.ReportScoresWithEligibleChallenges

4376

Created 5th November 2018, last changed 8th November 2018.

## 85.79 GameKit.ReportScores

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.ReportScores"; scoreIdentifiers )

### Parameters

#### scoreIdentifiers

The list of score identifiers.

**Result** Returns OK or error.

### Description

Use this function whenever you need to submit scores to Game Center, whether you are reporting a single score or multiple scores. The method runs through the array of Score identifiers, submitting scores one at a time.

Created 5th November 2018, last changed 8th November 2018.

## 85.80 GameKit.ReportScoresWithEligibleChallenges

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.ReportScoresWithEligibleChallenges"; challengeIdentifiers; scoreIdentifiers )

### Parameters

#### **challengeIdentifiers**

The list of challenge identifiers.

#### **scoreIdentifiers**

The list of score identifiers.

**Result** Returns OK or error.

### Description

### See also

- 85.78 GameKit.ReportAchievementsWithEligibleChallenges 4374

Created 5th November 2018, last changed 8th November 2018.

**85.81 GameKit.ResetAchievements**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.ResetAchievements" )

**Result** Returns OK or error.

**Description**

Calling this class method deletes all progress towards achievements previously reported for the local player. Hidden achievements that were previously visible are now hidden again.

**See also**

- 85.61 GameKit.LoadAchievements 4357
- 85.77 GameKit.ReportAchievements 4373

## 85.82 GameKit.Score.Date

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.Date"; ScoreIdentifier )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

**Result** Returns timestamp or error.

### Description

When you initialize the new score object, the date property is automatically set to the current date and time.

### See also

- 85.88 GameKit.Score.New 4384
- 85.89 GameKit.Score.Player 4385
- 85.90 GameKit.Score.Rank 4386

## 85.83 GameKit.Score.FormattedValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.FormattedValue"; ScoreIdentifier )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

**Result** Returns text or error.

### Description

This property is invalid on a newly initialized score object. On a score returned from GameKit, it contains a formatted string based on the player's score. You determine how a score is formatted when you define the leaderboard in App Store Connect.

Never convert the value property into a string directly; always use this method to receive the formatted string.

Created 5th November 2018, last changed 8th November 2018.

## 85.84 GameKit.Score.GetContext

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.GetContext"; ScoreIdentifier )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

**Result** Returns number or error.

### Description

An integer value used by your game.

The context property is stored and returned to your game, but is otherwise ignored by Game Center. It allows your game to associate an arbitrary 64-bit unsigned integer value with the score data reported to Game Center. You decide how this integer value is interpreted by your game. For example, you might use the context property to store flags that provide game-specific details about a player's score, or you might use the context as a key to other data stored on the device or on your own server. The context is most useful when your game displays a custom leaderboard user interface.

## 85.85 GameKit.Score.GetShouldSetDefaultLeaderboard

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.GetShouldSetDefaultLeaderboard"; ScoreIdentifier )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

**Result** Returns 1, 0 or error.

### Description

A Boolean value that indicates whether this score should also update the default leaderboard.

If the value of this property is true, when the score is reported to Game Center, Game Center also updates the local player's default leaderboard to match the value stored in the leaderboardIdentifier property of the score object.

If the value of this property is false, the default leaderboard is not changed by reporting the score. The default value of this property is false.

## 85.86 GameKit.Score.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.GetValue"; ScoreIdentifier )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

**Result** Returns value or error.

### Description

The score earned by the player.

You can use any algorithm you want to calculate scores in your game. Your game must set the value property before reporting a score, otherwise an error is returned.

The value provided by a score object is interpreted by Game Center only when formatted for display. You determine how your scores are formatted when you define the leaderboard in App Store Connect.

## 85.87 GameKit.Score.LeaderboardIdentifier

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.LeaderboardIdentifier"; ScoreIdentifier )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

**Result** Returns leaderboard identifier or error.

### Description

#### See also

- 85.29 GameKit.DefaultLeaderboardIdentifier 4325
- 85.95 GameKit.SetDefaultLeaderboardIdentifier 4391

Created 5th November 2018, last changed 8th November 2018.

## 85.88 GameKit.Score.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.New"; LeaderboardIdentifier { ; PlayerIdentifier } )

### Parameters

#### LeaderboardIdentifier

The identifier for the leaderboard for this score.

#### PlayerIdentifier

Optional

The player identifier, if not the current one.

**Result** Returns score identifier or error.

### Description

Returns score identifier for a new score object for the specified leaderboard and optional player.

Your game explicitly allocates and initializes a score object using the designated player and current date when it needs to report a new score to Game Center.

### See also

- 85.82 GameKit.Score.Date 4378

## 85.89 GameKit.Score.Player

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.Player"; ScoreIdentifier )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

**Result** Returns player identifier or error.

### Description

When you initialize a new score object, the player property is set to the identifier for the local player. If the score object was returned to your game by loading scores from Game Center, the player property identifies the player who recorded that score.

### See also

- 85.66 GameKit.LocalPlayer 4362

- 85.88 GameKit.Score.New 4384
- 85.90 GameKit.Score.Rank 4386

Created 5th November 2018, last changed 8th November 2018.

## 85.90 GameKit.Score.Rank

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.Rank"; ScoreIdentifier )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

**Result** Returns number or error.

### Description

The value of this property is only valid on score objects returned from Game Center. The rank property represents the position of the score in the returned results, with 1 being the best score, 2 being the second best, and so on.

### See also

- 85.82 GameKit.Score.Date 4378

## 85.91 GameKit.Score.SetContext

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.SetContext"; ScoreIdentifier; Value )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

#### Value

The new context value. This is a 64-bit number you can store with the score.

**Result** Returns OK or error.

### Description

An integer value used by your game.

The context property is stored and returned to your game, but is otherwise ignored by Game Center. It allows your game to associate an arbitrary 64-bit unsigned integer value with the score data reported to Game Center. You decide how this integer value is interpreted by your game. For example, you might use the context property to store flags that provide game-specific details about a player's score, or you might use the context as a key to other data stored on the device or on your own server. The context is most useful when your game displays a custom leaderboard user interface.

## 85.92 GameKit.Score.SetShouldSetDefaultLeaderboard

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.SetShouldSetDefaultLeaderboard"; ScoreIdentifier; Value )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

#### Value

The new value. Pass 1 to update default leaderboard or 0 if not.

1

**Result** Returns OK or error.

### Description

A Boolean value that indicates whether this score should also update the default leaderboard.

If the value of this property is true, when the score is reported to Game Center, Game Center also updates the local player's default leaderboard to match the value stored in the leaderboardIdentifier property of the score object.

If the value of this property is false, the default leaderboard is not changed by reporting the score. The default value of this property is false.

### See also

- 85.85 GameKit.Score.GetShouldSetDefaultLeaderboard 4381

## 85.93 GameKit.Score.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.Score.SetValue"; ScoreIdentifier; Value )

### Parameters

#### ScoreIdentifier

The identifier for the score object.

#### Value

The new score value.

**Result** Returns OK or error.

### Description

The score earned by the player.

You can use any algorithm you want to calculate scores in your game. Your game must set the value property before reporting a score, otherwise an error is returned.

The value provided by a score object is interpreted by Game Center only when formatted for display. You determine how your scores are formatted when you define the leaderboard in App Store Connect.

## 85.94 GameKit.SelectChallengeablePlayers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.SelectChallengeablePlayers"; AchievementRef; playerIdentifiers )

### Parameters

#### AchievementRef

The identifier for the achievement.

\$Achievement

#### playerIdentifiers

The list of player identifiers.

**Result** Returns player identifier list or error.

### Description

The list of players is used to find those players that are eligible to earn the achievement.

Created 5th November 2018, last changed 8th November 2018.

**85.95 GameKit.SetDefaultLeaderboardIdentifier**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.SetDefaultLeaderboardIdentifier"; leaderboardIdentifier )

**Parameters****leaderboardIdentifier**

The new default leaderboard identifier.

**Result** Returns OK or error.

**Description**

The default leaderboard is configured in App Store Connect as part of configuring your game's leaderboards. All players normally start with this leaderboard as the default leaderboard. Calling this method changes the default leaderboard only for the local player.

**See also**

- 85.29 GameKit.DefaultLeaderboardIdentifier 4325

## 85.96 GameKit.SetPlayerDidChangeScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.SetPlayerDidChangeScriptTrigger"; Filename; ScriptName )

### Parameters

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

Script is called when player changed.

### Examples

Set script to call when player changes:

```
Set Variable [ $r ; Value: MBS( "GameKit.SetPlayerDidChangeScriptTrigger"; Get(Filename); "Player-Changed" ) ]
```

### See also

- 85.41 GameKit.Initialize

## 85.97 GameKit.ShowChallengeComposeDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
85 GameKit	8.5	Yes	No	No	No	Yes

MBS( "GameKit.ShowChallengeComposeDialog"; scoreRef or AchievementRef; Message; playerIdentifiers { ; Filename; ScriptName } )

### Parameters

#### scoreRef or AchievementRef

The score or achievement identifier.

#### Message

The message text.

#### playerIdentifiers

The list of player identifiers.

#### Filename

Optional

The database file name where the script is located.

"test.fmp12"

#### ScriptName

Optional

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

Provides a challenge compose view controller with pre-selected player identifiers and a pre-formatted, player-editable message.

Once dialog finishes, the given script is triggered and passed either didIssueChallenge or cancel as parameter.

Created 5th November 2018, last changed 8th November 2018.

# Chapter 86

## GUIImage

Image functions to convert between image formats and apply effects.

### 86.1 GUIImage.ReadFromContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
86 GUIImage	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "GUIImage.ReadFromContainer"; ImageRef; data { ; Geometry; Depth; Magick } )

#### Parameters

##### ImageRef

The image reference number.

1

##### data

A value from a Container Field.

##### Geometry

Optional

The rectangle. Geometry is specified as a width and height "100x200". Can be empty.

##### Depth

Optional

Color depth parameter.

0

##### Magick

Optional

The codec to use to read file.

**Result** Returns OK or error.

**Description**

This allows you to set options before reading in image.

You may want to use `GMImage.SetBackgroundColor`, `GMImage.SetMagick`, `GMImage.SetFilename` or other settings before calling this.

**Examples**

Convert a SVG image to PNG with alpha channel:

```
# Load image from container
Set Variable [ $image ; Value: MBS( "GMImage.New"; "500x500"; "transparent" ) ]
# turn on alpha channel and set background to transparent
Set Variable [ $r ; Value: MBS( "GMImage.SetType"; $image; 7 ) ]
Set Variable [ $r ; Value: MBS( "GMImage.SetBackgroundColor"; $Image; "transparent" ) ]
# read SVG
Set Variable [ $r ; Value: MBS( "GMImage.ReadFromContainer"; $image; SVG to PNG::InputFile; "500x500";
0; "SVG" ) ]
# Output to container and release image
Set Field [ SVG to PNG::OutputFile ; MBS( "GMImage.WriteToPNGContainer"; $image; "test.png" ) ]
Set Variable [ $r ; Value: MBS("GMImage.Free"; $image) ]
```

## GraphicsMagick

Image functions to convert between image formats and apply effects.

### 87.1 GImage.AdaptiveThreshold

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AdaptiveThreshold"; ImageRef; Width; height { ; offset } )

#### Parameters

##### ImageRef

The image reference number.

1

##### Width

defines the size of the pixel neighborhood

100

##### height

defines the size of the pixel neighborhood

100

##### offset

Optional

Optional, constant to subtract from pixel neighborhood mean

0

**Result** Returns "OK" on success.

#### Description

**See also**

- 87.237 GImage.SetCacheThreshold

Created 18th August 2014, last changed 18th August 2014.

## 87.2 GImage.AddNoise

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddNoise"; ImageRef; noiseType )

### Parameters

#### ImageRef

The image reference number.

1

#### noiseType

UniformNoise = 0, GaussianNoise = 1, MultiplicativeGaussianNoise = 2, ImpulseNoise = 3, LaplacianNoise = 4, PoissonNoise = 5.

0

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

### 87.3 GImage.AddNoiseChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddNoiseChannel"; ImageRef; ChannelType; noiseType )

#### Parameters

##### ImageRef

The image reference number.

1

##### ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

##### noiseType

UniformNoise = 0, GaussianNoise = 1, MultiplicativeGaussianNoise = 2, ImpulseNoise = 3, LaplacianNoise = 4, PoissonNoise = 5.

0

**Result** Returns "OK" on success.

#### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.4 GImage.AddPathArcAbs

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddPathArcAbs"; ImageRef; radiusX; radiusY; xAxisRotation; largeArcFlag; sweepFlag; x; y )

### Parameters

#### ImageRef

The image reference number.

1

#### radiusX

The radius in x direction.

100

#### radiusY

The radius in y direction.

100

#### xAxisRotation

The rotation value.

0

#### largeArcFlag

Pass 1 or 0 to decide if you want to draw larger arcs.

0

#### sweepFlag

Whether to draw the arc matching a clock-wise rotation.

0

#### x

The x coordinate.

10

#### y

The y coordinate.

10

**Result** Returns OK or error.

### Description

Draws an elliptical arc from the current point to (x, y). The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is 1 then draw the larger of the available arcs. If sweepFlag is 1, then draw the arc matching a clock-wise rotation.

With absolute coordinate.

**See also**

- 87.5 GImage.AddPathArcRel 4405

Created 18th August 2014, last changed 18th August 2014.

## 87.5 GImage.AddPathArcRel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddPathArcRel"; ImageRef; radiusX; radiusY; xAxisRotation; largeArcFlag; sweepFlag; x; y )

### Parameters

#### ImageRef

The image reference number.

1

#### radiusX

The radius in x direction.

100

#### radiusY

The radius in y direction.

100

#### xAxisRotation

The rotation value.

0

#### largeArcFlag

Pass 1 or 0 to decide if you want to draw larger arcs.

0

#### sweepFlag

Whether to draw the arc matching a clock-wise rotation.

0

#### x

The x coordinate.

10

#### y

The y coordinate.

10

**Result** Returns OK or error.

### Description

Draws an elliptical arc from the current point to (x, y). The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is 1 then draw the larger of the available arcs. If sweepFlag is 1, then draw the arc matching a clock-wise rotation.

With relative coordinate.

**See also**

- 87.4 GImage.AddPathArcAbs 4403

Created 18th August 2014, last changed 18th August 2014.

## 87.6 **GImage.AddPathClosePath**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddPathClosePath"; ImageRef )

### **Parameters**

#### **ImageRef**

The image reference number.

1

**Result** Returns OK or error.

### **Description**

Created 18th August 2014, last changed 18th August 2014.

## 87.7 GImage.AddPathCurvetoAbs

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "GImage.AddPathCurvetoAbs"; ImageRef; x1; y1; x2; y2; x; y )
```

### Parameters

#### ImageRef

The image reference number.

1

#### x1

The first control point.

#### y1

The first control point.

#### x2

The second control point.

#### y2

The second control point.

#### x

Destination point coordinate.

#### y

Destination point coordinate.

**Result** Returns OK or error.

### Description

Draws a cubic Bézier curve from the current point to (x,\*y\*) using (x1,\*y1\*) as the control point at the beginning of the curve and (x2,\*y2\*) as the control point at the end of the curve. GImage.AddPathCurveToAbs indicates that absolute coordinates will follow; GImage.AddPathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,\*y\*) coordinate pair used in the polybezier.

### Examples

Draws a bezier curve:

```
$r = MBS("GImage.AddPathMovetoAbs"; $img; 100; 100 )
```

```
$r = MBS("GImage.AddPathCurvetoAbs"; $img; 100; 300; 300; 100; 300; 300 )
```

```
$r = MBS("GImage.DrawPath"; $img )
```

## 87.8 GImage.AddPathCurvetoRel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddPathCurvetoRel"; ImageRef; x1; y1; x2; y2; x; y )

### Parameters

#### ImageRef

The image reference number.

1

#### x1

The first control point.

#### y1

The first control point.

#### x2

The second control point.

#### y2

The second control point.

#### x

Destination point coordinate.

#### y

Destination point coordinate.

**Result** Returns OK or error.

### Description

Draws a cubic Bézier curve from the current point to (x,\*y\*) using (x1,\*y1\*) as the control point at the beginning of the curve and (x2,\*y2\*) as the control point at the end of the curve. GImage.AddPathCurve-toAbs indicates that absolute coordinates will follow; GImage.AddPathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,\*y\*) coordinate pair used in the polybezier.

## 87.9 GImage.AddPathLinetoAbs

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddPathLinetoAbs"; ImageRef; x; y )

### Parameters

#### ImageRef

The image reference number.

1

#### x

The x coordinate.

10

#### y

The y coordinate.

10

**Result** Returns OK or error.

### Description

Draw a line from the current point to the given coordinate which becomes the new current point. Relative coordinates are used. At the end of the command, the new current point is set to the final set of coordinates provided.

## 87.10 GMImage.AddPathLinetoHorizontalAbs

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.AddPathLinetoHorizontalAbs"; ImageRef; x )

### Parameters

#### ImageRef

The image reference number.

1

#### x

The new x coordinate.

100

**Result** Returns OK or error.

### Description

GMImage.AddPathLinetoHorizontalAbs indicates that absolute coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x

## 87.11 GImage.AddPathLinetoHorizontalRel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddPathLinetoHorizontalRel"; ImageRef; x )

### Parameters

#### ImageRef

The image reference number.

1

#### x

The new relative x coordinate.

100

**Result** Returns OK or error.

### Description

GImage.AddPathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

**87.12 GMImage.AddPathLinetoRel**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.AddPathLinetoRel"; ImageRef; x; y )

**Parameters****ImageRef**

The image reference number.

1

**x**

The x coordinate.

10

**y**

The y coordinate.

10

**Result** Returns OK or error.

**Description**

Draw a line from the current point to the given coordinate which becomes the new current point. Relative coordinates are used. At the end of the command, the new current point is set to the final set of coordinates provided.

## 87.13 GImage.AddPathLinetoVerticalAbs

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddPathLinetoVerticalAbs"; ImageRef; y )

### Parameters

#### ImageRef

The image reference number.

1

#### y

The new relative y coordinate.

100

**Result** Returns OK or error.

### Description

PathLinetoVerticalAbs indicates that absolute coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

### See also

## 87.17 GImage.AddPathQuadraticCurvetoAbs

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AddPathQuadraticCurvetoAbs"; ImageRef; x1; y1; x; y )

### Parameters

#### ImageRef

The image reference number.

1

#### x1

The first control point.

#### y1

The first control point.

#### x

The target point.

#### y

The target point.

**Result** Returns OK or error.

### Description

The quadratic Bézier commands depend on the argument x1/y1 and x/y.

## 87.23 GImage.Affine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Affine"; ImageRef; sx; sy; rx; ry; tx; ty )

### Parameters

#### ImageRef

The image reference number.

1

#### sx

The x scale factors.

1

#### sy

The y scale factors.

1

#### rx

The x rotate factors.

0

#### ry

The y rotate factors.

0

#### tx

The x translation value.

0

#### ty

The y translation value.

0

**Result** Returns OK or error.

### Description

Specify a transformation matrix to adjust scaling, rotation, and translation (coordinate transformation) for subsequently drawn objects in the same or decendent drawing context. The sx & sy parameters represent the x & y scale factors, the rx & ry parameters represent the x & y rotation, and the tx & ty parameters represent the x & y translation:

## 87.24 GMImage.Annotate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Annotate"; ImageRef; text { ; boundingArea; gravity; degrees } )

### Parameters

#### ImageRef

The image reference number.

1

#### text

Some text

"Hello World"

#### boundingArea

Optional

The rectangle where to draw. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200%!"

"100x200+10+20"

#### gravity

Optional

The position of the text. Can be number of text value. Can be ForgetGravity=0, NorthWestGravity=1, NorthGravity=2, NorthEastGravity=3, WestGravity=4, CenterGravity=5, EastGravity=6, SouthWestGravity=7, SouthGravity=8, SouthEastGravity=9, StaticGravity=10.

"SouthWestGravity"

#### degrees

Optional

The rotation in degrees.

0

**Result** Returns "OK" on success.

### Description

Annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

Gravity values:

NorthWestGravity	1	text bottom-left corner placed at top-left
NorthGravity	2	text bottom-center placed at top-center
NorthEastGravity	3	text bottom-right corner placed at top-right
WestGravity	4	text left-center placed at left-center
CenterGravity	5	text center placed at center
EastGravity	6	text right-center placed at right-center
SouthWestGravity	7	text top-left placed at bottom-left
SouthGravity	8	text top-center placed at bottom-center
SouthEastGravity	9	text top-right placed at bottom-right
StaticGravity	10	static

You can pass empty text for parameters or not pass parameters. This function can work in 5 modes:

- Annotate with text using specified text, bounding area, placement gravity, and rotation.
- Annotate using specified text, bounding area, and placement gravity
- Annotate with text (bounding area is entire image) and placement gravity
- Annotate using specified text, and placement location
- Annotate with text (bounding area is entire image) and placement south

Depending on which parameters you specify or leave empty, we pick the best mode.

The function does not wrap text.

Please use `GMImage.FontTypeMetrics` to measure how much space text needs.

With version 8.3 or newer you can pass font names without file path, as we now recognize most standard fonts. Only for special fonts you need full path.

### Examples

Write three lines at 200/200 into the picture:

```
MBS( "GMImage.Annotate"; $ImageRef; "Hello\nWorld\nAgain"; "200x200"; 0; 0 )
```

Setup and write Hello:

```
MBS("GMImage.SetLineWidth"; $img; 1)
MBS("GMImage.SetStrokeColor"; $img; "RGB 0 0 0")
```

```
MBS("GImage.SetFont"; $img; "@/Library/Fonts/Arial.ttf")
MBS("GImage.SetfontPointSize"; $img; 14)
MBS("GImage.Annotate"; $img; "Hello World"; "+20+20")
```

For Windows use different font path:

```
MBS("GImage.SetFont"; $img; "@c:\Windows\Fonts\Tahoma.ttf")
MBS("GImage.Annotate"; $img; "Hello World"; "+20+20")
```

Load pictures, sets puts text on it in yellow and centered:

```
# load image from container
Set Variable [ $ref; Wert:MBS("GImage.NewFromContainer"; Annotate Image::InputImage) ]
# set font and font size
Set Variable [ $r; Wert:MBS("GImage.SetFontPointSize"; $ref; Annotate Image::FontSize) ]
Set Variable [ $r; Wert:MBS("GImage.SetFont"; $ref; Annotate Image::FontPath) ]
# set color to yellow
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $ref; "RGB 1 1 0") ]
# draw in rectangle with width and height of image (here 640 by 480) centered.
Set Variable [ $r; Wert:MBS("GImage.Annotate"; $ref; Annotate Image::Text; "640x480"; "CenterGravity") ]
# save image
Set Field [ Annotate Image::OutputImage; MBS( "GImage.WriteToPNGContainer"; $ref ) ]
# and free memory
Set Variable [ $Error; Wert:MBS("GMImage.Release";$ref) ]
```

Text and gravity only:

```
MBS("GImage.Annotate"; $ref; Annotate Image::Text; ""; "SouthWestGravity")
```

Write text with Arial Black:

```
Set Variable [ $ref ; Value: MBS("GImage.NewFromContainer"; Annotate Image::InputImage) ]
Set Variable [ $r ; Value: MBS("GImage.SetFontPointSize"; $ref; 72) ]
Set Variable [ $r ; Value: MBS("GImage.SetFont"; $ref; "Arial Black") ]
Set Variable [ $r ; Value: MBS("GImage.SetFillColor"; $ref; "RGB 0 0 0") ]
Set Variable [ $r ; Value: MBS("GImage.Annotate"; $ref; "Hello World"; "100x200+10+80"; 1) ]
Set Field [ Annotate Image::OutputImage ; MBS( "GImage.WriteToPNGContainer"; $ref ) ]
Set Variable [ $Error ; Value: MBS("GMImage.Release";$ref) ]
```

Write Japanese text with unicode font and UTF-8 encoding:

```
# This script loads the original picture to an image environment set the settings for the font and write a
text on a picture. Then we save the image in a container.
#
Set Variable [ $ref ; Value: MBS("GImage.NewFromContainer"; Annotate Image::InputImage) ]
# Settings for the font
```

```

Set Variable [ $r ; Value: MBS("GImage.SetTextEncoding"; $ref; "UTF-8") ]
Set Variable [ $r ; Value: MBS("GImage.SetFontSize"; $ref; 40) ]
Set Variable [ $r ; Value: MBS("GImage.SetFont"; $ref; "ArialUnicodeMS") ]
Set Variable [ $r ; Value: MBS("GImage.SetFillColor"; $ref; "RGB 0 0 0") ]
# Write the text to the picture
Set Variable [ $r ; Value: MBS("GImage.Annotate"; $ref; "Hello "; "100x200+10+40"; 1) ]
Set Field [ Annotate Image::OutputImage ; MBS( "GImage.WriteToPNGContainer"; $ref ) ]
# Free image
Set Variable [ $Error ; Value: MBS("GImage.Free";$ref) ]

```

## 87.25 **GMImage.AutoOrient**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.AutoOrient"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns OK or error.

### Description

This allows the image to be viewed correctly when the orientation attribute is not available, or is not respected.

### 87.25.1 Blog Entries

- [MBS FileMaker Plugin, version 9.0pr6](#)

Created 28th December 2018, last changed 14th May 2019.

## 87.26 GImage.AveragePixelValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.AveragePixelValue"; ImageRef { ; X; Y; Width; Height } )

### Parameters

#### ImageRef

The image reference number.

1

#### X

Optional

X-Position of the rectangle.

\$left

#### Y

Optional

Y-Position of the rectangle.

\$top

#### Width

Optional

The width of the rectangle. Default is width of image.

\$width

#### Height

Optional

The height of the rectangle. Default is height of image.

\$height

**Result** Returns the average pixel value.

### Description

Value is in range from 0.0 to 1.0 depending if it is more black (0.0) or white (1.0).

Make sure the pixels are in RGB format before you call this method. (Use GImage.SetType with value 6.)

This function is designed to test if a certain area in the image is white or black.

Does not check alpha channel!

Version 9.1 and later uses full image if rectangle is missed.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.BaseRows"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.30 GMImage.Blur

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Blur"; ImageRef { ; radius; sigma } )

### Parameters

#### ImageRef

The image reference number.

1

#### radius

Optional

Optional, The radius of the Gaussian, in pixels, not counting the center pixel.

0

#### sigma

Optional

Optional, The standard deviation of the Laplacian, in pixels.

1

**Result** Returns "OK" on success.

### Description

#### Examples

Blurs image

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Blur"; $Image; 10; 5);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$Result)
```

## 87.31 GMImage.BlurChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.BlurChannel"; ImageRef; ChannelType; radius; sigma )

### Parameters

#### ImageRef

The image reference number.

1

#### ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

#### radius

The radius of the Gaussian, in pixels, not counting the center pixel.

0

#### sigma

The standard deviation of the Laplacian, in pixels.

1

**Result** Returns "OK" on success.

### Description

## 87.32 GImage.Border

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Border"; ImageRef { ; Geometry } )

### Parameters

#### ImageRef

The image reference number.

1

#### Geometry

Optional

Optional, The rectangle with border width and height. Geometry is specified as a width and height "100x200". "100x200"

**Result** Returns "OK" on success.

### Description

The color of the border is specified by the borderColor attribute.

Offset from geometry is not used, just width and height.

### Examples

Add whitespace on top and bottom of image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$r = MBS( "GImage.SetBorderColor"; $Image; "white" );
$r = MBS("GImage.Border";$Image; "0x100");
$Result = MBS("GImage.WriteToPNGContainer"; $Image);

$r = MBS("GImage.Release";$Image)
];
$Result)
```

Add white space:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromContainer"; ScancodeTests::MyImage ) ]
Set Variable [ $r ; Value: MBS("GImage.SetBorderColor"; $image; "white") ]
Set Variable [ $r ; Value: MBS("GImage.Border"; $image; "20x2") ]
```

## 87.33 GImage.BoundingBox

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.BoundingBox"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a string with a geometry.

### Description

The current fuzz value is used when discriminating between pixels. This is the crop bounding box used by `crop(Geometry(0,0))`;

### See also

- 87.329 GImage.Trim

4821

Created 18th August 2014, last changed 18th August 2014.

## 87.34 GMImage.Channel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Channel"; ImageRef; ChannelType )

### Parameters

#### ImageRef

The image reference number.

1

#### ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

**Result** Returns "OK" on success.

### Description

#### Examples

Extracts the red channel:

```
Let ( [
  $Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
  $Result = MBS("GMImage.Channel";$Image; 1);
  $Result = MBS("GMImage.WriteToPNGContainer"; $Image);
  $Error = MBS("GMImage.Release";$Image)
] ;
$Result)
```

## 87.35 GMImage.Charcoal

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Charcoal"; ImageRef { ; radius; sigma } )

### Parameters

#### ImageRef

The image reference number.

1

#### radius

Optional

Optional, The radius of the Gaussian, in pixels, not counting the center pixel.

0

#### sigma

Optional

Optional, The standard deviation of the Laplacian, in pixels.

1

**Result** Returns "OK" on success.

### Description

### Examples

Apply Charcoal effect to an image

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Charcoal"; $Image; 10; 5);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$Result)
```

## 87.36 GMImage.Chop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Chop"; ImageRef; Geometry )

### Parameters

#### ImageRef

The image reference number.

1

#### Geometry

The area to remove. A Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

**Result** Returns "OK" on success.

**87.37 GImage.ClipMask**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.ClipMask"; ImageRef; clipMask )

**Parameters****ImageRef**

The image reference number.

1

**clipMask**

The image reference number.

2

**Result** Returns "OK" on success.

**Description**

The clip mask must be the same dimensions as the image. Pass an invalid image to unset an existing clip mask.

**See also**

- 87.38 GImage.ClipPath 4449

## 87.38 GImage.ClipPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.ClipPath"; ImageRef; name )

### Parameters

#### ImageRef

The image reference number.

1

#### name

The clipping path name.

"Clip1"

**Result** Returns OK or error.

### Description

#### See also

- 87.37 GImage.ClipMask 4448

## 87.39 GImage.Coders

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	8.4	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Coders" )

**Result** Returns JSON or error.

### Description

For each coder, we have the following entries:

Name	Format ID ("magick")
Description	Format description
Note	Usage note for user
Version	Support library version
Module	Name of loadable module
Readable	Whether this coder can read.
Writable	Whether this coder can write.
MultiFrame	Coder may read/write multiple frames (default True)
BlobSupport	Coder uses BLOB APIs (default True)
ThreadSupport	Coder is thread safe (default True)

## 87.40 GMImage.Colorize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Colorize"; ImageRef; opacity; penColor )

### Parameters

#### ImageRef

The image reference number.

1

#### opacity

Percent from 0 to 100.

50

#### penColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

### Description

Blends the fill color with each pixel in the image.

A percentage blend is specified with opacity. Control the application of different color components by specifying a different percentage for each component (e.g. 90/100/10 is 90% red, 100% green, and 10% blue).

### Examples

Colorize an image:

```
Set Variable [ $image ; Value: MBS( "GMImage.NewFromContainer"; test::Input ) ]
```

```
Set Variable [ $r ; Value: MBS( "GMImage.Colorize"; $image; 50; "RGB 1 0 0" ) ]
```

```
Set Field [ test::Output ; MBS( "GMImage.WriteToPNGContainer"; $image ) ]
```

```
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $image ) ]
```

### See also

- 87.214 GImage.Release 4674
- 87.310 GImage.Solarize 4798
- 87.340 GImage.WriteToPNGContainer 4840

Created 18th August 2014, last changed 11st November 2019.

## 87.41 GMImage.ColorizeRGB

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.ColorizeRGB"; ImageRef; opacityRed; opacityGreen; opacityBlue; penColor )

### Parameters

#### ImageRef

The image reference number.

1

#### opacityRed

Percent from 0 to 100.

50

#### opacityGreen

Percent from 0 to 100.

50

#### opacityBlue

Percent from 0 to 100.

50

#### penColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

### Description

Blends the fill color with each pixel in the image.

A percentage blend is specified with opacity. Control the application of different color components by specifying a different percentage for each component (e.g. 90/100/10 is 90% red, 100% green, and 10% blue).

### Examples

Colorize an image

```
MBS("GMImage.ColorizeRGB"; $BigImageRef; 10; 0; 0; "green")
```

Colorize by adding 10% blue:

```
Set Variable [ $BigImageRef; Value:MBS("GMImage.NewFromContainer"; Test::BigImage) ]
```

```
# 10% blue
```

```
Set Variable [ $Result; Value:MBS("GMImage.ColorizeRGB"; $BigImageRef; 10; 10; 10; "blue") ]
```

Set Field [ Test::Result; MBS( "GMImage.WriteToJPEGContainer"; \$BigImageRef ) ]

Set Variable [ \$Error; Value:MBS("GMImage.Release";\$BigImageRef) ]

### See also

Created 18th August 2014, last changed 11st November 2019.

## 87.42 GMImage.Columns

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Columns"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the Image width.

### Description

#### See also

## 87.43 GImage.Compare

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Compare"; ImageRef; OtherImageRef )

### Parameters

#### ImageRef

The image reference number.

1

#### OtherImageRef

The image reference number.

1

**Result** Returns true if equal and false if not equal.

### Description

Sets meanErrorPerPixel, normalizedMaxError, and normalizedMeanError in the current image. False is returned if the images are identical.

### Examples

Compare images:

```
Set Variable [ $img1; Value:MBS( "GImage.NewFromContainer"; test::Container1 ) ]
Set Variable [ $img2; Value:MBS( "GImage.NewFromContainer"; test::Container2 ) ]
Set Variable [ $result; Value:MBS( "GImage.Compare"; $img1; $img2 ) ]
If [ $result = 1 ]
Show Custom Dialog [ "Image Comparison"; "equal" ]
Else If [ $result = 0 ]
Set Variable [ $e; Value:MBS( "GImage.NormalizedMaxError"; $img1 ) ]
If [ $e 0 and $e <,03 ]
Show Custom Dialog [ "Image Comparison"; "very similar: " & MBS( "GImage.NormalizedMaxError";
$img1 ) ]
Else
Show Custom Dialog [ "Image Comparison"; "not equal" ]
End If
End If
Set Variable [ $r; Value:MBS("GImage.Release"; $img1) ]
Set Variable [ $r; Value:MBS("GImage.Release"; $img2) ]
```

## 87.44 GImage.Composite

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Composite"; ImageRef; OtherImageRef; GravityType { ; CompositeOperator } )

### Parameters

#### ImageRef

The image reference number.

1

#### OtherImageRef

The second image reference (a number returned from the GImage.New functions)

2

#### GravityType

The Gravity Type. Can be ForgetGravity=0, NorthWestGravity=1, NorthGravity=2, NorthEastGravity=3, WestGravity=4, CenterGravity=5, EastGravity=6, SouthWestGravity=7, SouthGravity=8, SouthEastGravity=9, StaticGravity=10.

0

#### CompositeOperator

Optional

Optional operator. Can be one of the following numbers: UndefinedCompositeOp = 0, OverCompositeOp = 1, InCompositeOp = 2, OutCompositeOp = 3, AtopCompositeOp = 4, XorCompositeOp = 5, PlusCompositeOp = 6, MinusCompositeOp = 7, AddCompositeOp = 8, SubtractCompositeOp = 9, DifferenceCompositeOp = 10, MultiplyCompositeOp = 11, BumpmapCompositeOp = 12, CopyCompositeOp = 13, CopyRedCompositeOp = 14, CopyGreenCompositeOp = 15, CopyBlueCompositeOp = 16, CopyOpacityCompositeOp = 17, ClearCompositeOp = 18, DissolveCompositeOp = 19, DisplaceCompositeOp = 20, ModulateCompositeOp = 21, ThresholdCompositeOp = 22, NoCompositeOp = 23, DarkenCompositeOp = 24, LightenCompositeOp = 25, HueCompositeOp = 26, SaturateCompositeOp = 27, ColorizeCompositeOp = 28, LuminizeCompositeOp = 29, CopyCyanCompositeOp = 32, CopyMagentaCompositeOp = 33, CopyYellowCompositeOp = 34, CopyBlackCompositeOp = 35, DivideCompositeOp = 36. Default is 2.

2

**Result** Returns "OK" on success.

### Description

#### Examples

Load image and compose it on another one:

```
# load images...
Set Variable [ $Image1 ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/logo.png" ) ]
Set Variable [ $Image2 ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/input.jpg" ) ]
# maybe scale it?
Set Variable [ $r ; Value: MBS( "GImage.Scale"; $Image1; "500x500" ) ]
# put first on second
```

```
Set Variable [ $r ; Value: MBS( "GMImage.Composite"; $Image2; $Image1; 5; 1) ]  
# and save to file  
Set Variable [ $r ; Value: MBS( "GMImage.WriteToFile"; $Image2; "/Users/cs/Pictures/output.jpg") ]  
# free memory  
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image1) ]  
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image2) ]
```

## 87.45 GMMImage.CompositeXY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMMImage.CompositeXY"; ImageRef; OtherImageRef; xOffset; yOffset { ; CompositeOperator } )

### Parameters

#### ImageRef

The image reference number.

1

#### OtherImageRef

The second image reference (a number returned from the GMMImage.New functions)

2

#### xOffset

The x offset.

0

#### yOffset

The y offset.

0

#### CompositeOperator

Optional

Optional operator. Can be one of the following numbers: UndefinedCompositeOp = 0, OverCompositeOp = 1, InCompositeOp = 2, OutCompositeOp = 3, AtopCompositeOp = 4, XorCompositeOp = 5, PlusCompositeOp = 6, MinusCompositeOp = 7, AddCompositeOp = 8, SubtractCompositeOp = 9, DifferenceCompositeOp = 10, MultiplyCompositeOp = 11, BumpmapCompositeOp = 12, CopyCompositeOp = 13, CopyRedCompositeOp = 14, CopyGreenCompositeOp = 15, CopyBlueCompositeOp = 16, CopyOpacityCompositeOp = 17, ClearCompositeOp = 18, DissolveCompositeOp = 19, DisplaceCompositeOp = 20, ModulateCompositeOp = 21, ThresholdCompositeOp = 22, NoCompositeOp = 23, DarkenCompositeOp = 24, LightenCompositeOp = 25, HueCompositeOp = 26, SaturateCompositeOp = 27, ColorizeCompositeOp = 28, LuminizeCompositeOp = 29, CopyCyanCompositeOp = 32, CopyMagentaCompositeOp = 33, CopyYellowCompositeOp = 34, CopyBlackCompositeOp = 35, DivideCompositeOp = 36. Default is 2.

2

**Result** Returns "OK" on success.

### Description

You can use this function for example to add a watermark image.

### Examples

Compose a picture on second:

```
# load images...
Set Variable [ $Image1 ; Value: MBS( "GMMImage.NewFromFile"; "/Users/cs/Pictures/IMG_3625.jpg" ) ]
Set Variable [ $Image2 ; Value: MBS( "GMMImage.NewFromFile"; "/Users/cs/Pictures/mond.jpg" ) ]
# put first on second
```

```
Set Variable [ $r ; Value: MBS( "GMImage.CompositeXY"; $Image2; $Image1; 500; 200) ]  
# and save to file  
Set Variable [ $r ; Value: MBS( "GMImage.WriteToFile"; $Image2; "/Users/cs/Pictures/output.jpg") ]  
# free memory  
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image1) ]  
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image2) ]
```

## 87.46 GImage.Contrast

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Contrast"; ImageRef; sharpen )

### Parameters

#### ImageRef

The image reference number.

1

#### sharpen

The sharpen value. An integer number, either 0 or 1.

1

**Result** Returns "OK" on success.

### Description

Enhances the intensity differences between the lighter and darker elements of the image. Set sharpen to a value other than 0 to increase the image contrast otherwise the contrast is reduced.

### Examples

Changes contrast:

```
# load images...
Set Variable [ $Image ; Value: MBS( "GImage.NewFromContainer"; test::Input ) ]
# change contrast
Set Variable [ $r ; Value: MBS( "GImage.Contrast"; $Image; 1 ) ]
# and save to container
Set Field [ test::Output ; MBS( "GImage.WriteToPNGContainer"; $Image; "test.png" ) ]
# free memory
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

## 87.47 GMImage.Copy

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Copy"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the ImageRef number on success.

### Description

Please call GMImage.Release later to free memory for this image.

## 87.48 GImage.CopyChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	7.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.CopyChannel"; SourceImage; SourceChannel; DestImage; DestChannel )

### Parameters

#### SourceImage

The image reference number of source image.

\$sourceImage

#### SourceChannel

The source channel. Can be Red, Green, Blue or Opacity.

"Opacity"

#### DestImage

The image reference number of dest image.

\$destImage

#### DestChannel

The dest channel. Can be Red, Green, Blue or Opacity.

"Opacity"

**Result** Returns OK or error.

### Description

e.g. to copy opacity from one image to other.

### Examples

Clip an image:

```
Set Variable [ $gray ; Value: "# 777777" ]
# Read in source image
Set Variable [ $SourceImage ; Value: MBS( "GImage.NewFromContainer"; Clip Image::Input ) ]
Set Variable [ $sourceWidth ; Value: MBS( "GImage.GetWidth"; $SourceImage ) ]
Set Variable [ $sourceHeight ; Value: MBS( "GImage.GetHeight"; $SourceImage ) ]
#
# Scale to dest size
Set Variable [ $sourceSize ; Value: If($sourceWidth >$sourceHeight; $sourceHeight; $sourceWidth) ]
Set Variable [ $destWidth ; Value: GetAsNumber ( Clip Image::Width ) ]
Set Variable [ $destHeight ; Value: GetAsNumber ( Clip Image::Height ) ]
Set Variable [ $destSize ; Value: If($destWidth >$destHeight; $destHeight; $destWidth) ]
Set Variable [ $tempImage ; Value: MBS( "GImage.New"; $sourceSize & "x" & $sourceSize; "transparent"
) ]
Set Variable [ $r ; Value: MBS( "GImage.CompositeXY"; $tempImage; $sourceImage; -($sourceWidth-
$sourceSize)/2; -($sourceHeight-$sourceSize)/2; 1) ]
Set Variable [ $r ; Value: MBS( "GImage.Scale"; $tempImage; $destSize & "x" & $destSize ) ]
#
```

```

# Build mask
Set Variable [ $clipImage ; Value: MBS( "GMImage.New"; $destSize & "x" & $destSize; "transparent" ) ]
Set Variable [ $r ; Value: MBS( "GMImage.SetFillColor"; $clipImage; "black" ) ]
Set Variable [ $radius ; Value: $destSize/2 ]
Set Variable [ $r ; Value: MBS( "GMImage.DrawCircle"; $clipImage; $radius; $radius; 0; $radius ) ]
#
# Apply mask
Set Variable [ $r ; Value: MBS( "GMImage.CopyChannel"; $tempImage; "Opacity"; $clipImage; "Opacity" ) ]
#
# Create destination image
Set Variable [ $destImage ; Value: MBS( "GMImage.New"; $destWidth & "x" & $destHeight; $gray ) ]
Set Variable [ $r ; Value: MBS( "GMImage.CompositeXY"; $destImage; $tempImage; ($destWidth-$destSize)/2; ($destHeight-$destSize)/2; 1 ) ]
Set Field [ Clip Image::Output ; MBS( "GMImage.WriteToPNGContainer"; $destImage ) ]
#
# Memory cleanup
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $SourceImage ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $tempImage ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $clipImage ) ]

```

Created 16th July 2017, last changed 21st December 2018.

## 87.49 GImage.Crop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Crop"; ImageRef; geometry )

### Parameters

#### ImageRef

The image reference number.

1

#### geometry

The rectangle to crop. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

**Result** Returns "OK" on success.

### Description

You can add pixels with GImage.Border function.

### Examples

Crops the image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Width = MBS("GImage.GetWidth";$Image);
$Height = MBS("GImage.GetHeight";$Image);
$Width = $Width/2;
$Height = $Height/2;
$ScaleResult = MBS("GImage.Crop";$Image; $Width & "x" & $Height);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

Create barcode and crop it:

```
Set Field [ Barcode Generation::Image ; "" ]
Set Variable [ $img ; Value: MBS("Barcode.Generate"; Barcode Generation::Symbology; Barcode Generation::Text) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $ImageHeight ; Value: MBS("GImage.GetHeight"; $img) ]
Set Variable [ $ImageWidth ; Value: MBS("GImage.GetWidth"; $img) ]
# calculate the crop rectangle
Set Variable [ $w ; Value: $ImageWidth ]
Set Variable [ $h ; Value: $ImageHeight ]
```

```

Set Variable [ $x ; Value: 0 ]
Set Variable [ $y ; Value: $ImageHeight - 50 ]
# crop
Set Variable [ $r ; Value: MBS("GImage.Crop"; $img; $w & "x" & $h & "+" & $x & "+" & $y) ]
Set Field [ Barcode Generation::Image ; MBS( "GImage.WriteToPNGContainer"; $img; "barcode.png") ]
Set Variable [ $r ; Value: MBS( "GImage.Destroy"; $img ) ]
End If

```

## 87.50 **GMImage.CycleColormap**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.CycleColormap"; ImageRef; amount )

### **Parameters**

#### **ImageRef**

The image reference number.

1

#### **amount**

the number of colors to cycle.

1

**Result** Returns "OK" on success.

### **Description**

Created 18th August 2014, last changed 18th August 2014.

## 87.51 GImage.Despeckle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Despeckle"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.52 GMImage.Directory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Directory"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the directory string.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.53 GImage.DrawArc

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.DrawArc"; ImageRef; startX; startY; endX; endY; startDegrees; endDegrees )

### Parameters

#### ImageRef

The image reference number.

1

#### startX

The X coordinate for start position.

#### startY

The Y coordinate for start position.

#### endX

The X coordinate for end position.

#### endY

The Y coordinate for end position.

#### startDegrees

The start degree value.

#### endDegrees

The end degree value.

**Result** Returns OK or error message.

### Description

Draw an arc using the stroke color and based on the circle starting at coordinates startX,startY, and ending with coordinates endX,endY, and bounded by the rotational arc startDegrees,endDegrees.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

### Examples

Creates a new image with a round rectangle:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawArc"; $img; 50; 50; 250; 150; 0; 90) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

## 87.54 GImage.DrawCircle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.DrawCircle"; ImageRef; originX; originY; perimX; perimY )

### Parameters

#### ImageRef

The image reference number.

1

#### originX

The X coordinate for start position.

#### originY

The Y coordinate for start position.

#### perimX

The perimeter width.

#### perimY

The perimeter height.

**Result** Returns OK or error message.

### Description

Draw a circle using the stroke color and thickness using specified origin and perimeter coordinates. If a fill color is specified, then the object is filled.

PerimX/PerimY define a point where the circle goes through, so put it a radius away from the origin. e.g. PerimX is originX + radius while PerimY is originY.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

### Examples

Creates a new image and draws a circle inside:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $f; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $l; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $c; Wert:MBS("GImage.DrawCircle"; $img; 150; 100; 100; 100) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

Draws a circle in a rectangle in a circle:

```

Set Variable [ $img; Value:MBS( "GMImage.New"; "100x100"; "white" ) ]
Set Variable [ $r; Value:MBS( "GMImage.SetFillColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $s; Value:MBS( "GMImage.SetStrokeColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $r; Value:MBS( "GMImage.DrawCircle"; $img; 50; 50; 50; 90 ) ]
Set Variable [ $r; Value:MBS( "GMImage.DrawRectangle"; $img; 22; 22; 100-22; 100-22 ) ]
Set Variable [ $r; Value:MBS( "GMImage.DrawCircle"; $img; 50; 50; 50; 100-22 ) ]
Set Field [ test::test; MBS( "GMImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GMImage.Release"; $img ) ]

```

Draw a circle at x/y with w as radius:

```
MBS( "GMImage.DrawCircle"; $image ; $x; $y; $x+$w ; $y)
```

## 87.55 GImage.DrawEllipse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.DrawEllipse"; ImageRef; originX; originY; radiusX; radiusY; arcStart; arcEnd )

### Parameters

#### ImageRef

The image reference number.

1

#### originX

The X coordinate for origin position.

#### originY

The Y coordinate for origin position.

#### radiusX

The radius.

#### radiusY

The radius.

#### arcStart

The start degree value.

#### arcEnd

The end degree value.

**Result** Returns OK or error message.

### Description

Draw an ellipse using the stroke color and thickness, specified origin, x & y radius, as well as specified start and end of arc in degrees. If a fill color is specified, then the object is filled.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

### Examples

Draws an ellipse in a new image:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawEllipse"; $img; 150; 100; 80; 60; 0; 360) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

## 87.56 GImage.DrawLine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.DrawLine"; ImageRef; startX; startY; endX; endY )

### Parameters

#### ImageRef

The image reference number.

1

#### startX

The start X position.

#### startY

The start Y position.

#### endX

The end X position.

#### endY

The end Y position.

**Result** Returns OK or error message.

### Description

Draw a line using stroke color and thickness using starting and ending coordinates.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

### Examples

Create an image with a line:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $f; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $l; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $d; Wert:MBS("GImage.DrawLine"; $img; 50; 50; 250; 150) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

Draw a line from pos to pos2 on column x:

```
MBS( "GImage.DrawLine"; $img; $x; $pos; $x; $pos2 )
```

## 87.58 GImage.DrawRectangle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.DrawRectangle"; ImageRef; upperLeftX; upperLeftY; lowerRightX; lowerRightY )

### Parameters

#### ImageRef

The image reference number.

1

#### upperLeftX

Upper left X position.

#### upperLeftY

Upper left Y position.

#### lowerRightX

Lower right X position.

#### lowerRightY

Lower right Y position.

**Result** Returns OK or error message.

### Description

Draw a rectangle using stroke color and thickness from upper-left coordinates to lower-right coordinates. If a fill color is specified, then the object is filled.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

### Examples

Creates a new image and draws a rectangle inside:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawRectangle"; $img; 50; 50; 250; 150) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

Draws a circle in a rectangle in a circle:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "100x100"; "white" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetFillColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetStrokeColor"; $img; "RGB 0 0 1" ) ]
```

```

Set Variable [ $r; Value:MBS( "GMImage.DrawCircle"; $img; 50; 50; 50; 90 ) ]
Set Variable [ $r; Value:MBS( "GMImage.DrawRectangle"; $img; 22; 22; 100-22; 100-22 ) ]
Set Variable [ $r; Value:MBS( "GMImage.DrawCircle"; $img; 50; 50; 50; 100-22 ) ]
Set Field [ test::test; MBS( "GMImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GMImage.Release"; $img ) ]

```

Draw something and write to file on desktop:

```

# New Image
Set Variable [ $img; Value:MBS("GMImage.New"; "300x200"; "RGB 1 1 1") ]
# Set colors and line width
Set Variable [ $r; Value:MBS("GMImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $r; Value:MBS("GMImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $r; Value:MBS("GMImage.SetLineWidth"; $img; 5) ]
# draw a rectangle
Set Variable [ $r; Value:MBS("GMImage.DrawRectangle"; $img; 50; 50; 250; 150) ]
# save to test.png on desktop:
Set Variable [ $DesktopPath; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $DesktopPath; "test.png") ]
Set Variable [ $r; Value:MBS("GMImage.WriteToFile"; $img; $path) ]
# cleanup
Set Variable [ $r; Value:MBS("GMImage.Release"; $img) ]

```

## 87.59 GImage.DrawRoundRectangle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.DrawRoundRectangle"; ImageRef; upperLeftX; upperLeftY; lowerRightX; lowerRightY; cornerWidth; cornerHeight )

### Parameters

#### ImageRef

The image reference number.

1

#### upperLeftX

Upper left X position.

#### upperLeftY

Upper left Y position.

#### lowerRightX

Lower right X position.

#### lowerRightY

Lower right Y position.

#### cornerWidth

The width of the corner arc.

#### cornerHeight

The height of the corner arc.

**Result** Returns OK or error message.

### Description

Draw a rounded rectangle using stroke color and thickness, with specified center coordinate, specified width and height, and specified corner width and height. If a fill color is specified, then the object is filled.

If you have an open path, the command is added there for later drawing with GImage.DrawPath.

### Examples

Creates a new image and draws a round rectangle inside:

```
Set Variable [ $img; Wert:MBS("GImage.New"; "300x200"; "RGB 1 1 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $r; Wert:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $r; Wert:MBS("GImage.SetLineWidth"; $img; 5) ]
Set Variable [ $r; Wert:MBS("GImage.DrawRoundRectangle"; $img; 50; 50; 250; 150; 10; 10) ]
Set Variable [ $png; Wert:MBS("GImage.WriteToPNGContainer"; $img; "test.png") ]
Set Variable [ $r; Wert:MBS("GImage.Release"; $img) ]
Set Field [ Drawing::Image; $png ]
```

**87.60 GImage.Edge**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Edge"; ImageRef { ; radius } )

**Parameters****ImageRef**

The image reference number.

1

**radius**

Optional

Optional the radius value.

0.0

**Result** Returns "OK" on success.

**Description****See also**

## 87.61 GMImage.Emboss

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Emboss"; ImageRef { ; radius; sigma } )

### Parameters

#### ImageRef

The image reference number.

1

#### radius

Optional

Optional, The radius of the Gaussian, in pixels, not counting the center pixel.

0

#### sigma

Optional

Optional, The standard deviation of the Laplacian, in pixels.

1

**Result** Returns "OK" on success.

### Description

### Examples

Apply an emboss effect to an image

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Emboss"; $Image; 10; 5);
$result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$result)
```

## 87.62 GMImage.Enhance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Enhance"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns "OK" on success.

### Description

#### Examples

Apply an enhance effect to the image:

```
Let ( [
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GMImage.Enhance";$Image);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$error = MBS("GMImage.Release";$Image)
];
$Result)
```

## 87.63 GImage.Equalize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Equalize"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns "OK" on success.

### Description

#### Examples

Apply equalize effect to an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Equalize";$Image);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

## 87.64 GMImage.Erase

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Erase"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns "OK" on success.

### Description

### Examples

Create a transparent picture by erasing with transparent color:

```
Set Variable [ $img ; Value: MBS("GMImage.New"; $width & "x" & $height; "RGB 1 1 1") ]
```

```
Set Variable [ $r ; Value: MBS( "GMImage.SetMatte"; $img; 1) ]
```

```
Set Variable [ $r ; Value: MBS( "GMImage.SetBackgroundColor"; $img; "transparent") ]
```

```
Set Variable [ $r ; Value: MBS("GMImage.Erase"; $img) ]
```

## 87.65 GImage.ExifThumbnail

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.ExifThumbnail"; ImageRef { ; FileName } )

### Parameters

#### ImageRef

The image reference number.

1

#### FileName

Optional

File name to pass to FileMaker with container.

"test.jpg"

**Result** Returns container value or error.

### Description

Returns a JPEG in a container.

## 87.66 GMImage.Extent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Extent"; ImageRef; geometry { ; Color; GravityType } )

### Parameters

#### ImageRef

The image reference number.

1

#### geometry

The rectangle to use. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

#### Color

Optional

The background color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. #FF0000 for full red.

"RGB 1 0 0"

#### GravityType

Optional

The Gravity Type. Can be number of text value. Can be ForgetGravity=0, NorthWestGravity=1, NorthGravity=2, NorthEastGravity=3, WestGravity=4, CenterGravity=5, EastGravity=6, SouthWestGravity=7, SouthGravity=8, SouthEastGravity=9, StaticGravity=10.

0

**Result** Returns OK or error.

### Description

Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.

Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.

### Examples

Extent image with red space around:

```
Set Variable [ $BigImageRef ; Value: MBS("GMImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result ; Value: MBS("GMImage.Extent"; $BigImageRef; "1000x1000"; "red"; "center") ]
Set Field [ Test::Result ; MBS( "GMImage.WriteToPNGContainer"; $BigImageRef; "test.png" ) ]
Set Variable [ $Error ; Value: MBS("GMImage.Destroy";$BigImageRef) ]
```

## 87.67 **GImage.FillPattern**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.FillPattern"; ImageRef; fillPatternRef )

### **Parameters**

#### **ImageRef**

The image reference number.

1

#### **fillPatternRef**

The image reference number.

2

**Result** Returns "OK" on success.

### **Description**

Created 18th August 2014, last changed 18th August 2014.

## 87.68 GImage.FindColorInColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.FindColorInColumn"; ImageRef; x; y; color { ; Invert; Tolerance } )

### Parameters

#### ImageRef

The image reference number.

1

#### x

The x coordinate. Zero based from 0 to GImage.GetWidth-1.

10

#### y

The y coordinate. Zero based from 0 to GImage.GetHeight-1.

10

#### color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

#### Invert

Optional

If 0, we find first pixel matching your color. If 1 we find first pixel not matching the color. Default is 0.

0

#### Tolerance

Optional

The tolerance for comparison. Normally a small value like 3. So if color is 255, 255, 255 and pixel is 252, 252, 252 we have a match for tolerance being 3.

3

**Result** Returns position or error.

### Description

You can find first pixel matching your given color in the column starting with given y position and given tolerance. If you set Invert to 1, the plugin returns row for first pixel not matching color.

Returns -1 if not found.

### Examples

Finds color in column:

```
MBS("GImage.FindColorInColumn"; $img; $x; $y; $ColorToSearch; 1; 3)
```

87.68. *GMIMAGE.FINDCOLORINCOLUMN*

4497

## 87.69 GImage.FindColorInRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.FindColorInRow"; ImageRef; x; y; color { ; Invert; Tolerance } )

### Parameters

#### ImageRef

The image reference number.

1

#### x

The x coordinate. Zero based from 0 to GImage.GetWidth-1.

10

#### y

The y coordinate. Zero based from 0 to GImage.GetHeight-1.

10

#### color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

#### Invert

Optional

If 0, we find first pixel matching your color. If 1 we find first pixel not matching the color. Default is 0.

0

#### Tolerance

Optional

The tolerance for comparison. Normally a small value like 3. So if color is 65535, 65535, 65535 and pixel is 64764, 64764, 64764 we have a match for tolerance being 800.

800

**Result** Returns position or error.

### Description

You can find first pixel matching your given color in the row starting with given x position and given tolerance. If you set Invert to 1, the plugin returns column for first pixel not matching color.

Returns -1 if not found.

### Examples

Finds color in row:

MBS("GImage.FindColorInRow"; \$img; \$x; \$y; \$ColorToSearch; 1; 3)

## 87.71 GImage.FloodFillColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.FloodFillColor"; ImageRef; Geometry; fillColor { ; borderColor } )

### Parameters

#### ImageRef

The image reference number.

1

#### Geometry

The point. A Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" +20+30

#### fillColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

#### borderColor

Optional

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

### Description

Fill pixels starting at target-pixel and stopping at pixels matching specified border color. Uses current fuzz setting when determining color match:

## 87.72 GImage.FloodFillColorXY

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.FloodFillColorXY"; ImageRef; x; y; fillColor { ; borderColor } )

### Parameters

#### ImageRef

The image reference number.

1

**x**

x Position

0

**y**

y Position

0

#### fillColor

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

#### borderColor

Optional

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

### Description

Uses current fuzz setting when determining color match.

### Examples

Make a picture transparent:

```
# load a picture
Set Variable [ $image; Value:MBS( "GImage.NewFromContainer"; Test::BigImage) ]
# white in RGB
Set Variable [ $f; Value:"white" ]
# Replace all white with nearly white
```

```

Set Variable [ $r; Value:MBS( "GMImage.ReplaceColor"; $image; $f; "COLOR 65535 65278 65535"; 0 ) ]
# now flood fill it with 5 as tolerance
Set Variable [ $r; Value:MBS( "GMImage.SetColorFuzz"; $image; 5 ) ]
Set Variable [ $r; Value:MBS( "GMImage.FloodFillColorXY"; $image; 0; 0; $f ) ]
# now set back fuzz and make transparent using white
Set Variable [ $r; Value:MBS( "GMImage.SetColorFuzz"; $image; 0 ) ]
Set Variable [ $imagecolor; Value:MBS( "GMImage.Transparent"; $image; $f ) ]
# write back to container
Set Field [ Test::Result; MBS( "GMImage.WriteToPNGContainer"; $image; ) ]
# cleanup
Set Variable [ $Error; Value:MBS("GMImage.Release";$image) ]

```

## 87.73 GImage.FloodFillOpacity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.FloodFillOpacity"; ImageRef; x; y; opacity; PaintMethod )

### Parameters

#### ImageRef

The image reference number.

1

#### x

The X Position

0

#### y

The Y Position

0

#### opacity

A value from 0 to 65535.

127\*257

#### PaintMethod

PointMethod = 0, ReplaceMethod = 1, FloodfillMethod = 2, FillToBorderMethod = 3, ResetMethod = 4

1

**Result** Returns "OK" on success.

The image reference number.

1

#### x

x Position

0

#### y

y Position

0

#### texture

The image reference number.

2

#### borderColor

Optional

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

### Description

Fills pixels that match the color of the target pixel and are neighbors of the target pixel. Uses current fuzz setting when determining color match.

## 87.76 GMImage.Flop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Flop"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns "OK" on success.

### Description

#### Examples

Mirror the picture.

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Flop"; $Image);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$Result)
```

Created 18th August 2014, last changed 21st December 2018.

## 87.77 GImage.FontMap

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.FontMap" )

**Result** Returns XML text or error.

### Description

The MBS Plugin provides to GraphicsMagick the font map to use.

This is a XML defining which fonts are available.

Use this function to learn what fonts may be available or debug to see why a font doesn't load.

### See also

- [87.46 GImage.Contrast](#) 4462

## 87.78 GImage.FontTypeMetrics

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	7.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.FontTypeMetrics"; ImageRef; text )

### Parameters

#### ImageRef

The image reference number.

1

#### text

Some text

"Hello World"

**Result** Returns list or error.

### Description

Obtain font metrics for text string given current font, point size, and density settings.

Returns list with following values:

- text width in pixel
- text height in pixel
- Ascent, the distance in pixels from the text baseline to the highest/upper grid coordinate used to place an outline point.
- Descent, the distance in pixels from the baseline to the lowest grid coordinate used to place an outline point. Always a negative value.
- Maximum horizontal advance in pixels.
- Font size

To extract values, please pass through `Math.TextToNumber` or similar functions which always uses dot as decimal separator.

### Examples

Draw some text on a picture:

```
# open a picture
Set Variable [ $ref ; Value: MBS("GImage.NewFromContainer"; Annotate Image::InputImage) ]
# set font size
Set Variable [ $r ; Value: MBS("GImage.SetFontPointsize"; $ref; 20) ]
# set the font
Set Variable [ $r ; Value: MBS("GImage.SetFont"; $ref; "@/System/Library/Fonts/LucidaGrande.ttc") ]
# set the fill color
```

```

Set Variable [ $r ; Value: MBS("GMImage.SetFillColor"; $ref; "RGB 0 0 0") ]
# Query size for this text:
Set Variable [ $r ; Value: MBS("GMImage.FontTypeMetrics"; $ref; Annotate Image::Text) ]
# draw the text:
Set Variable [ $r ; Value: MBS("GMImage.Annotate"; $ref; Annotate Image::Text; "100x200+10+40"; 1) ]
# write image
Set Field [ Annotate Image::OutputImage ; MBS( "GMImage.WriteToPNGContainer"; $ref ) ]
# free memory
Set Variable [ $Error ; Value: MBS("GMImage.Release";$ref) ]

```

Measure text:

```
MBS("GMImage.FontTypeMetrics"; $ref; Annotate Image::Text)
```

Example result: "528.000000

47.000000

39.000000

-8.000000

66.000000

40.000000"

**87.79 GImage.Format**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Format"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns the long image format description.

**Description****See also**

- 87.32 GImage.Border 4440
- 87.77 GImage.FontMap 4511
- 87.80 GImage.Frame 4515
- 87.221 GImage.Rotate 4685
- 87.311 GImage.Spread 4800

Created 18th August 2014, last changed 18th August 2014.

## 87.80 GMImage.Frame

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Frame"; ImageRef; width; height; innerBevel; outerBevel )

### Parameters

#### ImageRef

The image reference number.

1

#### width

The width of the frame

300

#### height

The height of the frame

200

#### innerBevel

The inner bevel size

6

#### outerBevel

The outer bevel size

6

**Result** Returns "OK" on success.

### Description

### Examples

Adds a frame to the image:

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Frame"; $Image);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release"; $Image)
];
$Result)
```

## 87.81 GMImage.Free

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	8.4	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Free"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns OK or error.

### Description

Please call this function when you are done with the image to free memory.

The plugin doesn't know whether you need the image later, so it can't free the memory for you.

You can use GMImage.ImageCount to find out how many images are open in memory.

## 87.83 GImage.Gamma

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Gamma"; ImageRef; gammaRed; gammaGreen; gammaBlue )

### Parameters

#### ImageRef

The image reference number.

1

#### gammaRed

The gamma value for the red channel. (or if only one value is given the gamma value for all channels)

0.5

#### gammaGreen

The gamma value for the green channel.

0.5

#### gammaBlue

The gamma value for the blue channel.

0.5

**Result** Returns "OK" on success.

### Description

You can also pass only one gamma value for all three channels.

### See also

- 87.121 GImage.GetGamma

Created 18th August 2014, last changed 18th August 2014.

## 87.84 GMImage.GaussianBlur

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.GaussianBlur"; ImageRef; width; sigma )

### Parameters

#### ImageRef

The image reference number.

1

#### width

The number of neighbor pixels to be included in the convolution mask is specified by width

100

#### sigma

Specifies the standard deviation of the gaussian bell curve

1

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.85 GImage.GaussianBlurChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GaussianBlurChannel"; ImageRef; ChannelType; width; sigma )

### Parameters

#### ImageRef

The image reference number.

1

#### ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

#### width

The number of neighbor pixels to be included in the convolution mask is specified by width

100

#### sigma

Specifies the standard deviation of the gaussian bell curve

1

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.86 GMImage.Geometry

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Geometry"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the geometry string.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.87 GImage.GetAdjoin

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetAdjoin"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a boolean value.

### Description

#### See also

- 87.113 GImage.GetEndian 4553
- 87.228 GImage.SetAdjoin 4696

Created 18th August 2014, last changed 18th August 2014.

**87.88 GImage.GetAnimationDelay**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetAnimationDelay"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns animation delay value as number.

**Description**

Time in 1/100ths of a second which must expire before displaying the next image in an animated sequence.

Time in 1/100ths of a second (0 to 65535) which must expire before displaying the next image in an animated sequence. This option is useful for regulating the animation of a sequence of GIF images within Netscape.

**See also**

- 87.229 GImage.SetAnimationDelay

4697

Created 18th August 2014, last changed 11st September 2017.

## 87.89 GImage.GetAnimationIterations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetAnimationIterations"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the Number of iterations to loop an animation for.

### Description

#### See also

- 87.230 GImage.SetAnimationIterations

4698

Created 18th August 2014, last changed 18th August 2014.

## 87.90 **GImage.GetAntiAlias**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetAntiAlias"; ImageRef )

### Parameters

#### **ImageRef**

The image reference number.

1

**Result** Returns a boolean value.

### Description

#### See also

- 87.231 *GImage.SetAntiAlias*

4699

Created 18th August 2014, last changed 18th August 2014.

## 87.91 GImage.GetAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "GImage.GetAttribute"; ImageRef; name { ; Encoding } )
```

### Parameters

#### ImageRef

The image reference number.

1

#### name

The name of the attribute.

#### Encoding

Optional

The text encoding. Default is UTF-8.

UTF8

**Result** Returns the value as string.

### Description

Any number of named attributes may be attached to the image. For example, the image comment is a named image attribute with the name "comment". EXIF tags are attached to the image as named attributes. Use the syntax "EXIF:<tag>" to request an EXIF tag similar to "EXIF:DateTime":

### Examples

Read EXIF DateTime:

```
MBS( "GImage.GetAttribute"; $image; "EXIF:DateTime" )
```

Query IPTC Keywords:

```
MBS("GImage.GetAttribute"; $img; "IPTC:2:25"; "UTF-8")
```

Query JPEG Quality used to compress image:

```
Set Variable [ $img; Value:MBS("GImage.NewFromContainer"; Image::InputImage) ]
Set Variable [ $value; Value:MBS("GImage.GetAttribute"; $img; "JPEG-Quality") ]
Show Custom Dialog [ "JPEG Quality used to compress image"; $value ]
Set Variable [ $r; Value:MBS("GImage.Release"; $img) ]
```

Read PNG original color type:

```
MBS("GImage.GetAttribute"; $image; "png:IHDR.color-type-orig")
// Value is combination of 0 = gray, 1 = palette, 2 = color, 4 = alpha
// e.g. 4 = Gray + Alpha, 6 = RGBA, 2 = RGB, 0 = Gray
```

Query JPEG Colorspace:

```
MBS("GMImage.GetAttribute"; $img; "JPEG-Colorspace-Name") & " " & MBS("GMImage.GetAttribute";
$img; "JPEG-Colorspace")
// the numbers are: 1 = grayscale, 2 = RGB, 3 = YCbCr, 4 = CMYK, 5 = YCCK
```

Show GPS location:

```
Set Variable [ $img ; Value: MBS("GMImage.NewFromContainer"; GraphicsMagick Exif::InputImage) ]
Set Variable [ $lat ; Value: MBS("GMImage.GetAttribute"; $img; "EXIF:GPSLatitude") ]
Set Variable [ $long ; Value: MBS("GMImage.GetAttribute"; $img; "EXIF:GPSLongitude") ]
Show Custom Dialog [ "GPS" ; $lat & " / " & $long ]
Set Variable [ $r ; Value: MBS("GMImage.Release"; $img) ]
```

Created 18th August 2014, last changed 10th June 2019.

## 87.92 GImage.GetAttributeNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetAttributeNames"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns list or error.

### Description

Only attributes created before are visible, so e.g. EXIF data may not yet be loaded and parsed.

### Examples

Show attributes:

```
Set Variable [ $ImageRef ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image2.png") ]
Show Custom Dialog [ "Attributes" ; MBS( "GImage.GetAttributeNames"; $ImageRef ) ]
Set Variable [ $r ; Value: MBS("GImage.Release"; $ImageRef) ]
```

### See also

## 87.93 GMImage.GetAttributesJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.GetAttributesJSON"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns JSON object or error.

### Description

Only attributes created before are visible, so e.g. EXIF data may not yet be loaded and parsed. e.g. for a PNG this may include the original color type and the bit depth:

```
{
```

```
  "png:IHDR.color-type-orig":  "4",
  "png:IHDR.bit-depth-orig":  "16"
```

```
}
```

### Examples

Show attributes:

```
Set Variable [ $ImageRef ; Value: MBS("GMImage.NewFromFile"; "/Users/cs/Desktop/image2.png") ]
Show Custom Dialog [ "Attributes" ; MBS( "GMImage.GetAttributesJSON"; $ImageRef ) ]
Set Variable [ $r ; Value: MBS("GMImage.Release"; $ImageRef) ]
```

4786

Created 18th August 2014, last changed 27th May 2018.

## 87.99 GImage.GetClassType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetClassType"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the class type number.

### Description

Value is either 1 for DirectClass or 2 for PseudoClass.

### Examples

Show image class type:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
Set Variable [ $value ; Value: MBS("GImage.GetClassType"; $image) ]
Show Custom Dialog [ "Class" ; $value ]
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

### See also

**87.100 GImage.GetClipMask**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	7.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetClipMask"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns image reference or error.

**Description**

Please call GImage.Release later to free memory for this image.

## 87.103 GImage.GetColorSpace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetColorSpace"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the color space type as number.

### Description

UndefinedColorspace = 0, RGBColorspace = 1 (Plain old RGB colorspace), GRAYColorspace = 2 (Plain old full-range grayscale), TransparentColorspace = 3 (RGB but preserve matte channel during quantize), OHTAColorspace = 4, XYZColorspace = 5 (CIE XYZ), YCCColorspace = 6 (Kodak PhotoCD PhotoYCC), YIQColorspace = 7, YPbPrColorspace = 8, YUVCColorspace = 9, CMYKColorspace = 10 (Cyan, magenta, yellow, black, alpha), sRGBColorspace = 11 (Kodak PhotoCD sRGB), HSLColorspace = 12 (Hue, saturation, luminosity), HWBColorspace = 13 (Hue, whiteness, blackness), LABColorspace = 14 (LAB colorspace not supported yet other than via lcms), CineonLogRGBColorspace = 15 (RGB data with Cineon Log scaling, 2.048 density range), Rec601LumaColorspace = 16 (Luma (Y) according to ITU-R 601), Rec601YCbCrColorspace = 17 (YCbCr according to ITU-R 601), Rec709LumaColorspace = 18 (Luma (Y) according to ITU-R 709), Rec709YCbCrColorspace = 19 (YCbCr according to ITU-R 709)

### Examples

Shows color space for image:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image2.png") ]
Set Variable [ $value ; Value: MBS("GImage.GetColorSpace"; $image) ]
Show Custom Dialog [ "ColorSpace" ; $value ]
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

Created 18th August 2014, last changed 18th August 2014.

**87.106 GImage.GetCompressType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetCompressType"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns a number.

**Description**

UndefinedCompression = 0, NoCompression = 1, BZipCompression = 2, FaxCompression = 3, Group4Compression = 4, JPEGCompression = 5, LosslessJPEGCompression = 6, LZWCompression = 7, RLECompression = 8, ZipCompression = 9

**Examples**

Shows compression:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
```

```
Set Variable [ $value ; Value: MBS("GImage.GetCompressType"; $image) ]
```

```
Show Custom Dialog [ "Compress type" ; $value ]
```

```
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

**87.107 GImage.GetDebug**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetDebug"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns a boolean value.

**Description****See also**

- 87.111 GImage.GetDepth 4551
- 87.131 GImage.GetLabel 4572
- 87.245 GImage.SetDebug 4717

Created 18th August 2014, last changed 18th August 2014.

**87.108 GImage.GetDefineSet**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetDefineSet"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns a boolean value.

**Description**

Tagged image format define. Similar to the get/setdefineValue() functions except that passing the flag value 'true' creates a value-less define with that format and key. Passing the flag value 'false' removes any existing matching definition. The method returns 'true' if a matching key exists, and 'false' if no matching key exists.

**See also**

- 87.109 GImage.GetDefineValue 4549
- 87.246 GImage.SetDefineSet 4718

Created 18th August 2014, last changed 18th August 2014.

**87.109 GImage.GetDefineValue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetDefineValue"; ImageRef; magick; key )

**Parameters****ImageRef**

The image reference number.

1

**magick**

The name of the codec

**key**

A key name as string

**Result** Returns the value as string.

**Description**

Tagged image format define (set/access coder-specific option) The magick option specifies the coder the define applies to. The key option provides the key specific to that coder. The value option provides the value to set (if any). See the get/set defineSet functions if the key must be removed entirely.

**See also**

## 87.110 GImage.GetDensity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetDensity"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a geomery as string.

### Description

### Examples

Load image and get density:

```
$image = MBS( "GImage.NewFromContainer"; MediaField)
$res = MBS( "GImage.GetDensity"; $image )
MBS( "GMimage.Release"; $image )
```

### See also

Created 18th August 2014, last changed 21st December 2018.

## 87.111 GImage.GetDepth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetDepth"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a number.

### Description

### Examples

Queries color depth:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
```

```
Set Variable [ $value ; Value: MBS("GImage.GetDepth"; $image) ]
```

```
Show Custom Dialog [ "Depth" ; $value ]
```

```
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

### See also

## 87.112 GImage.GetEXIFOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetEXIFOrientation"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns value or error.

### Description

Returns number from 0 to 8 depending on rotation.

This function can only read orientation, if there is an EXIF block in image.

### Examples

Shows EXIF orientation:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
Set Variable [ $value ; Value: MBS("GImage.GetEXIFOrientation"; $image) ]
Show Custom Dialog [ "Orientation in EXIF" ; $value ]
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

## 87.122 GImage.GetGifDisposeMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetGifDisposeMethod"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a number.

### Description

#### See also

- 87.258 GImage.SetGifDisposeMethod

4732

Created 18th August 2014, last changed 18th August 2014.

## 87.123 GImage.GetHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetHeight"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the image height.

### Description

#### Examples

Show with and height

```
Let ( [
  $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
  $Width = MBS("GImage.GetWidth"; $Image);
  $Height = MBS("GImage.GetHeight"; $Image);
  $Error = MBS("GImage.Release"; $Image)
];
$Width & " x " & $Height )
```

Query size of image into \$h and \$w:

```
Set Variable [ $Image ; Value: MBS( "GImage.NewFromContainer"; ImageView::ImageContainer ) ]
Set Variable [ $w ; Value: MBS( "GImage.GetWidth"; $Image ) ]
Set Variable [ $h ; Value: MBS( "GImage.GetHeight"; $Image ) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

## 87.124 GImage.GetICCColorProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetICCColorProfile"; ImageRef { ; Filename } )

### Parameters

#### ImageRef

The image reference number.

1

#### Filename

Optional

The filename to use for the profile. Default is "profile.icc".

"myprofile.icc"

**Result** Returns a container value with the profile file inside.

### Description

### Examples

Queries profile:

```
$Profile = MBS("GImage.GeticcColorProfile"; $Image);
```

### See also

## 87.125 GImage.GetIPTCProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetIPTCProfile"; ImageRef { ; Filename } )

### Parameters

#### ImageRef

The image reference number.

1

#### Filename

Optional

The filename to use for the profile. Default is "profile.iptc".  
"myprofile.iptc"

**Result** Returns a container value with the profile file inside.

### Description

### See also

**87.126 GImage.GetIPTCProfileValues**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	6.2	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetIPTCProfileValues"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns list or error.

**Description****Examples**

Queries IPTC values:

```
Set Variable [ $img; Value:MBS("GImage.NewFromContainer"; IPTC::InputImage) ]
```

```
Set Field [ IPTC::values; MBS("GImage.GetiptcProfileValues"; $img) ]
```

```
Set Variable [ $r; Value:MBS("GImage.Release"; $img) ]
```

## 87.127 GImage.GetInterlaceType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetInterlaceType"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a number.

### Description

UndefinedInterlace = 0, NoInterlace = 1, LineInterlace = 2, PlaneInterlace = 3, PartitionInterlace = 4

### See also

- 87.261 GImage.SetInterlaceType 4736

Created 18th August 2014, last changed 18th August 2014.

## 87.128 **GImage.IsValid**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.IsValid"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a boolean value.

### Description

#### See also

## 87.132 GImage.GetLineWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetLineWidth"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a number.

### Description

### Examples

Set and Query line width:

```
Set Variable [ $Image ; Value: MBS("GImage.New"; "200x200"; "white") ]
```

```
Set Variable [ $r ; Value: MBS("GImage.SetLineWidth"; $Image; 5) ]
```

```
Show Custom Dialog [ "LineWidth" ; MBS("GImage.GetLineWidth";$Image;) ]
```

```
Set Variable [ $r ; Value: MBS("GImage.Release";$Image) ]
```

## 87.136 GImage.GetModulusDepth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetModulusDepth"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a number.

### Description

That is the minimum number of bits required to support red/green/blue components without loss of accuracy.

#### See also

- 87.268 GImage.SetModulusDepth

4745

Created 18th August 2014, last changed 18th August 2014.

## 87.137 GImage.GetMonochrome

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetMonochrome"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a boolean value.

### Description

## 87.138 GImage.GetOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetOrientation"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a number.

### Description

UndefinedOrientation = 0, TopLeftOrientation = 1, (Line direction: Left to right, Frame Direction: Top to bottom) TopRightOrientation = 2, (Line direction: Right to left, Frame Direction: Top to bottom) BottomRightOrientation = 3, (Line direction: Right to left, Frame Direction: Bottom to top) BottomLeftOrientation = 4, (Line direction: Left to right, Frame Direction: Bottom to top) LeftTopOrientation = 5, (Line direction: Top to bottom, Frame Direction: Left to right) RightTopOrientation = 6, (Line direction: Top to bottom, Frame Direction: Right to left) RightBottomOrientation = 7, (Line direction: Bottom to top, Frame Direction: Right to left) LeftBottomOrientation = 8 (Line direction: Bottom to top, Frame Direction: Left to right)

### Examples

Set and query orientation:

```
Set Variable [ $Image ; Value: MBS("GImage.New"; "200x200"; "white") ]
Set Variable [ $r ; Value: MBS("GImage.SetOrientation"; $Image; 5) ]
Show Custom Dialog [ "LineWidth" ; MBS("GImage.GetOrientation";$Image;) ]
Set Variable [ $r ; Value: MBS("GImage.Release";$Image) ]
```

## 87.142 GImage.GetPixelColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetPixelColor"; ImageRef; x; y )

### Parameters

#### ImageRef

The image reference number.

1

#### x

The horizontal position. Range from 0 to GImage.GetWidth-1.

0

#### y

The vertical position. Range from 0 to GImage.GetHeight-1.

0

**Result** Returns a color value as string.

### Description

Returned color is 16bit in v9.0 or later.

You may need to divide values by 257 if you need 8 bit values.

### Examples

Open picture and read first pixel:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$colorValue = MBS("GImage.GetPixelColor"; $Image; 0; 0);
$error = MBS("GImage.Release"; $Image)
];
$colorValue )
```

Trims space around image and make transparent:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GImage.SetBackgroundColor"; $BigImageRef; "RGB 1 0 0" ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 5 ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetMatte"; $BigImageRef; 1 ) ]
Set Variable [ $farbe; Value:MBS( "GImage.GetPixelColor"; $BigImageRef; 0; 0 ) ]
Set Variable [ $Result; Value:MBS( "GImage.ReplaceColor"; $BigImageRef; $farbe; "RGB 1 1 1"; 5) ]
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release"; $BigImageRef) ]
```

## 87.143 GImage.GetProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetProfile"; ImageRef; name { ; Filename } )

### Parameters

#### ImageRef

The image reference number.

1

#### name

the string with the name of the profile.

"IPTC"

#### Filename

Optional

The filename to use for the profile. Default is "profile".

"myprofile.icc"

**Result** Returns a container file value with the embedded profile file.

### Description

Valid names are: "8BIM", "8BIMTEXT", "APP1", "EXIF", "APP1JPEG", "ICC", "ICM", & "IPTC" or an existing user/format-defined profile name.

### Examples

Get EXIF data blob:

```
MBS( "GImage.Getprofile"; $img; "EXIF" )
```

## 87.149 GImage.GetQuiet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetQuiet"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns 1, 0 or error.

### Description

If enabled, suppress all warning messages. Error messages are still reported.

### See also

## 87.150 **GUIImage.GetRenderingIntent**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GUIImage.GetRenderingIntent"; ImageRef )

### Parameters

#### **ImageRef**

The image reference number.

1

**Result** Returns a number.

### Description

UndefinedIntent = 0, SaturationIntent = 1, PerceptualIntent = 2, AbsoluteIntent = 3, RelativeIntent = 4

### See also

- 87.280 **GUIImage.SetRenderingIntent** 4761

## 87.151 GImage.GetResolutionUnits

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetResolutionUnits"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a number.

### Description

UndefinedResolution = 0, PixelsPerInchResolution = 1, PixelsPerCentimeterResolution = 2

### See also

- 87.281 GImage.SetResolutionUnits 4762

Created 18th August 2014, last changed 18th August 2014.

**87.156 GImage.GetStrokeDashArray**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetStrokeDashArray"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns list of values or error.

**Description**

The strokeDashArray represents an array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2.

**87.157 GImage.GetStrokeDashOffset**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetStrokeDashOffset"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns a number.

**Description**

While drawing using a dash pattern, specify distance into the dash pattern to start the dash (default 0).

**See also**

- 87.156 GImage.GetStrokeDashArray 4599

- 87.289 GImage.SetStrokeLineJoin 4773

Created 18th August 2014, last changed 18th August 2014.

**87.160 GImage.GetStrokeMiterLimit**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetStrokeMiterLimit"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns a number.

**Description**

When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.

## 87.166 GImage.GetType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetType"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the image type number.

### Description

UndefinedType = 0, BilevelType = 1, GrayscaleType = 2, GrayscaleMatteType = 3, PaletteType = 4, PaletteMatteType = 5, TrueColorType = 6, TrueColorMatteType = 7, ColorSeparationType = 8, ColorSeparationMatteType = 9, OptimizeType = 10

### Examples

Shows type:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromFile"; "/Users/cs/Desktop/image4.png") ]
```

```
Set Variable [ $value ; Value: MBS("GImage.GetType"; $image) ]
```

```
Show Custom Dialog [ "Type"; $value ]
```

```
Set Variable [ $r ; Value: MBS("GImage.Release"; $image) ]
```

- 87.283 GImage.SetSize 4765
- 87.298 GImage.SetView 4784

Created 18th August 2014, last changed 18th August 2014.

**87.169 GImage.GetWidth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetWidth"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns the Image width.

**Description****Examples**

Show with and height

```
Let ( [
  $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
  $Width = MBS("GImage.GetWidth"; $Image);
  $Height = MBS("GImage.GetHeight"; $Image);
  $Error = MBS("GImage.Release"; $Image)
];
$Width & " x " & $Height )
```

Query size of image into \$h and \$w:

```
Set Variable [ $Image ; Value: MBS( "GImage.NewFromContainer"; ImageView::ImageContainer ) ]
Set Variable [ $w ; Value: MBS( "GImage.GetWidth"; $Image ) ]
Set Variable [ $h ; Value: MBS( "GImage.GetHeight"; $Image ) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

**87.170 GImage.GetXMP**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.GetXMP"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns XML text or error.

**Description**

XMP data is a XML file with a given structure.

You can easily use the XML.Query function to get values.

**Examples**

Query XMP data from image:

```
Variable setzen [ $img; Wert:MBS( "GImage.NewImagesFromFile"; "/Users/cs/Desktop/test.tif" ) ]
```

```
Variable setzen [ $xmp; Wert:MBS( "GImage.GetXMP"; $img ) ]
```

```
Variable setzen [ $r; Wert:MBS( "GImage.Release"; $img ) ]
```

## 87.172 GImage.Hash

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.4	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Hash"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns text or error.

### Description

Hash is returned as 64 characters being 1 or 0.

We convert image to 8x8, turn grayscale and check if pixels are above or below mean value.

This hash is quite immune against resizing, compression artifacts and hue changes.

You can use Text.LevenshteinDistance or Text.JaroWinklerDistance to compare two hashes.

### Examples

Play with hash function:

```
Set Variable [ $ImageRef ; Value: MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Hash1 ; Value: MBS("GImage.Hash"; $ImageRef) ]
Set Variable [ $r ; Value: MBS( "GImage.Flip"; $ImageRef ) ]
Set Variable [ $Hash2 ; Value: MBS("GImage.Hash"; $ImageRef) ]
Set Variable [ $r ; Value: MBS( "GImage.Flop"; $ImageRef ) ]
Set Variable [ $Hash3 ; Value: MBS("GImage.Hash"; $ImageRef) ]
Set Variable [ $Error ; Value: MBS("GImage.Release"; $ImageRef) ]
Show Custom Dialog [ "Hash original: " & $hash1 & §& "Hash after 1x mirror: " & $hash2 & §& "Hash
after 2x mirror: " & ... ]
```

## 87.174 GImage.Implode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Implode"; ImageRef; factor )

### Parameters

#### ImageRef

The image reference number.

1

#### factor

The implode factor.

0

**Result** Returns "OK" on success.

### Description

### Examples

Applies the implode effect:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Implode";$Image; 5);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

## 87.175 GImage.InvertChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	8.4	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.InvertChannel"; ImageRef; Channel )

### Parameters

#### ImageRef

The image reference number.

1

#### Channel

Which channel to work with. Can be opacity, red, green or blue. The value rgb will apply effect to all three color channels.

"rgb"

**Result** Returns OK or error.

### Description

All pixel values are negated.

This is same as MBS( "GImage.MultiplyChannel"; ImageRef; Channel; -1; 0; 65535), but a bit faster.

### Examples

Invert image:

```
Set Variable [ $image ; Value: MBS( "GImage.NewFromContainer"; Invert::Input ) ]
# each channel...
// Set Variable [ $r ; Value: MBS( "GImage.InvertChannel"; $image; "red" ) ]
// Set Variable [ $g ; Value: MBS( "GImage.InvertChannel"; $image ) ]
// Set Variable [ $b ; Value: MBS( "GImage.InvertChannel"; $image; "blue" ) ]
# all channels...
Set Variable [ $r ; Value: MBS( "GImage.InvertChannel"; $image; "rgb" ) ]
Set Field [ Invert::Output ; MBS( "GImage.WriteToPNGContainer"; $image; "output.png" ) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $image ) ]
```

## 87.176 GImage.IsGray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	8.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.IsGray"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns value or error.

### Description

Returns 1 for gray or 0 if one pixel at least is not gray.

### 87.176.1 Blog Entries

- [MBS FileMaker Plugin, version 8.3pr5](#)

Created 4th July 2018, last changed 28th November 2019.

**87.177 GImage.Level**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Level"; ImageRef; blackPoint; whitePoint { ; midPoint } )

**Parameters****ImageRef**

The image reference number.

1

**blackPoint**

The black point.

0

**whitePoint**

The white point.

1.0

**midPoint**

Optional

The middle point.

1.0

**Result** Returns "OK" on success.

**Description**

Adjust the levels of the image by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten.

## 87.178 GMImage.LevelChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.LevelChannel"; ImageRef; ChannelType; blackPoint; whitePoint { ; midPoint } )

### Parameters

#### ImageRef

The image reference number.

1

#### ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

#### blackPoint

The black point.

0

#### whitePoint

The white point.

1.0

#### midPoint

Optional

The middle point.

1.0

**Result** Returns "OK" on success.

### Description

Adjust the levels of the image by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. ## 87.179 GImage.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.List" )

**Result** Returns list or error.

### Description

Returns IDs for all images in memory. If this list is growing, you may have forgotten to call GImage.Release in your scripts.

Normally after all scripts are done, this list should be empty, except for static images you want to load once and reuse from time to time.

**87.180 GImage.Magnify**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Magnify"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns "OK" on success.

**Description**

Increases image size to 200% .

**Examples**

Magnificates an image:

```
# load images...
Set Variable [ $Image ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/IMG_3625.jpg" ) ]
# put first on second
Set Variable [ $r ; Value: MBS( "GImage.Magnify"; $Image ) ]
# magnify image
Set Variable [ $r ; Value: MBS( "GImage.WriteToFile"; $Image; "/Users/cs/Pictures/output.jpg" ) ]
# free memory
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Map"; ImageRef; mapImage { ; dither } )

**Parameters****ImageRef**

The image reference number.

1

**mapImage**

The image reference number.

2

**dither**

Optional

Optional, a boolean whether to dither.

0

**Result** Returns "OK" on success.

**Description****See also**

**87.182 GImage.MatteFloodfill**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.MatteFloodfill"; ImageRef; target; opacity; x; y; PaintMethod )

**Parameters****ImageRef**

The image reference number.

1

**target**

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**opacity**

The opacity value from 0 to 65535.

127\*257

**x**

The X Position.

0

**y**

The Y Position.

0

**PaintMethod**

PointMethod = 0, ReplaceMethod = 1, FloodfillMethod = 2, FillToBorderMethod = 3, ResetMethod = 4

2

**Result** Returns "OK" on success.

**Description**

Created 18th August 2014, last changed 11st November 2019.

**87.183 GImage.MeanErrorPerPixel**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.MeanErrorPerPixel"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns the mean error per pixel as number.

**Description**

Created 18th August 2014, last changed 18th August 2014.

## 87.184 GImage.MedianFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.MedianFilter"; ImageRef; radius )

### Parameters

#### ImageRef

The image reference number.

1

#### radius

The radius.

0.0

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.185 GImage.Minify

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Minify"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns "OK" on success.

### Description

Reduces image size to 50% .

### Examples

Shrinks image:

```
# load images...
Set Variable [ $Image ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/IMG_3625.jpg" ) ]
# minimize first
Set Variable [ $r ; Value: MBS( "GImage.Minify"; $Image ) ]
# and save to file
Set Variable [ $r ; Value: MBS( "GImage.WriteToFile"; $Image; "/Users/cs/Pictures/output.jpg" ) ]
# free memory
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image ) ]
```

### See also

## 87.186 GImage.Modulate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Modulate"; ImageRef; brightness; saturation; hue )

### Parameters

#### ImageRef

The image reference number.

1

#### brightness

The brightness value.

100

#### saturation

The saturation value.

0

#### hue

The hue value.

100

**Result** Returns "OK" on success.

### Description

Modulation of saturation and brightness is as a ratio of the current value (100 for no change). Modulation of hue is an absolute rotation of -180 degrees to +180 degrees from the current position corresponding to an argument range of 0 to 200 (100 for no change).

### Examples

Increase brightness:

```
MBS("GImage.Modulate"; $Image; 110; 100; 100);
```

Increase saturation:

```
MBS("GImage.Modulate"; $Image; 100; 110; 100);
```

Increase hue:

```
MBS("GImage.Modulate"; $Image; 100; 100; 110);
```

Modulate an image:

```
Set Variable [ $image ; Value: MBS("GImage.NewFromContainer"; MyTable::InputImage) ]
Set Variable [ $r ; Value: MBS ("GImage.Modulate" ; $image ; 150 ; 150 ; 150 ) ]
Set Field [ MyTable::Brightened ; MBS("GImage.WriteToJPEGContainer";$image) ]
```

87.186. *GMIMAGE.MODULATE* 4635  
Set Variable [ \$r ; Value: MBS("GMImage.Release"; \$image) ]

**See also**

- 87.338 GMImage.WriteToJPEGContainer 4836

Created 18th August 2014, last changed 26th April 2019.

## 87.187 GImage.MontageGeometry

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.MontageGeometry"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns a geometry string.

### Description

Created 18th August 2014, last changed 18th August 2014.

**87.188 GImage.MotionBlur**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.MotionBlur"; ImageRef; radius; sigma; angle )

**Parameters****ImageRef**

The image reference number.

1

**radius**

Specifies the radius of the Gaussian, in pixels, not counting the center pixel.

10

**sigma**

Specifies the standard deviation of the Laplacian, in pixels.

5

**angle**

specifies the angle the object appears to be coming from (zero degrees is from the right).

0

**Result** Returns "OK" on success.

**Description**

Created 18th August 2014, last changed 18th August 2014.

**87.189 GImage.MultiplyChannel**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.MultiplyChannel"; ImageRef; Channel; Factor { ; Add1; Add2 } )

**Parameters****ImageRef**

The image reference number.

1

**Channel**

Which channel to work with. Can be opacity, red, green or blue. The value rgb will apply effect to all three color channels.

"rgb"

**Factor**

The multiplication factor. Range from -1.0 to 1.0.

0.1

**Add1**

Optional

The value to add before multiply. Usually between -65535 and 65535.

0

**Add2**

Optional

The value to add after multiply. Usually in range from -65535 to 65535.

65535\*0.9

**Result** Returns OK or error.

**Description**

For every pixel component, we apply the formula:

$$\text{newValue} = ((\text{Add1} + \text{oldValue}) * \text{Factor}) + \text{Add2}$$

This can be used to change brightness or make opacity less/more transparent.

**Examples**

Multiplies existing opacity channel to make image 90% transparent:

```
// existing values * 0.1 and add 90% to the value to move to higher range.
```

```
MBS("GImage.MultiplyChannel"; $ImageRef; "opacity"; 0.1; 0; 255*0.9)
```

Invert image via multiply:

```
Set Variable [ $image ; Value: MBS( "GImage.NewFromContainer"; Invert::Input ) ]
```

```
# each channel...
```

```
// Set Variable [ $r ; Value: MBS( "GImage.MultiplyChannel"; $image; "red"; -1; 0; 65535) ]
```

```
// Set Variable [ $r ; Value: MBS( "GImage.MultiplyChannel"; $image; "green"; -1; 0; 65535) ]
```

## 87.189. GMIMAGE.MULTIPLYCHANNEL

4639

```
// Set Variable [ $r ; Value: MBS( "GMImage.MultiplyChannel"; $image; "blue"; -1; 0; 65535) ]  
# all channels...  
Set Variable [ $r ; Value: MBS( "GMImage.MultiplyChannel"; $image; "rgb"; -1; 0; 65535) ]  
Set Field [ Invert::Output ; MBS( "GMImage.WriteToPNGContainer"; $image; "output.png" ) ]  
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $image) ]
```

**87.190 GImage.Negate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Negate"; ImageRef; grayscale )

**Parameters****ImageRef**

The image reference number.

1

**grayscale**

Set grayscale to only negate grayscale values in image.

1

**Result** Returns "OK" on success.

**Description****Examples**

Negates an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Negate";$Image);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

**87.191 GImage.New**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.New"; Geometry; Color )

**Parameters****Geometry**

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

**Color**

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns the ImageRef number on success.

**Description**

Please call GImage.Release later to free memory for this image.

Image reference numbers are starting at 18000 and counting up for each new image.

**Examples**

New white image:

```
MBS( "GImage.New"; "16x16"; "white" )
```

New red image:

```
MBS( "GImage.New"; "16x16"; "# FF0000" )
```

Create red square and save to container:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "red" ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

Build in a calculation:

```
SetVars ( [
```

```
img = MBS( "GImage.New"; "16x16"; "random" );
result = MBS( "GImage.WriteToPNGContainer"; img; "test.png" );
```

```
r = MBS( "GMImage.Release"; img)

]; result )
```

Create picture with red and 50% alpha:

```
# Create picture
Set Variable [ $img; Value:MBS( "GMImage.New"; "16x16"; "white" ) ]
# Add alpha channel
Set Variable [ $r; Value:MBS( "GMImage.SetMatte"; $img; 1 ) ]
# Set background color and fill
Set Variable [ $r; Value:MBS( "GMImage.SetBackgroundColor"; $img; "COLOR 65535 0 0 0.5" ) ]
Set Variable [ $r; Value:MBS( "GMImage.Erase"; $img ) ]
# Write to field
Set Variable [ $pic; Value:MBS( "GMImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Field [ test::r; $pic ]
# Cleanup
Set Variable [ $r; Value:MBS( "GMImage.Release"; $img ) ]
```

Create a transparent picture by erasing with transparent color:

```
Set Variable [ $img ; Value: MBS("GMImage.New"; $width & "x" & $height; "RGB 1 1 1" ) ]
Set Variable [ $r ; Value: MBS( "GMImage.SetMatte"; $img; 1 ) ]
Set Variable [ $r ; Value: MBS( "GMImage.SetBackgroundColor"; $img; "transparent" ) ]
Set Variable [ $r ; Value: MBS("GMImage.Erase"; $img) ]
```

## 87.193 GImage.NewFromContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "GImage.NewFromContainer"; data )
```

### Parameters

#### data

A value from a Container Field. Can include various image formats like JPEG, PNG or just containers with FILE data.

**Result** Returns the ImageRef number on success.

### Description

Please call GImage.Release later to free memory for this image.

Image reference numbers are starting at 18000 and counting up for each new image.

### Examples

Show with and height

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Width = MBS("GImage.GetWidth";$Image);
$Height = MBS("GImage.GetHeight";$Image);
$error = MBS("GImage.Release";$Image)
];
$Width & " x " & $Height )
```

Load from container:

```
MBS( "GImage.NewFromContainer"; test::test)
```

### See also

## 87.194 GImage.NewFromFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.NewFromFile"; Path { ; Magick } )

### Parameters

#### Path

The platform specific file path.

"/test.jpg"

#### Magick

Optional

Available in MBS FileMaker Plugin 8.4 or newer.

The magick setting to define which codec to use.

"JPG"

**Result** Returns the ImageRef number on success.

### Description

Please call GImage.Release later to free memory for this image.

Image reference numbers are starting at 18000 and counting up for each new image.

## 87.195 GImage.NewFromHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.NewFromHex"; text )

### Parameters

#### text

The text to decode.

**Result** Returns the ImageRef number on success.

### Description

Please call GImage.Release later to free memory for this image.

This is useful for images you got from a database.

Image reference numbers are starting at 18000 and counting up for each new image.

## 87.196 GImage.NewImagesFromContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.NewImagesFromContainer"; data )

### Parameters

#### data

A value from a Container Field.

**Result** Returns list of image references or error.

### Description

This is for loading multi image tiff files.

Please call GImage.Release later to free memory each image.

Image reference numbers are starting at 18000 and counting up for each new image.

### See also

## 87.197 GImage.NewImagesFromFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.NewImagesFromFile"; Path )

### Parameters

#### Path

The platform specific file path.

"/test.tif"

**Result** Returns list of image references or error.

### Description

This is for loading multi image tiff files.

Please call GImage.Release later to free memory for each image.

Image reference numbers are starting at 18000 and counting up for each new image.

### Examples

Loads from file and writes to other file:

```
Set Variable [ $img; Value:MBS("GImage.NewImagesFromFile"; "/Users/cs/Desktop/test.jpg") ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r; Value:MBS( "GImage.WriteToFile"; $img; "/Users/cs/Desktop/test.tif" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
End If
```

**87.200 GImage.NormalizedMeanError**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.NormalizedMeanError"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns the normalized mean error as number.

**Description****See also**

- 87.199 GImage.NormalizedMaxError

4655

Created 18th August 2014, last changed 18th August 2014.

## 87.201 GImage.OilPaint

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.OilPaint"; ImageRef { ; radius } )

### Parameters

#### ImageRef

The image reference number.

1

#### radius

Optional

The radius.

3.0

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.202 GImage.Opacity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Opacity"; ImageRef; opacity )

### Parameters

#### ImageRef

The image reference number.

1

#### opacity

The opacity, range from 0 to 255.

127

**Result** Returns "OK" on success.

### Description

If the image pixels are opaque then they are set to the specified opacity value, otherwise they are blended with the supplied opacity value. The value of opacity ranges from 0 (completely opaque) to MaxRGB (65535). The defines OpaqueOpacity and TransparentOpacity are available to specify completely opaque or completely transparent, respectively.

**87.203 GImage.Opacity**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Opacity"; ImageRef; opaqueColor; penColor )

**Parameters****ImageRef**

The image reference number.

1

**opaqueColor**

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**penColor**

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

**Description****See also**

- 87.202 GImage.Opacity 4659
- 87.216 GImage.Repage 4677

Created 18th August 2014, last changed 11st November 2019.

## 87.204 GImage.PopClipPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.PopClipPath"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns OK or error.

### Description

#### See also

- 87.38 GImage.ClipPath 4449
- 87.206 GImage.PushClipPath 4663

Created 18th August 2014, last changed 18th August 2014.

## 87.205 GImage.PurgeTemporaryFiles

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.PurgeTemporaryFiles" )

**Result** Returns OK or error.

### Description

The plugin checks if images are in use and refuses to purge if there are current image references.

If you process images in a batch and you finish your work, you can call this method after freeing the last image to clear temp files.

### 87.205.1 Blog Entries

- [MBS FileMaker Plugin, version 5.0pr12](#)

Created 14th February 2015, last changed 14th February 2015.

**87.206 GImage.PushClipPath**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.PushClipPath"; ImageRef; name )

**Parameters****ImageRef**

The image reference number.

1

**name**

The name of the new clippath.

"Clip1"

**Result** Returns OK or error.

**Description**

Clip patch definition consists of subsequent drawing commands, terminated by GImage.PopClipPath.

## 87.207 GImage.Quantize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Quantize"; ImageRef { ; measureError } )

### Parameters

#### ImageRef

The image reference number.

1

#### measureError

Optional

Optionally, a boolean value.

0

**Result** Returns "OK" on success.

### Description

See GImage.SetQuantizeColorSpace, GImage.SetQuantizeColors, GImage.SetQuantizeDither and GImage.SetQuantizeTreeDepth for options.

### Examples

Quantize picture:

```
Set Variable [ $BigImageRef ; Value: MBS("GImage.NewFromContainer"; Test::BigImage) ]
# reduce to 20 colors, so we see the effect. Normally 256
Set Variable [ $Result ; Value: MBS( "GImage.SetQuantizeColors"; $BigImageRef; 20) // 256 ) ]
# Enable dithering, turn off to really see the effect
Set Variable [ $Result ; Value: MBS( "GImage.SetQuantizeDither"; $BigImageRef; 1 ) ]
# Quantize to palette colors
Set Variable [ $Result ; Value: MBS( "GImage.SetQuantizeColorSpace"; $BigImageRef; 4 /* palette */ )
]
# Do it!
Set Variable [ $Result ; Value: MBS("GImage.Quantize"; $BigImageRef) ]
# Type should now be 4 for palette
Set Variable [ $Result ; Value: MBS("GImage.GetType"; $BigImageRef) ]
# save as GIF
Set Field [ Test::Result ; MBS( "GImage.WriteToGIFContainer"; $BigImageRef ) ]
Set Variable [ $Error ; Value: MBS("GImage.Release";$BigImageRef) ]
```

## 87.208 GImage.QuantumDepth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	8.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.QuantumDepth" )

**Result** Returns bit number.

### Description

This is bit depth used to store one component of a pixel.  
The MBS Plugin can be build with 8 or 16 bit.

### 87.208.1 Blog Entries

## 87.209 GImage.Raise

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Raise"; ImageRef { ; geometry; raisedFlag } )

### Parameters

#### ImageRef

The image reference number.

1

#### geometry

Optional

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

#### raisedFlag

Optional

A boolean flag.

0

**Result** Returns "OK" on success.

### Description

#### Examples

Raises the border of an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$ScaleResult = MBS("GImage.Raise";$Image);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

Raise an image:

```
# load images...
Set Variable [ $Image ; Value: MBS( "GImage.NewFromFile"; "/Users/cs/Pictures/IMG_3625.jpg") ]
# raise image
Set Variable [ $r ; Value: MBS( "GImage.Raise"; $Image) ]
# and save to file
Set Variable [ $r ; Value: MBS( "GImage.WriteToFile"; $Image; "/Users/cs/Pictures/output.jpg") ]
# free memory
Set Variable [ $r ; Value: MBS( "GImage.Release"; $Image) ]
```

**Example Databases**

- [GraphicsMagick/GraphicsMagick Sample](#)

Created 18th August 2014, last changed 11st December 2019.

**87.210 GImage.RandomThreshold**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.RandomThreshold"; ImageRef; thresholds )

**Parameters****ImageRef**

The image reference number.

1

**thresholds**

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

**Result** Returns "OK" on success.

**Description**

Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds\_ argument is a geometry containing LOWx-HIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a ChannelType argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

Created 18th August 2014, last changed 18th August 2014.

## 87.211 GImage.RandomThresholdChannel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.RandomThresholdChannel"; ImageRef; thresholds; ChannelType )

### Parameters

#### ImageRef

The image reference number.

1

#### thresholds

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20".

For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

"100x200"

#### ChannelType

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

**Result** Returns "OK" on success.

### Description

Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds\_ argument is a geometry containing LOWx-HIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a ChannelType argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

Created 18th August 2014, last changed 18th August 2014.

## 87.212 GImage.Read

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	8.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Read"; ImageRef; Spec { ; Geometry } )

### Parameters

#### ImageRef

The image reference number.

1

#### Spec

The image specification. e.g. native file path

#### Geometry

Optional

The image size. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

**Result** Returns OK or error.

### Description

This allows you to directly specify the coders to use and include options.

e.g. gradient coder takes a range of two colors to create gradient.

### Examples

Reads in a gradient image:

```
Set Variable [ $image ; Value: MBS( "GImage.New"; "200x200"; "white" ) ]
Set Variable [ $r ; Value: MBS( "GImage.Read"; $image; "gradient:# 20a0ff-# ffff00;" ) ]
// Set Variable [ $r ; Value: MBS( "GImage.Read"; $image; "gradient:white-black" ) ]
Set Field [ Contacts::Photo Container ; MBS( "GImage.WriteToPNGContainer"; $image; "gradient.png" ) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $image) ]
```

### 87.212.1 Blog Entries

- [MBS FileMaker Plugin, version 8.3pr1](#)
- [Gradients in GraphicsMagick](#)

Created 25th May 2018, last changed 21st December 2018.

**87.213 GImage.ReduceNoise**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.ReduceNoise"; ImageRef { ; order } )

**Parameters****ImageRef**

The image reference number.

1

**order**

Optional

The order value.

0

**Result** Returns "OK" on success.

**Description**

Created 18th August 2014, last changed 18th August 2014.

## 87.214 GImage.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Release"; ImageRef )

(old name: GImage.Destroy)

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns OK or error.

### Description

Please call this function when you are done with the image to free memory.

The plugin doesn't know whether you need the image later, so it can't free the memory for you.

You can use GImage.ImageCount to find out how many images are open in memory.

On the long term, we will change all examples to use GImage.Release instead of GImage.Destroy and later deprecate GImage.Destroy and hide it in documentation.

You need to release all image references returned by functions GImage.New, GImage.NewFromBase64, GImage.NewFromContainer, GImage.NewFromFile, GImage.NewFromHex, GImage.NewImagesFromContainer, GImage.NewImagesFromFile, GImage.Copy, GImage.GetClipMask, MenuItem.GetImage, MenuItem.GetMixedStateImage, MenuItem.GetOffStateImage, MenuItem.GetOnStateImage, Twain.CurrentImage, and Barcode.Generate.

### Examples

Show with and height

```
Let ( [
  $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
  $Width = MBS("GImage.GetWidth";$Image);
  $Height = MBS("GImage.GetHeight";$Image);
  $Error = MBS("GImage.Destroy";$Image)
];
$Width & " x " & $Height )
```

Create red square and save to container:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "red" ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Destroy"; $img ) ]
```

87.214. *GMIMAGE.RELEASE* 4675

## 87.215 GImage.ReleaseAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	7.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.ReleaseAll" )

(old name: GImage.DestroyAll)

**Result** Returns OK or error.

### Description

On the long term, we will change all examples to use GImage.ReleaseAll instead of GImage.DestroyAll and later deprecate GImage.DestroyAll and hide it in documentation.

Be aware that on a server this may free objects, which are used by other scripts running in parallel!

## 87.217 GImage.ReplaceColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.ReplaceColor"; ImageRef; color1; color2 { ; Tolerance } )

### Parameters

#### ImageRef

The image reference number.

1

#### color1

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

#### color2

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 0 1 0"

#### Tolerance

Optional

The tolerance to allow for a match. Pass 1 to have one channel be matched if value is one away, e.g. 128 is accepted if searched for 127 or 129. Default is 0.

500

**Result** Returns OK or error.

### Description

Match is exact, so no fuzzy matching unless you pass tolerance parameter.

### Examples

Replaces a nearly white color with red:

```
Set Variable [ $img; Wert:MBS( "GImage.NewFromContainer"; Replace Colors::Input) ]
Set Variable [ $r; Wert:MBS( "GImage.ReplaceColor"; $img; "COLOR 65278 65278 65278"; "COLOR 65535 0 0") ]
Set Variable [ Replace Colors::Output; MBS( "GImage.WriteToPNGContainer"; $img; "logo.png" ) ]
Set Variable [ $r; Wert:MBS( "GImage.Release"; $img ) ]
```

Replace white with transparent:

```

Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
# Set type to RGBA
Set Variable [ $Result; Value:MBS("GImage.SetType"; $BigImageRef; 7) ]
# Replace white with transparent
Set Variable [ $Result; Value:MBS("GImage.ReplaceColor"; $BigImageRef; "white"; "transparent"; 10) ]
# save as PNG
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]

```

Trims space around image and make transparent:

```

Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GImage.SetBackgroundColor"; $BigImageRef; "RGB 1 0 0" ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 5 ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetMatte"; $BigImageRef; 1 ) ]
Set Variable [ $farbe; Value:MBS( "GImage.GetPixelColor"; $BigImageRef; 0; 0 ) ]
Set Variable [ $Result; Value:MBS( "GImage.ReplaceColor"; $BigImageRef; $farbe; "RGB 1 1 1"; 5) ]
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]

```

Replace black in black & white picture with red:

```

Set Variable [ $image ; Value: MBS( "GImage.NewFromContainer"; test::Input ) ]
Set Variable [ $r ; Value: MBS( "GImage.ReplaceColor"; $image; "black"; "red"; 1) ]
Set Field [ test::Output ; MBS( "GImage.WriteToPNGContainer"; $image) ]
Set Variable [ $r ; Value: MBS( "GImage.Release"; $image) ]

```

## 87.218 GImage.Resize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Resize"; ImageRef; geometry { ; FilterTypes; Blur } )

### Parameters

#### ImageRef

The image reference number.

1

#### geometry

The rectangle to use. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

#### FilterTypes

Optional

Which filter to use. Can be one of Undefined, Point, Box, Triangle, Hermite, Hanning, Hamming, Blackman, Gaussian, Quadratic, Cubic, Catrom, Mitchell, Lanczos, Bessel, or Sinc. "Cubic"

#### Blur

Optional

The blur radius. Only used if filter is specified.

3

**Result** Returns OK or error.

### Description

If filter or blur is not specified, we use image defaults.

### Examples

Resize image to 1000x1000 with cubic filter:

```
Set Variable [ $BigImageRef ; Value: MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result ; Value: MBS("GImage.Resize"; $BigImageRef; "1000x1000"; "Cubic"; 0) ]
Set Field [ Test::Result ; MBS( "GImage.WriteToPNGContainer"; $BigImageRef; "test.png" ) ]
Set Variable [ $Error ; Value: MBS("GImage.Destroy";$BigImageRef) ]
```

Created 18th August 2014, last changed 18th August 2014.

**87.221 GImage.Rotate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Rotate"; ImageRef; degrees )

**Parameters****ImageRef**

The image reference number.

1

**degrees**

The angle in degrees.

90

**Result** Returns "OK" on success.

**Description**

Positive angles rotate the image in a clockwise direction while negative angles rotate counter-clockwise.

**Examples**

Rotates image by 90 degree to right

```
Let (
[
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GImage.Rotate"; $Image; 90);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GImage.Release"; $Image)
];
$Result)
```

Custom function to rotate image:

```
/*
MBS_Image_Rotate (Picture; rotation)
```

Picture: Container 'MyTable::MyField'  
rotation: Grad ° - numeric Value, positiv OR negative

Benjamin Fehr, EfficientBizz GmbH  
<http://www.efficientbizz.com>  
/

```
Let (
[
```

```

$image = MBS("GMImage.NewFromContainer"; Picture);
$rotateResult = MBS("GMImage.Rotate"; $image; rotation);
$result = MBS("GMImage.WriteToPNGContainer"; $image);
$destroyResult = MBS("GMImage.Release"; $image)
];

$result)

```

## 87.225 GImage.Scale

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Scale"; ImageRef; Geometry )

### Parameters

#### ImageRef

The image reference number.

1

#### Geometry

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "300x200"

**Result** Returns "OK" on success.

### Description

GraphicsMagick has added a number of qualifiers to the standard geometry string for use when resizing images. The form of an extended geometry string is "<width>x<height>{ +- } <xoffset>{ +- } <yoffset>{ % } { ! } { < } { > } ". Extended geometry strings should only be used when resizing an image. Using an extended geometry string for other applications may cause the API call to fail. The available qualifiers are shown in the following table:

Qualifier	Description
%	Interpret width and height as a percentage of the current size.
!	Resize to width and height exactly, losing original aspect ratio.
<	Resize only if the image is smaller than the geometry specification.
>	Resize only if the image is greater than the geometry specification.

### Examples

Scales the image to 50% with calculating ourself

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Width = MBS("GImage.GetWidth";$Image);
$Height = MBS("GImage.GetHeight";$Image);
$Width = $Width/2;
$Height = $Height/2;
$ScaleResult = MBS("GImage.Scale";$Image; $Width & "x" & $Height);
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
```

```
$Result)
```

Scales the image to 50% easily

```
Let ( [
$Image = MBS("GUIImage.NewFromContainer"; GraphicsMagick::image);
$ScaleResult = MBS("GUIImage.Scale";$Image; "50% ");
$Result = MBS("GUIImage.WriteToPNGContainer"; $Image);
$error = MBS("GMimage.Release";$Image)
] ;
$Result)
```

Scales the image down to 640 pixel width, if it is bigger

```
Let ( [
$Image = MBS("GUIImage.NewFromContainer"; GraphicsMagick::image);
$ScaleResult = MBS("GUIImage.Scale";$Image; "640>");
$Result = MBS("GUIImage.WriteToPNGContainer"; $Image);
$error = MBS("GMimage.Release";$Image)
] ;
$Result)
```

Scale as script:

```
Set Variable [ $Image; Value:MBS("GUIImage.NewFromContainer"; Image Scaling::InputImage) ]
Set Variable [ $r; Value:MBS("GUIImage.Scale"; $Image; "800x600") ]
Set Field [ Image Scaling::Result; MBS("GUIImage.WriteToPNGContainer"; $Image) ]
Set Variable [ $r; Value: MBS("GMimage.Release"; $Image) ]
```

Download picture and scale it down:

```
Set Variable [ $curl ; Value: MBS("CURL.New") ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionURL"; $curl; MIX::URL) ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionFollowLocation"; $curl; 1) ]
Set Variable [ $r ; Value: MBS("CURL.SetOptionMaxRedirs"; $curl; 3) ]
Set Variable [ $result ; Value: MBS("CURL.Perform"; $curl) ]
Set Variable [ $debug ; Value: MBS( "CURL.GetDebugAsText"; $curl) ]
If [ $result = "OK" ]
Set Variable [ $Image ; Value: MBS( "CURL.GetResultAsContainer"; $curl) ]
Set Variable [ $ImageRef ; Value: MBS("GUIImage.NewFromContainer"; $image) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r ; Value: MBS("GUIImage.Scale";$ImageRef; "256x256>") ]
Set Variable [ $ScaledImage ; Value: MBS("GUIImage.WriteToJPEGContainer"; $ImageRef) ]
If [ MBS("IsError") = 0 ]
Set Field [ MIX::Image ; $ScaledImage ]
End If
Set Variable [ $r ; Value: MBS("GMimage.Release";$ImageRef) ]
```

End If

End If

Set Variable [ \$r ; Value: MBS(”CURL.Release”; \$curl) ]

## 87.227 GImage.Segment

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Segment"; ImageRef; clusterThreshold; smoothingThreshold )

### Parameters

#### ImageRef

The image reference number.

1

#### clusterThreshold

the cluster threshold

1.0

#### smoothingThreshold

the smoothing threshold

1.5

**Result** Returns "OK" on success.

### Description

Segment (coalesce similar image components) by analyzing the histograms of the color components and identifying units that are homogeneous with the fuzzy c-means technique. Also uses QuantizeColorSpace and Verbose image attributes

**87.228 GImage.SetAdjoin**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetAdjoin"; ImageRef; flag )

**Parameters****ImageRef**

The image reference number.

1

**flag**

a boolean value

0

**Result** Returns "OK" on success.

**Description****See also**

- 87.87 GImage.GetAdjoin 4524

**87.229 GImage.SetAnimationDelay**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetAnimationDelay"; ImageRef; delay )

**Parameters****ImageRef**

The image reference number.

1

**delay**

Time in 1/100ths of a second

10

**Result** Returns "OK" on success.

**Description**

Time in 1/100ths of a second which must expire before displaying the next image in an animated sequence.

Time in 1/100ths of a second (0 to 65535) which must expire before displaying the next image in an animated sequence. This option is useful for regulating the animation of a sequence of GIF images within Netscape.

**See also**

- 87.88 GImage.GetAnimationDelay

## 87.230 GImage.SetAnimationIterations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetAnimationIterations"; ImageRef; iterations )

### Parameters

#### ImageRef

The image reference number.

1

#### iterations

the Number of iterations to loop an animation for

10

**Result** Returns "OK" on success.

### Description

#### See also

- [87.89 GImage.GetAnimationIterations](#) 4526

### Example Databases

- [GraphicsMagick/Create GIF](#)

Created 18th August 2014, last changed 18th August 2014.

## 87.231 GImage.SetAntiAlias

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetAntiAlias"; ImageRef; flag )

### Parameters

#### ImageRef

The image reference number.

1

#### flag

a boolean value

0

**Result** Returns "OK" on success.

### Description

#### See also

- 87.90 GImage.GetAntiAlias

4527

Created 18th August 2014, last changed 18th August 2014.

## 87.232 GImage.SetAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetAttribute"; ImageRef; name; value { ; Encoding } )

### Parameters

#### ImageRef

The image reference number.

1

#### name

The name of the attribute.

#### value

The value of the attribute.

#### Encoding

Optional

The text encoding. Default is UTF-8.

UTF8

**Result** Returns "OK" on success.

### Description

GraphicsMagick does not support writing attributes back to files, so this only stores new value in memory for GImage.GetAttribute to query.

### See also

## 87.233 GImage.SetBackgroundColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetBackgroundColor"; ImageRef; color )

### Parameters

#### ImageRef

The image reference number.

1

#### color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

### Description

### Examples

Create picture with red and 50% alpha:

```
# Create picture
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "white" ) ]
# Add alpha channel
Set Variable [ $r; Value:MBS( "GImage.SetMatte"; $img; 1 ) ]
# Set background color and fill
Set Variable [ $r; Value:MBS( "GImage.SetBackgroundColor"; $img; "COLOR 65535 0 0 0.5" ) ]
Set Variable [ $r; Value:MBS( "GImage.Erase"; $img ) ]
# Write to field
Set Variable [ $pic; Value:MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Field [ test::r; $pic ]
# Cleanup
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

Convert a SVG image to PNG with alpha channel:

```
# Load image from container
Set Variable [ $image ; Value: MBS( "GImage.New"; "500x500"; "transparent" ) ]
# turn on alpha channel and set background to transparent
Set Variable [ $r ; Value: MBS( "GImage.SetType"; $image; 7 ) ]
Set Variable [ $r ; Value: MBS( "GImage.SetBackgroundColor"; $image; "transparent" ) ]
# read SVG
```

```

Set Variable [ $r ; Value: MBS( "GImage.ReadFromContainer"; $image; SVG to PNG::InputFile; "500x500";
0; "SVG" ) ]
# Output to container and release image
Set Field [ SVG to PNG::OutputFile ; MBS( "GImage.WriteToPNGContainer"; $image; "test.png" ) ]
Set Variable [ $r ; Value: MBS("GImage.Free"; $image) ]

```

Create a transparent picture by erasing with transparent color:

```

Set Variable [ $img ; Value: MBS("GImage.New"; $width & "x" & $height; "RGB 1 1 1") ]
Set Variable [ $r ; Value: MBS( "GImage.SetMatte"; $img; 1) ]
Set Variable [ $r ; Value: MBS( "GImage.SetBackgroundColor"; $img; "transparent") ]
Set Variable [ $r ; Value: MBS("GImage.Erase"; $img) ]

```

**87.235 GImage.SetBorderColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetBorderColor"; ImageRef; color )

**Parameters****ImageRef**

The image reference number.

1

**color**

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

**Description**

You can set this and call GImage.Border to add border with given color.

**Examples**

Add whitespace on top and bottom of image:

```
Let ( [
```

```
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$r = MBS( "GImage.SetBorderColor"; $Image; "white" );
$r = MBS("GImage.Border";$Image; "0x100");
$result = MBS("GImage.WriteToPNGContainer"; $Image);
```

```
$r = MBS("GMImage.Release";$Image)
```

```
];
```

```
$Result)
```

**87.237 GImage.SetCacheThreshold**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetCacheThreshold"; threshold )

**Parameters****threshold**

The Pixel cache threshold in megabytes

1

**Result** Returns "OK" on success.

**Description**

Once this memory threshold is exceeded, all subsequent pixels cache operations are to/from disk. This setting is shared by all Image objects.

**See also**

- 87.1 GImage.AdaptiveThreshold

4399

Created 18th August 2014, last changed 11st March 2017.

**87.238 GImage.SetClassType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetClassType"; ImageRef; classtype )

**Parameters****ImageRef**

The image reference number.

1

**classtype**

The class type number

2

**Result** Returns "OK" on success.

**Description**

setting a DirectClass image to PseudoClass will result in the loss of color information if the number of colors in the image is greater than the maximum palette size (either 256 or 65536 entries depending on the value of QuantumDepth when ImageMagick was built).

Value can be DirectClass = 1 or PseudoClass = 2.

**See also**

- 87.99 GImage.GetClassType 4538

**87.239 GMImage.SetColorFuzz**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.SetColorFuzz"; ImageRef; value )

**Parameters****ImageRef**

The image reference number.

1

**value**

a float number.

1.0

**Result** Returns "OK" on success.

**Description**

Used for example with GMImage.Trim function.

Range is from 0 to 65535 with zero being no fuzz and 65535 to match all colors.

Useful range may be around 50\*257.

**Examples**

Trim a picture:

```
Set Variable [ $BigImageRef; Value:MBS("GMImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GMImage.SetBackgroundColor"; $BigImageRef; "white" ) ]
Set Variable [ $Result; Value:MBS( "GMImage.SetColorFuzz"; $BigImageRef; 100 ) ]
Set Variable [ $Result; Value:MBS("GMImage.Trim"; $BigImageRef) ]
Set Field [ Test::Result; MBS( "GMImage.WriteToJPEGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GMImage.Release";$BigImageRef) ]
```

Make a picture transparent:

```
# load a picture
Set Variable [ $image; Value:MBS( "GMImage.NewFromContainer"; Test::BigImage) ]
# white in RGB
Set Variable [ $f; Value:"white" ]
# Replace all white with nearly white
Set Variable [ $r; Value:MBS( "GMImage.ReplaceColor"; $image; $f; "white"; 0 ) ]
# now flood fill it with 5 as tolerance
Set Variable [ $r; Value:MBS( "GMImage.SetColorFuzz"; $image; 5 ) ]
Set Variable [ $r; Value:MBS( "GMImage.FloodFillColorXY"; $image; 0; 0; $f ) ]
# now set back fuzz and make transparent using white
Set Variable [ $r; Value:MBS( "GMImage.SetColorFuzz"; $image; 0 ) ]
Set Variable [ $imagecolor; Value:MBS( "GMImage.Transparent"; $image; $f ) ]
# write back to container
```

```
Set Field [ Test::Result; MBS( "GMImage.WriteToPNGContainer"; $image; ) ]
# cleanup
Set Variable [ $Error; Value:MBS("GMImage.Release";$image) ]
```

## 87.243 GImage.SetCompose

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetCompose"; ImageRef; CompositeOperator )

### Parameters

#### ImageRef

The image reference number.

1

#### CompositeOperator

UndefinedCompositeOp = 0, OverCompositeOp = 1, InCompositeOp = 2, OutCompositeOp = 3, AtopCompositeOp = 4, XorCompositeOp = 5, PlusCompositeOp = 6, MinusCompositeOp = 7, AddCompositeOp = 8, SubtractCompositeOp = 9, DifferenceCompositeOp = 10, MultiplyCompositeOp = 11, BumpmapCompositeOp = 12, CopyCompositeOp = 13, CopyRedCompositeOp = 14, CopyGreenCompositeOp = 15, CopyBlueCompositeOp = 16, CopyOpacityCompositeOp = 17, ClearCompositeOp = 18, DissolveCompositeOp = 19, DisplaceCompositeOp = 20, ModulateCompositeOp = 21, ThresholdCompositeOp = 22, NoCompositeOp = 23, DarkenCompositeOp = 24, LightenCompositeOp = 25, HueCompositeOp = 26, SaturateCompositeOp = 27, ColorizeCompositeOp = 28, LuminizeCompositeOp = 29, CopyCyanCompositeOp = 32, CopyMagentaCompositeOp = 33, CopyYellowCompositeOp = 34, CopyBlackCompositeOp = 35, DivideCompositeOp = 36.

1

**Result** Returns "OK" on success.

**87.244 GMImage.SetCompressType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.SetCompressType"; ImageRef; CompressionType )

**Parameters****ImageRef**

The image reference number.

1

**CompressionType**

UndefinedCompression = 0, NoCompression = 1, BZipCompression = 2, FaxCompression = 3, Group4Compression = 4, JPEGCompression = 5, LosslessJPEGCompression = 6, LZWCompression = 7, RLECompression = 8, ZipCompression = 9

1

**Result** Returns "OK" on success.

**Description****Examples**

Convert image to 1 bit TIFF:

```
# Load from container
$image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);

# make black and white with threshold
$result = MBS("GMImage.Threshold"; $image; 127);

# mark as monochrome image
$result = MBS("GMImage.SetMonochrome"; $image; 1);

# set type to 1 for black/white
$result = MBS("GMImage.SetType"; $image; 1);

# set to use TIFF for compression
$result = MBS("GMImage.SetMagick"; $image; "TIFF");

# set to use CCITT 4 Fax compression
$result = MBS("GMImage.SetCompressType"; $image; 4);

# and write to a file
$result = MBS("GMImage.WriteToFile"; $image; "/tmp/test.tif");

# cleanup
$error = MBS("GMImage.Release"; $image)
```

**87.246 GImage.SetDefineSet**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetDefineSet"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns "OK" on success.

**Description**

Tagged image format define. Similar to the get/setdefineValue() functions except that passing the flag value 'true' creates a value-less define with that format and key. Passing the flag value 'false' removes any existing matching definition. The method returns 'true' if a matching key exists, and 'false' if no matching key exists.

**See also**

- 87.108 GImage.GetDefineSet 4548
- 87.247 GImage.SetDefineValue 4719

Created 18th August 2014, last changed 18th August 2014.

**87.247 GImage.SetDefineValue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetDefineValue"; ImageRef; magick; key; value )

**Parameters****ImageRef**

The image reference number.

1

**magick**

The name of the codec

**key**

A key name as string

**value**

The value as string

**Result** Returns "OK" on success.

**Description**

Tagged image format define (set/access coder-specific option) The magick option specifies the coder the define applies to. The key option provides the key specific to that coder. The value option provides the value to set (if any). See the get/set defineSet functions if the key must be removed entirely.

## 87.248 GImage.SetDensity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetDensity"; ImageRef; geometry )

### Parameters

#### ImageRef

The image reference number.

1

#### geometry

The rectangle. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

**Result** Returns "OK" on success.

### Description

Please use GImage.SetResolutionUnits to define units.

### Examples

Loads image and writes back with new DPI setting:

```
Set Variable [ $ImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS("GImage.SetDensity"; $ImageRef; "300x300") ]
Set Variable [ $Result; Value:MBS("GImage.SetQuality"; $ImageRef; 90) ]
Set Field [ Test::Result; MBS( "GImage.WriteToJPEGContainer"; $ImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$ImageRef) ]
```

Set resolution and remove all metadata with different resolution:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image );
$r = MBS("GImage.SetDensity"; $Image; "72x72") ;
$r = MBS( "GImage.SetProfile"; $Image; "EXIF"; "" ) ;
$r = MBS( "GImage.SetProfile"; $Image; "IPTC"; "" ) ;
$r = MBS( "GImage.SetProfile"; $Image; "XMP"; "" ) ;
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result
)
```

## 87.250 GImage.SetEXIFOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetEXIFOrientation"; ImageRef; Orientation )

### Parameters

#### ImageRef

The image reference number.

1

#### Orientation

The orientation value: UndefinedOrientation = 0, TopLeftOrientation = 1, (Line direction: Left to right, Frame Direction: Top to bottom) TopRightOrientation = 2, (Line direction: Right to left, Frame Direction: Top to bottom) BottomRightOrientation = 3, (Line direction: Right to left, Frame Direction: Bottom to top) BottomLeftOrientation = 4, (Line direction: Left to right, Frame Direction: Bottom to top) LeftTopOrientation = 5, (Line direction: Top to bottom, Frame Direction: Left to right) RightTopOrientation = 6, (Line direction: Top to bottom, Frame Direction: Right to left) RightBottomOrientation = 7, (Line direction: Bottom to top, Frame Direction: Right to left) LeftBottomOrientation = 8 (Line direction: Bottom to top, Frame Direction: Left to right)

1

**Result** Returns OK or error.

### Description

Changing orientation may need to set orientation via GImage.SetOrientation and GImage.SetEXIFOrientation. With a JPEG you have orientation both in JPEG header and in EXIF metadata.

**87.253 GImage.SetFillColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetFillColor"; ImageRef; color )

**Parameters****ImageRef**

The image reference number.

1

**color**

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

**Description****Examples**

Set red fill color:

```
MBS( "GImage.SetFillColor"; $img; "red" )
```

Draws a circle in a rectangle in a circle:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "100x100"; "white" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetFillColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $s; Value:MBS( "GImage.SetStrokeColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $c; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 90 ) ]
Set Variable [ $r; Value:MBS( "GImage.DrawRectangle"; $img; 22; 22; 100-22; 100-22 ) ]
Set Variable [ $c; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 100-22 ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

## 87.255 GImage.SetFilterType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetFilterType"; ImageRef; FilterType )

### Parameters

#### ImageRef

The image reference number.

1

#### FilterType

The filter type. Possible values: UndefinedFilter = 0, PointFilter = 1, BoxFilter = 2, TriangleFilter = 3, HermiteFilter = 4, HanningFilter = 5, HammingFilter = 6, BlackmanFilter = 7, GaussianFilter = 8, QuadraticFilter = 9, CubicFilter = 10, CatromFilter = 11, MitchellFilter = 12, LanczosFilter = 13, BesselFilter = 14, SincFilter = 15

2

**Result** Returns "OK" on success.

### Description

Version 9.0 or newer lets you pass filter by name instead of number.

### Examples

Set filter type to 1:

```
MBS( "GImage.SetFilterType"; $cross; 1 )
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetGifDisposeMethod"; ImageRef; disposeMethod )

**Parameters****ImageRef**

The image reference number.

1

**disposeMethod**

The dispose Method number.

**Result** Returns "OK" on success.

**Description**

Disposal	Description
0	No disposal specified.
1	Do not dispose between frames.
2	Overwrite frame with background color from header.
3	Overwrite with previous frame.

## 87.259 GImage.SetICCColorProfile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetICCColorProfile"; ImageRef; data )

### Parameters

#### ImageRef

The image reference number.

1

#### data

a Container field value with an embedded file containing the profile.

**Result** Returns "OK" on success.

### Description

Supplied via a Blob since GraphicsMagick do not currently support formatting this data structure directly. If there is not already an ICC color profile, the profile is merely attached to the image without transforming the pixels. If there is already an ICC color profile (the source profile), the pixels are translated according to the source and target profiles, and the existing profile is replaced with the target profile.

Also see GImage.SetRenderingIntent, which allows specifying the rendering intent if the profile is executed. Specifications for ICC color profiles and their usage are available from the International Color Consortium for the format of ICC color profiles.

### Examples

Removes an existing profile:

```
MBS("GImage.SetICCColorProfile"; $Image; "")
```

Assigns new profile from container:

```
MBS("GImage.SetICCColorProfile"; $Image; MyTable::ProfileContainer);
```

**87.266 GImage.SetMatte**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetMatte"; ImageRef; flag )

**Parameters****ImageRef**

The image reference number.

1

**flag**

A boolean value.

1

**Result** Returns "OK" on success.

**Description****Examples**

Removes alpha channel:

```
MBS("GImage.SetMatte"; $image; 0)
```

Adds an alpha channel:

```
MBS("GImage.SetMatte"; $image; 1)
```

Create picture with red and 50% alpha:

```
# Create picture
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "white" ) ]
# Add alpha channel
Set Variable [ $r; Value:MBS( "GImage.SetMatte"; $img; 1 ) ]
# Set background color and fill
Set Variable [ $r; Value:MBS( "GImage.SetBackgroundColor"; $img; "COLOR 65535 0 0 0.5" ) ]
Set Variable [ $r; Value:MBS( "GImage.Erase"; $img ) ]
# Write to field
Set Variable [ $pic; Value:MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Field [ test::r; $pic ]
# Cleanup
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

- [GraphicsMagick/Trim Picture Border](#)

Created 18th August 2014, last changed 11st November 2019.

**87.267 GImage.SetMatteColor**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetMatteColor"; ImageRef; color )

**Parameters****ImageRef**

The image reference number.

1

**color**

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

**Description****See also**

**87.268 GImage.SetModulusDepth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetModulusDepth"; ImageRef; modulusDepth )

**Parameters****ImageRef**

The image reference number.

1

**modulusDepth**

The new value.

8

**Result** Returns "OK" on success.

**Description**

The minimum number of bits required to support red/green/blue components without loss of accuracy.

**See also**

- 87.136 GImage.GetModulusDepth

4577

Created 18th August 2014, last changed 18th August 2014.

**87.269 GImage.SetMonochrome**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetMonochrome"; ImageRef; flag )

**Parameters****ImageRef**

The image reference number.

1

**flag**

A boolean value.

1

**Result** Returns "OK" on success.

**Description****See also**

## 87.270 GImage.SetOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetOrientation"; ImageRef; Orientation )

### Parameters

#### ImageRef

The image reference number.

1

#### Orientation

The orientation value: UndefinedOrientation = 0, TopLeftOrientation = 1, (Line direction: Left to right, Frame Direction: Top to bottom) TopRightOrientation = 2, (Line direction: Right to left, Frame Direction: Top to bottom) BottomRightOrientation = 3, (Line direction: Right to left, Frame Direction: Bottom to top) BottomLeftOrientation = 4, (Line direction: Left to right, Frame Direction: Bottom to top) LeftTopOrientation = 5, (Line direction: Top to bottom, Frame Direction: Left to right) RightTopOrientation = 6, (Line direction: Top to bottom, Frame Direction: Right to left) RightBottomOrientation = 7, (Line direction: Bottom to top, Frame Direction: Right to left) LeftBottomOrientation = 8 (Line direction: Bottom to top, Frame Direction: Left to right)

1

**Result** Returns "OK" on success.

### Description

### Examples

Set orientation

```
# load a picture
Set Variable [ $image; Value:MBS( "GImage.NewFromContainer"; Test::BigImage) ]
# Set orientation to 1
Set Variable [ $r; Value:MBS( "GImage.SetOrientation"; $image; 1) ]
# write back to container
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $image;) ]
# cleanup
Set Variable [ $Error; Value:MBS("GImage.Release";$image) ]
```

## 87.272 GImage.SetPixelColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetPixelColor"; ImageRef; x; y; color )

### Parameters

#### ImageRef

The image reference number.

1

#### x

The horizontal position. Range from 0 to GImage.GetWidth-1.

0

#### y

The vertical position. Range from 0 to GImage.GetHeight-1.

0

#### color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

Created 18th August 2014, last changed 11st November 2019.

**87.273 GImage.SetProfile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetProfile"; ImageRef; name; data )

**Parameters****ImageRef**

The image reference number.

1

**name**

The string with the name of the profile.

"IPTC"

**data**

The container field value with the embedded profile file.

**Result** Returns "OK" on success.

**Description**

Remove the profile by passing an empty container field. Valid names are "\*", "8BIM", "ICM", "IPTC", "EXIF", or a user/format-defined profile name.

**Examples**

Remove XMP:

```
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $imageRef; "XMP"; "" ) ]
```

Remove IPTC:

```
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $imageRef; "IPTC"; "" ) ]
```

Remove EXIF:

```
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $imageRef; "EXIF"; "" ) ]
```

Clear all profiles:

```
Set Variable [ $Image ; Value: MBS("GImage.NewFromContainer"; MyTable::BMPContainer) ]
# remove metadata
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $Image; "EXIF"; "" ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $Image; "IPTC"; "" ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetProfile"; $Image; "XMP"; "" ) ]
# write back as JPEG
Set Variable [ $r ; Value: MBS("GImage.SetQuality";$Image; 90) ]
Set Field [ MyTable::JPEGContainer ; MBS("GImage.WriteToJPEGContainer"; $Image) ]
```

87.273. *GMIMAGE.SETPROFILE* 4753  
Set Variable [ \$r ; Value: MBS("GMImage.Release";\$Image) ]

**See also**

## 87.274 GImage.SetQuality

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetQuality"; ImageRef; quality )

### Parameters

#### ImageRef

The image reference number.

1

#### quality

a number in range of 0 to 100.

75

**Result** Returns "OK" on success.

### Description

### Examples

Recompresses the image with JPEG compressor and a really bad quality:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.SetQuality"; $Image; 5);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release"; $Image)
] ;
$Result)
```

Converts to JPEG with 90% compression:

```
Set Variable [ $ImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS("GImage.SetQuality"; $ImageRef; 90) ]
Set Field [ Test::Result; MBS( "GImage.WriteToJPEGContainer"; $ImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release"; $ImageRef) ]
```

## 87.279 GImage.SetQuiet

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetQuiet"; ImageRef; Value )

### Parameters

#### ImageRef

The image reference number.

1

#### Value

The new setting. Pass 1 for quiet.

0

**Result** Returns OK or error.

### Description

If enabled, suppress all warning messages. Error messages are still reported.

**87.283 GImage.SetSize**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetSize"; ImageRef; Size )

**Parameters****ImageRef**

The image reference number.

1

**Size**

The rectangle. A Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "100x200"

**Result** Returns "OK" on success.

**Description**

Width and height of a raw image (an image which does not support width and height information). Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG)

## 87.285 GImage.SetStrokeColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetStrokeColor"; ImageRef; color )

### Parameters

#### ImageRef

The image reference number.

1

#### color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

### Description

The plugin has a list so some colors can be simply named like "red".

### Examples

Set color to red:

```
MBS( "GImage.SetStrokeColor"; $img; "red" )
```

Draws a circle in a rectangle in a circle:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "100x100"; "white" ) ]
Set Variable [ $r; Value:MBS( "GImage.SetFillColor"; $img; "RGB 1 0 0" ) ]
Set Variable [ $s; Value:MBS( "GImage.SetStrokeColor"; $img; "RGB 0 0 1" ) ]
Set Variable [ $c; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 90 ) ]
Set Variable [ $r; Value:MBS( "GImage.DrawRectangle"; $img; 22; 22; 100-22; 100-22 ) ]
Set Variable [ $c; Value:MBS( "GImage.DrawCircle"; $img; 50; 50; 50; 100-22 ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

## 87.286 GImage.SetStrokeDashArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetStrokeDashArray"; ImageRef; Pattern )

### Parameters

#### ImageRef

The image reference number.

1

#### Pattern

The list of pattern numbers. can be separated by space or newline.

"5 3 2"

**Result** Returns OK or error.

### Description

The strokeDashArray represents an array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2.

### Examples

Set a pattern

MBS( "GImage.SetStrokeDashArray"; \$ImageRef; "5 3 2" )

**87.290 GImage.SetStrokeMiterLimit**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetStrokeMiterLimit"; ImageRef; value )

**Parameters****ImageRef**

The image reference number.

1

**value**

The new value.

**Result** Returns "OK" on success.

**Description**

When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.

**87.296 GImage.SetType**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SetType"; ImageRef; type )

**Parameters****ImageRef**

The image reference number.

1

**type**

UndefinedType = 0, BilevelType = 1, GrayscaleType = 2, GrayscaleMatteType = 3, PaletteType = 4, PaletteMatteType = 5, TrueColorType = 6, TrueColorMatteType = 7, ColorSeparationType = 8, ColorSeparationMatteType = 9, OptimizeType = 10

6

**Result** Returns "OK" on success.

**Description**

Changing the type from TrueColorType to GrayscaleType will convert a color picture to grayscale.

**Examples**

Change the picture to grayscale.

```
Let ( [
  $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
  $Result = MBS("GImage.SetType";$Image; 2);
  $Result = MBS("GImage.WriteToPNGContainer"; $Image);
  $Error = MBS("GImage.Release";$Image)
] ;
$Result)
```

Convert image to 1 bit TIFF:

```
# Load from container
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);

# make black and white with threshold
$Result = MBS("GImage.Threshold";$Image; 127);

# mark as monochrome image
$Result = MBS("GImage.SetMonochrome";$Image; 1);

# set type to 1 for black/white
$Result = MBS("GImage.SetType";$Image; 1);
```

```
# set to use TIFF for compression
$Result = MBS("GImage.SetMagick";$Image; "TIFF");

# set to use CCITT 4 Fax compression
$Result = MBS("GImage.SetCompressType";$Image; 4);

# and write to a file
$Result = MBS("GImage.WriteToFile"; $Image; "/tmp/test.tif");

# cleanup
$error = MBS("GImage.Release";$Image)
```

Change picture to RGB:

```
MBS("GImage.SetType"; $image; 6);
```

Replace white with transparent:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
# Set type to RGBA
Set Variable [ $Result; Value:MBS("GImage.SetType"; $BigImageRef; 7) ]
# Replace white with transparent
Set Variable [ $Result; Value:MBS("GImage.ReplaceColor"; $BigImageRef; "white"; "transparent"; 10) ]
# save as PNG
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]
```

**87.303 GMImage.Sharpen**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Sharpen"; ImageRef { ; radius; sigma } )

**Parameters****ImageRef**

The image reference number.

1

**radius**

Optional

Optional, The radius of the Gaussian, in pixels, not counting the center pixel.

0

**sigma**

Optional

Optional, The standard deviation of the Laplacian, in pixels.

1

**Result** Returns "OK" on success.

**Description****Examples**

Applies the sharpen effect to the image:

```
Let (
[
$Image = MBS("GMImage.NewFromContainer"; GraphicsMagick::image);
$RotateResult = MBS("GMImage.Sharpen"; $Image; 10; 5);
$Result = MBS("GMImage.WriteToPNGContainer"; $Image);
$DestroyResult = MBS("GMImage.Release";$Image)
];
$Result)

1

**ChannelType**

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

1

**radius**

The radius of the Gaussian, in pixels, not counting the center pixel.

0

**sigma**

The standard deviation of the Laplacian, in pixels.

1

**Result** Returns "OK" on success.

**Description**

Created 18th August 2014, last changed 18th August 2014.

**87.305 GImage.Shave**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Shave"; ImageRef; Geometry )

**Parameters****ImageRef**

The image reference number.

1

**Geometry**

The rectangle where to draw. Geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200%!"

"100x200"

**Result** Returns "OK" on success.

**Description****Examples**

Shaves an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$ShaveResult = MBS("GImage.Shave";$Image; "10x10");
$Result = MBS("GImage.WriteToPNGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

## 87.307 GImage.Signature

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Signature"; ImageRef { ; force } )

### Parameters

#### ImageRef

The image reference number.

1

#### force

Optional

Optional, a boolean value.

0

**Result** Returns the signature string.

### Description

Created 18th August 2014, last changed 18th August 2014.

**87.308 GImage.SkewX**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.SkewX"; ImageRef; angle )

**Parameters****ImageRef**

The image reference number.

1

**angle**

The angle for the skew operation.

0

**Result** Returns OK or error.

**Description****See also**

**87.310 GImage.Solarize**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Solarize"; ImageRef { ; factor } )

**Parameters****ImageRef**

The image reference number.

1

**factor**

Optional

The factor.

50.0

**Result** Returns "OK" on success.

**Description****Examples**

Applies the solarize effect to an image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Solarize";$Image);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
] ;
$Result)
```

## 87.315 GImage.StrokePattern

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.StrokePattern"; ImageRef; patternImageRef )

### Parameters

#### ImageRef

The image reference number.

1

#### patternImageRef

The image reference number.

2

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.316 GImage.Swirl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Swirl"; ImageRef; degrees )

### Parameters

#### ImageRef

The image reference number.

1

#### degrees

The degrees.

90

**Result** Returns "OK" on success.

### Description

### Examples

Does a swirl on the image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Swirl";$Image; 90);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
] ;
$Result)
```

- 87.338 GImage.WriteToJPEGContainer 4836

### Example Databases

- [GraphicsMagick/GraphicsMagick Sample](#)

Created 18th August 2014, last changed 21st December 2018.

## 87.317 GImage.Texture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Texture"; ImageRef; texture )

### Parameters

#### ImageRef

The image reference number.

1

#### texture

The image reference number.

2

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 87.318 GImage.Threshold

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Threshold"; ImageRef { ; threshold } )

### Parameters

#### ImageRef

The image reference number.

1

#### threshold

Optional

The range of the threshold parameter is 0 to MaxRGB (65535).

127\*256

**Result** Returns "OK" on success.

### Description

### Examples

Applies a threshold on the image:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.Threshold";$Image; 127);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

Convert image to 1 bit TIFF:

```
# Load from container
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);

# make black and white with threshold
$Result = MBS("GImage.Threshold";$Image; 127);

# mark as monochrome image
$Result = MBS("GImage.SetMonochrome";$Image; 1);

# set type to 1 for black/white
$Result = MBS("GImage.SetType";$Image; 1);

# set to use TIFF for compression
$Result = MBS("GImage.SetMagick";$Image; "TIFF");
```

```

# set to use CCITT 4 Fax compression
$Result = MBS("GImage.SetCompressType";$Image; 4);

# and write to a file
$Result = MBS("GImage.WriteToFile"; $Image; "/tmp/test.tif");

# cleanup
$error = MBS("GImage.Release";$Image)

```

Make a picture black and transparent:

```

Set Variable [ $image; Value:MBS( "GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $r; Value:MBS( "GImage.Threshold"; $image; 127) ]
Set Variable [ $imagecolor; Value:MBS( "GImage.Transparent"; $image; "white") ]
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $image;) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$image) ]

```

**87.321 GImage.TransformOrigin**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.TransformOrigin"; ImageRef; x; y )

**Parameters****ImageRef**

The image reference number.

1

**x**

The horizontal offset

0

**y**

The vertical offset

0

**Result** Returns "OK" on success.

**Description**

See GImage.TransformReset to reset current transform.

**Examples**

Draw rectangle 45° rotated at specific coordinate:

```
# move origin
```

```
Variable setzen [ $r ; Wert: MBS( "GImage.TransformOrigin"; $img; 50 + 125; 50 + 75 ) ]
```

```
# draw rectangle centered there
```

```
Variable setzen [ $r ; Wert: MBS("GImage.DrawRectangle"; $img; -125; -75; 125; 75) // 250 x 150 ]
```

```
# rotate 45°
```

```
Variable setzen [ $r ; Wert: MBS( "GImage.TransformRotation"; $img; 45 ) ]
```

```
# draw rectangle centered there
```

```
Variable setzen [ $r ; Wert: MBS("GImage.DrawRectangle"; $img; -125; -75; 125; 75) // 250 x 150 ]

MBS( "GImage.TransformRotation"; ImageRef; angle )

**Parameters****ImageRef**

The image reference number.

1

**angle**

The angle.

90

**Result** Returns "OK" on success.

**Description**

If you need to rotate the image, please use GImage.Rotate function.

See GImage.TransformReset to reset current transform.

**Examples**

Draw rectangle 45° rotated at specific coordinate:

```
# move origin
Variable setzen [ $r ; Wert: MBS( "GImage.TransformOrigin"; $img; 50 + 125; 50 + 75 ) ]
# draw rectangle centered there
Variable setzen [ $r ; Wert: MBS("GImage.DrawRectangle"; $img; -125; -75; 125; 75) // 250 x 150 ]
# rotate 45°
Variable setzen [ $r ; Wert: MBS( "GImage.TransformRotation"; $img; 45 ) ]
# draw rectangle centered there
Variable setzen [ $r ; Wert: MBS("GImage.DrawRectangle"; $img; -125; -75; 125; 75) // 250 x 150 ]
```

**87.327 GImage.Translation**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Translation"; ImageRef; X; Y )

**Parameters****ImageRef**

The image reference number.

1

**X**

The x coordinate.

10

**Y**

The y coordinate.

10

**Result** Returns OK or error.

**Description**

Sets the new coordinate origin.

**See also**

- 87.328 GImage.Transparent

4819

Created 18th August 2014, last changed 18th August 2014.

## 87.328 GImage.Transparent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Transparent"; ImageRef; Color )

### Parameters

#### ImageRef

The image reference number.

1

#### Color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 65535. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"RGB 1 0 0"

**Result** Returns "OK" on success.

### Description

### Examples

Make a picture transparent:

```
# load a picture
Set Variable [ $image; Value:MBS( "GImage.NewFromContainer"; Test::BigImage) ]
# white in RGB
Set Variable [ $f; Value:"COLOR 65535 65535 65535" ]
# Replace all white with nearly white
Set Variable [ $r; Value:MBS( "GImage.ReplaceColor"; $image; $f; "COLOR 65535 65278 65535"; 0) ]
# now flood fill it with 5 as tolerance
Set Variable [ $r; Value:MBS( "GImage.SetColorFuzz"; $image; 5 ) ]
Set Variable [ $r; Value:MBS( "GImage.FloodFillColorXY"; $image; 0; 0; $f ) ]
# now set back fuzz and make transparent using white
Set Variable [ $r; Value:MBS( "GImage.SetColorFuzz"; $image; 0 ) ]
Set Variable [ $imagecolor; Value:MBS( "GImage.Transparent"; $image; $f) ]
# write back to container
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $image;) ]
# cleanup
Set Variable [ $Error; Value:MBS("GMimage.Release";$image) ]
```

**87.329 GImage.Trim**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Trim"; ImageRef )

**Parameters****ImageRef**

The image reference number.

1

**Result** Returns "OK" on success.

**Description**

Use GImage.SetColorFuzz to set the fuzzy level.

Trim looks on what pixel colors the edges have and checks if there is a smaller rectangle where all pixel outside have same color. See GImage.BoundingBox for the bounding box of content.

**Examples**

Trim a picture:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 100 ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Field [ Test::Result; MBS( "GImage.WriteToJPEGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]
```

Trim white around picture:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
# set one white pixel to make sure it trims only white
Set Variable [ $Result; Value:MBS( "GImage.SetPixelColor"; $BigImageRef; 0; 0; "white" ) ]
# allows up to 5 away into gray for comparing to white
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 5 ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Field [ Test::Result; MBS( "GImage.WriteToJPEGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]
```

Trims space around image and make transparent:

```
Set Variable [ $BigImageRef; Value:MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result; Value:MBS( "GImage.SetBackgroundColor"; $BigImageRef; "RGB 1 0 0" ) ]
Set Variable [ $Result; Value:MBS("GImage.Trim"; $BigImageRef) ]
Set Variable [ $Result; Value:MBS( "GImage.SetColorFuzz"; $BigImageRef; 5 ) ]
Set Variable [ $Result; Value:MBS( "GImage.SetMatte"; $BigImageRef; 1 ) ]
```

```
Set Variable [ $farbe; Value:MBS( "GImage.GetPixelColor"; $BigImageRef; 0; 0 ) ]
Set Variable [ $Result; Value:MBS( "GImage.ReplaceColor"; $BigImageRef; $farbe; "RGB 1 1 1"; 5 ) ]
Set Field [ Test::Result; MBS( "GImage.WriteToPNGContainer"; $BigImageRef ) ]
Set Variable [ $Error; Value:MBS("GImage.Release";$BigImageRef) ]
```

## 87.330 GImage.Unsharpmask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Unsharpmask"; ImageRef; radius; sigma; amount; threshold )

### Parameters

#### ImageRef

The image reference number.

1

#### radius

the radius of the Gaussian, in pixels, not counting the center pixel.

3

#### sigma

the standard deviation of the Gaussian, in pixels.

1

#### amount

the percentage of the difference between the original and the blur image that is added back into the original.

50

#### threshold

the threshold in pixels needed to apply the diffence amount.

3

**Result** Returns "OK" on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

**87.331 GImage.UnsharpmaskChannel**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.UnsharpmaskChannel"; ImageRef; ChannelType; radius; sigma; amount; threshold )

**Parameters****ImageRef**

The image reference number.

1

**ChannelType**

ChannelType

One of the following values: RedChannel = 1 (RGB Red channel), CyanChannel = 2 (CMYK Cyan channel), GreenChannel = 3 (RGB Green channel), MagentaChannel = 4 (CMYK Magenta channel), BlueChannel = 5 (RGB Blue channel), YellowChannel = 6 (CMYK Yellow channel), OpacityChannel = 7 (Opacity channel), BlackChannel = 8 (CMYK Black (K) channel), MatteChannel = 9 (Same as Opacity channel (deprecated)), AllChannels = 10 (Color channels), GrayChannel = 11 (Color channels represent an intensity.)

**radius**

the radius of the Gaussian, in pixels, not counting the center pixel.

3

**sigma**

the standard deviation of the Gaussian, in pixels.

1

**amount**

the percentage of the difference between the original and the blur image that is added back into the original.

50

**threshold**

the threshold in pixels needed to apply the diffence amount.

3

**Result** Returns "OK" on success.

**Description**

Created 18th August 2014, last changed 18th August 2014.

**87.332 GImage.Wave**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.Wave"; ImageRef { ; amplitude; wavelength } )

**Parameters****ImageRef**

The image reference number.

1

**amplitude**

Optional

The amplitude

25.0

**wavelength**

Optional

The wave length

150.0

**Result** Returns "OK" on success.

**Description****See also**

## 87.333 GImage.WriteImages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteImages"; ImageList; Path; Adjoin )

### Parameters

#### ImageList

The list of image references (numbers returned from the GImage.New functions) separated by either space or new line character.

"1 2 3"

#### Path

A platform specific filepath where to write the image.

"C:\Test.tif"

#### Adjoin

Whether to write one file per image or one image file with all images.

1

**Result** Returns OK or error message.

### Description

This function can be used to create multi image tiff files.

See GImage.NewImagesFromFile and GImage.NewImagesFromContainer for reading multi picture files.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

**87.334 GImage.WriteToBMPContainer**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.4	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteToBMPContainer"; ImageRef { ; Filename } )

**Parameters****ImageRef**

The image reference number.

1

**Filename**

Optional

The file name to use for the container. Default is "image.bmp"  
"ball.bmp"

**Result** Returns a container value.

**Description**

For preview a JPEG version is included as well as a file name "image.bmp" and the image size.  
See also GImage.WriteToFile, GImage.WriteToPNGContainer, GImage.WriteToTiffContainer, GImage.WriteToJPEGContainer and GImage.WriteToGIFContainer.

**Examples**

Get a container value from the picture in BMP format.

MBS( "GImage.WriteToBMPContainer"; \$MyImageRef; "logo.bmp" )

**See also**

**87.334.1 FileMaker Magazin**

- Ausgabe 5/2011, Seite 33

Created 18th August 2014, last changed 16th October 2014.

## 87.335 GImage.WriteToContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	9.3	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteToContainer"; ImageRef { ; FileName } )

### Parameters

#### ImageRef

The image reference number.

1

#### FileName

Optional

File name to pass to FileMaker with container.

"test.jpg"

**Result** Returns OK or error.

### Description

Please set type you want with GImage.SetMagick function.

Similar to other write functions, but allows you to use whatever magick type is set for codec.

This function is similar to our specialized functions GImage.WriteToBMPContainer, GImage.WriteToGIFContainer, GImage.WriteToJPEGContainer, GImage.WriteToPDFContainer, GImage.WriteToPNGContainer and GImage.WriteToTiffContainer, but you can specify the codec to use. Image is compressed and passed to FileMaker with filename. Then FileMaker (or our plugin for older FileMaker versions before 13) can detect the type from filename and generate required previews.

### Examples

Save an image as PNG:

```
Set Variable [ $BigImageRef ; Value: MBS("GImage.NewFromContainer"; Test::BigImage) ]
Set Variable [ $Result ; Value: MBS("GImage.SetMagick"; $BigImageRef; "PNG") ]
Set Field [ Test::Result ; MBS( "GImage.WriteToContainer"; $BigImageRef; "test.png" ) ]
Set Variable [ $Error ; Value: MBS("GImage.Destroy";$BigImageRef) ]
```

### 87.335.1 Blog Entries

- [MBS FileMaker Plugin, version 9.3pr7](#)

Created 20th July 2019, last changed 22nd February 2020.

**87.336 GImage.WriteToFile**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteToFile"; ImageRef; Path )

**Parameters****ImageRef**

The image reference number.

1

**Path**

A platform specific filepath where to write the image.

"C:\Test.jpg"

**Result** Returns "OK" on success.

**Description**

See also GImage.WriteToPNGContainer, GImage.WriteToBMPCContainer, GImage.WriteToTiffContainer, GImage.WriteToJPEGContainer and GImage.WriteToGIFContainer.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

**Examples**

Save file to Bob's desktop as GIF file on Mac OS X:

```
MBS( "GImage.WriteToFile"; $BigImageRef; "/Users/Bob/Desktop/test.gif" )
```

Save file to Bob's desktop as JPG file on Windows:

```
MBS( "GImage.WriteToFile"; $BigImageRef; "C:\Data\logo.jpg" )
```

Convert image to 1 bit TIFF:

```
# Load from container
```

```
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
```

```
# make black and white with threshold
```

```
$Result = MBS("GImage.Threshold";$Image; 127);
```

```
# mark as monochrome image
```

```
$Result = MBS("GImage.SetMonochrome";$Image; 1);
```

```
# set type to 1 for black/white
```

```
$Result = MBS("GImage.SetType";$Image; 1);
```

```

# set to use TIFF for compression
$Result = MBS("GImage.SetMagick";$Image; "TIFF");

# set to use CCITT 4 Fax compression
$Result = MBS("GImage.SetCompressType";$Image; 4);

# and write to a file
$Result = MBS("GImage.WriteToFile"; $Image; "/tmp/test.tif");

# cleanup
$error = MBS("GImage.Release";$Image)

```

Loads from file and writes to other file:

```

Set Variable [ $img; Value:MBS("GImage.NewImagesFromFile"; "/Users/cs/Desktop/test.jpg") ]
If [ MBS("IsError") = 0 ]
Set Variable [ $r; Value:MBS( "GImage.WriteToFile"; $img; "/Users/cs/Desktop/test.tif" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
End If

```

Draw something and write to file on desktop:

```

# New Image
Set Variable [ $img; Value:MBS("GImage.New"; "300x200"; "RGB 1 1 1") ]
# Set colors and line width
Set Variable [ $r; Value:MBS("GImage.SetStrokeColor"; $img; "RGB 1 0 0") ]
Set Variable [ $r; Value:MBS("GImage.SetFillColor"; $img; "RGB 0 0 1") ]
Set Variable [ $r; Value:MBS("GImage.SetLineWidth"; $img; 5) ]
# draw a rectangle
Set Variable [ $r; Value:MBS("GImage.DrawRectangle"; $img; 50; 50; 250; 150) ]
# save to test.png on desktop:
Set Variable [ $DesktopPath; Value:MBS( "Folders.UserDesktop" ) ]
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $DesktopPath; "test.png") ]
Set Variable [ $r; Value:MBS("GImage.WriteToFile"; $img; $path) ]
# cleanup
Set Variable [ $r; Value:MBS("GImage.Release"; $img) ]

```

## 87.337 GImage.WriteToGIFContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.4	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteToGIFContainer"; ImageRef { ; Filename } )

### Parameters

#### ImageRef

The image reference number.

1

#### Filename

Optional

The file name to use for the container. Default is "image.gif"  
"ball.gif"

**Result** Returns a container value.

### Description

For preview a JPEG version is included as well as a file name "image.gif" and the image size.

See also GImage.WriteToFile, GImage.WriteToPNGContainer, GImage.WriteToTiffContainer, GImage.WriteToBMPContainer and GImage.WriteToJPEGContainer.

### Examples

Get a container value from the picture in GIF format.

MBS( "GImage.WriteToGIFContainer"; \$MyImageRef; "logo.gif" )

### See also

Created 18th August 2014, last changed 24th August 2017.

**87.338 GImage.WriteToJPEGContainer**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteToJPEGContainer"; ImageRef { ; Filename } )

**Parameters****ImageRef**

The image reference number.

1

**Filename**

Optional

The file name to use for the container. Default is "image.jpg"

"ball.jpg"

**Result** Returns a container value.

**Description**

Includes a file name "image.jpg" and the image size.

For the quality setting use the GImage.SetQuality function.

For most cases the PNG file format is the better choice as it supports transparency and lossless compression.

See also GImage.WriteToFile, GImage.WriteToPNGContainer, GImage.WriteToTiffContainer, GImage.WriteToBMPContainer and GImage.WriteToGIFContainer.

**Examples**

Recompresses the image with JPEG compressor and a really bad quality:

```
Let ( [
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
$Result = MBS("GImage.SetQuality";$Image; 5);
$Result = MBS("GImage.WriteToJPEGContainer"; $Image);
$error = MBS("GImage.Release";$Image)
];
$Result)
```

Save JPEG image to container as script:

```
Set Variable [ $Image ; Value: MBS("GImage.NewFromContainer"; MyTable::BMPContainer) ]
Set Variable [ $r ; Value: MBS("GImage.SetQuality";$Image; 90) ]
Set Field [ MyTable::JPEGContainer ; MBS("GImage.WriteToJPEGContainer"; $Image) ]
Set Variable [ $r ; Value: MBS("GImage.Release";$Image) ]
```

## 87.339 GImage.WriteToPDFContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteToPDFContainer"; ImageRef { ; Filename } )

### Parameters

#### ImageRef

The image reference number.

1

#### Filename

Optional

The file name to use for the container. Default is "image.pdf"

"test.pdf"

**Result** Returns OK or error.

### Description

For preview a JPEG version is included as well as a file name and the image size.

Please make sure the DPI value is set via GImage.SetDensity function as an incorrect value can crop the PDF page.

See also GImage.WriteToFile, GImage.WriteToJPEGContainer, GImage.WriteToBMPContainer and GImage.WriteToGIFContainer.

If you need more options for PDF file, please use our DynaPDF functions.

### Examples

Load image and Save to container as PDF:

```
Let ( [
    $Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
    $Result = MBS("GImage.WriteToPDFContainer"; $Image; "image.pdf");

    $Error = MBS("GImage.Release";$Image)
];
$Result)
```

- [MBS FileMaker Plugin, version 7.4pr4](#)

Created 24th August 2017, last changed 21st December 2018.

**87.340 GImage.WriteToPNGContainer**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteToPNGContainer"; ImageRef { ; Filename } )

**Parameters****ImageRef**

The image reference number.

1

**Filename**

Optional

The file name to use for the container. Default is "image.png"

"ball.png"

**Result** Returns a container value.

**Description**

For preview a JPEG version is included as well as a file name "image.png" and the image size.

See also GImage.WriteToFile, GImage.WriteToJPEGContainer, GImage.WriteToBMPContainer and GImage.WriteToGIFContainer.

Some images have bad ICC profile, so saving them will crash (version 3.4 or lower) or return error (3.5 and newer). In this case, please use MBS("GImage.SetICCPProfile"; ImageRef; "") to remove the profile.

**Examples**

Get a container value from the picture in PNG format.

```
MBS( "GImage.WriteToPNGContainer"; $MyImageRef; "logo.png" )
```

Make a barcode and store it as PNG in a container:

```
Set Variable [ $image; Value:MBS( "Barcode.Generate"; "UPCA"; "72527270270" ) ]
If [ MBS("Iserror") = 0 ]
Set Field [ MyTable::BarCodeContainer; MBS( "GImage.WriteToPNGContainer"; $image; "barcode.png" ) ]
Set Variable [ $r; Value:MBS("GImage.Release"; $image) ]
Else
Set Field [ MyTable::BarCodeContainer; "" ]
End If
```

Create red square and save to container:

```
Set Variable [ $img; Value:MBS( "GImage.New"; "16x16"; "red" ) ]
Set Field [ test::test; MBS( "GImage.WriteToPNGContainer"; $img; "test.png" ) ]
Set Variable [ $r; Value:MBS( "GImage.Release"; $img ) ]
```

**87.341 GImage.WriteToTiffContainer**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.WriteToTiffContainer"; ImageRef { ; Filename } )

**Parameters****ImageRef**

The image reference number.

1

**Filename**

Optional

The file name to use for the container. Default is "image.tif"  
"ball.tif"

**Result** Returns a container value.

**Description**

For preview a JPEG version is included as well as a file name "image.tif" and the image size.

See also GImage.WriteToFile, GImage.WriteToJPEGContainer, GImage.WriteToPNGContainer, GImage.WriteToBMPCContainer and GImage.WriteToGIFContainer.

**Examples**

Get a container value from the picture in Tiff format.

```
MBS( "GImage.WriteToTIFFContainer"; $MyImageRef; "logo.tif" )
```

Convert image to 1 bit TIFF:

```
# Load from container
```

```
$Image = MBS("GImage.NewFromContainer"; GraphicsMagick::image);
```

```
# make black and white with threshold
```

```
$Result = MBS("GImage.Threshold";$Image; 127);
```

```
# mark as monochrome image
```

```
$Result = MBS("GImage.SetMonochrome";$Image; 1);
```

```
# set type to 1 for black/white
```

```
$Result = MBS("GImage.SetType";$Image; 1);
```

```
# set to use TIFF for compression
```

```
$Result = MBS("GImage.SetMagick";$Image; "TIFF");
```

```
# set to use CCITT 4 Fax compression
```

```
$Result = MBS("GImage.SetCompressType";$Image; 4);
```

```
# and write to a file
$Result = MBS("GImage.WriteToTiffContainer"; $Image; "test.tif");

# cleanup
$error = MBS("GImage.Release";$Image)
```

## 87.342 GImage.XResolution

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GImage.XResolution"; ImageRef )

### Parameters

#### ImageRef

The image reference number.

1

**Result** Returns the x resolution of the image.

### Description

See also density functions.

### See also

- 87.343 GImage.YResolution

4846

**87.344 GMImage.Zoom**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
87 GraphicsMagick	2.0	Yes	Yes	Yes	Yes	Yes

MBS( "GMImage.Zoom"; ImageRef; Geometry )

**Parameters****ImageRef**

The image reference number.

1

**Geometry**

The rectangle. A geometry is specified as a width and height "100x200". With an optional offset "100x200+10+20". For percent values, add a percent on the end, for % values add a % : "100x200% !" "200x300"

**Result** Returns "OK" on success.

# Chapter 88

## Hash

Calculate hash value of text.

### 88.1 Hash.CRC32

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	8.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "Hash.CRC32"; InputType; InputData { ; InputEncoding; StartValue } )
```

#### Parameters

##### InputType

The type of input. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

##### InputData

The actual input data. Text, container or file path.

"Hello World"

##### InputEncoding

Optional

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

##### StartValue

Optional

The start value for the CRC. Default is zero.

0

**Result** Returns OK or error.

#### Description

Same algorithm as used for zip functions.

**Examples**

CRC32 of Hello:

```
MBS("Hash.CRC32"; "Text"; "Hello"; "UTF-8"; 0)
```

**88.1.1 Blog Entries**

- [MBS FileMaker Plugin, version 8.3pr6](#)

Created 11st July 2018, last changed 11st July 2018.

## 88.2 Hash.Digest

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.Digest"; Algorithm; InputType; InputData; InputEncoding; OutputType { ; OutputInfo } )

### Parameters

#### Algorithm

Which algorithm to use. Can be MD4, MD5, SHA, SHA1, MDC2, RIPEMD160, SHA224, SHA256, SHA384 or SHA512.

"SHA512"

#### InputType

The type of input. Can be Text, Container, Image, Path, PDF, Data, base64 or Hex.

"Text"

#### InputData

The actual input data. Text, container or file path.

"Hello World"

#### InputEncoding

The text encoding for text input. Parameter is ignored for other cases.

"UTF-8"

#### OutputType

The output type. Can be Base64, Hex, Text, File, Path.

"Hex"

#### OutputInfo

Optional

The addition info for output. For text it is the text encoding, for file container the file name and for path the actual native file path.

""

**Result** Returns error or hash.

### Description

Input can be one of different types:

- Text, you pass "text", your text and the text encoding. If no or invalid encoding name is passed, the native one is used. The encoding can be one of the following strings: ansi, windows, mac, latin1, utf8, dos or native.
- PDF, you pass the container with the PDF file inside.
- Image, you pass the container with an image file (JPEG, GIF, TIFF, PNG, PICT).
- Data, you pass container and plugin looks for the file data inside.

- Hex, you pass a hex encoded text.
- Base64, you pass a base64 encoded text.
- Path, you pass the file path to a file to read.
- Container, you pass a container which is packed with all its content.

Now for output we can return the digest in various ways:

- Text, we return the hash as text in the encoding. This is not recommended for hash values. `OutputInfo` parameter is text encoding.
- Base64, the hash is returned as base64 encoded text.
- Hex, the hash is returned as hex encoded text.
- File, the hash is returned as a container value with a file inside containing the hash. `OutputInfo` parameter is the filename to be stored in the container value.
- Path, the hash is written to a file. In the `OutputInfo` parameter you provide a native file path.
- JPEG, a container with a JPEG image.
- GIF, a container with a GIF image.
- TIFF, a container with a TIFF image.
- PNG, a container with a PNG image.

Possible digest engines:

DSA-SHA, DSA, MD5, MDC2, RIPEMD160, SHA, SHA1, SHA224, SHA256, SHA384 or SHA512.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Calculate MD5 from text:

```
MBS( "Hash.Digest"; "MD5"; "Text"; "Hello World"; "UTF-8"; "Hex"; "" )
```

Calculate SHA512 from image in container and encode it as base64:

```
MBS( "Hash.Digest"; "SHA512"; "Image"; MyTable::MyContainer; ""; "Base64"; "" )
```

Hash of PDF in container:

```
MBS( "Hash.Digest"; "SHA512"; "PDF"; MyTable::MyContainer; ""; "Hex"; "" )
```

Hash a file with MD5:

```
MBS( "Hash.Digest"; "MD5"; "Path"; "/Users/cs/Desktop/test.fmp12"; "" ; "Hex"; "" )
```

Stream file to AWS:

```
# Build a path to file (local) and in AWS
Set Variable [ $Filename ; Value: "test.pdf" ]
Set Variable [ $Path ; Value: "/" & $BucketName & "/PDF/" & $Filename ]
Set Variable [ $localPath ; Value: "/Users/cs/Desktop/license.pdf" ]
# calculate hash for file to upload
Set Variable [ $HashedPayload ; Value: Lower(MBS( "Hash.Digest"; "sha256"; "path"; $localPath; "" ; "hex"
)) ]
# upload
Set Variable [ $curl ; Value: MBS("CURL.New") ]
# file content is streamed
Set Variable [ $result ; Value: MBS("CURL.OpenInputFile"; $curl; $localPath) ]
# setup AWS
Set Variable [ $result ; Value: MBS("CURL.SetupAWS"; $curl; $AWSAccessKeyId; $AWSSecretAccessKey;
$Region; $Service; $Path; $Domain; $Verb; $HashedPayload; $headers) ]
Set Field [ CURL Test::Result ; MBS("CURL.Perform"; $curl) ]
Set Field [ CURL Test::debug ; MBS("CURL.GetDebugAsText"; $curl) ]
Set Variable [ $result ; Value: MBS("CURL.Release"; $curl) ]
```

## 88.3 Hash.DigestFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.DigestFile"; Algorithm; FilePath; OutputType { ; OutputInfo } )

### Parameters

#### Algorithm

Which algorithm to use. Can be MD4, MD5, SHA, SHA1, MDC2, RIPEMD160, SHA224, SHA256, SHA384 or SHA512.

"SHA512"

#### FilePath

The native file path to use.

"C:\test.dat"

#### OutputType

The output type. Can be Base64, Hex, Text, File, Path.

"Hex"

#### OutputInfo

Optional

The addition info for output. For text it is the text encoding, for file container the file name and for path the actual native file path.

""

**Result** Returns OK or error.

### Description

This function is optimized to process files on disk in chunks, so it works well for several GB of file sizes.

For output we can return the digest in various ways:

- Base64, the hash is returned as base64 encoded text.
- Hex, the hash is returned as hex encoded text.

Possible digest engines:

DSA-SHA, DSA, MD5, MDC2, RIPEMD160, SHA, SHA1, SHA224, SHA256, SHA384 or SHA512.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Create MD5 of file:

```
MBS("Hash.DigestFile"; "MD5"; "/Users/cs/Movies/test.mov"; "hex")
```

**See also**

- 88.2 Hash.Digest 4851

**88.3.1 Blog Entries**

- [MBS FileMaker Plugin, version 9.2pr3](#)

Created 12nd April 2019, last changed 12nd April 2019.

## 88.4 Hash.MD5

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.MD5"; text { ; Flags } )

### Parameters

#### text

The text to process.

"Hello World"

#### Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded.

Pass 2 if input data is Hex encoded and plugin should decode it first.

0

**Result** Returns MD5 hash.

### Description

Text is converted to UTF-8 to make sure the text encoding doesn't change the hash value.

Hashes are used to store a fingerprint of some data. When hashes are not equal, the data is probably also not equal.

This function is good to make hashes for passwords. You don't save the password in your database, but only the hash. On login, you calculate the hash for the password entered by the user and compare the hash with the stored one. This way the database only contains hashes. And it's unlikely someone finds the password given the hash, except for easy cases like "hello" where google will tell you the text for the hash.

To make hashes more secure, use a prefix/suffix like the user id or simply your application name. This way even hello as a password will be quite impossible to recover from the hash.

SHA-512 is stronger than MD5.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

### Examples

Calculate hash of password:

```
MBS( "Hash.MD5"; $password )
```

Testing flags:

```
Set Variable [ $hash1; Value:MBS( "Hash.MD5"; "Hello" ) ]
```

```
Set Variable [ $hash2; Value:MBS( "Hash.MD5"; "48656C6C6F"; 2 ) ]
```

```
Show Custom Dialog [ "Two calculations for same hash..."; $hash1 & $hash2 ]
```

FileMaker 16 vs. Plugin:

```
# MBS Plugin:  
MBS( "Hash.MD5"; "Hello World")  
# Same via FileMaker 16 native:  
HexEncode( CryptDigest ( "Hello World"; "MD5" ))
```

#### See also

Created 18th August 2014, last changed 4th June 2017.

## 88.5 Hash.MD5.HMAC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.MD5.HMAC"; key; data { ; Flags } )

### Parameters

#### key

The key text to use.

"Hello"

#### data

The data text to use.

"World"

#### Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded. Pass 2 if key is Hex encoded and plugin should decode it first. Pass 4 if data is hex encoded and plugin should decode it first.

0

**Result** Returns the hash string.

### Description

Keyed-Hash Message Authentication Code is a way to add salt to a hash for more security.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

### Examples

Hash empty string

```
MBS( "Hash.MD5.HMAC"; ""; "" )
```

Example result: 74E6F7298A9C2D168935F58C001BAD88

Hash a test string

```
MBS( "Hash.MD5.HMAC"; "key"; "The quick brown fox jumps over the lazy dog")
```

Example result: 80070713463E7749B90C2DC24911E275

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
```

```
MBS( "Hash.MD5.HMAC"; "Key"; "Data")
```

```
# Same via FileMaker 16 native:  
HexEncode( CryptAuthCode ( "Data" ; "MD5" ; "Key" ))
```

**88.6 Hash.PBKDF2.HMAC**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.PBKDF2.HMAC"; salt; password; iterations; desiredHashLength; hashAlgorithm { ; Flags } )

**Parameters****salt**

The key text to use.

"Hello"

**password**

The data text to use.

"World"

**iterations**

Number of loops that the hash algorithm does.

100

**desiredHashLength**

Number of bytes that you want the resulting hash to be. 16 or 32 bytes are commonly used.

32

**hashAlgorithm**

The hash algorithm. Can be MD5, SHA1, SHA256 or SHA512.

"MD5"

**Flags**

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded. Pass 2 if salt is Hex encoded and plugin should decode it first. Pass 4 if password is hex encoded and plugin should decode it first.

0

**Result** Returns the hash or error.

**Description**

Same as Crypto.PBKDF2 in Xojo (Real Studio):

<http://docs.realsoftware.com/index.php/Crypto.PBKDF2>

**Examples**

Calculate password hash:

MBS( "Hash.PBKDF2.HMAC"; "Hello"; "World"; 100; 32; "SHA512")

Example result: 2CFDC277C8B84693B85E18D5A0176249EF29B74DFDF2EE6826636F5ACBF70D0

## 88.7 Hash.RandomHexString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.RandomHexString"; Length )

### Parameters

#### Length

The length of the text to return in characters. Result string will be double that size as it is hex.  
32

**Result** Returns text.

### Description

You can use these strings for hash seeds.

### Examples

Creates 8 byte string:

MBS( "Hash.RandomHexString"; 8 )

### See also

## 88.8 Hash.RandomString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.RandomString"; Length { ; Characters } )

### Parameters

#### Length

The length of the text to return in characters.

32

#### Characters

Optional

Optional, a list of characters to use instead of default set.

"1234"

**Result** Returns text.

### Description

User Characters: a to z, A to Z and 0 to 9.

You can use this strings for hash seeds or as password suggestions.

### Examples

Creates 8 byte string:

```
MBS( "Hash.RandomString"; 8 )
```

Create random text with only digits:

```
MBS("Hash.RandomString"; 32; "1234567890")
```

Create random hex number:

```
MBS("Hash.RandomString"; 32; "1234567890ABCDEF")
```

Create random password using digits and punctuation:

```
MBS("Hash.RandomString"; 10; "1234567890ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz~!@# $% ^& *-_+=.")
```

## 88.9 Hash.SHA1

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	3.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "Hash.SHA1"; text { ; Flags } )
```

### Parameters

#### text

The text to process.

"Hello World"

#### Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded.

Pass 2 if input data is Hex encoded and plugin should decode it first.

0

**Result** Returns SHA-256 hash.

### Description

Text is converted to UTF-8 to make sure the text encoding doesn't change the hash value.

Hashes are used to store a fingerprint of some data. When hashes are not equal, the data is probably also not equal.

This function is good to make hashes for passwords. You don't save the password in your database, but only the hash. On login, you calculate the hash for the password entered by the user and compare the hash with the stored one. This way the database only contains hashes. And it's unlikely someone finds the password given the hash, except for easy cases like "hello" where google will tell you the text for the hash.

To make hashes more secure, use a prefix/suffix like the user id or simply your application name. This way even hello as a password will be quite impossible to recover from the hash.

SHA-1 is stronger than MD5 and weaker than SHA-512.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

### Examples

Calculate hash of password:

```
MBS( "Hash.SHA1"; $password )
```

Calculate empty hash:

```
MBS("Hash.SHA1"; "")
```

Example result: DA39A3EE5E6B4B0D3255BFEF95601890AFD80709

Calculate empty hash as Base64:

```
MBS("Hash.SHA1"; ""); 1)
```

Example result: "2jmj7l5rSw0yVb/vlWAYkK/YBwk="

Calculate for two similar texts:

```
MBS("Hash.SHA1"; "Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")
```

Example result: 68AC906495480A3404BEEE4874ED853A037A7A8F

Encode Password like in PHP:

```
# original in PHP:
#
# $nonce_date_pwd = pack("A*",$nonce) . pack("A*",$CREATIONDATE) . pack("H*", sha1($password));
# $PASSWORDDIGEST = base64_encode( pack('H*', sha1($nonce_date_pwd)));
#
# in FileMaker:
#
# you can use Hash.RandomHexString to make your Nonce.
#
Set Variable [ $NonceHexEncoded ; Wert: MBS("Text.EncodeToHex"; Password Digest::Nonce) ]
Set Variable [ $CreationDateHexEncoded ; Wert: MBS("Text.EncodeToHex"; Password Digest::CreationDate) ]
Set Variable [ $PasswordHashHexEncoded ; Wert: MBS( "Hash.SHA1"; Password Digest::Password; 0 ) ]
Set Variable [ $Input ; Wert: $NonceHexEncoded & $CreationDateHexEncoded & $PasswordHashHexEncoded ]
# build hash by decoding from Hex, doing SHA1 and encode back to Base64
Set Variable [ $PasswordDigest ; Wert: MBS( "Hash.Digest"; "SHA1"; "hex"; $input; "" ; "Base64"; "" ) ]
Set Field [ Password Digest::PasswordDigest ; $PasswordDigest ]
```

Calculate for two similar texts:

```
MBS("Hash.SHA1"; "Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
```

Example result: D8E8ECE39C437E515AA8997C1A1E94F1ED2A0E62

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
MBS( "Hash.SHA1"; "Hello World")
# Same via FileMaker 16 native:
HexEncode( CryptDigest ( "Hello World"; "SHA1" ))
```

Created 18th August 2014, last changed 4th June 2017.

## 88.10 Hash.SHA1.HMAC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	3.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "Hash.SHA1.HMAC"; key; data { ; Flags } )
```

### Parameters

#### key

The key text to use.

```
"Hello"
```

#### data

The data text to use.

```
"World"
```

#### Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded. Pass 2 if key is Hex encoded and plugin should decode it first. Pass 4 if data is hex encoded and plugin should decode it first.

```
0
```

**Result** Returns the hash string.

### Description

Keyed-Hash Message Authentication Code is a way to add salt to a hash for more security.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

### Examples

Hash empty string

```
MBS( "Hash.SHA1.HMAC"; ""; "" )
```

Example result: FBDB1D1B18AA6C08324B7D64B71FB76370690E1D

Hash a test string

```
MBS( "Hash.SHA1.HMAC"; "key"; "The quick brown fox jumps over the lazy dog")
```

Example result: DE7C9B85B8B78AA6BC8A7A36F70A90701C9DB4D9

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
```

```
MBS( "Hash.SHA1.HMAC"; "Key"; "Data")
```

```
# Same via FileMaker 16 native:  
HexEncode( CryptAuthCode ( "Data" ; "SHA1" ; "Key" ))
```

## 88.11 Hash.SHA256

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.SHA256"; text { ; Flags } )

### Parameters

#### text

The text to process.

"Hello World"

#### Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded.

Pass 2 if input data is Hex encoded and plugin should decode it first.

0

**Result** Returns SHA-256 hash.

### Description

Text is converted to UTF-8 to make sure the text encoding doesn't change the hash value.

Hashes are used to store a fingerprint of some data. When hashes are not equal, the data is probably also not equal.

This function is good to make hashes for passwords. You don't save the password in your database, but only the hash. On login, you calculate the hash for the password entered by the user and compare the hash with the stored one. This way the database only contains hashes. And it's unlikely someone finds the password given the hash, except for easy cases like "hello" where google will tell you the text for the hash.

To make hashes more secure, use a prefix/suffix like the user id or simply your application name. This way even hello as a password will be quite impossible to recover from the hash.

SHA-256 is stronger than SHA-1.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

### Examples

Calculate hash of password:

```
MBS( "Hash.SHA256"; $password )
```

Calculate empty text hash:

```
MBS("Hash.SHA256"; "")
```

Example result: E3B0C44298FC1C149AFBF4C8996FB92427AE41E4649B934CA495991B7852B855

Calculate hash:

```
MBS("Hash.SHA256"; "The quick brown fox jumps over the lazy dog")
```

Example result: D7A8FBB307D7809469CA9ABCB0082E4F8D5651E46D3CDB762D02D0BF37C9E592

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
```

```
MBS( "Hash.SHA256"; "Hello World")
```

```
# Same via FileMaker 16 native:
```

```
HexEncode( CryptDigest ( "Hello World"; "SHA256" ))
```

## 88.12 Hash.SHA256.HMAC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
88 Hash	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "Hash.SHA256.HMAC"; key; data { ; Flags } )

### Parameters

#### key

The key text to use.

"Hello"

#### data

The data text to use.

"World"

### Flags

Optional

Various flags you can combine by addition. Pass 1 for getting result Base64 encoded instead of Hex encoded. Pass 2 if key is Hex encoded and plugin should decode it first. Pass 4 if data is hex encoded and plugin should decode it first.

0

**Result** Returns the hash string.

### Description

Keyed-Hash Message Authentication Code is a way to add salt to a hash for more security.

Please be aware that text can result in different hashes if it contains line endings. You may want to make sure that line endings are right with the Text.ReplaceNewline function before you compare hashes to results in other development tools. FileMaker uses Mac line endings by default and most examples for Javascript use Unix line endings.

Can be used to sign requests for Amazon MWS.

### Examples

Hash empty string

MBS( "Hash.SHA256.HMAC"; ""; "" )

Example result: B613679A0814D9EC772F95D778C35FC5FF1697C493715653C6C712144292C5AD

Hash a test string

MBS( "Hash.SHA256.HMAC"; "key"; "The quick brown fox jumps over the lazy dog")

Example result: F7BC83F430538424B13298E6AA6FB143EF4D59A14946175997479DBC2D1A3CD8

Hash with flags:

```
MBS( "Hash.SHA256.HMAC"; "6B6579"; "54686520717569636B2062726F776E20666F78206A756D7073206F766572207468652+4)
```

Example result: F7BC83F430538424B13298E6AA6FB143EF4D59A14946175997479DBC2D1A3CD8

FileMaker 16 vs. Plugin:

```
# MBS Plugin:
MBS( "Hash.SHA256.HMAC"; "Key"; "Data")
# Same via FileMaker 16 native:
HexEncode( CryptAuthCode ( "Data" ; "SHA256" ; "Key" ))
```

Calculate Amazon AWS Signature for canonical query:

```
Set Variable [ $Verb ; Value: "POST" ]
Set Variable [ $Domain ; Value: "mws.amazonservices.com" ]
Set Variable [ $Path ; Value: "/Orders/2013-09-01" ]
Set Variable [ $QueryString ; Value: "AWSAccessKeyId=AKIAJVZ5JFVD2SERTQIA& Action=GetOrder& AmazonOrderId.Id.1=112-4707920-3733828& SellerId=A1DGCWQ1HE6UN1& SignatureMethod=HmacSHA256& SignatureVersion=2& Timestamp=2018-01-24T22%3A34%3A24Z& Version=2013-09-01" ]
Set Variable [ $SecretKey ; Value: "1234567890" ]
Set Variable [ $Signature ; Value: MBS( "Hash.SHA256.HMAC"; $SecretKey; $Verb & Char(10) & $Domain & Char(10) & $Path & Char(10) & $QueryString; 1 ) ]
Show Custom Dialog [ "AWS Signature" ; $signature ]
```

Example result: "hTX0IGOH+lWyaqZBf513TcB6Mk3U/hidyQvJASsn7aE="

Calculate a JSON Web Token (JWT) in FileMaker:

```
// Header: { \alg\": \"HS256\", \typ\": \"JWT\" }
// Payload: { \"iss\": \"scotch.io\", \"exp\": 1300819380, \"name\": \"Chris Sevilleja\", \"admin\": true }

// expected result: eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJsb2dnZWVJbGZlIjoiYWRtaW4iLCJpYXQiOiE0MjI3NzkraSYs8EXBxLN_oWnFSRgCzcmJmMjLiuuy5CSpyHI
```

```
Let ( [
secret = "secretkey";
header = " { \alg\": \"HS256\", \typ\": \"JWT\" } ";
payload = " { \loggedInAs\": \"admin\", \iat\": 1422779638 } ";
encodedString = MBS( "Text.EncodeToBase64URL"; header; "UTF-8") & " " & MBS( "Text.EncodeToBase64URL"; payload; "UTF-8");
// calculate hash
hash = MBS( "Hash.SHA256.HMAC"; secret; encodedString; 1 );
// transcode from Base64 to Base64 URL:
hash = MBS( "Text.EncodeToBase64URL"; MBS( "Text.DecodeFromBase64"; hash; "Windows" ); "Windows" );
// and built final result:
result = MBS( "Text.EncodeToBase64URL"; header; "UTF-8") & " " & MBS( "Text.EncodeToBase64URL"; payload; "UTF-8") & " " & hash
```

88.12. *HASH.SHA256.HMAC* 4875  
] ; result )

# Chapter 89

## HealthKit

Functions for health data on iOS.

### 89.1 HealthKit.AuthorizationStatusForType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.AuthorizationStatusForType"; Type )

#### Parameters

##### Type

The type to check.

"BiologicalSex"

**Result** Returns value or error.

#### Description

Returns the application's authorization status for the given object type.

Value is NotDetermined, SharingDenied or SharingAuthorized.

Use HealthKit.RequestAuthorizationToShareTypes to request authentication.

Please enable HealthKit for the app entitlements for Xcode, add HealthKit framework and set NSHealthShareUsageDescription descriptor for info.plist.

#### Examples

Check status:

```
Set Variable [ $r ; Value: MBS( "HealthKit.AuthorizationStatusForType"; "BiologicalSex" ) ]  
Show Custom Dialog [ "Status" ; $r ]
```

**See also**

- 89.7 HealthKit.RequestAuthorizationToShareTypes

4888

Created 25th April 2018, last changed 9th August 2018.

## 89.2 HealthKit.BiologicalSex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.BiologicalSex" )

**Result** Returns sex value or error.

### Description

Before calling this function, the application should request authorization to access objects with the BiologicalSex type.

Returns error message, NotSet, Female, Male or Other.

### Examples

Show sex:

```
Show Custom Dialog [ "Biological Sex" ; MBS( "HealthKit.BiologicalSex" ) ]
```

Created 25th April 2018, last changed 25th April 2018.

## 89.3 HealthKit.BloodType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.BloodType" )

**Result** Returns value or error.

### Description

Returns an object encapsulating the user's blood type.

Before calling this method, the application should request authorization to access objects with the BloodType type.

Value can be NotSet, APositive, ANegative, BPositive, BNegative, ABPositive, ABNegative, OPositive or ONegative.

### Examples

Show blood type:

```
Show Custom Dialog [ "Blood Type" ; MBS( "HealthKit.BloodType" ) ]
```

Created 25th April 2018, last changed 25th April 2018.

## 89.4 HealthKit.DateOfBirth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.DateOfBirth" )

**Result** Returns date or error.

### Description

Returns the user's date of birth in the Gregorian calendar.

Before calling this method, the application should request authorization to access objects with the DateOfBirth type.

### Examples

Show date of birth as date and components:

```
Show Custom Dialog [ "Date of Birth" ; MBS( "HealthKit.DateOfBirth" ) & §& MBS( "HealthKit.DateOfBirthComponents" ) ]
```

### See also

- 89.5 HealthKit.DateOfBirthComponents

4886

Created 25th April 2018, last changed 25th April 2018.

## 89.5 HealthKit.DateOfBirthComponents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.DateOfBirthComponents" )

**Result** Returns date components or error.

### Description

For iOS 10.0 or newer.

Returns the user's date of birth in the Gregorian calendar.

Before calling this method, the application should request authorization to access objects with the DateOfBirth type.

### Examples

Show date of birth as date and components:

```
Show Custom Dialog [ "Date of Birth" ; MBS( "HealthKit.DateOfBirth" ) & §& MBS( "HealthKit.DateOfBirthComponents" ) ]
```

### See also

- 89.4 HealthKit.DateOfBirth

4885

Created 25th April 2018, last changed 25th April 2018.

## 89.6 HealthKit.FitzpatrickSkinType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.FitzpatrickSkinType" )

**Result** Returns value or error.

### Description

Returns an object encapsulating the user's Fitzpatrick skin type.

Before calling this method, the application should request authorization to access objects with the FitzpatrickSkinType type.

This represents the skin type of an individual based on the Fitzpatrick scale.

The Fitzpatrick scale is a numerical classification for skin color based on the skin's response to sun exposure in terms of the degree of burning and tanning.

I Pale white skin that always burns easily in the sun and never tans.

II White skin that burns easily and tans minimally.

III White to light brown skin that burns moderately and tans uniformly.

IV Beige-olive, lightly tanned skin that burns minimally and tans moderately.

V Brown skin that rarely burns and tans profusely.

VI Dark brown to black skin that never burns and tans profusely.

### Examples

Show skin type:

Show Custom Dialog [ "Skin Type" ; MBS( "HealthKit.FitzpatrickSkinType" ) ]

Created 25th April 2018, last changed 25th April 2018.

## 89.7 HealthKit.RequestAuthorizationToShareTypes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.RequestAuthorizationToShareTypes"; ShareList; ReadList { ; FileName; ScriptName } )

### Parameters

#### ShareList

The list of sample types to share. Can be empty if you just read.  
 """

#### ReadList

The list of object types to read.  
 "BiologicalSex\$BloodType"

#### FileName

Optional  
 The file name of the script to call.  
 Get(FileName)

#### ScriptName

Optional  
 The name of the script to trigger.  
 "AuthorizationCompleted"

**Result** Returns OK or error.

### Description

Prompts the user to authorize the application for reading and saving objects of the given types. Before attempting to execute queries or save objects, the application should first request authorization from the user to read and share every type of object for which the application may require access. The request is performed asynchronously and its completion will be executed on an arbitrary background queue after the user has responded. If the user has already chosen whether to grant the application access to all of the types provided, then the completion will be called without prompting the user.

We call optionally your script to pass in the result. You get a list of values. First entry is Success or Cancel. Second value is the error message.

The success parameter of the completion indicates whether prompting the user, if necessary, completed successfully and was not cancelled by the user. It does NOT indicate whether the application was granted authorization.

To customize the messages displayed on the authorization sheet, set the following keys in your app's Info.plist file. Set the NSHealthShareUsageDescription key to customize the message for reading data.

Set the NSHealthUpdateUsageDescription key to customize the message for writing data.

Supported quantity types:

- Body Measurements: BodyFatPercentage, BodyMass, BodyMassIndex, Height, LeanBodyMass, WaistCircumference.
- Fitness: StepCount, DistanceWalkingRunning, DistanceCycling, DistanceWheelchair, BasalEnergyBurned, ActiveEnergyBurned, FlightsClimbed, NikeFuel, AppleExerciseTime, PushCount, DistanceSwimming, SwimmingStrokeCount, VO2Max.
- Vitals: HeartRate, BodyTemperature, BasalBodyTemperature, BloodPressureSystolic, BloodPressureDiastolic, RespiratoryRate.
- Results: OxygenSaturation, PeripheralPerfusionIndex, BloodGlucose, NumberOfTimesFallen, ElectrodermalActivity, InhalerUsage, InsulinDelivery, BloodAlcoholContent, ForcedVitalCapacity, ForcedExpiratoryVolume1, PeakExpiratoryFlowRate.

Nutrition: DietaryFatTotal, DietaryFatPolyunsaturated, DietaryFatMonounsaturated, DietaryFatSaturated, DietaryCholesterol, DietarySodium, DietaryCarbohydrates, DietaryFiber, DietarySugar, DietaryEnergyConsumed, DietaryProtein, DietaryVitaminA, DietaryVitaminB6, DietaryVitaminB12, DietaryVitaminC, DietaryVitaminD, DietaryVitaminE, DietaryVitaminK, DietaryCalcium, DietaryIron, DietaryThiamin, DietaryRiboflavin, DietaryNiacin, DietaryFolate, DietaryBiotin, DietaryPantothenicAcid, DietaryPhosphorus, DietaryIodine, DietaryMagnesium, DietaryZinc, DietarySelenium, DietaryCopper, DietaryManganese, DietaryChromium, DietaryMolybdenum, DietaryChloride, DietaryPotassium, DietaryCaffeine, DietaryWater.

- UVExposure

Sample Types include Quantity types plus:

- Workout
- SleepAnalysis, AppleStandHour, CervicalMucusQuality, OvulationTestResult, MenstrualFlow, Inter-menstrualBleeding, SexualActivity and MindfulSession.
- BloodPressure and CDA.

Object Types include all above plus:

- activitySummary
- BiologicalSex
- BloodType
- DateOfBirth
- FitzpatrickSkinType

- WheelchairUse

Please enable HealthKit for the app entitlements for Xcode, add HealthKit framework and set NSHealthShareUsageDescription descriptor for info.plist.

**Examples**

Request authorization:

```
Set Variable [ $r ; Value: MBS( "HealthKit.RequestAuthorizationToShareTypes"; "" ; "BiologicalSex$Blood-  
Type$WheelchairUse$DateOfBirth$FitzpatrickSkinType$StepCount" ; Get(FileName); "AuthorizeTrigger"  
) ]  
If [ $r "OK" ]  
Show Custom Dialog [ "Error" ; $r ]  
End If
```

## 89.8 HealthKit.SampleQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

```
MBS( "HealthKit.SampleQuery"; QuantityType; Unit; StartDate; EndDate { ; SortKey; ascending; limit }
)
```

### Parameters

#### QuantityType

The quantity type to lookup.

"StepCount"

#### Unit

The unit to use. Can be SI unit or for example count for counters. See Apple documentation for details.

"count"

#### StartDate

The start date for the search.

Date ( 1 ; 1 ; 2018 )

#### EndDate

The end date for the search.

Date ( 2 ; 1 ; 2018 )

#### SortKey

Optional

How to sort. Can be StartDate or EndDate.

"StartDate"

#### ascending

Optional

Whether to prefer ascending instead of descending. Pass 1 for ascending or 0 for descending.

1

#### limit

Optional

The limit for search. Default 0 for no limit.

0

**Result** Returns values as JSON or error.

### Description

Before calling this method, the application should request authorization to access objects with the desired quantity type.

Supported quantity types:

Body Measurements:

BodyFatPercentage, BodyMass, BodyMassIndex, Height, LeanBodyMass, WaistCircumference.

Fitness:

StepCount, DistanceWalkingRunning, DistanceCycling, DistanceWheelchair, BasalEnergyBurned, ActiveEnergyBurned, FlightsClimbed, NikeFuel, AppleExerciseTime, PushCount, DistanceSwimming, SwimmingStrokeCount, VO2Max.

Vitals:

HeartRate, BodyTemperature, BasalBodyTemperature, BloodPressureSystolic, BloodPressureDiastolic, RespiratoryRate.

Results:

OxygenSaturation, PeripheralPerfusionIndex, BloodGlucose, NumberOfTimesFallen, ElectrodermalActivity, InhalerUsage, InsulinDelivery, BloodAlcoholContent, ForcedVitalCapacity, ForcedExpiratoryVolume1, PeakExpiratoryFlowRate.

Nutrition:

DietaryFatTotal, DietaryFatPolyunsaturated, DietaryFatMonounsaturated, DietaryFatSaturated, DietaryCholesterol, DietarySodium, DietaryCarbohydrates, DietaryFiber, DietarySugar, DietaryEnergyConsumed, DietaryProtein, DietaryVitaminA, DietaryVitaminB6, DietaryVitaminB12, DietaryVitaminC, DietaryVitaminD, DietaryVitaminE, DietaryVitaminK, DietaryCalcium, DietaryIron, DietaryThiamin, DietaryRiboflavin, DietaryNiacin, DietaryFolate, DietaryBiotin, DietaryPantothenicAcid, DietaryPhosphorus, DietaryIodine, DietaryMagnesium, DietaryZinc, DietarySelenium, DietaryCopper, DietaryManganese, DietaryChromium, DietaryMolybdenum, DietaryChloride, DietaryPotassium, DietaryCaffeine, DietaryWater.

UVExposure

### Examples

Query step count:

```
Set Field [ Placeholder::Result ; MBS( "HealthKit.SampleQuery"; "StepCount"; "count"; Date ( 1 ; 1 ; 2018 ); Date ( 1 ; 1 ; 2019 ) ) ]
```

## 89.8.1 Blog Entries

- [HealthKit for FileMaker on iOS](#)

Created 25th April 2018, last changed 26th April 2018.

## 89.9 HealthKit.WheelchairUse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.WheelchairUse" )

**Result** Returns value or error.

### Description

Returns an object encapsulating the user's wheelchair use.

Before calling this method, the application should request authorization to access objects with the WheelchairUse type.

Value is NotSet, No or Yes.

### Examples

Show wheelchair usage:

```
Show Custom Dialog [ "Wheelchair used" ; MBS( "HealthKit.WheelchairUse" ) ]
```

Created 25th April 2018, last changed 25th April 2018.

## 89.10 HealthKit.isHealthDataAvailable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
89 HealthKit	8.2	No	No	No	No	Yes

MBS( "HealthKit.isHealthDataAvailable" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if HealthKit is supported on the device.

HealthKit is not supported on all iOS devices. Call isHealthDataAvailable before attempting to use other parts of the framework.

Please ask for a plugin with HealthKit included. We often ship without this feature as you can only use it in apps which opt-in for HealthKit.

### Examples

Check status:

```
Show Custom Dialog [ "Health available" ; Let ( [ r = Let ( [ r = MBS( "HealthKit.isHealthDataAvailable" ); text = Case ( r = 1 ; "yes"; r = 0 ; "no" ; r ) ] ; text) ]
```

Created 25th April 2018, last changed 30th March 2019.

# Chapter 90

## HotKey

Hotkeys to execute scripts.

### 90.1 HotKey.GetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.4	Yes	Yes	No	No	No

MBS( "HotKey.GetEnabled"; HotKeyRef )

#### Parameters

##### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.  
\$hotkey

**Result** Returns 1, 0 or error.

#### Description

The plugin does not trigger script if hotkey is temporary disabled.

#### See also

- [90.15 HotKey.Register](#) 4909
- [90.16 HotKey.SetEnabled](#) 4913

#### 90.1.1 Blog Entries

- [MBS FileMaker Plugin, version 5.4pr4](#)

Created 29th October 2015, last changed 29th October 2015.

## 90.2 HotKey.GetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	6.1	Yes	Yes	No	No	No

MBS( "HotKey.GetEvaluate"; HotKeyRef )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.  
\$hotkey

**Result** Returns OK or error.

### Description

#### See also

- [90.15 HotKey.Register](#) 4909

## 90.3 HotKey.GetIgnoreOnModal

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.4	Yes	Yes	No	No	No

MBS( "HotKey.GetIgnoreOnModal"; HotKeyRef )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

**Result** Returns OK or error.

### Description

If set to 1, Hotkey scripts are not triggered in case a modal window is frontmost.

### See also

## 90.5 HotKey.GetKeyUp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	7.1	Yes	Yes	No	No	No

MBS( "HotKey.GetKeyUp"; HotKeyRef )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.  
\$hotkey

**Result** Returns 0, 1 or error.

### Description

#### See also

## 90.9 HotKey.GetPermanent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	10.2	Yes	No	No	No	No

MBS( "HotKey.GetPermanent"; HotKeyRef )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.  
\$hotkey

**Result** Returns 1, 0 or error.

### Description

#### See also

- 90.15 HotKey.Register 4909

### 90.12.1 Blog Entries

- [MBS FileMaker Plugin, version 10.2pr1](#)

Created 16th March 2020, last changed 16th March 2020.

## 90.13 HotKey.GetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.4	Yes	Yes	No	No	No

MBS( "HotKey.GetTag"; HotKeyRef )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.  
\$hotkey

**Result** Returns text or error.

### Description

#### See also

- [90.8 HotKey.GetName](#) 4902
- [90.15 HotKey.Register](#) 4909
- [90.25 HotKey.SetTag](#) 4925

### 90.13.1 Blog Entries

- [MBS FileMaker Plugin, version 5.4pr4](#)

Created 21st October 2015, last changed 21st October 2015.

## 90.14 HotKey.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.2	Yes	Yes	No	No	No

MBS( "HotKey.List" )

**Result** Returns list or error.

### Description

Returns list with IDs for currently registered hotkeys.

This helps debugging, especially finding scripts which do not release their objects properly.

Created 29th June 2015, last changed 21st September 2015.

## 90.15 HotKey.Register

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.0	Yes	Yes	No	No	No

MBS( "HotKey.Register"; Code; Modifiers { ; Exclusive; FileName; ScriptName; Local; Name; Tag } )

### Parameters

#### Code

The virtual key code of the key to watch. Can be number or name of key.

"F5"

#### Modifiers

The keyboard modifiers to look for. Can be number of text. Text can include command, shift, alpha, option and control. Added in 6.2 for Windows: RightShift, RightOption and RightControl.

"control"

#### Exclusive

Optional

Pass 1 to register exclusive or 0 for non exclusive.

0

#### FileName

Optional

The database file name where the script is located.

"test.fmp12"

#### ScriptName

Optional

The script name.

"MyScript"

#### Local

Optional

Pass 1 to have hotkey only run script if FileMaker is frontmost. Else pass 0 (default) to have a global hotkey.

0

#### Name

Optional

The name for the hotkey. e.g. you can use this property to later decide in a script what to do.

"Test Hotkey"

#### Tag

Optional

The tag for the hotkey. e.g. you can use this property to later decide in a script what to do.

**Result** Returns reference or error.

#### Description

Only one such combination can exist for the current application, i.e. multiple entities in the same application

cannot register for the same hot key combination. The same hot key can, however, be registered by multiple applications. This means that multiple applications can potentially be notified when a particular hot key is requested.

You can request exclusive registration for your process by passing 1 for exclusive parameter. Please use `HotKey.SetScript` to assign a script for the hotkey or use parameters here.

Added Windows support with version 5.2.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Register Control-F5:

```
Set Field [ HotKeys::HotKey ID; MBS("Hotkey.Register"; "F5"; "control") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; HotKeys::HotKey ID; Get(FileName); "HotkeyAction") ]
```

Register key 37 (L on US keyboard) with modifiers:

```
Set Field [ HotKeys::HotKey ID; MBS("Hotkey.Register"; 37; "shift-control-command-option") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; HotKeys::HotKey ID; Get(FileName); "HotkeyAction") ]
```

Register Control-F5 for showing/hiding data viewer:

```
Set Variable [ $hotkey; Value:MBS("HotKey.Register"; "F5"; "control") ]
Set Variable [ $r; Value:MBS( "HotKey.SetEvaluate"; $hotkey; "MBS(\ "MenuBar.RunMenuCommand\ ";
49297)" ) ]
// Mac & Windows
```

Register Control-F5 to write text file on desktop with content of data viewer:

```
MBS( "HotKey.SetEvaluate";
MBS("HotKey.Register"; "F5"; "control");
"MBS( \ "Text.WriteTextFile\ ";
MBS( \ "FM.DataViewerContent\ " );
MBS( \ "Path.AddPathComponent\ ";
MBS( \ "Folders.UserDesktop\ " );
\ "Data Viewer \ " & substitute(substitute(Get(CurrentTimestamp); \":\"; \"-"); \"/\"; \"-") & \".txt\"
);
\ "UTF-8\ "
)"
)
// Mac only.
```

Register Control-F6 to write current script a text file to desktop:

```

MBS( "HotKey.SetEvaluate";
MBS("HotKey.Register"; "F6"; "control");
"MBS( \"Text.WriteTextFile\";
MBS( \"ScriptWorkspace.ScriptText\" );
MBS( \"Path.AddPathComponent\";
MBS( \"Folders.UserDesktop\" );
\"Script \" & substitute(substitute(MBS( \"ScriptWorkspace.CurrentTab\" ); \":\"; \"-\"); \"/\"; \"-\")
& \".txt\" );
\"UTF-8\"
)\"
)
// Mac only

```

Register hotkey Control-F7 for Windows to insert XML snippet:

```

MBS( "HotKey.SetEvaluate"; MBS("HotKey.Register"; "F7"; "control");
"Let ( [
xml = \"<fmxmlsnippet type=\\\"FMObjectList\\\"><Step enable=\\\"True\\\" id=\\\"89\\\" name=\\\"#
(comment)\\\"><Text>loop counting up from 1 to $count</Text></Step><Step enable=\\\"True\\\"
id=\\\"141\\\" name=\\\"Set Variable\\\"><Value><Calculation><! [ CDATA [ \\\"/* add count
here */\\\" ] ] ></Calculation></Value><Repetition><Calculation><! [ CDATA [ 1 ] ] ></Calcula-
tion></Repetition><Name>$count</Name></Step><Step enable=\\\"True\\\" id=\\\"141\\\" name=\\\"Set
Variable\\\"><Value><Calculation><! [ CDATA [ 1 ] ] ></Calculation></Value><Repetition><Calcula-
tion><! [ CDATA [ 1 ] ] ></Calculation></Repetition><Name>$index</Name></Step><Step
enable=\\\"True\\\" id=\\\"68\\\" name=\\\"If\\\"><Calculation><! [ CDATA [ $index $count ] ]
></Calculation></Step><Step enable=\\\"True\\\" id=\\\"71\\\" name=\\\"Loop\\\"></Step><Step
enable=\\\"True\\\" id=\\\"89\\\" name=\\\"# (comment)\\\"><Text>your script steps here</Text></Step><Step
enable=\\\"True\\\" id=\\\"89\\\" name=\\\"# (comment)\\\"></Step><Step enable=\\\"True\\\"
id=\\\"89\\\" name=\\\"# (comment)\\\"><Text>next</Text></Step><Step enable=\\\"True\\\"
id=\\\"141\\\" name=\\\"Set Variable\\\"><Value><Calculation><! [ CDATA [ $index + 1 ] ] ></Calcula-
tion></Value><Repetition><Calculation><! [ CDATA [ 1 ] ] ></Calculation></Repetition><Name>$in-
dex</Name></Step><Step enable=\\\"True\\\" id=\\\"72\\\" name=\\\"Exit Loop If\\\"><Calcula-

## 90.16 HotKey.SetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.4	Yes	Yes	No	No	No

MBS( "HotKey.SetEnabled"; HotKeyRef; Value )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.  
\$hotkey

#### Value

The new state. 1 to enable, 0 to disable.

1

**Result** Returns OK or error.

### Description

The plugin does not trigger script if hotkey is temporary disabled.

### Examples

Set state:

MBS( "HotKey.SetEnabled"; "35001"; 0 )

### See also

## 90.17 HotKey.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	6.1	Yes	Yes	No	No	No

MBS( "HotKey.SetEvaluate"; HotKeyRef; Expression )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let ( \$\$Done = 1 ; 1 )"

**Result** Returns OK or error.

### Description

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the hotkey reference, so you can pass it to other functions if needed.

### Examples

Sets expression to run when hotkey is pressed:

```
Variable setzen [ $result ; Wert: MBS( "HotKey.SetEvaluate"; $curl; "Let ( $$Cancelled = 1 ; 1 )" ) ]
```

Set to write to a log file when a key is pressed:

```
MBS( "HotKey.SetEvaluate"; $hotkey; "MBS(\ "Text.AppendTextFile\"; Get(CurrentHostTimeStamp) & \": Key F5 pressed$\"; \"/Users/cs/Desktop/hotkey.txt\"; \ "native\ ")")
```

Register Control-F5 for showing/hiding data viewer:

```
Set Variable [ $hotkey; Value:MBS("HotKey.Register"; "F5"; "control") ]
Set Variable [ $r; Value:MBS( "HotKey.SetEvaluate"; $hotkey; "MBS(\ "MenuBar.RunMenuCommand\"; 49297)" ) ]
```

Register Control-F5 to write text file on desktop with content of data viewer:

```
MBS( "HotKey.SetEvaluate";
MBS("HotKey.Register"; "F5"; "control");
"MBS( \ "Text.WriteTextFile\";
MBS( \ "FM.DataViewerContent\ " );
MBS( \ "Path.AddPathComponent\";
MBS( \ "Folders.UserDesktop\ " );
\ "Data Viewer \ " & substitute(substitute(Get(CurrentTimestamp); \":\"; \ "-\"); \"/\"; \ "-\") & \ ".txt\ "
```

```
);
\"UTF-8\"
)\"
)
```

Register Control-F6 to write current script a text file to desktop:

```
MBS( \"HotKey.SetEvaluate\";
MBS(\"HotKey.Register\"; \"F6\"; \"control\");
\"MBS( \"Text.WriteTextFile\";
MBS( \"ScriptWorkspace.ScriptText\" );
MBS( \"Path.AddPathComponent\";
MBS( \"Folders.UserDesktop\" );
\"Script \" & substitute(substitute(MBS( \"ScriptWorkspace.CurrentTab\" ); \":\"; \"-\"); \"/\"; \"-\")
& \".txt\" );
\"UTF-8\"
)\"
)
```

## 90.18 HotKey.SetIgnoreOnModal

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.4	Yes	Yes	No	No	No

MBS( "HotKey.SetIgnoreOnModal"; HotKeyRef; Value )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

#### Value

The new state. 1 to enable, 0 to disable.

1

**Result** Returns OK or error.

### Description

If set to 1, Hotkey scripts are not triggered in case a modal window is frontmost.

### Examples

Set state:

MBS( "HotKey.SetIgnoreOnModal"; "35001"; 1 )

## 90.19 HotKey.SetKeyUp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	7.1	Yes	Yes	No	No	No

MBS( "HotKey.SetKeyUp"; HotKeyRef; Value )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

#### Value

Pass 1 to receive key down and up events. Pass 0 to only get one event for key down.

1

**Result** Returns OK or error.

### Description

The script parameter will have two values. First is the hotkey ID and second KeyDown or KeyUp as text.

#### See also

## 90.20 HotKey.SetLocal

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.4	Yes	Yes	No	No	No

MBS( "HotKey.SetLocal"; HotKeyRef; Local )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

#### Local

Set to 1 to only run hotkey if FileMaker is frontmost application.

0

**Result** Returns OK or error.

### Description

### Examples

Create hotkey and set local only:

```
Set Variable [ $HotKeyID; Value:MBS("Hotkey.Register"; "F5"; "shift control") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; $HotKeyID; Get(FileName); "HotkeyAction") ]
Set Variable [ $r; Value:MBS("HotKey.SetLocal"; $HotKeyID; 1) ]
```

## 90.21 HotKey.SetName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.4	Yes	Yes	No	No	No

MBS( "HotKey.SetName"; HotKeyRef )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

**Result** Returns OK or error.

### Description

This is just your own name which you can query. The plugin does not use this information.

### Examples

Register new hotkey with name:

```
Set Variable [ $HotKeyID; Value:MBS("Hotkey.Register"; "F5"; "shift control") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; $HotKeyID; Get(FileName); "HotkeyAction") ]
Set Variable [ $r; Value:MBS("HotKey.SetName"; $HotKeyID; "Search People") ]
```

## 90.22 HotKey.SetPermanent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	10.2	Yes	No	No	No	No

MBS( "HotKey.SetPermanent"; HotKeyRef; Value )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.  
\$hotkey

#### Value

The new setting. Pass 1 to store in preferences or 0 to not store.  
1

**Result** Returns OK or error.

### Description

Currently only implemented for MacOS.

### Examples

Make hotkey permanent:

MBS( "HotKey.SetPermanent"; \$HotKeyRef; 1 )

## 90.23 HotKey.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.0	Yes	Yes	No	No	No

MBS( "HotKey.SetScript"; HotKeyRef; Filename; ScriptName )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Register Control-F5:

```
Set Field [ HotKeys::HotKey ID; MBS("Hotkey.Register"; "F5"; "control") ]
```

```
Set Variable [ $r; Value:MBS("HotKey.SetScript"; HotKeys::HotKey ID; Get(FileName); "HotkeyAction") ]
```

## 90.24 HotKey.SetScriptWorkspaceOnly

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	10.2	Yes	No	No	No	No

MBS( "HotKey.SetScriptWorkspaceOnly"; HotKeyRef; Value )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

#### Value

The new setting. Pass 1 to limit to script workspace or 0 to allow it everywhere.

1

**Result** Returns OK or error.

### Description

Currently only implemented for MacOS.

### Examples

Make hotkey to run in script workspace only:

```
MBS( "HotKey.SetScriptWorkspaceOnly"; $HotKeyRef; 1 )
```

### See also

## 90.25 HotKey.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
90 HotKey	5.4	Yes	Yes	No	No	No

MBS( "HotKey.SetTag"; HotKeyRef )

### Parameters

#### HotKeyRef

The reference value for the hotkey as returned by HotKey.Register function.

\$hotkey

**Result** Returns OK or error.

### Description

This is just your own value which you can query. The plugin does not use this information.

### Examples

Register new hotkey with tag:

```
Set Variable [ $HotKeyID; Value:MBS("Hotkey.Register"; "F5"; "shift control") ]
Set Variable [ $r; Value:MBS("HotKey.SetScript"; $HotKeyID; Get(FileName); "HotkeyAction") ]
Set Variable [ $r; Value:MBS("HotKey.SetTag"; $HotKeyID; "Search People") ]
```

## 91.6 IKPictureTaker.GetInputImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 IKPictureTaker	3.5	Yes	No	No	No	No

MBS( "IKPictureTaker.GetInputImage" { ; ImageType; Filename } )

### Parameters

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns image or error.

### Description

## 91.24 IKPictureTaker.SetNotification

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 IKPictureTaker	3.5	Yes	No	No	No	No

MBS( "IKPictureTaker.SetNotification"; FileName; ScriptName )

### Parameters

#### FileName

The name of the FileMaker File that contains the script.  
"test.fp7"

#### ScriptName

The name of the script to run.  
"MyScript"

**Result** Returns OK on success.

### Description

This script is called whenever the buttons in the panel are called.  
Parameter to this script is "0" for cancel and "1" for OK.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Installs notification script:

```
MBS( "IKPictureTaker.SetNotification"; Get(FileName); "GotImage" )
```

## 91.27 IKPictureTaker.SetShowAddressBookPicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 IKPictureTaker	3.5	Yes	No	No	No	No

MBS( "IKPictureTaker.SetShowAddressBookPicture"; Value )

### Parameters

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

Deprecated by Apple.

#### See also

- 91.12 IKPictureTaker.GetShowAddressBookPicture 4938

Created 18th August 2014, last changed 28th November 2019.

## 91.29 IKPictureTaker.SetShowEmptyPicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 IKPictureTaker	3.5	Yes	No	No	No	No

MBS( "IKPictureTaker.SetShowEmptyPicture"; Image )

### Parameters

#### Image

The new container value with an input image.

\$image

**Result** Returns OK or error.

### Description

#### See also

- 91.14 IKPictureTaker.GetShowEmptyPicture 4940
- 91.15 IKPictureTaker.GetShowRecentPicture 4941

Created 18th August 2014, last changed 18th August 2014.

## 91.31 IKPictureTaker.SetUpdateRecentPicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
91 IKPictureTaker	3.5	Yes	No	No	No	No

MBS( "IKPictureTaker.SetUpdateRecentPicture"; Value )

### Parameters

#### Value

The new setting. Pass 0 to disable or 1 to enable.

1

**Result** Returns OK or error.

### Description

#### See also

- 91.15 IKPictureTaker.GetShowRecentPicture 4941
- 91.16 IKPictureTaker.GetUpdateRecentPicture 4942

Created 18th August 2014, last changed 18th August 2014.

# Chapter 92

## IKSlideShow

Run slideshow on Mac OS X.

### 92.1 IKSlideShow.Add

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	1.6	Yes	No	No	No	No

MBS( "IKSlideShow.Add"; container )

#### Parameters

##### container

The container with the image or the file.

**Result** Returns the number of slides added or an error message.

#### Description

The container can contain an image (GIF, PNG, BMP, JPEG) or an image file (TIFF, BMP, PNG, JPEG) and other formats supported by Mac OS X) or a PDF file.

For PDF files each page is made one slide.

This is the general function. It may often be better to use the functions IKSlideShow.AddImage, IKSlideShow.AddPath, IKSlideShow.AddPDF or IKSlideShow.AddURL.

Sets mode to images.

#### See also

- 92.2 IKSlideShow.AddImage 4961
- 92.4 IKSlideShow.AddPath 4963
- 92.3 IKSlideShow.AddPDF 4962
- 92.5 IKSlideShow.AddURL 4964

- 92.17 IKSlideShow.ItemAtIndex 4976
- 92.18 IKSlideShow.Run 4978

### Example Databases

- [Mac only/Slideshow Example](#)

Created 18th August 2014, last changed 18th August 2014.

## 92.2 IKSlideShow.AddImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	3.1	Yes	No	No	No	No

MBS( "IKSlideShow.AddImage"; Image )

### Parameters

#### Image

The image as container.

\$img

**Result** Returns the number of slides added or an error message.

### Description

The container can contain an image (GIF, PNG, BMP, JPEG) or an image file (TIFF, BMP, PNG, JPEG and other formats supported by Mac OS X).

Sets mode to images.

### See also

- [92.1 IKSlideShow.Add](#) 4959

- [92.3 IKSlideShow.AddPDF](#) 4962
- [92.5 IKSlideShow.AddURL](#) 4964

### 92.2.1 Blog Entries

- [MBS Filemaker Plugin, version 3.2pr7](#)

Created 18th August 2014, last changed 18th August 2014.

## 92.3 IKSlideShow.AddPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	3.1	Yes	No	No	No	No

MBS( "IKSlideShow.AddPDF"; PDF )

### Parameters

#### PDF

The PDF.

\$pdf

**Result** Returns the number of slides added or an error message.

### Description

Each page is made one slide.

You can pass a container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

Sets mode to PDF.

### See also

- 92.1 IKSlideShow.Add 4959
- 92.2 IKSlideShow.AddImage 4961
- 92.4 IKSlideShow.AddPath 4963
- 92.5 IKSlideShow.AddURL 4964
- 125.28 PDFKit.Open 6306

### 92.3.1 Blog Entries

- [MBS Filemaker Plugin, version 3.2pr7](#)

Created 18th August 2014, last changed 18th August 2014.

## 92.4 IKSlideShow.AddPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	3.1	Yes	No	No	No	No

MBS( "IKSlideShow.AddPath"; Path )

### Parameters

#### Path

The native file path to the image file.

"/Users/test/Images/test.jpg"

**Result** Returns the number of slides added or an error message.

### Description

The file can contain an image (GIF, PNG, BMP, JPEG) or an image file (TIFF, BMP, PNG, JPEG and other formats supported by Mac OS X)

Sets mode to images.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

### See also

- 124.2 Path.FileMakerPathToNativePath 6247

### 92.4.1 Blog Entries

- [MBS Filemaker Plugin, version 3.2pr7](#)

Created 18th August 2014, last changed 5th September 2014.

## 92.5 IKSlideShow.AddURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	3.1	Yes	No	No	No	No

MBS( "IKSlideShow.AddURL"; URL )

### Parameters

#### URL

The file url to the image.

"https://www.mbsplugins.de/images/realworld-disney.jpg"

**Result** Returns the number of slides added or an error message.

### Description

The URL can be http/https and some other formats Apple's frameworks know about.

Sets mode to images.

### See also

- 92.1 IKSlideShow.Add 4959

- [MBS Filemaker Plugin, version 3.2pr7](#)

Created 18th August 2014, last changed 18th August 2014.

## 92.6 IKSlideShow.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	1.6	Yes	No	No	No	No

MBS( "IKSlideShow.Clear" { ; Index } )

### Parameters

#### Index

Optional

The index of the item to remove. From 0 to IKSlideShow.Count-1.

If parameter is not provided, we clear all items.

0

**Result** Returns OK or error.

### Description

#### See also

- [92.7 IKSlideShow.Count](#)

## 92.9 IKSlideShow.GetMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	3.1	Yes	No	No	No	No

MBS( "IKSlideShow.GetMode" )

**Result** Returns current mode.

### Description

A slideshow is in one of three modes. If used with the wrong mode, you are in trouble and the framework can crash.

### See also

- [92.13 IKSlideShow.GetScreen](#) 4972

**92.10 IKSlideShow.GetPDFDisplayBox**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	1.6	Yes	No	No	No	No

MBS( "IKSlideShow.GetPDFDisplayBox" )

**Result** The current PDF display box.

**Description**

possible values:

kPDFDisplayBoxMediaBox = 0

kPDFDisplayBoxCropBox = 1

kPDFDisplayBoxBleedBox = 2

kPDFDisplayBoxTrimBox = 3

kPDFDisplayBoxArtBox = 4

**See also**

- 92.22 IKSlideShow.SetPDFDisplayMode 4982
- 92.23 IKSlideShow.SetPDFDisplaysAsBook 4983

Created 18th August 2014, last changed 18th August 2014.

## 92.11 IKSlideShow.GetPDFDisplayMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	1.6	Yes	No	No	No	No

MBS( "IKSlideShow.GetPDFDisplayMode" )

**Result** The current PDF display mode.

### Description

Display modes:

kPDFDisplaySinglePage = 0

kPDFDisplaySinglePageContinuous = 1

kPDFDisplayTwoUp = 2

kPDFDisplayTwoUpContinuous = 3

### See also

Created 18th August 2014, last changed 18th August 2014.

## 92.15 IKSlideShow.GetStartPaused

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	1.6	Yes	No	No	No	No

MBS( "IKSlideShow.GetStartPaused" )

**Result** Returns the current value for the start pause setting.

### Description

Default value is false.

### See also

- 92.14 IKSlideShow.GetStartIndex 4973
- 92.25 IKSlideShow.SetStartIndex 4985
- 92.26 IKSlideShow.SetStartPaused 4986

Created 18th August 2014, last changed 18th August 2014.

## 92.16 IKSlideShow.GetWrapAround

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	1.6	Yes	No	No	No	No

MBS( "IKSlideShow.GetWrapAround" )

**Result** a boolean value whether the slide show wraps around.

### Description

### See also

- [92.27 IKSlideShow.SetWrapAround](#)

4987

### Example Databases

- [Mac only/Slideshow Example](#)

Created 18th August 2014, last changed 18th August 2014.

## 92.17 IKSlideShow.ItemAtIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	6.4	Yes	No	No	No	No

MBS( "IKSlideShow.ItemAtIndex"; Index { ; Filename; Type } )

### Parameters

#### Index

From 0 to IKSlideShow.Count-1.

0

#### Filename

Optional

For PDF or image files returned an optional file name.

"test.jpg"

#### Type

Optional

For images the type you like to get. Can be JPEG, TIFF, PNG, GIF, BMP or PDF.

"JPEG"

**Result** Returns value or error.

### Description

### Examples

Add an item and query it back:

```
Set Variable [ $r; Value:MBS( "IKSlideShow.AddURL"; "http://www.mbsplugins.de/images/xdc2016.jpg"
) ]
Show Custom Dialog [ "Count"; MBS( "IKSlideShow.Count" ) ]
Show Custom Dialog [ "First item"; MBS( "IKSlideShow.ItemAtIndex"; 0 ) ]
```

## 92.19 IKSlideShow.SetAudioFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	6.4	Yes	No	No	No	No

MBS( "IKSlideShow.SetAudioFile"; Path )

### Parameters

#### Path

The native file path to the audio file.

"/Users/cs/Desktop/test.m4a"

**Result** Returns OK or error.

### Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

## 92.20 IKSlideShow.SetMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	3.1	Yes	No	No	No	No

MBS( "IKSlideShow.SetMode"; Mode )

### Parameters

#### Mode

Can be images, PDF or mixed.

**Result** Returns OK on success.

### Description

A slideshow is in one of three modes. Our Add methods set the mode automatically, so you may need to use this method to set the mode you want after adding items.

### Examples

Set mode to PDF:

```
MBS( "IKSlideShow.SetMode"; "pdf" )
```

Set mode to Mixed:

```
MBS( "IKSlideShow.SetMode"; "Mixed" )
```

Created 18th August 2014, last changed 18th August 2014.

## 92.27 IKSlideShow.SetWrapAround

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
92 IKSlideShow	1.6	Yes	No	No	No	No

MBS( "IKSlideShow.SetWrapAround"; value )

### Parameters

#### value

The new wrap around value.

1

**Result** Returns "OK" on success.

### Description

Default is true

### See also

- 92.16 IKSlideShow.GetWrapAround

4975

# Chapter 93

## ImageCapture

Scan images from flatbed scanners on Mac.

Using the ImageKit framework from Apple to talk to flatbed or document feeder scanner. See WIA functions for Windows or older TWAIN functions.

### 93.1 IKDeviceBrowserPanel.Close

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.Close" )

**Result** Returns OK or error.

#### Description

#### Examples

Close window:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.Close" ) ]
```

#### See also

- 93.8 IKDeviceBrowserPanel.GetMode 4997
- 93.13 IKDeviceBrowserPanel.Hide 5002
- 93.14 IKDeviceBrowserPanel.Reset 5003
- 93.23 IKDeviceBrowserPanel.SetMode 5012
- 93.29 IKDeviceBrowserPanel.Show 5019

- 93.30 IKDeviceBrowserPanel.Visible

Created 7th November 2016, last changed 7th November 2016.

## 93.2 IKDeviceBrowserPanel.GetCancelButtonLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.GetCancelButtonLabel" )

**Result** Returns text.

### Description

### See also

- 93.10 IKDeviceBrowserPanel.GetSelectButtonLabel 4999
- 93.17 IKDeviceBrowserPanel.SetCancelButtonLabel 5006
- 93.25 IKDeviceBrowserPanel.SetSelectButtonLabel 5014

Created 7th November 2016, last changed 7th November 2016.

### 93.3 IKDeviceBrowserPanel.GetDisplaysLocalCameras

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.GetDisplaysLocalCameras" )

**Result** Returns 1, 0 or error.

#### Description

#### See also

- 93.4 IKDeviceBrowserPanel.GetDisplaysLocalScanners 4993

Created 7th November 2016, last changed 7th November 2016.

## 93.7 IKDeviceBrowserPanel.GetHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.GetHeight" )

**Result** Returns height value.

### Description

See also IKDeviceBrowserPanel.SetWidth, IKDeviceBrowserPanel.GetWidth and IKDeviceBrowserPanel.SetHeight.

### See also

- 93.9 IKDeviceBrowserPanel.GetPrompt 4998

- 93.27 IKDeviceBrowserPanel.SetWidth 5017
- 93.30 IKDeviceBrowserPanel.Visible 5021

Created 7th November 2016, last changed 7th November 2016.

## 93.8 IKDeviceBrowserPanel.GetMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.GetMode" )

**Result** Returns OK or error.

### Description

Value is Table, Outline or Icon.

### See also

- 93.1 IKDeviceBrowserPanel.Close 4989

- 93.27 IKDeviceBrowserPanel.SetWidth 5017
- 93.29 IKDeviceBrowserPanel.Show 5019
- 93.30 IKDeviceBrowserPanel.Visible 5021

Created 7th November 2016, last changed 7th November 2016.

## 93.9 IKDeviceBrowserPanel.GetPrompt

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.GetPrompt" )

**Result** Returns text.

### Description

### See also

- 93.7 IKDeviceBrowserPanel.GetHeight 4996
- 93.8 IKDeviceBrowserPanel.GetMode 4997
- 93.11 IKDeviceBrowserPanel.GetWidth 5000

Created 7th November 2016, last changed 7th November 2016.

## 93.13 IKDeviceBrowserPanel.Hide

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.Hide" )

**Result** Returns OK or error.

### Description

### Examples

Hide window:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.Hide" ) ]
```

### See also

## 93.15 IKDeviceBrowserPanel.SelectedDeviceID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SelectedDeviceID" )

**Result** Returns text or error.

**Description**

**See also**

- 93.16 IKDeviceBrowserPanel.SelectedDeviceName

5005

Created 7th November 2016, last changed 7th November 2016.

## 93.16 IKDeviceBrowserPanel.SelectedDeviceName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SelectedDeviceName" )

**Result** Returns text or error.

### Description

### Examples

Query selected device in triggered script:

```
Set Variable [ $Param; Value:Get(ScriptParameter) ]
If [ $Param = "Select" ]
Set Variable [ $name; Value:MBS("IKDeviceBrowserPanel.SelectedDeviceName") ]
Set Field [ ImageCapture Dialogs::ScannerName; $name ]
End If
```

### See also

## 93.17 IKDeviceBrowserPanel.SetCancelButtonLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SetCancelButtonLabel"; text )

### Parameters

#### text

The new text.

"Cancel"

**Result** Returns OK or error.

### Description

### Examples

Set cancel button:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetCancelButtonLabel"; "Abbrechen" ) ]
```

## 93.18 IKDeviceBrowserPanel.SetDisplaysLocalCameras

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SetDisplaysLocalCameras"; Value )

### Parameters

#### Value

The new setting.

1

**Result** Returns OK or error.

### Description

#### Examples

Enable local cameras:

Set Variable [ \$r; Value:MBS( "IKDeviceBrowserPanel.SetDisplaysLocalCameras"; 1 ) ]

## 93.22 IKDeviceBrowserPanel.SetHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SetHeight"; Height )

### Parameters

#### Height

The desired height of the window.

400

**Result** Returns OK or error.

### Description

See also IKDeviceBrowserPanel.SetWidth, IKDeviceBrowserPanel.GetWidth and IKDeviceBrowserPanel.GetHeight.

### See also

## 93.23 IKDeviceBrowserPanel.SetMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SetMode"; Mode )

### Parameters

#### Mode

The new mode. Can be Icon, Outline or Table.

"Icon"

**Result** Returns OK or error.

### Description

### Examples

Set mode to table:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetMode"; "table" ) ]
```

### See also

## 93.24 IKDeviceBrowserPanel.SetPrompt

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SetPrompt"; text )

### Parameters

#### text

The new text.

"Please select an item:"

**Result** Returns OK or error.

### Description

This text is shown on the top of the dialog over the listbox.

### Examples

Set prompt:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetPrompt"; "Please choose scanner:" ) ]
```

## 93.25 IKDeviceBrowserPanel.SetSelectButtonLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SetSelectButtonLabel"; text )

### Parameters

#### text

The new text.

"Select"

**Result** Returns OK or error.

### Description

### Examples

Localize select button:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetSelectButtonLabel"; "Auswählen" ) ]
```

### See also

## 93.26 IKDeviceBrowserPanel.SetTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SetTrigger"; FileName; ScriptName )

### Parameters

#### FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

#### ScriptName

The name of the script to run.

"MyScript"

**Result** Returns OK or error.

### Description

Script parameter will be Cancel, Select or Close depending what the user clicked.

### Examples

Store selected scanner in triggered script:

```
Set Variable [ $Param; Value:Get(ScriptParameter) ]
If [ $Param = "Select" ]
Set Variable [ $name; Value:MBS("IKDeviceBrowserPanel.SelectedDeviceName") ]
Set Field [ ImageCapture Dialogs::ScannerName; $name ]
End If
```

Set trigger script:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetTrigger"; Get(FileName); "Scanner Selection Trigger" ) ]
```

## 93.28 IKDeviceBrowserPanel.SetWindowTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.SetWindowTitle"; text )

### Parameters

#### text

The new text.  
"Your Choice"

**Result** Returns OK or error.

### Description

### Examples

Set window title:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetWindowTitle"; "Scanner Choice" ) ]
```

### See also

## 93.29 IKDeviceBrowserPanel.Show

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKDeviceBrowserPanel.Show" )

**Result** Returns OK or Cancel.

### Description

This is not a dialog, so please have the script end with this command as the window will stay open while other script steps run.

Before calling this function, make sure you called ImageCapture.Initialize once.

### Examples

Show the device browser window:

```
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.Reset" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetCancelButtonLabel"; "Cancel" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetSelectButtonLabel"; "Select" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetWindowTitle"; "Scanner Choice" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetDisplaysLocalScanners"; 1 ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetDisplaysLocalCameras"; 1 ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetDisplaysNetworkCameras"; 1 ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetDisplaysNetworkScanners"; 1 ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetMode"; "table" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetPrompt"; "Please choose scanner:" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.SetTrigger"; Get(FileName); "Select Scanner Dialog Trigger" ) ]
Set Variable [ $r; Value:MBS( "IKDeviceBrowserPanel.Show" ) ]
```

## 93.48 IKScannerDevicePanel.SetCloseTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.1	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetCloseTrigger"; FileName; ScriptName { ; Parameter } )

### Parameters

#### FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

#### ScriptName

The name of the script to run.

"MyScript"

#### Parameter

Optional

The optional script parameter.

**Result** Returns OK or error.

### Description

This script will be called whenever the panel closes.

Either by code or by user clicking close button.

If the normal trigger run and you delayed work on the files, you can process them now.

### Examples

Set close trigger script:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetCloseTrigger"; Get(FileName); "Scanner Dialog Close Trigger" ) ]
```

Clear close trigger script:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetCloseTrigger"; ""; "" ) ]
```

## 93.51 IKScannerDevicePanel.SetDownloadsDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetDownloadsDirectory"; Path )

### Parameters

#### Path

The native path to the folder to store images.

**Result** Returns OK or error.

### Description

Please make sure you can write to this folder.  
We recommend a temporary folder.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

### Examples

Scan to desktop folder:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetDownloadsDirectory"; MBS("Folders.UserDesktop") ) ]
```

## 93.52 IKScannerDevicePanel.SetHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetHeight"; Height )

### Parameters

#### Height

The desired height of the window.

400

**Result** Returns OK or error.

### Description

See also IKScannerDevicePanel.SetWidth, IKScannerDevicePanel.GetWidth and IKScannerDevicePanel.GetHeight.

### See also

**93.53 IKScannerDevicePanel.SetMode**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetMode"; Mode )

**Parameters****Mode**

The new mode.

"Advanced"

**Result** Returns OK or error.

**Description**

Can be Simple or Advanced.

## 93.54 IKScannerDevicePanel.SetOverviewControlLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetOverviewControlLabel"; Label )

### Parameters

#### Label

The new label text.

"Übersicht"

**Result** Returns OK or error.

### Description

If empty or never set, we use the default, which is localized.

## 93.56 IKScannerDevicePanel.SetScannerDeviceID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetScannerDeviceID"; ID )

### Parameters

#### ID

Pass identifier for the scanner you want to use.  
"61B0A8E1-61B0-A8E1-61B0-A8E161B0A8E1"

**Result** Returns OK or error.

### Description

#### Examples

Select scanner by ID:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetScannerDeviceID"; "61B0A8E1-61B0-A8E1-61B0-A8E161B0A8E1" ) ]
```

Select scanner by name:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetScannerDeviceName"; "Brother DCP-8085DN" ) ]
```

### See also

## 93.57 IKScannerDevicePanel.SetScannerDeviceName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetScannerDeviceName"; Name )

### Parameters

#### Name

The name of the scanner to use.

"Brother DCP-8085DN"

**Result** Returns OK or error.

### Description

#### Examples

Select scanner by name:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetScannerDeviceName"; "Brother DCP-8085DN" ) ]
```

Select scanner by ID:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetScannerDeviceID"; "61B0A8E1-61B0-A8E1-61B0-A8E161B0A8E1" ) ]
```

## 93.58 IKScannerDevicePanel.SetTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetTrigger"; FileName; ScriptName )

### Parameters

#### FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

#### ScriptName

The name of the script to run.

"MyScript"

**Result** Returns OK or error.

### Description

You get a call for each picture as user may import several.

The parameter to your script is the native file path to the image file.

If scan is to PDF and we use document feeder, be aware that you may get a trigger with same file path again if a new page is added.

Either you use the trigger and process each image there or you can call later IKScannerDevicePanel.ImageCount and IKScannerDevicePanel.NextImage to get the images.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

### Examples

Set trigger script:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetTrigger"; Get(FileName); "Scanner Dialog Trigger" ) ]
```

Import image in triggered script:

```
Set Variable [ $Path; Value:Get(ScriptParameter) ]
Set Variable [ $Image; Value:MBS("Container.ReadFile"; $path) ]
If [ MBS("ISError") = 0 ]
New Record/Request
Set Field [ ImageCapture Dialogs::Image; $Image ]
Commit Records/Requests [ No dialog ]
End If
```

Clear trigger script:

93.58. *IKSCANNERDEVICEPANEL.SETTRIGGER* 5051  
Set Variable [ \$r; Value:MBS( "IKScannerDevicePanel.SetTrigger"; ""; "" ) ]

## 93.59 IKScannerDevicePanel.SetWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetWidth"; Width )

### Parameters

#### Width

The new desired width.

600

**Result** Returns OK or error.

### Description

See also IKScannerDevicePanel.SetHeight, IKScannerDevicePanel.GetWidth and IKScannerDevicePanel.GetHeight.

### See also

- 93.60 IKScannerDevicePanel.SetWindowTitle 5053
- 93.61 IKScannerDevicePanel.Show 5054
- 93.62 IKScannerDevicePanel.Visible 5056

Created 7th November 2016, last changed 7th November 2016.

**93.60 IKScannerDevicePanel.SetWindowTitle**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.SetWindowTitle"; text )

**Parameters****text**

The new text.  
"Your Choice"

**Result** Returns OK or error.

**Description****Examples**

Set window title:

Set Variable [ \$r; Value:MBS( "IKScannerDevicePanel.SetWindowTitle"; "Scanner" ) ]

**See also**

- 93.33 IKScannerDevicePanel.GetCombine 5024

## 93.61 IKScannerDevicePanel.Show

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.5	Yes	No	No	No	No

MBS( "IKScannerDevicePanel.Show" )

**Result** Returns OK or error.

### Description

This is not a dialog, so please have the script end with this command as the window will stay open while other script steps run.

Before calling this function, make sure you called ImageCapture.Initialize once, best in your start script.

### Examples

Show scan window:

```
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.Reset" ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetWindowTitle"; "Scanner" ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetDocumentName"; "Scan" ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetDownloadsDirectory"; MBS("Folders.UserDesktop") ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetScannerDeviceName"; ImageCapture Dialogs::ScannerName ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.SetTrigger"; Get(FileName); "Scanner Dialog Trigger" ) ]
Set Variable [ $r; Value:MBS( "IKScannerDevicePanel.Show" ) ]
```

## 93.63 ImageCapture.CameraInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.CameraInfo"; Selector )

### Parameters

#### Selector

Which value to query.

"name"

**Result** Returns OK or error.

### Description

Selector	Description
tetheredCaptureEnabled	This property is set to 1 when tethered capture is enabled on the device. Use ImageCapture.RequestEnableTethering and ImageCapture.RequestDisableTethering to enable or disable tethered capture on the device.
batteryLevelAvailable	Indicates if the device has reported battery charge level.
batteryLevel	Indicates the battery charge level. Its value ranges from 0 to 100.
contentCatalogPercentCompleted	Indicates the percentage of content cataloging completed on the device. Its value ranges from 0 to 100.
timeOffset	Indicates the time offset, in seconds, between the camera's clock and the computer's clock. This value is positive if the camera's clock is ahead of the computer's clock. This property should be ignored if the camera's capabilities property does not contain ICCameraDeviceCanSyncClock.
isAccessRestrictedAppleDevice	Set to 1 if the device is made by Apple and is pass-coded locked and connected to an untrusted host.
mountPoint	Filesystem mount point for a device with transportType of ICTransportType-MassStorage. This will be "" for all other devices.

## 93.64 ImageCapture.CloseDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.CloseDevice" { ; Wait } )

### Parameters

#### Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

**Result** Returns OK or error.

### Description

Added 20 seconds timeout for version 8.5.

### Examples

Closes device:

Set Variable [ \$r; Value:MBS("ImageCapture.CloseDevice") ]

## 93.65 ImageCapture.Contents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.Contents" )

**Result** Returns JSON or error.

### Description

The structure of the elements in this JSON array will reflect the folder structure of the storage reported by the camera. Each item in this array will correspond to a storage on the camera.

The plugin provides all details as a big JSON block for your analyzes.

## 93.66 ImageCapture.DeviceInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.DeviceInfo"; Device; Selector { ; ImageType; Filename } )

### Parameters

#### Device

The device ID. Can be zero based index in device list. Or UUID, Name or persistent ID string.  
0

#### Selector

Which value to query.  
"name"

#### ImageType

Optional  
The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.  
"JPEG"

#### Filename

Optional  
The filename to use for the picture. Default is "image" with the extension matching the image type.  
"test.jpg"

Result Returns OK or error.

### Description

Selector	Description	Example
availableFunctionListType	The available function list types for the device. This can include FileList, DocumentFolder, NetworkImageSource or PhotoImageSource.	"FunctionListAvailable"
name	Name of the device as reported by the device module or by the device transport when a device module is not in control of the device. This name may change if the device module overrides the default name of the device reported by the device's transport, or if the name of the filesystem volume mounted by the device is changed by the user.	"Device DCP-9082DN"
type	The type of the device. Can be 0 or 1.	"Scanner"
iconPath	Filesystem path of the device module that is associated with this device.	"10"
moduleVersion	The module version of the device module associated with this device.	1
remote	Indicates whether the device is a remote device published by Image Capture device sharing facility. Can be 1 or 0.	0
shared	Indicates whether the device is shared using the Image Capture device sharing facility. Can be 1 or 0.	0
serialNumberWiFiInterface	Indicates whether the device can be configured for use on a WiFi network.	"USB"
transportType	The transport type used by the device. Can be USB, Bluetooth, TCP/IP, MacOsShare.	"12345"
serialNumber	The serial number of the device. This will be NULL if the device does not provide a serial number.	"Test Scanner"
hardwareDescription	A non-technical hardware description string for the device.	"01BAAE1-641BA-AE13-612BD-AE13E8BAE1"
persistentIDString	A string representation of the persistent ID of the device.	"01BAAE1-641BA-AE13-612BD-AE13E8BAE1"
UUIDString	A non-technical location description string for the device.	"01BAAE1-641BA-AE13-612BD-AE13E8BAE1"
isOpenSystem	Indicates whether the device has an open system. Can be 1 or 0.	0
moduleLocationID	Filesystem location ID of the device module as reported by the device.	
locationID	The USB location ID of a USB device in the IOKit registry. This will be 0 for non-USB devices.	
productID	The USB product ID of a USB device in the IOKit registry. This will be 0 for non-USB devices.	
vendorID	The USB vendor ID of a USB device in the IOKit registry. This will be 0 for non-USB devices.	
productId	The iokitVendorID of a FireWire device in the IOKit registry. This will be 0 for non-FireWire devices.	
serialNumber	A string object with name of the ICH3Controller* value defined above.	
serialNumberPath	Filesystem path of an application that is to be automatically launched when this device is added.	
capabilities	The capabilities of the device as reported by the device module.	

Added with plugin version 7.0: `bonjourServiceName`, `bonjourServiceType`, `iconPath`, `ipAddress` and `productKind`.

### Examples

Query remote status for first device:

```
MBS("ImageCapture.DeviceInfo"; 0; "remote")
```

Query shared status for first device:

```
MBS("ImageCapture.DeviceInfo"; 0; "shared")
```

Query serial number for first device:

```
MBS("ImageCapture.DeviceInfo"; 0; "serialNumberString")
```

Query location description for a device:

```
MBS("ImageCapture.DeviceInfo"; "61B0A8E1-61B0-A8E1-61B0-A8E161B0A8E1"; "locationDescription")
```

Query capabilities for a device:

```
MBS("ImageCapture.DeviceInfo"; "61B0A8E1-61B0-A8E1-61B0-A8E161B0A8E1"; "capabilities")
```

## 93.67 ImageCapture.Devices

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.Devices" { ; Filter } )

### Parameters

#### Filter

Optional

Available in MBS FileMaker Plugin 8.3 or newer.

You can filter devices by passing criteria here. The filter string can contain camera, scanner, local, remote, Bonjour, bluetooth or shared to only show those devices.

"Camera, local"

**Result** Returns UUIDs or error.

### Description

Returns a list of UUIDs for devices.

Please pass the UUIDs to the ImageCapture.DeviceInfo function to query details.

Before calling this function, make sure you called ImageCapture.Initialize once, best in your start script.

Version 10.0 or later filters duplicates away.

### Examples

List devices:

```
Set Variable [ $Devices; Value:MBS("ImageCapture.Devices") ]
# loop over entries
Set Variable [ $Count; Value:ValueCount($Devices) ]
If [ $Count >0 ]
Set Variable [ $Index; Value:1 ]
Loop
# Check Device
Set Variable [ $ID; Value:GetValue($Devices; $index) ]
New Record/Request
Set Field [ Devices::Name; MBS("ImageCapture.DeviceInfo"; $ID; "name") ]
Set Field [ Devices::ID; $ID ]
Set Field [ Devices::Remote; Let ( [ r = MBS("ImageCapture.DeviceInfo"; $ID; "remote") ] ; If(r = 1; "yes"; "no") ) ]
Set Field [ Devices::Shared; Let ( [ r = MBS("ImageCapture.DeviceInfo"; $ID; "shared") ] ; If(r = 1; "yes"; "no") ) ]
Set Field [ Devices::transportType; MBS("ImageCapture.DeviceInfo"; $ID; "transportType") ]
Set Field [ Devices::serialNumberString; MBS("ImageCapture.DeviceInfo"; $ID; "serialNumberString") ]
Set Field [ Devices::locationDescription; MBS("ImageCapture.DeviceInfo"; $ID; "locationDescription") ]
Set Field [ Devices::persistentIDString; MBS("ImageCapture.DeviceInfo"; $ID; "persistentIDString") ]
```

```
Set Field [ Devices::icon; MBS("ImageCapture.DeviceInfo"; $ID; "icon") ]
Set Field [ Devices::capabilities; MBS("ImageCapture.DeviceInfo"; $ID; "capabilities") ]
Commit Records/Requests [ No dialog ]
# next
Set Variable [ $Index; Value:$index + 1 ]

## 93.68 ImageCapture.DevicesJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.DevicesJSON" { ; Filter } )

### Parameters

#### Filter

Optional

You can filter devices by passing criteria here. The filter string can contain camera, scanner, local, remote, bonjour, bluetooth or shared to only show those devices.

"Camera, local"

**Result** Returns JSON or error.

### Description

The JSON includes names & IDs of the devices.

Please pass the index or UUIDs to the ImageCapture.DeviceInfo function to query details.

Keys include UUIDString, Name, persistentIDString, serialNumberString, locationDescription, index, remote and shared.

### Examples

Check devices:

MBS( "ImageCapture.DevicesJSON" )

## 93.69 ImageCapture.Download

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.Download"; FileName { ; Folder; DeleteAfterDownload } )

### Parameters

#### FileName

The file name of the media file to download.

"IMG1234.JPG"

#### Folder

Optional

Path of destination folder. If empty, we use temporary folder.

"/Users/cs/Download"

#### DeleteAfterDownload

Optional

Pass 1 to delete file on device after successful download.

0

**Result** Returns file path or error.

### Description

On success returns native file path of downloaded file.

You can import file e.g. with Files.ReadFile.

You can use ImageCapture.MediaFileNames to learn list of file names.

## 93.71 ImageCapture.GetFeatureValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.GetFeatureValue"; FeatureName; Selector )

### Parameters

#### FeatureName

The name of the feature.

\$name

#### Selector

What value to query.

"value"

**Result** Returns value or error.

### Description

Selector	Description	Value
type	The type of feature. Can be Enumeration, Range, Boolean or Template.	„Boolean“
internalName	The internal name of this feature.	
humanReadableName	The human readable name of this feature.	
tooltip	Tooltip text describing the feature.	
value	The value of this feature. (boolean values)	
currentValue	The current value. Attempting to set the current value to a value that is not coincident with a step will result in a value corresponding to the nearest step being assigned to the current value.	
defaultValue	The default value. Attempting to set the default value to a value that is not coincident with a step will result in a value corresponding to the nearest step being assigned to the default value.	
minValue	The minimum value.	0
maxValue	The maximum value.	100
stepSize	The step size.	5
menuItemLabels	The human readable menu item labels to be used in a menu to allow the user to select the current value from an array of possible values. (enumeration)	
menuItemLabelsFootips	Tooltip text associated with the menu items. (enumeration)	
values	An array of possible values. All items in this array must be of same type. (enumeration)

# 93.73 ImageCapture.GetParameter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.GetParameter"; Selector )

## Parameters

### Selector

Which value to query.

"name"

Result Returns OK or error.

## Description

<code>acceptThreshold@BlackAndWhiteScanning</code>	<b>Description</b> Indicates if this functional unit accepts threshold value to be used when performing a scan in black & white.	<b>Example</b> "Flatbed@DocumentFeeder"
<code>availableFunctionalUnitType</code>	The bit depth to use when performing the final scan. This can include Flatbed, DocumentFeeder, NegativeTransparency or PositiveTransparency.	0
<code>bitDepth</code>	The bit depth to use when performing the final scan. This will always be one of the supported bit depths.	8
<code>canUseAutoCropScan</code>	Indicates if this functional unit can perform an overview scan, but all functional units can perform an overview scan. For example, a document feeder or a sheet feeder unit cannot perform an overview scan.	127
<code>defaultThreshold@BlackAndWhiteScanning</code>	Default threshold value used when performing a scan in black & white. This value is from 0 to 255.	1
<code>documentHeight</code>	The document height.	1
<code>documentLoaded</code>	Indicates whether the feeder has documents to scan. This value will change when the document is loaded or removed from the feeder, if the scanner module has the capability to detect this state.	"Scan"
<code>documentName</code>	The document name.	"41"
<code>documentSize</code>	Document size of the current document type expressed in current measurement unit.	"JPEG"
<code>documentType</code>	Current document type.	"/Users/ny/Desktop"
<code>documentURI</code>	The document URI. Can be JPEG, JPEG2000, TIFF or PNG.	1
<code>documentWidth</code>	The document width.	"Inches"
<code>downloadDirectory</code>	The download directory.	
<code>duplexScanningEnabled</code>	Indicates whether duplex scanning is enabled.	
<code>evenPageOrientation</code>	Default orientation of the even pages of the scanned document.	
<code>maxMemory@ScanSize</code>	The total maximum (hard- and soft-) memory required when performing a memory-based transfer.	
<code>measurementUnit</code>	Current measurement unit. Can be Inches, Centimeters, Picas, Points, Twips or Pixels.	
<code>scanXResolution</code>	Optical resolution along the X axis.	
<code>scanYResolution</code>	Optical resolution along the Y axis.	
<code>oddPageOrientation</code>	Default orientation of the odd pages of the scanned document.	
<code>overviewImage</code>	Overview scan image. This property will be empty for functional units that do not support overview scans.	
<code>overviewResolution</code>	Overview image resolution. Value returned to this will be contained by resolution allowed by the device.	
<code>overviewScannedProgress</code>	Indicates if an overview scan is in progress.	1
<code>physicalHeight</code>	Physical height of the scan area in current measurement unit.	
<code>physicalSize</code>	Physical size of the scan area in current measurement unit.	
<code>physicalWidth</code>	Physical width of the scan area in current measurement unit.	
<code>preferredDataTypes</code>	The preferred data type. Can be BW, Gray, RGB, Palette, CMY, CMYK, YUV, YUVK or CMYKZ.	
<code>preferredResolution</code>	Preferred scan resolution in DPI.	"100"
<code>preferredScaleFactor</code>	Preferred scale factor in percentage.	100
<code>rotation</code>	Indicates whether the document feeder made pages from back to front.	100
<code>scanAreaFactor</code>	Current scan resolution. This will always be one of the supported resolution values.	100
<code>scanAreaOrientation</code>	Current scan factor. This will always be one of the supported scale factor values.	100
<code>scanAreaWidth</code>	The area to scan. This property along with scanAreaOrientation describe the area to be scanned.	1
<code>scanAreaXResolution</code>	Default orientation of the scan area. This property along with scanArea describe the area to be scanned. 1 for Normal, 2 Flipped horizontally, 3 Rotated 180°, 4 Flipped vertically, 5 Rotated 90° CCW and flipped vertically, 6 Rotated 90° CCW, 7 Rotated 90° CW and flipped vertically, 8 Rotated 90° CW.	1
<code>scanAreaYResolution</code>	Default orientation of the scan area. This property along with scanArea describe the area to be scanned. 1 for Normal, 2 Flipped horizontally, 3 Rotated 180°, 4 Flipped vertically, 5 Rotated 90° CCW and flipped vertically, 6 Rotated 90° CCW, 7 Rotated 90° CW and flipped vertically, 8 Rotated 90° CW.	0.5
<code>scanProgress@PercentDone</code>	Indicates percentage of scan completed.	2
<code>scanProgress@PercentDone</code>	Indicates the current state of the functional unit. 1 for Ready, Add 2 for Scan In Progress, Add 4 for Overview Scan in Progress	"180"
<code>scanProgress@PercentDone</code>	Indicates the current state of the functional unit. 1 for Ready, Add 2 for Scan In Progress, Add 4 for Overview Scan in Progress	"100000000"
<code>supportedBitDepths</code>	Supported bit depths. Can include 1, 8 or 16.	"100"
<code>supportedDocumentTypes</code>	Supported document types.	"100"
<code>supportedMeasurementUnits</code>	Supported measurement units. Can be Inches, Centimeters, Picas, Points, Twips or Pixels.	"100"
<code>supportedResolutions</code>	Supported scan resolution in DPI.	127
<code>supportedScaleFactors</code>	Supported scale factors in percentage.	127
<code>supportedScanning</code>	Indicates whether duplex scanning is supported.	"100"
<code>threshold@BlackAndWhiteScanning</code>	Threshold value to be used when performing a scan in black & white. This value should be from 0 to 255.	1
<code>transferMode</code>	The transfer mode for scanned document. Can be File or Memory, but Plugins only supports File.	1
<code>useThreshold@BlackAndWhiteScanning</code>	Indicates if this functional unit use threshold value to be used when performing a scan in black & white.	1

## Examples

Query available functional unit types:

MBS("ImageCapture.GetParameter"; "availableFunctionalUnitTypes")

Example result: Flatbed

DocumentFeeder

Query supported resolutions:

Set Variable [ \$supportedResolutions; Value:MBS("ImageCapture.GetParameter"; "supportedResolutions") ]

Example result: 100

150

200

300

400

600

Query supported document types:

MBS("ImageCapture.GetParameter"; "supportedDocumentTypes")

Example result: A4

B5

USLetter

USLegal

A5

USExecutive

Query supported bit depths:

MBS("ImageCapture.GetParameter"; "supportedBitDepths")

Example result: 1

8

Set scan area to physical size:

Set Variable [ \$physicalWidth; Value:MBS("ImageCapture.GetParameter"; "physicalWidth") ]

Set Variable [ \$physicalHeight; Value:MBS("ImageCapture.GetParameter"; "physicalHeight") ]

Set Variable [ \$r; Value:MBS("ImageCapture.SetParameter"; "scanArea"; 0; 0; \$physicalWidth; \$physical-Height) ]

Query folder path for image files:

MBS( "ImageCapture.GetParameter"; "downloadsDirectory" )

Example result: "/Users/cs/Pictures"

## 93.75 ImageCapture.ImagePaths

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.ImagePaths" )

**Result** Returns list or error.

### Description

After you scanned, you can use this function to query list of image file paths.

File paths are returned as native file paths.

Please use Container.ReadFile to read file and Files.Delete to delete them if needed.

### Examples

Query images and import them:

```
Set Variable [ $Paths; Value:MBS("ImageCapture.ImagePaths") ]
Set Variable [ $Count; Value:ValueCount ( $Paths ) ]
Set Variable [ $Index; Value:1 ]
Loop
Set Variable [ $Path; Value:GetValue($Paths; $index) ]
New Record/Request
Set Field [ Images::Image; MBS("Container.ReadFile"; $path) ]
Set Variable [ $r; Value:MBS( "Files.Delete"; $Path ) ]
Commit Records/Requests [ No dialog ]
Set Variable [ $Index; Value:$index + 1 ]
Exit Loop If [ $index >$count ]
End Loop
```

### See also

## 93.76 ImageCapture.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.Initialize" )

**Result** Returns OK or error.

### Description

The plugin will now browse for devices and wait till at least till all local devices have been found. Network devices may be discovered a second later. So call this in your start script or first time user goes to scanning. Device count may change over time as devices are discovered or go away.

### Examples

Initialize:

```
Set Variable [ $r; Value:MBS("ImageCapture.Initialize") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "Initialize"; $r ]
Exit Script [ ]
End If
```

## 93.78 ImageCapture.MediaFiles

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.MediaFiles" )

**Result** Returns JSON or error.

### Description

These files are returned as a single JSON array without regard to the folder hierarchy used to store these files on the camera.

The plugin provides all details as a big JSON block for your analyzes.

### See also

- [93.70 ImageCapture.Features](#) 5067

## 93.79 ImageCapture.OpenDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.OpenDevice"; Device { ; Wait } )

### Parameters

#### Device

The device ID. Can be zero based index in device list. Or UUID, Name or persitent ID string.

0

#### Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

**Result** Returns OK or error.

### Description

A client MUST open a session on a device in order to use the device.

If needed closes current device to open new device.

Added 20 seconds timeout for version 8.1.

With ImageCapture.DeviceInfo you can query hasOpenSession later to verify you have a session open.

### Examples

Open device:

```
Set Variable [ $r; Value:MBS("ImageCapture.OpenDevice"; Images::Device) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to open"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ ]
End If
```

## 93.80 ImageCapture.PDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	9.1	Yes	No	No	No	No

MBS( "ImageCapture.PDF" { ; FileName } )

### Parameters

#### FileName

Optional

The filename to use.

"scan.pdf"

**Result** Returns PDF container value or error.

### Description

We get the file path list and create a new PDF document, add all the images and than return the PDF. You can store it in a container field or export to a file (with Container.WriteFile).

### Examples

Get a PDF into a field:

```
Set Variable [ $pdf; MBS("ImageCapture.PDF") ]
If [ MBS("IsError") = ]
Set Field [ MyTable::MyPDF; $pdf ]
End If
```

## 93.81 ImageCapture.PreferredDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.PreferredDevice" )

**Result** Returns UUID or error.

### Description

You can pass the UUID to other functions to select device or query information.

### Examples

Show name of preferred device:

```
Set Variable [ $PreferredDevice; Value:MBS( "ImageCapture.PreferredDevice" ) ]
Set Variable [ $Name; Value:MBS( "ImageCapture.DeviceInfo"; $PreferredDevice; "name" ) ]
Show Custom Dialog [ "Preferred Device"; $name ]
```

## 93.82 ImageCapture.RequestDeleteFiles

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.RequestDeleteFiles"; FileNames { ; Wait } )

### Parameters

#### FileNames

The list of filenames.

#### Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

**Result** Returns OK or error.

### Description

## 93.85 ImageCapture.RequestOverviewScan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.RequestOverviewScan" { ; Wait } )

### Parameters

#### Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

**Result** Returns OK or error.

### Description

If a progress dialog from our plugin is visible, the plugin will keep it updated with progress.

MBS Plugin 8.5 and newer observes progress and returns timeout error if scanner didn't do anything for 60 seconds.

### 93.85.1 Blog Entries

- [MBS FileMaker Plugin, version 8.3pr3](#)

Created 11st September 2016, last changed 19th November 2018.

## 93.86 ImageCapture.RequestScan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

```
MBS( "ImageCapture.RequestScan" { ; Wait } )
```

### Parameters

#### Wait

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

**Result** Returns OK or error.

### Description

If a progress dialog from our plugin is visible, the plugin will keep it updated with progress.

Please use ImageCapture.SetParameter to configure scanner before requesting the scan, e.g. for duplex.

MBS Plugin 8.5 and newer observes progress and returns timeout error if scanner didn't do anything for 60 seconds.

Please call ImageCapture.OpenDevice to open device before requesting a scan.

### Examples

Scan images:

```
# set parameters
Set Variable [ $physicalWidth; Value:MBS("ImageCapture.GetParameter"; "physicalWidth") ]
Set Variable [ $physicalHeight; Value:MBS("ImageCapture.GetParameter"; "physicalHeight") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "scanArea"; 0; 0; $physicalWidth; $physical-
Height) ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "documentType"; "USLetter") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "documentName"; "Scan") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "resolution"; 300) ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "pixelDataType"; "RGB") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "documentUTI"; "jpeg") ]

**93.87 ImageCapture.RequestSelectFunctionalUnit**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.RequestSelectFunctionalUnit"; Unit { ; Wait } )

**Parameters****Unit**

The functional unit to request. Can be Flatbed, PositiveTransparency, NegativeTransparency or DocumentFeeder.

"Flatbed"

**Wait**

Optional

Pass 1 to wait till complete. Or pass 0 to return immediately. Default is 1 to wait.

0

**Result** Returns OK or error.

**Description****Examples**

Request flatbed unit:

```
Set Variable [ $r; Value:MBS("ImageCapture.requestSelectFunctionalUnit"; "Flatbed") ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to get flatbed?"; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ ]
End If
```

Request document feeder:

```
MBS("ImageCapture.requestSelectFunctionalUnit"; "DocumentFeeder")
```

Open device and request document feeder:

```
Set Variable [ $r ; Value: MBS("ImageCapture.OpenDevice"; Images::Device) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to open" ; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ Text Result: ]
End If

## 93.88 ImageCapture.RequestSyncClock

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.RequestSyncClock" )

**Result** Returns OK or error.

### Description

Synchronize camera's clock with the computer's clock. You should send this request only if the camera has the ICCameraDeviceCanSyncClock capability.

### See also

## 93.89 ImageCapture.RequestTakePicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.RequestTakePicture" )

**Result** Returns OK or error.

### Description

Works only if the camera capabilities include ICCameraDeviceCanTakePicture.  
You MUST call ImageCapture.RequestEnableTethering before requesting take picture.

You may need to add a script pause after this to let the camera do the work.

**93.90 ImageCapture.SetFeatureValue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.SetFeatureValue"; FeatureName; Selector; Value )

**Parameters****FeatureName**

The name of the feature.

\$name

**Selector**

What value to set. Can be "value" for boolean values or "currentValue" for range or enumeration values.  
"value"

**Value**

The new value.

**Result** Returns OK or error.

## 93.91 ImageCapture.SetParameter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	6.4	Yes	No	No	No	No

MBS( "ImageCapture.SetParameter"; Selector; Value )

### Parameters

#### Selector

The value to set.  
"documentName"

#### Value

The value to set.

Result Returns OK or error.

### Description

Selector	Description	Example
bitDepth	The bit depth to use when performing the final scan. This will always be one of the supported bit depths.	8
documentName	The document name.	."Scan"
documentType	Current document type.	."A4"
documentUTI	The document UTI. Can be set using JPEG, JPES2000, PDF, TIFF or PNG.	."JPEG"
downloadDirectory	The download directory. If you pass "temp", we use the user's temp folder.	."/Users/ev/Desktop"
maxMemoryUsageSize	The total maximum hard size requested when performing a memory based transfer.	."1000000000"
measurementUnit	Current measurement unit. Can be inches, Centimeters, Picas, Points, Pixels or Points.	."Inches"
overviewResolution	Overview image resolution. Value assigned to this will be constrained by resolution allowed by the device.	300
resolution	Current main resolution. This will always be one of the supported resolution values.	127
thresholdOfBlackAndWhiteScanning	Threshold value to be used when performing a scan in black & white. This value should be from 0 to 255.	."100"
transferMode	The transfer mode for scanned document. Can be File or Stream, but Plugins only supports File.	1
useThresholdOfBlackAndWhiteScanning	Indicator if this function will use threshold value to be used when performing a scan in black & white.	1
width	Current scan width. This will always be one of the supported scan format names.	."100"
widthType	The pixel data type. Can be BW, Gray, RGB, Palette, CMY, CMYK, YUV, YUVK or CMYKZ.	."RGB"
widthOrientation	Default orientation of the scan area. This property along with scanArea describes the area to be scanned. 1 for Normal, 2 Flipped horizontally, 3 Rotated 180°, 4 Flipped vertically, 5 Rotated 90° CCW and Flipped vertically, 6 Rotated 90° CCW, 7 Rotated 90° CW and Flipped vertically, 8 Rotated 90° CW.	1
widthOrientation	Default orientation of the scan area. This property along with scanArea describes the area to be scanned. 1 for Normal, 2 Flipped horizontally, 3 Rotated 180°, 4 Flipped vertically, 5 Rotated 90° CCW and Flipped vertically, 6 Rotated 90° CCW, 7 Rotated 90° CW and Flipped vertically, 8 Rotated 90° CW.	1
scanArea	Four parameters with X, Y, Width and Height to define scan.	1

For scan area, please pass x, y, width and height as separate parameters.

Default folder for files is temporary folder.

List of valid document types: Default, A4, B5, USLetter, USLegal, A5, ISOB4, ISOB6, USLedger, USExecutive, A3, ISOB3, A6, C4, C5, C6, 4A0, 2A0, A0, A1, A2, A7, A8, A9, 10, ISOB0, ISOB1, ISOB2, ISOB5, ISOB7, ISOB8, ISOB9, ISOB10, JISB0, JISB1, JISB2, JISB3, JISB4, JISB6, JISB7, JISB8, JISB9, JISB10, C0, C1, C2, C3, C7, C8, C9, C10, USStatement, BusinessCard, E, 3R, 4R, 5R, 6R, 8R, S8R, 10R, S10R, 11R, 12R, S12R, 110, APSH, APSC, APSP, 135, MF, LF.

### Examples

Set scan area to physical size:

```
Set Variable [ $physicalWidth; Value:MBS("ImageCapture.GetParameter"; "physicalWidth") ]
Set Variable [ $physicalHeight; Value:MBS("ImageCapture.GetParameter"; "physicalHeight") ]
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "scanArea"; 0; 0; $physicalWidth; $physical-Height) ]
```

Set to US Letter format:

```
MBS("ImageCapture.SetParameter"; "documentType"; "USLetter")
```

Set document name:

```
MBS("ImageCapture.SetParameter"; "documentName"; "Scan")
```

Set resolution to 300 dpi:

```
MBS("ImageCapture.SetParameter"; "resolution"; 300)
```

Set to scan 8 bit RGB picture:

```
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]  
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "pixelDataType"; "RGB") ]
```

Set JPEG image type:

```
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "documentUTI"; "jpeg") ]
```

Use temporary folder for temp files:

```
Set Variable [ $r; Value:MBS("ImageCapture.SetParameter"; "downloadsDirectory"; "temp") ]
```

Set scan area:

```
MBS( "ImageCapture.SetParameter"; "scanArea"; $x; $y; $w; $h )
```

Enable duplex:

```
MBS("ImageCapture.SetParameter"; "duplexScanningEnabled"; 1)
```

Set to A4 format:

```
MBS("ImageCapture.SetParameter"; "documentType"; "A4")
```

Switch to color or gray:

```
If [ $gray ]  
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]  
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "pixelDataType"; "Gray") ]  
Else  
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]  
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "pixelDataType"; "RGB") ]  
End If
```

Run scan with duplex:

```
# set parameters  
Set Variable [ $physicalWidth ; Value: MBS("ImageCapture.GetParameter"; "physicalWidth") ]  
Set Variable [ $physicalHeight ; Value: MBS("ImageCapture.GetParameter"; "physicalHeight") ]
```

```

Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "documentType"; "A4") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "documentName"; "Scan") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "resolution"; 300) ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "bitDepth"; 8) ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "pixelDataType"; "RGB") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "documentUTI"; "jpeg") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "downloadsDirectory"; "temp") ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "duplexScanningEnabled"; 1) ]
Set Variable [ $r ; Value: MBS("ImageCapture.SetParameter"; "scanArea"; 0; 0; $physicalWidth; $physicalHeight) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.Reset") ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetTitle"; "Scanning" ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetBottomText"; "" ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetTopText"; "Scan from Flatbet scanner." ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetButtonCaption"; "Cancel" ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.SetProgress"; -1 ) ]
Set Variable [ $p ; Value: MBS("ProgressDialog.Show" ) ]
Set Variable [ $r ; Value: MBS("ImageCapture.requestScan") ]
Set Variable [ $p ; Value: MBS("ProgressDialog.Hide" ) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed start scan" ; MBS("Text.RemovePrefix"; $r; " [ MBS ] ") ]
Exit Script [ Text Result: ]
End If
#
# read images
Pause/Resume Script [ Duration (seconds): ,1 ]
Set Variable [ $Paths ; Value: MBS("ImageCapture.ImagePaths") ]
If [ Length ( $Paths ) >0 ]
Set Variable [ $Count ; Value: ValueCount ( $Paths ) ]
If [ $Count >0 ]
Set Variable [ $Index ; Value: 1 ]
Loop

## 93.92 ImageCapture.Thumbnail

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
93 ImageCapture	8.3	Yes	No	No	No	No

MBS( "ImageCapture.Thumbnail"; FileName { ; ImageType; Filename } )

### Parameters

#### FileName

The file name of the media file to download.

"IMG1234.JPG"

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns image or error.

### Description

# Chapter 94

## ImagePicker

A panel for iOS to select or take picture.

You can take a new picture via camera, record video or pick an existing picture.

### 94.1 ContinuityCamera.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker 57 ContinuityCamera	9.2	Yes	No	No	No	No

MBS( "ContinuityCamera.Clear" )

**Result** Returns OK or error.

**Description**

**See also**

- 94.2 ContinuityCamera.Import 5102
- 94.4 ContinuityCamera.Result 5105

Created 3th April 2019, last changed 6th January 2020.

## 94.2 ContinuityCamera.Import

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker 57 ContinuityCamera	9.2	Yes	No	No	No	No

MBS( "ContinuityCamera.Import"; Type )

### Parameters

#### Type

Pass 0 for Photo (default) or 1 for document.

0

**Result** Returns OK or error.

### Description

#### Examples

Import photo:

```
Set Variable [ $r ; Value: MBS("ContinuityCamera.Import";0) ]
```

Import document:

```
Set Variable [ $r ; Value: MBS("ContinuityCamera.Import"; 1) ]
```

## 94.3 ContinuityCamera.PopupMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker 57 ContinuityCamera	9.2	Yes	No	No	No	No

MBS( "ContinuityCamera.PopupMenu"; mode { ; x; y; window; item; objectName } )

### Parameters

#### mode

The mode to use. Can be "mouse", "screen" or "window". Default is mouse for leaving away the parameter or passing empty text. Version 8.3 adds mode "content" to make it relative to the content part of the window, below toolbars.

"mouse"

#### x

Optional

The relative x coordinates for the position relative to the mouse, screen or window.

0

#### y

Optional

The relative y coordinates for the position relative to the mouse, screen or window.

0

#### window

Optional

The window reference for the showing menu relative to a window.

\$window

#### item

Optional

The menu item to be positioned at the specified location in the view.

\$item

#### objectName

Optional

The object name for mode=object.

"web"

**Result** Returns 1, 0 or error.

### Description

Returns 1 if item was selected or 0 if not.

### Example Databases

- [Mac only/ContinuityCamera](#)

### 94.3.1 Blog Entries

- [MBS FileMaker Plugin, version 9.2pr3](#)

### 94.3.2 FileMaker Magazin

- Ausgabe 6/2019, Seite 37

Created 7th April 2019, last changed 6th January 2020.

## 94.4 ContinuityCamera.Result

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker 57 ContinuityCamera	9.2	Yes	No	No	No	No

MBS( "ContinuityCamera.Result" { ; FileName } )

### Parameters

#### FileName

Optional

File name to use.

"test.jpg"

**Result** Returns container value or error.

### Description

The result may be PNG, PDF, JPEG or TIFF document.

Usually documents come as PDF and images as JPEG.

### Examples

Write result to container field:

Set Field [ ContinuityCamera::Image ; MBS("ContinuityCamera.Result") ]

## 94.5 ContinuityCamera.SetScriptTrigger

	Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94	ImagePicker 57 ContinuityCamera	9.2	Yes	No	No	No	No

MBS( "ContinuityCamera.SetScriptTrigger"; Filename; ScriptName )

### Parameters

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

When some picture or document is available, we call the script.

Parameter to the script is currently the document type, e.g. JPEG, TIFF or PDF.

### Examples

Set trigger:

```
Set Variable [ $r ; Value: MBS("ContinuityCamera.SetScriptTrigger"; Get(Filename); "ContinuityCamera-Trigger") ]
```

### Example Databases

**94.6 UIImagePickerController.AvailableCaptureModesForCameraDevice**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 UIImagePickerController	7.3	No	No	No	No	Yes

MBS( "UIImagePickerController.AvailableCaptureModesForCameraDevice"; CameraDevice )

**Parameters****CameraDevice**

The new setting. Can be front or rear.  
"front"

**Result** Returns list or error.

**Description**

List contains Photo if photo is available and video if video is available.  
Created 17th June 2017, last changed 18th June 2017.

## 94.7 UIImagePickerController.AvailableMediaTypesForSourceType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 UIImagePickerController	7.3	No	No	No	No	Yes

MBS( "UIImagePickerController.AvailableMediaTypesForSourceType"; sourceType )

### Parameters

#### sourceType

The source to use to pick an image. Can be PhotoLibrary, Camera or SavedPhotosAlbum. "Camera"

**Result** Returns list or error.

### Description

Some iOS devices support video recording. Use this method, along with the UIImagePickerController.isSourceTypeAvailable function, to determine if video recording is available on a device. The availability of video recording is indicated by the presence of the kUTTypeMovie (public.movie) media type for the camera source type.

## 94.10 ImagePicker.Dismiss

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.Dismiss" )

**Result** Returns OK or error.

### Description

Something you can call in a script to cancel the message creation.

### Examples

Close picker:

```
Set Variable [ $r ; Value: MBS( "ImagePicker.Dismiss" ) ]
```

## 94.11 ImagePicker.GetAllowsEditing

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.GetAllowsEditing" )

**Result** Returns value or error.

### Description

A Boolean value indicating whether the user is allowed to edit a selected still image or movie. This property is set to 0 by default.

### See also

- 94.39 ImagePicker.SetAllowsEditing

5144

Created 17th June 2017, last changed 18th June 2017.

## 94.12 ImagePicker.GetCameraCaptureMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.GetCameraCaptureMode" )

**Result** Returns value or error.

### Description

The capture mode used by the camera.

**94.18 ImagePicker.GetShowsCameraControls**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.GetShowsCameraControls" )

**Result** Returns value or error.

**Description**

Indicates whether the image picker displays the default camera controls.

The default value of this property is 1, which specifies that the default camera controls are visible in the picker. Set it to 0 to hide the default controls if you want to instead provide a custom overlay view using the cameraOverlayView property.

If you set this property to 0 and provide your own custom controls, you can take multiple pictures before dismissing the image picker interface. However, if you set this property to 1, your delegate must dismiss the image picker interface after the user takes one picture or cancels the operation.

You can access this property only when the source type of the image picker is set to Camera. Attempting to access this property for other source types results in an error. Depending on the value you assign to the mediaTypes property, the default controls display the still camera or movie camera interface, or a selection control that lets the user choose the picker interface.

**See also**

- 94.46 ImagePicker.SetShowsCameraControls

5151

Created 17th June 2017, last changed 18th June 2017.

## 94.19 UIImagePickerController.SourceType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 UIImagePickerController	7.3	No	No	No	No	Yes

MBS( "UIImagePickerController" )

**Result** Returns value or error.

### Description

The type of picker interface to be displayed by the controller.

Prior to running the picker interface, set this value to the desired source type. The source type you set must be available and an error will be returned if it is not. If you change this property while the picker is visible, the picker interface changes to match the new value in this property.

The default value is PhotoLibrary.

**94.20 ImagePicker.GetVideoMaximumDuration**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.GetVideoMaximumDuration" )

**Result** Returns value or error.

**Description**

The maximum duration, in seconds, for a video recording.

The default value for this property is 10 minutes (600 seconds). When a user taps the Share button to send a movie to MMS, MobileMe, YouTube, or another destination, an appropriate duration limit and an appropriate video quality are enforced.

This property is available only if the `mediaTypes` property's value array includes the `kUTTypeMovie` (public.movie) media type.

**94.22 ImagePicker.IsCameraDeviceAvailable**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.IsCameraDeviceAvailable"; CameraDevice )

**Parameters****CameraDevice**

The new setting. Can be front or rear.  
"front"

**Result** Returns 1, 0 or error.

**Description**

Returns a Boolean value that indicates whether a given camera is available.

**See also**

- 94.25 ImagePicker.IsSourceTypeAvailable

5126

Created 17th June 2017, last changed 18th June 2017.

## 94.23 ImagePicker.IsFlashAvailableForCameraDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.IsFlashAvailableForCameraDevice"; CameraDevice )

### Parameters

#### CameraDevice

Which camera to check. Can be front or rear.

"front"

**Result** Returns 1, 0 or error.

### Description

Indicates whether a given camera has flash illumination capability.

Returns 1 if flash is available or 0 if not.

Created 17th June 2017, last changed 18th June 2017.

## 94.24 ImagePicker.IsPresented

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.IsPresented" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if visible and 0 if not.

### See also

- 94.38 ImagePicker.Present

5142

Created 17th June 2017, last changed 18th June 2017.

## 94.25 UIImagePickerController.IsSourceTypeAvailable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 UIImagePickerController	7.3	No	No	No	No	Yes

MBS( "UIImagePickerController.IsSourceTypeAvailable"; sourceType )

### Parameters

#### sourceType

The source to use to pick an image. Can be PhotoLibrary, Camera or SavedPhotosAlbum. "Camera"

**Result** Returns OK or error.

### Description

Returns a Boolean value indicating whether the device supports picking media using the specified source type.

1 if the device supports the specified source type; 0 if the specified source type is not available.

Because a media source may not be present or may be unavailable, devices may not always support all source types. For example, if you attempt to pick an image from the user's library and the library is empty, this method returns 0. Similarly, if the camera is already in use, this method returns 0.

Before attempting to use an UIImagePickerController object to pick an image, you must call this method to ensure that the desired source type is available.

### Examples

Check for source type being available:

```
Set Variable [ $SourceType ; Value: Get( ScriptParameter ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.IsSourceTypeAvailable"; $sourceType ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't pick picture." ; "The source " & $sourceType & " is not available." ]
Exit Script [ Text Result: "failed" ]
End If
```

## 94.38 UIImagePickerController.Present

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 UIImagePickerController	7.3	No	No	No	No	Yes

MBS( "UIImagePickerController.Present" )

**Result** Returns OK or error.

### Description

This will show the user interface and start the process.

Your script may call this in a script and then wait for the script trigger.

You may decide whether you close it by calling UIImagePickerController.Dismiss yourself or you leave it open to take more than one picture.

### Examples

Show picker, wait three seconds, take a picture and close automatically:

```
Set Variable [ $r ; Value: MBS( "UIImagePickerController.Present" ) ]
#
Pause/Resume Script [ Duration (seconds): 1 ]
#
Pause/Resume Script [ Duration (seconds): 1 ]
#
Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.TakePicture" ) ]
#
Pause/Resume Script [ Duration (seconds): .25 ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.Dismiss" ) ]
```

Show picker and wait for script trigger:

```
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetScript"; Get(FileName); "GotImage" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.Present" ) ]
```

Set various options and show picker:

```
Set Variable [ $r ; Value: MBS( "UIImagePickerController.New" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetScript"; Get(FileName); "MBS GotImage" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetSourceType"; "Camera" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetAllowsEditing"; 0 ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetCameraCaptureMode"; "Photo" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetCameraDevice"; "Front" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetCameraFlashMode"; "Off" ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.SetShowsCameraControls"; 0 ) ]
Set Variable [ $r ; Value: MBS( "UIImagePickerController.Present" ) ]
```

## 94.39 ImagePicker.SetAllowsEditing

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.SetAllowsEditing"; Value )

### Parameters

#### Value

The new setting. Pass 1 to enable or 0 to disable.

0

**Result** Returns OK or error.

### Description

A Boolean value indicating whether the user is allowed to edit a selected still image or movie.

This property is set to 0 by default.

### See also

## 94.40 ImagePicker.SetCameraCaptureMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.SetCameraCaptureMode"; Mode )

### Parameters

#### Mode

The mode. Can be Photo or Video.

"Photo"

**Result** Returns OK or error.

### Description

The capture mode used by the camera.

## 94.41 ImagePicker.SetCameraDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.SetCameraDevice"; CameraDevice )

### Parameters

#### CameraDevice

The new setting. Can be front or rear.  
"front"

**Result** Returns OK or error.

### Description

The camera used by the image picker controller.  
Default is Rear.

### See also

## 94.42 ImagePicker.SetCameraFlashMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.SetCameraFlashMode"; Value )

### Parameters

#### Value

The new setting. Can be On, Off and Auto.  
"Auto"

**Result** Returns OK or error.

### Description

The flash mode used by the active camera.

The value of this property specifies the behavior of the still-image flash when the value of the cameraCaptureMode property is photo, and specifies the behavior of the video torch when cameraCaptureMode is video.

## 94.43 ImagePicker.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.SetEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

**Result** Returns OK or error.

### Description

Parameter may be "Cancel" if user canceled the dialog or "Image" if something was picked.

### See also

- 94.15 ImagePicker.GetEvaluate

5116

Created 17th June 2017, last changed 4th April 2018.

## 94.44 ImagePicker.SetOverlayImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	8.3	No	No	No	No	Yes

MBS( "ImagePicker.SetOverlayImage"; Image )

### Parameters

#### Image

The new overlay image. Proportional stretched to screen size. But you can use different images for different devices for best results.

**Result** Returns OK or error.

### Description

This can be used to show additional framing rectangle or instructions to the user.

The overlay is scaled and cropped to the screen maintaining the aspect ratio, so you best use a square picture to work in landscape and portrait.

### Examples

Show image picker with overlay:

```
Set Variable [ $r ; Value: MBS( "ImagePicker.New" ) ]
Set Variable [ $r ; Value: MBS( "ImagePicker.SetCameraCaptureMode"; "Photo" ) ]
Set Variable [ $r ; Value: MBS( "ImagePicker.SetShowsCameraControls"; 1 ) ]
Set Variable [ $r ; Value: MBS( "ImagePicker.SetSourceType"; "Camera" ) ]
Set Variable [ $r ; Value: MBS( "ImagePicker.SetOverlayImage"; Placeholder::Container ) ]
Set Variable [ $r ; Value: MBS( "ImagePicker.Present" ) ]
```

## 94.45 ImagePicker.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.SetScript"; FileName; ScriptName )

### Parameters

#### FileName

The file name for the script to trigger.

"test.fmp12"

#### ScriptName

The script name of the script to launch.

"EmailComposerFinished"

**Result** Returns OK or error.

### Description

Parameter may be "Cancel" if user canceled the dialog or "Image" if something was picked.

### See also

## 94.46 ImagePicker.SetShowsCameraControls

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.SetShowsCameraControls"; Value )

### Parameters

#### Value

The new setting. Pass 1 to show camera controls or 0 to hide.

1

**Result** Returns OK or error.

### Description

Indicates whether the image picker displays the default camera controls.

The default value of this property is 1, which specifies that the default camera controls are visible in the picker. Set it to 0 to hide the default controls if you want to instead provide a custom overlay view using the cameraOverlayView property.

If you set this property to 0 and provide your own custom controls, you can take multiple pictures before dismissing the image picker interface. However, if you set this property to 1, your delegate must dismiss the image picker interface after the user takes one picture or cancels the operation.

You can access this property only when the source type of the image picker is set to Camera. Attempting to access this property for other source types results in an error. Depending on the value you assign to the mediaTypes property, the default controls display the still camera or movie camera interface, or a selection control that lets the user choose the picker interface.

## 94.47 UIImagePickerController.SetSourceType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 UIImagePickerController	7.3	No	No	No	No	Yes

MBS( "UIImagePickerController"; sourceType )

### Parameters

#### sourceType

The source to use to pick an image. Can be PhotoLibrary, Camera or SavedPhotosAlbum. "Camera"

**Result** Returns OK or error.

### Description

The type of picker interface to be displayed by the controller.

Prior to running the picker interface, set this value to the desired source type. The source type you set must be available and an error will be returned if it is not. If you change this property while the picker is visible, the picker interface changes to match the new value in this property.

The default value is PhotoLibrary.

Created 17th June 2017, last changed 18th June 2017.

**94.48 ImagePicker.SetVideoMaximumDuration**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.SetVideoMaximumDuration"; Value )

**Parameters****Value**

The new maximum length in seconds.

300

**Result** Returns OK or error.

**Description**

The maximum duration, in seconds, for a video recording.

The default value for this property is 10 minutes (600 seconds). When a user taps the Share button to send a movie to MMS, MobileMe, YouTube, or another destination, an appropriate duration limit and an appropriate video quality are enforced.

This property is available only if the `mediaTypes` property's value array includes the `kUTTypeMovie` (`public.movie`) media type.

**See also**

- 94.20 `ImagePicker.GetVideoMaximumDuration`

5121

Created 17th June 2017, last changed 18th June 2017.

## 94.49 UIImagePickerController.StartVideoCapture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 UIImagePickerController	7.3	No	No	No	No	Yes

MBS( "UIImagePickerController" )

**Result** Returns OK or error.

### Description

Select the camera via UIImagePickerController.SetCameraDevice function.

Returns OK on success or "Failed" on failure. This method may return a value of "Failed" for various reasons, among them the following:

- Movie capture is already in progress
- The device does not support movie capture
- The device is out of disk space

Use this function in conjunction to initiate the programmatic capture of a movie. You can take more than one movie without leaving the interface, but to do so requires you to hide the default image picker controls. Calling this method while a movie is being captured has no effect. You must call the UIImagePickerController.stopVideoCapture function, and then wait until the associated script trigger is run, before you can capture another movie.

Calling this method when the source type of the image picker is set to a value other than Camera results in an error.

### See also

- 94.50 UIImagePickerController.StopVideoCapture 5155

Created 17th June 2017, last changed 18th June 2017.

## 94.50 ImagePicker.StopVideoCapture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.StopVideoCapture" )

**Result** Returns OK or error.

### Description

After you call this method to stop video capture, the system calls the script trigger.

### See also

- 94.49 ImagePicker.StartVideoCapture

5154

Created 17th June 2017, last changed 18th June 2017.

## 94.51 ImagePicker.TakePicture

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.TakePicture" )

**Result** Returns OK or error.

### Description

Use this method in conjunction to initiate the programmatic capture of a still image. This supports taking more than one picture without leaving the interface, but requires that you hide the default image picker controls.

Calling this method while an image is being captured has no effect. You must wait until the script trigger is run before you can capture another picture.

Calling this method when the source type of the image picker is set to a value other than Camera results in an error.

**94.52 ImagePicker.VideoIsCompatibleWithSavedPhotosAlbum**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.VideoIsCompatibleWithSavedPhotosAlbum"; FilePath )

**Parameters****FilePath**

The file path to the video file.

**Result** Returns 1, 0 or error.

**Description**

Is a specific video eligible to be saved to the saved photos album?

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

**See also**

- 124.2 `Path.FileMakerPathToNativePath`

6247

Created 17th June 2017, last changed 18th June 2017.

## 94.53 ImagePicker.WriteImageToSavedPhotosAlbum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.WriteImageToSavedPhotosAlbum"; Image { ; FileName; ScriptName; Parameter } )

### Parameters

#### Image

The image container to add to photo roll.

#### FileName

Optional

The file name for the script.

Get(FileName)

#### ScriptName

Optional

The script name for the trigger.

#### Parameter

Optional

The script parameter to use.

**Result** Returns OK or error.

### Description

The work is done in background and we can optionally trigger a script when done.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

### Examples

Add image to saved photos:

```
If [ IsEmpty ( ImagePicker::Picture ) ]
```

```
Show Custom Dialog [ "No image?" ]
```

```
Else
```

```
Set Variable [ $path ; Value: MBS( "ImagePicker.WriteImageToSavedPhotosAlbum"; ImagePicker::Picture;
```

```
Get(FileName); "AddedToCameraRoll" ) ]
```

```
End If
```

## 94.54 ImagePicker.WriteVideoToSavedPhotosAlbum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
94 ImagePicker	7.3	No	No	No	No	Yes

MBS( "ImagePicker.WriteVideoToSavedPhotosAlbum"; FilePath { ; FileName; ScriptName; Parameter } )

### Parameters

#### FilePath

The file path to the video file.

#### FileName

Optional

The file name for the script.

Get(FileName)

#### ScriptName

Optional

The script name for the trigger.

#### Parameter

Optional

The script parameter to use.

**Result** Returns OK or error.

### Description

The work is done in background and we can optionally trigger a script when done.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

# Chapter 95

## ImageView

A control to show images with animation on a layout on macOS and iOS.

You can use this instead of a webviewer to show GIF animations.

### 95.1 ImageView.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.Clear"; ImageView )

#### Parameters

##### ImageView

The image view reference number.

\$\$ImageView

**Result** Returns OK or error.

#### Description

#### See also

- 95.12 ImageView.Release

5174

Created 14th September 2017, last changed 14th September 2017.

## 95.2 ImageView.CreateWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.CreateWithControl"; WindowRef; ControlName { ; DX; DY } )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

#### DX

Optional

A delta to move drop area more to left or right.

0

#### DY

Optional

A delta to move drop area more to top or bottom.

0

**Result** Returns image view reference number or error.

### Description

Use ImageView.Release later to destroy the image view.

If you use a register (tab controls) on the window, be aware that the image view actually is in front of the register (tab controls). So you need to check in the script which register page is current and should show what image view. Or by a trigger you turn the visibility on and off.

Image view reference numbers are starting at 74000 and counting up for each new image view.

If you create a control on a new window, you may do window update command in your script first to have FileMaker actually build the window with controls and display it. A short script pause or using FM.RunScriptLater with 0.1 delay can help having all controls draw themselves. Then you can use this command to put our control on top. We use GetControl() to query left, top, width and height and this gives empty value if control is not yet here.

Creation fails to pick the right window in case the window is selected by name and the window name is not

unique. In that case better work with window reference numbers or just pass 0 for current front window.

### Examples

Create image view with control as placeholder:

```
# Query size of image
Set Variable [ $Image ; Value: MBS( "GMImage.NewFromContainer"; ImageView::ImageContainer ) ]
Set Variable [ $w ; Value: MBS( "GMImage.GetWidth"; $Image ) ]
Set Variable [ $h ; Value: MBS( "GMImage.GetHeight"; $Image ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image ) ]

# We play half size for retina screen resolution
Set Variable [ $h ; Value: Round($h/2;0) ]
Set Variable [ $w ; Value: Round($w/2;0) ]

# We play half size for retina screen resolution
Set Variable [ $$ImageView ; Value: MBS("ImageView.CreateWithControl"; 0; "PlaceHolder") ]
Set Variable [ $r ; Value: MBS("ImageView.SetImage"; $$ImageView; ImageView::ImageContainer) ]
```

## 95.3 ImageView.CreateWithSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.CreateWithSize"; WindowRef; x; y; w; h )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### x

The left coordinate in the window.

0

#### y

The top coordinate in the window.

0

#### w

The width of the image view in the window.

100

#### h

The height of the image view in the window.

100

**Result** Returns image view reference number or error.

### Description

Use ImageView.Release later to destroy the image view.

If you use a register (tab controls) on the window, be aware that the image view actually is in front of the register (tab controls). So you need to check in the script which register page is current and should show what image view. Or by a trigger you turn the visibility on and off.

Image view reference numbers are starting at 74000 and counting up for each new image view.

### Examples

Create image view with size:

```
# Query size of image
Set Variable [ $Image ; Value: MBS( "GMImage.NewFromContainer"; ImageView::ImageContainer ) ]
Set Variable [ $w ; Value: MBS( "GMImage.GetWidth"; $Image ) ]
Set Variable [ $h ; Value: MBS( "GMImage.GetHeight"; $Image ) ]
Set Variable [ $r ; Value: MBS( "GMImage.Release"; $Image ) ]
```

```
# We play half size for retina screen resolution  
Set Variable [ $h ; Value: Round($h/2;0) ]  
Set Variable [ $w ; Value: Round($w/2;0) ]
```

```
# We play half size for retina screen resolution  
Set Variable [ $$ImageView ; Value: MBS("ImageView.CreateWithSize"; 0; 100; 100; $w; $h) ]  
Set Variable [ $r ; Value: MBS("ImageView.SetImage"; $$ImageView; ImageView::ImageContainer) ]
```

## 95.7 **ImageView.GetTag**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.GetTag"; ImageView )

### Parameters

#### **ImageView**

The image view reference number.

\$\$ImageView

**Result** Returns the stored tag value or an error.

### Description

#### See also

- 95.6 [ImageView.GetLeft](#) 5168
- 95.9 [ImageView.GetTop](#) 5171
- 95.16 [ImageView.SetImage](#) 5178
- 95.17 [ImageView.SetTag](#) 5179
- 108.40 [MapView.GetTag](#) 5771

Created 14th September 2017, last changed 14th September 2017.

## 95.8 ImageView.GetToolTip

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	No

MBS( "ImageView.GetToolTip"; ImageView )

### Parameters

#### ImageView

The image view reference number.

\$\$ImageView

**Result** Returns text or error.

### Description

The tooltip is visible on Mac when mouse stays over control. There are no tooltips for iOS.

### See also

- 95.9 ImageView.GetTop 5171
- 95.18 ImageView.SetToolTip 5180
- 108.41 MapView.GetToolTip 5772
- 108.88 MapView.SetToolTip 5824

Created 14th September 2017, last changed 14th September 2017.

## 95.9 **ImageView.GetTop**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.GetTop"; ImageView )

### Parameters

#### **ImageView**

The image view reference number.

\$\$ImageView

**Result** Returns y coordinate or error.

### Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

### See also

- 95.6 [ImageView.GetLeft](#) 5168
- 95.7 [ImageView.GetTag](#) 5169
- 95.8 [ImageView.GetToolTip](#) 5170
- 95.17 [ImageView.SetTag](#) 5179
- 108.42 [MapView.GetTop](#) 5773

Created 14th September 2017, last changed 14th September 2017.

## 95.10 `ImageView.GetVisible`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.GetVisible"; ImageView )

### Parameters

#### ImageView

The image view reference number.

\$\$ImageView

**Result** Returns 1, 0 or error.

### Description

Returns 1 if visible and 0 if hidden.

### See also

- 95.19 `ImageView.SetVisible` 5181
- 108.43 `MapView.GetVisible` 5774
- 108.89 `MapView.SetVisible` 5825
- 168.22 `TextView.GetVisible` 8028

Created 14th September 2017, last changed 14th September 2017.

## 95.11 **ImageView.GetWidth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.GetWidth"; ImageView )

### Parameters

#### **ImageView**

The image view reference number.

\$\$ImageView

**Result** Returns width or error.

### Description

#### See also

- 95.5 [ImageView.GetHeight](#) 5167
- 95.6 [ImageView.GetLeft](#) 5168
- 108.45 [MapView.GetWidth](#) 5776
- 168.23 [TextView.GetWidth](#) 8029

Created 14th September 2017, last changed 14th September 2017.

## 95.12 ImageView.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.Release"; ImageView )

### Parameters

#### ImageView

The image view reference number.

\$\$ImageView

**Result** Returns OK on success.

### Description

### Examples

Close image view:

```
If [ Length ( $$ImageView ) >0 ]
Set Variable [ $r ; Value: MBS("ImageView.Release"; $$ImageView) ]
Set Variable [ $$ImageView ; Value: "" ]
End If
```

### See also

- 95.1 ImageView.Clear 5161

Created 14th September 2017, last changed 14th September 2017.

## 95.13 **ImageView.ReleaseAll**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.ReleaseAll" )

**Result** Returns number of views released.

### **Description**

#### **See also**

- 95.12 [ImageView.Release](#) 5174
- 108.54 [MapView.ReleaseAll](#) 5786
- 168.28 [TextView.ReleaseAll](#) 8034

### **Example Databases**

- [Mac and iOS/ImageView](#)

Created 14th September 2017, last changed 14th September 2017.

## 95.14 `UIImageView.SetFrame`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 UIImageView	7.4	Yes	No	No	No	Yes

MBS( "UIImageView.SetFrame"; UIImageView; X; Y; Width; Height { ; swap } )

### Parameters

#### UIImageView

The image view reference number.

\$\$UIImageView

#### X

The x coordinate.

#### Y

The y coordinate.

#### Width

The width of the control.

#### Height

The height of the control.

#### swap

Optional

Whether to swap y coordinate. By default we swap them. Pass 0 to disable or 1 to swap.

1

**Result** Returns OK or error.

### Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

### See also

- 95.12 `UIImageView.Release` 5174

- 168.32 `TextView.SetFrame` 8039

Created 14th September 2017, last changed 14th September 2017.

## 95.15 **ImageView.SetFrameWithControl**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	9.0	Yes	No	No	No	Yes

MBS( "ImageView.SetFrameWithControl"; ImageView; ControlName { ; DX; DY } )

### Parameters

#### **ImageView**

The image view reference number.

\$\$ImageView

#### **ControlName**

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

#### **DX**

Optional

A delta to move drop area more to left or right.

0

#### **DY**

Optional

A delta to move drop area more to top or bottom.

0

**Result** Returns OK or error.

### Description

If you moved control in layout mode, this can move the drop area back to the new position.

Also useful to switch between different locations on the layout.

## 95.16 ImageView.SetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.SetImage"; ImageView; image )

### Parameters

#### ImageView

The image view reference number.

\$\$ImageView

#### image

the image to use. For best results, pass a container value with a PNG image. For animation, pass a GIF image.

**Result** Returns OK or error.

### Description

We treat GIF images special and animate them.

### Examples

Sets image:

```
Set Variable [ $r ; Value: MBS("ImageView.SetImage"; $$ImageView; ImageView::ImageContainer) ]
```

### See also

## 95.17 **ImageView.SetTag**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.SetTag"; ImageView; tag )

### Parameters

#### **ImageView**

The image view reference number.

\$\$ImageView

#### **tag**

A string you want to associate with the image view.

**Result** Returns OK or error message.

### Description

Use the tag to store whatever value you want to associate with the image view. You can later query it using `ImageView.GetTag`.

### See also

- 95.7 `ImageView.GetTag` 5169

## 95.18 `ImageView.SetToolTip`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	No

MBS( "ImageView.SetToolTip"; ImageView; Tooltip )

### Parameters

#### ImageView

The image view reference number.

\$\$ImageView

#### Tooltip

The new help text.

"Hello"

**Result** Returns OK or error.

### Description

The tooltip is visible on Mac when mouse stays over control. There are no tooltips for iOS.

### See also

- 95.8 `ImageView.GetToolTip` 5170

## 95.19 **ImageView.SetVisible**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
95 ImageView	7.4	Yes	No	No	No	Yes

MBS( "ImageView.SetVisible"; ImageView; Visible )

### Parameters

#### ImageView

The image view reference number.

\$\$ImageView

#### Visible

The new visible state.

1

**Result** Returns OK or error.

### Description

By default we create it visible, but you can hide it if it's on a register and the user clicked to other tab.

## 96.8 iOSApp.SetDidBecomeActiveEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	8.2	No	No	No	No	Yes

MBS( "iOSApp.SetDidBecomeActiveEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate.

**Result** Returns OK or error.

### Description

An app is active when it is receiving events. An active app can be said to have focus. It gains focus after being launched, loses focus when an overlay window pops up or when the device is locked, and gains focus when the device is unlocked.

Version 10.2 and newer stores this in preferences, so it is restored if app when app starts again after being killed in background.

## 96.9 iOSApp.SetDidBecomeActiveScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	8.2	No	No	No	No	Yes

MBS( "iOSApp.SetDidBecomeActiveScript"; Filename; ScriptName { ; Parameter } )

### Parameters

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

#### Parameter

Optional

The script parameter.

**Result** Returns OK or error.

### Description

An app is active when it is receiving events. An active app can be said to have focus. It gains focus after being launched, loses focus when an overlay window pops up or when the device is locked, and gains focus when the device is unlocked.

Version 10.2 and newer stores this in preferences, so it is restored if app when app starts again after being killed in background.

### Examples

Install trigger:

```
Set Variable [ $r ; Value: MBS( "iOSApp.SetDidBecomeActiveScript"; Get(Filename); "Trigger"; "DidBecomeActiveScript" ) ]
```

## 96.11 iOSApp.SetDidEnterBackgroundScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	7.4	No	No	No	No	Yes

MBS( "iOSApp.SetDidEnterBackgroundScript"; Filename; ScriptName { ; Parameter } )

### Parameters

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

#### Parameter

Optional

The script parameter.

**Result** Returns OK or error.

### Description

Posted when the app enters the background.

Version 10.2 and newer stores this in preferences, so it is restored if app when app starts again after being killed in background.

### Examples

Install trigger:

```
Set Variable [ $r ; Value: MBS( "iOSApp.SetDidEnterBackgroundScript"; Get(FileName); "Trigger"; "DidEnterBackgroundScript" ) ]
```

Created 23th September 2017, last changed 16th March 2020.

## 96.13 iOSApp.SetDidReceiveMemoryWarningScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	7.4	No	No	No	No	Yes

MBS( "iOSApp.SetDidReceiveMemoryWarningScript"; Filename; ScriptName { ; Parameter } )

### Parameters

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

#### Parameter

Optional

The script parameter.

**Result** Returns OK or error.

### Description

Posted when the app receives a warning from the operating system about low memory availability.

Version 10.2 and newer stores this in preferences, so it is restored if app when app starts again after being killed in background.

### Examples

Set trigger:

```
MBS( "iOSApp.SetDidReceiveMemoryWarningScript"; Get(Filename); "MemoryTrigger")
```

Install trigger:

```
Set Variable [ $r ; Value: MBS( "iOSApp.SetDidReceiveMemoryWarningScript"; Get(FileName); "Trigger"; "DidReceiveMemoryWarningScript" ) ]
```

### See also

## 96.14 iOSApp.SetIdleTimerDisabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	10.1	No	No	No	No	Yes

MBS( "iOSApp.SetIdleTimerDisabled"; Value )

### Parameters

#### Value

The new value. Pass 1 to disable idle sleep or pass 0 to enable.

1

**Result** Returns OK or error.

### Description

The default value of this property is 0. When most apps have no touches as user input for a short period, the system puts the device into a "sleep" state where the screen dims. This is done for the purposes of conserving power. However, apps that don't have user input except for the accelerometer—games, for instance—can, by setting this property to 1, disable the "idle timer" to avert system sleep.

## 96.15 iOSApp.SetSignificantTimeChangeEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	7.4	No	No	No	No	Yes

MBS( "iOSApp.SetSignificantTimeChangeEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate.

**Result** Returns OK or error.

### Description

Posted when there is a significant change in time, for example, change to a new day (midnight), carrier time update, and change to or from daylight savings time.

Version 10.2 and newer stores this in preferences, so it is restored if app when app starts again after being killed in background.

## 96.17 iOSApp.SetWillEnterForegroundEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	7.4	No	No	No	No	Yes

MBS( "iOSApp.SetWillEnterForegroundEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate.

**Result** Returns OK or error.

### Description

Posted shortly before an app leaves the background state on its way to becoming the active app.

Version 10.2 and newer stores this in preferences, so it is restored if app when app starts again after being killed in background.

### Examples

Show msgbox when app comes to foreground:

```
Set Variable [ $m ; Value: MBS( "iOSApp.SetWillEnterForegroundEvaluate"; "MBS(\msgbox\"; \Hello\)" )
]
```

Created 23th September 2017, last changed 16th March 2020.

## 96.18 iOSApp.SetWillEnterForegroundScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	7.4	No	No	No	No	Yes

MBS( "iOSApp.SetWillEnterForegroundScript"; Filename; ScriptName { ; Parameter } )

### Parameters

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

#### Parameter

Optional

The script parameter.

**Result** Returns OK or error.

### Description

Posted shortly before an app leaves the background state on its way to becoming the active app.

Version 10.2 and newer stores this in preferences, so it is restored if app when app starts again after being killed in background.

### Examples

Install trigger:

```
Set Variable [ $r ; Value: MBS( "iOSApp.SetWillEnterForegroundScript"; Get(Filename); "Trigger"; "WillEnterForegroundScript" ) ]
```

## 96.19 iOSApp.SetWillResignActiveEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
96 iOSApp	8.2	No	No	No	No	Yes

MBS( "iOSApp.SetWillResignActiveEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate.

**Result** Returns OK or error.

### Description

An app is active when it is receiving events. An active app can be said to have focus. It gains focus after being launched, loses focus when an overlay window pops up or when the device is locked, and gains focus when the device is unlocked.

Version 10.2 and newer stores this in preferences, so it is restored if app when app starts again after being killed in background.

# Chapter 97

## iOSDevice

iOS commands to query device details.

### 97.1 iOSDevice.BatteryLevel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.BatteryLevel" )

**Result** Returns value or error.

#### Description

Battery level ranges from 0.0 (fully discharged) to 1.0 (100% charged). Before accessing this property, ensure that battery monitoring is enabled.

If battery monitoring is not enabled, battery state is Unknown and the value of this property is -1.0.

#### Examples

Show battery level:

Show Custom Dialog [ "Battery Level" ; MBS( "iOSDevice.BatteryLevel" ) ]

#### See also

- 97.2 iOSDevice.BatteryState

5206

Created 18th March 2017, last changed 25th November 2017.

## 97.2 iOSDevice.BatteryState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.BatteryState" )

**Result** Returns value or error.

### Description

Value is Unknown, Unplugged, Charging or Full.

### See also

- 97.1 iOSDevice.BatteryLevel

5205

Created 18th March 2017, last changed 18th March 2017.

## 97.3 iOSDevice.IdentifierForVendor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.IdentifierForVendor" )

**Result** Returns UUID or error.

### Description

The value of this property is the same for apps that come from the same vendor running on the same device. A different value is returned for apps on the same device that come from different vendors, and for apps on different devices regardless of vendor.

### Examples

Show identifier:

Show Custom Dialog [ "Identifier" ; MBS( "iOSDevice.IdentifierForVendor" ) ]

Created 18th March 2017, last changed 25th November 2017.

## 97.4 iOSDevice.IsBatteryMonitoringEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.IsBatteryMonitoringEnabled" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if enabled or 0 if disabled.

### See also

- 97.11 iOSDevice.SetBatteryMonitoringEnabled

5215

Created 18th March 2017, last changed 18th March 2017.

## 97.5 iOSDevice.LocalizedModel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.LocalizedModel" )

**Result** Returns text or error.

### Description

The value of this property is a string that contains a localized version of the string returned from iOSDevice.Model.

### See also

- 97.6 iOSDevice.Model

5210

Created 18th March 2017, last changed 18th March 2017.

## 97.6 iOSDevice.Model

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.Model" )

**Result** Returns text or error.

### Description

Possible examples of model strings are "iPhone" and "iPod touch".

### Examples

Show model:

```
Show Custom Dialog [ "Model" ; MBS( "iOSDevice.Model" ) ]
```

### See also

- 97.5 iOSDevice.LocalizedModel 5209
- 97.7 iOSDevice.Name 5211

Created 18th March 2017, last changed 25th November 2017.

## 97.7 iOSDevice.Name

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.Name" )

**Result** Returns text or error.

### Description

The value of this property is an arbitrary alphanumeric string that is associated with the device as an identifier. For example, you can find the name of an iOS device in the General >About settings.

### Examples

Show name:

Show Custom Dialog [ "Name" ; MBS( "iOSDevice.Name" ) ]

### See also

- 97.6 iOSDevice.Model

5210

Created 18th March 2017, last changed 25th November 2017.

## 97.8 iOSDevice.Orientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.Orientation" )

**Result** Returns value or error.

### Description

The value of the property is a constant that indicates the current orientation of the device. This value represents the physical orientation of the device and may be different from the current orientation of your application's user interface.

Value can be Portrait, PortraitUpsideDown, LandscapeLeft, LandscapeRight, FaceUp, FaceDown or Unknown.

Created 18th March 2017, last changed 18th March 2017.

## 97.9 iOSDevice.OrientationIsLandscape

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.OrientationIsLandscape" )

**Result** Returns 1, 0 or error.

**Description**

**See also**

- 97.10 iOSDevice.OrientationIsPortrait

5214

Created 18th March 2017, last changed 18th March 2017.

## 97.10 iOSDevice.OrientationIsPortrait

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.OrientationIsPortrait" )

**Result** Returns 1, 0 or error.

**Description**

**See also**

- 97.9 iOSDevice.OrientationIsLandscape

5213

Created 18th March 2017, last changed 18th March 2017.

## 97.11 iOSDevice.SetBatteryMonitoringEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.SetBatteryMonitoringEnabled"; State )

### Parameters

#### State

The new state of monitoring. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

Enable battery monitoring if your app needs to be notified of changes to the battery state, or if you want to check the battery charge level.

The default value of this property is 0, which:

- Disables the posting of battery-related notifications
- Disables the ability to read battery charge level and battery state

### Examples

Enable battery monitoring:

MBS( "iOSDevice.SetBatteryMonitoringEnabled"; 1 )

### See also

- 97.4 iOSDevice.IsBatteryMonitoringEnabled

5208

Created 18th March 2017, last changed 25th November 2017.

## 97.12 iOSDevice.SystemName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.SystemName" )

**Result** Returns text or error.

### Description

### Examples

Show system name:

Show Custom Dialog [ "Name" ; MBS( "iOSDevice.SystemName" ) ]

Created 18th March 2017, last changed 25th November 2017.

## 97.13 iOSDevice.SystemVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.SystemVersion" )

**Result** Returns text or error.

### Description

An example of the system version is @"1.2".

### Examples

Show system version:

Show Custom Dialog [ "Version" ; MBS( "iOSDevice.SystemVersion" ) ]

### See also

- 127.62 Version

6446

Created 18th March 2017, last changed 25th November 2017.

## 97.14 iOSDevice.UserInterfaceIdiom

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
97 iOSDevice	7.2	No	No	No	No	Yes

MBS( "iOSDevice.UserInterfaceIdiom" )

**Result** Returns value or error.

### Description

For universal applications, you can use this property to tailor the behavior of your application for a specific type of device. For example, iPhone and iPad devices have different screen sizes, so you might want to create different views and controls based on the type of the current device.

Value is Phone, Pad, TV or CarPlay. FileMaker does not support all of those.

Created 18th March 2017, last changed 18th March 2017.

# Chapter 98

## iOSKeyboard

iOS Keyboard state and evaluation when it changes.

### 98.1 iOSKeyboard.GetDidHideEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 iOSKeyboard	7.4	No	No	No	No	Yes

MBS( "iOSKeyboard.GetDidHideEvaluate" )

**Result** Returns expression or error.

#### Description

- 98.8 iOSKeyboard.SetWillShowEvaluate 5226

Created 19th September 2017, last changed 19th September 2017.

## 98.5 iOSKeyboard.SetDidHideEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 iOSKeyboard	7.4	No	No	No	No	Yes

MBS( "iOSKeyboard.SetDidHideEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate.

**Result** Returns OK or error.

### Description

The plugin can evaluate this expression to set variables, call plugin functions to trigger other things.

### Examples

Set variable when keyboard hides:

```
MBS("iOSKeyboard.SetDidHideEvaluate"; "Let( [ $$keyboardVisible=0 ] ;0)")
```

### See also

- 98.1 iOSKeyboard.GetDidHideEvaluate 5219

- 98.8 iOSKeyboard.SetWillShowEvaluate 5226

Created 19th September 2017, last changed 19th September 2017.

## 98.6 iOSKeyboard.SetDidShowEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 iOSKeyboard	7.4	No	No	No	No	Yes

MBS( "iOSKeyboard.SetDidShowEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate.

**Result** Returns OK or error.

### Description

The plugin can evaluate this expression to set variables, call plugin functions to trigger other things.

### Examples

Set variable when keyboard shows:

```
MBS("iOSKeyboard.SetDidShowEvaluate"; "Let( [ $$keyboardVisible=1 ] ;0)")
```

## 98.9 iOSKeyboard.State

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
98 iOSKeyboard	7.4	No	No	No	No	Yes

MBS( "iOSKeyboard.State" )

**Result** Returns number or error.

### Description

State is 0 for hidden, 1 for showing animation, 2 for showing, 3 for hiding animation.  
Created 19th September 2017, last changed 19th September 2017.

# Chapter 99

## Java

Execute code in java classes.

You can initialize Java VM with a list of jar files. Than create objects, call methods, set and query fields.

### 99.1 Java.CallObjectMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.CallObjectMethod"; JObject; MethodName; Signature { ; Params } )

#### Parameters

##### JObject

The java object reference number.

\$j

##### MethodName

The name of the method.

"test"

##### Signature

The java signature of the method. This describes the parameter types. Please use "javap -s test.class" with file path to class file to show the signatures for a class.

" [] "

##### Params

Optional

The parameters to pass. Pass one parameter in FileMaker for each parameter to pass.

**Result** Returns OK or error.

##### Description

Parameters and return type is detected by plugin automatically from signature.  
Please call later `Java.Release` to release an object if this function returns one.

Java is only available if you call `Java.Initialize` before to load the java runtime.  
Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

### Examples

Init a class and a call a method:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()V" ) ]
Set Variable [ $r; Value:MBS( "Java.CallObjectMethod"; $j; "getValue"; "(I)" ) ]
Show Custom Dialog [ "value"; $r ]
Set Variable [ $r; Value:MBS( "Java.Release"; $j ) ]
```

Call method passing parameter and another to query:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()V" ) ]
Set Variable [ $r; Value:MBS( "Java.CallObjectMethod"; $j; "setValue"; "(IV"; 1234 ) ]
Set Variable [ $r; Value:MBS( "Java.CallObjectMethod"; $j; "getValue"; "(I)" ) ]
Show Custom Dialog [ "value"; $r ]
Set Variable [ $r; Value:MBS( "Java.Release"; $j ) ]
```

Call a void method

```
// public void DoSomething()
Set Variable [ $r; Value:MBS( "Java.CallObjectMethod"; $j; "DoSomething"; "()V" ) ]
```

### See also

- [99.6 Java.Initialize](#) 5238
- [99.8 Java.NewClassObject](#) 5242
- [99.10 Java.Release](#) 5245

### Example Databases

- [Java/Java Example/Java Example](#)
- [Java/Java Tests/Java Tests](#)

Created 2nd October 2016, last changed 22nd November 2018.

## 99.2 Java.CallStaticMethod

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.CallStaticMethod"; ClassName; MethodName; Signature { ; Params } )

### Parameters

#### ClassName

The name of the java class.  
"com.mbs.test"

#### MethodName

The name of the method.  
"test"

#### Signature

The java signature of the method. This describes the parameter types. Please use "javap -s test.class" with file path to class file to show the signatures for a class.  
" [] "

#### Params

Optional

The parameters to pass. Pass one parameter in FileMaker for each parameter to pass.

**Result** Returns result or error.

### Description

Parameters and return type is detected by plugin automatically from signature.  
Please call later Java.Release to release an object if this function returns one.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

### Examples

Call Function GetString:

```
MBS( "Java.CallStaticMethod"; "test"; "GetString"; "()Ljava/lang/String;" )
```

Call function returning an integer:

```
// public static int method_int(int a, double b, char c, long d, short e)
Set Variable [ $r; Value:MBS( "Java.CallStaticMethod"; "tests"; "method_int"; "(IDCJS)I"; 10000; 2000; 300; 40; 5 ) ]
```

```
If [ MBS("IsError") or ($r 12345) ]  
Show Custom Dialog [ "Java Error"; $r ]  
Exit Script [ Result: "Static int method failed" ]  
End If
```

Call function returning a double value:

```
// public static double method_double(int a, double b, char c, long d, short e)  
Set Variable [ $r; Value:MBS( "Java.CallStaticMethod"; "tests"; "method_double"; "(IDCJS)D"; 10000;  
2000; 300; 40; 5 ) ]  
If [ MBS("IsError") or ($r 12345) ]  
Show Custom Dialog [ "Java Error"; $r ]  
Exit Script [ Result: "Static double method failed" ]  
End If
```

Created 2nd October 2016, last changed 22nd November 2018.

## 99.3 Java.GetContainerFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.GetContainerFileName" )

**Result** Returns text or error.

### Description

### See also

- 99.12 Java.SetContainerFileName

5247

Created 13th October 2016, last changed 13th October 2016.

## 99.4 Java.GetObjectField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.GetObjectField"; JObject; FieldName; Signature )

### Parameters

#### JObject

The java object reference number.

\$j

#### FieldName

The name of the field.

"test"

#### Signature

The java signature of the field. This describes the data type of the field.

"I"

**Result** Returns OK or error.

### Description

Data type is automatically detected by plugin from signature.

If you read an object value, please call Java.Release later for it.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

### Examples

Test object field:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "value"; "I"; 2345 ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "value"; "I" ) ]
```

```
Show Custom Dialog [ "value"; $r ]
```

```
Set Variable [ $r; Value:MBS( "Java.Release"; $j ) ]
```

Queries various fields:

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_boolean"; "Z" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_byte"; "B" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_byteArray"; " [ B" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_char"; "C" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_charArray"; " [ C" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_double"; "D" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_float"; "F" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_int"; "I" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_long"; "J" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_short"; "S" ) ]  
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "property_string"; "Ljava/lang/String;" ) ]
```

## 99.5 Java.GetStaticField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.GetStaticField"; ClassName; FieldName; Signature )

### Parameters

#### ClassName

The name of the java class.  
"com.mbs.test"

#### FieldName

The name of the field.  
"test"

#### Signature

The java signature of the field. This describes the data type of the field.  
"I"

**Result** Returns value or error.

### Description

This is like a global variable as there is only one value for all objects of the class.  
Data type is automatically detected by plugin from signature.  
If you read an object value, please call Java.Release later for it.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

For PDF content: If you have a DynaPDF Pro license and DynaPDF functions initialized, this function can add previews for the PDF file on Windows and Linux. For MacOS, we make them with PDFKit.

### Examples

Test static field:

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "test"; "n"; "I"; 3456 ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "test"; "n"; "I" ) ]
Show Custom Dialog [ "value"; $r ]
```

Query various static fields:

```
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_boolean"; "Z" ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_byte"; "B" ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_byteArray"; " [ B" ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_char"; "C" ) ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_charArray"; " [ C" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_double"; "D") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_float"; "F") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_int"; "I") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_long"; "J") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_short"; "S") ]
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "tests"; "static_property_string"; "Ljava/lang/String;")
]
```

Created 2nd October 2016, last changed 17th August 2018.

## 99.6 Java.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.Initialize" { ; LibPath; ClassPathList; Option } )

### Parameters

#### LibPath

Optional

Path to java library (e.g. jvm.dll) If empty, the plugin uses the Java framework on Mac and looks into registry on Windows to find newest Java installation.

e.g. on Windows: "C:\Program Files\Java\jre1.8.0\_101\bin\server\jvm.dll"  
""

#### ClassPathList

Optional

The list of native paths to the jar files to load. Please pass here all jar files you want to use.

"/Users/cs/Desktop/test.jar"

#### Option

Optional

Pass a parameter for each additional option to pass to Java VM initialization.

**Result** Returns OK or error.

### Description

You can either pass path to jvm library file or let the plugin look for it. To access classes, you need to pass paths to the jar and class files you want to use.

Returns error if already a JavaVM is initialized.

Please be aware that you can only have one VM running at a given time, so you can't use Java in other plugin and our plugin together.

This should work fine for any Java version starting with 1.4 or newer. Tested with 1.7 and 1.8.

May not initialize probably if other plugin initialized Java before.

Returns "Using existing Java VM." in case an existing Java VM initialized by other plugin is used. In that case we can't pass your class paths or other options!

On Windows, we look into Local Machine\SOFTWARE\JavaSoft\Java Runtime Environment in registry to find the newest entry and the path to the jvm.dll file. Please note that on Windows you can install 32-bit and 64-bit version of Java and you need the matching bit number to FileMaker application.

If you get error 126 on Windows, maybe MSVCR100.DLL is missing. So install Visual Studio 2010 runtime libraries. You can download them from Microsoft website. Do not download them from other websites

spreading malware!

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Initialize java:

```
Set Variable [ $r ; Value: MBS("Java.Initialize") ]
If [ MBS("Java.Initialized") ]
Show Custom anzeigen [ "Java" ; "Java initialized." ]
Else
Show Custom anzeigen [ "Java" ; "Java failed to initialize" & $r ]
End If
```

Initialize on Linux:

```
Set Variable [ $r ; Value: MBS("Java.Initialize"; "/home/cs/jrel.6.0_05/lib/x64/client/libjvm.so"; "/java/test.jar$/java/drive" ) ]
```

Init with three class path entries:

```
MBS("Java.Initialize"; Java Test::Path to Java Library; Java Test::ClassPath1 & $r & Java Test::ClassPath2 & $r & Java Test::ClassPath3)
```

## 99.7 Java.Initialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.Initialized" )

**Result** Returns 1, 0 or error.

### Description

### Examples

Check if Java is initialized:

```
MBS("Java.Initialized")
```

Initialize java:

```
Set Variable [ $r ; Value: MBS("Java.Initialize") ]
If [ MBS("Java.Initialized") ]
Show Custom anzeigen [ "Java" ; "Java initialized." ]
Else
Show Custom anzeigen [ "Java" ; "Java failed to initialize" & $r ]
End If
```

## 99.8 Java.NewClassObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.NewClassObject"; ClassName; ConstructorName; Signature { ; Params } )

### Parameters

#### ClassName

The name of the java class.

"com.mbs.test"

#### ConstructorName

The name of the constructor.

"test"

#### Signature

The java signature of the method. This describes the parameter types.

"()"

#### Params

Optional

The parameters to pass. Pass one parameter in FileMaker for each parameter to pass.

**Result** Returns object reference or error.

### Description

Parameters and return type is detected by plugin automatically from signature.

Please call later Java.Release to release the object.

Java is only available if you call Java.Initialize before to load the java runtime.

### Examples

Create a new test object with default constructor:

```
MBS( "Java.NewClassObject"; "test"; "<init>"; "()V")
```

## 99.9 Java.ObjectClassName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.ObjectClassName"; JObject )

### Parameters

#### JObject

The java object reference number.

\$j

**Result** Returns text or error.

### Description

#### Examples

Query object name:

```
MBS( "Java.ObjectClassName"; $j )
```

Create object and query class name:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.ObjectClassName"; $j ) ]
```

```
Show Custom Dialog [ "value"; $r ]
```

```
Set Variable [ $r; Value:MBS( "Java.Release"; $j ) ]
```

### See also

- 99.8 Java.NewClassObject 5242

Created 2nd October 2016, last changed 2nd October 2016.

## 99.10 Java.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.Release"; JObject )

### Parameters

#### JObject

The java object reference number.

\$j

**Result** Returns OK or error.

### Description

Please call that for all java objects to release memory.

### Examples

Release object in \$j:

Set Variable [ \$r; Value:MBS( "Java.Release"; \$j) ]

### See also

## 99.11 Java.ReleaseAll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.ReleaseAll" )

**Result** Returns OK or error.

### Description

This is called for you in Java.Close.

Be aware that on a server this may free objects, which are used by other scripts running in parallel!

### See also

- 62.150 CURL.ReleaseAll 2013
- 99.10 Java.Release 5245

Created 2nd October 2016, last changed 9th January 2020.

## 99.12 Java.SetContainerFileName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.SetContainerFileName"; FileName )

### Parameters

#### FileName

The file name to use for container.

"test.jpg"

**Result** Returns OK or error.

### Description

When a function call to Java returns a ByteArray, we pack it into a container using this file name. The file name than determents for FileMaker the type of file.

### Examples

Set file name:

MBS( "Java.SetContainerFileName"; "Logo.jpg" )

### See also

Created 13th October 2016, last changed 6th September 2019.

## 99.13 Java.SetObjectField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.SetObjectField"; JObject; fieldName; Signature; Value )

### Parameters

#### JObject

The java object reference number.

\$j

#### fieldName

The name of the field.

"test"

#### Signature

The java signature of the field. This describes the data type of the field.

"I"

#### Value

The value to use for the field.

123

**Result** Returns OK or error.

### Description

Data type is automatically detected by plugin from signature.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

### Examples

Test object field:

```
Set Variable [ $j; Value:MBS( "Java.NewClassObject"; "test"; "<init>"; "()"V" ) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "value"; "I"; 2345) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetObjectField"; $j; "value"; "I" ) ]
```

```
Show Custom Dialog [ "value"; $r ]
```

```
Set Variable [ $r; Value:MBS( "Java.Release"; $j) ]
```

Sets various fields:

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_boolean"; "Z"; 1) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_byte"; "B"; 123) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_byteArray"; " [ B"; Java Test::TestContainer) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_char"; "C"; 123) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_charArray"; " [ C"; "123") ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_double"; "D"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_float"; "F"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_int"; "I"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_long"; "J"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_short"; "S"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetObjectField"; $j; "property_string"; "Ljava/lang/String;"; "123") ]
```

## 99.14 Java.SetStaticField

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
99 Java	6.5	Yes	Yes	Yes	Yes	No

MBS( "Java.SetStaticField"; ClassName; FieldName; Signature; Value )

### Parameters

#### ClassName

The name of the java class.

"com.mbs.test"

#### FieldName

The name of the field.

"test"

#### Signature

The java signature of the field. This describes the data type of the field.

"I"

#### Value

The value to use for the field.

123

**Result** Returns OK or error.

### Description

This is like a global variable as there is only one value for all objects of the class.

Data type is automatically detected by plugin from signature.

Java is only available if you call Java.Initialize before to load the java runtime.

Supported data types include: void, int, long, boolean, string, double, float, char, byte, object, byte array (for container), char array (using FileMaker text).

### Examples

Test static field:

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "test"; "n"; "I"; 3456) ]
```

```
Set Variable [ $r; Value:MBS( "Java.GetStaticField"; "test"; "n"; "I") ]
```

```
Show Custom Dialog [ "value"; $r ]
```

Set various static fields:

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_boolean"; "Z"; 1) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_byte"; "B"; 123) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_byteArray"; " [ B"; Java  
Test::TestContainer) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_char"; "C"; 123) ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_charArray"; " [ C"; "123") ]
```

```
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_double"; "D"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_float"; "F"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_int"; "I"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_long"; "J"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_short"; "S"; 123) ]
Set Variable [ $r; Value:MBS( "Java.SetStaticField"; "tests"; "static_property_string"; "Ljava/lang/String;";
"123") ]
```

# Chapter 100

# JavaScript

Run Javascript without Webviewer cross-platform, even on server.

## 100.1 JS.AddFileMakerEvaluateFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.AddFileMakerEvaluateFunction"; JSRef; Name )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the function.

"test"

**Result** Returns OK or error.

### Description

The function will take string parameter and evaluate the result in FileMaker. Result is returned as text to JavaScript.

For increased security we prefer all FileMaker developers define their own function name, so if you get some foreign JavaScript, it can't know the function name and mess with FileMaker.

### Examples

Evaluate something with FileMaker in JavaScript:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFileMakerEvaluateFunction"; $js; "FMEval" ) ]
Show Custom Dialog [ "Result" ; MBS( "JS.Evaluate"; $JS; " \ "got AccountName: \ " + FMEval(\ "Get(Ac-
countName)\")" ) ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

**See also**

**Example Databases**

- [JavaScript/JavaScript](#)

Created 7th December 2019, last changed 12nd December 2019.

## 100.2 JS.AddFileMakerRunScriptFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.AddFileMakerRunScriptFunction"; JSRef; Name )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the function.

"test"

**Result** Returns OK or error.

### Description

Scripts are queued and run later when JavaScript finished.

The function in JavaScript returns the error code from FileMaker, which is zero for success.

For increased security we prefer all FileMaker developers define their own function name, so if you get some foreign JavaScript, it can't know the function name and mess with FileMaker. Be aware that this function may launch any script in the solution, even those not shown in the menu.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Run a script from JavaScript:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "JS.AddFileMakerRunScriptFunction"; $js; "FMRun" ) ]
```

```
Show Custom Dialog [ "Result" ; MBS( "JS.Evaluate"; $JS; " \start script: \ + FMRun(\ "JavaScript.fmp12\ ", \ "testRun\ ", \ "Hello World\ ") " ) ]
```

```
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

### See also

- 100.1 JS.AddFileMakerEvaluateFunction 5253

Created 7th December 2019, last changed 8th December 2019.

## 100.3 JS.AddFileMakerSQLFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.AddFileMakerSQLFunction"; JSRef; Name )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the function.

"test"

**Result** Returns OK or error.

### Description

The function will take string parameter with file name and SQL and evaluate the result in FileMaker. Result is returned as text to JavaScript. You can pass additional parameters for filling parameters in SQL.

For increased security we prefer all FileMaker developers define their own function name, so if you get some foreign JavaScript, it can't know the function name and mess with FileMaker. Be aware that users may run commands like DELETE to delete all records of a table!

### Examples

Run SQL from JavaScript:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "JS.AddFileMakerSQLFunction"; $js; "FMSQL" ) ]
```

```
Show Custom Dialog [ "Result" ; MBS( "JS.Evaluate"; $JS; " \"got SQL result: \" + FMSQL( \"JavaScript.fmp12\", \"SELECT COUNT(*) FROM JavaScript\" ) ) ]
```

```
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

## 100.4 JS.AddFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.AddFunction"; JSRef; Name; JavaScript )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the function.

"test"

#### JavaScript

The JavaScript code.

"function (x,y) { return x+y; } "

**Result** Returns OK or error.

### Description

Optional provide a file name to show in stack traces.

Function source code may contain a function name, but we use only the name parameter to register the function as global one.

### Examples

Define a function and call it:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $js; "adder"; "function (x,y) { return x+y; } " ) ]
Show Custom Dialog [ "Result" ; MBS( "JS.CallFunction"; $JS; "adder"; 3; 4 ) ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Initialize JavaScript environment with two functions:

```
If [ Length($$js) = 0 ]
Set Variable [ $$js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $$js; "makeCRCTable"; "function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c >>1)) : (c >>1));
}
crcTable [ n ] = c;
}
}
```

```
return crcTable;
} ” ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $$js; "crc32"; "function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++ ) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i) & 0xFF ) ;
}

return (crc ^(-1)) »>0;
} ” ]
End If
```

## 100.5 JS.CallFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.CallFunction"; JSRef; Name; Parameters )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the function.

"test"

#### Parameters

JSON to pass as parameter.

**Result** Returns JSON or error.

### Description

Parameters are passed to the function. Please pass as many parameters in FileMaker as needed.

If the function needs more parameter, undefined values are used to fill up.

If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a JSON value.

### Examples

Define a function and call it:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $js; "adder"; "function (x,y) { return x+y; } " ) ]
Show Custom Dialog [ "Result" ; MBS( "JS.CallFunction"; $JS; "adder"; 3; 4 ) ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Concat strings:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.AddFunction"; $js; "Concat"; "function (x,y) { return x+\\" \"+y; } " ) ]
Show Custom Dialog [ "Result" ; MBS( "JS.CallFunction"; $JS; "Concat"; "\\"Hello\\""; "\\"World\\"") ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Call a function:

```
If [ Length($js) >0 ]
Set Variable [ $p ; Value: MBS( "JSON.CreateString"; test::Input ) ]
Set Field [ test::Output ; MBS( "JS.CallFunction"; $js; "crc32"; $p ) ]
End If
```

100.5. *JS.CALLFUNCTION*

## 100.6 JS.Evaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.Evaluate"; JSRef; JavaScript )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### JavaScript

A JavaScript expression.

"1+2"

**Result** Returns JSON or error.

### Description

This may include definition of functions and objects and using them.

Result is converted to JSON and returned.

### Examples

Evaluate some expressions:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "4+5" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "test"; "\"Hello World\"" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "test + test;" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Defines and runs a function in JavaScript:

```
Let( [
f = "
function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
return crcTable;
```

```

}

function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i) & 0xFF ) ;
}

return (crc ^(-1)) »>0;
};

crc32(InputChange);";
j = MBS( "JS.New" );
r = MBS( "JS.SetGlobalPropertyValue"; j; "InputChange"; "Hello World" );
r = MBS( "JS.Evaluate"; j; f );
x = MBS( "JS.Free"; j )
];r)

```

Initialize JavaScript environment with two functions:

```

If [ Length($$js) = 0 ]
Set Variable [ $$js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $$js;
"function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n=0; n <256; n++) {
c = n;
for(var k=0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
return crcTable;
}

function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i) & 0xFF ) ;
}

return (crc ^(-1)) »>0;
};"} ]

```

End If

List global properties:

```
MBS( "JS.Evaluate"; $$JS; "Object.keys(globalThis);" )
```

Query now in JavaScript:

```
MBS( "JS.Evaluate"; $$JS; "performance.now();" )
```

Measure time for a test function:

```
MBS("JS.Evaluate"; $js; "function testFunction() {
for (var i = 0; i <1e6; i++) { }
}")
```

```
var t1 = performance.now();
testFunction();
var t2 = performance.now();
```

```
('test took: ' + (t2 - t1) + ' milliseconds');
```

## 100.7 JS.EvaluateToString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.EvaluateToString"; JSRef; JavaScript )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### JavaScript

A JavaScript expression.

"1+2"

**Result** Returns text or error.

### Description

This may include definition of functions and objects and using them.

Result is converted to string and returned.

### Examples

Evaluate some text:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.EvaluateToString"; $js; "e = \"test\"; e + String.fromCharCode(33)" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Defines and runs a function in JavaScript:

```
Let( [
f = "
function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
return crcTable;
}
```

```

function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i)) & 0xFF ] ;
}

return (crc ^(-1)) »>0;
};

crc32(InputChange);";
j = MBS( "JS.New" );
r = MBS( "JS.SetGlobalPropertyValue"; j; "InputChange"; "Hello World" );
r = MBS( "JS.EvaluateToString"; j; f );
x = MBS( "JS.Free"; j )
];r)

## 100.8 JS.Free

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.Free"; JSRef )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

**Result** Returns OK or error.

### Description

### Examples

Evaluate some expressions:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "4+5" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "test"; "\"Hello World\"" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "test + test;" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

Cleanup script:

```
If [ Length($$js) >0 ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $$js ) ]
Set Variable [ $$js ; Value: "" ]
End If
```

## 100.9 JS.GetGlobalProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.GetGlobalProperty"; JSRef; Name )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the variable.

"test"

**Result** Returns JSON value or error.

### Description

Returns value as JSON encoded.

### Examples

Get and set some properties:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
# try number
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v1"; 123 ) ]
Set Variable [ $v1 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v1" ) ]
# try some JSON array
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v2"; " [ 1,2,3 ] " ) ]
Set Variable [ $v2 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v2" ) ]
# try some text
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v3"; "\"test\"" ) ]
Set Variable [ $v3 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v3" ) ]
# show results
Show Custom Dialog [ "Property" ; $v1 & §& $v2 & §& $v3 ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

### Example Databases

- [JavaScript/JavaScript](#)

Created 7th December 2019, last changed 7th December 2019.

## 100.10 JS.GetGlobalPropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.GetGlobalPropertyValue"; JSRef; Name )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the variable.

"test"

**Result** Returns value or error.

### Description

Returns value as number, text or JSON encoded.

This is a simplified version of JS.GetGlobalProperty to avoid extra JSON encoding for simple values. Objects are still returned JSON encoded.

### Examples

Queries a number value:

```
MBS( "JS.GetGlobalPropertyValue"; $js; "Hello")
```

## 100.11 JS.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.New" )

**Result** Returns JS reference number or error.

### Description

This object contains all the functions and properties you defined. Please release the object later with the JS.Free function.

Your own JavaScript engine is useful for:

- Running some snippet of JavaScript code without web viewer.
- Using various JavaScript libraries
- Providing a scripting language to your own solution.
- Doing JavaScript on server side.
- Working with JSON data
- Enjoy using regular expressions, unicode text functions, number parsing and formatting with no platform dependencies

### Examples

Evaluate a bit of JavaScript:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
Set Variable [ $r ; Value: MBS( "JS.Evaluate"; $js; "4+5" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

## 100.12 JS.Now

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "JS.Now"; JSRef )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

**Result** Returns number or error.

### Description

This is seconds since 1st January 1970 multiplied by 1000 and may contain fraction with microseconds.

Get current time in POSIX milliseconds, as seen by the ECMAScript environment. The return value matches `Date.now()` with the reservation that sub-millisecond resolution may be available.

### Examples

Query current time:

MBS( "JS.Now"; \$\$JS )

Example result: 1579438706835.8249512

### See also

## 100.13 JS.ObjectCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "JS.ObjectCount"; JSRef )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

**Result** Returns number or error.

### Description

A fresh JavaScript engine already has about 400 objects for the built-in functionality.

### Examples

Query memory statistics:

```
Set Variable [ $JS ; Value: MBS( "JS.New" ) ]
```

```
Show Custom Dialog [ "JavaScript memory statistics:" ; MBS( "JS.StringCount"; $JS ) & " strings" & $&
MBS( "JS.ObjectCount"; $JS ) & " objects" ]
```

## 100.14 JS.SetGlobalProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.SetGlobalProperty"; JSRef; Name; Value )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the variable.

"test"

#### Value

The JSON value.

" [ 1,2,3 ] "

**Result** Returns OK or error.

### Description

Please pass value as JSON value.

### Examples

Get and set some properties:

```
Set Variable [ $js ; Value: MBS( "JS.New" ) ]
# try number
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v1"; 123 ) ]
Set Variable [ $v1 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v1" ) ]
# try some JSON array
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v2"; " [ 1,2,3 ] " ) ]
Set Variable [ $v2 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v2" ) ]
# try some text
Set Variable [ $r ; Value: MBS( "JS.SetGlobalProperty"; $JS; "v3"; "\"test\"" ) ]
Set Variable [ $v3 ; Value: MBS( "JS.GetGlobalProperty"; $JS; "v3" ) ]
# show results
Show Custom Dialog [ "Property" ; $v1 & $& $v2 & $& $v3 ]
Set Variable [ $r ; Value: MBS( "JS.Free"; $JS ) ]
```

## 100.15 JS.SetGlobalPropertyValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JS.SetGlobalPropertyValue"; JSRef; Name; Value )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Name

The name of the variable.

"test"

#### Value

The number or text value.

123

**Result** Returns OK or error.

### Description

Please pass value as number or text.

Container, date, time and timestamp are converted to text.

This is a simplified version of JS.SetGlobalProperty to avoid extra JSON encoding for simple values.

### Examples

Sets a variable with name:

MBS( "JS.SetGlobalPropertyValue"; \$js; "Hello"; 123,45 )

### See also

## 100.16 JS.StringCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "JS.StringCount"; JSRef )

### Parameters

#### JSRef

The JavaScript reference number.  
\$js

**Result** Returns number or error.

### Description

A fresh JavaScript engine already has about 1000 strings.

### Examples

Query memory statistics:

```
Set Variable [ $JS ; Value: MBS( "JS.New" ) ]
```

```
Show Custom Dialog [ "JavaScript memory statistics:" ; MBS( "JS.StringCount"; $JS ) & " strings" & $&
MBS( "JS.ObjectCount"; $JS ) & " objects" ]
```

## 100.17 JS.TimeToDateComponents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "JS.TimeToDateComponents"; JSRef; Time )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Time

The time value.

1579438861538

**Result** Returns JSON or error.

### Description

Convert a time value to components (year, month, day, hour, minute, second) interpreted in UTC. If the time value is invalid, e.g. beyond the valid ECMAScript time range, an error is thrown.

### Examples

Query date components for now:

```
MBS( "JS.TimeToDateComponents"; $$JS; MBS( "JS.Now"; $$JS ) )
```

```
Example result: {
  "year": 2020,
  "month": 1,

- [MBS FileMaker Plugin, version 10.1pr1](#)

Created 19th January 2020, last changed 19th January 2020.

## 100.18 JS.TimeToUTCDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "JS.TimeToUTCDate"; JSRef; Time )

### Parameters

#### JSRef

The JavaScript reference number.

\$js

#### Time

The time value.

1579438861538

**Result** Returns timestamp or error.

### Description

### Examples

Query now as timestamp:

```
MBS( "JS.TimeToUTCDate"; $$JS; MBS( "JS.Now"; $$JS ) )
```

Example result: 19.01.2020 12:59:46

**100.19 JS.UTCDateToTime**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
100 JavaScript	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "JS.UTCDateToTime"; JSRef; TS )

**Parameters****JSRef**

The JavaScript reference number.

\$js

**TS**

The timestamp to convert. Must be in UTC timezone.

**Result** Returns double or error.

**Description**

Convert components (year, month, day, hour, minute, seconds) in timestamp, interpreted in UTC, into a time value.

**Examples**

Tests time functions:

```
Let( [
c = MBS( "JS.New" );
r = MBS( "JS.UTCDateToTime"; c; Get(CurrentTimeStamp) );
d = MBS( "JS.TimeToDateComponents"; c; r )
]; r & $& d)
```

Example result: 1582121231000

```
{
"year": 2020,
"month": 2,
"day": 19,
"hours": 14,
"minutes": 7,
"seconds": 11,
"milliseconds": 0,
"weekday": 3,
"timezone": "UTC",
"weekdayText": "Wednesday"
}
```

# Chapter 101

## JavaScriptMac

Run Javascript without Webviewer on Mac/iOS, even on server.

Supported for iOS with MBS Plugin 7.5 or newer.

### 101.1 JavaScript.CheckScriptSyntax

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.CheckScriptSyntax"; JavaScriptContext; Script { ; URL; startingLineNumber } )

#### Parameters

##### JavaScriptContext

The reference number of the javascript context.

\$Context

##### Script

The script to evaluate.

##### URL

Optional

The source URL for this script. A URL for the script's source file. Used by debuggers and when reporting exceptions. This parameter is informative only: it does not change the behavior of the script.

##### startingLineNumber

Optional

An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.

1

**Result** Returns OK or error.

### Description

Returns OK on success or error message.

### Examples

Check syntax:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]  
Set Variable [ $r ; Value: MBS( "JavaScript.CheckScriptSyntax"; $js; "test+++++" ) ]  
Show Custom Dialog [ "Result" ; $r ]  
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

### See also

- 101.5 JavaScript.New 5294
- 101.10 JavaScript.Release 5301

Created 5th November 2015, last changed 9th January 2020.

## 101.2 JavaScript.EvaluateScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.EvaluateScript"; JavaScriptContext; Script { ; URL; startingLineNumber } )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.

\$Context

#### Script

The script to evaluate.

#### URL

Optional

The source URL for this script. A URL for the script's source file. Used by debuggers and when reporting exceptions. This parameter is informative only: it does not change the behavior of the script.

#### startingLineNumber

Optional

An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.

1

**Result** Returns text or error.

### Description

See also `WebView.RunJavaScript` or `WebView.Evaluate` for use with web viewer.

### Examples

Set variables and use them in the script:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.SetProperty"; $js; "FirstName"; "Joe" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.SetProperty"; $js; "LastName"; "Miller" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.EvaluateScript"; $js; "FirstName + ' ' + LastName;" ) ]
Show Custom Dialog [ "Result" ; $r ]
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

Evaluate in javascript the FileMaker get function:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.RegisterEvaluateFunction"; $js; "FMEvaluate" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.EvaluateScript"; $js; "FMEvaluate('Get(AccountName)') + '
from javascript'" ) ]
Show Custom Dialog [ "Result" ; $r ]
```

```
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

Defines and runs a function in JavaScript:

```
Let( [
f = "
function makeCRCTable() {
var c;
var crcTable = [ ] ;
for(var n =0; n <256; n++) {
c = n;
for(var k =0; k <8; k++) {
c = ((c& 1) ? (0xEDB88320 ^ (c »>1)) : (c »>1));
}
crcTable [ n ] = c;
}
return crcTable;
}

function crc32(str) {
var crcTable = crcTable || (crcTable = makeCRCTable());
var crc = 0 ^(-1);

for (var i = 0; i <str.length; i++ ) {
crc = (crc »>8) ^crcTable [ (crc ^str.charCodeAt(i)) & 0xFF ] ;
}

return (crc ^(-1)) »>0;
} ;

crc32(InputChange);";
j = MBS( "JavaScript.New" );
r = MBS( "JavaScript.SetProperty"; j; "InputChange"; "Hello World" );
r = MBS( "JavaScript.EvaluateScript"; j; f );
x = MBS( "JavaScript.Release"; j )
] ;r)
```

## 101.3 JavaScript.GetProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.GetProperty"; JavaScriptContext; PropertyName )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.

\$Context

#### PropertyName

The name of the property.

"FirstName"

**Result** Returns text or error.

### Description

### Examples

Set and query property:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.SetProperty"; $js; "FirstName"; "Joe" ) ]
Show Custom Dialog [ "Result" ; MBS( "JavaScript.GetProperty"; $js; "FirstName" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

### Example Databases

- [Mac and iOS/JavaScript](#)

Created 5th November 2015, last changed 9th January 2020.

## 101.4 JavaScript.HasProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.HasProperty"; JavaScriptContext; PropertyName )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.

\$Context

#### PropertyName

The name of the property.

"FirstName"

**Result** Returns 0, 1 or error.

### Description

#### See also

- 101.3 JavaScript.GetProperty 5292
- 101.11 JavaScript.SetProperty 5302

### Example Databases

- [Mac and iOS/JavaScript](#)

Created 5th November 2015, last changed 9th January 2020.

## 101.5 JavaScript.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.New" )

**Result** Returns reference number or error.

### Description

Reference numbers start at 47000.

Works in FileMaker 32-bit and 64-bit.

Supported for iOS with MBS Plugin 7.5.

Check JS Functions for JavaScript engine cross platform.

### See also

- 101.1 JavaScript.CheckScriptSyntax 5287

Created 5th November 2015, last changed 9th January 2020.

## 101.6 JavaScript.RegisterEvaluateFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.RegisterEvaluateFunction"; JavaScriptContext; FunctionName )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.

\$Context

#### FunctionName

The name for the new function.

"Evaluate"

**Result** Returns OK or error.

### Description

The javascript function takes one parameter which is expression to evaluate. Returns the text of the expression result.

Call later like this: FMEvaluate("Get(AccountName)")

### Examples

Register function:

```
MBS( "JavaScript.RegisterEvaluateFunction"; $$Context; "FMEvaluate" )
```

```
# later:
```

```
# FMEvaluate("Get(AccountName)")
```

Evaluate in javascript the FileMaker get function:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "JavaScript.RegisterEvaluateFunction"; $js; "FMEvaluate" ) ]
```

```
Set Variable [ $r ; Value: MBS( "JavaScript.EvaluateScript"; $js; "FMEvaluate('Get(AccountName)') + ' from javascript'" ) ]
```

```
Show Custom Dialog [ "Result" ; $r ]
```

```
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

### See also

Created 7th November 2015, last changed 9th January 2020.

## 101.7 JavaScript.RegisterFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.RegisterFunction"; JavaScriptContext; FunctionName { ; ParameterNames; Body; SourceURL; startingLineNumber } )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.

\$Context

#### FunctionName

The name for the new function.

"test"

#### ParameterNames

Optional

The names for the parameters.

"Value\$Count"

#### Body

Optional

The body of the function.

"return value;"

#### SourceURL

Optional

A text containing a URL for the script's source file. This is only used when reporting exceptions. Pass empty text if you do not care to include source file information in exceptions.

#### startingLineNumber

Optional

An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.

1

**Result** Returns OK or error.

### Description

#### Examples

Register a function:

```
Set Variable [ $r; Value:MBS( "JavaScript.RegisterFunction"; $$Context; "Test"; "Value$Count"; "return Value * Count;" ) ]
```

### See also

- 101.6 JavaScript.RegisterEvaluateFunction 5295
- 101.9 JavaScript.RegisterSQLQueryFunction 5300

**Example Databases**

- [Mac and iOS/JavaScript](#)

Created 7th November 2015, last changed 9th January 2020.

## 101.8 JavaScript.RegisterRunScriptFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.RegisterRunScriptFunction"; JavaScriptContext; FunctionName )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.

\$Context

#### FunctionName

The name for the new function.

"StartScript"

**Result** Returns OK or error.

### Description

The javascript function takes first parameter the filename, second parameter the script name. Optionally third parameter is passed as text to the script.

Call for example like this: FMRunScript('Javascript.fp7', 'test', 'Hello World')

### Examples

Register RunScript function:

```
Set Variable [ $r; Value:MBS( "JavaScript.RegisterRunScriptFunction"; $$Context; "FMRunScript" ) ]
```

```
# later:
```

```
# FMRunScript('Javascript.fp7', 'test', 'Hello World')
```

### See also

- 101.6 JavaScript.RegisterEvaluateFunction 5295
- 101.9 JavaScript.RegisterSQLQueryFunction 5300

### Example Databases

- [Mac and iOS/JavaScript](#)

Created 7th November 2015, last changed 9th January 2020.

## 101.9 JavaScript.RegisterSQLQueryFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.RegisterSQLQueryFunction"; JavaScriptContext; FunctionName )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.

\$Context

#### FunctionName

The name for the new function.

"SQLQuery"

**Result** Returns OK or error.

### Description

The javascript function has as parameter first the SQL expression. Second optional parameter is the file name to limit query to only this FileMaker database file. Third and fourth parameter are separators for column or row which can be text or number. Default is column = tab and row = return. Fifth and following parameters are passed as parameters to SQL.

Call like this:

```
FMQuery('select * from Hello')
```

or

```
FMQuery('select * from Hello where "Count"=?', 'JavaScript.fmp12', 9, 13, 2)
```

### Examples

Register query function:

```
MBS( "JavaScript.RegisterSQLQueryFunction"; $$Context; "FMQuery" )
```

### See also

- 101.6 JavaScript.RegisterEvaluateFunction 5295

Created 7th November 2015, last changed 9th January 2020.

## 101.10 JavaScript.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.Release"; JavaScriptContext )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.  
\$Context

**Result** Returns OK or error.

### Description

#### See also

- [101.1 JavaScript.CheckScriptSyntax](#) 5287

- [Mac and iOS/JavaScript](#)

Created 5th November 2015, last changed 9th January 2020.

## 101.11 JavaScript.SetProperty

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
101 JavaScriptMac	5.4	Yes	No	Yes, macOS only	No	Yes

MBS( "JavaScript.SetProperty"; JavaScriptContext; PropertyName; Value )

### Parameters

#### JavaScriptContext

The reference number of the javascript context.

\$Context

#### PropertyName

The name of the property.

"FirstName"

#### Value

The new text value.

"Joe"

**Result** Returns OK or error.

### Description

### Examples

Set and query property:

```
Set Variable [ $js ; Value: MBS( "JavaScript.New" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.SetProperty"; $js; "FirstName"; "Joe" ) ]
Show Custom Dialog [ "Result" ; MBS( "JavaScript.GetProperty"; $js; "FirstName" ) ]
Set Variable [ $r ; Value: MBS( "JavaScript.Release"; $js ) ]
```

# Chapter 102

## JSON

Parse or build JSON texts.

### 102.1 Dictionary.ToJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
66 Dictionary 102 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "Dictionary.ToJSON"; DictionaryRef )

#### Parameters

##### DictionaryRef

The reference number to the dictionary as returned by Dictionary.Create function.  
\$dic

**Result** Returns OK or error.

#### Description

This is useful for passing data from dictionary to some javascript.

#### Examples

Test exporting dictionaries:

```
#  
#  
# Create new Dictionary  
#  
Set Variable [ $param; Value:MBS( "Dictionary.Create" ) ]  
#  
# Fill in values  
#
```

```

Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "text"; Pass Parameters with Dictionary::TextField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "number"; Pass Parameters with Dictionary::NumberField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "date"; Pass Parameters with Dictionary::DateField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "time"; Pass Parameters with Dictionary::TimeField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "timestamp"; Pass Parameters with Dictionary::TimeStampField ) ]
Set Variable [ $r; Value:MBS( "Dictionary.SetValueForKey"; $param; "container"; Pass Parameters with Dictionary::ContainerField ) ]
#
# Call save xml, json and text
#
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToXML"; $param; 1); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.xml"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToText"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.txt"); "UTF8" ) ]
Set Variable [ $r; Value:MBS( "Text.WriteTextFile"; MBS("Dictionary.ToJSON"; $param); MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ) ; "dictionary.json.txt"); "UTF8" ) ]
#
# free memory
#
Set Variable [ $r; Value:MBS("Dictionary.Release"; $param) ]

```

- [MBS FileMaker Plugin, version 6.1pr3](#)

Created 25th February 2016, last changed 20th February 2018.

## 102.2 FM.SQL.JSONRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL 102 JSON	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.JSONRecord"; SQLref; Row; FieldNames { ; Flags } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### Row

The row you like to get.

1

#### FieldNames

A list of field names for the JSON.

"Model\$Names"

#### Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

**Result** Returns JSON text or error.

### Description

You provide list of field names, which should be in same order as fields in SQL result.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

### Examples

Query JSON record:

```
Set Variable [ $sql ; Value: MBS( "FM.SQL.Execute"; "" ; "SELECT \"First\", \"Last\", Birthday, \"Photo Container\" FROM Contacts" ) ]
```

```
Set Variable [ $json ; Value: MBS( "FM.SQL.JSONRecord"; $sql; 0; "First$Last$Birthday$Photo"; 2) ]
```

```
Show Custom Dialog [ "JSON" ; $json ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $sql ) ]
```

Query record as JSON:

```
Let ( [
fields = MBS( "FM.QueryFieldsForTableName"; "Contacts" );
Records = MBS( "FM.SQL.Execute"; "" ; "SELECT \"\" & substitute(fields; $; \"\", \")\" & \"\" FROM \"Contacts\" WHERE \"First\" = ?"; "Joe");
```

## 102.2. *FM.SQL.JSONRECORD*

5307

```
json = MBS( "FM.SQL.JSONRecord"; Records; 0; fields);  
r = MBS( "FM.SQL.Release"; Records ) ]  
; json )
```

### See also

- 81.34 [FM.SQL.Release](#) 4213
- 159.10 [SQL.Execute](#) 7425

### 102.2.1 Blog Entries

- [Query FileMaker records as JSON](#)
- [MBS FileMaker Plugin, version 8.6pr2](#)

Created 4th March 2018, last changed 8th April 2019.

## 102.3 FM.SQL.JSONRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
80 FM 81 FMSQL 102 JSON	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "FM.SQL.JSONRecords"; SQLref; FieldNames { ; Flags } )

### Parameters

#### SQLref

The reference number returned by FM.SQL.Execute function.

\$SQLRef

#### FieldNames

A list of field names for the JSON.

"Model\$Names"

#### Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

**Result** Returns JSON text or error.

### Description

You provide list of field names, which should be in same order as fields in SQL result.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

### Examples

Query JSON:

```
Set Variable [ $sql ; Value: MBS( "FM.SQL.Execute"; "" ; "SELECT \"First\", \"Last\", Birthday, \"Photo Container\" FROM Contacts" ) ]
```

```
Set Variable [ $json ; Value: MBS( "FM.SQL.JSONRecords"; $sql; "First$Last$Birthday$Photo"; 2 ) ]
```

```
Show Custom Dialog [ "JSON" ; $json ]
```

```
Set Variable [ $r ; Value: MBS( "FM.SQL.Release"; $sql ) ]
```

Make a JSON query in one Let statment:

```
Let (
```

```
[
```

```
$sdat = "10/1/2019 00:00";
```

```
$edat = "10/10/2019 00:00";
```

```
sku = "'PARbh50','PARgy50'";
```

```
sql1 = MBS("FM.SQL.Execute"; "" ; "Select docnum,linetotal,db from \"MyTable\" where ItemCode in (\" & sku & ") and DocDate between ? and ?"; $sdat; $edat);
```

```
json = MBS( "FM.SQL.JSONRecords"; sql1; "DocNum$LineTotal$DB"; 1);
```

```
r = MBS( "FM.SQL.Release"; sql1 )
```

```
]; json
)
```

Query related records as JSON:

```
# get related teams
Set Variable [ $r ; Value: MBS( "FM.SQL.Execute"; Get(FileName); "SELECT \"UUID\", \"ID\", \"ID_De-
partment\", \"Team.Name\", \"MemberCount\" FROM \"Teams\" WHERE ID_Department=?"; Depart-
ment::ID) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "SQL error" ; $r ]
Else
# fill as json in field
Set Field [ Department::JSON_Department ; MBS( "FM.SQL.JSONRecords"; $r; "UUID$ID$ID_Depart-
ment$Team.Name$MemberCount") ]
Set Variable [ $e ; Value: MBS( "FM.SQL.Release"; $r ) ]
End If
```

## 102.4 JSON.AddArrayToArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddArrayToArray"; json; OtherJSONs )

### Parameters

#### json

A JSON text or reference.

[ "1","2" ]

#### OtherJSONs

A second JSON text or reference. Can be arrays to take their items or JSON values.

[ "3","4" ]

**Result** Returns OK or error.

### Description

May also add JSON items to an array.

### Examples

Adds arrays:

MBS("JSON.AddArrayToArray"; " [ 1,2 ] "; " [ 3,4 ] "; " [ 5 ] ")

### See also

- [102.7 JSON.AddItemToArray](#) 5315

## 102.5 JSON.AddBooleanToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddBooleanToObject"; json; name; value )

### Parameters

#### json

A JSON text or reference.

[ false,true,false ]

#### name

The name of the key.

"Hello"

#### value

The boolean to be added. Pass 1 for true and 0 for false.

1

**Result** Returns JSON code or error.

### Description

Same as JSON.AddItemToArray, but calls JSON.CreateBoolean automatically for you.

With version 6, you can pass several parameters to add several entries to the array.

When adding to a JSON reference, the function returns that reference number.

### Examples

Add a boolean to object:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Set Variable [ $json; Value:MBS( "JSON.AddBooleanToObject"; $json; "test"; 1 ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

Add a value:

```
MBS( "JSON.AddBooleanToObject"; " { } "; "test"; 1 )
```

```
Example result: {
  "test": true
}
```

## 102.6 JSON.AddFalseToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddFalseToObject"; json; name )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### name

The name of the Object property.

```
"length"
```

**Result** Returns JSON code.

### Description

With version 6, you can pass several parameters to add several entries to the object. When adding to a JSON reference, the function returns that reference number.

### Examples

Adds two entries with false to empty array:

```
MBS( "JSON.AddFalseToObject"; " { } "; "hello"; "world" )
```

```
Example result: {
"hello": false,
"world": false
}
```

Adds false to object:

```
MBS( "JSON.AddFalseToObject"; " { } "; "test" )
```

```
Example result: {
"test": false
}
```

## 102.7 JSON.AddItemToArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddItemToArray"; json; json2 )

### Parameters

#### json

A JSON text or reference.

[ 1,2,3 ]

#### json2

A JSON text or reference.

4

**Result** Returns JSON code.

### Description

With version 6, you can pass several parameters to add several entries to the array. When adding to a JSON reference, the function returns that reference number.

### Examples

Adds an item to array:

```
MBS( "JSON.AddItemToArray"; " [ 1,2,3 ] "; MBS("JSON.CreateNumber"; 4) )
```

Example result: [ 1, 2, 3, 4 ]

Add three items to empty array:

```
MBS( "JSON.AddItemToArray"; " [ ] "; "1"; "2"; "\"Heinz\"")
```

Example result: [ 1, 2, "Heinz" ]

Adds an item to the array:

```
MBS( "JSON.AddItemToArray"; " [ ] "; 67 )
```

Example result: [ 67 ]

## 102.8 JSON.AddItemToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddItemToObject"; json; name; json2 )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### name

The name of the Object property.

```
"length"
```

#### json2

The JSON text for the item.

```
50
```

**Result** Returns JSON code.

### Description

With version 6, you can pass several parameters to add several entries to the object.

When adding to a JSON reference, the function returns that reference number.

### Examples

Build nested objects:

```
Set Variable [ $j1; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j2; MBS( "JSON.AddStringToObject"; $j1; "name"; "" ) ]
Set Variable [ $j3; MBS( "JSON.AddStringToObject"; $j2; "record_type"; "MX" ) ]
Display Dialog [ "JSON"; $j3 ]
Set Variable [ $j4; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j5; MBS( "JSON.AddItemToObject"; $j4; "record"; $j3 ) ]
Display Dialog [ "JSON"; $j4 ]
```

Add two items to an object:

```
MBS( "JSON.AddItemToObject"; " { } "; "Values"; " [ 1,2 ] "; "Name"; " { \"FirstName\": \"Heinz\" } " )
```

```
Example result: {
  "Values": [ 1, 2 ],
  "Name": {
    "FirstName": "Heinz"
  }
}
```

Add big number:

```
MBS( "JSON.AddItemToObject"; " { } "; "test"; "12063660878882855000013426248015578834577" )
```

```
Example result: {
  "test": 12063660878882855000013426248015578834577
}
```

Create JSON with values in fields on current layout:

```
Let ( [
  // Create object as reference
  j = MBS( "JSON.CreateObjectRef" );
  // List fields in current layout
  fields = FieldNames ( get(FileName) ; get(LayoutName) );
  // how many?
  c = ValueCount ( fields );
  // make a loop to add field values
  r = While ( i = 1 ; i < c ; [ name = GetValue ( fields ; i ); r = MBS( "JSON.AddItemToObject"; j; name;
  MBS( "JSON.CreateValue"; GetField ( name ) ); i = i + 1 ] ; i );
  // format the result
  text = MBS( "JSON.Format"; j );
  // free json
  r = MBS( "JSON.Release"; j )
];
// return result as text
text )
```

```
Example result: {
  "First": "John",
  "Last": "Miller",
  "Group": "",
  "Company": "Some Ltd.",
  "ID": 12
}
```

## 102.9 JSON.AddNullToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddNullToObject"; json; name )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### name

The name of the Object property.

```
"length"
```

**Result** Returns JSON code.

### Description

With version 6, you can pass several parameters to add several entries to the object. When adding to a JSON reference, the function returns that reference number.

### Examples

Add two null entries:

```
MBS( "JSON.AddNullToObject"; " { } "; "hello"; "test")
```

```
Example result: {
  "hello": null,
  "test": null
}
```

Adds a NULL value:

```
MBS( "JSON.AddNullToObject"; " { } "; "test" )
```

```
Example result: {
  "test": null
}
```

## 102.10 JSON.AddNumberToArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.3	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.AddNumberToArray"; json; value )
```

### Parameters

#### json

A JSON text or reference.

[ 1,2,3 ]

#### value

The number to be added

5

**Result** Returns JSON code or error.

### Description

Same as JSON.AddItemToArray, but calls JSON.CreateNumber automatically for you.

With version 6, you can pass several parameters to add several entries to the array.

When adding to a JSON reference, the function returns that reference number.

### Examples

Adds an item to array:

```
MBS( "JSON.AddItemToArray"; " [ 1,2,3 ] "; 4)
```

Example result: [ 1, 2, 3, 4 ]

Add 4 numbers to an array:

```
MBS( "JSON.AddNumberToArray"; " [ ] "; 1; 2; 3; 4 )
```

Example result: [ 1, 2, 3, 4 ]

Add big number:

```
MBS( "JSON.AddNumberToArray"; " [ ] "; 12063660878882855000013426248015578834577 )
```

Example result: [ 12063660878882855000013426248015578834577 ]

Use While loop to create JSON array:

```
Let ( [
// Create array object
j = MBS( "JSON.CreateArrayRef" );
// make a loop to add numbers
r = While ( $i = 0 ; $i < 10 ; [ r = MBS( "JSON.AddNumberToArray"; j; $i ); $i = $i + 1 ] ; $i );
```

## 102.10. JSON.ADDNUMBERTOARRAY

5323

```
// format the result
text = MBS( "JSON.Format"; j );
// free json
r = MBS( "JSON.Release"; j )
];
// return result as text
text )
```

## 102.11 JSON.AddNumberToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddNumberToObject"; json; name; value )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### name

The name of the Object property.

```
"length"
```

#### value

The number value to add.

```
123.45
```

**Result** Returns JSON code.

### Description

With version 6, you can pass several parameters to add several entries to the object.

When adding to a JSON reference, the function returns that reference number.

### Examples

Adds two number entries to an object:

```
MBS( "JSON.AddNumberToObject"; " { } "; "hello"; 1; "test"; 5)
```

```
Example result: {
"hello": 1,
"test": 5
}
```

Adds number:

```
MBS( "JSON.AddNumberToObject"; " { } "; "test"; 123 )
```

```
Example result: {
"test": 123
}
```

Add big number:

```
MBS( "JSON.AddNumberToObject"; " { } "; "zahl"; 12063660878882855000013426248015578834577 )
```

```
Example result: {
"zahl": 12063660878882855000013426248015578834577
}
```

## 102.12 JSON.AddStringToArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddStringToArray"; json; value )

### Parameters

#### json

A JSON text or reference.

[ "1","2" ]

#### value

The new text.

"Hello"

**Result** Returns JSON code.

### Description

Same as JSON.AddItemToArray, but calls JSON.CreateString automatically for you.

With version 6, you can pass several parameters to add several entries to the array.

When adding to a JSON reference, the function returns that reference number.

### Examples

Adds a string to an array:

```
MBS( "JSON.AddStringToArray"; " [ \"1\", \"2\", \"3\" ] "; "4")
```

Example result: [ "1", "2", "3", "4" ]

Adds 4 strings to an array:

```
MBS( "JSON.AddStringToArray"; " [ ] "; "1"; "2"; "3"; "4" )
```

Example result: [ "1", "2", "3", "4" ]

## 102.13 JSON.AddStringToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddStringToObject"; json; name; value )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### name

The name of the Object property.

```
"length"
```

#### value

The text value to add.

```
"Hello"
```

**Result** Returns JSON code.

### Description

With version 6, you can pass several parameters to add several entries to the object.

When adding to a JSON reference, the function returns that reference number.

### Examples

Create object, add content and pick value:

```
Let(
[
j = MBS( "JSON.CreateObject" );
j = MBS( "JSON.AddStringToObject"; j; "hello"; "world" );
r = MBS( "JSON.GetObjectItem"; j; "hello" )
];
r)
```

Example result: "world"

Build nested objects:

```
Set Variable [ $j1; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j2; MBS( "JSON.AddStringToObject"; $j1; "name"; "" ) ]
Set Variable [ $j3; MBS( "JSON.AddStringToObject"; $j2; "record_type"; "MX" ) ]
Display Dialog [ "JSON"; $j3 ]
Set Variable [ $j4; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j5; MBS( "JSON.AddItemToObject"; $j4; "record"; $j3 ) ]
Display Dialog [ "JSON"; $j4 ]
```

Add two entries in one call:

```
MBS( "JSON.AddStringToObject"; " { } "; "hello"; "world"; "test"; "entry")
```

```
Example result: {
"hello": "world",
"test": "entry"
}
```

Adds string to object:

```
MBS( "JSON.AddStringToObject"; " { } "; "test"; "Hello World" )
```

```
Example result: {
"test": "Hello World"
}
```

## 102.14 JSON.AddTrueToObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.AddTrueToObject"; json; name )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### name

The name of the Object property.

"length"

**Result** Returns JSON code.

### Description

With version 6, you can pass several parameters to add several entries to the object. When adding to a JSON reference, the function returns that reference number.

### Examples

Adds two entries with true to empty array:

```
MBS( "JSON.AddTrueToObject"; " { } "; "hello"; "world"
```

```
Example result: {
  "hello": true,
  "world": true
}
```

Adds true to object:

```
MBS( "JSON.AddTrueToObject"; " { } "; "test" )
```

```
Example result: {
  "test": true
}
```

## 102.15 JSON.Clone

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Clone"; JSON )

### Parameters

#### JSON

The JSON text or reference number.

" [ 1,2,3 ] "

**Result** Returns reference number or error.

### Description

A new reference number with a new json object or array behind and all content copied.

### 102.15.1 Blog Entries

- [MBS FileMaker Plugin, version 6.1pr5](#)

Created 5th March 2016, last changed 5th March 2016.

## 102.16 JSON.Colorize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Colorize"; json )

### Parameters

#### json

A JSON text.

```
{ "key": "value" }
```

**Result** Returns formatted text or error.

### Description

This colorizes an existing JSON text to show to user.  
Keys get blue, text value purple, numbers and others orange and brackets black.

Text is returned only with colors. You can apply text font and font size with normal FileMaker functions.  
Processing time is linear to length, so should be faster than custom functions.

### Examples

Colorize a field:

```
Set Field [ Data::JSON ; MBS("JSON.Colorize"; Data::JSON) ]
```

## 102.17 JSON.Compact

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Compact"; json )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

**Result** Returns JSON code.

### Description

#### Examples

Creates compact text of JSON with spaces:

MBS( "JSON.Compact"; " [ 1, 3, 4 ] " )

Example result: [ 1,3,4 ]

Compacts JSON and removes spaces:

MBS( "JSON.Compact"; " [ 1 , 2 , 3 ] " )

Example result: [ 1,2,3 ]

**102.18 JSON.CreateArray**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateArray" )

**Result** Returns JSON code.

**Description****Examples**

Creates a new empty array:

```
$a = MBS("JSON.CreateArray")
```

Example result: []

**See also**

Created 18th August 2014, last changed 11st December 2016.

## 102.19 JSON.CreateArrayRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.CreateArrayRef" )
```

**Result** Returns reference number or error.

### Description

Please use JSON.Release later to free the json object.

You can pass the reference number to all MBS JSON functions instead of JSON text.

### Examples

Test array reference functions:

```
# create array reference
$ref = MBS( "JSON.CreateArrayRef" )
# add some numbers
$r = MBS( "JSON.AddNumberToArray"; $ref; 1; 2; 3 )
# add some texts
$r = MBS( "JSON.AddStringToArray"; $ref; "Hello"; "World" )
# get JSON text for this array:
$text = MBS( "JSON.Compact"; $ref )
# free memory
$r = MBS( "JSON.Release"; $ref )
```

Use While loop to create JSON array:

```
Let ( [
// Create array object
j = MBS( "JSON.CreateArrayRef" );
// make a loop to add numbers
r = While ( $i = 0 ; $i <10 ; [ r = MBS( "JSON.AddNumberToArray"; j; $i ); $i = $i + 1 ] ; $i );
// format the result
text = MBS( "JSON.Format"; j );
// free json
r = MBS( "JSON.Release"; j )
];
// return result as text
text )
```

Example result: [ 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 ]

Create complex JSON:

```
Set Variable [ $a ; Value: MBS( "JSON.CreateArrayRef" ) ]
#
# first entry
```

```

Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "FieldType"; 11 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNullToObject"; $o; "FieldName" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $o; "Value"; "Julien" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddBooleanToObject"; $o; "EmptyMatch"; False ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToArray"; $a; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
# second entry
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "FieldType"; 23 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNullToObject"; $o; "FieldName" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $o; "Value"; "Stadel" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddBooleanToObject"; $o; "EmptyMatch"; False ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToArray"; $a; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
# surrounding object
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $o; "Data"; $a ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "Id"; 123 ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $a ) ]
#
# put in final object
Set Variable [ $j ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $j; "Address"; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
Set Field [ JSON::JSON ; MBS("JSON.Colorize"; MBS("JSON.Format"; $j)) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $j ) ]

```

**102.20 JSON.CreateBool**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateBool"; value )

**Parameters****value**

The boolean value.

1

**Result** Returns JSON code.

**Description****Examples**

Creates true node:

MBS( "JSON.CreateBool"; 1 )

Example result: true

Creates false node:

MBS( "JSON.CreateBool"; 0 )

Example result: false

**See also**

- 102.5 JSON.AddBooleanToObject 5311
- 102.21 JSON.CreateBoolean 5342
- 102.25 JSON.CreateNull 5346
- 102.32 JSON.CreateTrue 5357

Created 18th August 2014, last changed 11st December 2016.

## 102.21 JSON.CreateBoolean

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateBoolean"; Value )

### Parameters

#### Value

The boolean value. Pass 1 for true and 0 for false.

1

**Result** Returns JSON or error.

### Description

As we pass JSON in JSON around, you can simply write "false" directly instead of calling one of this functions.

### Examples

Create a boolean with an expression:

```
Set Variable [ $json; Value:MBS( "JSON.CreateBoolean"; Length($text) >0 ) ]
```

Example result: true

### See also

**102.22 JSON.CreateDoubleArray**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateDoubleArray" { ; values } )

**Parameters****values**

Optional

Optional parameters for the array values. Pass one parameter per item to be added to the array.

1

**Result** Returns JSON code.

**Description**

This is for creating an array with floating point numbers.

For integer numbers, please use `JSON.CreateIntegerArray`.

**Examples**

Creates number array:

```
MBS( "JSON.CreateDoubleArray"; 1; 2; 3)
```

Example result: [ 1, 2, 3 ]

**See also**

- 102.24 `JSON.CreateIntegerArray` 5345
- 102.30 `JSON.CreateStringArray` 5355

- 102.41 `JSON.GetArrayItem` 5370
- 102.55 `JSON.GetType` 5392

Created 18th August 2014, last changed 7th June 2017.

## 102.23 JSON.CreateFalse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateFalse" )

**Result** Returns JSON code.

### Description

As we pass JSON in JSON around, you can simply write "false" directly instead of calling one of this functions.

### Examples

Creates false:

```
MBS( "JSON.CreateFalse"
```

Example result: false

### See also

- 102.25 JSON.CreateNull 5346
- 102.32 JSON.CreateTrue 5357

Created 18th August 2014, last changed 11st December 2016.

## 102.24 JSON.CreateIntegerArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateIntegerArray" { ; values } )

### Parameters

#### values

Optional

Optional parameters for the array values. Pass one parameter per item to be added to the array.

1

**Result** Returns JSON code.

### Description

For floating point numbers, please use JSON.CreateDoubleArray.

### Examples

Creates number array:

```
MBS( "JSON.CreateIntegerArray"; 1; 2; 3)
```

Example result: [ 1, 2, 3 ]

Adds an item to the object with an integer array:

```
MBS( "JSON.AddItemToObject"; " { } "; "test"; MBS( "JSON.CreateIntegerArray"; 1; 2; 3 ) )
```

Example result: {

```
"test": [ 1, 2, 3 ]
```

```
}
```

### See also

## 102.25 JSON.CreateNull

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateNull" )

**Result** Returns JSON code which is "null" text.

### Description

As we pass JSON in JSON around, you can simply write "null" directly instead of calling one of this functions.

### Examples

Creates NULL node:

```
MBS("JSON.CreateNull")
```

Example result: null

### See also

## 102.26 JSON.CreateNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateNumber"; value )

### Parameters

#### value

The number value.

123.4

**Result** Returns JSON code.

### Description

Version 10.0 or newer preserve formatting if you pass a text with a number containing digits with optionally one dot and one minus.

### Examples

Creates a number:

```
MBS( "JSON.CreateNumber"; 123 )
```

Example result: 123

Create big number:

```
MBS( "JSON.CreateNumber"; 12063660878882855000013426248015578834577 )
```

Pass through vs. number parsing:

```
MBS( "JSON.CreateNumber"; "123.5" ) & §& MBS( "JSON.CreateNumber"; 123,5 )
// in German with comma as separator second one is parsed as double precision value.
```

Example result: 123.5

123.500000

### See also

## 102.27 JSON.CreateObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateObject" )

**Result** Returns JSON code.

### Description

### Examples

Creates empty object:

```
MBS( "JSON.CreateObject" )
```

Example result: { }

Build nested objects:

```
Set Variable [ $j1; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j2; MBS( "JSON.AddStringToObject"; $j1; "name"; "" ) ]
Set Variable [ $j3; MBS( "JSON.AddStringToObject"; $j2; "record_type"; "MX" ) ]
Display Dialog [ "JSON"; $j3 ]
Set Variable [ $j4; MBS( "JSON.CreateObject" ) ]
Set Variable [ $j5; MBS( "JSON.AddItemToObject"; $j4; "record"; $j3 ) ]
Display Dialog [ "JSON"; $j4 ]
```

### 102.27.1 Blog Entries

- [Generate JSON with MBS Plugin](#)

Created 18th August 2014, last changed 11st December 2016.

## 102.28 JSON.CreateObjectRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateObjectRef" )

**Result** Returns reference number or error.

### Description

Please use JSON.Release later to free the json object.

You can pass the reference number to all MBS JSON functions instead of JSON text.

### Examples

Try object reference functions:

```
# create object reference
$ref = MBS( "JSON.CreateObjectRef" )
# add some texts
$r = MBS("JSON.AddStringToObject"; $ref; "FirstName"; "Joe"; "LastName"; "Miller")
# add some number
$r = MBS("JSON.AddNumberToObject"; $ref; "Age"; 50)
# add a true value:
$r = MBS( "JSON.AddTrueToObject"; $ref; "married" )
# get the text
$text = MBS( "JSON.Format"; $ref)
# free memory
$r = MBS( "JSON.release"; $ref)
```

Create JSON with values in fields on current layout:

```
Let ( [
// Create object as reference
j = MBS( "JSON.CreateObjectRef" );
// List fields in current layout
fields = FieldNames ( get(FileName) ; get(LayoutName) );
// how many?
c = ValueCount ( fields );
// make a loop to add field values
r = While ( i = 1 ; i < c ; [ name = GetValue ( fields ; i ); r = MBS( "JSON.AddItemToObject"; j; name;
MBS( "JSON.CreateValue"; GetField ( name ) ); i = i + 1 ] ; i );
// format the result
text = MBS( "JSON.Format"; j );
// free json
r = MBS( "JSON.Release"; j )
];
// return result as text
text )
```

```
Example result: {
  "First": "John",
  "Last": "Miller",
  "Group": "",
  "Company": "Some Ltd.",
  "ID": 12
}
```

Create complex JSON:

```
Set Variable [ $a ; Value: MBS( "JSON.CreateArrayRef" ) ]
#
# first entry
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "FieldType"; 11 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNullToObject"; $o; "FieldName" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $o; "Value"; "Julien" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddBooleanToObject"; $o; "EmptyMatch"; False ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToArray"; $a; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
# second entry
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "FieldType"; 23 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNullToObject"; $o; "FieldName" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $o; "Value"; "Stadel" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddBooleanToObject"; $o; "EmptyMatch"; False ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToArray"; $a; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
# surrounding object
Set Variable [ $o ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $o; "Data"; $a ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $o; "Id"; 123 ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $a ) ]
#
# put in final object
Set Variable [ $j ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $j; "Address"; $o ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $o ) ]
#
Set Field [ JSON::JSON ; MBS("JSON.Colorize"; MBS("JSON.Format"; $j)) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $j ) ]
```

```
Example result: {
  "Address": {
    "Data": [
      {
```

```

"FieldType": 11,
"FieldName": null,
"Value": "Julien",
"EmptyMatch": false
},
{
"FieldType": 23,
"FieldName": null,
"Value": "Stadel",
"EmptyMatch": false
}
],
"Id": 123
}
}

```

## 102.29 JSON.CreateString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateString"; Text )

### Parameters

#### Text

The text to use.

"Hello World"

**Result** Returns JSON code.

### Description

The text is escaped.

### Examples

Creates new text node:

MBS( "JSON.CreateString"; "Hello World")

Example result: "Hello World"

**102.30 JSON.CreateStringArray**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateStringArray" { ; values } )

**Parameters****values**

Optional

Optional parameters for the array values. Pass one parameter per item to be added to the array.  
"Hello"

**Result** Returns JSON code.

**Description****Examples**

Creates string array:

MBS( "JSON.CreateStringArray"; "Hello"; "World")

Example result: [ "Hello", "World" ]

**See also**

## 102.31 JSON.CreateStringArrayWithList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateStringArrayWithList"; valueList )

### Parameters

#### valueList

List of values separated by return character.

"Hello\$World"

**Result** Returns JSON code or error.

### Description

### Examples

Create a list:

MBS( "JSON.CreateStringArrayWithList"; "Hello\$World\$Test" )

**102.32 JSON.CreateTrue**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateTrue" )

**Result** Returns JSON code.

**Description**

As we pass JSON in JSON around, you can simply write "true" directly instead of calling one of this functions.

**Examples**

Creates false:

MBS( "JSON.CreateTrue" )

Example result: true

**See also**

- 102.18 JSON.CreateArray 5337

- 102.33 JSON.CreateValue 5358

Created 18th August 2014, last changed 11st December 2016.

## 102.33 JSON.CreateValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.CreateValue"; Value )

### Parameters

#### Value

The value to pass. Can be number, date, time, timestamp or text.

"Hello"

**Result** Returns JSON or error.

### Description

Convenience function to either create text or number depending on FileMaker data type.

### Examples

Create with number:

MBS( "JSON.CreateValue"; 123 )

Example result: 123

Create with string:

MBS( "JSON.CreateValue"; "Hello" & §& "World" & char(9) & "test" )

Example result: "Hello\rWorld\ttest"

- [MBS FileMaker Plugin, version 8.6pr4](#)

Created 14th December 2018, last changed 14th December 2018.

**102.34 JSON.DeleteItemFromArray**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.DeleteItemFromArray"; json; index )

**Parameters****json**

A JSON text or reference.

[ 1,2,3 ]

**index**

The zero based index of the value.

1

**Result** Returns JSON code.

**Description**

Returns the JSON reference number if called with reference number. Otherwise returns new JSON text.

**Examples**

Create array with numbers and delete last entry:

```
Let(
[
j = MBS( "JSON.CreateDoubleArray"; 1; 2; 3);
r = MBS( "JSON.DeleteItemFromArray"; j; MBS( "JSON.GetArraySize"; j )-1 )
];
r)
```

Created 18th August 2014, last changed 15th November 2019.

## 102.35 JSON.DeleteItemFromObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.DeleteItemFromObject"; json; name )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### name

The name of the item.

```
"key"
```

**Result** Returns JSON code.

### Description

Returns the JSON reference number if called with reference number. Otherwise returns new JSON text.

### Examples

Add and delete item:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Set Variable [ $r; Value:MBS( "JSON.AddBooleanToObject"; $json; "test"; 1 ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.DeleteItemFromObject"; $json; "test" ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

## 102.36 JSON.EqualContent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.EqualContent"; json1; json2 )

### Parameters

#### json1

A JSON text or reference.

```
{ "key": "value" }
```

#### json2

A JSON text or reference.

```
{ "key": "value" }
```

**Result** Returns 1, 0 or error.

### Description

We compare recursively all nodes.

If structure and values are the same, we return 1, otherwise 0.

Objects do not need to have same order for entries.

While JSON.Equals checks the type, this function does check the content.

### Examples

Compare 123 with text to it as number:

```
MBS( "JSON.EqualContent"; "\"123\""; "123")
```

Example result: 1

### See also

- [102.37 JSON.Equals](#)

### 102.36.1 Blog Entries

- [The new JSON.EqualContent function](#)
- [MBS FileMaker Plugin, version 10.0pr8](#)

Created 10th January 2020, last changed 10th January 2020.

## 102.37 JSON.Equals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Equals"; json1; json2 )

### Parameters

#### json1

A JSON text or reference.

```
{ "key": "value" }
```

#### json2

A JSON text or reference.

```
{ "key": "value" }
```

**Result** Returns 1, 0 or error.

### Description

We compare recursively all nodes.

If structure and values are the same, we return 1, otherwise 0.

Objects do not need to have same order for entries.

### Examples

Compare two numbers:

```
MBS( "JSON.Equals"; 1; 1 )
```

Example result: 1

Comparing strings:

```
MBS( "JSON.Equals"; "\"Hello\""; "\"World\"" ) &
MBS( "JSON.Equals"; "\"Hello\""; "\"Hello\"" )
```

Example result: 01

Comparing booleans:

```
MBS( "JSON.Equals"; true; true ) &
MBS( "JSON.Equals"; false; false ) &
MBS( "JSON.Equals"; true; false ) &
MBS( "JSON.Equals"; false; true )
```

Example result: 1100

Compare objects:

```
MBS( "JSON.Equals"; " { \"key\": \"value\" } "; " { \"key\": \"value\" } ") & MBS( "JSON.Equals"; "
{ \"key\": \"value\" } "; " { \"key\": \"Value\" } ")
```

102.37. *JSON.EQUALS*

5363

Example result: 10

## 102.38 JSON.FindValueInArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.FindValueInArray"; json; find { ; byContent } )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### find

A JSON text or reference to find.

```
{ "key": "value" }
```

#### byContent

Optional

Compare JSON by content, so number can be found via text. Default is 0, so type counts first.

1

**Result** Returns index or error.

### Description

Returns zero based index or -1 if not found.

Version 10.0 or newer finds optionally by content, so number can be found via text.

### Examples

Find value in an array of numbers:

```
MBS( "JSON.FindValueInArray"; " [ 5,6,7,1,4,3,7 ] "; 3)
```

Example result: 5

Find text:

```
MBS( "JSON.FindValueInArray"; " [ \"Hello\", \"World\", \"Test\" ] "; "\"World\"")
```

Example result: 1

Find objects:

```
MBS( "JSON.FindValueInArray"; " [ { \"Hello\":123 } , { \"World\":234 } , { \"Test\":345 } ] "; " { \"World\":234 } ")
```

Example result: 1

## 102.39 JSON.FindValueInObjectArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.FindValueInObjectArray"; json; Label; find { ; byContent } )

### Parameters

#### json

A JSON text or reference.

" [ { \"key\": 1 } ] "

#### Label

The label for the value in the object to compare.

"key"

#### find

A JSON text or reference to find.

1

#### byContent

Optional

Compare JSON by content, so number can be found via text. Default is 0, so type counts first.

1

**Result** Returns index or error.

### Description

Returns zero based index or -1 if not found.

We look into each object in the array, check if it has a value for the given label and compare that to the one to find.

Version 10.0 or newer finds optionally by content, so number can be found via text.

### Examples

Find item:

MBS( "JSON.FindValueInObjectArray"; " [ { \"key\": 1 } ] "; "key"; 1 )

Example result: 0

## 102.40 JSON.Format

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Format"; json )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

**Result** Returns JSON code.

### Description

### Examples

Format some object:

```
Set Variable [ $json; Value:MBS( "JSON.Format"; " { \"Hello\": \"World\" } " ) ]
Show Custom Dialog [ $json ]
```

Parse some JSON, display it formatted and release:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

## 102.41 JSON.GetArrayItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetArrayItem"; json; index { ; AsReference } )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

#### index

The index of the array element.

0

#### AsReference

Optional

Whether to return a reference number (1) instead of the JSON text (0). Default is 0 for JSON text.

0

**Result** Returns JSON code.

### Description

Index is zero based.

### Examples

Create array and pick second item:

```
Let(
[
j = MBS( "JSON.CreateDoubleArray"; 1; 2; 3);
r = MBS( "JSON.GetArrayItem"; j; 1 )
];
r)
```

## 102.42 JSON.GetArrayItemsAsList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.2	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetArrayItemsAsList"; json { ; ReturnValues } )
```

### Parameters

#### json

A JSON text or reference.

```
" [ 1,2,3 ] "
```

#### ReturnValues

Optional

Available in MBS FileMaker Plugin 8.1 or newer.

Pass 1 to return values instead of keeping strings in quotes.

1

**Result** Returns list or error.

### Description

Intended for arrays containing text or numbers.

Broken in version 6.0. Please use 6.1. Version 6.5 and newer doesn't add an extra newline any more.

### Examples

Query a list from JSON array:

```
MBS( "JSON.GetArrayItemsAsList"; " [ 1,2,3 ] " )
```

Now a list of strings:

```
MBS( "JSON.GetArrayItemsAsList"; " [ \"Hello\", \"World\", \"Test\" ] " )
```

Now an array with objects:

```
MBS( "JSON.GetArrayItemsAsList"; " [ \"Hello\", \"World\", { \"Hello\": \"test\" } ] " )
```

### See also

- 102.41 JSON.GetArrayItem

## 102.43 JSON.GetArrayPathItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	7.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetArrayPathItems"; json; Path { ; AsValue } )
```

### Parameters

#### json

A JSON text or reference.

```
" { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "
```

#### Path

The path through the json hierarchy as list. For object, pass name of item to choose. For array pass index. "people\$0\$last"

#### AsValue

Optional

Pass 1 to return as value, e.g. text or number. Pass 0 (or nothing) to return as JSON.

**Result** Returns OK or error.

### Description

The path describes the way through the hierarchy to find the JSON node to return.

Result can be JSON or the value.

### Examples

Query all test values in objects in array:

```
MBS("JSON.GetArrayPathItems"; JSON Test::JSON; "test")
```

Lookup items in array:

```
MBS( "JSON.GetArrayPathItems"; " [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } , { \"first\": \"Peter\", \"last\": \"Miller\", \"city\": \"New York\" } ] "; "first"; 0 )
```

Example result: "Christian"

"Peter"

Lookup item values in array:

```
MBS( "JSON.GetArrayPathItems"; " [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } , { \"first\": \"Peter\", \"last\": \"Miller\", \"city\": \"New York\" } ] "; "first"; 1 )
```

Example result: Christian

Peter

## 102.44 JSON.GetArraySize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetArraySize"; json )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

**Result** Returns number of array entries.

### Description

### Examples

Checks number of array elements:

MBS( "JSON.GetArraySize"; " [ 1, 2, 3, 4 ] " )

### See also

## 102.45 JSON.GetDoubleValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetDoubleValue"; json )

### Parameters

#### **json**

A JSON text or reference.

"3.4"

**Result** Returns the value.

### Description

### Examples

Queries double value:

MBS( "JSON.GetDoubleValue"; "3.4" )

### See also

- 102.56 JSON.GetValue

## 102.46 JSON.GetIntegerValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetIntegerValue"; json )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

**Result** Returns the value.

### Description

### Examples

Queries integer value:

MBS( "JSON.GetIntegerValue"; "3" )

Created 18th August 2014, last changed 3th February 2016.

## 102.47 JSON.GetObjectItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetObjectItem"; json; name { ; AsReference } )
```

### Parameters

#### json

A JSON text or reference.

```
" [ 1,2,3 ] "
```

#### name

The name of the key to query.

```
"test"
```

#### AsReference

Optional

Whether to return a reference number (1) instead of the JSON text (0). Default is 0 for JSON text.

```
0
```

**Result** Returns JSON code.

### Description

You still need functions like JSON.GetStringValue to get back the decoded string.

### Examples

Create object, add content and pick value:

```
Let(
[
j = MBS( "JSON.CreateObject" );
j = MBS( "JSON.AddStringToObject"; j; "hello"; "world" );
r = MBS( "JSON.GetObjectItem"; j; "hello" )
];
r)
```

Pick a text from a JSON dictionary:

```
set $json to " { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } "
set $first to MBS("JSON.GetObjectItem"; $json; "first")
set $firstText to MBS("JSON.GetStringValue"; $first)
display dialog $firstText
```

Extract error details from JSON:

```
# JSON in field:
# {
# "error": {
```

```

# "message": "Your card's expiration year is invalid.",
# "type": "card_error",
# "param": "exp_year",
# "code": "invalid_expiry_year"
# }
# }
# get it in variable
Set Variable [ $json; Value:test::input ]
# pick error node
Set Variable [ $error; Value:MBS("JSON.GetObjectItem"; $json; "error") ]
If [ $error = "" ]
Show Custom Dialog [ "No error"; "No error node in the JSON." ]
Else
# get message node
Set Variable [ $message; Value:MBS("JSON.GetObjectItem"; $error; "message") ]
# decode text
Set Variable [ $messageText; Value:MBS("JSON.GetStringValue"; $message) ]
# get code node
Set Variable [ $code; Value:MBS("JSON.GetObjectItem"; $error; "code") ]
# decode text
Set Variable [ $codeText; Value:MBS("JSON.GetStringValue"; $code) ]
# show result
Show Custom Dialog [ "Got error"; "Message: " & $messageText & §& "Code: " & $codeText ]
End If

```

## 102.48 JSON.GetObjectItemTree

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	3.2	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetObjectItemTree"; json; names )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

#### names

The names for keys to query. Pass several parameters to go down an object tree. For arrays you can pass index.

"test"

**Result** Returns JSON or error.

### Description

You still need functions like `JSON.GetStringValue` to get back the decoded string.

Works also for arrays where you pass in index.

### Examples

Query properties object and inside it the lastname object and there the value property:

```
MBS("JSON.GetObjectItemTree"; JSON Test::JSON; "properties"; "lastname"; "value")
```

Look into object tree, pick addresses, first address, than value and there the content of street:

```
MBS("JSON.GetStringValue"; MBS( "JSON.GetObjectItemTree"; test::JSON ; "addresses"; 0; "value"; "streetAddress" ))
```

**102.49 JSON.GetObjectItemTreeRef**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetObjectItemTreeRef"; json; names )

**Parameters****json**

A JSON text or reference.

" [ 1,2,3 ] "

**names**

The names for keys to query. Pass several parameters to go down an object tree. For arrays you can pass index.

"test"

**Result** Returns reference number or error.

**Description**

You still need functions like `JSON.GetStringValue` to get back the decoded string.

Works also for arrays where you pass in index.

Same as `JSON.GetObjectItemTree`, but returns reference number.

**See also**

## 102.50 JSON.GetObjectName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetObjectName"; json; index )

### Parameters

#### json

A JSON text or reference.

" { \"a\": \"b\", \"c\": \"d\" } "

#### index

The index of the item to get the name from. From 0 to JSON.GetObjectSize-1.

0

**Result** Returns name of item.

### Description

### Examples

Gets first object item's name:

MBS( "JSON.GetObjectName"; " { \"a\": \"b\", \"c\": \"d\" } "; 0 )

### See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetObjectNameList"; json )
```

### Parameters

#### json

A JSON text or reference.

```
" { \"a\": \"b\", \"c\": \"d\" } "
```

**Result** Returns name of items as list.

### Description

### Examples

Gets first object item's name:

```
MBS( "JSON.GetObjectNameList"; " { \"a\": \"b\", \"c\": \"d\" } " )
// return a and b as list.
```

## 102.52 JSON.GetObjectSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetObjectSize"; json )

### Parameters

#### json

A JSON text or reference.

" { \"a\": \"b\", \"c\": \"d\" } "

**Result** Returns number of object entries.

### Description

### Examples

Checks number of object elements:

MBS( "JSON.GetObjectSize"; " { \"a\": \"b\", \"c\": \"d\" } " )

Example result: 2

## 102.53 JSON.GetPathItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetPathItem"; json; Path { ; Flags } )

### Parameters

#### json

A JSON text or reference.

```
" { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "
```

#### Path

The path through the json hierarchy as list. For object, pass name of item to choose. For array pass index. "people\$0\$last"

#### Flags

Optional

Pass 1 to return as value, e.g. text or number. Pass 0 (or nothing) to return as JSON.

Add 2 to return empty in case of error, e.g. value not existing. (new in 7.5)

**Result** Returns value or error.

### Description

The path describes the way through the hierarchy to find the JSON node to return.

Result can be JSON or the value.

If path ends with # in an array, we return number of elements.

### Examples

Query people ->first entry:

```
MBS( "JSON.GetPathItem"; " { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "; "people$0")
```

Query people ->first entry ->last name:

```
MBS( "JSON.GetPathItem"; " { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "; "people$0$last")
```

Query people:

```
MBS( "JSON.GetPathItem"; " { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "; "people")
```

Query IP via ipinfo.io:

Go to Layout [ "Table" ]

New Record/Request

```

# Start new session
Set Variable [ $curl; Value:MBS("CURL.New") ]
# Set URL to load (HTTP, HTTPS, FTP, FTPS, SFTP, etc.)
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "http://ipinfo.io") ]
# RUN now
Set Variable [ $result; Value:MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ Table::DebugLog; MBS("CURL.GetDebugAsText"; $curl) ]
Set Field [ Table::Result; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
If [ $result = "OK" ]
# Check HTTP error code
Set Variable [ $response; Value:MBS("CURL.GetResponseCode"; $curl) ]
If [ $response = 200 ]
# Query values from JSON
Set Variable [ $json; Value:MBS( "JSON.Parse"; Table::Result ) ]
Set Field [ Table::IP; MBS("JSON.GetPathItem"; $json; "ip"; 1) ]
Set Field [ Table::Hostname; MBS("JSON.GetPathItem"; $json; "hostname"; 1) ]
Set Field [ Table::City; MBS("JSON.GetPathItem"; $json; "city"; 1) ]
Set Field [ Table::Region; MBS("JSON.GetPathItem"; $json; "region"; 1) ]
Set Field [ Table::Country; MBS("JSON.GetPathItem"; $json; "country"; 1) ]
Set Field [ Table::Location; MBS("JSON.GetPathItem"; $json; "loc"; 1) ]
Set Field [ Table::Company or Provider; MBS("JSON.GetPathItem"; $json; "org"; 1) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json ) ]
End If
End If
# Cleanup
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
Commit Records/Requests [ No dialog ]

```

Query number of entries in array:

```
MBS( "JSON.GetPathItem"; " { \"IDs\": [ 1,5,8,2,5 ] } "; "IDs$# ")
```

Example result: 5

## 102.54 JSON.GetStringValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.GetStringValue"; json )
```

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

**Result** Returns text.

### Description

### Examples

Get string value:

```
MBS( "JSON.GetStringValue"; "\"Hello\rjust a test\"" )
```

Example result: Hello

just a test

Extract error details from JSON:

```
# JSON in field:
# {
# "error": {
# "message": "Your card's expiration year is invalid.",
# "type": "card_error",
# "param": "exp_year",
# "code": "invalid_expiry_year"
# }
# }
# get it in variable
Set Variable [ $json; Value:test::input ]
# pick error node
Set Variable [ $error; Value:MBS("JSON.GetObjectItem"; $json; "error") ]
If [ $error = "" ]
Show Custom Dialog [ "No error"; "No error node in the JSON." ]
Else
# get message node
Set Variable [ $message; Value:MBS("JSON.GetObjectItem"; $error; "message") ]
# decode text
Set Variable [ $messageText; Value:MBS("JSON.GetStringValue"; $message) ]
# get code node
Set Variable [ $code; Value:MBS("JSON.GetObjectItem"; $error; "code") ]
# decode text
```

#### 102.54. *JSON.GETSTRINGVALUE*

5391

```
Set Variable [ $codeText; Value:MBS("JSON.GetStringValue"; $code) ]  
# show result  
Show Custom Dialog [ "Got error"; "Message: " & $messageText & $& "Code: " & $codeText ]  
End If
```

Decode string with unicode text:

```
MBS( "JSON.GetStringValue"; "\"Hello \u00e4\"" )
```

## 102.55 JSON.GetType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	2.7	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetType"; json )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

**Result** Returns type: false, true, null, string, array, object or number.

### Description

### Examples

Creates array and queries type:

```
MBS("JSON.GetType"; MBS( "JSON.CreateDoubleArray"; 1; 2; 3))
```

Example result: array

Query type of value:

```
MBS( "JSON.GetType"; 123 )
```

Example result: number

Query type of value:

```
MBS( "JSON.GetType"; " [ ] " )
```

Example result: array

### See also

- 102.22 JSON.CreateDoubleArray

5343

Created 18th August 2014, last changed 11st December 2016.

## 102.56 JSON.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.GetValue"; json )

### Parameters

#### json

A JSON text or reference.

"1.3"

**Result** Returns value or error.

### Description

This is same as using JSON.GetDoubleValue or JSON.GetStringValue, but automatically detect type.

For boolean value return 0 or 1.

For object or array returns JSON text.

Numbers are returned as numbers.

### Examples

Returns 5 for a numeric value:

MBS( "JSON.GetValue"; "5" )

Example result: 5

Returns text:

MBS( "JSON.GetValue"; "\"Test JSON\"" )

Example result: Test JSON

Returns 1 for boolean:

MBS( "JSON.GetValue"; "true" )

Example result: 1

## 102.57 JSON.Import

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	5.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "JSON.Import"; JSON; InsertFileName { ; TableNamePrefix } )
```

### Parameters

#### JSON

The JSON data to import. Please pass text, not reference numbers.

#### InsertFileName

The file name of where the insert table is inside. Can be empty.

Get(FileName)

#### TableNamePrefix

Optional

The prefix to put in front of all tables.

"Import"

**Result** Returns number or error.

### Description

This function can import any JSON into FileMaker tables with all fields and attributes.

Returns number of records to be added. This function prefers the import and runs it later at idle time. In a script please call JSON.Import and then loop and do script pauses. Then use JSON.Import.Status to check regularly for updates. When you get back Finished as status, the script can continue with other work.

If you have a JSON file you need to import regularly into FileMaker and you have no XSLT to transform it for FileMaker, you can use this plugin function. On the first run, it creates for a sample JSON file the required tables and fields. Then you can define any layout or script to process values, e.g. copy into your tables. On further runs the plugin may add more fields (if newer JSON file has more fields) and import newer records.

All tables have three default fields. `_RecordUUID` is a unique identifier for the record. `_ParentRecordUUID` provides a link to the record one level higher in the JSON. This can be used to find child/parent records. The `_CreationTimeStamp` is the creation date, so you can distinguish different imports.

As a lot of records with a lot of data is imported and you may not need everything, you may want to put the imports in an extra FileMaker file. You decide if you clear tables before import or you want to keep history of all imports.

If the JSON has errors like a missing `<` in the JSON, you get an error. If you switch on IgnoreError parameter, the plugin reads everything until the error is reached which may give less records than possible.

This function works at idle time which is currently (FM 14) not supported on server.

Requires FileMaker 12 or newer.

On Server, please add a loop calling JSON.Import.Work to make progress.

See also XML.Import.SetBaseFields and XML.Import.SetExtraField.

### Examples

Imports test.json into FileMaker:

```
Set Variable [ $text; Value:MBS("Text.ReadTextFile"; "/Users/cs/Desktop/test.json"; "UTF-8") ]
Set Variable [ $r; Value:MBS("JSON.Import"; $text; ""; "") ]
Set Variable [ $text; Value:"" ]
If [ MBS("IsError") = 0 ]
Set Variable [ $total; Value:MBS("JSON.Import.Total") ]
Loop
Set Variable [ $todo; Value:MBS("JSON.Import.TODO") ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $s; Value:MBS("JSON.Import.Status") ]
Exit Loop If [ $s "Working" ]
End Loop
Show Custom Dialog [ "JSON Import"; $r & " " & $s ]
End If
```

Import script with progress bar for importing JSON with Windows ANSI encoding:

```
Go to Layout [ "JSON Import" (Import2Row) ]
Delete All Records [ No dialog ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetBottomText"; "") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetTopText"; "Importiere JSON") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetTitle"; "Import...") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetButtonCaption"; "Abbrechen") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetProgress"; -1) ]
Set Variable [ $r; Value:MBS("ProgressDialog.Show") ]
Pause/Resume Script [ Duration (seconds): ,1 ]
Set Variable [ $text; Value:MBS("Text.ReadTextFile"; "/Users/cs/Desktop/test.JSON"; "Windows") ]
Set Variable [ $r; Value:MBS("JSON.Import"; $text; ""; "Import2") ]
Set Variable [ $text; Value:"" ]
If [ MBS("IsError") = 0 ]
Set Variable [ $total; Value:MBS("JSON.Import.Total") ]
Loop
Set Variable [ $todo; Value:MBS("JSON.Import.TODO") ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetProgress"; ($total - $todo) * 100 / $total) ]
Set Variable [ $r; Value:MBS("ProgressDialog.SetBottomText"; "Schritt " & ($total - $todo) & " von " & $total) ]
Pause/Resume Script [ Duration (seconds): 1 ]
Set Variable [ $s; Value:MBS("JSON.Import.Status") ]
Exit Loop If [ $s "Working" ]
If [ MBS("ProgressDialog.GetCancel") = 1 ]
Set Variable [ $r; Value:MBS("ProgressDialog.Hide") ]
```

## 102.57. JSON.IMPORT

5397

```
Set Variable [ $r; Value:MBS("JSON.Import.Cancel") ]  
Exit Script [ ]  
End If  
End Loop  
Set Variable [ $r; Value:MBS("ProgressDialog.Hide") ]  
Show Custom Dialog [ "JSON Import"; $r & " " & $s ]  
End If  
Set Variable [ $r; Value:MBS("ProgressDialog.Hide") ]
```

## 102.59 JSON.Import.ErrorCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	9.3	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Import.ErrorCount" )

**Result** Returns number or error.

### Description

Should be zero if we had no errors while importing.

### See also

- 102.60 JSON.Import.Errors 5400

## 102.61 JSON.Import.Status

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Import.Status" )

**Result** Returns status value.

### Description

Returns Working, Finished or Unknown depending of the state.

So before first import, it is unknown. Than with first import it switches to working. Now when it's ready, you get back Finished.

### See also

## 102.62 JSON.Import.TODO

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Import.TODO" { ; Selector } )

### Parameters

#### Selector

Optional

Which value to return. By default we return number of records to create. You can pass here "Tables" to get number of tables, "Fields" to get number of fields or "Records" to get number of records.

**Result** Returns number.

### Description

#### See also

## 102.64 JSON.Import.Work

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Import.Work" )

**Result** Returns OK or error.

### Description

Normally we do import on idle while a script pause. But on server this does not work. You can call this method in a loop to do the inserts for the import. But it will not create the tables and fields required for import.

### See also

## 102.65 JSON.IsValid

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.IsValid"; JSON )

### Parameters

#### JSON

The JSON text to parse.

" [ 1,2,3 ] "

**Result** Returns 1, 0 or error.

### Description

This parses the JSON text and returns 1 on success or 0 on failure.

### Examples

Checks validity:

MBS( "JSON.IsValid"; " [ 1,2,3 ] " )

Example result: 1

Checks with error:

MBS( "JSON.IsValid"; " [ 1,hello,3 ] " )

Example result: 0

## 102.66 JSON.Parse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Parse"; JSON )

### Parameters

#### JSON

The JSON text to parse.

" [ 1,2,3 ] "

**Result** Returns reference number or error.

### Description

Please use JSON.Release later to free the json object.

You can pass the reference number to all MBS JSON functions instead of JSON text.

### Examples

Parse an array:

```
# parse some json
$ref = MBS( "JSON.Parse"; " [ 1,2,3 ] " )
# query array size:
MBS( "JSON.GetArraySize"; $ref )
# free memory
MBS( "JSON.Release"; $ref )
```

Parse some JSON, display it formatted and release:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

Query IP via ipinfo.io:

```
Go to Layout [ "Table" ]
New Record/Request
# Start new session
Set Variable [ $curl; Value:MBS("CURL.New") ]
# Set URL to load (HTTP, HTTPS, FTP, FTPS, SFTP, etc.)
Set Variable [ $result; Value:MBS("CURL.SetOptionURL"; $curl; "http://ipinfo.io") ]
# RUN now
Set Variable [ $result; Value:MBS("CURL.Perform"; $curl) ]
# Check result
Set Field [ Table::DebugLog; MBS("CURL.GetDebugAsText"; $curl) ]
Set Field [ Table::Result; MBS("CURL.GetResultAsText"; $curl; "UTF8") ]
If [ $result = "OK" ]
```

```

# Check HTTP error code
Set Variable [ $response; Value:MBS("CURL.GetResponseCode"; $curl) ]
If [ $response = 200 ]
# Query values from JSON
Set Variable [ $json; Value:MBS( "JSON.Parse"; Table::Result ) ]
Set Field [ Table::IP; MBS("JSON.GetPathItem"; $json; "ip"; 1) ]
Set Field [ Table::Hostname; MBS("JSON.GetPathItem"; $json; "hostname"; 1) ]
Set Field [ Table::City; MBS("JSON.GetPathItem"; $json; "city"; 1) ]
Set Field [ Table::Region; MBS("JSON.GetPathItem"; $json; "region"; 1) ]
Set Field [ Table::Country; MBS("JSON.GetPathItem"; $json; "country"; 1) ]
Set Field [ Table::Location; MBS("JSON.GetPathItem"; $json; "loc"; 1) ]
Set Field [ Table::Company or Provider; MBS("JSON.GetPathItem"; $json; "org"; 1) ]
Set Variable [ $r; Value:MBS( "JSON.Release"; $json ) ]
End If
End If
# Cleanup
Set Variable [ $result; Value:MBS("CURL.Release"; $curl) ]
Commit Records/Requests [ No dialog ]

```

## 102.67 JSON.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Release"; JSONRef )

### Parameters

#### JSONRef

The JSON reference number.

\$json

**Result** Returns OK or error.

### Description

#### Examples

Parse some JSON, display it formatted and release:

```
Set Variable [ $json; Value:MBS( "JSON.Parse"; " { \"Hello\": \"World\" } " ) ]
```

```
Show Custom Dialog [ $json; MBS("JSON.Format"; $json) ]
```

```
Set Variable [ $r; Value:MBS( "JSON.Release"; $json) ]
```

### 102.67.1 Blog Entries

- [Fun with While function in FileMaker](#)
- [Face detection via CoreImage in FileMaker](#)
- [MBS FileMaker Plugin, version 6.0pr6](#)

Created 5th January 2016, last changed 10th February 2016.

**102.68 JSON.ReleaseAll**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.ReleaseAll" )

**Result** Returns OK or error.

**Description**

After this call all reference numbers are invalid.

This is useful if you start a script which creates dozens of JSON reference numbers and you don't want to keep track of those IDs.

Be aware that on a server this may free objects, which are used by other scripts running in parallel!

**Examples**

Release all JSON objects:

Set Variable [ \$r; Value:MBS( "JSON.ReleaseAll" ) ]

**See also**

## 102.69 JSON.ReplaceItemInArray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.ReplaceItemInArray"; json; index; json2 )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3,4 ] "

#### index

The index of the array item.

2

#### json2

The new json item for the array.

5

**Result** Returns JSON code.

### Description

### Examples

Replace a value in array:

MBS( "JSON.ReplaceItemInArray"; " [ 1,2,3,4 ] "; 2; "5" )

Example result: [ 1, 2, 5, 4 ]

### See also

- 102.70 JSON.ReplaceItemInObject

### 102.69.1 Blog Entries

- [MBS Filemaker Plugin, version 4.3pr8](#)

Created 26th August 2014, last changed 11st December 2016.

## 102.70 JSON.ReplaceItemInObject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.ReplaceItemInObject"; json; name; json2 )

### Parameters

**json**

A JSON text or reference.

```
{ "key": "value" }
```

**name**

The name of the Object property.

```
"key"
```

**json2**

The JSON text for the item.

```
"Hello"
```

**Result** Returns JSON code.

### Description

### Examples

Replace key with new Value:

```
MBS( "JSON.ReplaceItemInObject"; " { \"key\": \"value\" } "; "key"; "\"Hello\"" )
```

Example result: {

```
"key": "Hello"
```

```
}
```

## 102.71 JSON.SetPathItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.SetPathItem"; json; Path; Value )

### Parameters

#### json

A JSON text or reference.

" [ 1,2,3 ] "

#### Path

The path through the json hierarchy as list. For object, pass name of item to choose. For array pass index. For last array you can use special value "append" to add an entry.

"people\$0\$last"

#### Value

The new value as JSON.

"\"Hello\""

**Result** Returns JSON or error.

### Description

The path describes the way through the hierarchy to find the JSON node to return.

Please pass in new value as JSON.

Version 9.2 automatically creates missing object/array entries. The value parameter will be treated as text if it is not a valid JSON instead of reporting an error.

### Examples

Adds an entry with country:

```
MBS( "JSON.SetPathItem"; " { \"people\": [ { \"first\": \"Christian\", \"last\": \"Schmitz\", \"city\": \"Nickenich\" } ] } "; "people$0$country"; "\"Germany\"" )
```

Example result: {

```
"people": [ {
  "first": "Christian",
  "last": "Schmitz",
  "city": "Nickenich",
  "country": "Germany"
} ]
}
```

Sets an entry in an array:

```
MBS( "JSON.SetPathItem"; " [ 1,2,3 ] "; "1"; 5)
```

Example result: [ 1, 5, 3 ]

Adds an entry to array in object:

```
MBS( "JSON.SetPathItem"; " { \"test\": [ 1,2,3 ] } "; "test$append"; 5)
```

```
Example result: {
"test": [ 1, 2, 3, 5 ]
}
```

Sets hierarchical item:

```
MBS( "JSON.SetPathItem"; " { } "; "Hello$World$Test"; "Hello" )
```

```
Example result: {
"Hello": {
"World": {
"Test": "Hello"
}
}
}
```

Create missing array entries and add our new one:

```
MBS( "JSON.SetPathItem"; " [ ] "; "5"; "6th item" )
```

Example result: [ null, null, null, null, null, 6 ]

## 102.72 JSON.Sort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	9.3	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.Sort"; json )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

**Result** Returns JSON code.

### Description

#### Examples

Sort an array of numbers:

```
MBS( "JSON.Sort"; " [ 9,4,3.2,3.1,123 ] " )
```

Sort text values:

```
MBS( "JSON.Sort"; " [ \"123\", \"Hello\", \"FileMaker\", \"World\" ] " )
```

Sort keys in object:

```
MBS( "JSON.Sort"; " { \"last\":123, \"first\":456 } " )
```

## 102.73 JSON.SortWithEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.SortWithEvaluate"; json; Expression )

### Parameters

#### json

A JSON text or reference.

[ 2,9,3,1 ]

#### Expression

The expression to evaluate. Can include "leftJSON", "rightJSON" as variables. You can call other MBS JSON functions if needed.

"(leftJSON) >GetAsNumber(rightJSON)"

**Result** Returns OK or error.

### Description

The expression is run every time two values are compared, so keep it quick. It should return 1 if leftJSON is smaller than rightJSON.

Our normal JSON.Sort is faster due to not having the overhead of evaluating expressions.

### Examples

Sort with evaluate:

```
MBS( "JSON.SortWithEvaluate"; " [ 2,9,3,1 ] "; "MBS( \"JSON.GetValue\"; leftJSON) <MBS( \"JSON.GetValue\"; rightJSON)" )
```

Sort a list of object by name:

```
MBS( "JSON.SortWithEvaluate"; " [
  { \"name\": \"Joe\" } ,
  { \"name\": \"Anna\" } ,
  { \"name\": \"Tim\" } ,
  { \"name\": \"John\" }
] "; "JSONGetElement ( leftJSON; \"name\" ) <JSONGetElement ( rightJSON; \"name\" )" )
```

## 102.74 JSON.ToHTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
102 JSON	8.2	Yes	Yes	Yes	Yes	Yes

MBS( "JSON.ToHTML"; json { ; Flags; CSS Style } )

### Parameters

#### json

A JSON text or reference.

```
{ "key": "value" }
```

#### Flags

Optional

The flags for processing. Currently you can pass 1 to exclude html header and just get a HTML table.

0

#### CSS Style

Optional

Extra CSS / HTML to include.

**Result** Returns HTML text or error.

### Description

We build for you a HTML with tables for each array and object. We include values and tag rows with even/odd CSS classes.

### Examples

Convert some JSON:

```
MBS("JSON.ToHTML"; JSON Input; 0;
/* CSS style to include */
"<style>
td
{
vertical-align:top;
}

.odd
{
background-color: white;
}

.even
{
background-color: # DDD;
}
</style>")
```

## 102.75 LDAP.AddJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP 102 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.AddJSON"; LDAPRef; dn; JSON )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### dn

The name of the entry to add.

#### JSON

The JSON to parse. Must be a JSON array with entries. Each entry has an element operation with Add, Replace, Delete or Increment. Also a node with name "type" and the type to set. Then you can pass with value a single value or with values a list of values.

**Result** Returns OK or error.

### Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

Sample JSON for structure:

```
[ {
  "operation": "Add",
  "type": "xxx",

  "values": [ "Hello", "World" ]

},
{
  "operation": "Add",
  "type": "yyy",
  "value": "Other"
} ]
```

Type is the name of the attribute, e.g. cn.

Version 10.1 or newer accepts name instead of type for the key to match the search results.

### Examples

Add a new employee to LDAP:

```
Set Variable [ $ldap ; Value: MBS("LDAP.Connect"; "ldap.test.de"; 0; 389 ) ]
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "cn=admin,dc=ldap,dc=test,dc=de"; "S2A2S@home";
"simple" ) ]
Set Variable [ $r ; Value: MBS("LDAP.AddJSON"; $ldap; Employee::_LDAP.Entry.CN; Employee::_LDAP.JSON.Add)
]
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]
```

Example result: Input JSON used:

```
[
{
"operation": "Add",
"name": "objectClass",
"values": [
"posixAccount",
"shadowAccount",
"top",
"inetOrgPerson",
"organizationalPerson",
"person"
]
},
{
"operation": "Add",
"name": "uid",
"value": "bob.miller"
},
{
"operation": "Add",
"name": "uidNumber",
"value": "1"
},
{
"operation": "Add",
"name": "cn",
"value": "Bob Miller"
},
{
"operation": "Add",
"name": "mail",
"value": "bob.miller@test.de"
},
{
"operation": "Add",
"name": "homeDirectory",
"value": "/usr/local/var/"
},
]
```

```

{
"operation": "Add",
"name": "sn",
"value": "Miller"
},
{
"operation": "Add",
"name": "employeeType",
"value": "Employee"
},
{
"operation": "Add",
"name": "givenName",
"value": "Bob"
},
{
"operation": "Add",
"name": "employeeNumber",
"value": "77"
},
{
"operation": "Add",
"name": "userPassword",
"value": "xxxx"
},
{
"operation": "Add",
"name": "gidNumber",
"value": "100"
}
]

```

## 102.76 LDAP.JSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP 102 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.JSON"; LDAPRef )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

**Result** Returns OK or error.

### Description

Please first search, then query here the result as JSON.

### Examples

Query JSON:

```
# Connect
Set Variable [ $r ; Value: MBS("LDAP.Connect"; "ldap.forumsys.com"; 0; 389) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "LDAP error" ; "Failed to connect." & $r ]
Else
Set Variable [ $ldap ; Value: $r ]
# Login
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "uid=tesla,dc=example,dc=com"; "password"; "simple") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "LDAP error" ; "Failed to authenticate." & $r ]
Else
# Search
Set Variable [ $r ; Value: MBS("LDAP.Search"; $ldap; "dc=example,dc=com"; "subtree"; "(givenName=*)"; "" ; 0; 20; 999) ]
# Check results
Show Custom Dialog [ "JSON" ; MBS("LDAP.JSON"; $ldap) ]
End If
# Cleanup
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]
End If
```

```
Example result: [ {
  "dn": "uid=test,dc=example,dc=com",
  "attributes": [ {
    "name": "objectClass",
    "values": [ "posixAccount", "top", "inetOrgPerson" ]
  } , {
```

```

"name": "gidNumber",
"values": [ "0" ]
}, {
"name": "givenName",
"values": [ "Test" ]
}, {
"name": "sn",
"values": [ "Test" ]
}, {
"name": "displayName",
"values": [ "Test" ]
}, {
"name": "uid",
"values": [ "test" ]
}, {
"name": "initials",
"values": [ "TS" ]
}, {
"name": "homeDirectory",
"values": [ "home" ]
}, {
"name": "cn",
"values": [ "Test" ]
}, {
"name": "uidNumber",
"values": [ "24601" ]
}, {
"name": "o",
"values": [ "Company" ]
} ]
} ]

```

Query a person via JSON:

```

Set Variable [ $ldap ; Value: MBS("LDAP.Connect"; "ldap.test.de"; 0; 389 ) ]
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "cn=admin,dc=ldap,dc=test,dc=de"; "S2A2S@home";
"simple" ) ]
Set Variable [ $r ; Value: MBS("LDAP.Search"; $ldap; "ou=Users,dc=ldap,dc=test,dc=de"; "Subtree"; "";
""; 0; 20; 999) ]
Set Field [ Employee::_LDAP.JSON.QUERY ; MBS("LDAP.JSON"; $ldap) ]
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]

```

Example result: [

```

{
"dn": "ou=Users,dc=ldap,dc=test,dc=de",
"attributes": [
{
"name": "objectClass",
"values": [

```

```
"organizationalUnit",
"top"
]
},
{
"name": "ou",
"values": [
"Users"
]
}
],
},
{
"dn": "uid=bob.miller,ou=Users,dc=ldap,dc=test,dc=de",
"attributes": [
{
"name": "objectClass",
"values": [
"posixAccount",
"shadowAccount",
"top",
"inetOrgPerson",
"organizationalPerson",
"person"
]
},
{
"name": "uid",
"values": [
"bob.miller"
]
},
{
"name": "uidNumber",
"values": [ "1" ]
},
{
"name": "cn",
"values": [
"Bob Miller"
]
},
{
"name": "mail",
"values": [
"bob.miller@test.de"
]
},
},
}
```

```

{
  "name": "homeDirectory",
  "values": [
    "/usr/local/var/"
  ]
},
{
  "name": "sn",
  "values": [
    "Miller"
  ]
},
{
  "name": "employeeType",
  "values": [
    "Employee"
  ]
},
{
  "name": "givenName",
  "values": [
    "Bob"
  ]
},
{
  "name": "employeeNumber",
  "values": [ "77" ]
},
{
  "name": "userPassword",
  "values": [
    "xxxx"
  ]
},
{
  "name": "gidNumber",
  "values": [ "100" ]
}
]

## 102.77 LDAP.ModifyJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP 102 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.ModifyJSON"; LDAPRef; dn; JSON )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### dn

The name of the entry to add.

#### JSON

The JSON to parse. Must be a JSON array with entries. Each entry has an element operation with Add, Replace, Delete or Increment. Also a node with name "type" and the type to set. Then you can pass with value a single value or with values a list of values.

**Result** Returns OK or error.

### Description

If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain.

Sample JSON for structure:

```
[ {
  "operation": "Add",
  "type": "xxx",

  "values": [ "Hello", "World" ]

},
{
  "operation": "Replace",
  "type": "yyy",
  "value": "Other"
},
{
  "operation": "Delete",
  "type": "zzz"
} ]
```

# Chapter 103

## Keychain

Manage passwords in Mac & iOS Keychain

### 103.1 Keychain.AddPassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 Keychain	8.4	Yes	No	No	No	Yes

MBS( "Keychain.AddPassword"; Name; Location; Username; Password )

#### Parameters

##### Name

The name of the entry.

"MyDatabase"

##### Location

The location where the database is. Must be prefixed with FMP. e.g. "FMP: " or "FMPADMIN: " followed with the name or IP.

"FMPADMIN: mbs.test.ifmcloud.com"

##### Username

The user name.

"Admin"

##### Password

The password to store.

"HelloWorld"

**Result** Returns OK or error.

#### Description

Only if FileMaker you provide correct entries for FileMaker, it will find the entry.

So please check what FileMaker writes for your entry there.

**Examples**

Add a new password:

```
MBS("Keychain.AddPassword"; "Anlagen"; "FMP: Anlagen"; "Admin"; "HelloWorld")
```

**See also**

- 103.5 Keychain.UpdatePassword

5438

Created 25th August 2018, last changed 26th August 2018.

## 103.2 Keychain.DeletePassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 Keychain	8.4	Yes	No	No	No	Yes

MBS( "Keychain.DeletePassword"; Location; Username )

### Parameters

#### Location

The location where the database is. Must be prefixed with FMP. e.g. "FMP: " or "FMPADMIN: " followed with the name or IP.

"FMPADMIN: mbs.test.ifmcloud.com"

#### Username

The user name.

"Admin"

**Result** Returns OK or error.

### Description

We look for a FileMaker password with given account name and location.

### Examples

Deletes a password:

MBS("Keychain.DeletePassword"; "FMP: Anlagen"; "Admin")

### See also

- 103.5 Keychain.UpdatePassword

### 103.3 Keychain.ListAccounts

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 Keychain	8.4	Yes	No	No	No	Yes

MBS( "Keychain.ListAccounts"; Location )

#### Parameters

##### Location

The location where the database is. Must be prefixed with FMP. e.g. "FMP: " or "FMPADMIN: " followed with the name or IP.

"FMPADMIN: mbs.test.ifmcloud.com"

**Result** Returns OK or error.

##### Description

##### Examples

Lists my accounts in Cloud:

MBS("Keychain.ListAccounts"; "FMPADMIN: monkeybread.fmi.filemaker-cloud.com")

Created 25th August 2018, last changed 25th August 2018.

## 103.4 Keychain.ListDatabases

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 Keychain	8.4	Yes	No	No	No	Yes

MBS( "Keychain.ListDatabases" )

**Result** Returns OK or error.

### Description

### Examples

Lists my databases:

```
MBS("Keychain.ListDatabases")
```

Created 25th August 2018, last changed 25th August 2018.

## 103.5 Keychain.UpdatePassword

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
103 Keychain	8.4	Yes	No	No	No	Yes

MBS( "Keychain.UpdatePassword"; Location; Username; Password )

### Parameters

#### Location

The location where the database is. Must be prefixed with FMP. e.g. "FMP: " or "FMPADMIN: " followed with the name or IP.

"FMPADMIN: mbs.test.ifmcloud.com"

#### Username

The user name.

"Admin"

#### Password

The new password to store.

"New password"

**Result** Returns OK or error.

### Description

### Examples

Updates account with new password:

MBS("Keychain.UpdatePassword"; "FMP: Anlagen"; "Admin"; "NewPassword")

# Chapter 104

## LDAP

Query LDAP or Active Directory servers to manager user accounts.

The plugin can query, modify, add and delete values.

FileMaker can use LDAP or Active Directory for authentication. You can manage users in FileMaker database and send updates to your authentication server via our plugin.

### 104.1 LDAP.Add

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.Add"; LDAPRef; dn; Type { ; Value } )

#### Parameters

##### LDAPRef

The reference number for the LDAP connection.

\$ldap

##### dn

The name of the entry to add.

##### Type

The name of the attribute to add.

##### Value

Optional

The value for the attribute.

**Result** Returns OK or error.

#### Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

With 6.4 plugin you can pass several more value parameters to form a list of values.  
Deprecated. Please use LDAP.AddJSON instead.

### Examples

Add a value:

```
MBS( "LDAP.Add"; $ldap; "test"; "cn"; "Hello" )
```

Add a value with 3 values:

```
MBS( "LDAP.Add"; $ldap; "test"; "cn"; "Hello"; "World"; "test" )
```

## 104.2 LDAP.AddJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP 102 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.AddJSON"; LDAPRef; dn; JSON )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### dn

The name of the entry to add.

#### JSON

The JSON to parse. Must be a JSON array with entries. Each entry has an element operation with Add, Replace, Delete or Increment. Also a node with name "type" and the type to set. Then you can pass with value a single value or with values a list of values.

**Result** Returns OK or error.

### Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

Sample JSON for structure:

```
[ {
  "operation": "Add",
  "type": "xxx",

  "values": [ "Hello", "World" ]

},
{
  "operation": "Add",
  "type": "yyy",
  "value": "Other"
} ]
```

Type is the name of the attribute, e.g. cn.

Version 10.1 or newer accepts name instead of type for the key to match the search results.

### Examples

Add a new employee to LDAP:

```
Set Variable [ $ldap ; Value: MBS("LDAP.Connect"; "ldap.test.de"; 0; 389 ) ]
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "cn=admin,dc=ldap,dc=test,dc=de"; "S2A2S@home";
"simple" ) ]
Set Variable [ $r ; Value: MBS("LDAP.AddJSON"; $ldap; Employee::_LDAP.Entry.CN; Employee::_LDAP.JSON.Add)
]
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]
```

Example result: Input JSON used:

```
[
{
"operation": "Add",
"name": "objectClass",
"values": [
"posixAccount",
"shadowAccount",
"top",
"inetOrgPerson",
"organizationalPerson",
"person"
]
},
{
"operation": "Add",
"name": "uid",
"value": "bob.miller"
},
{
"operation": "Add",
"name": "uidNumber",
"value": "1"
},
{
"operation": "Add",
"name": "cn",
"value": "Bob Miller"
},
{
"operation": "Add",
"name": "mail",
"value": "bob.miller@test.de"
},
{
"operation": "Add",
"name": "homeDirectory",
"value": "/usr/local/var/"
},
]
```

```

{
"operation": "Add",
"name": "sn",
"value": "Miller"
},
{
"operation": "Add",
"name": "employeeType",
"value": "Employee"
},
{
"operation": "Add",
"name": "givenName",
"value": "Bob"
},
{
"operation": "Add",
"name": "employeeNumber",
"value": "77"
},
{
"operation": "Add",
"name": "userPassword",
"value": "xxxx"
},
{
"operation": "Add",
"name": "gidNumber",
"value": "100"
}
]

```

## 104.3 LDAP.AddList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.4	Yes	Yes	Yes	Yes	No

MBS( "LDAP.AddList"; LDAPRef; dn; Type; List )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### dn

The name of the entry to add.

#### Type

The name of the attribute to add.

#### List

The value for the attribute as a list.

"Hello\$World"

**Result** Returns OK or error.

### Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

The list of values are transformed into a list for LDAP.

Deprecated. Please use LDAP.AddJSON instead.

### Examples

Add a list of values to a value:

```
MBS("LDAP.AddList"; $$connectLDAP; "CN=Test_FMPRO_TEMPO2,OU=Eleves,DC=mss,DC=qc,DC=ca";
"objectClass"; "user$top$person$organizationalPerson")
```

## 104.4 LDAP.AddRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	7.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.AddRecord"; LDAPRef; dn; Type { ; Value; TypeN; ValueN } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### dn

The name of the entry to add.

#### Type

The name of the attribute to add.

#### Value

Optional

The value for the attribute.

#### TypeN

Optional

nth attribute name.

#### ValueN

Optional

nth attribute value.

**Result** Returns OK or error.

### Description

The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

This version of the Add can add several keys and values with simple text values.

So please pass as many parameters as you need, always with key and value.

Deprecated. Please use LDAP.AddJSON instead.

### Examples

Add two values:

MBS( "LDAP.Add"; \$ldap; "test"; "cn"; "Hello"; "fn"; "World" )

### See also

- 104.1 LDAP.Add

## 104.5 LDAP.Bind

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.Bind"; LDAPRef; DN; Cred; AuthMethod { ; Domain } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### DN

Test that contains the distinguished name of the entry used to bind. This can be a DN, a UPN, a WinNT style user name, or other name that the directory server will accept as an identifier.

#### Cred

The credentials with which to authenticate. Arbitrary credentials can be passed using this parameter. The format and content of the credentials depends on the setting of the method parameter.

#### AuthMethod

The authentication method to use. Can be simple, SASL or Negotiate. On Mac OS X, also none, KRBv4, KRBv41 and KRBv42 are accepted. On Windows, also Sicily, MSN, NTLM, DPA, SSPI, Digest and External are accepted.

"simple"

#### Domain

Optional

Domain for Windows.

**Result** Returns OK or error.

### Description

See also SystemInfo.ADSYSTEMINFO function to query details about logged in computer user.

### Examples

Authenticate connection:

```
Set Variable [ $r; Value:MBS("LDAP.Bind"; $ldap; $UserName; $Password; $AuthMethod) ]
```

### See also

## 104.6 LDAP.Connect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.Connect"; IP; SSL; Port )

### Parameters

#### IP

The IP or domain name of the server. If prefixed with ldap:// or ldaps://, the plugin will remove that prefix. If prefix is ldaps://, the plugin will assume SSL is enabled.  
"192.168.2.222"

#### SSL

Whether to use SSL. 1 to enable or 0 to not enable.  
1

#### Port

The port to use. If zero or undefined, the default port is used. e.g. 636 for LDAPS or 389 for LDAP.  
3889

**Result** Returns reference number or error.

### Description

Returns the references number which you pass to other LDAP functions.  
Please call LDAP.Release later to close connection.

### Examples

Connect to local LDAP server:

```
MBS( "LDAP.Connect"; "localhost"; 0; 389 )
```

Connect to LDAP server:

```
MBS( "LDAP.Connect"; "ldap.internal"; 1)
```

Connect via IP and special port:

```
MBS( "LDAP.Connect"; "192.168.1.123"; 1; 3636)
```

Connect using URL:

```
MBS( "LDAP.Connect"; "ldaps://192.168.1.123")
```

Connect and Query:

```
Delete All Records [ No dialog ]
# Connect
```

```

Set Variable [ $r; Value:MBS("LDAP.Connect"; LDAP Query::Server; LDAP Query::SSL; LDAP Query::Port)
]
If [ MBS("IsError") ]
Show Custom Dialog [ "LDAP error"; "Failed to connect." & $r ]
Exit Script [ ]
Else
Set Variable [ $ldap; Value:$r ]
# Login
Set Variable [ $r; Value:MBS("LDAP.Bind"; $ldap; LDAP Query::UserName; LDAP Query::Password;
LDAP Query::AuthMethod) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "LDAP error"; "Failed to authenticate." & $r ]
Else
# Search
Set Variable [ $r; Value:MBS("LDAP.Search"; $ldap; LDAP Query::Base; LDAP Query::Scope; LDAP
Query::Filter; ""; 0; 20; 999) ]
# Check results
Set Variable [ $EntryCount; Value:MBS("LDAP.SearchResult.Count"; $ldap) ]
# Walk over all entries
Set Field [ LDAP Query::Entry Count; $EntryCount ]
If [ $EntryCount >0 ]
Set Variable [ $EntryIndex; Value:0 ]
Loop
Set Variable [ $EntryName; Value:MBS("LDAP.SearchResult.DistinguishedName"; $ldap; $EntryIndex) ]
# Walk over all attributes
Set Variable [ $AttributeCount; Value:MBS("LDAP.SearchResult.AttributeCount"; $ldap; $EntryIndex) ]

## 104.7 LDAP.Delete

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.Delete"; LDAPRef; dn )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.  
\$ldap

#### dn

The distinguished name of the entry to delete.

**Result** Returns OK or error.

### Description

Be aware that LDAP does not support deletion of entire subtrees in a single operation. When connecting to an LDAP 2 server, the application must perform a bind operation first.

## 104.12 LDAP.JSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP 102 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.JSON"; LDAPRef )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

**Result** Returns OK or error.

### Description

Please first search, then query here the result as JSON.

### Examples

Query JSON:

```
# Connect
Set Variable [ $r ; Value: MBS("LDAP.Connect"; "ldap.forumsys.com"; 0; 389) ]
If [ MBS("IsError") ]
Show Custom Dialog [ "LDAP error" ; "Failed to connect." & $r ]
Else
Set Variable [ $ldap ; Value: $r ]
# Login
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "uid=tesla,dc=example,dc=com"; "password"; "simple") ]
If [ MBS("IsError") ]
Show Custom Dialog [ "LDAP error" ; "Failed to authenticate." & $r ]
Else
# Search
Set Variable [ $r ; Value: MBS("LDAP.Search"; $ldap; "dc=example,dc=com"; "subtree"; "(givenName=*)"; "" ; 0; 20; 999) ]
# Check results
Show Custom Dialog [ "JSON" ; MBS("LDAP.JSON"; $ldap) ]
End If
# Cleanup
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]
End If
```

```
Example result: [ {
  "dn": "uid=test,dc=example,dc=com",
  "attributes": [ {
    "name": "objectClass",
    "values": [ "posixAccount", "top", "inetOrgPerson" ]
  } , {
```

```

"name": "gidNumber",
"values": [ "0" ]
}, {
"name": "givenName",
"values": [ "Test" ]
}, {
"name": "sn",
"values": [ "Test" ]
}, {
"name": "displayName",
"values": [ "Test" ]
}, {
"name": "uid",
"values": [ "test" ]
}, {
"name": "initials",
"values": [ "TS" ]
}, {
"name": "homeDirectory",
"values": [ "home" ]
}, {
"name": "cn",
"values": [ "Test" ]
}, {
"name": "uidNumber",
"values": [ "24601" ]
}, {
"name": "o",
"values": [ "Company" ]
} ]
} ]

```

Query a person via JSON:

```

Set Variable [ $ldap ; Value: MBS("LDAP.Connect"; "ldap.test.de"; 0; 389 ) ]
Set Variable [ $r ; Value: MBS("LDAP.Bind"; $ldap; "cn=admin,dc=ldap,dc=test,dc=de"; "S2A2S@home";
"simple" ) ]
Set Variable [ $r ; Value: MBS("LDAP.Search"; $ldap; "ou=Users,dc=ldap,dc=test,dc=de"; "Subtree"; "";
""; 0; 20; 999) ]
Set Field [ Employee::_LDAP.JSON.QUERY ; MBS("LDAP.JSON"; $ldap) ]
Set Variable [ $r ; Value: MBS("LDAP.Release"; $ldap) ]

```

Example result: [

```

{
"dn": "ou=Users,dc=ldap,dc=test,dc=de",
"attributes": [
{
"name": "objectClass",
"values": [

```

```
"organizationalUnit",
"top"
]
},
{
"name": "ou",
"values": [
"Users"
]
}
],
},
{
"dn": "uid=bob.miller,ou=Users,dc=ldap,dc=test,dc=de",
"attributes": [
{
"name": "objectClass",
"values": [
"posixAccount",
"shadowAccount",
"top",
"inetOrgPerson",
"organizationalPerson",
"person"
]
},
{
"name": "uid",
"values": [
"bob.miller"
]
},
{
"name": "uidNumber",
"values": [ "1" ]
},
{
"name": "cn",
"values": [
"Bob Miller"
]
},
{
"name": "mail",
"values": [
"bob.miller@test.de"
]
},
},
}
```

```

{
  "name": "homeDirectory",
  "values": [
    "/usr/local/var/"
  ]
},
{
  "name": "sn",
  "values": [
    "Miller"
  ]
},
{
  "name": "employeeType",
  "values": [
    "Employee"
  ]
},
{
  "name": "givenName",
  "values": [
    "Bob"
  ]
},
{
  "name": "employeeNumber",
  "values": [ "77" ]
},
{
  "name": "userPassword",
  "values": [
    "xxxx"
  ]
},
{
  "name": "gidNumber",
  "values": [ "100" ]
}
]

```

## 104.13 LDAP.Modify

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.Modify"; LDAPRef; OperationType; dn; Type { ; Value } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### OperationType

What to do. Can be Delete, Replace or Add.

"Replace"

#### dn

The name of the entry to modify.

#### Type

The name of the attribute to modify.

#### Value

Optional

The value for the attribute.

**Result** Returns OK or error.

### Description

If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain.

Deprecated. Please use LDAP.ModifyJSON instead.

### See also

- 104.14 LDAP.ModifyJSON 5465

## 104.14 LDAP.ModifyJSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP 102 JSON	8.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.ModifyJSON"; LDAPRef; dn; JSON )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### dn

The name of the entry to add.

#### JSON

The JSON to parse. Must be a JSON array with entries. Each entry has an element operation with Add, Replace, Delete or Increment. Also a node with name "type" and the type to set. Then you can pass with value a single value or with values a list of values.

**Result** Returns OK or error.

### Description

If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain.

Sample JSON for structure:

```
[ {
  "operation": "Add",
  "type": "xxx",

  "values": [ "Hello", "World" ]

},
{
  "operation": "Replace",
  "type": "yyy",
  "value": "Other"
},
{
  "operation": "Delete",
  "type": "zzz"
}
]
```

Version 10.1 or newer accepts name instead of type for the key to match the search results.

## 104.15 LDAP.ModifyRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	7.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.ModifyRecord"; LDAPRef; OperationType; dn; Type { ; Value; TypeN; ValueN } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### OperationType

What to do. Can be Delete, Replace or Add.

"Replace"

#### dn

The name of the entry to modify.

#### Type

The name of the attribute to modify.

#### Value

Optional

The value for the attribute.

#### TypeN

Optional

nth attribute name.

#### ValueN

Optional

nth attribute value.

**Result** Returns OK or error.

### Description

If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain.

This version of the Modify can add several keys and values with simple text values.

So please pass as many parameters as you need, always with key and value.

Deprecated. Please use LDAP.ModifyJSON instead.

## 104.16 LDAP.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.Release"; LDAPRef )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

**Result** Returns OK or error.

### Description

### Examples

Close connection:

MBS( "LDAP.Release"; \$ldap )

### 104.16.1 Blog Entries

- [LDAP with JSON](#)
- [LDAP in FileMaker](#)

Created 15th December 2015, last changed 16th December 2015.

## 104.17 LDAP.Rename

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.Rename"; LDAPRef; DN; NewRDN { ; NewParent; DeleteOldRdn } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### DN

The distinguished name of the entry to be renamed.

#### NewRDN

The new relative distinguished name.

#### NewParent

Optional

The distinguished name of the new parent for this entry. This parameter enables you to move the entry to a new parent container. Can be empty.

#### DeleteOldRdn

Optional

1 if the old relative distinguished name should be deleted; 0 if the old relative distinguished name should be retained.

1

**Result** Returns OK or error.

### Description

This function is available effective with LDAP 3.

#### See also

- 104.16 LDAP.Release

5469

Created 15th December 2015, last changed 15th December 2015.

## 104.18 LDAP.Search

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.Search"; LDAPRef; Base; Scope; Filter; Attributes; AttributesOnly { ; Timeout; Size Limit } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### Base

the distinguished name of the entry at which to start the search.

#### Scope

Value to indicate the search scope. Can be:

Base: Search the base entry only. OneLevel: Search all entries in the first level below the base entry, excluding the base entry. Subtree: Search the base entry and all entries in the tree below the base.

On Mac can also be Children.

"Subtree"

#### Filter

A text that specifies the search filter.

#### Attributes

List indicating which attributes to return for each matching entry.

"cn\$sn"

#### AttributesOnly

Boolean value that should be 0 if both attribute types and values are to be returned, 1 if only types are required.

0

#### Timeout

Optional

Timeout in seconds. Specifies both the local search time-out value, in seconds, and the operation time limit that is sent to the server within the search request.

10

#### Size Limit

Optional

Limit on the number of entries to return from the search. A value of zero indicates no limit.

**Result** Returns OK or error.

### Description

Searches the LDAP directory and returns a requested set of attributes for each matched entry.

On success, you can use `LDAP.SearchResult.Count` to find out the number of entries found.

### Examples

Search for name:

```
MBS( "LDAP.Search"; $ldap; "dc=example,dc=com"; "Subtree"; "(sn=Jensen)")
```

Find entries with a givenName:

```
MBS("LDAP.Search"; $ldap; ""; "Subtree"; "(givenName=*)"; ""; 0; 20; 999)
```

## 104.19 LDAP.SearchResult.AttributeCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.AttributeCount"; LDAPRef; EntryIndex )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

**Result** Returns number or error.

### Description

### Examples

Query number of attributes in an entry:

```
Set Variable [ $AttributeCount; Value:MBS("LDAP.SearchResult.AttributeCount"; $ldap; $EntryIndex) ]
```

## 104.20 LDAP.SearchResult.AttributeName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.AttributeName"; LDAPRef; EntryIndex; AttributeIndex )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

#### AttributeIndex

The index of the attribute. From 0 to LDAP.SearchResult.AttributeCount-1.

0

**Result** Returns value or error.

### Description

## 104.21 LDAP.SearchResult.AttributeNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.AttributeNames"; LDAPRef; EntryIndex { ; NoReturnEnding } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

### Examples

Query names of attributes as list:

MBS( "LDAP.SearchResult.AttributeNames"; \$ldap; \$EntryIndex)

### See also

- 104.23 LDAP.SearchResult.AttributeValueCount 5478
- 104.24 LDAP.SearchResult.AttributeValues 5479
- 104.25 LDAP.SearchResult.AttributeValuesByName 5481

Created 15th December 2015, last changed 16th December 2015.

## 104.22 LDAP.SearchResult.AttributeValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.AttributeValue"; LDAPRef; EntryIndex; AttributeIndex; ValueIndex )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

#### AttributeIndex

The index of the attribute. From 0 to LDAP.SearchResult.AttributeCount-1.

0

#### ValueIndex

The index of the value. Must be range from zero to LDAP.SearchResult.AttributeValueCount-1.

0

**Result** Returns OK or error.

### Description

#### See also

- 104.6 LDAP.Connect 5451

- 104.24 LDAP.SearchResult.AttributeValues 5479
- 104.25 LDAP.SearchResult.AttributeValuesByName 5481
- 104.26 LDAP.SearchResult.Count 5483

Created 15th December 2015, last changed 15th December 2015.

## 104.23 LDAP.SearchResult.AttributeValueCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.AttributeValueCount"; LDAPRef; EntryIndex; AttributeIndex )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

#### AttributeIndex

The index of the attribute. From 0 to LDAP.SearchResult.AttributeCount-1.

0

**Result** Returns number or error.

### Description

If the plugin has no value, this is zero. If the attribute is a list and has more than one entry, the result is >1.

### Examples

Query attribute values as list:

```
Set Variable [ $AttributeValues; Value:MBS("LDAP.SearchResult.AttributeValues"; $ldap; $EntryIndex; $AttributeIndex; 1) ]
```

### See also

## 104.24 LDAP.SearchResult.AttributeValues

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.AttributeValues"; LDAPRef; EntryIndex; AttributeIndex { ; NoReturnEnding } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

#### AttributeIndex

The index of the attribute. From 0 to LDAP.SearchResult.AttributeCount-1.

0

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 1 to include none, so a list with one value behaves as a text value.

1

**Result** Returns list or error.

## 104.25 LDAP.SearchResult.AttributeValuesByName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	7.4	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.AttributeValuesByName"; LDAPRef; EntryIndex; AttributeName { ; NoReturnEnding } )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

#### AttributeName

The name of the attribute.

"FirstName"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 1 to include none, so a list with one value behaves as a text value.

1

**Result** Returns value, list or error.

### Description

This function searches attributes by name instead of index.

If nothing is found, you get empty result.

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.Count"; LDAPRef )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

**Result** Returns number or error.

### Description

### Examples

Query number of search results:

```
Set Variable [ $EntryCount; Value:MBS("LDAP.SearchResult.Count"; $ldap) ]
```

Loop over search results:

```
# loop over entries
Set Variable [ $EntryCount; Value:MBS("LDAP.SearchResult.Count"; $ldap) ]
Set Field [ LDAP Query::Entry Count; $EntryCount ]
If [ $EntryCount >0 ]
Set Variable [ $EntryIndex; Value:0 ]
Loop
# get info for entry
Set Variable [ $EntryName; Value:MBS("LDAP.SearchResult.DistinguishedName"; $ldap; $EntryIndex) ]
# loop over attributes
Set Variable [ $AttributeCount; Value:MBS("LDAP.SearchResult.AttributeCount"; $ldap; $EntryIndex) ]
If [ $AttributeCount ]
Set Variable [ $AttributeIndex; Value:0 ]
Loop
# get detail for attribute
Set Variable [ $AttributeCount; Value:MBS("LDAP.SearchResult.AttributeCount"; $ldap; $EntryIndex) ]
Set Variable [ $EntryName; Value:MBS("LDAP.SearchResult.DistinguishedName"; $ldap; $EntryIndex) ]
Set Variable [ $AttributeName; Value:MBS("LDAP.SearchResult.AttributeName"; $ldap; $EntryIndex; $AttributeIndex) ]
Set Variable [ $AttributeValues; Value:MBS("LDAP.SearchResult.AttributeValues"; $ldap; $EntryIndex; $AttributeIndex; 1) ]
# store in a record
New Record/Request
Set Field [ LDAP Query::Entry; $EntryName ]
Set Field [ LDAP Query::Attribute; $AttributeName ]
Set Field [ LDAP Query::Values; $AttributeValues ]
```

```
Commit Records/Requests [ No dialog ]
# next
Set Variable [ $AttributeIndex; Value:$AttributeIndex + 1 ]
Exit Loop If [ $AttributeIndex = $AttributeCount ]
End Loop
End If
Set Variable [ $EntryIndex; Value:$EntryIndex + 1 ]
Exit Loop If [ $EntryIndex = $EntryCount ]
End Loop
End If
```

## 104.27 LDAP.SearchResult.DistinguishedName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SearchResult.DistinguishedName"; LDAPRef; EntryIndex )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### EntryIndex

The index in the search results. Range from 0 to LDAP.SearchResult.EntryCount-1.

\$index

**Result** Returns value or error.

### Description

This is like the unique record ID for this entry.

### Examples

Query distinguished name for an entry:

Set Variable [ \$EntryName; Value:MBS("LDAP.SearchResult.DistinguishedName"; \$ldap; \$EntryIndex) ]

### See also

## 104.28 LDAP.SetNetworkTimeout

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	No	Yes	Yes	No

MBS( "LDAP.SetNetworkTimeout"; LDAPRef; Timeout )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### Timeout

The new timeout in seconds.

5

**Result** Returns OK or error.

### Description

This function sets the socket level timeout.

Value is in seconds. Resolution is in microseconds.

### Examples

Sets network timeout:

```
Variable setzen [ $r ; Wert: MBS("LDAP.SetNetworkTimeout"; $ldap; 3) ]
```

### See also

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SetProtocolVersion"; LDAPRef; Version )

**Parameters****LDAPRef**

The reference number for the LDAP connection.

\$ldap

**Version**

Can be 1, 2 or 3 to specify LDAP version.

3

**Result** Returns OK or error.

**Description****Examples**

Sets version 3:

MBS( "LDAP.SetProtocolVersion"; \$ldap; 3 )

**See also**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SetReferrals"; LDAPRef; Value )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### Value

The new setting.

0

**Result** Returns OK or error.

### Description

Specifies whether to automatically follow referrals returned by the LDAP server.

#### See also

- 104.10 LDAP.GetReferrals

5457

Created 18th December 2015, last changed 18th December 2015.

## 104.31 LDAP.SetTimeOut

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	No	Yes	Yes	No

MBS( "LDAP.SetTimeOut"; LDAPRef; Timeout )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### Timeout

The new timeout in seconds.

5

**Result** Returns OK or error.

### Description

This sets the default timeout for the ldap connection.

Value is in seconds. Resolution is in microseconds.

### Examples

Sets timeout to 3 seconds:

```
Variable setzen [ $r ; Wert: MBS("LDAP.SetTimeOut"; $ldap; 3) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	6.0	Yes	Yes	Yes	Yes	No

MBS( "LDAP.SimpleBind"; LDAPRef; dn; Password )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

#### dn

The name of the user to bind as. The bind operation uses the dn and password parameters to authenticate the user.

#### Password

The password of the user specified in the dn parameter.

**Result** Returns OK or error.

### Description

#### Examples

Binds anonymously to the server:

```
MBS( "LDAP.SimpleBind"; $ldap)
```

### 104.32.1 Blog Entries

## 104.33 LDAP.StartTLS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
104 LDAP	9.3	Yes	Yes	Yes	Yes	No

MBS( "LDAP.StartTLS"; LDAPRef )

### Parameters

#### LDAPRef

The reference number for the LDAP connection.

\$ldap

**Result** Returns OK or error.

### Description

Sends a StartTLS request to a server, waits for the reply, and then installs TLS handlers on the session if the request succeeded.

Created 13th August 2019, last changed 13th August 2019.

## 104.34 SystemInfo.ADSystemInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
164 SystemInfo 104 LDAP	9.3	No	Yes	No	No	No

MBS( "SystemInfo.ADSystemInfo" )

**Result** Returns JSON or error.

### Description

This call may take a second if a query needs to be sent to server.

Returns JSON with details including UserName, ComputerName, SiteName, DomainShortName, DomainDNSName, ForestDNSName, PDCRoleOwner, SchemaRoleOwner, IsNativeMode, DCName and DCSiteName.

The result is an empty JSON object in case of no Active Directory in use.

### Examples

Query Active Directory details on Windows:

MBS( "SystemInfo.ADSystemInfo" )

Example result: {

"UserName": "CN=John Doe,OU=2SH User,DC=2SXXX,DC=2S",

"ComputerName": "CN=2SMBP16W10,CN=Computers,DC=2SXXX,DC=2S",

"SiteName": "Default-First-Site-Name",

"DomainShortName": "2SXXX",

"DomainDNSName": "2SXXX.2S",

"ForestDNSName": "2SXXX.2S",

"PDCRoleOwner": "CN=NTDS Settings,CN=2SDCERP,CN=Servers,CN=Default-First-Site-Name,CN=Sites,CN=Configuration,DC=2SXXX,DC=2S",

"SchemaRoleOwner": "CN=NTDS Settings,CN=2SDCERP,CN=Servers,CN=Default-First-Site-Name,CN=Sites,CN=Configuration,DC=2SXXX,DC=2S",

"IsNativeMode": true,

"DCName": "2SDCSTORAGE.2SXXX.2S",

"DCSiteName": "Default-First-Site-Name"

}

# Chapter 105

## List

Text functions for working with lists.

For big lists, our QuickList functions are much faster. Because the list is only parsed once and stored indexed in memory.

### 105.1 List.AddPostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.AddPostfix"; List; Postfix { ; NoReturnEnding } )

#### Parameters

##### List

The list to process.

"Hello\$World"

##### Postfix

The text to append.

"!"

##### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

#### Description

#### Examples

Add postfix to list:

```
MBS( "List.AddPostfix"; "Hello$World"; "!")
```

**See also**

Created 4th March 2016, last changed 4th March 2016.

## 105.2 List.AddPrefix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.AddPrefix"; List; Prefix { ; NoReturnEnding } )

### Parameters

#### List

The list to process.

"Hello\$World"

#### Prefix

The text to prepend.

"!"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

### Examples

Add prefix to list:

MBS( "List.AddPrefix"; "Hello\$World"; "!" )

### See also

## 105.3 List.AddValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.AddValue"; List; Text )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### Text

The text to add.

"Hello"

**Result** Returns list or error.

### Description

For big lists, using QuickList functions is much faster. The list is only parsed once and stored in memory.

### See also

- 105.15 List.GetValue 5514
- 105.17 List.HasValue 5516

## 105.4 List.And

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.And"; List1; List2 { ; NoReturnEnding } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

Performs a logical AND operation.

### Examples

Perform logical AND on list:

MBS( "List.AND"; "1§2§3§4"; "3§4§5§6" )

### See also

- 105.5 List.AndColumn 5499

## 105.5 List.AndColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "List.AndColumn"; List1; List2; Separator; Column { ; NoReturnEnding } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

#### Column

The index of the column to compare. Starts with 0 for first column.

0

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

Performs a logical AND operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as List.And, but slower.

### Examples

And two lists based on 2 column:

```
MBS( "List.AndColumn";
"1 test 3§a b c§d§e f";
"2 test 4§a f c§d b";
" "; 1 )
```

Example result: 2 test 4

a f c

5500

d b

## 105.6 List.BestMatch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "List.BestMatch"; List; SearchText )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### SearchText

The text to search.

"Hello"

**Result** Returns best match, empty or error.

### Description

If not found, returns empty result, so FileMaker function isEmpty() will tell you if it's empty (instead of just having no text).

Uses internally the Text.LevenshteinDistance function to compare all items and look for best match.

If no entry matches over 50% , this may return empty text.

See also QuickList.BestMatch in case you need to query several times and want to load list only once.

### Examples

Looking for best match for Hilo will find Hello:

MBS( "List.BestMatch"; "Test\$Hello\$World\$Hallo"; "Hilo" )

### See also

- 105.26 List.RegExMatch 5528

## 105.7 List.CSVSplit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.CSVSplit"; Text { ; Delimiter } )

### Parameters

#### Text

The CSV text.

"Hello;World"

#### Delimiter

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The delimiter to use. If empty, we auto detect it.

","

**Result** Returns list or error.

### Description

Plugin automatically detects if comma or semicolon is used.

Returns list with all values.

Version 8 can detect tab character, too.

### Examples

Split with one value:

```
MBS("List.CSVSplit"; "hello")
```

Split with three values:

```
MBS("List.CSVSplit"; "\hello\";\test\";\CSV\")
```

Split with 3 rows and 3 values:

```
MBS("List.CSVSplit"; "\hello1\";\test\";\CSV\">$\"hello2\";\test\";\CSV\">$\"hello3\";\test\";\CSV\")
```

## 105.8 List.CountValues

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	8.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.CountValues"; List )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

**Result** Returns list or error.

### Description

The result contains count, tab and the word and is not sorted.

### Examples

List values:

MBS( "List.CountValues"; "Hello\$World\$Hello" )

Example result: 1 World

2 Hello

## 105.9 List.CountValuesMatching

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.CountValuesMatching"; List; Operator )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### Operator

The compare operator. Can be =, !=, <, >, <=, >=, , or .  
""

**Result** Returns number or error.

### Description

#### Examples

Count values 3:

MBS( "List.CountValuesMatching"; "1§2§3§4"; ">="; 3 )

Example result: 2

Count values <4:

MBS( "List.CountValuesMatching"; "1§2§3§4"; "<"; 4 )

## 105.10 List.CrossProduct

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.CrossProduct"; List1; List2 { ; Prefix; Midfix; Postfix; Flags } )

### Parameters

#### List1

The first list to process.  
"Hello\$World"

#### List2

The second list to process.  
"1\$2"

#### Prefix

Optional  
The prefix to use

#### Midfix

Optional  
The middle to use. This text is put between texts from both lists.

#### Postfix

Optional  
The postfix to use

#### Flags

Optional  
Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists. Add 2 for a diagonal cross, so we combine each element of first list with the same element index from the second list.  
1

**Result** Returns list or error.

### Description

Optionally adds prefix, postfix and midfix.  
Returns empty list if one of the lists are empty!

### Examples

Test with all parameters:

```
MBS( "List.CrossProduct"; "Hello$World"; "1$2"; "before"; "middle"; "after" )
```

Combine elements from lists:

```
MBS( "List.CrossProduct"; "Hello$World"; "1$2"; "before"; "middle"; "after"; 2 )
```

105.10. *LIST.CROSSPRODUCT*

## 105.11 List.DeCombine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.3	Yes	Yes	Yes	Yes	Yes

MBS( "List.DeCombine"; List; ColumnDelimiter; StartColumn; EndColumn { ; NoReturnEnding } )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### ColumnDelimiter

The delimiter between cols. This is also used in result.

" | "

#### StartColumn

Index of column to start. First is 0.

0

#### EndColumn

Index of column to end. First is 0. If you only want one column, please pass same value for start and end column.

0

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

This function combines values from a list by picking only given columns.

### Examples

Queries second word in each entry:

```
MBS( "List.DeCombine"; "Hello | The | World$Thats | What | WeMake$YUPP | Thats | Fun"; " | "; 1; 1;1 )
```

Example result: "The\$What\$Thats"

Query fist word in each entry:

```
MBS( "List.DeCombine"; "Hello | The | World$Thats | What | WeMake$YUPP | Thats | Fun"; " | "; 0; 0;1 )
```

Example result: "Hello\$Thats\$YUPP"

Query first adn second word in each entry:

## 105.11. *LIST.DECOMBINE*

5509

MBS( "List.DeCombine"; "Hello | The | World\$Thats | What | WeMake\$YUPP | Thats | Fun"; " | "; 0; 1 ;1 )

Example result: "Hello | The\$Thats | What\$YUPP | Thats"

## 105.12 List.Deserialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.Deserialize"; Text { ; NoReturnEnding } )

### Parameters

#### Text

The serialized data as text.

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

### Examples

Save and restore a list:

```
Set Variable [ $list; Value:"Hello$World$1234$Just a test!" ]
```

```
Set Variable [ $text; Value:MBS("List.Serialize"; $list) ]
```

```
Show Custom Dialog [ "List"; "Encoded: " & $text & $& $& "Decoded: " & MBS("List.Deserialize"; $text) ]
```

## 105.13 List.FindEquals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.FindEquals"; List1; List2 { ; NoReturnEnding } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns new list.

### Description

### Examples

Find equal entries in both lists:

MBS( "List.FindEquals"; "Hello" §"World"; "Hello" §"Friends" )

### See also

- 105.14 List.FindUnequals

## 105.14 List.FindUnequals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.FindUnequals"; List1; List2 { ; NoReturnEnding; NotFromSecondList } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

#### NotFromSecondList

Optional

Pass 1 to only returns items from first list not present in second list. Default is 0 to get items from both lists.

0

**Result** Returns new list.

### Description

### Examples

Find non equal entries in both lists:

```
MBS( "List.FindUnequals"; "Hello§World"; "Hello§Friends"; 1 )
```

Example result: "World

Friends"

Find items in first list which are not in second list:

```
MBS( "List.FindUnequals"; "Hello§World"; "Hello§Friends"; 1; 1 )
```

Example result: "Hello"

## 105.15 List.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.GetValue"; List; Index )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### Index

The index of the value to get. Must be in range from 0 to QuickList.Count-1.

\$index

**Result** Returns list or error.

### Description

If you enable tracing with Trace command, this function will be much slower due to the debug output.

## 105.17 List.HasValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.HasValue"; List; Value )

### Parameters

#### List

The list to process.  
"Hello" §" §"World"

#### Value

The value to check.  
"Hello"

**Result** Returns 1, 0 or error.

### Description

Returns 1 if value is found or 0 if not. Text comparison is case sensitive.

### Examples

Check if value is in list:

```
MBS( "List.HasValue"; "1§2§3"; "2" )
```

Print what user selected:

```
# Show dialog to select something
Set Variable [ $r; Value:MBS("ListDialog.ClearList") ]
Set Variable [ $r; Value:MBS("ListDialog.SetPrompt"; "Please select items to print:") ]
# We use tags as the visible titles may be localized.
Set Variable [ $r; Value:MBS("ListDialog.AddItemToList"; "Werbung§Angebot§Rechnung§Erinnerung"; "Flyer§Of-fer§Invoice§Reminder") ]
Set Variable [ $r; Value:MBS("ListDialog.SetAllowMultipleSelection"; 1) ]
Set Variable [ $r; Value:MBS("ListDialog.SetSelectedTitle"; "Offer") ]
# Show dialog
Set Variable [ $r; Value:MBS("ListDialog.ShowDialog") ]
# now do things
Set Variable [ $selected; Value:MBS("ListDialog.GetSelectedTag") ]
If [ MBS("List.HasValue"; $selected; "Flyer") ]
# print flyer
End If
If [ MBS("List.HasValue"; $selected; "Invoice") ]
# print invoice
End If
If [ MBS("List.HasValue"; $selected; "Offer") ]
# print offer
```

105.17. *LIST.HASVALUE* 5517

```
End If  
If [ MBS("List.HasValue"; $selected; "Reminder") ]  
# print reminder  
End If
```

## 105.18 List.IndexOfFirstValueMatching

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.IndexOfFirstValueMatching"; List; Operator { ; Text } )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### Operator

The compare operator. Can be =, !=, <, >, <=, >=, , or .

""

#### Text

Optional

The text to compare.

"Test"

**Result** Returns number or error.

### Description

#### Examples

Find the value =2:

MBS( "List.IndexOfFirstValueMatching"; "1§2§3§4"; "="; 2 )

Example result: 1

Find the value 3

MBS( "List.IndexOfFirstValueMatching"; "1§2§3§4"; ">="; 3 )

Example result: 2

## 105.20 List.MatchesPostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.MatchesPostfix"; List; Text { ; NoReturnEnding } )

### Parameters

#### List

The list of texts to search.

"Hello"

#### Text

The text to find.

"Hello"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns new list or error.

### Description

Comparison is case insensitive.

### Examples

Finds list entries with matching postfixes:

MBS( "List.MatchesPostfix"; "Hello\$auto\$World"; "o" )

MBS( "List.MatchesPrefix"; List; Text { ; NoReturnEnding } )

### Parameters

#### List

The list of texts to search.

"Hello"

#### Text

The text to find.

"Hello"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns new list or error.

### Description

Comparison is case insensitive.

### Examples

Finds matching prefixes:

MBS( "List.MatchesPrefix"; "Hello\$www\$World"; "w" )

### See also

## 105.22 List.Not

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.Not"; List1; List2 { ; NoReturnEnding } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns OK or error.

### Description

Performs a logical NOT operation.

### Examples

Operate not on two lists:

MBS("List.Not"; "Abc\$Def\$Ghi\$Jkl"; "Abc\$Jkl\$Zui\$Edf" )

### See also

- 105.23 List.NotColumn 5523

Created 8th October 2014, last changed 8th October 2014.

## 105.23 List.NotColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "List.NotColumn"; List1; List2; Separator; Column { ; NoReturnEnding } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

#### Column

The index of the column to compare. Starts with 0 for first column.

0

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

Performs a logical NOT operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as List.Not, but slower.

### See also

- 105.5 List.AndColumn 5499
- 105.22 List.Not 5522

## 105.24 List.Or

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.Or"; List1; List2 { ; NoReturnEnding } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

Performs a logical OR operation.

### Examples

Perform logical OR on list:

MBS( "List.Or"; "1§2§3§4"; "3§4§5§6" )

### See also

- 105.25 List.OrColumn 5526

## 105.25 List.OrColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "List.OrColumn"; List1; List2; Separator; Column { ; NoReturnEnding } )

### Parameters

#### List1

The first list.  
"Hello" §"World"

#### List2

The second list.  
"Hello" §"Friends"

#### Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".  
Char(9)

#### Column

The index of the column to compare. Starts with 0 for first column.  
0

#### NoReturnEnding

Optional  
Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.  
1

**Result** Returns list or error.

### Description

Performs a logical OR operation.

Checks the given column in both lists too compare.  
If Separator is empty, this is same as List.Or, but slower.

### Examples

Trying OR based on second column:

MBS( "List.OrColumn"; "1 test 3\$a b c\$d\$e f"; "2 test 4\$a f c\$d b"; " "; 1 )

Example result: 1 test 3

a b c

d

e f

2 test 4

105.25. *LIST.ORCOLUMN*

5527

## 105.26 List.RegExMatch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.RegExMatch"; List; Pattern; CompilerOptions; ExecuteOptions { ; NoReturnEnding } )

### Parameters

#### List

The list of texts to search.

"Hello"

#### Pattern

The pattern to use.

"H(\*)"

#### CompilerOptions

A number for the options to use. e.g. 1 for case insensitive or 512 for ungreedy.

512+1

#### ExecuteOptions

The options for executing.

0

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

This compiles the pattern, executes it and looks if we have a match or not for each list item.

Returns the list items which match.

### Examples

Match Hello with pattern:

```
MBS( "List.RegExMatch"; "Hello$Test$World$House$Test"; "H(*)o")
```

same without return on end of result:

```
MBS( "List.RegExMatch"; "Hello$Test$World$House$Test"; "H(*)o"; 0; 0; 1)
```

## 105.27 List.Remove

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.Remove"; List; Index )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### Index

The index of the item to remove. Range from 0 to QuickList.Count-1.

0

**Result** Returns list or error.

### Description

Returns a new list where the value is missing.

For big lists, using QuickList functions is much faster. The list is only parsed once and stored in memory.

### See also

Created 11st March 2017, last changed 13th November 2017.

## 105.28 List.RemoveDuplicateItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.RemoveDuplicateItems"; List { ; NoReturnEnding; RemoveAll } )

### Parameters

#### List

The list to process.

"Hello" §"Hello" §"World"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

#### RemoveAll

Optional

If duplicate is found also remove the first occurrence. Set to 1 to enable or 0 to disable. Default is disabled.

1

**Result** Returns new list.

### Description

Similar to UniqueValues function in FileMaker to find unique values.

### Examples

Remove duplicates:

MBS( "List.RemoveDuplicateItems"; "Hello\$World\$Hello" )

Remove all duplicates

MBS( "List.RemoveDuplicateItems"; "Hello\$World\$Hello"; 0; 1 )

### See also

## 105.29 List.RemoveEmptyItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.RemoveEmptyItems"; List { ; NoReturnEnding } )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns new list.

### Description

### Examples

Remove empty lines:

MBS( "List.RemoveEmptyItems"; "Hello" §" §"World" )

## 105.30 List.RemovePostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.RemovePostfix"; List; Postfix { ; NoReturnEnding; CaseSensitive } )

### Parameters

#### List

The list to process.

"Hello\$World"

#### Postfix

The text to remove.

"llo"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

#### CaseSensitive

Optional

Whether to match with case sensitive comparison. Default is 0 for case insensitive. You can pass 1 to have a case sensitive comparison.

0

**Result** Returns list or error.

### Description

### Examples

Remove postfix from list:

MBS( "List.RemovePostfix"; "Hello?\$Other\$World?"; "?" )

### See also

## 105.31 List.RemovePrefix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.RemovePrefix"; List; Prefix { ; NoReturnEnding; CaseSensitive } )

### Parameters

#### List

The list to process.

"Hello\$World"

#### Prefix

The text to remove.

"H"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

#### CaseSensitive

Optional

Whether to match with case sensitive comparison. Default is 0 for case insensitive. You can pass 1 to have a case sensitive comparison.

0

**Result** Returns list or error.

### Description

#### Examples

Remove prefix from list:

```
MBS( "List.RemovePrefix"; "testHello$Other$testWorld"; "test")
```

List files with relative paths:

```
MBS( "List.RemovePrefix"; MBS( "Files.ListRecursive"; "/Users/Shared/"); "/Users/Shared/")
```

## 105.32 List.RemoveValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.1	Yes	Yes	Yes	Yes	Yes

```
MBS( "List.RemoveValue"; List; Value { ; All } )
```

### Parameters

#### List

The list to process.

```
"Hello" §" §"World"
```

#### Value

The value to remove.

```
"Hello"
```

#### All

Optional

Optional, pass 1 to remove all values with the given value. Pass 0 (default) to remove only the first matching value.

```
0
```

**Result** Returns list or error.

### Description

### Examples

Remove one value:

```
MBS( "List.RemoveValue"; "Hello§123§World§123§abc"; "123")
```

Example result: Hello

World

123

abc

Remove all values:

```
MBS( "List.RemoveValue"; "Hello§123§World§123§abc"; "123"; 1)
```

Example result: Hello

World

abc

## 105.33 List.Reverse

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.Reverse"; List { ; NoReturnEnding } )

### Parameters

#### List

The list to sort.

"Hello" §"World"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns OK or error.

### Description

### Examples

Reverse list:

MBS( "List.Reverse"; "Hello\$World\$Test" )

### 105.33.1 Blog Entries

## 105.34 List.Serialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.Serialize"; List )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

**Result** Returns text or error.

### Description

The dictionary content is stored in a base64 encoded string which the plugin function List.Deserialize and QuickList.Deserialize can read.

Using this function allows to store a list in a text field or transmit it with Socket functions, SerialPort functions or by writing it to a file.

### Examples

Save and restore a list:

```
Set Variable [ $list; Value:"Hello$World$1234$Just a test!" ]
```

```
Set Variable [ $text; Value:MBS("List.Serialize"; $list) ]
```

```
Show Custom Dialog [ "List"; "Encoded: " & $text & §& §& "Decoded: " & MBS("List.Deserialize"; $text) ]
```

### See also

## 105.35 List.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.1	Yes	Yes	Yes	Yes	Yes

MBS( "List.SetValue"; List; Index; Text )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### Index

The index of the value to set. Must be in range from 0 to ValueCount(List).

\$index

#### Text

The text to add.

"Hello"

**Result** Returns list or error.

### Description

If index is equal to count, we append the text to the list.

For big lists, using QuickList functions is much faster. The list is only parsed once and stored in memory.

### See also

- 105.3 List.AddValue 5496

Created 11st March 2017, last changed 29th March 2019.

## 105.36 List.Sort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.Sort"; List { ; Flags; NoReturnEnding } )

### Parameters

#### List

The list to sort.  
"Hello" §"World"

#### Flags

Optional

Optional, whether to sort case insensitive or descending. Pass 1 to sort case insensitive or 0 to sort case sensitive. Add 2 to sort descending. Add 4 for sorting dates in DD.MM.YYYY style and 8 for sorting dates in MM.DD.YYYY style. Add 16 for number sorting (new in 7.5).

1

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns new list.

### Description

Version 6.2 adds new modes for date sorting. Mode 4 for DD.MM.YYYY style and mode 8 for MM.DD.YYYY style.

Version 7.5 adds number sorting.

### Examples

Sort case sensitive:

```
MBS( "List.Sort"; "Hello$World$Test" )
```

Sort case insensitive:

```
MBS( "List.Sort"; "Hello$World$test"; 1 )
```

Sort case sensitive and descending:

```
MBS( "List.Sort"; "Hello$World$Test"; 2 )
```

Sort case insensitive and descending:

```
MBS( "List.Sort"; "Hello$World$test"; 3 )
```

Sort German dates:

Show Custom Dialog [ MBS("List.Sort"; "01.01.2001§12.04.1981§01.04.1981§12.07.1981§12.01.1981§23.11.2014";  
4; 0) ]

Sort US dates:

Show Custom Dialog [ MBS("List.Sort"; "01/01/2001§04/12/1981§04/01/1981§07/12/1981§01/12/1981§11/23/2014";  
8; 0) ]

Sort numbers

MBS( "List.Sort"; "1§55§7"; 16 )

Example result: "1

7

555

"

## 105.37 List.SortWithEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "List.SortWithEvaluate"; List; Expression { ; NoReturnEnding } )

### Parameters

#### List

The list to sort.

"Hello" §"World"

#### Expression

The expression to evaluate. Can include "leftValue" and "rightValue" as variables.

"leftValue >rightValue"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns OK or error.

### Description

The expression is run every time two values are compared, so keep it quick. It should return 1 if leftValue is smaller than rightValue.

Our normal List.Sort is faster due to not having the overhead of evaluating expressions.

### Examples

Sort numbers numeric with GetAsNumber() function:

```
MBS("List.SortWithEvaluate"; "1§2§3"; "GetAsNumber(leftValue) <GetAsNumber(rightValue)")
```

Example result: 1

3

22

Sort dates with using GetAsDate:

```
MBS("List.SortWithEvaluate"; "1.1.2000§2.2.2020§3.4.1998"; "GetAsDate(leftValue) <GetAsDate(right-Value)")
```

## 105.38 List.SubList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "List.SubList"; List; Index; Count { ; NoReturnEnding } )

### Parameters

#### List

The list to process.

"Hello" §" §"World"

#### Index

The zero based index where to start. Or in other words: How many entries to skip.

3

#### Count

How many entries to copy. If negative, we pick the other items left.

5

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns OK or error.

### Description

#### Examples

Get first item:

```
MBS( "List.SubList"; "Hello"; 0; 1; 1)
```

Example result: "Hello"

Get all items:

```
MBS( "List.SubList"; "a$b$c$d$e"; 0; -1)
```

Example result: "a

b

c

d

e

"

Get 2 items starting at offset 2:

```
MBS( "List.SubList"; "a$b$c$d$e"; 2; 2)
```

Example result: "c  
d  
"

## 105.39 List.Trim

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "List.Trim"; List { ; NoReturnEnding } )

### Parameters

#### List

The list to sort.

"Hello" §"World"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns OK or error.

### Description

### Examples

Trim list values:

MBS( "List.Trim"; " Hello §With tab §" )

Created 21st October 2017, last changed 21st October 2017.

## 105.40 List.ValueIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.ValueIndex"; List; Value )

### Parameters

#### List

The list of texts to search.

"Hello"

#### Value

The text to find.

"Hello"

**Result** Returns index, nothing or error.

### Description

Returns zero based index (0 = first list value).

Returns empty result if not found.

Comparison is case insensitive.

### Examples

Searches a word in a list:

# Returns 4

MBS( "List.ValueIndex"; "Hello\$1\$2\$3\$World"; "world" )

### 105.40.1 Blog Entries

- [MBS FileMaker Plugin, version 5.4pr7](#)

Created 20th November 2015, last changed 20th November 2015.

## 105.41 List.XOr

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "List.XOr"; List1; List2 { ; NoReturnEnding } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

Performs an exclusive logical OR operation.

### Examples

Perform logical XOR on list:

MBS( "List.XOr"; "1§2§3§4"; "3§4§5§6" )

### See also

- 105.24 List.Or 5525

## 105.42 List.XOrColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "List.XOrColumn"; List1; List2; Separator; Column { ; NoReturnEnding } )

### Parameters

#### List1

The first list.

"Hello" §"World"

#### List2

The second list.

"Hello" §"Friends"

#### Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

#### Column

The index of the column to compare. Starts with 0 for first column.

0

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns list or error.

### Description

Performs an exclusive logical OR operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as List.XOr, but slower.

## 105.43 QuickList.AddList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.AddList"; List1; List2 { ; Separator } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The list to add.

\$List2

#### Separator

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The separator to use. Can be ASCII character number (e.g. 9 for tab) or a text where we use first character as separator. Default is newline character.

" | "

**Result** Returns OK or error.

### Description

### Examples

Create a quicklist and add a list:

```
Set Variable [ $q; Value:MBS("QuickList.New"; "Hello$World") ]
Set Variable [ $r; Value:MBS("QuickList.AddList"; $q; "Hello$World") ]
Show Custom Dialog [ MBS("QuickList.GetList"; $q) ]
Set Variable [ $r; Value:MBS("QuickList.Free"; $q) ]
```

## 105.44 QuickList.AddMultiValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.AddMultiValue"; ListRef; Text; Count { ; Separator } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Text

The text to add. Can be a list itself.

"Hello"

#### Count

The number of times to add the value/list. Default is 0.

5

#### Separator

Optional

Available in MBS FileMaker Plugin 8.5 or newer.

The separator to use. Can be ASCII character number (e.g. 9 for tab) or a text where we use first character as separator. Default is newline.

" | "

**Result** Returns OK or error.

### Description

### Examples

Create a list:

```
Let ( [
q = MBS( "QuickList.New" );
r = MBS( "QuickList.AddValue"; q; "First" );
r = MBS( "QuickList.AddMultiValue"; q; "Middle"; 10 );
r = MBS( "QuickList.AddValue"; q; "Last" );
list = MBS("QuickList.GetList"; q);
r = MBS( "QuickList.Free"; q )
]; list )
```

Example result: First

Middle

Middle

Middle

Middle

Middle

Middle

Middle

Middle

Middle

Middle

Last

Create list from list:

```
Let ( [  
q = MBS( "QuickList.New" );  
r = MBS( "QuickList.AddMultiValue"; q; "Hello$World"; 3 );  
list = MBS("QuickList.GetList"; q);  
r = MBS( "QuickList.Free"; q )  
] ; list )
```

Example result: Hello

World

Hello

World

Hello

World

## 105.45 QuickList.AddPostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.AddPostfix"; ListRef; Postfix { ; ReturnNewList } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Postfix

The text to append.

"!"

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.  
Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list or error.

### Description

### Examples

Try in one Let statement:

```
Let( [
list = MBS("QuickList.New"; "Hello$World");
e = MBS("QuickList.AddPrefix"; list; ">");
e = MBS("QuickList.AddPostfix"; list; "<");
r = MBS("QuickList.GetList"; list);
d = MBS("QuickList.Free"; list)
]; r)
```

## 105.46 QuickList.AddPrefix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.AddPrefix"; ListRef; Prefix { ; ReturnNewList } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Prefix

The text to prepend.

"!"

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.  
Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list or error.

### Description

### Examples

Try in one Let statement:

```
Let( [
list = MBS("QuickList.New"; "Hello$World");
e = MBS("QuickList.AddPrefix"; list; ">");
e = MBS("QuickList.AddPostfix"; list; "<");

## 105.47 QuickList.AddQuickList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.AddQuickList"; ListRef; ListRef2 )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.  
\$List

#### ListRef2

The reference to the list returned from QuickList.New function.  
\$List

**Result** Returns OK or error.

### Description

### Examples

Build two quicklists and add one to other:

```
Set Variable [ $q; Value:MBS("QuickList.New"; "Hello$World") ]
Set Variable [ $o; Value:MBS("QuickList.New"; "1$2") ]
Set Variable [ $r; Value:MBS("QuickList.AddQuickList"; $q; $o) ]
Show Custom Dialog [ MBS("QuickList.GetList"; $q) ]
Set Variable [ $r; Value:MBS("QuickList.Free"; $q) ]
Set Variable [ $r; Value:MBS("QuickList.Free"; $o) ]
```

### See also

## 105.48 QuickList.AddSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.AddSQL"; ListRef; SQL Statement; FileName { ; Params } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### SQL Statement

SQL Statement as a Text string

#### FileName

The target database name. Can be empty to not limit query to one database.

""

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns number of items added or error.

### Description

All values in the result set are added as text to the list.

Returns error in case of SQL error with error message.

This function is currently only supported for FileMaker 11 and newer. If you need it for older versions, please contact us.

### Examples

Fill a list and return it:

```
# create new list
$list = MBS("QuickList.New")
# add values via SQL
MBS("QuickList.AddSQL"; $list; "SELECT TextField FROM \"Test Table\"")
# query list content for displaying
$text = MBS("QuickList.GetList"; $list)
# and free it
MBS("QuickList.Free"; $list )
```

Add values based on SQL query in current file and one parameter:

```
MBS("QuickList.AddSQL"; "12002"; "SELECT TextField FROM \"Test Table\" WHERE NumberField>?";
```

Get(FileName); 1 )

Run query with quoted names and parameters for value:

```
Set Variable [ $Text ; Value: MBS("QuickList.AddSQL"; $ListNum; "SELECT \"MyField\" from \"MyTable\"  
Where \"SomeField\" = ?"; Get(FileName); "xyz") ]
```

## 105.49 QuickList.AddValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.AddValue"; ListRef; Text )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Text

The text to add.

"Hello"

**Result** Returns OK or error.

### Description

Building list via plugin can be much faster than building using FileMaker internal functions.

### Examples

Add items to a list:

```
$listID = MBS( "QuickList.New"; "Hello$World" )
$r = MBS( "QuickList.AddValue"; $listID; "1234" )
$r = MBS( "QuickList.AddValue"; $listID; "5678" )
$list = MBS( "QuickList.GetList"; $listID )
$r = MBS( "QuickList.Free"; $listID )
```

## 105.50 QuickList.And

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.And"; List1; List2 { ; ReturnNewList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

Performs a logical AND operation.

### Examples

Performs And on two quicklists:

```
$list1 = MBS( "QuickList.New"; "a$b$c$d" )
$list2 = MBS( "QuickList.New"; "a$d" )
$list3 = MBS( "QuickList.And"; $list1; $list2; 1 )
$list = MBS( "QuickList.GetList"; $list3 )
$r = MBS( "QuickList.Free"; $list1 )
$r = MBS( "QuickList.Free"; $list2 )
$r = MBS( "QuickList.Free"; $list3 )
```

## 105.51 QuickList.AndColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.AndColumn"; List1; List2; Separator; Column { ; ReturnNewList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

#### Column

The index of the column to compare. Starts with 0 for first column.

0

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

Performs a logical AND operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as QuickList.And, but slower.

## 105.52 QuickList.BestMatch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.BestMatch"; ListRef; SearchText )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### SearchText

The text to search.

"Hello"

**Result** Returns best match, empty or error.

### Description

If not found, returns empty result, so FileMaker function isEmpty() will tell you if it's empty (instead of just having no text).

Uses internally the Text.LevenshteinDistance function to compare all items and look for best match.

If no entry matches over 50% , this may return empty text.

## 105.53 QuickList.CSVSplit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.CSVSplit"; Text { ; Delimiter } )

### Parameters

#### Text

The CSV text.  
"Hello;World"

#### Delimiter

Optional  
Available in MBS FileMaker Plugin 8.5 or newer.  
The delimiter to use. If empty, we auto detect it.  
";"

**Result** Returns QuickList reference number or error.

### Description

Plugin automatically detects if comma or semicolon is used.  
Returns list with all values.

Version 8 can detect tab character, too.

### Examples

Try with 3 values:

```
MBS("QuickList.CSVSplit"; "\hello\";\test\";\CSV\")
```

## 105.58 QuickList.CrossProduct

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.CrossProduct"; List1; List2 { ; Prefix; Midfix; Postfix; Flags } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### Prefix

Optional

The prefix to use

#### Midfix

Optional

The middle to use. This text is put between texts from both lists.

#### Postfix

Optional

The postfix to use

#### Flags

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter. Add 2 for a diagonal cross, so we combine each element of first list with the same element index from the second list.

0

**Result** Returns list or error.

### Description

Optionally adds prefix, postfix and midfix.

Returns empty list if one of the lists are empty!

### Examples

Try in a Let statement:

```
Let( [
list1 = MBS("QuickList.New"; "Hello$World");
list2 = MBS("QuickList.New"; "1$2");
e = MBS("QuickList.CrossProduct"; list1; list2);
r = MBS("QuickList.GetList"; list1);
d = MBS("QuickList.Free"; list1);
```

```
d = MBS("QuickList.Free"; list2)
]; r)
```

## 105.59 QuickList.DeCombine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.5	Yes	Yes	Yes	Yes	Yes

```
MBS( "QuickList.DeCombine"; ListRef; ColumnDelimiter; StartColumn; EndColumn { ; ReturnNewList; NoReturnEnding } )
```

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### ColumnDelimiter

The delimiter between cols. This is also used in result.

" | "

#### StartColumn

Index of column to start. First is 0.

0

#### EndColumn

Index of column to end. First is 0. If you only want one column, please pass same value for start and end column.

0

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to return a text list.

0

#### NoReturnEnding

Optional

If you passed 0 for ReturnNewList, decides about new list: Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns new list or error.

### Description

This function combines values from a list by picking only given columns.

### Examples

Sort a list column:

```
Set Variable [ $List ; Value: "65412 | Schreiber | Klaus | 459oz8235" & §& "76542 | Abraham | Hermmann | 38957zf" & §& "85112 | Behrens | Robert | 489748hj" ]
```

```
Set Variable [ $QuickList1 ; Value: MBS( "QuickList.New"; $list ) ]
```

```
#
```

```

Set Variable [ $QuickList2 ; Value: MBS( "QuickList.DeCombine"; $QuickList1; " | "; 1 /* StartColumn*/;
1 /* EndColumn */; 1 /* New List*/ ) ]
Set Variable [ $List2 ; Value: MBS( "QuickList.GetList"; $QuickList2) ]
Set Variable [ $r ; Value: MBS( "QuickList.SortWith"; $QuickList2; 1; $QuickList1 ) ]
Set Variable [ $List1 ; Value: MBS( "QuickList.GetList"; $QuickList1) ]
#
Set Variable [ $r ; Value: MBS( "QuickList.Free"; $QuickList1 ) ]
Set Variable [ $r ; Value: MBS( "QuickList.Free"; $QuickList2 ) ]

```

## 105.60 QuickList.Deserialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Deserialize"; Text )

### Parameters

#### Text

The serialized data as text.

**Result** Returns quick list reference number or error.

### Description

### Examples

Create and save a list to restore it:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$1234$Just a test!" ) ]
Set Variable [ $text; Value:MBS("Quicklist.Serialize"; $list) ]
Set Variable [ $secondList; Value:MBS("Quicklist.Deserialize"; $text) ]
Show Custom Dialog [ "List"; "Encoded: " & $text & $& $& "Decoded: " & MBS("QuickList.GetList";
$secondList) ]
Set Variable [ $r; Value:MBS("Quicklist.Free"; $list) ]
Set Variable [ $r; Value:MBS("Quicklist.Free"; $secondList) ]
```

## 105.61 QuickList.FindEquals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "QuickList.FindEquals"; List1; List2 { ; ReturnNewList } )
```

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.  
Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

## 105.62 QuickList.FindUnequals

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.FindUnequals"; List1; List2 { ; ReturnNewList; NotFromSecondList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.  
Pass 0 (Default) to modify the list in the List1 parameter.

0

#### NotFromSecondList

Optional

Pass 1 to only returns items from first list not present in second list. Default is 0 to get items from both lists.

0

**Result** Returns list, OK or error.

### Description

## 105.63 QuickList.Free

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Free"; ListRef )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

**Result** Returns OK or error.

### Description

Please call this for each list to make sure you don't run out of memory.

### Examples

Creates list and frees it:

```
$list = MBS( "QuickList.New"; "Hello$World$Test" )
$r = MBS( "QuickList.Free"; $list)
```

## 105.64 QuickList.GetList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.GetList"; ListRef { ; NoReturnEnding; Delimiter } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### NoReturnEnding

Optional

Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

#### Delimiter

Optional

The delimiter to use. Can be empty to have no delimiter. Common use is to pass "§", ", " or "; ".  
", "

**Result** Returns text or error.

### Description

Lines are separated by return character.

### Examples

Create a list and query it:

```
$listID = MBS( "QuickList.New"; "Hello$World" )
$list = MBS( "QuickList.GetList"; $listID )
$r = MBS( "QuickList.Free"; $listID )
```

Try with delimiter:

```
Set Variable [ $listID; Value:MBS( "QuickList.New"; "Hello$World" ) ]
Set Variable [ $list1; Value:MBS( "QuickList.GetList"; $listID ) ]
Show Custom Dialog [ "Result default"; $list1 ]
Set Variable [ $list2; Value:MBS( "QuickList.GetList"; $listID; 0; "" ) ]
Show Custom Dialog [ "Result with empty delimiter"; $list2 ]
Set Variable [ $list3; Value:MBS( "QuickList.GetList"; $listID; 0; " " ) ]
Show Custom Dialog [ "Result with space delimiter"; $list3 ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $listID ) ]
```

## 105.65 QuickList.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.GetValue"; ListRef; Index )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Index

The index of the value to get. Must be in range from 0 to QuickList.Count-1.

\$index

**Result** Returns OK or error.

### Description

Using our QuickList functions is much faster than using GetValue(listOfValues;valueNumber) function in FileMaker for large lists.

If you enable tracing with Trace command, this function will be much slower due to the debug output.

### Examples

Query values from List:

```
$listID = MBS( "QuickList.New"; "Hello$World" )
$v1 = MBS( "QuickList.GetValue"; $listID; 1 )
$v2 = MBS( "QuickList.GetValue"; $listID; 2 )
$r = MBS( "QuickList.Free"; $listID )
```

## 105.66 QuickList.HasDuplicateItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.HasDuplicateItems"; ListRef )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.  
\$List

**Result** Returns 1, 0 or error.

### Description

Returns 1 if duplicate lines are found or 0 if not.

### See also

- [105.16 List.HasDuplicateItems](#) 5515
- [105.74 QuickList.New](#) 5604

## 105.67 QuickList.HasValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.HasValue"; ListRef; Value )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Value

The value to check.

"Hello"

**Result** Returns 1, 0 or error.

### Description

Returns 1 if value is found or 0 if not. Text comparison is case sensitive.

### Examples

Checks if list contains value:

```
Set Variable [ $q; Value:MBS("QuickList.New"; "Hello$World") ]
Show Custom Dialog [ "Contains World"; MBS("QuickList.HasValue"; $q; "World") ]
Show Custom Dialog [ "Contains Test"; MBS("QuickList.HasValue"; $q; "Test") ]
Set Variable [ $r; Value:MBS("QuickList.Free"; $q) ]
```

## 105.68 QuickList.IndexOfFirstValueMatching

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.IndexOfFirstValueMatching"; ListRef; Operator { ; Text } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Operator

The compare operator. Can be =, !=, <, >, <=, >=, , or .

"""

#### Text

Optional

The text to compare.

"Test"

**Result** Returns number or error.

### Description

### Examples

Find index of first value 4:

```
Let( [
list = MBS( "QuickList.New"; "1$2$3$4");
count = MBS( "QuickList.IndexOfFirstValueMatching"; list; ""; 4 );
r = MBS("QuickList.Free"; list) ] ;
count)
```

## 105.69 QuickList.InsertValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.InsertValue"; ListRef; Index; Text )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.  
\$List

#### Index

the index where to insert.  
0

#### Text

The text to add.  
"Hello"

**Result** Returns OK or error.

### Description

Please note that QuickList.AddValue is more efficient than inserting.

## 105.71 QuickList.MatchesPostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.MatchesPostfix"; ListRef; Text { ; Flags } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Text

The text to find.

"Hello"

#### Flags

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter. Add 2 to split. This is only useful with first option together (so pass 3 for both). Matching entries will be in new list and non matching entries will stay in old list. Add 4 to reverse operation (NOT).

0

**Result** Returns OK, list or error.

### Description

Comparison is case insensitive.

### Examples

Finds list entries with same postfixes:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$auto" ) ]
Set Variable [ $matchesList; Value:MBS( "QuickList.MatchesPostfix"; $list; "o"; 0 ) ]
Set Variable [ $text; Value:MBS( "QuickList.GetList"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
Show Custom Dialog [ "result"; $text ]
```

## 105.72 QuickList.MatchesPrefix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.MatchesPrefix"; ListRef; Text { ; Flags } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Text

The text to find.

"Hello"

#### Flags

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter. Add 2 to split. This is only useful with first option together (so pass 3 for both). Matching entries will be in new list and non matching entries will stay in old list. Add 4 to reverse operation (NOT).

0

**Result** Returns OK, list or error.

### Description

Comparison is case insensitive.

### Examples

Finds list entries with same prefixes:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$auto" ) ]
Set Variable [ $matchesList; Value:MBS( "QuickList.MatchesPrefix"; $list; "w"; 0 ) ]
Set Variable [ $text; Value:MBS( "QuickList.GetList"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
Show Custom Dialog [ "result"; $text ]
```

Find entries not matching in prefix:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$auto" ) ]
Set Variable [ $matchesList; Value:MBS( "QuickList.MatchesPrefix"; $list; "w"; 4 ) ]
Set Variable [ $text; Value:MBS( "QuickList.GetList"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
Show Custom Dialog [ "Result"; $text ]
```

## 105.73 QuickList.MatchesSubString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.MatchesSubString"; ListRef; Text { ; Flags } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Text

The text to find.

"Hello"

#### Flags

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter. Add 2 to split. This is only useful with first option together (so pass 3 for both). Matching entries will be in new list and non matching entries will stay in old list. Add 4 to reverse operation (NOT).

0

**Result** Returns OK, list or error.

### Description

Comparison is case insensitive. (currently case sensitive on Windows)

### Examples

Split a list matching substring:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$auto" ) ]

## 105.74 QuickList.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.New" { ; Text; Separator; RefNum } )

### Parameters

#### Text

Optional

Initial list content.

"Hello\$World\$Test"

#### Separator

Optional

The separator to use. Can be ASCII character number (e.g. 9 for tab) or a text where we use first character as separator. Default is newline.

" | "

#### RefNum

Optional

The desired reference number. Leave empty for default.

"IDs"

**Result** Returns reference number or error.

### Description

You can provide whatever separator you need. Default is new line characters. But works also fine with comma, semicolon or tab characters.

Please use QuickList.Free to release the list later.

QuickList reference numbers are starting at 12000 and counting up for each new list.

### Examples

Creates new list:

```
MBS( "QuickList.New"; "Hello$World$Test" )
```

Create list with | as separator:

```
MBS("QuickList.New"; "Hello | World"; " | ")
```

Parse with newline as separator:

```
MBS("QuickList.GetList"; MBS( "QuickList.New"; "1$2" & Char(10) & "3" & Char(13) & "4" ))
```

# accepts CR and LF as delimiter.

## 105.75 QuickList.Not

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Not"; List1; List2 { ; ReturnNewList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

Performs a logical NOT operation.

## 105.76 QuickList.NotColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.NotColumn"; List1; List2; Separator; Column { ; ReturnNewList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

#### Column

The index of the column to compare. Starts with 0 for first column.

0

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

Performs a logical NOT operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as QuickList.Not, but slower.

### See also

## 105.77 QuickList.Or

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Or"; List1; List2 { ; ReturnNewList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

Performs a logical OR operation.

### Examples

Creates two lists and combines them:

```
$list1 = MBS( "QuickList.New"; "Hello$World")
```

```
$list2 = MBS( "QuickList.New"; "a$b")
```

```
$list3 = MBS( "QuickList.Or"; $list1; $list2; 1 )
```

```
$list = MBS( "QuickList.GetList"; $list3)
```

```
$r = MBS("QuickList.Free"; $list1)
```

```
$r = MBS("QuickList.Free"; $list2)
```

```
$r = MBS("QuickList.Free"; $list3)
```

105 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.OrColumn"; List1; List2; Separator; Column { ; ReturnNewList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

#### Column

The index of the column to compare. Starts with 0 for first column.

0

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

Performs a logical OR operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as QuickList.Or, but slower.

## 105.79 QuickList.Pop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Pop"; ListRef )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

**Result** Returns value or error.

### Description

### Examples

Push and pop:

```
Set Variable [ $list; Value:MBS( "QuickList.New" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "Hello" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "World" ) ]
Show Custom Dialog [ "List"; MBS( "QuickList.Pop"; $list ) ]
Show Custom Dialog [ "List"; MBS( "QuickList.Pop"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
```

Created 2nd August 2015, last changed 2nd August 2015.

## 105.80 QuickList.PopFirst

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.PopFirst"; ListRef )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

**Result** Returns value or error.

### Description

Please note that QuickList.Pop is more efficient than QuickList.PopFirst.

### Examples

Push and pop first:

```
Set Variable [ $list; Value:MBS( "QuickList.New" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "Hello" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "World" ) ]
Show Custom Dialog [ "List"; MBS( "QuickList.PopFirst"; $list ) ]
Show Custom Dialog [ "List"; MBS( "QuickList.PopFirst"; $list ) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $list ) ]
```

## 105.81 QuickList.Push

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Push"; ListRef; Text )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Text

The text to add.

"Hello"

**Result** Returns OK or error.

### Description

### Examples

Trying push:

```
Set Variable [ $list; Value:MBS( "QuickList.New" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "Hello" ) ]
Set Variable [ $r; Value:MBS( "QuickList.Push"; $list; "World" ) ]

## 105.82 QuickList.RegExMatch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

```
MBS( "QuickList.RegExMatch"; ListRef; Pattern; CompilerOptions; ExecuteOptions { ; ReturnNewList }
)
```

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Pattern

The pattern to use.

"H(.\*)"

#### CompilerOptions

A number for the options to use. e.g. 1 for case insensitive or 512 for ungreedy.

512+1

#### ExecuteOptions

The options for executing.

0

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list or error.

### Description

This compiles the pattern, executes it and looks if we have a match or not for each list item.

Returns the list items which match.

## 105.86 QuickList.RemovePostfix

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.RemovePostfix"; ListRef; Postfix { ; ReturnNewList; CaseSensitive } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Postfix

The text to remove.

"llo"

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to modify the list in the List1 parameter.

0

#### CaseSensitive

Optional

Whether to match with case sensitive comparison. Default is 0 for case insensitive. You can pass 1 to have a case sensitive comparison.

0

**Result** Returns list or error.

### Description

#### Examples

Try in one let statement:

```
Let( [
list = MBS("QuickList.New"; ">Hello<$>World<");
e = MBS("QuickList.RemovePrefix"; list; ">");
e = MBS("QuickList.RemovePostfix"; list; "<");
r = MBS("QuickList.GetList"; list);

## 105.89 QuickList.Reserve

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Reserve"; ListRef; Size )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Size

The new size in entries. So passing 100 will make sure we have space for 100 list entries at least. If more are added, the list grows automatically.

100

**Result** Returns OK or error.

### Description

To ensure upfront that enough memory is available.

This will not change the count, just preallocate memory.

## 105.91 QuickList.Serialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Serialize"; ListRef )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

**Result** Returns text or error.

### Description

The dictionary content is stored in a base64 encoded string which the plugin function List.Deserialize and QuickList.Deserialize can read.

Using this function allows to store a list in a text field or transmit it with Socket functions, SerialPort functions or by writing it to a file.

### Examples

Create and save a list to restore it:

```
Set Variable [ $list; Value:MBS( "QuickList.New"; "Hello$World$1234$Just a test!" ) ]
Set Variable [ $text; Value:MBS("Quicklist.Serialize"; $list) ]
Set Variable [ $secondList; Value:MBS("Quicklist.Deserialize"; $text) ]
Show Custom Dialog [ "List"; "Encoded: " & $text & $& $& "Decoded: " & MBS("QuickList.GetList";
$secondList) ]
Set Variable [ $r; Value:MBS("Quicklist.Free"; $list) ]
Set Variable [ $r; Value:MBS("Quicklist.Free"; $secondList) ]
```

- [MBS FileMaker Plugin, version 5.2pr6](#)

Created 6th July 2015, last changed 1st August 2015.

## 105.92 QuickList.SetList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.SetList"; ListRef; Text { ; Separator } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Text

New content for the list.

"Hello\$World\$Test"

#### Separator

Optional

The separator to use. Can be ASCII character number (e.g. 9 for tab) or a text where we use first character as separator.

" | "

**Result** Returns OK or error.

### Description

## 105.93 QuickList.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.SetValue"; ListRef; Index; Text )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Index

The index of the value to get. Must be in range from 0 to QuickList.Count-1.

\$index

#### Text

The text to add.

"Hello"

**Result** Returns OK or error.

### Description

If index is equal to count, we append the text to the list.

### Examples

Tries set value:

```
Variable setzen [ $list; Wert:MBS( "QuickList.New"; "Hello$World$Test" ) ]
Variable setzen [ $r; Wert:MBS( "QuickList.SetValue"; $list; 0; "Element 0" ) ]
Eigenes Dialogfeld anzeigen [ "List contains"; MBS( "QuickList.GetList"; $list ) ]
Variable setzen [ $r; Wert:MBS( "QuickList.Free"; $list ) ]
```

## 105.94 QuickList.Sort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.Sort"; ListRef { ; Flags } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Flags

Optional

Optional, whether to sort case insensitive or descending. Pass 1 to sort case insensitive or 0 to sort case sensitive. Add 2 to sort descending. Add 4 for sorting dates in DD.MM.YYYY style and 8 for sorting dates in MM.DD.YYYY style.

1

**Result** Returns OK or error.

### Description

Version 6.2 adds new modes for date sorting. Mode 4 for DD.MM.YYYY style and mode 8 for MM.DD.YYYY style.

### Examples

Sort a list:

```
Let
( [
l = MBS("QuickList.New"; "aßeä$1");
r = MBS("QuickList.Sort"; l);
list = MBS("QuickList.GetList"; l);
r = MBS("QuickList.Free"; l)
]; list )
```

Sort a list ascending case sensitive:

```
Let
( [
l = MBS("QuickList.New"; "Aßeä$1");
r = MBS("QuickList.Sort"; l);
list = MBS("QuickList.GetList"; l);
r = MBS("QuickList.Free"; l)
]; list )
```

Sort a list descending case insensitive:

```
Let  
( [  
l = MBS("QuickList.New"; "A$e$ä$Ä$9$1");  
r = MBS("QuickList.Sort"; l; 3);  
list = MBS("QuickList.GetList"; l);  
r = MBS("QuickList.Free"; l)  
]; list )
```

## 105.95 QuickList.SortWith

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	6.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.SortWith"; ListRef; Flags; List1 { ; List2 } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Flags

Optional, whether to sort case insensitive or descending. Pass 1 to sort case insensitive or 0 to sort case sensitive. Add 2 to sort descending. Add 4 for sorting dates in DD.MM.YYYY style and 8 for sorting dates in MM.DD.YYYY style.

1

#### List1

The first list to sort with.

\$list1

#### List2

Optional

The second list to sort with.

\$list2

**Result** Returns OK or error.

### Description

We sort the first list and move all items in other lists as well to match the order.

You can pass as many lists in the parameters as needed, not just 2.

### Examples

Test sorting with four lists:

```
# build some lists
Set Variable [ $keys; Value:MBS( "QuickList.New"; "234$123$545$152" ) ]
Set Variable [ $firstnames; Value:MBS( "QuickList.New"; "Bob$John$Bill$Chris" ) ]
Set Variable [ $lastnames; Value:MBS( "QuickList.New"; "Miller$Jones$Becks$Meyer" ) ]
Set Variable [ $cities; Value:MBS( "QuickList.New"; "New York$Santa Clara$San Francisco$Atlanta" ) ]
# show before
Set Variable [ $r1; Value:MBS( "List.CrossProduct"; MBS("QuickList.GetList"; $keys); MBS("QuickList.GetList"; $firstnames); ""; " "; ""; 2) ]
Set Variable [ $r2; Value:MBS( "List.CrossProduct"; MBS("QuickList.GetList"; $lastnames); MBS("QuickList.GetList"; $cities); ""; " "; ""; 2) ]
Set Variable [ $r3; Value:MBS( "List.CrossProduct"; $r1; $r2; ""; " "; ""; 2) ]
# sort
Set Variable [ $r; Value:MBS( "QuickList.SortWith"; $keys; 0; $firstnames; $lastnames; $cities) ]
```

```

# show result:
Set Variable [ $r1; Value:MBS( "List.CrossProduct"; MBS("QuickList.GetList"; $keys); MBS("QuickList.GetList";
$firstnames); ""; ", "; ""; 2) ]
Set Variable [ $r2; Value:MBS( "List.CrossProduct"; MBS("QuickList.GetList"; $lastnames); MBS("Quick-
List.GetList"; $cities); ""; ", "; ""; 2) ]
Set Variable [ $r4; Value:MBS( "List.CrossProduct"; $r1; $r2; ""; ", "; ""; 2) ]
Show Custom Dialog [ "Sort results"; "Before: " & $r3 & $r4 & "Sorted: " & $r4 ]
# cleanup memory
Set Variable [ $r; Value:MBS( "QuickList.Free"; $keys) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $cities) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $firstnames) ]
Set Variable [ $r; Value:MBS( "QuickList.Free"; $lastnames) ]

```

Sort a list column:

```

Set Variable [ $List ; Value: "65412 | Schreiber | Klaus | 459oz8235" & $r3 & "76542 | Abraham | Hermmann |
38957zf" & $r4 & "85112 | Behrens | Robert | 489748hj" ]
Set Variable [ $QuickList1 ; Value: MBS( "QuickList.New"; $List ) ]
#
Set Variable [ $QuickList2 ; Value: MBS( "QuickList.DeCombine"; $QuickList1; " | "; 1 /* StartColumn*/;
1 /* EndColumn */; 1 /* New List*/ ) ]
Set Variable [ $List2 ; Value: MBS( "QuickList.GetList"; $QuickList2) ]
Set Variable [ $r ; Value: MBS( "QuickList.SortWith"; $QuickList2; 1; $QuickList1 ) ]
Set Variable [ $List1 ; Value: MBS( "QuickList.GetList"; $QuickList1) ]
#
Set Variable [ $r ; Value: MBS( "QuickList.Free"; $QuickList1 ) ]
Set Variable [ $r ; Value: MBS( "QuickList.Free"; $QuickList2 ) ]

```

## 105.96 QuickList.SortWithEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.SortWithEvaluate"; ListRef; Expression )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Expression

The expression to evaluate. Can include "leftValue" and "rightValue" as variables.

"leftValue >rightValue"

**Result** Returns OK or error.

### Description

The expression is run every time two values are compared, so keep it quick. It should return 1 if leftValue is smaller than rightValue.

Our normal QuickList.Sort is faster due to not having the overhead of evaluating expressions.

## 105.97 QuickList.SubList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.SubList"; ListRef; Index; Count { ; ReturnNewList; NoReturnEnding } )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Index

The zero based index where to start. Or in other words: How many entries to skip.

3

#### Count

How many entries to copy. If negative, we pick the other items left.

5

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.

Pass 0 (Default) to return a text list.

0

#### NoReturnEnding

Optional

If you passed 0 for ReturnNewList, decides about new list: Pass 1 to have no extra newline character on the end of the returned list. Default is 0 to include one to easily concat lists.

1

**Result** Returns OK or error.

### Description

Can return new QuickList or normal list.

## 105.99 QuickList.ValueIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.ValueIndex"; ListRef; Value )

### Parameters

#### ListRef

The reference to the list returned from QuickList.New function.

\$List

#### Value

The text to find.

"Hello"

**Result** Returns index, nothing or error.

### Description

Returns zero based index (0 = first list value).

Returns empty result if not found.

Comparison is case insensitive.

## 105.100 QuickList.XOr

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	4.4	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.XOr"; List1; List2 { ; ReturnNewList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function.  
Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

Performs an exclusive logical OR operation.

## 105.101 QuickList.XOrColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
105 List	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "QuickList.XOrColumn"; List1; List2; Separator; Column { ; ReturnNewList } )

### Parameters

#### List1

The reference to the first quicklist.

\$List1

#### List2

The reference to the second quicklist.

\$List2

#### Separator

The separator text. Can be multiple characters. For tab separated text, pass Char(9). For CSV separated text, pass ";" or ",".

Char(9)

#### Column

The index of the column to compare. Starts with 0 for first column.

0

#### ReturnNewList

Optional

Pass 1 to return result as new QuickList. This new list must be freed later using QuickList.Free function. Pass 0 (Default) to modify the list in the List1 parameter.

0

**Result** Returns list, OK or error.

### Description

Performs an exclusive logical OR operation.

Checks the given column in both lists too compare.

If Separator is empty, this is same as QuickList.XOr, but slower.

# Chapter 106

## ListDialog

Functions for a dialog to pick items from a list.

### 106.1 ListDialog.AddItemToList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.2	Yes	Yes	No	No	No

```
MBS( "ListDialog.AddItemToList"; title { ; tag; Header } )
```

#### Parameters

##### title

The title to show.

"Hello World"

##### tag

Optional

The tag, e.g. the record ID.

"1234"

##### Header

Optional

Pass 1 to make this an header item, which is shown differently.

1

**Result** Returns OK.

#### Description

#### Examples

Clears list and adds three lines:

```
MBS( "ListDialog.ClearList" )  
MBS( "ListDialog.AddItemToList"; "Bob"; 1 )  
MBS( "ListDialog.AddItemToList"; "Joe"; 2 )  
MBS( "ListDialog.AddItemToList"; "Tim"; 3 )
```

**See also**

## 106.2 ListDialog.AddItemstoList

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.2	Yes	Yes	No	No	No

MBS( "ListDialog.AddItemstoList"; titles { ; tags } )

### Parameters

#### titles

The titles to add.

"Hello World"

#### tags

Optional

The tags, e.g. the record ID.

"1234"

**Result** Returns number of items.

### Description

You can pass a list of items (separated with new line character)

If tag for an item is # , plugin will mark this entry as header item.

### Examples

Add two items

MBS( "ListDialog.AddItemstoList"; "Hello\$World" )

Add header with two items

MBS( "ListDialog.AddItemstoList"; "Names\$Steve\$Joe\$Geoff"; "# §1§2§3" )

## 106.3 ListDialog.AddSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	5.1	Yes	Yes	No	No	No

MBS( "ListDialog.AddSQL"; SQL Statement; FileName { ; Params } )

### Parameters

#### SQL Statement

SQL Statement as a Text string

#### FileName

The target database name. Can be empty to not limit query to one database.

””

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.

123

**Result** Returns number of items added or error.

### Description

First field from SQL result is used as text, second as tag and third as header flag.

Tag and header columns are optional.

### Examples

Add items:

MBS("ListDialog.AddSQL"; "select Text, Tag, Header from Liste")

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.2	Yes	Yes	No	No	No

MBS( "ListDialog.ClearList" )

**Result** Returns OK.

### Description

Also clears the selection.

### Examples

Clears list and adds three lines:

```
MBS( "ListDialog.ClearList" )
MBS( "ListDialog.AddItemToList"; "Bob"; 1 )
MBS( "ListDialog.AddItemToList"; "Joe"; 2 )
MBS( "ListDialog.AddItemToList"; "Tim"; 3 )
```

## 106.26 ListDialog.SetAllowEmptySelection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	5.0	Yes	Yes	No	No	No

MBS( "ListDialog.SetAllowEmptySelection"; value )

### Parameters

#### value

Whether to allow empty selections. Pass 1 to allow and 0 to disallow.

1

**Result** Returns OK or error.

### Description

### Examples

Enable empty selection:

```
MBS( "ListDialog.SetAllowEmptySelection"; 1 )
```

Disable empty selection:

```
MBS( "ListDialog.SetAllowEmptySelection"; 0 )
```

## 106.27 ListDialog.SetAllowMultipleSelection

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.2	Yes	Yes	No	No	No

MBS( "ListDialog.SetAllowMultipleSelection"; value )

### Parameters

#### value

Whether to allow multiple selections. Pass 1 to allow and 0 to disallow.

1

**Result** Returns OK.

### Description

#### Examples

Enable multiple selection:

```
MBS( "ListDialog.SetAllowMultipleSelection"; 1 )
```

Disable multiple selection:

```
MBS( "ListDialog.SetAllowMultipleSelection"; 0 )
```

## 106.29 ListDialog.SetColumnCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	9.2	Yes	Yes	No	No	No

MBS( "ListDialog.SetColumnCount"; Value )

### Parameters

#### Value

The new column count.

2

**Result** Returns OK or error.

### Description

Currently we support up to 5 columns.

Default is 1 column unless you change it.

### Examples

Set column headers:

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnCount"; 2) ]
```

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnHeader"; 0; "Column left") ]
```

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnHeader"; 1; "Column right") ]
```

### See also

## 106.30 ListDialog.SetColumnHeader

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	9.2	Yes	Yes	No	No	No

MBS( "ListDialog.SetColumnHeader"; Index; Text )

### Parameters

#### Index

The index of the column starting with zero for the first one.

0

#### Text

The text for the column header.

"Hello"

**Result** Returns OK or error.

### Description

### Examples

Set column headers:

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnCount"; 2) ]
```

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnHeader"; 0; "Column left") ]
```

```
Variable setzen [ $r ; Wert: MBS("ListDialog.SetColumnHeader"; 1; "Column right") ]
```

### See also

Created 18th August 2014, last changed 18th August 2014.

## 106.32 ListDialog.SetOtherButtonEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	9.5	Yes	Yes	No	No	No

MBS( "ListDialog.SetOtherButtonEvaluate" )

**Result** Returns OK or error.

### Description

If set, we run this expression instead of closing the dialog.

This can be useful to start action while dialog stays open. Please note you can't run a script while dialog is open.

Other button is only visible if the label is set.

### Examples

Add a button and let it run showurl to open website:

```
Set Variable [ $r ; Value: MBS("ListDialog.SetOtherButtonLabel"; "Help") ]
```

```
Set Variable [ $r ; Value: MBS("ListDialog.SetOtherButtonEvaluate"; "MBS( \"ShowURL\"; \"https://mbs-plugins.eu\" )" ) ]
```

Created 11st October 2019, last changed 11st October 2019.

## 106.33 ListDialog.SetOtherButtonLabel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	9.5	Yes	Yes	No	No	No

MBS( "ListDialog.SetOtherButtonLabel"; text )

### Parameters

#### text

The new text.

"Help"

**Result** Returns OK or error.

### Description

Other button is only visible if the label is set.

If expression to evaluate is set, the evaluate happens when button is clicked. If no expression is set, the result for running the dialog and clicking this button is "Other".

### Examples

Add a button and let it run showurl to open website:

```
Set Variable [ $r ; Value: MBS("ListDialog.SetOtherButtonLabel"; "Help") ]
```

```
Set Variable [ $r ; Value: MBS("ListDialog.SetOtherButtonEvaluate"; "MBS( \"ShowURL\"; \"https://mb-plugins.eu\" )" ) ]

## 106.39 ListDialog.SetSelectedTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.2	Yes	Yes	No	No	No

MBS( "ListDialog.SetSelectedTag"; text )

### Parameters

#### text

The text to select.

"1234"

**Result** Returns OK.

### Description

You can preselect one or more items using this function.

This can be a list if used with multiple selection.

### See also

- 106.18 ListDialog.GetSelectedTag 5665
- 106.19 ListDialog.GetSelectedTitle 5666
- 106.40 ListDialog.SetSelectedTitle 5687

Created 18th August 2014, last changed 18th August 2014.

## 106.40 ListDialog.SetSelectedTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.2	Yes	Yes	No	No	No

MBS( "ListDialog.SetSelectedTitle"; text )

### Parameters

#### text

The text to select.

"Hello World"

**Result** Returns OK.

### Description

You can preselect one or more items using this function.

This can be a list if used with multiple selection.

### Examples

Define to pick an item from the list by default via title:

```
MBS( "ListDialog.SetSelectedTitle"; "Hello World" )
```

## 106.41 ListDialog.SetWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.3	Yes	Yes	No	No	No

MBS( "ListDialog.SetWidth" )

**Result** Returns OK.

### Description

See also ListDialog.SetHeight, ListDialog.GetWidth and ListDialog.GetHeight.  
Minimum width in 4.3/4.4 is 300 pixel which was lowed to 260 in plugin version 4.5.

### Examples

Set size to 800x600:

```
MBS( "ListDialog.SetWidth"; 800 )
```

```
MBS( "ListDialog.SetHeight"; 600 )
```

### See also

**106.42 ListDialog.SetWindowTitle**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.2	Yes	Yes	No	No	No

MBS( "ListDialog.SetWindowTitle"; text )

**Parameters****text**

The new text.  
"Your Choice"

**Result** Returns OK.

**Description****Examples**

Sets window title:

MBS( "ListDialog.SetWindowTitle"; "Freunde wählen" )

**See also**

- 64.26 Dialog.GetWindowTitle 2407

## 106.43 ListDialog.ShowDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	4.2	Yes	Yes	No	No	No

MBS( "ListDialog.ShowDialog" { ; TopMost } )

### Parameters

#### TopMost

Optional

Available in MBS FileMaker Plugin 10.1 or newer.

Whether the dialog will get top most flag on Windows. Pass 1 to make it topmost, pass 0 or nothing for normal behavior.

**Result** Returns OK or Cancel.

### Description

### Examples

Shows a dialog:

```
Set Variable [ $r; Value:MBS("ListDialog.ClearList") ]
Set Variable [ $r; Value:MBS("ListDialog.SetPrompt"; "Please select an item:") ]
Set Variable [ $r; Value:MBS("ListDialog.AddItemToList"; "First Item"; "1234") ]
Set Variable [ $r; Value:MBS("ListDialog.SetAllowMultipleSelection"; 1) ]
Set Variable [ $r; Value:MBS("ListDialog.SetSelectedTitle"; "1234") ]
Set Variable [ $r; Value:MBS("ListDialog.ShowDialog") ]
Set Field [ ListDialog::Result; $r ]
Set Field [ ListDialog::Selected Tag; MBS("ListDialog.GetSelectedTag") ]
Set Field [ ListDialog::Selected; MBS("ListDialog.GetSelectedTitle") ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
106 ListDialog	7.5	Yes	Yes	No	No	No

MBS( "ListDialog.Sort" { ; Descending } )

### Parameters

#### Descending

Optional

Pass 1 for descending sort. Default is 0 for ascending.

0

**Result** Returns OK or error.

### Description

Sorts ignoring case, by default ascending.

# Chapter 107

## MailComposer

A panel for iOS to edit and send an email.

You can add attachments and optionally html content.

See also MessageComposer functions for creating text messages.

### 107.1 MailComposer.AddAttachmentContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.AddAttachmentContainer"; Container; Name { ; MimeType } )

#### Parameters

##### Container

The container to attach to email.

Attachment::Container

##### Name

The name for the attachment.

"sample.pdf"

##### MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".

"application/octet-stream"

**Result** Returns OK or error.

#### Description

You can use Text.FileExtensionToMimeType to find the mime type for a file extension.

You can use `AddAttachment` several times to add several attachments.

### Examples

Adds an attachment:

```
Set Variable [ $FieldName ; Value: Get(ScriptParameter) ]
Set Variable [ $Container ; Value: GetField ( $FieldName) ]
If [ IsEmpty ( $container ) = 0 ]
Set Variable [ $path ; Value: GetAsText ( $Container ) ]
Set Variable [ $name ; Value: MBS( "Path.LastPathComponent"; $path) ]
Set Variable [ $extension ; Value: MBS( "Files.FileExtension"; $name ) ]
Set Variable [ $mimeType ; Value: MBS( "Text.FileExtensionToMimeType"; $extension ) ]
#
Set Variable [ $r ; Value: MBS( "MailComposer.AddAttachmentContainer"; $container; $name; $mimeType) ]
End If
```

Created 10th June 2017, last changed 10th June 2017.

## 107.2 MailComposer.AddAttachmentFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.AddAttachmentFile"; Path; Name { ; mimeType } )

### Parameters

#### Path

The native file path to the file to include as attachment.

"/Users/cs/Desktop/sample.pdf"

#### Name

The name for the attachment.

"sample.pdf"

#### MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".  
"application/octet-stream"

**Result** Returns OK or error.

### Description

Attachments over 100 MB are not supported.

You can use `Text.FileExtensionToMimeType` to find the mime type for a file extension.

You can use `AddAttachment` several times to add several attachments.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

### See also

- 167.37 Text.FileExtensionToMimeType 7956

Created 10th June 2017, last changed 10th June 2017.

### 107.3 MailComposer.AddAttachmentText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.AddAttachmentText"; Text; Encoding; Name { ; MimeType } )

#### Parameters

##### Text

The text to use for the attachment.

"Hello World"

##### Encoding

The text encoding for text parameter. Default is UTF-8.

"UTF8"

##### Name

The name for the attachment. If empty, version 6.2 or newer uses file name from file path.

"sample.txt"

##### MimeType

Optional

The mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "text/plain".

"text/plain"

**Result** Returns OK or error.

#### Description

Attachments over 100 MB are not supported.

You can use `Text.FileExtensionToMimeType` to find the mime type for a file extension.

You can use `AddAttachment` several times to add several attachments.

#### See also

- 107.1 MailComposer.AddAttachmentContainer 5693

## 107.4 MailComposer.CanSendMail

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.CanSendMail" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if the user has set up the device for sending email.

The client may continue to set the recipients and content if the return value was 1. If 0 was the result, the client has a couple options. It may choose to simply notify the user of the inability to send mail, or it may issue a "mailto" URL via Open URL.

This function can be called before having a composer initialized.

### Examples

Checks whether we can email:

```
Set Variable [ $r ; Value: MBS( "MailComposer.CanSendMail" ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't send emails." ; "This iOS device is not configured to send emails." ]
Exit Script [ Text Result: "failed" ]
End If
```

- [iOS/iOS Email Sending](#)

Created 10th June 2017, last changed 18th June 2017.

## 107.5 MailComposer.Dismiss

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.Dismiss" )

**Result** Returns OK or error.

### Description

Something you can call in a script to cancel the email creation.

### See also

- 116.7 MessageComposer.Dismiss 6112
- 156.4 SocialComposer.Dismiss 7279

Created 10th June 2017, last changed 10th June 2017.

## 107.6 MailComposer.Error

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.Error" )

**Result** Returns error text or empty.

### Description

Returns empty result if there was no error.

### Examples

Show result in a field:

```
Set Variable [ $result ; Value: MBS( "MailComposer.Result" ) ]
Set Variable [ $error ; Value: MBS( "MailComposer.Error" ) ]
Set Field [ Placeholder::Result ; $result & ": " & $error ]
```

**107.16 MailComposer.New**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.New" )

**Result** Returns OK or error.

**Description**

Resets last error and clears last email content.

**Examples**

Start a new email:

```
Set Variable [ $r ; Value: MBS( "MailComposer.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MailComposer.SetSubject"; Placeholder::Subject ) ]
```

**See also**

## 107.17 MailComposer.Present

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.Present" )

**Result** Returns OK or error.

### Description

This will show the user interface and start the process.  
Your script may call this in a script and then wait for the script trigger.

### Examples

Setups email and send:

```

Set Variable [ $r ; Value: MBS( "MailComposer.CanSendMail" ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't send emails." ; "This iOS device is not configured to send emails." ]
Exit Script [ Text Result: "failed" ]
End If
Set Variable [ $r ; Value: MBS( "MailComposer.New" ) ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetSubject"; Placeholder::Subject ) ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetScript"; Get(FileName); "Sent" ) ]
If [ Length ( Placeholder::Body ) > 0 ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetMessageBody"; Placeholder::Body; Position ( Placeholder::Body ; "<html>" ; 1 ; 1 ) > 0 ) ]
End If
If [ Length ( Placeholder::CCRecipients ) > 0 ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetCCRecipients"; Placeholder::CCRecipients ) ]
End If
If [ Length ( Placeholder::BCCRecipients ) > 0 ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetBCCRecipients"; Placeholder::BCCRecipients ) ]
End If
If [ Length ( Placeholder::TORecipients ) > 0 ]
Set Variable [ $r ; Value: MBS( "MailComposer.SetTORecipients"; Placeholder::TORecipients ) ]
End If
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment1 ) ]
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment2 ) ]
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment3 ) ]
Set Variable [ $r ; Value: MBS( "MailComposer.Present" ) ]

```

## 107.19 MailComposer.SetBCCRecipients

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.SetBCCRecipients"; Recipients )

### Parameters

#### Recipients

List of recipients.

**Result** Returns OK or error.

### Description

Will set the BCC header for the email message. This should be called prior to display.

Recipient addresses should be specified as per RFC5322.

After the view has been presented to the user, this method will no longer change the value.

## 107.20 MailComposer.SetCCRecipients

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.SetCCRecipients"; Recipients )

### Parameters

#### Recipients

List of recipients.

**Result** Returns OK or error.

### Description

Will set the CC header for the email message. This should be called prior to display.

Recipient addresses should be specified as per RFC5322.

After the view has been presented to the user, this method will no longer change the value.

### See also

- 107.7 MailComposer.GetBCCRecipients 5700

Created 10th June 2017, last changed 10th June 2017.

**107.21 MailComposer.SetEvaluate**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.SetEvaluate"; Expression )

**Parameters****Expression**

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

**Result** Returns OK or error.

**Description**

In the script you can check with MailComposer.Result and MailComposer.Error what happened.

**See also**

- 107.6 MailComposer.Error 5699
- 107.9 MailComposer.GetEvaluate 5702

- 156.18 SocialComposer.SetEvaluate 7295

Created 10th June 2017, last changed 4th April 2018.

## 107.22 MailComposer.SetMessageBody

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.SetMessageBody"; Body; IsHTML )

### Parameters

#### Body

The text containing the body contents of the email message.

#### IsHTML

A boolean value indicating if the body argument is to be interpreted as HTML content. Pass 1 if Body is html or 0 for plain text. Default is 0 for plain text.

0

**Result** Returns OK or error.

### Description

This method will set the body of the email message. This should be called prior to display. The user's signature, if specified, will be added after the body content.

### See also

- 107.11 MailComposer.GetMessageBody 5704
- 107.17 MailComposer.Present 5710
- 116.10 MessageComposer.GetMessageBody 6115

## 107.23 MailComposer.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.SetScript"; FileName; ScriptName { ; Parameter } )

### Parameters

#### FileName

The file name for the script to trigger.

"test.fmp12"

#### ScriptName

The script name of the script to launch.

"EmailComposerFinished"

#### Parameter

Optional

The parameter to pass to the script.

**Result** Returns OK or error.

### Description

In the script you can check with MailComposer.Result and MailComposer.Error what happened.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Set script:

```
Set Variable [ $r ; Value: MBS( "MailComposer.SetScript"; Get(FileName); "Sent") ]
```

### See also

- 107.6 MailComposer.Error 5699

- 156.20 SocialComposer.SetScript

### Example Databases

- [iOS/iOS Email Sending](#)

Created 10th June 2017, last changed 10th June 2017.

## 107.24 MailComposer.SetSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.SetSubject"; Subject )

### Parameters

#### Subject

The new subject.  
"Hello World"

**Result** Returns OK or error.

### Description

This method will set the Subject header for the email message. This should be called prior to display. Newlines are removed from the parameter. After the view has been presented to the user, this method will no longer change the value.

### Examples

Start a new email:

```
Set Variable [ $r ; Value: MBS( "MailComposer.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MailComposer.SetSubject"; Placeholder::Subject ) ]
```

### See also

## 107.25 MailComposer.SetTORecipients

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
107 MailComposer	7.3	No	No	No	No	Yes

MBS( "MailComposer.SetTORecipients"; Recipients )

### Parameters

#### Recipients

List of recipients.

**Result** Returns OK or error.

### Description

Set the To header for the email message. This should be called prior to display.

Recipient addresses should be specified as per RFC5322.

After the view has been presented to the user, this method will no longer change the value.

# Chapter 108

## MapView

MapKit functions for MacOS to show maps.

### 108.1 MapView.AddCircle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.AddCircle"; MapView; JSON )

#### Parameters

##### MapView

The map view reference number.

\$\$MapView

##### JSON

The JSON to describe the circle.

```
{ "address": "Nickenich", "radius": 500, "title": "Monkeybread Software", "subtitle": "MBS is here", "color": "# FF000077" }
```

**Result** Returns identifier or error.

#### Description

The JSON may contain the following entries:

You can either pass latitude and longitude together or pass the address and we lookup it to find coordinates.

#### Examples

Add circle for MBS with address string:

```
Set Variable [ $r ; Value: MBS( "MapView.AddCircle"; $$MapView; " { \"address\": \"Nickenich\",
```

latitude	The latitude of the coordinate.
longitude	The longitude of the coordinate.
address	The address to lookup to find latitude or longitude.
radius	The radius in meter.
title	The title for the circle.
subtitle	The subtitle for the item.
strokeColor	The stroke color as name or hex notation.
fillColor	The fill color as name or hex notation.
identifier	The identifier to use. Can be empty to get new identifier auto assigned.

```
\”radius\”: 500, \”title\”: \”Monkeybread Software\”, \”subtitle\”: \”MBS is here\”, \”color\”: \”#FF000077\” } ”) ]
```

Add circle for MBS with coordinates:

```
Set Variable [ $r ; Value: MBS( ”MapView.AddCircle”; $$MapView; ” { \”longitude\”: 7.329722, \”latitude\”: 50.413333, \”radius\”: 500, \”title\”: \”Monkeybread Software\”, \”subtitle\”: \”MBS is here\”, \”color\”: \”# FF000077\” } ”) ]
```

## 108.2 MapView.AddPin

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.AddPin"; MapView; Latitude; Longitude { ; Title; Subtitle; Identifier; color } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Latitude

The latitude of the coordinate.

#### Longitude

The longitude of the coordinate.

#### Title

Optional

The title for the pin.

#### Subtitle

Optional

The subtitle for the pin.

#### Identifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger.

#### color

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.

"# FF0000"

**Result** Returns identifier or error.

### Description

Deprecated. Please use MapView.AddPoint function instead for more options.

### See also

- 108.4 MapView.AddPoint

## 108.3 MapView.AddPinWithAddress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.AddPinWithAddress"; MapView; Address { ; Title; Subtitle; Identifier; color } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Address

The address to lookup.”

”New York”

#### Title

Optional

The title for the pin.

#### Subtitle

Optional

The subtitle for the pin.

#### Identifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger.

#### color

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.

”# FF0000”

**Result** Returns identifier or error.

### Description

Deprecated. Please use MapView.AddPoint function instead for more options.

### See also

## 108.4 MapView.AddPoint

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.AddPoint"; MapView; JSON )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### JSON

The JSON to describe the point.

**Result** Returns identifier or error.

### Description

The JSON may contain the following entries:

latitude	The latitude of the coordinate.
longitude	The longitude of the coordinate.
address	The address to lookup to find latitude or longitude.
radius	The radius in meter.
title	The title for the pin.
subtitle	The subtitle for the item.
color	The color as name or hex notation for the pin.
identifier	The identifier to use. Can be empty to get new identifier auto assigned.
image	The base64 encoded image data to use.
imageWidth	Optional the image width to use.
imageHeight	Optional the image height to use.
clusteringIdentifier	Optionally an identifier that determines whether the annotation view participates in clustering.
displayPriority	Optionally the display priority of this annotation view. Can be Required, High, Low or Default.

New in 9.5 are some boolean keys named `enabled`, `draggable` and `canShowCallout` to customize behavior.

You can either pass latitude and longitude together or pass the address and we lookup it to find coordinates.

### Examples

Create MBS Pin on map with custom image:

```
Set Variable [ $json ; Value: " { \"address\": \"Nickenich\", \"title\": \"Monkeybread Software\", \"subtitle\": \"MBS is here\", \"imageWidth\": 40, \"imageHeight\": 40 } " ]
```

```
# add image from container field to JSON
Set Variable [ $json ; Value: MBS( "JSON.AddStringToObject"; $json; "image"; Base64Encode ( MapView:image ) ) ]
# show
Set Variable [ $r ; Value: MBS( "MapView.AddPoint"; $$MapView; $JSON ) ]
```

Adds simple pin for Hamburg:

```
Set Variable [ $r ; Value: MBS( "MapView.AddPoint"; $$MapView; " { \"address\": \"Hamburg, Germany\", \"title\": \"Hamburg\" } )" ]
```

Create circle of pins around current region:

```
# create some pins on a circle around a given point
Set Variable [ $centerLat ; Value: MBS( "MapView.GetCenterCoordinateLatitude"; $$MapView ) ]
Set Variable [ $centerLon ; Value: MBS( "MapView.GetCenterCoordinateLongitude"; $$MapView ) ]
#
# loop counting up from 1 to $count
Set Variable [ $count ; Value: 12 ]
Set Variable [ $index ; Value: 1 ]
If [ $index $count ]
Loop
# your script steps here
Set Variable [ $angle ; Value: 360 * ($index / 12) ]
Set Variable [ $a ; Value: $angle / 180 * Pi ]
#
# calculate new coordinates
Set Variable [ $fLat ; Value: ,005 ]
Set Variable [ $fLon ; Value: ,01 ]
Set Variable [ $lat ; Value: $centerLat + Sin($a) * $fLat ]
Set Variable [ $lon ; Value: $centerLon + Cos($a) * $fLon ]
#
Set Variable [ $json ; Value: " { } " ]
Set Variable [ $json ; Value: MBS( "JSON.AddNumberToObject"; $json; "latitude"; $lat ) ]
Set Variable [ $json ; Value: MBS( "JSON.AddNumberToObject"; $json; "longitude"; $lon ) ]
Set Variable [ $json ; Value: MBS( "JSON.AddNumberToObject"; $json; "clusteringIdentifier"; "pin" ) ]
Set Variable [ $r ; Value: MBS( "MapView.AddPoint"; $$MapView; $JSON ) ]
#
# next
Set Variable [ $index ; Value: $index + 1 ]
Exit Loop If [ $index >$count ]
End Loop
End If
```

## 108.5 MapView.AddPolygon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.AddPolygon"; MapView; JSON )

### Parameters

#### MapView

The map view reference number.  
\$\$MapView

#### JSON

The JSON to describe the circle.

**Result** Returns identifier or error.

### Description

The JSON may contain the following entries:

coordinates	The JSON array with the objects for the coordinates. Each entry can contain either longitude & latitude pair, x and y pair or address value.
title	The title for the polygon.
subtitle	The subtitle for the item.
fillColor	The fill color as name or hex notation for the polygon.
strokeColor	The stroke color as name or hex notation for the polygon.
identifier	The identifier to use. Can be empty to get new identifier auto assigned.
lineWidth	The line width to use. Default 5 point.

You can either pass latitude and longitude together or pass the address and we lookup it to find coordinates.

### Examples

Add polygon from Hamburg to Munich and Cologne:

```
Set Variable [ $r ; Value: MBS( "MapView.AddPolygon"; $$MapView; " { \"coordinates\": [ { \"address\": \"Hamburg, Germany\" } , { \"address\": \"Munich, Germany\" } , { \"address\": \"Cologne, Germany\" } ] , \"strokeColor\": \"# FF00077\" } )" ]
```

Add polygon with some coordinates:

```
Set Variable [ $r ; Value: MBS( "MapView.AddPolygon"; $$MapView; " { \"coordinates\": [ { \"longitude\": 7.3, \"latitude\": 50.4 } , { \"longitude\": 7.3, \"latitude\": 50.5 } ,
```

### 108.5. MAPVIEW.ADDPOLYGON

5731

```
{ \"longitude\": 7.4, \"latitude\": 50.5 } ,  
{ \"longitude\": 7.4, \"latitude\": 50.4 }  
],  
\"strokeColor\": \"# FF00077\"  
} ” ]
```

## 108.6 MapView.AddPolyline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.AddPolyline"; MapView; JSON )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### JSON

The JSON to describe the circle.

**Result** Returns identifier or error.

### Description

The JSON may contain the following entries:

coordinates	The JSON array with the objects for the coordinates. Each entry can contain either longitude & latitude pair or address value.
title	The title for the poly line.
subtitle	The subtitle for the item.
fillColor	The fill color as name or hex notation for the line.
strokeColor	The stroke color as name or hex notation for the line.
identifier	The identifier to use. Can be empty to get new identifier auto assigned.
lineWidth	The line width to use. Default 5 point.

You can either pass latitude and longitude together or pass the address and we lookup it to find coordinates.

### Examples

Add poly line from Hamburg to Munich and Cologne:

```
Set Variable [ $r ; Value: MBS( "MapView.AddPolyline"; $$MapView; " { \"coordinates\": [ { \"address\": \"Hamburg, Germany\" } , { \"address\": \"Munich, Germany\" } , { \"address\": \"Cologne, Germany\" } ] , \"strokeColor\": \"# FF00077\" } )" ]
```

## 108.7 MapView.Annotations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.Annotations"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns list of identifiers or error.

### Description

### Examples

Queries annotations:

MBS( "MapView.Annotations"; 78001 )

### 108.7.1 Blog Entries

- [MBS FileMaker Plugin, version 9.4pr6](#)

Created 7th September 2019, last changed 7th September 2019.

## 108.8 MapView.CreateWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.CreateWithControl"; WindowRef; ControlName { ; DX; DY } )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

#### DX

Optional

A delta to move drop area more to left or right.

0

#### DY

Optional

A delta to move drop area more to top or bottom.

0

**Result** Returns map view reference number or error.

### Description

Use MapView.Release later to destroy the image view.

If you use a register (tab controls) on the window, be aware that the image view actually is in front of the register (tab controls). So you need to check in the script which register page is current and should show what image view. Or by a trigger you turn the visibility on and off.

Image view reference numbers are starting at 78000 and counting up for each new map view.

Not supported for MacOS 32-bit.

Does not work for WebDirect.

When creating on a card window, please pass reference to parent window or just 0 for front window. On MacOS you may need to pass delta y value to adjust position.

If you create a control on a new window, you may do window update command in your script first to have

FileMaker actually build the window with controls and display it. A short script pause or using FM.RunScriptLater with 0.1 delay can help having all controls draw themselves. Then you can use this command to put our control on top. We use GetControl() to query left, top, width and height and this gives empty value if control is not yet here.

Creation fails to pick the right window in case the window is selected by name and the window name is not unique. In that case better work with window reference numbers or just pass 0 for current front window.

## 108.9 MapView.CreateWithSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.CreateWithSize"; WindowRef; x; y; w; h )

### Parameters

#### WindowRef

Window Reference is the unique OS level window ID. You can obtain this by using the Window.FindByTitle or Window.FindByIndex functions. Pass zero to access the frontmost window.

0

#### x

The left coordinate in the window.

0

#### y

The top coordinate in the window.

0

#### w

The width of the image view in the window.

100

#### h

The height of the image view in the window.

100

**Result** Returns map view reference number or error.

### Description

Use MapView.Release later to destroy the image view.

If you use a register (tab controls) on the window, be aware that the image view actually is in front of the register (tab controls). So you need to check in the script which register page is current and should show what image view. Or by a trigger you turn the visibility on and off.

Image view reference numbers are starting at 78000 and counting up for each new map view.

Not supported for MacOS 32-bit.

Does not work for WebDirect.

## 108.10 MapView.FormatDistance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.2	Yes	No	Yes, macOS only	No	Yes

MBS( "MapView.FormatDistance"; distance )

### Parameters

#### distance

The distance in meters to format.

123

**Result** Returns text or error.

### Description

Uses current locale for formatting, so it uses km in Europe and miles in USA.

### Examples

Format a distance:

MBS( "MapView.FormatDistance"; 9555 )

Example result: "9,6 km"

## 108.11 MapView.GetAnnotationCoordinate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.GetAnnotationCoordinate"; MapView; Annotation Identifier )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Annotation Identifier

The identifier for the annotation to remove.

"82001"

**Result** Returns JSON or error.

### Description

Returns JSON with longitude and latitude.

### See also

- 108.12 MapView.GetAnnotationDragImage 5741

## 108.12 MapView.GetAnnotationDragImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.GetAnnotationDragImage"; MapView; Annotation Identifier { ; ImageType; Filename } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Annotation Identifier

The identifier for the annotation.

"82001"

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns container value or error.

### Description

Only for point annotations with image.

### See also

## 108.14 MapView.GetAnnotationSelectedImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.GetAnnotationSelectedImage"; MapView; Annotation Identifier { ; ImageType; Filename } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Annotation Identifier

The identifier for the annotation.

"82001"

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns container value or error.

### Description

Only for point annotations with image.

## 108.15 MapView.GetAutoResizingMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetAutoResizingMask"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns number or error.

### Description

This defines whether web viewer changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

## 108.20 MapView.GetMapType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetMapType"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns text or error.

### Description

Value can be Standard, Satellite, Hybrid, SatelliteFlyover, HybridFlyover or MutedStandard.

### See also

- 108.70 MapView.SetMapType

5804

Created 14th January 2019, last changed 15th January 2019.

## 108.21 MapView.GetOverlayFillColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.GetOverlayFillColor"; MapView; Overlay Identifier )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Overlay Identifier

The identifier for the overlay to use.

"82001"

**Result** Returns color or error.

### Description

#### See also

- 108.22 MapView.GetOverlayLineWidth 5752

## 108.22 MapView.GetOverlayLineWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.GetOverlayLineWidth"; MapView; Overlay Identifier )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Overlay Identifier

The identifier for the overlay to use.

"82001"

**Result** Returns line width or error.

### Description

#### See also

- 108.21 MapView.GetOverlayFillColor 5751

## 108.23 MapView.GetOverlayPoints

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.GetOverlayPoints"; MapView; Overlay Identifier )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Overlay Identifier

The identifier for the overlay.

"82001"

**Result** Returns JSON or error.

### Description

Only for polygon and poly line overlays.

Returns JSON with points (x/y) and coordinates (longitude/latitude).

### Examples

Queries points for an overlay:

MBS( "MapView.GetOverlayPoints"; \$\$MapView; 82002 )

```
Example result: {
  "points" : [
    {
      "y" : 90572524.642136484,
      "latitude" : 50.399999999999984,
      "x" : 139661002.524444446,
      "longitude" : 7.3000000000000114
    },
    {
      "y" : 90455421.722824365,
      "latitude" : 50.499999999999993,
      "x" : 139661002.524444446,
      "longitude" : 7.3000000000000114
    },
    {
      "y" : 90455421.722824365,
      "latitude" : 50.499999999999993,
      "x" : 139735567.92888889,
      "longitude" : 7.4000000000000057
    },
    {
      "y" : 90572524.642136484,
```

5754

```
"latitude" : 50.399999999999984,  
"x" : 139735567.92888889,  
"longitude" : 7.4000000000000057  
}  
],  
"pointCount" : 4  
}
```

## 108.26 MapView.GetRegion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetRegion"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns OK or error.

### Description

### Examples

Query region:

MBS( "MapView.GetRegion"; \$\$MapView)

Example result: {

```
"longitude" : 9.3726796999999955,
"longitudeDelta" : 2.0140728459134323,
"latitude" : 53.6798862999999907,
"latitudeDelta" : 0.63485953767546732
}
```

## 108.37 MapView.GetShowsTraffic

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetShowsTraffic"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns 0, 1 or error.

### Description

A Boolean value indicating whether the map displays traffic information.

### See also

- 108.36 MapView.GetShowsScale 5767
- 108.84 MapView.SetShowsTraffic 5819

Created 14th January 2019, last changed 15th January 2019.

## 108.38 MapView.GetShowsUserLocation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetShowsUserLocation"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns 0, 1 or error.

### Description

A Boolean value indicating whether the map should try to display the user's location.

### See also

- 108.85 MapView.SetShowsUserLocation

5820

Created 14th January 2019, last changed 15th January 2019.

## 108.39 MapView.GetShowsZoomControls

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	No

MBS( "MapView.GetShowsZoomControls"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns 0, 1 or error.

### Description

A Boolean indicating whether the map displays zoom controls.

### See also

- 108.86 MapView.SetShowsZoomControls

5822

Created 14th January 2019, last changed 15th January 2019.

## 108.40 MapView.GetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetTag"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns the stored tag value or an error.

### Description

## 108.41 MapView.GetToolTip

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	No

MBS( "MapView.GetToolTip"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns text or error.

### Description

The tooltip is visible on Mac when mouse stays over control. There are no tooltips for iOS.

### See also

- 95.8 [ImageView.GetToolTip](#) 5170
- 95.18 [ImageView.SetToolTip](#) 5180
- 108.42 [MapView.GetTop](#) 5773
- 108.88 [MapView.SetToolTip](#) 5824

Created 14th January 2019, last changed 15th January 2019.

## 108.42 MapView.GetTop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetTop"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns y coordinate or error.

### Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

### See also

- 95.9 ImageView.GetTop 5171
- 108.19 MapView.GetLeft 5749

## 108.43 MapView.GetVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetVisible"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns 1, 0 or error.

### Description

Returns 1 if visible and 0 if hidden.

### See also

- 95.10 ImageView.GetVisible 5172
- 95.19 ImageView.SetVisible 5181
- 108.44 MapView.GetVisibleMapRect 5775

- 168.22 TextView.GetVisible 8028
- 168.42 TextView.SetVisible 8049

Created 14th January 2019, last changed 15th January 2019.

## 108.44 MapView.GetVisibleMapRect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetVisibleMapRect"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns map rect as JSON or error.

### Description

This property represents the same basic information as the region property but specified as a map rectangle instead of a region.

### Examples

Queries map rect:

MBS( "MapView.GetVisibleMapRect"; \$\$MapView )

```
Example result: {
"x" : 140455603.74390683,
"height" : 799234.62509903312,
"y" : 86194618.191567183,
"width" : 1501801.5633610785
}
```

### See also

## 108.45 MapView.GetWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetWidth"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns width or error.

### Description

#### See also

- 95.11 [ImageView.GetWidth](#) 5173

Created 14th January 2019, last changed 15th January 2019.

## 108.46 MapView.GetZoomEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.GetZoomEnabled"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns 0, 1 or error.

### Description

A Boolean value that determines whether the user may use pinch gestures to zoom in and out of the map.

### See also

- 108.25 MapView.GetPitchEnabled 5756
- 108.31 MapView.GetRotateEnabled 5762

## 108.47 MapView.GetZoomLevel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.GetZoomLevel"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns number or error.

### Description

## 108.48 MapView.IsUserLocationVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.IsUserLocationVisible"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns OK or error.

### Description

This property tells you whether the icon used to represent the user's current location is visible in the map view. When determining whether the current location is visible, this property factors in the horizontal accuracy of the location data. Specifically, if the rectangle represented by the user's current location plus or minus the horizontal accuracy of that location intersects the map's visible rectangle, this property contains the value 1. If that location rectangle does not intersect the map's visible rectangle, this property contains the value 0.

If the user's location cannot be determined, this property contains the value 0.

## 108.49 MapView.MouseCoordinate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	No

MBS( "MapView.MouseCoordinate"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns JSON or error.

### Description

Returns JSON with latitude and longitude.

### See also

## 108.51 MapView.ParseDistance

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.2	Yes	No	Yes, macOS only	No	Yes

MBS( "MapView.ParseDistance"; text )

### Parameters

#### text

The text to parse.

"8 km"

**Result** Returns number or error.

### Description

Uses current locale, so may use miles in US and km in Europe.

Returns distance in meters.

### Examples

Parse 8 km:

MBS( "MapView.ParseDistance"; "8 km" )

Example result: 8000

### See also

- 108.10 MapView.FormatDistance

## 108.52 MapView.PlanRoute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.2	Yes	No	Yes, macOS only	No	Yes

MBS( "MapView.PlanRoute"; MapView; SourceAddress; DestinationAddress; Mode { ; TransportType; StartIdentifier; EndIdentifier; StartColor; EndColor } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### SourceAddress

The address where to start.

"Köln"

#### DestinationAddress

The address where to end.

"München"

#### Mode

Various options. Add 1 to show route on map. Add 2 to show alternative routes on the map. Add 4 to show start of route with a pin. Add 8 to show end of route with a pin. Add 16 to zoom map to show whole of the router. Add 32 to return result as JSON. Add 64 to include poly lines in JSON.

1+4+8+16

#### TransportType

Optional

The type of transportation to use. Value can be a combination of 1 for car, 2 for walk. Default is by car.

1

#### StartIdentifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger. If empty, the plugin assigns a number automatically.

#### EndIdentifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger. If empty, the plugin assigns a number automatically.

#### StartColor

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.

"# FF0000"

#### EndColor

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.  
”# FF0000”

**Result** Returns result or error.

### Description

The plugin will lookup coordinates for the given addresses and request a route calculation. Then we may add show routes and optionally return JSON with results.

### Examples

Plan a route and store JSON:

```
Set Variable [ $r ; Value: MBS(”MapView.PlanRoute”; $$MapView; ”Köln”; ”München”; 1+2+4+8+16+32;  
1+2+4) ]
```

```
Set Field [ MapView::Route ; $r ]
```

## 108.55 MapView.RemoveAnnotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.RemoveAnnotation"; MapView; Annotation Identifier )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Annotation Identifier

The identifier for the annotation to remove.

"82001"

**Result** Returns OK or error.

### Description

See also MapView.RemoveOverlay for overlays.

### Examples

Remove an annotation:

MBS( "MapView.RemoveAnnotation"; \$MapView; \$AnnotationIdentifier)

## 108.59 MapView.Screenshot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.3	Yes	No	No	No	Yes

MBS( "MapView.Screenshot"; MapView { ; ImageType; Filename } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns container or error.

### Description

This includes annotations and overlays as they are visible.

### Examples

Save screenshot to deektop:

```
If [ Length ( $$MapView ) > 0 ]
```

```
Set Variable [ $screenshot ; Value: MBS("MapView.Screenshot"; $$MapView; "PNG") ]
```

```
Set Variable [ $file ; Value: MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "mapview.png" ) ]
```

```
Set Variable [ $r ; Value: MBS( "Container.WriteFile"; $screenshot; $file ) ]
```

```
End If
```

## 108.61 MapView.SetAnnotationCoordinate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.SetAnnotationCoordinate"; MapView; Annotation Identifier; JSON )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Annotation Identifier

The identifier for the annotation to remove.

"82001"

#### JSON

The JSON to describe the coordinate. Can include keys longitude and latitude with values or a key address with address string.

" { \"address\": \"Restaurant Waldfrieden, Nickenich\" } "

**Result** Returns OK or error.

### Description

#### Examples

Changes position of Pin:

```
Set Variable [ $json ; Value: " { \"address\": \"Restaurant Waldfrieden, Nickenich\" } " ]
```

```
Set Variable [ $r ; Value: MBS( "MapView.SetAnnotationCoordinate"; $$MapView; "82001"; $JSON ) ]
```

## 108.65 MapView.SetAutoResizingMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetAutoResizingMask"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting.

4+8

**Result** Returns OK or error.

### Description

This defines whether web viewer changes its size based on the surrounding window.

Name	Value	Description
NotSizable	0	The view cannot be resized.
MinXMargin	1	The left margin between the view and its superview is flexible.
WidthSizable	2	The view's width is flexible.
MaxXMargin	4	The right margin between the view and its superview is flexible.
MinYMargin	8	The bottom margin between the view and its superview is flexible.
HeightSizable	16	The view's height is flexible.
MaxYMargin	32	The top margin between the view and its superview is flexible.

e.g. the value 18 means the view can resize both horizontally and vertically with the parent view (window).

### Examples

Make mapview resizable:

MBS( "MapView.SetAutoResizingMask"; \$\$MapView; 2+16 )

Created 16th January 2019, last changed 16th January 2019.

## 108.66 MapView.SetColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.4	Yes	No	No	No	Yes

MBS( "MapView.SetColor"; MapView; Annotation Identifier; color )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Annotation Identifier

The identifier for the annotation.

"82001"

#### color

The color to use. Can be a color name or hex notation like in HTML.

"# FF0000"

**Result** Returns OK or error.

### Description

#### Examples

Changes color to blue:

MBS( "MapView.SetColor"; "78001"; "82001"; "# 0000FF" )

Created 7th September 2019, last changed 9th September 2019.

## 108.67 MapView.SetCoordinate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetCoordinate"; MapView; Latitude; Longitude { ; ZoomLevel; Animated } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Latitude

The latitude of the coordinate.

#### Longitude

The longitude of the coordinate.

#### ZoomLevel

Optional

Optional zoom level in range from 0 to 20.

#### Animated

Optional

Whether to animate the change. Default is 1 to animate.

1

**Result** Returns OK or error.

### Description

#### See also

- 108.49 MapView.MouseCoordinate

5780

### Example Databases

- [Mac and iOS/MapKit/MapView BeeExample](#)

## 108.68 MapView.SetFrame

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetFrame"; MapView; X; Y; Width; Height { ; swap } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### X

The x coordinate.

#### Y

The y coordinate.

#### Width

The width of the control.

#### Height

The height of the control.

#### swap

Optional

Whether to swap y coordinate. By default we swap them. Pass 0 to disable or 1 to swap.

1

**Result** Returns OK or error.

### Description

As Cocoa framework uses zero for the bottom coordinate, we have to swap for the normal topdown coordinates to be used.

Created 14th January 2019, last changed 15th January 2019.

## 108.69 MapView.SetFrameWithControl

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetFrameWithControl"; MapView; ControlName { ; DX; DY } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### ControlName

The name of the control on your FileMaker form. For example "mymedia" if you assign this name to a media field. This is not the name of the field in the database!

"mymedia"

#### DX

Optional

A delta to move drop area more to left or right.

0

#### DY

Optional

A delta to move drop area more to top or bottom.

0

**Result** Returns OK or error.

### Description

If you moved control in layout mode, this can move the drop area back to the new position.

Also useful to switch between different locations on the layout.

## 108.70 MapView.SetMapType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetMapType"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new map type. Can be Standard, Satellite, Hybrid, SatelliteFlyover, HybridFlyover or MutedStandard. "Hybrid"

**Result** Returns OK or error.

### Description

### Examples

Switch to hybrid flyover:

MBS( "MapView.SetMapType"; \$\$MapView; "HybridFlyover" )

## 108.71 MapView.SetOverlayFillColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.SetOverlayFillColor"; MapView; Overlay Identifier; color )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Overlay Identifier

The identifier for the overlay to use.

"82001"

#### color

A color value. This can be a common color name or color in hex notation: # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"# FF0000"

**Result** Returns OK or error.

### Description

### Examples

Change color to red:

MBS( "MapView.SetOverlayFillColor"; \$\$MapView; "82001"; "# FF0000" )

### See also

## 108.72 MapView.SetOverlayLineWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.SetOverlayLineWidth"; MapView; Overlay Identifier; LineWidth )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Overlay Identifier

The identifier for the overlay to use.

"82001"

#### LineWidth

The new line width to use. Zero is default for width of street.

5

**Result** Returns OK or error.

### Description

### Examples

Make a thick line:

```
MBS( "MapView.SetOverlayLineWidth"; $$MapView; "82001"; 10 )
```

### See also

## 108.73 MapView.SetOverlayPoints

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.SetOverlayPoints"; MapView; Overlay Identifier; JSON )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Overlay Identifier

The identifier for the overlay.

"82001"

#### JSON

The JSON array with points. Can be given with objects for the coordinates. Each entry can contain either longitude & latitude pair, x and y pair or address value.

```
" [ { \"latitude\" : 50.4, \"longitude\" : 7.3 } , { \"latitude\" : 50.5, \"longitude\" : 7.3 } , { \"latitude\" : 50.49, \"longitude\" : 7.4 } , { \"latitude\" : 50.4, \"longitude\" : 7.4 } ] "
```

**Result** Returns OK or error.

### Description

Only for polygon and poly line overlays.

### Examples

Change coordiantes for a polygon:

```
MBS( "MapView.SetOverlayPoints"; $$MapView; 82002; $NewCoordinates )
```

### See also

## 108.74 MapView.SetOverlayStrokeColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.SetOverlayStrokeColor"; MapView; Overlay Identifier; color )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Overlay Identifier

The identifier for the overlay to use.

"82001"

#### color

A color value. This can be a common color name or color in hex notation: # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red.

"# FF0000"

**Result** Returns OK or error.

### Description

### Examples

Change color to transparent blue:

```
MBS( "MapView.SetOverlayStrokeColor"; $$MapView; "82001"; "# 0000FF77" )
```

### See also

## 108.75 MapView.SetPitchEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetPitchEnabled"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean value indicating whether the map camera's pitch information is used.

#### See also

- 108.25 MapView.GetPitchEnabled 5756
- 108.31 MapView.GetRotateEnabled 5762

Created 14th January 2019, last changed 15th January 2019.

## 108.76 MapView.SetRegion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetRegion"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

An JSON with region details. Can be degree or meter based for span. latitude and longitude to define center coordinate. Add latitudeMeters/longitudeMeters or latitudeDelta/longitudeDelta to define span. If there is an address key, we query coordiantes of the given address string instead of using coordinates.

**Result** Returns OK or error.

### Description

#### Examples

Sets region:

```
MBS( "MapView.SetRegion"; $$MapView; " { \"longitude\" : 9.3726796999999955, \"longitudeDelta\" : 2.0140728459134323, \"latitude\" : 53.6798862999999907, \"latitudeDelta\" : 0.63485953767546732 } ")
```

### See also

## 108.77 MapView.SetRotateEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetRotateEnabled"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean value indicating whether the map camera's heading information is used.

When this property is set to 1 and a valid camera is associated with the map, the camera's heading angle is used to rotate the plane of the map around its center point. When this property is set to false, the camera's heading angle is ignored and the map is always oriented so that true north is situated at the top of the map view.

### See also

## 108.78 MapView.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.3	Yes	No	No	No	Yes

MBS( "MapView.SetScript"; MapView { ; Filename; ScriptName } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Filename

Optional

The database file name where the script is located.

"test.fmp12"

#### ScriptName

Optional

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

Script is called for pins with identifiers when clicked.

With version 9.5, we start passing JSON with various values included. Version 9.3 and 9.4 only pass annotation identifier.

The JSON includes mapViewID, annotationIdentifier, latitude, longitude, mouseInViewX, mouseInViewY, mouseInWindowX, mouseInWindowY, mouseLocationX, mouseLocationY, reason and overlayIdentifiers.

overlayIdentifiers are found by bounding rectangles, so we don't check polygons or circles exactly!

The JSON contains an entry reason for why the script was called including Touch, Click, AnnotationMoved, and AnnotationSelected.

### Examples

Set script:

```
Set Variable [ $$MapView ; Value: MBS("MapView.CreateWithControl"; 0; "Placeholder") ]
Set Variable [ $r ; Value: MBS("MapView.SetScript"; $$MapView; Get(Filename); "PinClicked") ]
```

## 108.79 MapView.SetScrollEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetScrollEnabled"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean value that determines whether the user may scroll around the map.

#### See also

## 108.80 MapView.SetShowsBuildings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetShowsBuildings"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean indicating whether the map displays extruded building information.

When this property is set to 1 and the camera has a pitch angle greater than zero, the map extrudes buildings so that they extend above the map plane, creating a 3D effect. The mapType property must be set to Standard for extruded buildings to be displayed. The default value of this property is 1.

### See also

- 108.33 MapView.GetShowsBuildings

## 108.81 MapView.SetShowsCompass

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetShowsCompass"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean indicating whether the map displays a compass control.

Use this property to show or hide a control that lets users change the heading orientation of the map.

### See also

## 108.82 MapView.SetShowsPointsOfInterest

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetShowsPointsOfInterest"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean indicating whether the map displays point-of-interest information.

When this property is set to 1, the map displays icons and labels for restaurants, schools, and other relevant points of interest. The mapType property must be set to Standard or Hybrid for points of interest to be displayed. The default value of this property is 1.

### See also

- 108.35 MapView.GetShowsPointsOfInterest

## 108.83 MapView.SetShowsScale

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetShowsScale"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean indicating whether the map shows scale information.

#### See also

- 108.36 MapView.GetShowsScale 5767
- 108.81 MapView.SetShowsCompass 5816
- 108.84 MapView.SetShowsTraffic 5819

**108.84 MapView.SetShowsTraffic**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetShowsTraffic"; MapView; Value )

**Parameters****MapView**

The map view reference number.

\$\$MapView

**Value**

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

**Description**

A Boolean value indicating whether the map displays traffic information.

**See also**

- 108.37 MapView.GetShowsTraffic 5768

Created 14th January 2019, last changed 15th January 2019.

## 108.85 MapView.SetShowsUserLocation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetShowsUserLocation"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean value indicating whether the map should try to display the user's location.

This property does not indicate whether the user's position is actually visible on the map, only whether the map view should try to display it. Setting this property to 1 causes the map view to use the Core Location framework to find the current location and try to display it on the map. As long as this property is 1, the map view continues to track the user's location and update it periodically. The default value of this property is 0.

Showing the user's location does not guarantee that the location is visible on the map. The user might have scrolled the map to a different point, causing the current location to be offscreen. To determine whether the user's current location is currently displayed on the map, use the MapView.IsUserLocationVisible function.

### Examples

Create map view and show user location:

```
Set Variable [ $$MapView ; Value: MBS("MapView.CreateWithControl"; 0; "Placeholder") ]
Set Variable [ $r ; Value: MBS( "MapView.SetShowsUserLocation"; $$MapView; 1 ) ]
# may trigger dialog to ask for location permissions
```

## 108.86 MapView.SetShowsZoomControls

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	No

MBS( "MapView.SetShowsZoomControls"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean indicating whether the map displays zoom controls.

## 108.87 MapView.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetTag"; MapView; tag )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### tag

A string you want to associate with the map view.

**Result** Returns OK or error.

### Description

Use the tag to store whatever value you want to associate with the image view. You can later query it using MapView.GetTag.

### See also

- 95.17 ImageView.SetTag 5179

## 108.88 MapView.SetToolTip

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	No

MBS( "MapView.SetToolTip"; MapView; Tooltip )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Tooltip

The new help text.

"Hello"

**Result** Returns OK or error.

### Description

The tooltip is visible on Mac when mouse stays over control. There are no tooltips for iOS.

### See also

- 95.8 ImageView.GetToolTip 5170
- 95.18 ImageView.SetToolTip 5180
- 108.41 MapView.GetToolTip 5772

## 108.89 MapView.SetVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetVisible"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new visible state. Can be 1 for visible and 0 for hidden.

1

**Result** Returns OK or error.

### Description

By default we create it visible, but you can hide it if it's on a register and the user clicked to other tab.

## 108.90 MapView.SetVisibleMapRect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetVisibleMapRect"; MapView; Rect )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Rect

The map rectangle. A JSON with x, y, width and height.

**Result** Returns OK or error.

### Description

Changes the currently visible portion of the map and optionally animates the change.

### Examples

Sets visible rect:

```
MBS( "MapView.SetVisibleMapRect"; $$MapView; " { \"x\": 140455603.74390683, \"height\": 799234.62509903312, \"y\": 86194618.191567183, \"width\": 1501801.5633610785 } "
```

### See also

Created 14th January 2019, last changed 15th January 2019.

## 108.91 MapView.SetZoomEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.SetZoomEnabled"; MapView; Value )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Value

The new setting. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

A Boolean value that determines whether the user may use pinch gestures to zoom in and out of the map.

#### See also

- 108.25 MapView.GetPitchEnabled 5756
- 108.31 MapView.GetRotateEnabled 5762

## 108.92 MapView.SetZoomLevel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.5	Yes	No	No	No	Yes

MBS( "MapView.SetZoomLevel"; MapView; ZoomLevel { ; Animated } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### ZoomLevel

The new zoom level. Range 1 to 20.

5

#### Animated

Optional

Whether to animate. Pass 1 to animate or 0 to not animate. Default is animated.

1

**Result** Returns OK or error.

### Description

#### Examples

Zoom one level in:

```
MBS( "MapView.SetZoomLevel"; $$MapView; MBS( "MapView.GetZoomLevel"; $$MapView ) + 1; 1)
```

Zoom out:

```
MBS( "MapView.SetZoomLevel"; $$MapView; 1; 1)
```

## 108.93 MapView.ShowAddress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	No	No	Yes

MBS( "MapView.ShowAddress"; MapView; Address { ; addPin; Identifier; color } )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

#### Address

The address to lookup.”

”New York”

#### addPin

Optional

Whether to add a pin. Pass 0 to just show the area or 1 to add pin and show the area.

1

#### Identifier

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The identifier for the pin to use with script trigger.

#### color

Optional

Available in MBS FileMaker Plugin 9.3 or newer.

The color to use. Can be a color name or hex notation like in HTML.

”# FF0000”

**Result** Returns OK, identifier or error.

### Description

Asynchronously queries coordinate for given address and shows it.

### Examples

Show pin in New York in green:

```
MBS("MapView.ShowAddress"; $$MapView; "New York"; 1; ""; "# 00FF00")
```

### Example Databases

## 108.94 MapView.ShowAllAnnotations

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.1	Yes	No	No	No	Yes

MBS( "MapView.ShowAllAnnotations"; MapView )

### Parameters

#### MapView

The map view reference number.

\$\$MapView

**Result** Returns OK or error.

### Description

#### See also

- 108.56 MapView.RemoveAnnotations 5788

## 108.95 MapView.Snapshot

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
108 MapView	9.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MapView.Snapshot"; Options { ; ImageType; Filename } )

### Parameters

#### Options

The options as JSON block. All values are optional and have default.

```
" { \"width\": 800, \"height\": 600 } "
```

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns image or error.

### Description

Not sure if this works on server!

Keys in the JSON include:

width	The pixel width requested. Default is 256.
height	The pixel height requested. Default is 256.
scale	The scale of the display, defaults to screen scale. Only for iOS.
showsPointsOfInterest	Whether to show points of interests. Pass 1 to enable or 0 to disable.
showsBuildings	Show buildings. Pass 1 to enable or 0 to disable.
mapType	Pass Standard, Satellite, Hybrid, SatelliteFlyover, HybridFlyover or Muted-Standard.
mapRect	An object with x, y, width and height for the map rectangle to show in world coordinates.
region	An object with region details. Can be degree or meter based for span. latitude and longitude to define center coordinate. Add latitudeMeters/longitudeMeters or latitudeDelta/longitudeDelta to define span.
camera	The JSON object for camera specification.
appearance	Which appearance to use for MacOS 10.14. Can be Dark, Light or current. Default is current of Mac.

Camera specification includes center coordinate (latitude and longitude) and can be either looking from eye

point (eyeLatitude, eyeLongitude and altitude) or looking from distance (distance, pitch and heading).

Rendering may take a few seconds, but gets faster over time due to caching.

### Examples

Make a snapshot with all options default:

```
Set Field [ Snapshots::Image ; MBS( "MapView.Snapshot"; " { } " ) ]
```

Snapshot with camera:

```
Set Variable [ $json ; Value: MBS( "JSON.CreateObjectRef" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $json; "width"; 800 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $json; "height"; 600 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddStringToObject"; $json; "mapType"; "HybridFlyover" ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $json; "showsBuildings"; 1 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $json; "showsPointsOfInterest"; 1 ) ]
#
Set Variable [ $camera ; Value: MBS( "JSON.CreateObjectRef" ) ]
# The coordinate point on which the map should be centered.
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "latitude"; 40.7457172 ) ]
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "longitude"; -73.9941266 ) ]
#
# The line-of-sight distance from the camera to the center coordinate of the map.
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "distance"; 3000 ) ]
#
# The viewing angle of the camera, measured in degrees.
# A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a
camera that is pitched toward the horizon by the specified number of degrees. If the map type is satellite or
hybrid, the pitch value is clamped to 0.
# The value in this property may be clamped to a maximum value to maintain map readability. There is
no fixed maximum value, though, because the actual maximum value is dependent on the current altitude
of the camera.
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "pitch"; 70 ) ]
#
# The heading of the camera (measured in degrees) relative to true north.
# The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the
top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.
Set Variable [ $r ; Value: MBS( "JSON.AddNumberToObject"; $camera; "heading"; 28 ) ]
#
Set Variable [ $r ; Value: MBS( "JSON.AddItemToObject"; $json; "camera"; $camera ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $camera ) ]
#
Set Variable [ $options ; Value: MBS( "JSON.Format"; $json ) ]
Set Variable [ $r ; Value: MBS( "JSON.Release"; $json ) ]
Set Variable [ $image ; Value: MBS("MapView.Snapshot"; $options; "PNG"; "map.png") ]
If [ MBS("isError") ]
Show Custom Dialog [ "Failed to render map" ; $image ]
```

```
Else  
Set Field [ Snapshots::Image ; $image ]  
End If
```

# Chapter 109

## Markdown

Convert Markdown code to HTML code.

Using a Markdown library built-in to the plugin. Alternative can be WebViewer functions loading MakeDown library in JavaScript.

### 109.1 Markdown.CSS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Markdown	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Markdown.CSS"; MarkdownRef )

#### Parameters

##### MarkdownRef

The reference to the Markdown object as returned by Markdown.Create function.

\$ref

**Result** Returns text or error.

#### Description

#### See also

- 109.2 Markdown.Create

5836

#### Example Databases

- [Markdown](#)

Created 13th April 2015, last changed 14th April 2015.

## 109.2 Markdown.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Markdown	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Markdown.Create"; MarkdownCode )

### Parameters

#### MarkdownCode

The mark down code to process.

**Result** Returns reference number or error.

### Description

### Examples

Create and query html:

```
Set Variable [ $r ; Value: MBS("Markdown.Create"; "Text attributes italic, bold, 'monospace',
~~strikethrough~~.") ]
```

```
Set Variable [ $html ; Value: MBS("Markdown.HTML"; $r) ]
```

```
Set Variable [ $r ; Value: MBS("Markdown.Release"; $r) ]
```

### See also

### Example Databases

- [Markdown](#)

Created 13th April 2015, last changed 4th June 2015.

## 109.3 Markdown.HTML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Markdown	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Markdown.HTML"; MarkdownRef )

### Parameters

#### MarkdownRef

The reference to the Markdown object as returned by Markdown.Create function.

\$ref

**Result** Returns text or error.

### Description

#### Examples

Create and query html:

```
Set Variable [ $r ; Value: MBS("Markdown.Create"; "Text attributes italic, bold, 'monospace',
~~strikethrough~~.") ]
```

```
Set Variable [ $html ; Value: MBS("Markdown.HTML"; $r) ]
```

```
Set Variable [ $r ; Value: MBS("Markdown.Release"; $r) ]
```

### See also

## 109.4 Markdown.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
109 Markdown	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Markdown.Release"; MarkdownRef )

### Parameters

#### MarkdownRef

The reference to the Markdown object as returned by Markdown.Create function.

\$ref

**Result** Returns OK or error.

### Description

#### Examples

Create and query html:

```
Set Variable [ $r ; Value: MBS("Markdown.Create"; "Text attributes italic, bold, 'monospace',
~~strikethrough~~.") ]
```

```
Set Variable [ $html ; Value: MBS("Markdown.HTML"; $r) ]
```

```
Set Variable [ $r ; Value: MBS("Markdown.Release"; $r) ]
```

# Chapter 110

## Math

Math functions.

### 110.1 Math.BitwiseAND

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Math.BitwiseAND"; value1; value2 )

#### Parameters

##### value1

The first number.

5

##### value2

The second number.

6

**Result** Returns number.

#### Description

Only for integer numbers. You can pass several values to combine more than 2 values.

Updated to use 64-bit signed integers in version 7.3.

#### Examples

Applies bitwise and for three numbers which gives 16:

```
MBS("Math.BitwiseAND"; 255; 48; 18)
```

## 110.2 Math.BitwiseNOT

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Math.BitwiseNOT"; value )

### Parameters

#### value

The number to use.

255

**Result** Returns number.

### Description

Only for integer number.

Updated to use 64-bit signed integers in version 7.3.

### Examples

Calculates Bitwise NOT of 255:

MBS( "Math.BitwiseNOT"; 255 )

### See also

## 110.3 Math.BitwiseOR

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Math.BitwiseOR"; value1; value2 )

### Parameters

#### value1

The first number.

5

#### value2

The second number.

6

**Result** Returns number.

### Description

Only for integer numbers. You can pass several values to combine more than 2 values.

Updated to use 64-bit signed integers in version 7.3.

### Examples

Applies bitwise or for three numbers which gives 23:

```
MBS("Math.BitwiseOR"; 5; 6; 16)
```

## 110.4 Math.BitwiseShiftLeft

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Math.BitwiseShiftLeft"; value; steps )

### Parameters

#### value

The number to shift.

2

#### steps

The number of steps to shift.

1

**Result** Returns number.

### Description

Only for integer numbers.

Updated to use 64-bit signed integers in version 7.3.

### Examples

Shifts number. 4 shifted by 2 to left results in 16.

MBS( "Math.BitwiseShiftLeft"; 16; 2 )

## 110.5 Math.BitwiseShiftRight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Math.BitwiseShiftRight"; value; steps )

### Parameters

#### value

The number to shift.

2

#### steps

The number of steps to shift.

1

**Result** Returns number.

### Description

Only for integer numbers.

Updated to use 64-bit signed integers in version 7.3.

### Examples

Shifts number. 16 shifted by 2 to right results in 4

MBS( "Math.BitwiseShiftRight"; 16; 2 )

## 110.6 Math.BitwiseXOR

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	4.1	Yes	Yes	Yes	Yes	Yes

MBS( "Math.BitwiseXOR"; value1; value2 )

### Parameters

#### value1

The first number.

5

#### value2

The second number.

6

**Result** Returns number.

### Description

Only for integer numbers. You can pass several values to combine more than 2 values.

Updated to use 64-bit signed integers in version 7.3.

### Examples

Applies bitwise or for three numbers which gives 19:

```
MBS("Math.BitwiseXOR"; 5; 6; 16)
```

### See also

## 110.7 Math.DecToHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "Math.DecToHex"; number { ; NoLeadingZeros } )

### Parameters

#### number

The number you want to convert to hexadecimal.

1234

#### NoLeadingZeros

Optional

Optional, whether to avoid leading zeros. Default is 0.

0

**Result** Returns the hexadecimal number.

### Description

Works with 32 bit integers.

### Examples

Query number for 65535. Returns 0000FFFF.

MBS( "Math.DecToHex"; 65535 )

Query number without leading zeros for 4096. Returns 1000.

MBS( "Math.DecToHex"; 4096 )

### Example Databases

- [Math/Hexadecimal numbers](#)

### 110.7.1 Blog Entries

- [MBS Filemaker Plugin, version 2.5pr3](#)

Created 18th August 2014, last changed 18th August 2014.

## 110.8 Math.DecodeNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "Math.DecodeNumber"; NumberType; Bits; Text { ; BigEndian } )

### Parameters

#### NumberType

Which type of number to encode. Can be "Float", "Integer" or "UnsignedInteger".  
"Float"

#### Bits

The number of bits. Can be 32 or 64 for float. Can be 8, 16, 24, 32 or 64 for integers.  
32

#### Text

The hex encoded binary data.  
"14EF"

#### BigEndian

Optional  
Pass 1 to encode big endian. Default is 0 for little endian.  
0

**Result** Returns number or error.

### Description

This may be useful for binary protocols with serial ports or sockets.

### Examples

Decodes a 32-bit floating point number:

MBS( "Math.DecodeNumber"; "Float"; 32; "79E9F642" )

Decode a 8-bit integer number:

MBS( "Math.DecodeNumber"; "Integer"; 8; "C8")

Decode a 64-bit unsigned integer:

MBS( "Math.DecodeNumber"; "UnsignedInteger"; 64; "C0BA8A3CD5620400")

Decode big endian 64-bit:

MBS( "Math.DecodeNumber"; "Integer"; 64; "0000000000000001"; 1)

**See also**

- 110.9 Math.EncodeNumber 5849
- 110.20 Math.TextToNumber 5862

### 110.8.1 Blog Entries

- [MBS FileMaker Plugin, version 6.4pr3](#)
- [MBS FileMaker Plugin, version 6.4pr1](#)

Created 14th July 2016, last changed 1st August 2016.

## 110.9 Math.EncodeNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	6.4	Yes	Yes	Yes	Yes	Yes

MBS( "Math.EncodeNumber"; NumberType; Bits; Number { ; BigEndian } )

### Parameters

#### NumberType

Which type of number to encode. Can be "Float", "Integer" or "UnsignedInteger".  
"Float"

#### Bits

The number of bits. Can be 32 or 64 for float. Can be 8, 16, 24, 32 or 64 for integers.  
32

#### Number

The number to encode.  
123

#### BigEndian

Optional  
Pass 1 to encode big endian. Default is 0 for little endian.  
0

**Result** Returns hex text or error.

### Description

You can use Math.DecodeNumber to decode it again.

### Examples

Encodes a 32-bit floating point number:

```
MBS( "Math.EncodeNumber"; "Float"; 32; 123.456 )
// 79E9F642
```

Encode 8 bit signed integer:

```
MBS( "Math.EncodeNumber"; "Integer"; 8; -56 )
// C8
```

Encode 64-bit unsigned integer:

```
MBS( "Math.EncodeNumber"; "UnsignedInteger"; 64; 1234567890123456)
// C0BA8A3CD5620400
```

Encodes number with big/little endian:

```
MBS( "Math.EncodeNumber"; "Float"; 32; 123,456; 1 ) & §& MBS( "Math.EncodeNumber"; "Float"; 32;
```

5850

123,456; 0 )

Encode number with big endian and extended to 16 bytes:

```
"000000000000000000000000" & MBS( "Math.EncodeNumber"; "Integer"; 32; 1234567;1 )
```

## 110.10 Math.HexToDec

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	2.5	Yes	Yes	Yes	Yes	Yes

MBS( "Math.HexToDec"; hexNumber )

### Parameters

#### hexNumber

The hex number you want to convert to hexadecimal.  
FEDC

**Result** Returns the decimal number.

### Description

Works with 32 bit integers, so hex number has a maximal length of 8 characters.

### Examples

Query number for hex number FFFF (returns 65535)

MBS( "Math.HexToDec"; "FFFF" )

### Example Databases

- [Color Panel](#)
- [Math/Hexadecimal numbers](#)

### 110.10.1 Blog Entries

- [Using Emojis in FileMaker](#)
- [MBS Filemaker Plugin, version 2.5pr3](#)

## 110.11 Math.InchToPixel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "Math.InchToPixel"; Value; Resolution )

### Parameters

#### Value

The value to convert.

123

#### Resolution

The resolution used in dpi. Default is 72 dpi.

72

**Result** Return value or error.

### Description

The formula is:  $\text{result} = \text{value} * \text{resolution}$ .

### Examples

Convert 3 inches to pixel:

```
MBS( "Math.InchToPixel"; 3 )
```

### 110.11.1 Blog Entries

- [MBS Filemaker Plugin, version 3.4pr7](#)

Created 18th August 2014, last changed 18th August 2014.

## 110.12 Math.InsidePolygon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	2.2	Yes	Yes	Yes	Yes	Yes

MBS( "Math.InsidePolygon"; X; Y; Values )

### Parameters

#### X

The X coordinate

30

#### Y

The Y coordinate

30

### Values

The list of x and y values. Delimiter is semicolon. Numbers in US format.

"10;20;30;20;30;40;10;40"

### Description

### Examples

Check if point is inside polygon:

```
$result = MBS("Math.InsidePolygon"; 30; 30; "10;20;30;20;30;40;10;40")
```

Check with GPS coordinates:

```
MBS("Math.InsidePolygon"; 45.787; 4.831;
"45.78603562364937;4.830036163330078;
45.788691544176785;4.830873012542725;
45.78536975331141;4.833780527114868;
45.7881753329116;4.834917783737183")
```

## 110.13 Math.IsValidCC

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "Math.IsValidCC"; text )

### Parameters

#### text

The text with the number.

"12345678"

**Result** Returns 1 on success or 0 on failure.

### Description

This function implements the Luhn algorithm. This is a simple checksum formula used to validate a variety of identification numbers, such as credit card numbers, IMEI numbers, National Provider Identifier numbers in US and Canadian Social Insurance Numbers.

If this function returns 0, you can be sure the number is not valid. But if the function returns 1, you may want to check the number online with some database.

### Example Databases

- [Math/Validate CC numbers](#)

## 110.14 Math.MillimeterToPixel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "Math.MillimeterToPixel"; Value; Resolution )

### Parameters

#### Value

The value to convert.

123

#### Resolution

The resolution used in dpi. Default is 72 dpi.

72

**Result** Return value or error.

### Description

The formula is:  $\text{result} = \text{value} / 25.4 * \text{resolution}$ .

### Examples

Convert 300 millimeter to pixel:

MBS( "Math.MillimeterToPixel"; 300 )

### 110.14.1 Blog Entries

- [MBS Filemaker Plugin, version 3.4pr7](#)

## 110.15 Math.NumberToText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Math.NumberToText"; value )

### Parameters

#### value

Some numerical value you want to convert.

1234

**Result** Returns text.

### Description

This function always uses english system (dot as decimal separator).

See [Math.TextToNumber](#) for the reverse.

### See also

- [110.20 Math.TextToNumber](#)

## 110.16 Math.PixelToInch

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "Math.PixelToInch"; Value; Resolution )

### Parameters

#### Value

The value to convert.

123

#### Resolution

The resolution used in dpi. Default is 72 dpi.

72

**Result** Return value or error.

### Description

The formula is:  $\text{result} = \text{value} / \text{resolution}$ .

### Examples

Convert 300 pixel to inch:

MBS( "Math.PixelToInch"; 300 )

### 110.16.1 Blog Entries

- [MBS Filemaker Plugin, version 3.4pr7](#)

Created 18th August 2014, last changed 18th August 2014.

## 110.17 Math.PixelToMillimeter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "Math.PixelToMillimeter"; Value; Resolution )

### Parameters

#### Value

The value to convert.

123

#### Resolution

The resolution used in dpi. Default is 72 dpi.

72

**Result** Return value or error.

### Description

The formula is:  $\text{result} = \text{value} * 25.4 / \text{resolution}$ .

### Examples

Convert 300 pixels to millimeter:

```
MBS("Math.PixelToMillimeter"; 300)
```

Convert 72 pixels at 72 dpi resulting in 25.4 millimeter:

```
MBS("Math.PixelToMillimeter"; 72; 72)
```

### 110.17.1 Blog Entries

- [MBS Filemaker Plugin, version 3.4pr7](#)

## 110.18 Math.PolylineDecode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Math.PolylineDecode"; Text )

### Parameters

#### Text

The coordinate value to decode.

"~ps | U"

**Result** Returns number or error.

### Description

We decode the number stored in the given text and return the numeric value.

Precision is just 5 digits after comma.

See

<https://developers.google.com/maps/documentation/utilities/polylinealgorithm>

### Examples

Decode a number:

MBS("Math.PolylineDecode"; "~ps | U")

Example result: -120.20

### See also

- 110.19 Math.PolylineEncode

5860

### 110.18.1 Blog Entries

Created 31st March 2019, last changed 31st March 2019.

## 110.19 Math.PolylineEncode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Math.PolylineEncode"; Value )

### Parameters

#### Value

The value to encode.

40,7

**Result** Returns text or error.

### Description

We take a number (latitude or longitude) and encode it as an ASCII text.

See

<https://developers.google.com/maps/documentation/utilities/polylinealgorithm>

### Examples

Encode number:

```
MBS("Math.PolylineEncode"; 38.5)
```

Example result: `_p~iF`

Encode another value:

```
MBS("Math.PolylineEncode"; -120.2)
```

Example result: `~ps | U`

Encode a polyline with 3 points:

```
// Points: (38.5, -120.2), (40.7, -120.95), (43.252, -126.453)
```

```
MBS("Math.PolylineEncode"; 38.5) & MBS("Math.PolylineEncode"; -120.20) &
```

```
MBS("Math.PolylineEncode"; 40.7 - 38.5) & MBS("Math.PolylineEncode"; -120.95 - -120.2) &
```

```
MBS("Math.PolylineEncode"; 43.252 - 40.7) & MBS("Math.PolylineEncode"; -126.453 - -120.95)
```

Example result: `_p~iF~ps | U_ulLnnqC_mqNvxq'@`

## 110.20 Math.TextToNumber

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
110 Math	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "Math.TextToNumber"; text { ; detect } )

### Parameters

#### text

Some text value where you want to get the number back.  
"123.456"

#### detect

Optional  
Pass 1 to detect comma vs. dot and interpret number right.  
1

**Result** Returns number.

### Description

This function always uses english system (dot as decimal separator).

### Examples

Detect that number has dot as decimal divider and read number:

```
MBS("Math.TextToNumber"; "123,456.789"; 1)
```

Detect that number has comma as decimal divider and read number:

```
MBS("Math.TextToNumber"; "123.456,789"; 1)
```

# Chapter 111

## Matrix

Matrix functions

Two dimensionals lists.

### 111.1 Matrix.Add

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Add"; MatrixRef; Value { ; firstRow; lastRow; firstCol; lastCol } )

#### Parameters

##### MatrixRef

The matrix reference number.

\$matrix

##### Value

The value to add to all cells.

123

##### firstRow

Optional

The index of first row. Default is 0.

0

##### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

##### firstCol

Optional

The index of first column. Default is 0.

0

**lastCol**

Optional

The index of last column. Default is FM.SQL.FieldCount-1.

6

**Result** Returns OK or error.

### Description

We loop over all rows in all columns for the range and add the given value to the numbers.

If the cell doesn't contain a number, it's converted to a number like GetAsNumber().

### Examples

Add one to each cell:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New"; 5; 6) ]
# set values
Set Variable [ $r ; Value: MBS("Matrix.SetRow"; $matrix; 0; "Joe$Miller$New York$123") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRow"; $matrix; 1; "Bob$Jones$Washington$234") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRow"; $matrix; 2; "Jane$Stones$Los Angeles$567") ]
# add one to all
Set Variable [ $r ; Value: MBS("Matrix.Add"; $matrix; 1; 0; 3; 3; 3) ]
# show numbers
Show Custom Dialog [ "Values" ; MBS("Matrix.GetColumn"; $matrix; 3) ]
# free
Set Variable [ $r ; Value: MBS("Matrix.Free"; $matrix) ]
```

## 111.2 Matrix.AddColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.AddColumn"; MatrixRef )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

**Result** Returns OK or error.

### Description

### Examples

Add a column and fill it with values:

```
Set Variable [ $r ; Value: MBS( "Matrix.AddColumn"; $matrix) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 3; "2$4$12" ) ]
```

## 111.3 Matrix.AddColumns

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.AddColumns"; MatrixRef { ; Count } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Count

Optional

The number of columns to add. Default is 1.

2

**Result** Returns OK or error.

### Description

### Examples

Add columns and set values:

```
Set Variable [ $r ; Value: MBS( "Matrix.AddColumns"; $matrix ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 3; "2$4$12" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 4; "6$8$39" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.AddRow"; MatrixRef )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

**Result** Returns OK or error.

### Description

### Examples

Add row and set values:

```
Set Variable [ $r ; Value: MBS( "Matrix.AddRow";$matrix) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.SetRow"; $matrix; 3; "98$43$12$69" ) ]
```

## 111.5 Matrix.AddRows

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.AddRows"; MatrixRef { ; Count } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Count

Optional

The number of rows to add. Default is 1.

2

**Result** Returns OK or error.

### Description

### Examples

Add rows and set values:

```
Set Variable [ $r ; Value: MBS( "Matrix.AddRows";$matrix; 2 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetRow"; $matrix; 3; "98$43$12$69" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetRow"; $matrix; 4; "89$466$45$8" ) ]
```

### See also

## 111.6 Matrix.Avg

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Avg"; MatrixRef; Column { ; firstRow; lastRow } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Column

The index of the column. Default is 0.

0

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**Result** Returns number or error.

### Description

You got a record set in memory and we can walk over a column in a given row range to add the sum value and later divide by number of values.

### Examples

Calculate average:

Set Variable [ \$r ; Value: MBS( "Matrix.Avg"; \$matrix; 1;2;5 ) ]

### See also

- 81.35 FM.SQL.RowCount 4215
- 111.1 Matrix.Add 5865

Created 8th April 2019, last changed 17th December 2019.

## 111.7 Matrix.CSV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.CSV"; MatrixRef { ; firstRow; lastRow; firstCol; lastCol; rowSeparator; colSeparator } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is Matrix.Height-1.

5

#### firstCol

Optional

The index of first column. Default is 0.

0

#### lastCol

Optional

The index of last column. Default is Matrix.Width-1.

6

#### rowSeparator

Optional

The row separator. Default is CR.

Char(13)

#### colSeparator

Optional

The column separator. Default is semicolon.

”;"

**Result** Returns text or error.

### Description

You can use this method to quickly get all values in a given area as text.

If needed, we put values in quotes and escape quotes and newlines.

Please use Text.WriteTextFile to write to text file if you need CSV export.

**Examples**

Show matrix in dialog as CSV:

Show Custom Dialog [ “The Matrix” ; MBS( "Matrix.CSV"; \$matrix; 0; 2; 0; 2; Char(13); " " ) ]

**See also**

- 111.24 Matrix.Height 5893

## 111.8 Matrix.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Clear"; MatrixRef )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

**Result** Returns OK or error.

### Description

Removes all values from it and sets size to 0/0.

### Examples

Clear and check:

```
Set Variable [ $r ; Value: MBS("Matrix.Clear"; $matrix) ]
```

```
// After this step the width and height of the matrix are 0
```

```
Show Custom Dialog [ "Matrix Height"; MBS("Matrix.Height";$matrix) & "=" & MBS("Matrix.width";$matrix) ]
```

Created 8th April 2019, last changed 17th December 2019.

## 111.9 Matrix.ClearValues

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.ClearValues"; MatrixRef )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

**Result** Returns OK or error.

### Description

Keeps size of the matrix.

### Examples

Clear values:

```
Set Variable [ $r ; Value: MBS("Matrix.ClearValues";$matrix) ]
```

### See also

- 111.8 Matrix.Clear

5875

Created 8th April 2019, last changed 17th December 2019.

## 111.10 Matrix.Clone

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Clone"; MatrixRef )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

**Result** Returns matrix reference number or error.

### Description

Please call Matrix.Free later to free object.

### Examples

Clone matrix:

```
Set Variable [ $CloneMatrix ; Value: MBS("Matrix.Clone"; $Matrix) ]
```

## 111.11 Matrix.CopyColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.CopyColumn"; Matrix1; Column1; Matrix2; Column2 )

### Parameters

#### Matrix1

The matrix reference number.

\$matrix1

#### Column1

The zero based column number.

2

#### Matrix2

The matrix reference number.

\$matrix2

#### Column2

The zero based column number.

2

**Result** Returns OK or error.

### Description

### Examples

Copy second column to third:

MBS( "Matrix.CopyColumn"; \$matrix; 1; \$matrix; 2 )

### See also

111 Matrix	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.CopyRow"; Matrix1; Row1; Matrix2; Row2 )

### Parameters

#### Matrix1

The matrix reference number.

\$matrix1

#### Row1

The zero based row number.

2

#### Matrix2

The matrix reference number.

\$matrix2

#### Row2

The zero based row number.

2

**Result** Returns OK or error.

### Description

#### 111.12.1 Blog Entries

- [MBS FileMaker Plugin, version 10.2pr4](#)

Created 16th April 2020, last changed 16th April 2020.

## 111.13 Matrix.DataType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.DataType"; MatrixRef; Row; Column )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Row

The row number from 0 to Archive.Height-1.

\$row

#### Column

The column number from 0 to Archive.Width-1.

\$col

**Result** Returns text or error.

### Description

Returns text, date, number, time, timestamp, boolean, container or invalid.

### Examples

Check data type:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New";3;3) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"Hello$Time$left" ) ]
```

```
Show Custom Dialog [ "Datatypes" ; "Hello: " & MBS("Matrix.Datatype"; $matrix; 0; 0 ) ]
```

### See also

## 111.14 Matrix.Evaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Evaluate"; MatrixRef; Expression { ; firstRow; lastRow; firstCol; lastCol; ReadOnly } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Expression

The expression to evaluate. Can include "row", "column" and "current" as variables.  
"current +1"

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

#### firstCol

Optional

The index of first column. Default is 0.

0

#### lastCol

Optional

The index of last column. Default is FM.SQL.FieldCount-1.

6

#### ReadOnly

Optional

Pass 1 to ignore results of expressions and not put them back in matrix.

0

**Result** Returns OK or error.

### Description

You can change the value by doing a calculation in FileMaker syntax to change the value.

Reference current value via "current", the current row via "row" and the current column via "column" as variable names.

The result of the evaluate is written to the cell.

May return error if expression is invalid.

### Examples

Try evaluate:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New"; 5; 6) ]
# set values
Set Variable [ $r ; Value: MBS("Matrix.SetRow"; $matrix; 0; "Joe$Miller$New York$123") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRow"; $matrix; 1; "Bob$Jones$Washington$234") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRow"; $matrix; 2; "Jane$Stones$Los Angeles$567") ]

# add one to all by expression
Set Variable [ $r ; Value: MBS("Matrix.Evaluate"; $matrix; "current + 1"; 0; 3; 3; 3) ]

# show numbers
Show Custom Dialog [ "Values" ; MBS("Matrix.GetColumn"; $matrix; 3) ]
Set Variable [ $r ; Value: MBS("Matrix.Free"; $matrix) ]
```

Set each cell to the value and row/column:

```
Set Variable [ $r ; Value: MBS("Matrix.Evaluate"; $matrix; "current & \" \" & row & \" \" & column"; 0; 3; 3; 3) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.GetColumn"; MatrixRef; Column )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Column

The zero based column number.

2

**Result** Returns text or error.

### Description

Returns list of values.

### Examples

Queries column:

Set Variable [ \$Column ; Value: MBS("Matrix.getColumn"; \$matrix; 0) ]

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.GetColumnNames"; MatrixRef )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

**Result** Returns list or error.

### Description

### Examples

Try the column names:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New"; 5; 6) ]
# name columns
Set Variable [ $r ; Value: MBS("Matrix.SetColumnName"; $matrix; 0; "First Name") ]
Set Variable [ $r ; Value: MBS("Matrix.SetColumnName"; $matrix; 1; "Last Name") ]
Set Variable [ $r ; Value: MBS("Matrix.SetColumnName"; $matrix; 2; "City") ]
Set Variable [ $r ; Value: MBS("Matrix.SetColumnName"; $matrix; 3; "Amount") ]
# show names
Show Custom Dialog [ "Column Names" ; MBS("Matrix.GetColumnNames"; $matrix) ]
# free
Set Variable [ $r ; Value: MBS("Matrix.Free"; $matrix) ]
```

**111.19 Matrix.GetRow**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.GetRow"; MatrixRef; Row )

**Parameters****MatrixRef**

The matrix reference number.

\$matrix

**Row**

The zero based row number.

2

**Result** Returns text or error.

**Description**

Returns list of values.

**Examples**

Queries row values:

```
Set Variable [ $row ; Value: MBS("Matrix.getRow"; $Matrix;0) ]
```

**See also**

## 111.21 Matrix.GetRowNames

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.GetRowNames" )

**Result** Returns list or error.

### Description

### Examples

Try the Row names:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New"; 5; 6) ]
# name Rows
Set Variable [ $r ; Value: MBS("Matrix.SetRowName"; $matrix; 0; "First Name") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRowName"; $matrix; 1; "Last Name") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRowName"; $matrix; 2; "City") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRowName"; $matrix; 3; "Amount") ]
# show names
Show Custom Dialog [ "Row Names" ; MBS("Matrix.GetRowNames"; $matrix) ]
# free
Set Variable [ $r ; Value: MBS("Matrix.Free"; $matrix) ]
```

## 111.22 Matrix.GetText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.GetText"; MatrixRef { ; Delimiter } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Delimiter

Optional

The column delimiter. Default is empty text.

Char(9)

**Result** Returns text or error.

### Description

Returns list of row values.

### Examples

Queries text of a column:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New";3;3) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"15§07§92" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 1;"17§3§60" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetColumn"; $matrix; 2;"15§1§87" ) ]
Show Custom Dialog [ "Unser Matrix" ; MBS("Matrix.GetText"; $matrix) ]
```

### See also

## 111.23 Matrix.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.GetValue"; MatrixRef; Row; Column )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Row

The zero based row number.

2

#### Column

The zero based column number.

2

**Result** Returns value or error.

### Description

Retains original data type.

### Examples

Test setting and getting values:

```
Set Variable [ $matrix ; Value: MBS( "Matrix.New"; 3; 4 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetValue"; $matrix; 0; 0; "Hello" ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetValue"; $matrix; 1; 0; 123,456 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetValue"; $matrix; 2; 0; Get(CurrentTimestamp) ) ]
Set Variable [ $t ; Value: MBS( "Matrix.GetValue"; $matrix; 0; 0 ) ]
Set Variable [ $v ; Value: MBS( "Matrix.GetValue"; $matrix; 1; 0 ) ]
Set Variable [ $z ; Value: MBS( "Matrix.GetValue"; $matrix; 2; 0 ) ]
Show Custom Dialog [ "Results" ; $t & $& $v & $& $z ]
Show Custom Dialog [ "Results" ; MBS("FM.DataType"; $t) & $& MBS("FM.DataType"; $v) & $&
MBS("FM.DataType"; $z) ]
Set Variable [ $r ; Value: MBS( "Matrix.Free"; $matrix ) ]
```

## 111.24 Matrix.Height

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Height"; MatrixRef )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

**Result** Returns number or error.

### Description

#### Examples

Check size of matrix:

```
If [ MBS("Matrix.Height"; $matrix) = MBS("Matrix.Width"; $Matrix) ]
Show Custom Dialog [ "The matrix is square" ; "number of rows and columns are equal!" ]
End If
```

## 111.25 Matrix.InsertRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

```
MBS( "Matrix.InsertRecords"; MatrixRef; InsertFileName; InsertTableName; FieldNames { ; StartRow; EndRow } )
```

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### InsertFileName

The file name of where the insert table is inside. Can be empty to look for the table in all files.

Get(FileName)

#### InsertTableName

The name of the table to insert record into.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model"

#### StartRow

Optional

The index of the start row in the current recordset. First row is 0.

0

#### EndRow

Optional

The index of the end row in the current recordset. First row is 0. Last Row would be FM.SQL.RowCount-1.

0

**Result** Returns OK or error.

### Description

This function allows to easily copy a lot of records from a query in FileMaker database into a FileMaker table.

Please provide field names in FileMaker. The order has to match those in the record set.

Due to passing in new field names, you can even rearrange values from one column to other while copying.

In the SQL you can use functions for sums or join data from several tables together to fill a new table.

Use FM.ExecuteSQL.LastErrorMessage and FM.ExecuteSQL.LastError to see error message.

Reports an error if field name list doesn't match column count of the query result.

Function will fail if data types in source and dest fields do not match for assignment. e.g. date and time fields will not work, only timestamp fields.

For insert from SQL Connection into FileMaker database, please use SQL.InsertRecords.

111.25. *MATRIX.INSERTRECORDS* 5895

## 111.26 Matrix.InsertRecordsToSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.InsertRecordsToSQL"; MatrixRef; Connection; InsertTableName; FieldNames { ; StartRow; EndRow; Replace } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Connection

The connection reference number gained with SQL.NewConnection.

\$Connection

#### InsertTableName

The name of the table to insert record into.

"Assets"

#### FieldNames

A list of field names for the insert. Empty entries in the list are ignored.

"Model\$Names"

#### StartRow

Optional

The index of the start row. First row is 0. Pass -1 or nothing for default which is starting with row 0.

-1

#### EndRow

Optional

The index of the end row. First row is 0. Last Row would be FM.SQL.RowCount-1. Pass -1 to use all rows and the plugin will internally use RowCount-1.

-1

#### Replace

Optional

Set to 1 to replace existing entries. Currently available for MySQL and databases with same syntax.

0

**Result** Returns OK or error.

### Description

## 111.27 Matrix.JSONRecord

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.JSONRecord"; MatrixRef; Row { ; FieldNames; Flags } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Row

The row you like to get.

1

#### FieldNames

Optional

A list of field names for the JSON.

"Model\$Names"

#### Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

**Result** Returns JSON text or error.

### Description

You provide list of field names, which should be in same order as fields in matrix.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

### Examples

Query JSON:

```
Set Variable [ $JSON ; Value: MBS( "Matrix.JSONRecord"; $result; 1; "a$b$c" ) ]
```

### See also

- 111.28 Matrix.JSONRecords

5899

## 111.28 Matrix.JSONRecords

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.JSONRecords"; MatrixRef; FieldNames { ; Flags } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### FieldNames

A list of field names for the JSON.

"Model\$Names"

#### Flags

Optional

The flags for the json creation. Pass 1 to get all values as text. Pass 2 to get all dates, times and timestamps in SQL format.

1+2

**Result** Returns JSON text or error.

### Description

You provide list of field names, which should be in same order as fields in matrix.

Optionally we can return SQL dates, times and timestamps as SQL format.

Containers are returned as Base64 encoded data.

### Examples

Query matrix as JSON:

```
# Matrix as JSON object
```

```
Set Variable [ $JSON ; Value: MBS( "Matrix.JSONRecords"; $result; "a$b$c" ) ]
```

```
Show Custom Dialog [ "Matrix as JSON" ; $JSON ]
```

### See also

## 111.29 Matrix.Max

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Max"; MatrixRef; Column { ; firstRow; lastRow } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Column

The index of the column. Default is 0.

0

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**Result** Returns number or error.

### Description

You got a record set in memory and we can walk over a column in a given row range to find the maximum value.

### Examples

Calculate max:

Set Variable [ \$Max; Value: MBS( "Matrix.Max"; \$matrix; 1 ) ]

### See also

- 81.35 FM.SQL.RowCount 4215
- 111.30 Matrix.Min 5901

### 111.29.1 FileMaker Magazin

- Ausgabe 4/2019, Seite 30

Created 8th April 2019, last changed 17th December 2019.

## 111.30 Matrix.Min

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Min"; MatrixRef; Column { ; firstRow; lastRow } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Column

The index of the column. Default is 0.

0

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**Result** Returns number or error.

### Description

You got a record set in memory and we can walk over a column in a given row range to find the minimum value.

### Examples

Calculate minimum:

Set Variable [ \$Min; Value: MBS( "Matrix.Min"; \$matrix; 5; 4; 8 ) ]

### See also

- 81.35 FM.SQL.RowCount 4215
- 111.29 Matrix.Max 5900

### 111.30.1 FileMaker Magazin

- Ausgabe 4/2019, Seite 30

## 111.31 Matrix.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.New"; Height; Width )

### Parameters

#### Height

The height of the matrix.

3

#### Width

The width of the matrix.

4

**Result** Returns matrix reference number or error.

### Description

Please call Matrix.Free later to free the matrix object.

Internally we store all data in FileMaker data types, so times, dates, timestamps, numbers and containers are preserved as they are and not converted to texts.

### Examples

Creates a matrix:

```
Set Variable [ $matrix ; Value: MBS( "Matrix.New"; 3; 4 ) ]
Show Custom Dialog [ "Size" ; MBS( "Matrix.Width"; $matrix ) & " x " & MBS( "Matrix.Height"; $matrix ) ]
Set Variable [ $r ; Value: MBS( "Matrix.Free"; $matrix ) ]
```

Create and set columns:

```
Set Variable [ $matrix; Value: MBS("Matrix.New";3;3) ]
# Set the values of the matrix
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"15$07$92" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 1;"17$3$60" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 2;"15$1$87" ) ]
```

## 111.32 Matrix.NewWithSQL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.NewWithSQL"; FileName; SQL Statement { ; Params } )

### Parameters

#### FileName

The target database name. Can be empty to not limit query to one database.  
””

#### SQL Statement

SQL Statement as a Text string

#### Params

Optional

Optional, pass here parameters. One parameter to this function for each parameter you want to pass to the SQL statement.  
123

**Result** Returns matrix reference number or error.

### Description

Returns a matrix reference number, so you can use functions like Matrix.Height, Matrix.Width, Matrix.GetValue and Matrix.DataType to query result. Don't forget to use Matrix.Free to release the result from memory when you are done with it.

### See also

- 111.13 Matrix.DataType 5880

- 111.43 Matrix.Width 5922

Created 8th April 2019, last changed 8th April 2019.

## 111.33 Matrix.RemoveColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.RemoveColumn"; MatrixRef; Column )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Column

The zero based column number.

2

**Result** Returns OK or error.

### Description

### Examples

Remove a column:

Set Variable [ \$r; Value: MBS( "Matrix.RemoveColumn"; \$matrix; 1 ) ]

### See also

- 111.11 Matrix.CopyColumn

## 111.34 Matrix.RemoveRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.RemoveRow"; MatrixRef; Row )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Row

The zero based row number.

2

**Result** Returns OK or error.

### Description

### Examples

Remove a row:

```
Set Variable [ $r; Value: MBS( "Matrix.RemoveRow"; $matrix; 2 ) ]
```

Created 8th April 2019, last changed 17th December 2019.

**111.35 Matrix.Resize**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Resize"; MatrixRef; Height; Width )

**Parameters****MatrixRef**

The matrix reference number.

\$matrix

**Height**

The height of the matrix.

3

**Width**

The width of the matrix.

4

**Result** Returns OK or error.

**Description****Examples**

Try resize:

```
Set Variable [ $matrix ; Value: MBS( "Matrix.New"; 3; 4 ) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.Resize"; $matrix; 7; 8 ) ]
```

```
Show Custom Dialog [ "Size" ; MBS( "Matrix.Width"; $matrix ) & " x " & MBS( "Matrix.Height"; $matrix ) ]
```

```
Set Variable [ $r ; Value: MBS( "Matrix.Free"; $matrix ) ]
```

Resizes a matrix:

```
Set Variable [ $r; Value: MBS( "Matrix.Resize"; $matrix; 3; 4 ) ]
```

## 111.36 Matrix.SetColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.SetColumn"; MatrixRef; Column { ; Values } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Column

The zero based column number.

2

#### Values

Optional

The list of values.

"1\$2"

**Result** Returns OK or error.

### Description

If less values are given, the other values in the column are filled with empty values.

### Examples

Creates matrix and sets columns:

```
Set Variable [ $matrix; Value: MBS("Matrix.New";3;3) ]
# Set the values of the matrix
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"15$07$92" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 1;"17$3$60" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 2;"15$1$87" ) ]
```

## 111.37 Matrix.SetColumnName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.SetColumnName"; MatrixRef; Column; Name )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Column

The zero based column number.

2

#### Name

The new name.

"Company Name"

**Result** Returns OK or error.

### Description

This is a value associated with the column. e.g. associate a field name with the column.

Whenever you need to provide column index, you can also pass column name.

### Examples

Try the column names:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New"; 5; 6) ]
# name columns
Set Variable [ $r ; Value: MBS("Matrix.SetColumnName"; $matrix; 0; "First Name") ]
Set Variable [ $r ; Value: MBS("Matrix.SetColumnName"; $matrix; 1; "Last Name") ]
Set Variable [ $r ; Value: MBS("Matrix.SetColumnName"; $matrix; 2; "City") ]
Set Variable [ $r ; Value: MBS("Matrix.SetColumnName"; $matrix; 3; "Amount") ]
# show names
Show Custom Dialog [ "Column Names" ; MBS("Matrix.GetColumnNames"; $matrix) ]
# free
Set Variable [ $r ; Value: MBS("Matrix.Free"; $matrix) ]
```

## 111.38 Matrix.SetRow

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.SetRow"; MatrixRef; Row { ; Values } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Row

The zero based row number.

2

#### Values

Optional

The list of values.

"1\$2"

**Result** Returns OK or error.

### Description

If less values are given, the other values in the column are filled with empty values.

### Examples

Sets rows:

```
Set Variable [ $r; Value: MBS( "Matrix.SetRow"; $result; 3; "98$43$12$69" ) ]
```

```
Set Variable [ $r; Value: MBS( "Matrix.SetRow"; $result; 4; "89$466$45$8" ) ]
```

## 111.39 Matrix.SetRowName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.SetRowName"; MatrixRef; Row; Name )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Row

The row you like to get.

1

#### Name

The new name.

\$uuid

**Result** Returns OK or error.

### Description

This is a value associated with the row. e.g. associate an UUID with the row.

Whenever you need to provide row index, you can also pass row name.

### Examples

Try the Row names:

```
Set Variable [ $matrix ; Value: MBS("Matrix.New"; 5; 6) ]
# name Rows
Set Variable [ $r ; Value: MBS("Matrix.SetRowName"; $matrix; 0; "First Name") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRowName"; $matrix; 1; "Last Name") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRowName"; $matrix; 2; "City") ]
Set Variable [ $r ; Value: MBS("Matrix.SetRowName"; $matrix; 3; "Amount") ]
# show names
Show Custom Dialog [ "Row Names" ; MBS("Matrix.GetRowNames"; $matrix) ]
# free
Set Variable [ $r ; Value: MBS("Matrix.Free"; $matrix) ]
```

## 111.40 Matrix.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.SetValue"; MatrixRef; Row; Column { ; Value } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Row

The zero based row number.

2

#### Column

The zero based column number.

2

#### Value

Optional

The new value.

"Hello"

**Result** Returns OK or error.

### Description

The original data type is retained.

### Examples

Test set and get:

```
Set Variable [ $m ; Value: MBS ( "Matrix.New"; 2; 2 ) ]
Set Variable [ $r ; Value: MBS( "Matrix.SetValue"; $m; 0; 0; Contacts::Company ) ]
Set Field [ Contacts::Job Title ; MBS( "Matrix.GetValue"; $m; 0; 0 ) ]
Set Variable [ $r ; Value: MBS ( "Matrix.Free"; $m ) ]
```

Sets a value:

```
Set Variable [ $r; Value: MBS("Matrix.SetValue"; $matrix;1;1;40) ]
```

## 111.41 Matrix.Sum

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Sum"; MatrixRef; Column { ; firstRow; lastRow } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### Column

The index of the column. Default is 0.

0

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

**Result** Returns number or error.

### Description

You got a record set in memory and we can walk over a column in a given row range to add the sum value.

### Examples

Sums the values in a matrix:

```
Set Variable [ $matrix; Value: MBS("Matrix.New";3;3) ]
# Set the values of the matrix
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 0;"15$07$92" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 1;"17$3$60" ) ]
Set Variable [ $r; Value: MBS( "Matrix.SetColumn"; $matrix; 2;"15$1$87" ) ]
# Add all numbers in the matrix (3x3)
Set Variable [ $a; Value: MBS( "Matrix.Sum"; $matrix; 0 ) ]
Set Variable [ $b; Value: MBS( "Matrix.Sum"; $matrix; 1 ) ]
Set Variable [ $c; Value: MBS( "Matrix.Sum"; $matrix; 2 ) ]
Set Variable [ $sum; Value: $a+$b+$c ]
```

```
Set Variable [ $r; Value: MBS("Matrix.Free"; $matrix) ]
```

## 111.42 Matrix.Text

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Text"; MatrixRef { ; firstRow; lastRow; firstCol; lastCol; rowSeparator; colSeparator } )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

#### firstRow

Optional

The index of first row. Default is 0.

0

#### lastRow

Optional

The index of last row. Default is FM.SQL.RowCount-1.

5

#### firstCol

Optional

The index of first column. Default is 0.

0

#### lastCol

Optional

The index of last column. Default is FM.SQL.FieldCount-1.

6

#### rowSeparator

Optional

The row separator. Default is CR.

Char(13)

#### colSeparator

Optional

The column separator. Default is tab character.

Char(9)

**Result** Returns text or error.

### Description

You can use this method to quickly get all values in a given area as text.

This joins the values and removes text formatting.

**See also**

- 81.27 FM.SQL.Field

<i>111.42. MATRIX.TEXT</i>	5921

## 111.43 Matrix.Width

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
111 Matrix	9.2	Yes	Yes	Yes	Yes	Yes

MBS( "Matrix.Width"; MatrixRef )

### Parameters

#### MatrixRef

The matrix reference number.

\$matrix

**Result** Returns number or error.

### Description

### Examples

Check size of matrix:

```
If [ MBS("Matrix.Height"; $matrix) = MBS("Matrix.Width"; $Matrix) ]
Show Custom Dialog [ "The matrix is square" ; "number of rows and columns are equal!" ]
End If
```

# Chapter 112

## MatrixDongle

Use and work with matrix dongles.

### 112.1 MatrixDongle.Count

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.Count" { ; PortNumber } )

#### Parameters

##### PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

**Result** Returns number or error.

#### Description

#### Examples

Count dongles:

```
Set Field [ MatrixDongle::CountResult; MBS( "MatrixDongle.Count" ) ]
```

#### See also

- 112.2 MatrixDongle.Find

- 112.16 MatrixDongle.Version 5943
- 112.17 MatrixDongle.WriteHex 5944
- 112.18 MatrixDongle.WriteText 5945

### Example Databases

- [MatrixDongle](#)

Created 1st August 2015, last changed 1st August 2015.

## 112.2 MatrixDongle.Find

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.Find" )

**Result** Returns number or error.

### Description

The LPT port at which the dongle was found is returned: 1 for LPT1, 2 for LPT 2 or 3 for LPT3 or 85 for USB.

Note: This function only supplies the first port at which a dongle is found, regardless of whether other dongles are available at other LPT or USB interfaces.

Use MatrixDongle.Count function for more details.

### Examples

Find dongles:

```
Set Field [ MatrixDongle::FindResult; MBS( "MatrixDongle.Find" ) ]
```

### See also

- 112.1 MatrixDongle.Count 5923

### 112.3 MatrixDongle.GetDriverFlag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.GetDriverFlag"; UserCode { ; DongleNumber; PortNumber } )

#### Parameters

##### UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

##### DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

##### PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

**Result** Returns number or error.

#### Description

Returns value 1 (HID) or 0 (Driver) is the requested USB operating mode of the dongle.

#### See also

- 112.1 MatrixDongle.Count 5923
- 112.15 MatrixDongle.SetDriverFlag 5941

Created 1st August 2015, last changed 1st August 2015.

## 112.4 MatrixDongle.GetVersionAPI

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.GetVersionAPI" )

**Result** Returns version number or error.

### Description

Format is x.y using major and minor version number.

### Examples

Queries version of API:

Set Field [ MatrixDongle::VersionAPI; MBS( "MatrixDongle.GetVersionAPI" ) ]

### See also

- [112.5 MatrixDongle.GetVersionDRV](#) 5928
- [112.6 MatrixDongle.GetVersionDRV.USB](#) 5929

### Example Databases

- [MatrixDongle](#)

Created 1st August 2015, last changed 1st August 2015.

## 112.5 MatrixDongle.GetVersionDRV

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.GetVersionDRV" )

**Result** Returns version number or error.

### Description

Format is x.y using major and minor version number.

### See also

- 112.4 MatrixDongle.GetVersionAPI 5927
- 112.6 MatrixDongle.GetVersionDRV.USB 5929

Created 1st August 2015, last changed 1st August 2015.

## 112.6 MatrixDongle.GetVersionDRV.USB

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.GetVersionDRV.USB" )

**Result** Returns version number or error.

### Description

Format is x.y using major and minor version number.

### Examples

Queries driver version:

Set Field [ MatrixDongle::DriverVersion; MBS( "MatrixDongle.GetVersionDrv.USB" ) ]

### See also

- 112.4 MatrixDongle.GetVersionAPI 5927
- 112.5 MatrixDongle.GetVersionDRV 5928

Created 1st August 2015, last changed 1st August 2015.

## 112.7 MatrixDongle.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.Initialize"; LibraryPath )

### Parameters

#### LibraryPath

The native file path to the matrix library file.

\$path

**Result** Returns OK or error.

### Description

Loads the library files: matrix64.dll, matrix32.dll or libmxmac260.dylib from disk.

You need to pass the path to the dynapdf library and the plugin loads it.

The matrix dll/dylib files are included with the matrix dongle SDK.

Be sure to use right 32-bit/64-bit driver depending on which bit number FileMaker has!

You can pass just the filename of library and the plugin finds it in the Extensions folder or in FileMaker's application folder.

If you get a crash here on MacOS, please check if crash report says Code Signature Invalid. Then you may need to code sign the dylib yourself to match the code signature of your application.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Initialize dongle functions:

```

If [ MBS( "SystemInfo.isMacOSX" ) = 1 ]
Set Variable [ $path; Value:MatrixDongle::LibraryPathMac ]
Else
Set Variable [ $path; Value:MatrixDongle::LibraryPathWin ]
End If
Set Variable [ $r; Value:MBS("MatrixDongle.Initialize"; $path) ]
If [ MBS("iserror") ]
Show Custom Dialog [ "Failed to initialize"; $r ]
Else
Show Custom Dialog [ "Initialize OK"; "The dongle functions are ready to use." ]
End If

```

## 112.8 MatrixDongle.Initialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.Initialized" )

**Result** Returns 0 to 1.

### Description

Returns 1, if MatrixDongle.Initialize was called successfully.

### See also

- 112.7 MatrixDongle.Initialize

5930

Created 1st August 2015, last changed 1st August 2015.

## 112.9 MatrixDongle.MemorySize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.MemorySize" { ; DongleNumber; PortNumber } )

### Parameters

#### DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

#### PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

**Result** Returns number or error.

### Description

The memory size in bytes is returned. For example, if the ML-60 is connected, the return value is 60. With the ML-12, the return value is 12 etc.

To know the number of data fields, divide the result by 4.

### Examples

Queries memory size:

```
Set Field [ MatrixDongle::MemorySize; MBS( "MatrixDongle.MemorySize" ) ]
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.Model" { ; DongleNumber; PortNumber } )

### Parameters

#### DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

#### PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

**Result** Returns model number or error.

### Description

### Examples

Queries model:

```
Set Field [ MatrixDongle::Model; MBS( "MatrixDongle.Model" ) ]
```

112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.ReadHex"; UserCode; Pos; Count { ; DongleNumber; PortNumber } )

### Parameters

#### UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

#### Pos

The position to write at. This value is in 4 byte data words, so for 12 bytes offset pass 3.

0

#### Count

Number of data words to read. 4 bytes per data word.

1

#### DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.ReadText"; UserCode; Pos; Count { ; Encoding; DongleNumber; PortNumber } )

### Parameters

#### UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

#### Pos

The position to write at. This value is in 4 byte data words, so for 12 bytes offset pass 3.

0

#### Count

Number of data words to read. 4 bytes per data word.

1

#### Encoding

Optional

The text encoding for text parameter. Default is UTF-8.

UTF8

#### DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.SetDriverFlag"; UserCode; Mode { ; DongleNumber; PortNumber } )

### Parameters

#### UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

#### Mode

Can have the value 0 or 1:0 - "Driver-Mode" - with a proprietary USB driver. 1 - "HID-Mode" - without any proprietary USB driver.

1

#### DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

#### PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

**Result** Returns OK or error.

### Description

#### Examples

Sets HID mode:

```
Set Variable [ $r; Value:MBS( "MatrixDongle.SetDriverFlag"; MatrixDongle::UserCode; 1) ]
```

112 MatrixDongle	5.2	Yes	Yes	Yes	No	No

MBS( "MatrixDongle.WriteHex"; UserCode; Text { ; Pos; DongleNumber; PortNumber } )

### Parameters

#### UserCode

This is your personal UserCode and must correspond with the internal UserCode from the dongle.

#### Text

The hex text to write.

"48656C6C6F20576F726C64"

#### Pos

Optional

The position to write at. This value is in 4 byte data words, so for 12 bytes offset pass 3.

0

#### DongleNumber

Optional

This is the dongle number when several dongles are plugged in one after the other. The maximum number of dongles available can be determined via the MatrixDongle.Count function. A maximum of 99 dongles can be connected to the LPT port and a maximum of 127 dongles to the USB connection. The plugin uses 1 if you don't pass this parameter.

1

#### PortNumber

Optional

With LPT dongles, this is the number of the LPT port to which the dongles are connected. With LPT dongles, the port number must be between 1 and 3. Example: 1 for LPT1, 2 for LPT2 or 3 for LPT3. With USB, this parameter must be 85. This variable is ignored with network calls. Default for MBS Plugin is 85 for USB.

85

**Result** Returns OK or error.

### Description

The plugin decodes the hex bytes and writes them to the dongle as bytes.

Created 18th August 2014, last changed 18th August 2014.

**113.3 MediaLibraryBrowser.setFrame**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 MediaLibraryBrowser	3.5	Yes	No	No	No	No

MBS( "MediaLibraryBrowser.setFrame"; x; y; w; h )

**Parameters****x**

New X coordinate.

20

**y**

New Y coordinate.

200

**w**

New width of panel.

300

**h**

New height of panel.

200

**Result** Returns OK or error.

**Description**

Requires Mac OS X 10.9.

Uses bottom up coordinates, so 0/0 is bottom left of main screen.

## 113.4 MediaLibraryBrowser.setMediaLibraries

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 MediaLibraryBrowser	3.5	Yes	No	No	No	No

MBS( "MediaLibraryBrowser.setMediaLibraries"; value )

### Parameters

#### value

The new media library selection.

1

**Result** Returns OK or error.

### Description

Requires Mac OS X 10.9. Currently only one type of media is supported.

Value is 1 for Audio, 2 for Image or 4 for Video.

### See also

## 113.6 MediaLibraryBrowser.togglePanel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
113 MediaLibraryBrowser	3.5	Yes	No	No	No	No

MBS( "MediaLibraryBrowser.togglePanel" )

**Result** Returns OK or error.

### Description

Shows or hides the panel depending on current state.

Requires Mac OS X 10.9.

Created 18th August 2014, last changed 18th August 2014.

# Chapter 114

## Menu

Functions to create menus and show them as popup menu.

### 114.1 Menu.AddItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

```
MBS( "Menu.AddItem"; menu; item )
```

#### Parameters

##### **menu**

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

##### **item**

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**Result** Returns OK or error.

#### Description

Thus, the receiver does not accept the menu item if it already belongs to another menu. After adding the menu item, the receiver updates itself.

#### Examples

Show a context menu based on a table with menu entries:

```
# go to layout with menu entries  
Go to Layout [ "REP" (REP Reports) ]  
# this script can be called with various groups
```

```

Set Variable [ $type ; Value: Get(ScriptParameter) ]
# make a new menu
Set Variable [ $menu ; Value: MBS( "Menu.CreateMenu" ) ]
# loop over records
Go to Record/Request/Page [ First ]
Loop
# if group matches
If [ REP Reports::Group = $type ]
# add new menu item with title from table
Set Variable [ $item ; Value: MBS( "MenuItem.CreateMenuItem"; REP Reports::LabelReport) ]
# define which script to call if menu item is selected
Set Variable [ $r ; Value: MBS( "MenuItem.SetScriptAction"; $item; Get(FileName); REP Reports::Script
) ]
# add item to menu
Set Variable [ $r ; Value: MBS( "Menu.AddItem"; $menu; $item ) ]
End If
# next record?
Go to Record/Request/Page [ Next ; Exit after last ]
End Loop
# switch layout back
Go to Layout [ original layout ]
# Show menu
Set Variable [ $r ; Value: MBS( "Menu.PopUp"; $menu; "mouse" ) ]
# Cleanup memory
Set Variable [ $r ; Value: MBS( "Menu.Release"; $menu) ]

```

## 114.2 Menu.AddItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.AddItems"; menu; titles { ; tags } )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### titles

The list of titles for new menu items.

"Hello"

#### tags

Optional

The tags for the entries.

**Result** Returns OK or error.

### Description

If the list of titles includes a line with "-" the plugin version 4.5 and newer will use a separator for this item.

### Examples

Add two items

```
MBS( "Menu.AddItems"; $menu; "Hello$World" )
```

Add two items with tags

```
MBS( "Menu.AddItems"; $menu; "Hello$World"; "11$12" )
```

QuickMenu custom function:

```
/* Parameters: Items */
Let ( [
/* Create a menu */
menu = MBS( "Menu.CreateMenu" );
/* add items from our parameter */
m2 = MBS( "Menu.AddItems"; menu; Items );
/* show menu at mouse position */
m3 = MBS( "Menu.PopUp"; menu; "mouse"; 0; 0 );
/* query selected item */
selectedItem = MBS( "Menu.SelectedItem"; menu );
/* if something is selected, query its text */
result = If( Length(selectedItem) > 0; MBS( "MenuItem.GetTitle"; selectedItem ); "" );
/* Cleanup menu */
```

```
m5 = MBS( "Menu.Release"; menu; 1 )
```

```
];
```

```
/* return selection */
result )
```

QuickMenu custom function with tags

```
/* Parameters: Items, Tags */
```

```
Let ( [
```

```
/* Create a menu */
```

```
menu = MBS( "Menu.CreateMenu" );
```

```
/* add items from our parameter */
```

```
m2 = MBS( "Menu.AddItem"; menu; Items; Tags );
```

```
/* show menu at mouse position */
```

```
m3 = MBS( "Menu.PopUp"; menu; "mouse"; 0; 0 );
```

```
/* query selected item */
```

```
selectedItem = MBS( "Menu.SelectedItem"; menu );
```

```
/* if something is selected, query its text */
```

```
result = If( Length(selectedItem )>0; MBS( "MenuItem.GetTag"; selectedItem ); "" );
```

```
/* Cleanup menu */
```

```
m5 = MBS( "Menu.Release"; menu; 1 )
```

```
];
```

```
/* return selected tag */
result )
```

## 114.3 Menu.CreateMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.CreateMenu" { ; title } )

### Parameters

#### title

Optional

The title for the menu.

"Hello"

**Result** Return menu reference or error.

### Description

You need to later release it with Menu.Release function.

Menu reference numbers are starting at 10000 and counting up for each new menu.

### Examples

Show a context menu based on a table with menu entries:

```
# go to layout with menu entries
Go to Layout [ "REP" (REP Reports) ]
# this script can be called with various groups
Set Variable [ $type ; Value: Get(ScriptParameter) ]
# make a new menu
Set Variable [ $menu ; Value: MBS( "Menu.CreateMenu" ) ]
# loop over records
Go to Record/Request/Page [ First ]
Loop
# if group matches
If [ REP Reports::Group = $type ]
# add new menu item with title from table
Set Variable [ $item ; Value: MBS( "MenuItem.CreateMenuItem"; REP Reports::LabelReport) ]
# define which script to call if menu item is selected
Set Variable [ $r ; Value: MBS( "MenuItem.SetScriptAction"; $item; Get(FileName); REP Reports::Script
) ]
# add item to menu
Set Variable [ $r ; Value: MBS( "Menu.AddItem"; $menu; $item ) ]
End If
# next record?
Go to Record/Request/Page [ Next ; Exit after last ]
End Loop
# switch layout back
Go to Layout [ original layout ]
# Show menu
Set Variable [ $r ; Value: MBS( "Menu.PopUp"; $menu; "mouse" ) ]
```

```
# Cleanup memory  
Set Variable [ $r ; Value: MBS( "Menu.Release"; $menu) ]
```

Created 18th August 2014, last changed 11st September 2015.

## 114.4 Menu.DefineQuickMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.1	Yes	Yes	No	No	No

MBS( "Menu.DefineQuickMenu"; Name; Definition )

### Parameters

#### Name

The title of the new menu.

"MainMenu"

#### Definition

The menu definition.

"Red;1\$Blue;2\$Yellow;3"

**Result** Returns menu reference or error.

### Description

This function allows you to easily create a menu with a definition. The first two parameters are required. The "Name" parameter is the name of the menu.

The "Definition" parameter is a return-delimited list of menu items for this menu. Each line represents one item on the menu. You can specify a tag value for a menu item by appending a semi-colon and the value onto the end of the item name. For example, if you had "Blue;0000FF" on a line, your menu would have an item with the title "Blue" and when a user selected that item, the tag value "0000FF" could be used for your script. For sub-menus, specify the name of the sub-menu, followed by a greater-than sign (>) followed by the next sub-menu name or menu item. For example, if you had "Colors>Red" on a line, your menu would have a sub-menu named "Colors" with an item inside named "Red". Every sub-menu and menu item can be preceded with one or more special "meta tags" to specify different styles and marks for the sub-menu or item name as explained below:

You can specify more than one of the above for any item to set multiple attributes at once, with the exception of the check mark, bullet mark, and diamond mark. You can only have one mark defined for a menu item. For example, if you had "!# % Delete Record" on a line, your menu would have an item with the name "Delete Record" that appeared disabled, bold, and italicized. If you need to display a menu item that starts with one of these "meta tags", you can use the equals ("=") meta tag to skip the meta tag processing for the item. For example, if you had "=\$4.00" on a line, your menu would have an item with the name "\$4.00" instead of a menu named "4.00" that required you to press the shift key in order to make the item visible.

Not all features available on Windows!

With 5.2 plugin the name of the menu also defines the identifier to use. You can leave name empty to use reference number provided by plugin.

### Examples

Define a menu:

!	The item will appear disabled.
\$	The item will require the shift key to be pressed in order to show up.
^	The item will require the control key to be pressed in order to show up.
~	The item will require the alt/option key to be pressed in order to show up. (this is the tilde character, which is shifted version of the key to the left of the 1 on English keyboards) (only available on Mac)
@	The item will require the command key to be pressed in order to show up. (only available on Mac)
#	The item will appear bold.
%	The item will appear italicized.
_	The item will appear underlined.
' or √	The item will appear with a check mark. (this is the backtick character, which is the key to the left of the 1 on English keyboards) (on Mac, you can also use opt-v to type an actual check mark)
* or •	The item will appear with a bullet mark. (On Mac, you can also use opt-8 to type an actual bullet mark)
+ or	The item will appear with a diamond mark. (On Mac, you can also use shift-opt-v to type an actual diamond mark)
=	disable the meta tag processing for the rest of the sub-menu or item name.
-	The item is a separator.

```
MBS( "Menu.DefineQuickMenu"; "ColorsMenu" ; "Red;1$Blue;2$Yellow;3" )
```

Define a menu with submenus:

```
MBS( "Menu.DefineQuickMenu"; "ColorsMenu"; "Warm colors>Red$Warm colors>Yellow$Warm colors>Orange$Cool colors>Blue$Cool colors>Green$Cool colors>Purple")
```

Define a menu with checkmark:

```
MBS( "Menu.DefineQuickMenu"; "Current Fruit"; "Banana;Cherry;'Grape;Orange" )
```

Choose from menu with one Let statement:

```
// show menu with one let statement
Let ( [
// some list of menu entries
valuelist = "xxx$yyy$zzz" ;
// create menu from definition
menu = MBS ( "Menu.DefineQuickmenu"; "x" ; valuelist ) ;
// show menu near mouse
result = MBS ( "Menu.popup" ; menu ; "mouse" ) ;
```

#### 114.4. MENU.DEFINEQUICKMENU

5963

```
// query selected item number
item = IF ( result = 1 ; MBS("Menu.SelectedItem"; menu) ) ;
// query title for that item
title = IF ( Length ( item >0 ) ; MBS ( "MenuItem.GetTitle" ; item ) ) ;
// release memory
r = MBS ( "Menu.Release"; menu ) ] ;
// return the selected title
title )
```

## 114.5 Menu.DefineQuickMenuXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.2	Yes	Yes	No	No	No

MBS( "Menu.DefineQuickMenuXML"; XML )

### Parameters

#### XML

The description XML.

**Result** Returns menu reference or error.

### Description

The xml has a root entry called "menu". Each menu entry can have attributes title, tag, groupID, scriptname, filename and modifierkeys. A menu can have subnodes of name menu or item. The item can have attributes title, tag, scriptname, filename, tag, enabled, selectable, Separator, mark, style, GroupID or modifierkeys.

Modifierkeys can include shift, control, option or command.

Mark can include mixed, bullet, diamond or checked.

Style can include bold, italic or underline.

If an item has name "-" or Separator=1 attribute, the plugin will mark it as being a separator.

If the root menu entry has a name, we can use that name as menu reference.

Added FontColor and BackColor in version 9.4.

### Examples

Defines a quick menu with XML:

```
MBS( "Menu.DefineQuickMenuXML"; "<menu name=\"menue\">
<menuitem name=\"Red\" value=\"1\" />
<menuitem name=\"Blue\" value=\"2\" />
<menuitem name=\"Yellow\" value=\"3\" />
</menu>" )
```

Define a menu with submenus:

```
MBS( "Menu.DefineQuickMenuXML"; "<menu name=\"menue\">
<submenu name=\"Warm Colors\">
<menuitem name=\"Red\" value=\"1\" />
<menuitem name=\"Blue\" value=\"2\" />
<menuitem name=\"Yellow\" value=\"3\" />
</submenu>
<submenu name=\"Cool Colors\">
<menuitem name=\"Blue\" value=\"4\" />
<menuitem name=\"Green\" value=\"5\" />
<menuitem name=\"Purple\" value=\"6\" />
</submenu>
</menu>" )
```

## 114.5. MENU.DEFINEQUICKMENUXML

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "Menu.GetMinimumWidth"; menu )

### Parameters

#### **menu**

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

**Result** Returns value or error.

### Description

Available in OS X v10.6 and later.

The minimum width of the menu in screen coordinates.

## 114.22 Menu.PopUp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.PopUp"; menu; mode { ; x; y; window; item; objectName } )

### Parameters

#### **menu**

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### **mode**

The mode to use. Can be "mouse", "screen" or "window". Default is mouse for leaving away the parameter or passing empty text. Version 8.3 adds mode "content" to make it relative to the content part of the window, below toolbars.

"mouse"

#### **x**

Optional

The relative x coordinates for the position relative to the mouse, screen or window.

0

#### **y**

Optional

The relative y coordinates for the position relative to the mouse, screen or window.

0

#### **window**

Optional

The window reference for the showing menu relative to a window.

\$window

#### **item**

Optional

The menu item to be positioned at the specified location in the view.

\$item

#### **objectName**

Optional

The object name for mode=object.

"web"

**Result** Returns 1, 0 or error.

### Description

The top left corner of the specified item (if specified, item must be present in the receiver) is positioned at the specified location in the specified view, interpreted in the view's own coordinate system.

If you call this on the server for webdirect, the menu will show on the server, not in the browser.

Returns 1 if item was selected or 0 if not.

If you like to show a context menu only when user did a right mouse click, you can use the EventMonitor.LastMouseClickedButton function to check mouse state.

### Examples

Show a context menu based on a table with menu entries:

```
# go to layout with menu entries
Go to Layout [ "REP" (REP Reports) ]
# this script can be called with various groups
Set Variable [ $type ; Value: Get(ScriptParameter) ]
# make a new menu
Set Variable [ $menu ; Value: MBS( "Menu.CreateMenu" ) ]
# loop over records
Go to Record/Request/Page [ First ]
Loop
# if group matches
If [ REP Reports::Group = $type ]
# add new menu item with title from table
Set Variable [ $item ; Value: MBS( "MenuItem.CreateMenuItem"; REP Reports::LabelReport) ]
# define which script to call if menu item is selected
Set Variable [ $r ; Value: MBS( "MenuItem.SetScriptAction"; $item; Get(FileName); REP Reports::Script
) ]
# add item to menu
Set Variable [ $r ; Value: MBS( "Menu.AddItem"; $menu; $item ) ]
End If
# next record?
Go to Record/Request/Page [ Next ; Exit after last ]
End Loop
# switch layout back
Go to Layout [ original layout ]
# Show menu
Set Variable [ $r ; Value: MBS( "Menu.PopUp"; $menu; "mouse" ) ]
# Cleanup memory
Set Variable [ $r ; Value: MBS( "Menu.Release"; $menu) ]
```

Show menu and show selection:

```
Set Variable [ $menu; Value:MBS("Menu.CreateMenu" ) ]
# create menu items...
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World" ) ]
Set Variable [ $r; Value:MBS("MenuItem.SetTag"; $item; "secret value" ) ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
#
# show menu
Set Variable [ $m; Value:MBS("Menu.PopUp"; $Menu; "mouse" ) ]
#
# you selected something?
If [ $m = 1 ]
```

```

Set Variable [ $selectedItem; Value:MBS("Menu.SelectedItem"; $menu) ]
Set Variable [ $selectedTitle; Value:MBS("MenuItem.GetTitle"; $selectedItem) ]
Set Variable [ $selectedTag; Value:MBS("MenuItem.GetTag"; $selectedItem) ]
#
Show Custom Dialog [ "Auswahl"; $selectedItem & §& $selectedTitle & §& $selectedTag ]
End If
Set Variable [ $m; Value:MBS("Menu.Release"; $Menu; 1) ]

```

Choose from menu with one Let statement:

```

// show menu with one let statement
Let ( [
// some list of menu entries
valuelist = "xxx$yyy$zzz" ;
// create menu from definition
menu = MBS ( "Menu.DefineQuickmenu"; "x" ; valuelist ) ;
// show menu near mouse
result = MBS ( "Menu.popup" ; menu ; "mouse" ) ;
// query selected item number
item = IF ( result = 1 ; MBS("Menu.SelectedItem"; menu) ) ;
// query title for that item
title = IF ( Length ( item >0 ) ; MBS ( "MenuItem.GetTitle" ; item ) ) ;
// release memory
r = MBS ( "Menu.Release"; menu ) ] ;
// return the selected title
title )

```

Run menu at logo object:

```
MBS("Menu.PopUp"; $Menu; "object"; 0; 0; Get(WindowName); "" ; "logo")
```

## 114.23 Menu.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.Release"; menu { ; children } )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.  
\$menu

#### children

Optional

If 1, releases all child menu items and child menus.  
0

**Result** Returns OK or error.

### Description

You need to release menus after you finished using it to avoid running out of memory.

## 114.25 Menu.RemoveAllItems

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.RemoveAllItems"; menu )

### Parameters

#### **menu**

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

**Result** Returns OK or error.

### Description

This function is more efficient than removing menu items individually.

### See also

## 114.26 Menu.RemoveItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.RemoveItem"; menu; item )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### item

The reference to the menu item to be removed.

\$item

**Result** Returns OK or error.

### Description

Please use Menu.RemoveItemAtIndex if you have the index and not the reference number.

### See also

## 114.27 Menu.RemoveItemAtIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.RemoveItemAtIndex"; menu; index )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### index

An integer index identifying the menu item. Index must be between 0 and Menu.NumberOfItems-1.

0

**Result** Returns OK or error.

### Description

Please use Menu.RemoveItem if you have the reference number and not the index.

### See also

## 114.28 Menu.SelectedItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.SelectedItem"; menu )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

**Result** Returns reference number or error.

### Description

### Examples

Show menu and show selection:

```
Set Variable [ $menu; Value:MBS("Menu.CreateMenu") ]
# create menu items...
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetTag"; $item; "secret value") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
#
# show menu
Set Variable [ $m; Value:MBS("Menu.PopUp"; $Menu; "mouse") ]
#
# you selected something?
If [ $m = 1 ]
Set Variable [ $selectedItem; Value:MBS("Menu.SelectedItem"; $menu) ]
Set Variable [ $selectedTitle; Value:MBS("MenuItem.GetTitle"; $selectedItem) ]
Set Variable [ $selectedTag; Value:MBS("MenuItem.GetTag"; $selectedItem) ]
#
Show Custom Dialog [ "Auswahl"; $selectedItem & $& $selectedTitle & $& $selectedTag ]
End If
Set Variable [ $m; Value:MBS("Menu.Release"; $Menu; 1) ]
```

Choose from menu with one Let statement:

```
// show menu with one let statement
Let ( [
// some list of menu entries
valuelist = "xxx$yyy$zzz" ;
// create menu from definition
menu = MBS ( "Menu.DefineQuickmenu"; "x" ; valuelist ) ;
// show menu near mouse
result = MBS ( "Menu.popup" ; menu ; "mouse" ) ;
```

## 114.28. MENU.SELECTEDITEM

5993

```
// query selected item number
item = IF ( result = 1 ; MBS("Menu.SelectedItem"; menu ) ) ;
// query title for that item
title = IF ( Length ( item >0 ) ; MBS ( "MenuItem.GetTitle" ; item ) ) ;
// release memory
r = MBS ( "Menu.Release"; menu ) ] ;
// return the selected title
title )
```

## 114.29 Menu.SetAllowsContextMenuPlugIns

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "Menu.SetAllowsContextMenuPlugIns"; menu; value )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### value

1 if the popup menu should allow context menu plugin items to be appending, otherwise 0.

1

**Result** Returns OK or error.

### Description

Contextual menu plugins are system-wide services provided by other applications. For example, a contextual menu plugin might provide an "Open URL..." service. By enabling context menu plugins your application's contextual menu will display the appropriate items for the currently selected data type.

See also Menu.GetAllowsContextMenuPlugIns.

## 114.30 Menu.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	6.1	Yes	Yes	No	No	No

MBS( "Menu.SetEvaluate"; menu; Expression )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let ( \$\$Done = 1 ; 1 )"

**Result** Returns OK or error.

### Description

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the hotkey reference, so you can pass it to other functions if needed.

### See also

## 114.31 Menu.SetMinimumWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "Menu.SetMinimumWidth"; menu; width )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### width

The minimum width of the menu in screen coordinates.

0

**Result** Returns OK or error.

### Description

The menu will not draw smaller than its minimum width, but may draw larger if it needs more space. The default value is 0.

See also Menu.GetMinimumWidth.

### See also

- 114.3 Menu.CreateMenu 5959

## 114.32 Menu.SetScriptAction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.SetScriptAction"; menu; FileName; ScriptName { ; ScriptParameter } )

### Parameters

#### **menu**

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### **FileName**

The filename of file which contains the script.

"Menus.fmp12"

#### **ScriptName**

The name of the script.

"MenuScript"

#### **ScriptParameter**

Optional

If you want a specific script parameter. Default is to leave empty and get the ID fo the menu item.

**Result** Returns OK or error.

### Description

You can use MenuItem.SetScriptAction to associate a script with individual items or use this function for a whole menu.

See also Menu.GetScriptFileName and Menu.GetScriptName.

The script parameter is the MenuItem reference, so you can use functions like MenuItem.GetTitle to get the title or MenuItem.GetTag to get an associated value.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

## 114.33 Menu.SetShowsStateColumn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "Menu.SetShowsStateColumn"; menu; value )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### value

Pass 1 to show or 0 to hide the state column.

1

**Result** Returns OK or error.

### Description

Available in OS X v10.5 and later.

See also Menu.GetShowsStateColumn.

### See also

- 114.3 Menu.CreateMenu 5959

## 114.34 Menu.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.SetTag"; menu; value )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### value

The new tag value.

Get(RecordID)

**Result** Returns OK or error.

### Description

See also Menu.GetTag.

With the tag, we allow you to associate a text with the menu item, for example a record ID.

### See also

## 114.35 Menu.SetTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "Menu.SetTitle"; menu; value )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### value

The new title.

"Hello"

**Result** Returns OK or error.

### Description

See also Menu.GetTitle.

### See also

- 114.3 Menu.CreateMenu 5959

## 114.36 Menu.SetURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	6.5	Yes	Yes	No	No	No

MBS( "Menu.SetURL"; menu; URL )

### Parameters

#### menu

The reference to the menu. Please create one with Menu.CreateMenu.

\$menu

#### URL

The URL to trigger.

**Result** Returns OK or error.

### Description

\$\$ID\$\$ in the URL is replaced with menu ID.

Queries http/ftp/sftp URLs with CURL, other URLs passed to OS to open.

### See also

- 114.3 Menu.CreateMenu 5959

## 114.37 MenuItem.CreateMenuItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.CreateMenuItem" { ; Title; keyEquivalent } )

### Parameters

#### Title

Optional

The title of the menu item.

"Hello World"

#### keyEquivalent

Optional

Optional, a string representing a keyboard key to be used as the key equivalent.

"T"

**Result** Returns menu item reference number or error.

### Description

You later need to release it with MenuItem.Release.

Menu item reference numbers are starting at 11000 and counting up for each new menu item.

### Examples

Show a context menu based on a table with menu entries:

```
# go to layout with menu entries
Go to Layout [ "REP" (REP Reports) ]
# this script can be called with various groups
Set Variable [ $type ; Value: Get(ScriptParameter) ]
# make a new menu
Set Variable [ $menu ; Value: MBS( "Menu.CreateMenu" ) ]
# loop over records
Go to Record/Request/Page [ First ]
Loop
# if group matches
If [ REP Reports::Group = $type ]
# add new menu item with title from table
Set Variable [ $item ; Value: MBS( "MenuItem.CreateMenuItem"; REP Reports::LabelReport) ]
# define which script to call if menu item is selected
Set Variable [ $r ; Value: MBS( "MenuItem.SetScriptAction"; $item; Get(FileName); REP Reports::Script
) ]
# add item to menu
Set Variable [ $r ; Value: MBS( "Menu.AddItem"; $menu; $item ) ]
End If
# next record?
Go to Record/Request/Page [ Next ; Exit after last ]
End Loop
```

```
# switch layout back
Go to Layout [ original layout ]
# Show menu
Set Variable [ $r ; Value: MBS( "Menu.PopUp"; $menu; "mouse" ) ]
# Cleanup memory
Set Variable [ $r ; Value: MBS( "Menu.Release"; $menu) ]
```

## 114.47 MenuItem.GetFontSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.1	Yes	Yes	No	No	No

MBS( "MenuItem.GetFontSize"; item )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**Result** Returns font size or error.

### Description

Font size 0 is to use system default size.

## 114.48 MenuItem.GetGroupID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.2	Yes	Yes	No	No	No

MBS( "MenuItem.GetGroupID"; item )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**Result** Returns OK or error.

### Description

If several menu items have the same group id, the plugin only shows the first one fulfilling all requirements like key modifiers.

### See also

## 114.49 MenuItem.GetHidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.GetHidden"; item )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**Result** Returns 0, 1 or error.

### Description

1 if the menu item is hidden, otherwise 0.

Available in OS X v10.5 and later.

See also MenuItem.SetHidden.

### See also

## 114.50 MenuItem.GetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.GetImage"; item { ; ImageType; Filename } )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns image or error.

### Description

See also MenuItem.SetImage.

Please call GImage.Release later to free memory for this image.

## 114.52 MenuItem.GetKeyEquivalent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "MenuItem.GetKeyEquivalent"; item )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**Result** Returns text or error.

### Description

The menuItem's unmodified keyboard equivalent, or the empty string if one hasn't been defined. Use MenuItem.GetKeyEquivalentModifierMask to determine the modifier mask for the key equivalent. See also MenuItem.SetKeyEquivalent.

### See also

- 114.37 MenuItem.CreateMenuItem 6003

## 114.54 MenuItem.GetMixedStateImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.GetMixedStateImage"; item { ; ImageType; Filename } )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns image or error.

### Description

A mixed state is useful for indicating a mix of "off" and "on" attribute values in a group of selected objects, such as a selection of text containing boldface and plain (non-boldface) words. By default this is a horizontal line.

Please call GImage.Release later to free memory for this image.

## 114.55 MenuItem.GetOffStateImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.GetOffStateImage"; item { ; ImageType; Filename } )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.  
"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.  
"test.jpg"

**Result** Returns image or error.

### Description

The image used to depict the receiver's off state, or empty if the image has not been set. Please call GImage.Release later to free memory for this image.

## 114.56 MenuItem.GetOnStateImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.GetOnStateImage"; item { ; ImageType; Filename } )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns image or error.

### Description

The image used to depict the receiver's "on" state, or empty if the image has not been set.

Please call GImage.Release later to free memory for this image.

## 114.57 MenuItem.GetParentItem

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.GetParentItem"; item )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**Result** Returns reference number or error.

### Description

The parent menu item, or empty text if the receiver does not have a parent item.

### See also

- 114.37 MenuItem.CreateMenuItem 6003

## 114.58 MenuItem.GetParentMenu

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.3	Yes	Yes	No	No	No

MBS( "MenuItem.GetParentMenu"; item )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**Result** Returns OK or error.

### Description

The parent menu, or empty text if the item does not have a parent item.

### See also

## 114.59 MenuItem.GetPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.2	Yes	Yes	No	No	No

MBS( "MenuItem.GetPath"; item; Mode { ; Delimiter } )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Mode

Can be Title, Tag or ID and defines which value to use.

"Title"

#### Delimiter

Optional

Which delimiter to use. Default is newline.

"/"

**Result** Returns text or error.

## 114.70 MenuItem.GetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.GetTag"; item )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**Result** Returns value or error.

### Description

See also Menu.SetTag.

With the tag, we allow you to associate a text with the menu item, for example a record ID.

### Examples

Show menu and show selection:

```
Set Variable [ $menu; Value:MBS("Menu.CreateMenu") ]
# create menu items...
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetTag"; $item; "secret value") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
#
# show menu
Set Variable [ $m; Value:MBS("Menu.PopUp"; $Menu; "mouse") ]
#
# you selected something?
If [ $m = 1 ]
Set Variable [ $selectedItem; Value:MBS("Menu.SelectedItem"; $menu) ]
Set Variable [ $selectedTitle; Value:MBS("MenuItem.GetTitle"; $selectedItem) ]
Set Variable [ $selectedTag; Value:MBS("MenuItem.GetTag"; $selectedItem) ]
#
Show Custom Dialog [ "Auswahl"; $selectedItem & §& $selectedTitle & §& $selectedTag ]
End If
Set Variable [ $m; Value:MBS("Menu.Release"; $Menu; 1) ]
```

## 114.78 MenuItem.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	10.1	Yes	Yes	No	No	No

MBS( "MenuItem.List" )

**Result** Returns list or error.

### Description

You may use the list to loop over the entries and apply some styles to all.

### 114.78.1 Blog Entries

- [MBS FileMaker Plugin, version 10.1pr7](#)

Created 5th March 2020, last changed 5th March 2020.

**114.79 MenuItem.Release**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.Release"; item { ; children } )

**Parameters****item**

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

**children**

Optional

If 1, releases all child menu items and child menus.

0

**Result** Returns OK or error.

**Description**

You need to release menu items after you finished using it to avoid running out of memory.

**See also**

## 114.80 MenuItem.SetAlternate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "MenuItem.SetAlternate"; item; value )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### value

1 if the receiver is an alternate to the previous menu item, 0 otherwise.

1

**Result** Returns OK or error.

### Description

If the receiver has the same key equivalent as the previous item, but has different key equivalent modifiers, the items are folded into a single visible item and the appropriate item shows while tracking the menu, depending on what modifier key (if any) is pressed. The menu items may also have no key equivalent as long as the key equivalent modifiers are different.

See also MenuItem.GetAlternate.

## 114.81 MenuItem.SetAttributedTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "MenuItem.SetAttributedTitle"; item; text )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### text

The text with styles.

\$text

**Result** Returns OK or error.

### Description

Supported styles are bold, italic, font name, font size, underline and colors.

See also MenuItem.GetAttributedTitle.

### See also

- 114.37 MenuItem.CreateMenuItem 6003

## 114.82 MenuItem.SetBackColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	6.5	No	Yes	No	No	No

MBS( "MenuItem.SetBackColor"; item; Color )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 255. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red. "RGB 1 0 0"

**Result** Returns OK or error.

### Description

Currently only used on Windows.

On Mac it would only color the area where the text is and not the whole menu item, so this feature is disabled for Mac.

### Examples

Creates a menu item for background color:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Red Color") ]
Set Variable [ $r; Value:MBS("MenuItem.SetBackColor"; $item; "# FF0000") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.83 MenuItem.SetBold

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetBold"; item; flag )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### flag

The bold state. Pass 1 to use bold font or 0 to disable.

1

**Result** Returns OK or error.

### Description

### Examples

Create bold menu item:

```
# create menu
Set Variable [ $menu ; Value: MBS("Menu.CreateMenu") ]
# create menu item...
Set Variable [ $item ; Value: MBS("MenuItem.CreateMenuItem"; "Bold item") ]
Set Variable [ $r ; Value: MBS("MenuItem.SetBold"; $item; 1) ]
Set Variable [ $r ; Value: MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.84 MenuItem.SetEnabled

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetEnabled"; item; flag )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### flag

The enabled state. Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

See also MenuItem.GetEnabled.

### Examples

Add a disabled menu item:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetEnabled"; $item; 0) ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.85 MenuItem.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	6.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetEvaluate"; item; Expression )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let ( \$\$Done = 1 ; 1 )"

**Result** Returns OK or error.

### Description

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the hotkey reference, so you can pass it to other functions if needed.

### See also

## 114.86 MenuItem.SetFontColor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	6.5	Yes	Yes	No	No	No

MBS( "MenuItem.SetFontColor"; item; Color )

(old name: MenuItem.ApplyColor)

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Color

A color value. This can be a string in the following format "HSL h s l a", "YUV y u v a", "RGB r g b a", "MONO m a", "GRAY g a" or "COLOR R G B a". Alpha value a is optional. Range of values is 0 to 1.0 except if you use COLOR where RGB values are 0 to 255. Starting with version 5.4 of our plugin, you can use hex notation. # followed by 2 digits for red, green, blue and optional alpha, e.g. # FF0000 for full red. "RGB 1 0 0"

**Result** Returns OK or error.

### Description

On Windows, a few features are not compatible with having a custom color.

### Examples

Create menu item with font color:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Red Color") ]
Set Variable [ $r; Value:MBS("MenuItem.SetFontColor"; $item; "# FF0000") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.87 MenuItem.SetFontName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetFontName"; item; FontName { ; FontSize } )

(old name: MenuItem.ApplyFont)

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### FontName

The font name to use.

"Arial"

#### FontSize

Optional

The font size to use. Use 0 for default system font size.

9

**Result** Returns OK or error.

### Description

Leave empty for system font.

### Examples

Create a menu entry with specific font:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With Comic Sans Font") ]
```

```
Set Variable [ $r; Value:MBS("MenuItem.SetFontName"; $item; "Comic Sans MS"; 13) ]
```

```
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.88 MenuItem.SetFontSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetFontSize"; item; FontSize )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### FontSize

The font size to use. Use 0 for default system font size.

9

**Result** Returns OK or error.

### Description

### Examples

Creates a menu item with a font size:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Font Size 20") ]
```

```
Set Variable [ $r; Value:MBS("MenuItem.SetFontSize"; $item; 20) ]
```

```
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.89 MenuItem.SetGroupID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.2	Yes	Yes	No	No	No

MBS( "MenuItem.SetGroupID"; item; GroupID )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### GroupID

Any string to identify your groups.

"123"

**Result** Returns OK or error.

### Description

If several menu items have the same group id, the plugin only shows the first one fulfilling all requirements like key modifiers.

### See also

- 114.37 MenuItem.CreateMenuItem 6003
- 114.38 MenuItem.CreateSeparator 6005

## 114.90 MenuItem.SetHidden

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetHidden"; item; value )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### value

1 if the menu item is to be hidden, otherwise 0.

1

**Result** Returns OK or error.

### Description

Hidden menu items (or items with a hidden superitem) do not appear in a menu and do not participate in command key matching.

See also MenuItem.GetHidden.

### See also

Created 18th August 2014, last changed 31st August 2014.

## 114.91 MenuItem.SetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetImage"; item; Image )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Image

The image to use. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

**Result** Returns OK or error.

### Description

See also MenuItem.GetImage.

Transparency is not supported on Windows.

### Examples

Add a menu item with image:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetImage"; $item; MyTable::MyImage ) ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.92 MenuItem.SetItalic

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetItalic"; item; flag )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### flag

The italic state. Pass 1 to use italic font or 0 to disable.

1

**Result** Returns OK or error.

### Description

### Examples

Creates a menu item with italic font:

```
# create menu
Set Variable [ $menu ; Value: MBS("Menu.CreateMenu") ]
# create menu item...
Set Variable [ $item ; Value: MBS("MenuItem.CreateMenuItem"; "Italic item") ]
Set Variable [ $r ; Value: MBS("MenuItem.SetItalic"; $item; 1) ]
Set Variable [ $r ; Value: MBS("Menu.AddItem"; $menu; $item) ]
```

Created 11st May 2015, last changed 25th November 2019.

## 114.93 MenuItem.SetKeyEquivalent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "MenuItem.SetKeyEquivalent"; item; text )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### text

A string containing a character code representing a keyboard key. If you want to remove the key equivalent from a menu item, pass an empty string.

"T"

**Result** Returns OK or error.

### Description

This method considers the case of the letter passed to determine if it has a Shift modifier added. That is, "w" sets the key equivalent to Command-w, while "W" is Command-Shift-w. You use MenuItem.SetKeyEquivalentModifierMask to set the appropriate mask for the modifier keys for the key equivalent.

### Examples

Add menu item with key T:

```
# set useful constants:
```

```
Set Variable [ $ShiftKeyMask; Value:131072 ]
```

```
Set Variable [ $ControlKeyMask; Value:262144 ]
```

```
Set Variable [ $AlternateKeyMask; Value:524288 ]
```

```
Set Variable [ $CommandKeyMask; Value:1048576 ]
```

```
# now make menu entry
```

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With Key Equivalent") ]
```

```
Set Variable [ $r; Value:MBS("MenuItem.SetKeyEquivalent"; $item; "T") ]
```

```
Set Variable [ $r; Value:MBS("MenuItem.SetKeyEquivalentModifierMask"; $item; $ShiftKeyMask + $CommandKeyMask) ]
```

```
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

Created 18th August 2014, last changed 15th April 2015.

## 114.94 MenuItem.SetKeyEquivalentModifierMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "MenuItem.SetKeyEquivalentModifierMask"; item; mask )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### mask

The key masks indicate modifiers such as the Shift or Option keys. mask is a number and you can add the constants below.

524288

**Result** Returns OK or error.

### Description

In general, you are strongly encouraged to always set NSCommandKeyMask in mask, although there may be some conventions where this is not required. For example, in an application that plays media, the Play command may be mapped to just " " (space), without the command key.

NSShiftKeyMask is a valid modifier for any key equivalent in mask. This allows you to specify key-equivalents such as Command-Shift-1 that are consistent across all keyboards. However, with a few exceptions (such as the German "ß" character), a lowercase character with NSShiftKeyMask is interpreted the same as the uppercase character without that mask. For example, Command-Shift-c and Command-C are considered to be identical key equivalents.

NSShiftKeyMask	131072	Shift Key
NSControlKeyMask	262144	Control Key
NSAlternateKeyMask	524288	Alternate/Option Key
NSCommandKeyMask	1048576	Command Key

### Examples

Add menu item with key T:

```
# set useful constants:
```

```
Set Variable [ $ShiftKeyMask; Value:131072 ]
```

```
Set Variable [ $ControlKeyMask; Value:262144 ]
```

```
Set Variable [ $AlternateKeyMask; Value:524288 ]
```

```
Set Variable [ $CommandKeyMask; Value:1048576 ]
```

```
# now make menu entry
```

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With Key Equivalent") ]
```

114.94. *MENUITEM.SETKEYEQUIVALENTMODIFIERMASK*

6071

Set Variable [ \$r; Value:MBS("MenuItem.SetKeyEquivalent"; \$item; "T") ]

Set Variable [ \$r; Value:MBS("MenuItem.SetKeyEquivalentModifierMask"; \$item; \$ShiftKeyMask + \$CommandKeyMask) ]

Set Variable [ \$r; Value:MBS("Menu.AddItem"; \$menu; \$item) ]

## 114.95 MenuItem.SetMixedStateImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetMixedStateImage"; item; Image )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Image

The image to you. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

**Result** Returns OK or error.

### Description

Transparency is not supported on Windows.

## 114.96 MenuItem.SetOffStateImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetOffStateImage"; item; Image )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Image

The image to you. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

**Result** Returns OK or error.

### Description

Transparency is not supported on Windows.

## 114.97 MenuItem.SetOnStateImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetOnStateImage"; item; Image )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Image

The image to you. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

**Result** Returns OK or error.

## 114.98 MenuItem.SetRequireCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetRequireCommand"; item; Value )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Value

The new setting. Pass 1 to require command key or 0 to not require it.

1

**Result** Returns OK or error.

## 114.102 MenuItem.SetScriptAction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetScriptAction"; item; FileName; ScriptName { ; ScriptParameter } )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### FileName

The filename of file which contains the script.

"Menus.fmp12"

#### ScriptName

The name of the script.

"MenuScript"

#### ScriptParameter

Optional

If you want a specific script parameter. Default is to leave empty and get the ID fo the menu item. You can store a value with the menu item via MenuItem.SetTag.

**Result** Returns OK or error.

### Description

You can use MenuItem.SetScriptAction to associate a script with individual items or use this function for a whole menu.

See also MenuItem.GetScriptFileName and MenuItem.GetScriptName.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Add menu item with script to be called:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetScriptAction"; $item; Get(FileName); "MenuScript") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.103 MenuItem.SetSelectable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	6.3	Yes	Yes	No	No	No

MBS( "MenuItem.SetSelectable"; item; Value )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Value

The new setting. Pass 1 to make menu item selectable or 0 to disable selection.

0

**Result** Returns OK or error.

### Description

By default on Mac you can select submenu's parent menu item. This function can be used to disable this behavior.

For the plugin all menu items are created selectable = true by default.

Currently this flag has no effect on Windows.

### Examples

Disable selecting menuitem:

```
MBS("MenuItem.SetSelectable"; $item; 0)
```

### See also

## 114.104 MenuItem.SetState

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetState"; item; itemState )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### itemState

The new state; it should be one of Off, on or mixed.

"mixed"

**Result** Returns OK or error.

### Description

The image associated with the new state is displayed to the left of the menu item.

See also MenuItem.GetState.

Mixed state is not supported on Windows.

On Mac the special values "bullet" and "diamond" sets state to on and switch to use bullet/diamond images.

### Examples

Create menu item with mixed state:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With State Mixed") ]
Set Variable [ $r; Value:MBS("MenuItem.SetState"; $item; "mixed") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

Create menu item with on state:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "With State On") ]
Set Variable [ $r; Value:MBS("MenuItem.SetState"; $item; "on") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.105 MenuItem.SetStrikeOut

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	6.5	Yes	Yes	No	No	No

MBS( "MenuItem.SetStrikeOut"; item; Value )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### Value

The new setting.

1

**Result** Returns OK or error.

### Description

The text will be down stroked out.

### Examples

Creates a menu item with stroked out text:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Striked out") ]
Set Variable [ $r; Value:MBS("MenuItem.SetStrikeOut"; $item; 1) ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.107 MenuItem.SetTag

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetTag"; item; value )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### value

The new tag value.

Get(RecordID)

**Result** Returns OK or error.

### Description

See also Menu.GetTag.

With the tag, we allow you to associate a text with the menu item, for example a record ID.

## 114.109 MenuItem.SetToolTip

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	4.1	Yes	No	No	No	No

MBS( "MenuItem.SetToolTip"; item { ; text } )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### text

Optional

Optional, a short string that describes the menu item.  
"Print document"

**Result** Returns OK or error.

### Description

See also MenuItem.GetToolTip.

### Examples

Add a menu item with tooltip:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Hello World") ]
Set Variable [ $r; Value:MBS("MenuItem.SetToolTip"; $item; "This is sample tooltip.") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.110 MenuItem.SetURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	6.5	Yes	Yes	No	No	No

MBS( "MenuItem.SetURL"; item; URL )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### URL

The URL to trigger.

**Result** Returns OK or error.

### Description

\$\$ID\$\$ in the URL is replaced with menu ID.

Queries http/ftp/sftp URLs with CURL, other URLs passed to OS to open.

### Examples

Create menu to open email application:

```
Set Variable [ $item; Value:MBS("MenuItem.CreateMenuItem"; "Send Email to Support") ]
Set Variable [ $r; Value:MBS("MenuItem.SetURL"; $item; "mailto:support@monkeybreadsoftware.test") ]
Set Variable [ $r; Value:MBS("Menu.AddItem"; $menu; $item) ]
```

## 114.111 MenuItem.SetUnderline

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
114 Menu	5.1	Yes	Yes	No	No	No

MBS( "MenuItem.SetUnderline"; item; flag )

### Parameters

#### item

The reference to the menu item. Please create one with MenuItem.CreateMenuItem or MenuItem.CreateSeparator.

\$item

#### flag

The underline state. Pass 1 to use underline font or 0 to disable.

1

**Result** Returns OK or error.

### Description

### Examples

Creates a menu item with underlined font:

```
# create menu
Set Variable [ $menu ; Value: MBS("Menu.CreateMenu") ]
# create menu item...
Set Variable [ $item ; Value: MBS("MenuItem.CreateMenuItem"; "Italic item") ]
Set Variable [ $r ; Value: MBS("MenuItem.SetUnderline"; $item; 1) ]
Set Variable [ $r ; Value: MBS("Menu.AddItem"; $menu; $item) ]
```

# Chapter 115

## Menubar

Functions to modify the FileMaker menu.

### 115.1 Menubar.HasMenuCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 Menubar	5.0	Yes	Yes	No	No	No

MBS( "Menubar.HasMenuCommand"; Path )

#### Parameters

##### Path

The ID or path to the menu entry. Use Menubar.ListMenuCommands to find out the IDs and names.  
49297

**Result** Returns 1 or error.

#### Description

#### Examples

Check if select all command is there in German:

```
MBS("FM.HasMenuCommand"; "Bearbeiten§Alles auswählen")
```

Do we have the New Database command?

```
MBS("Menubar.HasMenuCommand"; 57600)
```

#### See also

- 115.4 Menubar.RemoveMenuCommand 6098
- 115.5 Menubar.RunMenuCommand 6099

### 115.1.1 Blog Entries

- [Tip of the day: Show debugger in FileMaker from within a script](#)

Created 15th November 2014, last changed 15th November 2014.

## 115.2 Menubar.IsMenuCommandChecked

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 Menubar	6.3	Yes	Yes	No	No	No

MBS( "Menubar.IsMenuCommandChecked"; Path )

### Parameters

#### Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.  
49297

**Result** Returns 0, 1 or error.

### Description

Returns 1 if the menubar has a checkmark.

### Examples

Checks if debugger is visible:

```
MBS( "Menubar.IsMenuCommandChecked"; 49260)
```

Show debugger from within a script:

```
# The menu command as we got it from Menubar.ListMenuCommands
Set Variable [ $DebuggerMenuID; Value:49260 ]
If [ MBS( "Menubar.HasMenuCommand"; $DebuggerMenuID ) = 1 ]
If [ MBS( "Menubar.IsMenuCommandChecked"; $DebuggerMenuID ) = 1 ]
# debugger already visible
Else
# show debugger
Set Variable [ $r; Value:MBS( "Menubar.RunMenuCommand"; $DebuggerMenuID ) ]
Pause/Resume Script [ Duration (seconds): ,1 ]
End If
Else
Show Custom Dialog [ "Debugger missing in Menubar?" ]
End If
# now follows your script that should always run in debugger
```

### 115.2.1 Blog Entries

- [MBS FileMaker Plugin, version 6.3pr3](#)
- [Tip of the day: Show debugger in FileMaker from within a script](#)

Created 17th June 2016, last changed 17th June 2016.

## 115.3 Menubar.ListMenuCommands

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 Menubar	5.0	Yes	Yes	No	No	No

MBS( "Menubar.ListMenuCommands" )

**Result** Returns list or error.

### Description

The result is a list with a line for each menu entry. The data is separated with tab character. First in each row is the command ID followed by the menu item names for the path to the item.

Works well in FileMaker 12 or newer, but not in FileMaker 11.

### Examples

List menu commands:

```
MBS("Menubar.ListMenuCommands")
```

Write commands to disk:

```
MBS("Text.WriteTextFile"; MBS( "Menubar.ListMenuCommands" ); "/Users/cs/Desktop/menu.txt")
```

### 115.3.1 Blog Entries

- [Tip of the day: Show debugger in FileMaker from within a script](#)

Created 15th November 2014, last changed 15th September 2016.

## 115.4 Menubar.RemoveMenuCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 Menubar	6.2	Yes	Yes	No	No	No

MBS( "Menubar.RemoveMenuCommand"; Path )

### Parameters

#### Path

The ID or path to the menu entry. Use Menubar.ListMenuCommands to find out the IDs and names.  
49297

**Result** Returns OK or error.

### Description

FileMaker may restore menu later.

### Examples

Remove tools menu:

```
MBS("Menubar.RemoveMenuCommand"; "Tools")
```

### See also

### 115.4.1 Blog Entries

- [MBS FileMaker Plugin, version 6.2pr10](#)

Created 14th May 2016, last changed 14th May 2016.

## 115.5 Menubar.RunMenuCommand

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 Menubar	5.0	Yes	Yes	No	No	No

MBS( "Menubar.RunMenuCommand"; Path )

### Parameters

#### Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.  
49297

**Result** Returns OK or error.

### Description

The plugin searches menu command and invokes it.

For Windows, the command is run asynchronously, so the function returns before the command runs. You may need to make a script pause to run the command.

For a couple of menu commands you may need to use `Schedule.EvaluateAfterDelay` to make sure the plugin invokes the menu after the script finished running.

### Examples

Run command to select all:

```
MBS("FM.RunMenuCommand"; "Bearbeiten$Alles auswählen")
```

Show debugger:

```
MBS("Menubar.RunMenuCommand"; "Werkzeuge$Script-Debugger")
```

Show debugger from within a script:

```
# The menu command as we got it from Menubar.ListMenuCommands
Set Variable [ $DebuggerMenuID; Value:49260 ]
If [ MBS( "Menubar.HasMenuCommand"; $DebuggerMenuID ) = 1 ]
If [ MBS( "Menubar.IsMenuCommandChecked"; $DebuggerMenuID ) = 1 ]
# debugger already visible
Else
# show debugger
Set Variable [ $r; Value:MBS( "Menubar.RunMenuCommand"; $DebuggerMenuID ) ]
Pause/Resume Script [ Duration (seconds): ,1 ]
End If
Else
Show Custom Dialog [ "Debugger missing in Menubar?" ]
End If
# now follows your script that should always run in debugger
```

Show/Hide format bar in German:

```
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; ,1; "MBS( \ "Menubar.RunMenuCommand\"; Liste(\ "Ansicht\"; \ "Formatierungsleiste\") )" ) ]
```

Make snapshot link with F5 hotkey:

```
Set Variable [ $$Hotkey ; Value: MBS("Hotkey.Register"; "F5"; "") ]
Set Variable [ $r ; Value: MBS( "HotKey.SetEvaluate"; $$Hotkey; "MBS( \ "Menubar.RunMenuCommand\"; 50285 )" ) ]
```

Enter layout mode in a second:

```
Set Variable [ $r ; Value: MBS ( "Schedule.EvaluateAfterDelay" ; 1 ; "MBS ( \ "Menubar.RunMenuCommand\"; 49156 )" ) ]
```

## 115.6 Menubar.SetMenuCommandShortcut

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 Menubar	5.0	Yes	No	No	No	No

MBS( "Menubar.SetMenuCommandShortcut"; Path; Key; Modifiers )

### Parameters

#### Path

The ID or path to the menu entry. Use Menubar.ListMenuCommands to find out the IDs and names.  
49297

#### Key

Which key to use.  
"D"

#### Modifiers

Which modifiers to use. can include command, option, shift or control.  
"command shift"

**Result** Returns OK or error.

### Description

#### Examples

Set Shortcut to "D" for the Data Viewer by ID:

```
MBS("Menubar.SetMenuCommandShortcut"; 49297; "D"; "shift command")
```

Set Shortcut to "D" for the Data Viewer by name in German:

```
MBS("FM.SetMenuCommandShortcut"; "Werkzeuge$Datenanzeige"; "D"; "command shift")
```

Created 15th November 2014, last changed 15th November 2014.

## 115.7 Menubar.SetMenuCommandTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 Menubar	6.1	Yes	Yes	No	No	No

MBS( "Menubar.SetMenuCommandTitle"; Path; Title )

### Parameters

#### Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.  
49297

#### Title

The new menu item title.  
"Hello"

**Result** Returns OK or error.

### Description

#### Examples

Rename menu entry on Mac:

```
MBS("Menubar.SetMenuCommandTitle"; "FileMaker Pro Advanced$FileMaker Pro Advanced ausblenden";
"Hello")
```

Sets a menu entry on Windows:

```
MBS("Menubar.SetMenuCommandTitle"; "Datei$Verwalten"; "Hello")
```

## 115.8 Menubar.SetMenuCommandVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
115 Menubar	5.0	Yes	Yes	No	No	No

MBS( "Menubar.SetMenuCommandVisible"; Path; Visible )

### Parameters

#### Path

The ID or path to the menu entry. Use `Menubar.ListMenuCommands` to find out the IDs and names.  
49297

#### Visible

The new visible state. Pass 1 to make visible and 0 to hide.  
1

**Result** Returns OK or error.

### Description

This allows you to remove menu entries by path/ID from the FileMaker menu, so user cannot longer use it. The change is not permanent and whenever FileMaker rebuilds the menu, all menu entries are back.

### Examples

Hide preferences menu command:

```
MBS("Menubar.SetMenuCommandVisible"; 49153; 0)
```

Hide service menu in FileMaker Pro Advanced in German:

```
MBS("Menubar.SetMenuCommandVisible"; "FileMaker Pro Advanced$Dienste"; 0)
```

# Chapter 116

## MessageComposer

A panel for iOS to edit and send an messages.

You can send text messages or iMessage with text and attachments.

See also MailComposer functions for creating emails.

### 116.1 MessageComposer.AddAttachmentContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

```
MBS( "MessageComposer.AddAttachmentContainer"; Container; Name { ; MimeType } )
```

#### Parameters

##### Container

The container to attach to email.

Attachment::Container

##### Name

The name for the attachment.

"sample.pdf"

##### MimeType

Optional

The UTI, file extension or mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".

"application/octet-stream"

**Result** Returns OK or error.

#### Description

You can use `Text.FileExtensionToMimeType` to find the mime type for a file extension.

You can use `AddAttachment` several times to add several attachments.

### Examples

Adds an attachment:

```
Set Variable [ $FieldName ; Value: Get(ScriptParameter) ]
Set Variable [ $Container ; Value: GetField ( $FieldName) ]
If [ IsEmpty ( $container ) = 0 ]
Set Variable [ $path ; Value: GetAsText ( $Container ) ]
Set Variable [ $name ; Value: MBS( "Path.LastPathComponent"; $path) ]
Set Variable [ $extension ; Value: MBS( "Files.FileExtension"; $name ) ]
Set Variable [ $mimeType ; Value: MBS( "Text.FileExtensionToMimeType"; $extension ) ]
#
Set Variable [ $r ; Value: MBS( "MessageComposer.AddAttachmentContainer"; $container; $name; $mimeType) ]
End If
```

- 116.3 `MessageComposer.AttachmentCount` 6108
- 124.5 `Path.LastPathComponent` 6252
- 167.37 `Text.FileExtensionToMimeType` 7956

### Example Databases

- [iOS/iOS Message Sending](#)

Created 10th June 2017, last changed 10th June 2017.

## 116.2 MessageComposer.AddAttachmentFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.AddAttachmentFile"; Path; Name { ; MimeType } )

### Parameters

#### Path

The native file path to the file to include as attachment.

"/Users/cs/Desktop/sample.pdf"

#### Name

The name for the attachment.

"sample.pdf"

#### MimeType

Optional

The UTI, file extension or mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".

"application/octet-stream"

**Result** Returns OK or error.

### Description

Attachments over 100 MB are not supported.

You can use `Text.FileExtensionToMimeType` to find the mime type for a file extension.

You can use `AddAttachment` several times to add several attachments.

### See also

Created 10th June 2017, last changed 10th June 2017.

### 116.3 MessageComposer.AttachmentCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.AttachmentCount" )

**Result** Returns count or error.

**Description**

**See also**

- 116.1 MessageComposer.AddAttachmentContainer 6105
- 116.2 MessageComposer.AddAttachmentFile 6107

Created 11st June 2017, last changed 11st June 2017.

## 116.4 MessageComposer.CanSendAttachments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.CanSendAttachments" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if the user has set up the device for including attachments in messages.

This function can be called before having a composer initialized.

### See also

- 116.23 MessageComposer.disableUserAttachments

6130

Created 10th June 2017, last changed 17th June 2018.

## 116.5 MessageComposer.CanSendSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.CanSendSubject" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if the user has set up the device for including subjects in messages.

This function can be called before having a composer initialized.

### See also

- 116.6 MessageComposer.CanSendText 6111
- 116.13 MessageComposer.GetSubject 6118
- 116.22 MessageComposer.SetSubject 6129

Created 10th June 2017, last changed 17th June 2018.

## 116.6 MessageComposer.CanSendText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.CanSendText" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if the user has set up the device for sending text only messages.

If the return value is 1, the client can set the recipients and body of the message.

If the return value is 0, the client may notify the user of the failure, or the client may open an SMS URL via open URL command.

This function can be called before having a composer initialized.

### Examples

Check whether message can be send:

```
Set Variable [ $r ; Value: MBS( "MessageComposer.CanSendText" ) ]
```

```
If [ $r = 1 ]
```

```
Show Custom Dialog [ "Can't send emails." ; "This iOS device is not configured to send text messages." ]
```

```
Exit Script [ Text Result: "failed" ]
```

```
End If
```

- 107.15 MailComposer.IsPresented 5708
- 116.16 MessageComposer.Present 6121
- 156.11 SocialComposer.IsPresented 7286

Created 10th June 2017, last changed 10th June 2017.

## 116.15 MessageComposer.New

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.New" )

**Result** Returns OK or error.

### Description

Resets last error and clears last message content.

There is only one message composer at all times, so starting a new one will clear last one.

### Examples

Starts a new message:

```
Set Variable [ $r ; Value: MBS( "MessageComposer.New" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MessageComposer.SetSubject"; Placeholder::Subject ) ]
```

### See also

- 116.16 MessageComposer.Present 6121
- 116.17 MessageComposer.Result 6123
- 116.22 MessageComposer.SetSubject 6129

### Example Databases

- [iOS/iOS Message Sending](#)

Created 10th June 2017, last changed 11st June 2017.

## 116.16 MessageComposer.Present

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.Present" )

**Result** Returns OK or error.

### Description

This will show the user interface and start the process.

Your script may call this in a script and than wait for the script trigger.

### Examples

Send a message with options:

```
Set Variable [ $r ; Value: MBS( "MessageComposer.CanSendText" ) ]
If [ $r = 1 ]
Show Custom Dialog [ "Can't send emails." ; "This iOS device is not configured to send text messages." ]
Exit Script [ Text Result: "failed" ]
End If
Set Variable [ $r ; Value: MBS( "MessageComposer.New" ) ]
If [ Length ( Placeholder::Subject ) >0 ]
Set Variable [ $r ; Value: MBS( "MessageComposer.SetSubject"; Placeholder::Subject ) ]
End If
Set Variable [ $r ; Value: MBS( "MessageComposer.SetScript"; Get(FileName); "Sent" ) ]
If [ Length ( Placeholder::Body ) >0 ]
Set Variable [ $r ; Value: MBS( "MessageComposer.SetMessageBody"; Placeholder::Body ) ]
End If
If [ Length ( Placeholder::Recipients ) >0 ]
Set Variable [ $r ; Value: MBS( "MessageComposer.SetRecipients"; Placeholder::Recipients ) ]
End If
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment1 ) ]
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment2 ) ]
Perform Script [ "AddAttachment" ; Parameter: GetFieldName ( Placeholder::Attachment3 ) ]
Set Variable [ $r ; Value: MBS( "MessageComposer.Present" ) ]
```

## 116.17 MessageComposer.Result

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.Result" )

**Result** Returns value or error.

### Description

If email composer is not yet finished, the result is empty.  
Status can be Cancelled, Sent, Failed.

### Examples

Check status:

```
Set Variable [ $result ; Value: MBS( "MessageComposer.Result" ) ]
Set Field [ Placeholder::Result ; $result ]
```

### See also

Created 10th June 2017, last changed 10th June 2017.

## 116.18 MessageComposer.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.SetEvaluate"; Expression )

### Parameters

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

**Result** Returns OK or error.

### Description

In the script you can check with MessageComposer.Result what happened.

#### See also

- 107.9 MailComposer.GetEvaluate 5702

## 116.19 MessageComposer.SetMessageBody

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.SetMessageBody"; Body )

### Parameters

#### Body

The text containing the body contents of the email message.

**Result** Returns OK or error.

### Description

This method will set the body of the email message. This should be called prior to display. The user's signature, if specified, will be added after the body content.

### Examples

Set the message text:

MBS( "MessageComposer.SetMessageBody"; "Hello World" )

### See also

## 116.20 MessageComposer.SetRecipients

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.SetRecipients"; Recipients )

### Parameters

#### Recipients

List of recipients.

**Result** Returns OK or error.

### Description

Sets the initial value of the To field for the message to the specified addresses.

### Examples

Send to two emails:

MBS( "MessageComposer.SetRecipients"; \$Email1 & \$& \$Email2 )

### See also

## 116.21 MessageComposer.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.SetScript"; FileName; ScriptName { ; Parameter } )

### Parameters

#### FileName

The file name for the script to trigger.

"test.fmp12"

#### ScriptName

The script name of the script to launch.

"EmailComposerFinished"

#### Parameter

Optional

The parameter to pass to the script.

**Result** Returns OK or error.

### Description

In the script you can check with MessageComposer.Result what happened.

### Examples

Sets script:

```
Set Variable [ $r ; Value: MBS( "MessageComposer.SetScript"; Get(FileName); "Sent" ) ]
```

### See also

## 116.22 MessageComposer.SetSubject

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.SetSubject"; Subject )

### Parameters

#### Subject

The new subject.  
"Hello World"

**Result** Returns OK or error.

### Description

This method will set the Subject header for the message. This should be called prior to display. Newlines are removed from the parameter. After the view has been presented to the user, this method will no longer change the value.

#### See also

## 116.23 MessageComposer.disableUserAttachments

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
116 MessageComposer	7.3	No	No	No	No	Yes

MBS( "MessageComposer.disableUserAttachments" )

**Result** Returns OK or error.

### Description

Calling this method will disable the camera/attachment button in the view controller. After the controller has been presented, this call will have no effect. The camera / attachment button is visible by default.

# Chapter 117

## MetaDataQuery

Spotlight search for macOS and iOS.

Find files & folders on the computer based on metadata properties, content or file names.

### 117.1 MetaDataQuery.AttributesForFile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	No

MBS( "MetaDataQuery.AttributesForFile"; Path )

#### Parameters

##### Path

The native file path to the file to check.

"/Users/cs/Desktop/sample.pdf"

**Result** Returns JSON or error.

#### Description

Returns JSON block with attributes.

This provides information Spotlight knows about the file.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

#### Examples

Query download URL of file:

```
Set Variable [ $path ; Value: "/Users/cs/Downloads/test.html" ]
```

```
Set Variable [ $json ; Value: MBS( "MetaDataQuery.AttributesForFile"; $path) ]
Set Variable [ $link ; Value: MBS("JSON.GetPathItem"; $json; "kMDItemWhereFroms$0") ]
Show Custom Dialog [ "Link" ; $link ]
```

Query song details:

```
MBS( "MetaDataQuery.AttributesForFile"; "/Users/cs/Music/iTunes/iTunes Music/ABBA/ABBA_ Gold  
- Greatest Hits/16 One of Us.m4p" )
```

## 117.2 MetaDataQuery.Close

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetaDataQuery.Close"; Query )

### Parameters

#### Query

The reference number of the query.

\$query

**Result** Returns OK or error.

### Description

### Examples

Close search:

Set Variable [ \$r ; Value: MBS( "MetaDataQuery.Close"; \$Query ) ]

### See also

## 117.4 MetaDataQuery.GetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetaDataQuery.GetEvaluate"; ShellRef )

### Parameters

#### ShellRef

The reference number from the shell.

\$shell

**Result** Returns text or error.

### Description

## 117.7 MetaDataQuery.IsGathering

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetaDataQuery.IsGathering"; Query )

### Parameters

#### Query

The reference number of the query.

\$query

**Result** Returns 1, 0 or error.

### Description

A Boolean value that indicates whether the receiver is in the initial gathering phase of the query.

### Examples

Wait for the search to finish:

Loop

Pause/Resume Script [ Duration (seconds): ,2 ]

Exit Loop If [ MBS( "MetaDataQuery.IsGathering"; \$Query ) = 0 ]

End Loop

## 117.10 MetaDataQuery.PathAtIndex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetaDataQuery.PathAtIndex"; Query; Index )

### Parameters

#### Query

The reference number of the query.

\$query

#### Index

The index of the item. Range from 0 to MetaDataQuery.ResultCount-1.

0

**Result** Returns OK or error.

### Description

### Examples

Put paths in records:

```
Set Variable [ $index ; Value: 0 ]
```

```
Loop
```

```
New Record/Request
```

```
Set Variable [ $path ; Value: MBS( "MetaDataQuery.PathAtIndex"; $Query; $Index ) ]
```

```
Set Field [ Search Applications::FilePath ; $path ]
```

```
Commit Records/Requests [ With dialog: Off ]
```

```
# next
```

```
Set Variable [ $index ; Value: $index + 1 ]
```

```
Exit Loop If [ $index = $count ]
```

```
End Loop
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetaDataQuery.Results"; Query )

### Parameters

#### Query

The reference number of the query.

\$query

**Result** Returns JSON Text or error.

### Description

Returns all items with all attributes as one big JSON block.

### Examples

Save all results as JSON in field:

Set Field [ Search Applications::All Results JSON ; MBS( "MetaDataQuery.Results"; \$Query ) ]

### See also

## 117.16 MetaDataQuery.SearchScopes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetaDataQuery.SearchScopes"; Query )

### Parameters

#### Query

The reference number of the query.

\$query

**Result** Returns OK or error.

### Description

Returns a list with file paths and special keywords used to specify specific locations:

Key	Description
UserHomeScope	Search the user's home directory.
LocalComputerScope	Search all local mounted volumes, including the user home directory. The user's home directory is searched even if it is a remote volume.
NetworkScope	Search all user-mounted remote volumes.
UbiquitousDocumentsScope	Search all files in the Documents directories of the app's iCloud container directories.
UbiquitousDataScope	Search all files not in the Documents directories of the app's iCloud container directories.
AccessibleUbiquitousExternalDocumentsScope	Search for documents outside the app's container. This search can locate iCloud documents that the user previously opened using a document picker view controller. This lets your app access the documents again without requiring direct user interaction.
IndexedLocalComputerScope	Search all indexed local mounted volumes including the current user's home directory (even if the home directory is remote).
IndexedNetworkScope	Search all indexed user-mounted remote volumes.

## 117.18 MetadataQuery.SetQueryString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetadataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetadataQuery.SetQueryString"; Query; QueryString )

### Parameters

#### Query

The reference number of the query.

\$query

#### QueryString

The query string.

"kMDItemContentType=\"com.apple.application-bundle\""

**Result** Returns OK or error.

### Description

The plugin will build the predicate with the given query string.

Setting this property while a query is running stops the query and discards the current results. The receiver immediately starts a new query.

See list of metadata keys here:

[https://developer.apple.com/documentation/coreservices/file\\_metadata/mditem/common\\_metadata\\_attribute\\_keys](https://developer.apple.com/documentation/coreservices/file_metadata/mditem/common_metadata_attribute_keys)

### Examples

Search for applications

MBS( "MetadataQuery.SetQueryString"; \$Query; "kMDItemContentType=\"com.apple.application-bundle\"" )

Start a query:

```
Set Variable [ $query ; Value: MBS( "MetadataQuery.Create" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MetadataQuery.SetQueryString"; $Query; "kMDItemContentType=\"com.apple.application-bundle\"" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MetadataQuery.StartQuery"; $Query) ]
```

## 117.19 MetaDataQuery.SetScript

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetaDataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetaDataQuery.SetScript"; ShellRef; Filename; ScriptName )

### Parameters

#### ShellRef

The reference number from the shell.

\$shell

#### Filename

The database file name where the script is located.

"test.fmp12"

#### ScriptName

The script name.

"MyScript"

**Result** Returns OK or error.

### Description

### See also

- [117.6 MetaDataQuery.GetScriptName](#)

## 117.20 MetadataQuery.SetSearchScopes

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetadataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetadataQuery.SetSearchScopes"; Query; SearchScopes )

### Parameters

#### Query

The reference number of the query.

\$query

#### SearchScopes

The list of search scopes.

"LocalComputerScope"

**Result** Returns OK or error.

### Description

Please pass a list with file paths and special keywords used to specify specific locations:

Key	Description
UserHomeScope	Search the user's home directory.
LocalComputerScope	Search all local mounted volumes, including the user home directory. The user's home directory is searched even if it is a remote volume.
NetworkScope	Search all user-mounted remote volumes.
UbiquitousDocumentsScope	Search all files in the Documents directories of the app's iCloud container directories.
UbiquitousDataScope	Search all files not in the Documents directories of the app's iCloud container directories.
AccessibleUbiquitousExternalDocumentsScope	Search for documents outside the app's container. This search can locate iCloud documents that the user previously opened using a document picker view controller. This lets your app access the documents again without requiring direct user interaction.
IndexedLocalComputerScope	Search all indexed local mounted volumes including the current user's home directory (even if the home directory is remote).
IndexedNetworkScope	Search all indexed user-mounted remote volumes.

### Examples

Search home folder:

MBS( "MetadataQuery.SetSearchScopes"; \$Query; "UserHomeScope" )

Search application folder:

MBS( "MetadataQuery.SetSearchScopes"; \$Query; "/"Applications" )

### See also

- 117.16 MetaDataQuery.SearchScopes

## 117.21 MetadataQuery.StartQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetadataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetadataQuery.StartQuery"; Query )

### Parameters

#### Query

The reference number of the query.

\$query

**Result** Returns OK or error.

### Description

Returns OK when successful; otherwise, Failed.

A query may fail to start if it does not specify a predicate, or if the query has already been started.

### Examples

Start a query:

```
Set Variable [ $query ; Value: MBS( "MetadataQuery.Create" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MetadataQuery.SetQueryString"; $Query; "kMDItemContentType=\"com.apple.application-bundle\"" ) ]
```

```
Set Variable [ $r ; Value: MBS( "MetadataQuery.StartQuery"; $Query ) ]
```

Created 16th December 2017, last changed 16th December 2017.

## 117.22 MetadataQuery.StopQuery

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
117 MetadataQuery	8.0	Yes	No	Yes, macOS only	No	Yes

MBS( "MetadataQuery.StopQuery"; Query )

### Parameters

#### Query

The reference number of the query.

\$query

**Result** Returns OK or error.

### Description

The receiver first completes gathering any unprocessed results.

You call this function to stop a query that is generating too many results to be useful but you still want to access the available results. If the receiver is sent a startQuery message after performing this method, the existing results are discarded.

# Chapter 118

## MovieView

Control the movieplayer for playing video in a container on Mac. (FileMaker 11 to 13 only)

See AVPlayer for newer FileMaker versions.

### 118.1 MovieView.AreStepButtonsVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.AreStepButtonsVisible"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

#### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

**Result** Returns 1 if visible and 0 if not.

#### Description

#### See also

- 118.2 MovieView.AreZoomButtonsVisible 6159

- 118.27 `MovieView.SetZoomButtonsVisible` 6184

Created 18th August 2014, last changed 18th August 2014.

## 118.2 `MovieView.AreZoomButtonsVisible`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.AreZoomButtonsVisible"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### **MovieViewReference**

The name of the container where to look for a movie view.  
"movie"

**Result** Returns 1 if visible and 0 if not.

### Description

#### See also

- 118.27 `MovieView.SetZoomButtonsVisible` 6184

Created 18th August 2014, last changed 18th August 2014.

## 118.3 `MovieView.CurrentFrameImage`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 <code>MovieView</code>	3.0	Yes	No	No	No	No

MBS( "MovieView.CurrentFrameImage"; `MovieViewReference` { ; `ImageType`; `Filename` } )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### **MovieViewReference**

The name of the container where to look for a movie view.

"movie"

#### **ImageType**

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### **Filename**

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns container value with image or error.

### Description

### See also

- 136.2 `QTMovie.CurrentFrameImage`

Created 18th August 2014, last changed 18th August 2014.

## 118.4 MovieView.CurrentTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	4.0	Yes	No	No	No	No

MBS( "MovieView.CurrentTime"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

**Result** Returns value or error.

### Description

Value is in seconds.

### See also

- 118.21 MovieView.SetCurrentTime 6178
- 136.5 QTMovie.GetCurrentTime 6696
- 136.26 QTMovie.SetCurrentTime 6721

## 118.5 MovieView.Duration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	4.0	Yes	No	No	No	No

MBS( "MovieView.Duration"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

**Result** Returns value or error.

### Description

Value is in seconds.

Created 18th August 2014, last changed 18th August 2014.

## 118.6 MovieView.GotoBeginning

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.GotoBeginning"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

**Result** Returns OK on success.

### Description

This action method sets the current movie time to the beginning of the movie. If the movie is playing, the movie continues playing from the new position.

### See also

- 136.13 QTMovie.GotoBeginning

6704

Created 18th August 2014, last changed 18th August 2014.

## 118.7 `MovieView.GotoEnd`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.GotoEnd"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### **MovieViewReference**

The name of the container where to look for a movie view.

"movie"

**Result** Returns OK on success.

### Description

This action method sets the current movie time to the end of the movie. If the movie is playing in one of the looping modes, the movie continues playing accordingly; otherwise, play stops.

Created 18th August 2014, last changed 18th August 2014.

## 118.8 MovieView.GotoPosterFrame

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.GotoPosterFrame"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

**Result** Returns OK on success.

### Description

Created 18th August 2014, last changed 18th August 2014.

## 118.9 `MovieView.IsBackButtonVisible`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.IsBackButtonVisible"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### **MovieViewReference**

The name of the container where to look for a movie view.  
"movie"

**Result** Returns 1 if visible and 0 if not.

### Description

#### See also

- 118.1 `MovieView.AreStepButtonsVisible` 6157

- 118.12 `MovieView.IsHotSpotButtonVisible` 6169
- 118.13 `MovieView.IsTranslateButtonVisible` 6170
- 118.14 `MovieView.IsVolumeButtonVisible` 6171
- 118.19 `MovieView.SetBackButtonVisible` 6176
- 118.24 `MovieView.SetStepButtonsVisible` 6181
- 118.27 `MovieView.SetZoomButtonsVisible` 6184

Created 18th August 2014, last changed 18th August 2014.

## 118.10 MovieView.IsControllerVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.IsControllerVisible"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

**Result** Returns 1 if visible and 0 if not.

### Description

Using the MovieView.setControllerVisible method, the client tells QTMovieView whether or not to display a user interface for controlling the movie within its bounds. Using the isControllerVisible method, the client can determine whether a QTMovieView has been configured to display such an interface. By using the controllerBarHeight method, you can determine the height of the portion of the QTMovieView that is required to display that interface. Note that some types of QuickTime content are authored to display their own user interface; for those types of content it is possible for the ControllerBarHeight method to return 0 even when the MovieView.IsControllerVisible method returns 1.

## 118.17 MovieView.PauseDelayed

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	5.0	Yes	No	No	No	No

MBS( "MovieView.PauseDelayed"; MovieViewReference; Delay )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

#### Delay

The time in seconds to wait for performing pause operation.  
5

**Result** Returns OK or error.

### Description

You can start a video in a script and in next step run the pause command with a delay to play only a portion of the video.

### 118.17.1 Blog Entries

## 118.21 `MovieView.SetCurrentTime`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	5.0	Yes	No	No	No	No

MBS( "MovieView.SetCurrentTime"; MovieViewReference; Time )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### **MovieViewReference**

The name of the container where to look for a movie view.  
"movie"

#### **Time**

The new time value in seconds.  
1.5

**Result** Returns OK or error.

### Description

Value is in seconds.

### See also

### 118.21.1 Blog Entries

- [MBS Filemaker Plugin, version 4.5pr4](#)

Created 10th December 2014, last changed 10th December 2014.

## 118.22 MovieView.SetCustomButtonVisible

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.SetCustomButtonVisible"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.

"movie"

**Result** Returns OK on success.

### Description

Be aware that it is possible that FileMaker can reset this setting.

## 118.28 MovieView.StepBackward

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.StepBackward"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

**Result** Returns OK on success.

### Description

#### See also

- 118.29 MovieView.StepForward

6186

Created 18th August 2014, last changed 18th August 2014.

## 118.29 `MovieView.StepForward`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.StepForward"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### **MovieViewReference**

The name of the container where to look for a movie view.  
"movie"

**Result** Returns OK on success.

### Description

#### See also

- 118.28 `MovieView.StepBackward`

6185

Created 18th August 2014, last changed 18th August 2014.

## 118.30 MovieView.Valid

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
118 MovieView	3.0	Yes	No	No	No	No

MBS( "MovieView.Valid"; MovieViewReference )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### MovieViewReference

The name of the container where to look for a movie view.  
"movie"

**Result** Returns 1 on success and 0 or error on failure.

### Description

With FileMaker 11, 12 and 13, you need to click on a container first to have it load a movie view with the movie. And only if container is set to picture (not the newer interactive mode). FileMaker 14 uses different control (a webviewer), so this function doesn't work.

### See also

- 118.18 MovieView.Play 6175

Created 18th August 2014, last changed 28th April 2016.

# Chapter 119

## Mutex

Functions for named mutexes.

Allows synchronization of file/memory/device access by two FileMaker processes, e.g. client and server running on same computer.

### 119.1 Mutex.Create

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 Mutex	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Mutex.Create"; Name )

#### Parameters

##### Name

The name to use for the mutex. Name should be a simple text, but unique, so we recommend reverse domain notation. The name should not contain a slash.

"test"

**Result** Returns OK or error.

#### Description

If mutex exists already, we open it. The mutex lives until the last application closed it.

Please call Mutex.Free later.

If name matches the name of an existing event, semaphore, waitable timer, job, or file-mapping object, the function fails.

You can open the same mutex twice and get different reference numbers from the plugin.

#### Examples

Create a mutex

```
MBS( "Mutex.Create"; "com.monkeybreadsoftware.test" )
```

Create the mutex and use it:

```
# create a mutex
Set Variable [ $mutex ; Value: MBS( "Mutex.Create"; "de.monkeybreadsoftware.test" ) ]
# lock it
Set Variable [ $r ; Value: MBS( "Mutex.TryLock"; $Mutex ) ]
If [ $r = 1 ]
# do something
#
# finally unlock
Set Variable [ $r ; Value: MBS( "Mutex.Unlock"; $Mutex ) ]
End If
# free it mutex
Set Variable [ $r ; Value: MBS( "Mutex.Free"; $Mutex ) ]
```

### See also

- 119.2 Mutex.Free 6191
- 119.6 Mutex.TryLock 6195
- 119.7 Mutex.Unlock 6196

Created 5th April 2020, last changed 5th April 2020.

## 119.2 Mutex.Free

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 Mutex	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Mutex.Free"; Mutex )

### Parameters

#### Mutex

The reference number of the mutex.

\$mutex

**Result** Returns OK or error.

### Description

Releases memory needed for mutex.

### See also

- 119.1 Mutex.Create

6189

Created 5th April 2020, last changed 5th April 2020.

### 119.3 Mutex.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 Mutex	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Mutex.List" )

**Result** Returns list or error.

**Description**

Created 5th April 2020, last changed 5th April 2020.

## 119.4 Mutex.Lock

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 Mutex	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Mutex.Lock"; Mutex )

### Parameters

#### Mutex

The reference number of the mutex.

\$mutex

**Result** Returns OK or error.

### Description

Only one application can lock the mutex.

Please call Mutex.Unlock later to unlock the mutex.

To avoid you looking up the FileMaker app, we limit locking to one minute. After that you get a timeout error.

### Examples

Lock a mutex:

```
MBS( "Mutex.Lock"; $Mutex )
```

Lock and unlock:

```
# lock it
Set Variable [ $r ; Value: MBS( "Mutex.Lock"; $Mutex ) ]
# do something
#
# finally unlock
Set Variable [ $r ; Value: MBS( "Mutex.Unlock"; $Mutex ) ]
```

### See also

- 119.7 Mutex.Unlock

## 119.5 Mutex.Name

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 Mutex	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Mutex.Name"; Mutex )

### Parameters

#### Mutex

The reference number of the mutex.

\$mutex

**Result** Returns text or error.

### Description

Created 5th April 2020, last changed 5th April 2020.

## 119.6 Mutex.TryLock

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 Mutex	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Mutex.TryLock"; Mutex )

### Parameters

#### Mutex

The reference number of the mutex.

\$mutex

**Result** Returns 1, 0 or error.

### Description

If the mutex is locked, this function returns 0, otherwise it returns 1 or an error.

Please call Mutex.Unlock later to unlock the mutex.

### Examples

Try lock and unlock:

```
# lock it
Set Variable [ $r ; Value: MBS( "Mutex.TryLock"; $Mutex ) ]
If [ $r = 1 ]
# do something
#
# finally unlock
Set Variable [ $r ; Value: MBS( "Mutex.Unlock"; $Mutex ) ]
End If
```

### See also

- 119.1 Mutex.Create 6189
- 119.7 Mutex.Unlock 6196

Created 5th April 2020, last changed 5th April 2020.

## 119.7 Mutex.Unlock

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
119 Mutex	10.2	Yes	Yes	Yes	Yes	Yes

MBS( "Mutex.Unlock"; Mutex )

### Parameters

#### Mutex

The reference number of the mutex.

\$mutex

**Result** Returns OK or error.

### Description

### Examples

Lock and unlock:

```
# lock it
Set Variable [ $r ; Value: MBS( "Mutex.Lock"; $Mutex ) ]
# do something
#
# finally unlock
Set Variable [ $r ; Value: MBS( "Mutex.Unlock"; $Mutex ) ]
```

### See also

- 119.1 Mutex.Create 6189
- 119.4 Mutex.Lock 6193
- 119.6 Mutex.TryLock 6195

Created 5th April 2020, last changed 5th April 2020.

# Chapter 120

## NetworkInterfaces

Query Network interfaces on Mac.

### 120.1 NetworkInterfaces.Count

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 NetworkInterfaces	4.3	Yes	No	Yes	Yes	Yes

MBS( "NetworkInterfaces.Count" )

**Result** Returns number or error.

#### Description

If called first without a call to NetworkInterfaces.Update, the plugin will internally call NetworkInterfaces.Update.

#### See also

- [120.2 NetworkInterfaces.Default](#) 6198
- [120.3 NetworkInterfaces.JSON](#) 6199
- [120.4 NetworkInterfaces.Update](#) 6200
- [120.5 NetworkInterfaces.Value](#) 6201

#### Example Databases

- [Mac only/Network Interfaces](#)

Created 18th August 2014, last changed 19th March 2017.

## 120.2 NetworkInterfaces.Default

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 NetworkInterfaces	5.2	Yes	No	Yes	Yes	Yes

MBS( "NetworkInterfaces.Default"; Selector )

### Parameters

#### Selector

What value to return. Default is name. Mode can be IP, IPv4, IPv6, Index, InterfaceIndex, Name or MAC. "IP"

**Result** Returns value or error.

#### Description

Can be used to find IP, name or MAC of the default interface. Default is the first connected interface.

#### Examples

Queries name of default network interface:

```
MBS( "NetworkInterfaces.Default"; "Name" )
```

Queries IP of default connection:

```
MBS( "NetworkInterfaces.Default"; "IP" )
```

#### See also

- [120.1 NetworkInterfaces.Count](#) 6197
- [120.4 NetworkInterfaces.Update](#) 6200
- [120.5 NetworkInterfaces.Value](#) 6201

### 120.2.1 Blog Entries

- [MBS FileMaker Plugin, version 5.2pr6](#)

Created 8th July 2015, last changed 19th March 2017.

## 120.3 NetworkInterfaces.JSON

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 NetworkInterfaces	8.4	Yes	No	Yes	Yes	Yes

MBS( "NetworkInterfaces.JSON" )

**Result** Returns JSON or error.

### Description

If called first without a call to NetworkInterfaces.Update, the plugin will internally call NetworkInterfaces.Update.

### See also

- [120.1 NetworkInterfaces.Count](#) 6197
- [120.4 NetworkInterfaces.Update](#) 6200
- [120.5 NetworkInterfaces.Value](#) 6201

### 120.3.1 Blog Entries

- [MBS FileMaker Plugin, version 8.4pr1](#)

Created 27th July 2018, last changed 27th July 2018.

## 120.4 NetworkInterfaces.Update

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 NetworkInterfaces	4.3	Yes	No	Yes	Yes	Yes

MBS( "NetworkInterfaces.Update" )

**Result** Returns OK or error.

### Description

Normally you call NetworkInterfaces.Update function. Than you call NetworkInterfaces.Count to query number of network interfaces and finally for each value the NetworkInterfaces.Value function.

### See also

- 120.1 NetworkInterfaces.Count 6197
- 120.2 NetworkInterfaces.Default 6198
- 120.3 NetworkInterfaces.JSON 6199
- 120.5 NetworkInterfaces.Value 6201

### Example Databases

- [Mac only/Network Interfaces](#)

Created 18th August 2014, last changed 19th March 2017.

## 120.5 NetworkInterfaces.Value

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
120 NetworkInterfaces	4.3	Yes	No	Yes	Yes	Yes

MBS( "NetworkInterfaces.Value"; Index; Selector )

### Parameters

#### Index

The index from 0 to NetworkInterfaces.Count-1.

0

#### Selector

Which value to query: Name, IPv4, IPv6, IP, MAC, Destination, Broadcast, Netmask, NetmaskIPv4, NetmaskIPv6, InterfaceIndex, Multicast, HasBroadcast, HasDestination, Up, Loopback, IPv4s, IPv6s, IPv4Count or IPv6Count.

"Name"

**Result** Returns value or error.

### Description

### See also

- 120.1 NetworkInterfaces.Count 6197

Created 18th August 2014, last changed 19th March 2017.

# Chapter 121

## Notification

Send or receive notifications.

Those notifications are between applications and not to show to user. See UNNotification functions for Mac/iOS and WindowsUserNotification functions for Windows to show notifications to user.

### 121.1 Notification.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Notification	3.3	Yes	Yes	Yes	No	No

MBS( "Notification.List" )

**Result** Returns list of names.

#### Description

#### See also

- [121.2 Notification.Listen](#) 6205
- [121.3 Notification.Send](#) 6207
- [121.5 Notification.Unlisten](#) 6209

#### 121.1.1 Blog Entries

- [MBS Filemaker Plugin, version 3.3pr1](#)

6204

*CHAPTER 121. NOTIFICATION*

Created 18th August 2014, last changed 21st September 2015.

## 121.2 Notification.Listen

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Notification	2.6	Yes	Yes	No	No	No

MBS( "Notification.Listen"; NotificationName; FileName; ScriptName )

### Parameters

#### NotificationName

The name of the notification.

"de.mbsplugins.MyTestNotification"

#### FileName

The name of the FileMaker File that contains the script

#### ScriptName

The name of the script to run

**Result** Returns "OK" or error message.

### Description

Specify a filename and script name to have this script being called when a notification is received. The script parameter will be the notification name plus parameters.

Although the notification name can be any text, you probably want to use reverse dns notation to avoid conflicts.

This is implemented with Distributed Notifications on Mac and named messages on Windows. You can use our NSDistributedNotificationCenterMBS and WinNotificationMBS classes in the Real Studio plugins to send/receive these notifications.

Version 7.2 and newer pass parameters to the script call. On Windows you get both parameters (WParam and LParam).

For version 7.3 you can receive a payload in json as script parameter to the script call after the name of notification.

If you need to trigger scripts on other computers, please check UDPsocket or ServerSocket functions.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

### Examples

Registers script event:

```
MBS( "Notification.Listen"; "de.mbsplugins.MyTestNotification"; Get ( FileName ); "GotTestNotification"
```

Listen for device change event on Windows:

```
MBS( "Notification.Listen"; 537; Get ( FileName ); "DeviceChanged")
```

// Notifies an application of a change to the hardware configuration of a device or the computer.

Listen for System time change event on Windows:

```
MBS( "Notification.Listen"; 31; Get ( FileName ); "TimeChangedTrigger")
```

Listen for display change on Windows:

```
MBS( "Notification.Listen"; 126; Get ( FileName ); "DisplayChangedTrigger")
```

// The WM\_DISPLAYCHANGE message is sent to all windows when the display resolution has changed.

#### See also

- [121.1 Notification.List](#) 6203

#### 121.2.1 Blog Entries

- [MBS Filemaker Plugin, version 2.6pr7](#)

Created 18th August 2014, last changed 19th March 2020.

## 121.3 Notification.Send

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Notification	2.6	Yes	Yes	Yes	No	No

MBS( "Notification.Send"; NotificationName { ; Param1; Param2 } )

### Parameters

#### NotificationName

The name of the notification.

"de.mbsplugins.MyTestNotification"

#### Param1

Optional

Available in MBS FileMaker Plugin 7.2 or newer.

A number to pass on Windows. For Mac in 7.3 plugins you can pass JSON here.

#### Param2

Optional

A number to pass on Windows.

**Result** Returns "OK" or error message.

### Description

This notification is delivered to all applications on the computer which register for receiving it.

### Examples

Send notification on Mac with JSON payload:

```
MBS("Notification.Send"; "MyNotification"; " { \"recordID\":5 } ")
```

### See also

Created 18th August 2014, last changed 14th May 2017.

## 121.4 Notification.SendDirect

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
121 Notification	5.2	Yes	Yes	Yes	No	No

MBS( "Notification.SendDirect"; NotificationName { ; Parameter } )

### Parameters

#### NotificationName

The name of the notification.

"de.mbsplugins.MyTestNotification"

#### Parameter

Optional

The script parameter. If you don't specify, we pass name of notification as usual. By passing your own parameter, you can include several values like a list of values including record IDs or reference numbers.

**Result** Returns number or error.

### Description

This notification is delivered to all listening scripts within the FileMaker instance. For debugging.

### 121.4.1 Blog Entries

# Chapter 122

## NSEventFilter

Filter Cocoa events to block e.g. scrollwheel on Mac.

### 122.1 NSEventFilter.DisableEvents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 NSEventFilter	2.9	Yes	No	No	No	No

MBS( "NSEventFilter.DisableEvents"; eventMask )

#### Parameters

##### eventMask

Which events to disable.

0

**Result** Returns OK on success.

#### Description

Event filtering requires Mac OS X 10.6 or newer.

#### Examples

Disable scroll wheel events:

MBS( "NSEventFilter.DisableEvents"; 4194304 )

Disable all right mouse events:

MBS( "NSEventFilter.DisableEvents"; 8+16+128 )

**See also**

- 122.2 NSEventFilter.EnableAllEvents 6213
- 122.3 NSEventFilter.EnableEvents 6214

### 122.1.1 Blog Entries

- [MBS Filemaker Plugin, version 2.9pr9](#)

Created 18th August 2014, last changed 18th August 2014.

## 122.2 NSEventFilter.EnableAllEvents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 NSEventFilter	2.9	Yes	No	No	No	No

MBS( "NSEventFilter.EnableAllEvents" )

**Result** Returns OK on success.

### Description

Event filtering requires Mac OS X 10.6 or newer.

### Examples

Enable all events

MBS( "NSEventFilter.EnableAllEvents" )

### See also

- [122.1 NSEventFilter.DisableEvents](#) 6211

### 122.2.1 Blog Entries

- [MBS Filemaker Plugin, version 2.9pr9](#)

Created 18th August 2014, last changed 18th August 2014.

## 122.3 NSEventFilter.EnableEvents

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
122 NSEventFilter	2.9	Yes	No	No	No	No

MBS( "NSEventFilter.EnableEvents"; eventMask )

### Parameters

#### eventMask

Which events to enable.

0

**Result** Returns OK on success.

### Description

Event filtering requires Mac OS X 10.6 or newer.

Possible values for the events:

NSLeftMouseDownMask	2
NSLeftMouseUpMask	4
NSRightMouseDownMask	8
NSRightMouseUpMask	16
NSMouseMovedMask	32
NSLeftMouseDraggedMask	64
NSRightMouseDraggedMask	128
NSKeyDownMask	1024
NSKeyUpMask	2048
NSFlagsChangedMask	4096
NSScrollWheelMask	4194304
NSTabletPointMask	8388608
NSTabletProximityMask	16777216
NSOtherMouseDownMask	33554432
NSOtherMouseUpMask	67108864
NSOtherMouseDraggedMask	134217728

You can add several mask values.

### Examples

Enable scroll wheel events:

MBS( "NSEventFilter.DisableEvents"; 4194304 )

Enable all right mouse events:

MBS( "NSEventFilter.DisableEvents"; 8+16+128 )

### 122.3. *NSEVENTFILTER.ENABLEEVENTS*

# Chapter 123

## OCR

Recognize text on images.

### 123.1 OCR.Cleanup

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.Cleanup" )

**Result** Returns OK on success.

#### Description

This is optional. You can initialize the engine when your solution starts and keep it running all time.

#### Examples

Cleanup:

MBS( "OCR.Cleanup" )

#### See also

- 123.6 OCR.GetText 6222
- 123.7 OCR.GetTextWithCoordinates 6224

Created 18th August 2014, last changed 18th August 2014.

## 123.2 OCR.Clear

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.Clear" )

**Result** Returns OK on success.

### Description

Afterwards, you must call SetImage or TesseractRect before doing any Recognize or Get\* operation.

### Examples

Clear:

MBS( "OCR.Clear" )

Created 18th August 2014, last changed 18th August 2014.

**123.3 OCR.GetBoxText**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

```
MBS( "OCR.GetBoxText" { ; page } )
```

**Parameters****page**

Optional

The page index you want to use in html. Default value is 0.

0

**Result** Returns the text.**Description**

Constructs coordinates in the original image - not just the rectangle. Page is a 0-based page index that will appear in the box file.

**Examples**

Queries text of first page:

```
$text = MBS( "OCR.GetBoxText"; 0 )
```

**See also**

- 123.4 *OCR.GetHOCText* 6220
- 123.6 *OCR.GetText* 6222

Created 18th August 2014, last changed 2nd November 2017.

## 123.4 OCR.GetHOCText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

```
MBS( "OCR.GetHOCText" { ; page } )
```

### Parameters

#### page

Optional

The page index you want to use in html. Default value is 0.

0

**Result** Returns the text.

### Description

Page is 0-based but will appear in the output as 1-based.

### Examples

Queries text of first page:

```
$text = MBS( "OCR.GetHOCText"; 0 )
```

### See also

- 123.3 OCR.GetBoxText

6219

Created 18th August 2014, last changed 18th August 2014.

## 123.5 OCR.GetPageSegMode

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.GetPageSegMode" )

**Result** Returns the page set mode.

### Description

See also OCR.SetPageSegMode.

### Examples

Set single block mode and query value:

```
$r = MBS( "OCR.SetPageSegMode"; "SingleBlock" )
$pageMode = MBS( "OCR.GetPageSegMode" )
```

### See also

- 123.15 OCR.SetPageSegMode

6235

Created 18th August 2014, last changed 18th August 2014.

## 123.6 OCR.GetText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.GetText" )

**Result** Returns the text.

### Description

Calls Recognize if needed internally.

### Examples

Query text:

```
$text = MBS( "OCR.GetText" )
```

Custom function to read image and return text:

```
/*
MBS-OCR ( language; Image)
```

Requires tessdata resources [ MIT © ]

language: deu ('deu.traineddata'), fra, eng, etc.

Image: Container Fieldname ('MyTable::MyField') in Quotes

path: FM/Extensions - put 'tessdata' Folder into FM Extensions Folder

Benjamin Fehr, EfficientBizz GmbH

<http://www.efficientbizz.com>

/

```
Let (
```

```
[
```

```
// init OCR
```

```
$path = MBS( "Path.FilemakerPathToNativePath"; Get(FileMakerPath)& "Extensions/" ) ;
```

```
initialize = MBS( "OCR.Initialize"; $path; language ) ; $Error = initialize ;
```

```
SegMode = MBS( "OCR.SetPageSegMode"; "Auto" );
```

```
// Process Image
```

```
$img = MBS( "GMImage.NewFromContainer"; Image );
```

```
set = MBS( "OCR.SetImage"; $img ) ;
```

```
$result = MBS( "OCR.GetText" ) ;
```

```
// Cleanup
```

```
$clean = MBS( "OCR.CleanUp" ) ;
```

```
$destroy = MBS( "GMImage.Release"; $img)
```

**Example Databases**

- [OCR/OCR with DynaPDF](#)

Created 18th August 2014, last changed 21st December 2018.

## 123.7 OCR.GetTextWithCoordinates

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.GetTextWithCoordinates" )

**Result** Returns list or error.

### Description

Please call OCR.Recognize or OCR.GetText or another function first to trigger recognition.

Returns a list with tab separated values. First 4 values define the pixel coordinates. Than followed by style and font size. Finally the word.

Columns: left, top, right, bottom, isBold, isItalic, isUnderlined, isMonospace, isSerif, isSmallCaps, Pointsize, Text.

e.g.

left	top	right	bottom	isBold	isItalic	isUnderlined	isMonospace	isSerif	isSmallCaps	Pointsize	Text
36	194	91	218	0	0	0	0	0	0	7	The
102	194	177	224	0	0	0	0	0	0	7	quick
189	194	274	218	0	0	0	0	0	0	7	brown
287	194	339	225	0	0	0	0	0	0	7	dog
348	194	456	225	0	0	0	0	0	0	7	jumped
468	200	531	218	0	0	0	0	0	0	7	over
540	194	585	218	0	0	0	0	0	0	7	the
37	228	92	259	0	0	0	0	0	0	7	lazy
103	228	153	252	0	0	0	0	0	0	7	fox.

### Examples

Recognize:

```
# Init OCR
Set Variable [ $r; Value:MBS( "OCR.Initialize"; "/Users/cs/Documents"; "eng" ) ]
Set Variable [ $rr; Value:MBS( "OCR.SetPageSegMode"; "Auto" ) ]
# Process Image
Set Variable [ $img; Value:MBS("GMImage.NewFromContainer"; OCR::Image) ]
Set Variable [ $r; Value:MBS( "OCR.SetImage"; $img ) ]
Set Variable [ $rr; Value:MBS( "OCR.Recognize" ) ]
Set Field [ OCR::Text; MBS("OCR.GetTextWithCoordinates" ) ]
# Cleanup
Set Variable [ $r; Value:MBS( "OCR.CleanUp" ) ]
Set Variable [ $r; Value:MBS( "GMImage.Release"; $img ) ]
```

## 123.8 OCR.GetVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.GetVariable"; Name )

### Parameters

#### Name

The name of the variable.

"test"

**Result** Returns value or error.

### Description

#### See also

- [123.18 OCR.SetVariable](#) 6239
- [126.5 PHP.GetVariable](#) 6360
- [126.10 PHP.SetVariable](#) 6366

### 123.8.1 Blog Entries

- [MBS FileMaker Plugin, version 7.5pr6](#)

Created 2nd November 2017, last changed 2nd November 2017.

## 123.9 OCR.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.Initialize"; Path; Lang )

### Parameters

#### Path

The path to the folder where to find tessdata folder.

\$path

#### Lang

The language to use.

"eng"

**Result** Returns OK on success.

### Description

Pass path to parent folder of tessdata folder and language you need.

The language is (usually) an ISO 639-3 string.

To use multiple languages, please concat them with plus sign: e.g. "eng+deu"

You find our language files archive here:

<http://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/Tesseract/>

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Initialize with tessdata folder in same folder as database for english:

```
set variable $databasePath to Get(FilePath)
set variable $databasePath to MBS("Path.FilemakerPathToNativePath"; $databasePath)
set variable $databasePath to Substitute ( $databasePath ; ".fp7" ; ".fmp12")
set variable $databaseName to Get(FileName) & ".fmp12"
set variable $path to Substitute ( $databasePath ; $databaseName ; "" )
set variable $r to MBS( "OCR.Initialize"; $path; "eng")
```

Initialize on Server with tessdata in Server folder:

```
MBS( "OCR.Initialize"; "/Library/FileMaker Server/"; "eng")
```

Initialize on demand:

```
If [ MBS("OCR.IsInitialized") = 1 ]
```

```
Set Variable [ $r; Value:MBS( "OCR.Initialize"; "/Library/FileMaker Server/"; "eng" ) ]  
End If
```

**See also**

- 99.6 Java.Initialize 5238
- 123.6 OCR.GetText 6222
- 123.7 OCR.GetTextWithCoordinates 6224
- 123.10 OCR.IsInitialized 6229
- 124.2 Path.FileMakerPathToNativePath 6247
- 134.2 Proj.Initialize 6659
- 166.21 TAPI.Initialize 7876
- 184.12 WIA.Initialize 8647
- 193.117 XL.Initialize 9145

**Example Databases**

- [OCR/OCR with DynaPDF](#)
- [OCR/OCR](#)

Created 18th August 2014, last changed 10th May 2018.

## 123.10 OCR.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	4.2	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.IsInitialized" )

**Result** Returns 1 or 0.

### Description

If value is 1, everything is okay.

If value is zero, the library is not initialized and you need to call `OCR.Initialize` function.

On a hosted database this function is better than using a global variable, as the variable can't see if initialization was made on server or client side.

### Examples

Initialize on demand:

```
If [ MBS("OCR.IsInitialized") 1 ]
Set Variable [ $r; Value:MBS( "OCR.Initialize"; "/Library/FileMaker Server/"; "eng") ]
End If
```

### See also

- [123.9 OCR.Initialize](#) 6227

### 123.10.1 Blog Entries

- [MBS Filemaker Plugin, version 4.2pr6](#)

Created 18th August 2014, last changed 7th July 2016.

## 123.11 OCR.Language

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.Language" )

**Result** Returns the language name. e.g. "eng"

### Description

### Examples

Queries language:

```
$lang = MBS( "OCR.Language" )
```

Created 18th August 2014, last changed 18th August 2014.

## 123.12 OCR.MeanTextConf

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.MeanTextConf" )

**Result** Returns mean confidence.

### Description

### Examples

Query mean text confidence:

```
$r = MBS( "OCR.MeanTextConf" )
```

Created 18th August 2014, last changed 18th August 2014.

## 123.13 OCR.Recognize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.Recognize" )

**Result** Returns OK on success.

### Description

Optional. The Get\*Text functions will call Recognize if needed. After Recognize, the output is kept internally until the next SetImage.

### Examples

Start recognition process:

```
$r = MBS( "OCR.Recognize" )
```

### See also

- 123.7 OCR.GetTextWithCoordinates

6224

Created 18th August 2014, last changed 18th August 2014.

## 123.14 OCR.SetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.SetImage"; imageRef )

### Parameters

#### imageRef

The image reference. Use functions like `GUIImage.NewFromContainer` to get an image reference.  
\$img

**Result** Returns OK on success.

### Description

The plugin makes a copy of the image.

Please do not pass PDF files. For PDF you either need to extract image (for scans) or raster PDF pages as images. Our functions `PDFKit.GetPDFPageImage` or `DynaPDF.RenderPage` can help here. If the PDF file contains real text, please use `PDFKit.GetPDFText`, `PDFKit.GetPDFPageText`, `DynaPDF.ExtractText`, `DynaPDF.ExtractPageText` or `DynaPDF.ExtractPageRectText`. This will not do OCR, but extract the text directly.

### Examples

Set image reference:

```
MBS( "OCR.SetImage"; $img )
```

**123.15 OCR.SetPageSegMode**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.SetPageSegMode"; mode )

**Parameters****mode**

The new page segmentation mode.

"auto"

**Result** Returns OK on success.

**Description**

Possible values:

OSDOnly	Orientation and script detection only.
AutoOSD	Automatic page segmentation with orientation and script detection. (OSD)
AutoOnly	Automatic page segmentation, but no OSD, or OCR.
Auto	Fully automatic page segmentation, but no OSD.
SingleColumn	Assume a single column of text of variable sizes.
SingleBlockVertText	Assume a single uniform block of vertically.
SingleBlock	Assume a single uniform block of text. (Default)
SingleLine	Treat the image as a single text line.
SingleWord	Treat the image as a single word.
CircleWord	Treat the image as a single word in a circle.
SingleChar	Treat the image as a single character.

**Examples**

Set auto detection mode:

MBS( "OCR.SetPageSegMode"; "AutoOSD" )

Set single block mode:

MBS( "OCR.SetPageSegMode"; "SingleBlock" )

**See also**

## 123.16 OCR.SetRectangle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	2.9	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.SetRectangle"; x; y; width; height )

### Parameters

#### **x**

The x coordinate.

0

#### **y**

The y coordinate.

0

#### **width**

The width of the rectangle.

100

#### **height**

The height of the rectangle.

100

**Result** Returns OK on success.

### Description

Call after SetImage. Each SetRectangle clears the recognition results so multiple rectangles can be recognized with the same image.

### Examples

Set Rectangle to 800x600:

MBS( "OCR.SetRectangle"; 0; 0; 800; 600 )

Created 18th August 2014, last changed 20th January 2020.

## 123.17 OCR.SetResolution

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.SetResolution"; Resolution )

### Parameters

#### Resolution

The new resolution value in pixel per inch.

72

**Result** Returns OK or error.

### Description

This helps to calculate font size information in results.

Call this after OCR.SetImage.

### See also

- 123.14 OCR.SetImage

## 123.18 OCR.SetVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	7.5	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.SetVariable"; Name; Value )

### Parameters

#### Name

The name of the variable.

"test"

#### Value

The text value for this variable.

"123"

**Result** Returns OK or error.

### Description

#### Examples

Set variable for white list characters:

```
MBS( "OCR.SetVariable"; "tessedit_char_whitelist"; "0123456789" )
```

Set variable for black list characters:

```
MBS( "OCR.SetVariable"; "tessedit_char_blacklist"; "xyz" )
```

## 123.19 OCR.WriteToPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
123 OCR	3.1	Yes	Yes	Yes	Yes	Yes

MBS( "OCR.WriteToPDF"; PosX; PosY; Width; Height )

### Parameters

#### PosX

X-Coordinate of image.

\$x

#### PosY

Y-Coordinate of image.

\$y

#### Width

Width of the image.

\$w

#### Height

Height of the image.

\$h

**Result** Returns OK or error message.

### Description

This function is good to overlay an OCR'd image with text, so you can copy/search the text. Please set a default font before calling this function.

Be aware that if the font loaded in pdf page is wider than scanned font, the words can overlap. Plugin version 7.5 or newer will reduce font size if needed to fit word length to fix this.

### Examples

Insert image and write text over it:

```
MBS("DynaPDF.InsertImage"; OCR::Image; $x; $y; $w; $h)
```

```
MBS( "OCR.WriteToPDF"; $x; $y; $w; $h)
```

# Chapter 124

## Path

Convert paths from native to FileMaker and back.

### 124.1 Path.AddPathComponent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "Path.AddPathComponent"; Path; Component { ; More Components } )

#### Parameters

##### Path

The native file path.

"/Users/cs/Desktop"

##### Component

The new path component.

"Hello"

##### More Components

Optional

Pass more components, each in its own parameter.

**Result** Returns path or error.

#### Description

The path provided as parameter does not need to end with a slash or backslash.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Adds a path component to a path:

```
MBS( "Path.AddPathComponent"; "/Users/cs/Desktop"; "Hello" )
```

Adds a file name:

```
MBS( "Path.AddPathComponent"; "/Users/cs/Desktop/"; "test.txt" )
```

Adds a file path on Windows:

```
MBS( "Path.AddPathComponent"; "c:\\Test"; "test.txt" )
```

Get file name from container and add to folder path:

```
Set Variable [ $name; Value:GetAsText ( Container Batch Export::Test1 ) ]
Set Variable [ $name; Value:GetValue($name; 1) ]
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; $name ) ]
Set Variable [ $dpath; Value:MBS( "Path.AddPathComponent"; $FolderPath; $name ) ]
```

Create folder on Desktop:

```
Set Variable [ $folder; Value:MBS( "Folders.UserDesktop" ) ]
If [ IsEmpty(Container Export::Name) ]
Set Field [ Container Export::Name; "Record " & Get(RecordID) ]
End If
Set Variable [ $path; Value:MBS( "Path.AddPathComponent"; $folder; Container Export::Name ) ]
Set Variable [ $r; Value:MBS("Files.CreateDirectory"; $path) ]
```

Write container to temp file and launch:

```
# get temp folder
Set Variable [ $TempFolder; Value:MBS( "Folders.SystemTemporary" ) ]
# and file name from container
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; test::myContainer ) ]
# add name to folder path
Set Variable [ $TempPath; Value:MBS( "Path.AddPathComponent"; $TempFolder; $name ) ]
# now write temp file
Set Variable [ $r; Value:MBS( "Files.WriteFile"; test::myContainer; $TempPath) ]
# and launch file
Set Variable [ $r; Value:MBS( "Files.LaunchFile"; $TempPath) ]
```

Add multiple path componennts:

```
MBS( "Path.AddPathComponent"; "/Users/cs/Desktop"; "Hello"; "World"; "test" )
```

Example result: /Users/cs/Desktop/Hello/World/test

Export a container to desktop:

```
# get path stored in the container field
Set Variable [ $ContainerPath ; Value: GetAsText ( Contacts::Photo Container ) ]
# get the file name portion
Set Variable [ $ContainerName ; Value: MBS( "Path.LastPathComponent"; $ContainerPath ) ]
# take a folder on the computer, e.g. desktop
Set Variable [ $DesktopFolder ; Value: MBS( "Folders.UserDesktop" ) ]
# build path with file name on that folder
Set Variable [ $FilePath ; Value: MBS( "Path.AddPathComponent"; $DesktopFolder; $ContainerName ) ]
# and export the content of container to that path
Set Variable [ $r ; Value: MBS( "Container.WriteFile"; Contacts::Photo Container; $FilePath ) ]
```

## 124.2 Path.FileMakerPathToNativePath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	2.4	Yes	Yes	Yes	Yes	Yes

MBS( "Path.FileMakerPathToNativePath"; path )

### Parameters

#### path

The FileMaker file path.

"/Macintosh HD/Users/test/Desktop/picture.jpg"

**Result** Returns the native path.

### Description

The difference between a native path and a FileMaker path on Mac is, that FileMaker expects to have the Disk Name in front followed by the rest of the path. Mac OS X functions require paths from the root disk to start without volume name. Other disks have paths starting with "/Volumes/name".

This function does not work for relative paths.

### Examples

Convert path to native path:

MBS( "Path.FilemakerPathToNativePath"; "/Macintosh HD/Users/test/Desktop/picture.jpg")

## 124.3 Path.FilePathToFileURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Path.FilePathToFileURL"; Path )

### Parameters

#### Path

The absolute file path to convert to URL.

"/Users/cs/Desktop/test.html"

**Result** Returns URL or error.

### Description

### Examples

Converts a path to a file URL

```
/* shows: file://localhost/Users/cs/Desktop/test.html */
MBS( "Path.FilePathToFileURL"; "/Users/cs/Desktop/test.html" )
```

Converts a Windows path to file URL:

```
MBS( "Path.FilePathToFileURL"; "C:\Users\Christian\Desktop\test.html" )
```

Write a HTML file and an image file to load in web viewer:

```
Set Variable [ $folder ; Value: MBS( "Folders.UserTemporary" ) ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "test.jpg" ) ]
Set Variable [ $r ; Value: MBS( "Container.WriteFile"; Images::Image; $path ) ]
#
Set Variable [ $html ; Value: "<html><body><p>Hello World</p><img src=test.jpg width=300></body></html>" ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "test.html" ) ]
Set Variable [ $r ; Value: MBS( "Text.WriteTextFile"; $html; $path ) ]
#
Set Variable [ $URL ; Value: MBS( "Path.FilePathToFileURL"; $Path ) ]
Set Web Viewer [ Object Name: "web" ; URL: $URL ]
```

## 124.4 Path.FileURLToFilePath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Path.FileURLToFilePath"; URL )

### Parameters

#### URL

The file URL to convert.

"file://localhost/Users/cs/Desktop/test.html"

**Result** Returns path or error.

### Description

#### Examples

Converts a path URL:

```
/* returns /Users/cs/Desktop/test.html */
MBS( "Path.FileURLToFilePath"; "file://localhost/Users/cs/Desktop/test.html" )
```

Example result: "/Users/cs/Desktop/test.html"

Converts file URL on Windows to path:

```
MBS( "Path.FileURLToFilePath"; "file://C:/Users/Christian/Desktop/test.html"
```

Example result: "/Users/Christian/Desktop/test.html"

### 124.4.1 Blog Entries

Created 30th January 2015, last changed 11st December 2016.

## 124.5 Path.LastPathComponent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "Path.LastPathComponent"; Path )

### Parameters

#### Path

The native file path.  
"/Users/cs/Desktop"

**Result** Returns path or error.

### Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Queries file name:

```
MBS( "Path.LastPathComponent"; "c:\\test.txt" )
```

Get file name from container and add to folder path:

```
Set Variable [ $name; Value:GetAsText ( Container Batch Export::Test1 ) ]
Set Variable [ $name; Value:GetValue($name; 1) ]
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; $name ) ]
Set Variable [ $dpath; Value:MBS( "Path.AddPathComponent"; $FolderPath; $name ) ]
```

Write container to temp file and launch:

```
# get temp folder
Set Variable [ $TempFolder; Value:MBS( "Folders.SystemTemporary" ) ]
# and file name from container
Set Variable [ $name; Value:MBS( "Path.LastPathComponent"; test::myContainer ) ]
# add name to folder path
Set Variable [ $TempPath; Value:MBS( "Path.AddPathComponent"; $TempFolder; $name ) ]
# now write temp file
Set Variable [ $r; Value:MBS( "Files.WriteFile"; test::myContainer; $TempPath) ]
# and launch file
Set Variable [ $r; Value:MBS( "Files.LaunchFile"; $TempPath) ]
```

## 124.6 Path.LongPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "Path.LongPath"; Path )

### Parameters

#### Path

The native file path.

"C:\Users\Christian Schmitz\Dokumente"

**Result** Returns OK or error.

### Description

For your convenience this function returns same path on iOS, Mac and Linux.

If the specified path is already in its long form and conversion is not needed, the function simply returns the input path.

### Examples

Convert to long path:

MBS( "Path.LongPath"; "C:\PROGRA~1\FILEMA~1\FILEMA~1" )

Example result: "C:\Program Files\FileMaker\FileMaker Pro 17 Advanced"

## 124.7 Path.NativePathToFileMakerPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	2.4	Yes	Yes	Yes	Yes	Yes

MBS( "Path.NativePathToFileMakerPath"; path )

### Parameters

#### path

The native file path.

"/Users/test/Desktop/picture.jpg"

**Result** Returns the FileMaker path.

### Description

The difference between a native path and a FileMaker path on Mac is, that FileMaker expects to have the Disk Name in front followed by the rest of the path. Mac OS X functions require paths from the root disk to start without volume name. Other disks have paths starting with "/Volumes/name".

This function does not work for relative paths.

### Examples

Convert path to FileMaker path:

```
MBS( "Path.NativePathToFilemakerPath"; "/Users/test/Desktop/picture.jpg")
```

Build temp path:

```
"imagemac:" & MBS( "Path.NativePathToFileMakerPath"; MBS("Path.AddPathComponent"; MBS("Folders.UserTemporary"); "test.jpg") )
```

## 124.8 Path.RemoveLastPathComponent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	6.0	Yes	Yes	Yes	Yes	Yes

MBS( "Path.RemoveLastPathComponent"; Path )

### Parameters

#### Path

The native file path.  
"/Users/cs/Desktop"

**Result** Returns path or error.

### Description

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Removes last path component on Windows:

```
MBS( "Path.RemoveLastPathComponent"; "c:\\test.txt" )
```

Get app folder path:

```
MBS( "Path.RemoveLastPathComponent"; MBS( "App.GetProcessPath" ) )
```

Query plugin folder:

```
MBS( "Path.RemoveLastPathComponent"; MBS( "Plugin.Path" ) )
```

Example result: "/Applications/FileMaker Pro 18 Advanced/Extensions"

## 124.9 Path.ShortPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
124 Path	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "Path.ShortPath"; Path )

### Parameters

#### Path

The native file path.

"C:\Users\Christian Schmitz\Dokumente"

**Result** Returns OK or error.

### Description

For your convenience this function returns same path on iOS, Mac and Linux.

If the specified path is already in its short form and conversion is not needed, the function simply returns the input path.

Use Path.LongPath function to reverse to long path.

### Examples

Convert FileMaker path:

MBS( "Path.ShortPath"; "C:\Program Files\FileMaker\FileMaker Pro 17 Advanced" )

Example result: "C:\PROGRA~1\FILEMA~1\FILEMA~1"

# Chapter 125

## PDFKit

PDF functions for Mac.

### 125.1 PDFKit.AddEmptyPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	5.0	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.AddEmptyPage"; PDF { ; Width; Height } )

#### Parameters

##### PDF

A PDF reference number from PDFKit.Open.

\$ref

##### Width

Optional

The width for the new PDF page.

600

##### Height

Optional

The height of the new PDF page.

800

**Result** Returns OK or error.

#### Description

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

#### Examples

Create PDF from images:

```
# Start new document
Set Variable [ $doc; Value:MBS("PDFKit.NewPDFDocument") ]
# Add image in full size as new page
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image) ]
# Add empty page in default size
Set Variable [ $r; Value:MBS("PDFKit.AddEmptyPage"; $doc) ]
# Add image in given size as new page:
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image; 400; 300) ]
# get PDF document and store in container:
Set Field [ test::test; MBS("PDFKit.GetPDFDocument"; $doc) ]
# release memory
Set Variable [ $r; Value:MBS("PDFKit.Release"; $doc) ]
```

### See also

### 125.1.1 Blog Entries

- [MBS FileMaker Plugin, version 5.0pr12](#)

Created 16th February 2015, last changed 25th April 2016.

## 125.2 PDFKit.AddImageFilePage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	7.2	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.AddImageFilePage"; PDF; FilePath { ; Width; Height } )

### Parameters

#### PDF

A PDF reference number from PDFKit.Open.

\$ref

#### FilePath

The file path to the image file to use.

"/Users/cs/Desktop/test.png"

#### Width

Optional

The width for the new PDF page.

600

#### Height

Optional

The height of the new PDF page.

800

**Result** Returns OK or error.

### Description

If you need more control about details, you may want to check DynaPDF functions.

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Create PDF from image file:

```
Set Variable [ $ref; Value:MBS("PDFKit.NewPDFDocument") ]
```

```
Set Variable [ $r; Value:MBS("PDFKit.AddImageFilePage"; $ref; "/Users/cs/Desktop/test.jpg"; 640; 480) ]
```

```
Set Variable [ $r; Value:MBS("PDFKit.WriteToPath"; $ref; "/Users/cs/Desktop/test.pdf") ]
```

```
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]
```

## 125.3 PDFKit.AddImagePage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	5.0	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.AddImagePage"; PDF; Image { ; Width; Height } )

### Parameters

#### PDF

A PDF reference number from PDFKit.Open.

\$ref

#### Image

The image to use. Pass a container value with JPEG, TIFF, PNG or other image formats.

\$image

#### Width

Optional

The width for the new PDF page.

600

#### Height

Optional

The height of the new PDF page.

800

**Result** Returns OK or error.

### Description

If you need more control about details, you may want to check DynaPDF functions.

Please use PDFKit.AddImageFilePage to add image file on disk.

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

### Examples

Create PDF from images:

```
# Start new document
Set Variable [ $doc; Value:MBS("PDFKit.NewPDFDocument") ]
# Add image in full size as new page
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image) ]
# Add empty page in default size
Set Variable [ $r; Value:MBS("PDFKit.AddEmptyPage"; $doc) ]
# Add image in given size as new page:
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image; 400; 300) ]
# get PDF document and store in container:
Set Field [ test::test; MBS("PDFKit.GetPDFDocument"; $doc) ]
# release memory
```

Set Variable [ \$r; Value:MBS("PDFKit.Release"; \$doc) ]

## 125.4 PDFKit.AppendPages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	3.1	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.AppendPages"; PDFRef; OtherPDFs )

### Parameters

#### PDFRef

The PDF Reference where pages are added.

\$ref

#### OtherPDFs

Several PDF references. A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

\$PDF

**Result** Returns OK on success or error on failure.

### Description

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

### Examples

Merge two PDFs:

```
Set Variable [ $pdf ; Value: MBS("PDFKit.OpenContainer"; MyTable::InputPDF) ]
Set Variable [ $r ; Value: MBS( "PDFKit.AppendPages"; $pdf; MyTable::OtherPDF ) ]
Set Field [ MyTable::OutputPDF ; MBS( "PDFKit.GetPDFDocument"; $PDF ) ]
Set Variable [ $r ; Value: MBS( "PDFKit.Release"; $pdf ) ]
```

## 125.5 PDFKit.Combine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.Combine"; Name; PDFs )

### Parameters

#### Name

A text with the file name to include with the PDF.

"test.pdf"

#### PDFs

Several PDF references. A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open. The function will fail if one of those is an image file.

**Result** Returns the PDF container value.

### Description

You can pass container values, URLs or PDF references. You can pass one PDF reference to save to a new PDF.

Please note the difference between PDFKit.Combine and PDFKit.CombineRef. Combine returns a new container value with the new PDF. CombineRef returns the new PDF reference for further processing.

If on combining one of the PDF parameters is not a valid PDF, the function returns an error. You can use PDFKit.SetIgnoreCombineErrors to disable that and ignore all PDFs which fail to open. For example if you write code which takes 4 container values and not all of them contain PDF files.

Starting with version 6.0, the PDFs parameters can also be lists of paths or reference numbers.

### Examples

Combine two PDF files form two media fields into a new PDF

```
MBS("PDFKit.Combine"; "test.pdf"; mytable::test1; mytable::test2)
```

Merge PDFs:

```
# Start with blank list
Set Variable [ $list; Value:"" ]
# Load PDF from container
Go to Record/Request/Page [ First ]
Set Variable [ $destPage; Value:1 ]
Loop
Set Variable [ $r; Value:MBS("PDFKit.OpenContainer"; Merge PDFs::InputPDF) ]
If [ MBS("IsError") = 0 ]
Set Variable [ $list; Value:$list & $r & $]
End If
Go to Record/Request/Page [ Next; Exit after last ]
End Loop
```

## 125.5. PDFKIT.COMBINE

6269

Set Field [ Merge PDFs::FinalPDF; MBS("PDFKit.Combine"; "merge.pdf"; \$list) ]

Set Variable [ \$r; Value:MBS("PDFKit.Release"; \$list) ]

## 125.6 PDFKit.CombineRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.CombineRef"; Name; PDFs )

### Parameters

#### Name

A text with the file name to include with the PDF.  
"test.pdf"

#### PDFs

Several PDF references. A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

**Result** Returns the PDF reference.

### Description

You can pass container values, URLs or PDF references. You can pass one PDF reference to save to a new PDF.

Please note the difference between PDFKit.Combine and PDFKit.CombineRef. Combine returns a new container value with the new PDF. CombineRef returns the new PDF reference for further processing.

If on combining one of the PDF parameters is not a valid PDF, the function returns an error. You can use PDFKit.SetIgnoreCombineErrors to disable that and ignore all PDFs which fail to open. For example if you write code which takes 4 container values and not all of them contain PDF files.

Starting with version 6.0, the PDFs parameters can also be lists of paths or reference numbers.

### Examples

Combine the PDF files in the three PDF references into a new PDF reference:

```
MBS("PDFKit.CombineRef"; "" ; $ref1; $ref2; $ref3)
```

## 125.7 PDFKit.GeneratePreview

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	7.5	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GeneratePreview"; Container )

### Parameters

#### Container

A media value containing PDF data.

**Result** Returns OK or error.

### Description

For Windows or Linux, please use DynaPDF.GeneratePreview.

### Examples

Generate preview:

```
Set Field [ Merge PDFs::FinalPDF ; MBS("PDFKit.GeneratePreview"; Merge PDFs::InputPDF) ]
```

Add a preview to PDF container if needed:

```
# get a PDF somewhere
Set Variable [ $PDF ; Value: MBS( "Files.ReadFile"; "C:\Users\Christian\Desktop\test.pdf"; "auto" ) ]
# Does have PDF and no image?
Set Variable [ $types ; Value: MBS( "Container.GetTypes"; $PDF ) ]
# PDF included?
If [ Position ( $types ; "PDF " ; 1 ; 1 ) >0 ]
# Image preview missing?
If [ Position ( $types ; "JPEG" ; 1 ; 1 ) <1 and Position ( $types ; "PNGf" ; 1 ; 1 ) <1 ]
# Use DynaPDF if initialized, we can use it
If [ MBS( "DynaPDF.IsInitialized" ) ]
Set Variable [ $PDF2 ; Value: MBS( "DynaPDF.GeneratePreview"; $PDF ) ]
If [ MBS("IsError") = 0 ]
# Success, so use the new PDF
Set Variable [ $PDF ; Value: $PDF2 ]
End If
Else If [ MBS( "IsMacOSX" ) = 1 ]
# On Mac use PDFKit
Set Variable [ $PDF2 ; Value: MBS( "PDFKit.GeneratePreview"; $PDF ) ]
If [ MBS("IsError") = 0 ]
# Success, so use the new PDF
Set Variable [ $PDF ; Value: $PDF2 ]
End If
End If
End If
End If
```

## 125.7. *PDFKIT.GENERATEPREVIEW*

6273

```
# Store PDF with preview

## 125.10 PDFKit.GetPDFAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFAttribute"; PDF; Key )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### Key

Which information to query. This can be one of the following: Title, Subject, Author, Creator, Producer, Keywords, CreationDate or ModificationDate.

"Title"

**Result** Returns the text or date value requested.

### Description

New keys in v5.4: OwnerPassword, UserPassword, EncryptionKeyLength, AllowsPrinting and AllowsCopying.

If you need more control about encryption, restrictions or metadata, you may want to checkout our DynaPDF functions in the plugin.

### Examples

Get all the information values for a PDF in a container:

```
"Title: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Title") & "§" &
"Subject: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Subject") & "§" &
"Author: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Author") & "§" &
"Creator: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Creator") & "§" &
"Producer: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Producer") & "§" &
"Keywords: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "Keywords") & "§" &
"CreationDate: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "CreationDate") & "§" &
"ModificationDate: " & MBS("PDFKit.GetPDFAttribute"; combine pdf::test1; "ModificationDate")
```

- [MBS Filemaker Plugin, version 3.2pr8](#)

Created 18th August 2014, last changed 17th December 2018.

Key	Description
Title	The document's title. Optional; if present, the value of this key must be a text.
Author	The name of the person who created this document. Optional; if present, the value of this key must be a text.
Subject	The subject of a document. Optional; if present, the value of this key must be a text.
Keywords	The keywords for this document. This key is optional. Must be the keywords with comma separated.
Creator	The name of the application that created the original data used to create this document. Optional; if present, the value of this key must be a text.
OwnerPassword	The "owner password" of the PDF document. If this key is specified, the document will be encrypted using the value as the owner password; otherwise, the document will not be encrypted. The value of this key must be a text which can be represented in ASCII encoding; only the first 32 bytes will be used for the password. There is no default value for this key. If the value of this key cannot be represented in ASCII, the document will not be created and the creation function will fail.
UserPassword	The "user password" of the PDF document. If the document is encrypted, then the value of this key will be the user password for the document; if unspecified, the user password will be the empty string. The value of this key must be a text which can be represented in ASCII encoding; only the first 32 bytes will be used for the password. If the value of this key cannot be represented in ASCII, the document will not be created and the creation function will fail.
EncryptionKeyLength	Specifies the encryption key length in bits; see Table 3.18 "Entries common to all encryption dictionaries", PDF Reference: Adobe PDF version 1.5 (4th ed.) for more info. Optional; if present, the value of this key must be a number with value which is a multiple of 8 between 40 and 128, inclusive. If this key is absent or invalid, the encryption key length defaults to 40 bits.
AllowsPrinting	Used to specify whether the document allows printing when unlocked with the user password. The value of this key must be a boolean. The default value of this key is 1 (true).
AllowsCopying	Used to specify whether the document allows copying when unlocked with the user password. The value of this key must be a boolean. The default value of this key is 1 (true).
CreationDate	The creation date of PDF.
ModificationDate	The modification date of PDF.

## 125.11 PDFKit.GetPDFDocument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.2	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFDocument"; PDF { ; Filename } )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### Filename

Optional

Optionally, the file name to use for the container value.

"output.pdf"

**Result** Returns a container with a PDF document. The plugin adds a JPEG picture for preview as well as a file name. You can store it in a media field.

### Description

Filename is optional. When you use an URL for the PDF, you can basically load a new PDF from a server.

### Examples

Save a PDF in a PDF reference into a container value:

```
MBS( "PDFKit.GetPDFDocument"; $ref; "test.pdf" )
```

Create PDF from images:

```
# Start new document
Set Variable [ $doc; Value:MBS("PDFKit.NewPDFDocument") ]
# Add image in full size as new page
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image) ]
# Add empty page in default size
Set Variable [ $r; Value:MBS("PDFKit.AddEmptyPage"; $doc) ]
# Add image in given size as new page:
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image; 400; 300) ]
# get PDF document and store in container:
Set Field [ test::test; MBS("PDFKit.GetPDFDocument"; $doc) ]
# release memory
Set Variable [ $r; Value:MBS("PDFKit.Release"; $doc) ]
```

## 125.12 PDFKit.GetPDFPageCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPageCount"; PDF )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

**Result** The number of the page count.

### Description

### Examples

Query the page count from this PDF file:

MBS( "PDFKit.GetPDFPageCount"; mytable::pdfField )

**125.13 PDFKit.GetPDFPageDisplayAnnotation**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	6.0	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPageDisplayAnnotation"; PDF; index )

**Parameters****PDF**

The PDF reference number.

\$pdf

**index**

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

**Result** Returns OK or error.

**Description****See also**

- 125.12 PDFKit.GetPDFPageCount 6281
- 125.41 PDFKit.SetPDFPageDisplayAnnotation 6328

Created 30th November 2015, last changed 30th November 2015.

## 125.14 PDFKit.GetPDFPageFormattedText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.7	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPageFormattedText"; PDF; index )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

5

**Result** The styled text of the PDF page as far as PDFKit knows it and the plugin can translate it.

### Description

Our plugin translates the styled text from PDFKit to FileMaker. It should work with font size and styles like bold, underline and italic.

### Examples

Extract styled text of page 6 in this PDF

```
MBS( "PDFKit.GetPDFPageFormattedText"; $ref; 5 )
```

### See also

- [125.12 PDFKit.GetPDFPageCount](#) 6281

Created 18th August 2014, last changed 16th February 2015.

## 125.15 PDFKit.GetPDFPageImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

```
MBS( "PDFKit.GetPDFPageImage"; PDF; index { ; ImageType; Filename; DPI; box; ClearBackground }
)
```

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

#### DPI

Optional

The DPI to use for the resolution of the image. Default is 72.

72

#### box

Optional

The PDF box to use. Can be Media Box = 0, Crop Box = 1, Bleed Box = 2, TrimBox = 3 or ArtBox = 4.

If the box is not defined, we fall back to the media box. Default is 0.

1

#### ClearBackground

Optional

Optionally, whether to have a transparent background (1) vs. a white background (0). Default is 0 for white.

For JPEG, you can't pass 1.

0

**Result** Returns a container with a JPEG picture of the PDF page. You can store it in a media field.

### Description

With plugin version 2.4 you can specify format with ImageType parameter.

Due to bugs in Apple's PDFKit you may see memory leaks with JPEG data from PDF pages (seen in macOS 10.12).

For Windows, Linux or iOS, please check `DynaPDF.RenderPage` or `DynaPDF.GeneratePreview` function.

### Examples

Render page 2 of a PDF into a picture

```
MBS( "PDFKit.GetPDFPageImage"; $ref; 1; "jpeg"; "test.jpg"; 300; 1 )
```

Render first page of a PDF in a container:

```
MBS( "PDFKit.GetPDFPageImage"; TableName::ContainerFieldName; 0; "jpeg"; "image.jpg" )
```

## 125.16 PDFKit.GetPDFPagePDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.2	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPagePDF"; PDF; index { ; Filename; DontRenderPreview } )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

#### Filename

Optional

Optionally, the file name to use for the container value.

"output.pdf"

#### DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

**Result** Returns a container with a PDF document. The plugin adds a JPEG picture for preview as well as a file name. You can store it in a media field.

### Description

Filename is optional.

### Examples

Extract page 6 into a new PDF:

MBS( "PDFKit.GetPDFPagePDF"; \$ref; 5; "newpdf.pdf" )

## 125.17 PDFKit.GetPDFPagePDFRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPagePDFRef"; PDF; index )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

myTable::myMedia

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

**Result** Returns a PDF reference for the new PDF document.

### Description

#### Examples

Extract the PDF page with the given number:

```
MBS( "PDFKit.GetPDFPagePDFRef"; $ref; 5 )
```

### See also

## 125.18 PDFKit.GetPDFPageRotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPageRotation"; PDF; index )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

**Result** Returns rotation in degrees.

### Description

The rotation is a positive multiple of 90: 0, 90, 180, or 270. The rotation of pages with negative rotation is converted to a corresponding positive rotation.

## 125.19 PDFKit.GetPDFPageText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPageText"; PDF; index )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

5

**Result** The text of the PDF page as far as PDFKit knows it.

### Description

If you need text from all pages, please use PDFKit.GetPDFText.

For solutions on Windows, Linux or iOS, please use DynaPDF.ExtractPageText.

You may need to use Text.ConvertUnicodeToCharacterComposition if text is coming back in decomposed unicode characters.

### Examples

Extract text of page 6 in this PDF

MBS( "PDFKit.GetPDFPageText"; \$ref; 5 )

## 125.20 PDFKit.GetPDFPageValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	5.0	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPageValue"; PDF; index; Selector; Parameter { ; DontRenderPreview } )

### Parameters

#### PDF

A PDF reference number from PDFKit.Open.

\$ref

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

#### Selector

Which value to pick.

"label"

#### Parameter

For dataRepresentation the filename. For width/height/x/y the index of the box: 0 = media box, 1 = crop box, 2 = bleed box, 3 = trim box, 4 = art box.

#### DontRenderPreview

Optional

Optional for dataRepresentation. Pass 1 to not create a JPEG with preview of first page as part of the container.

0

**Result** Returns OK or error.

### Description

label	The page label. Usually "1" for the first page, "2" for the second, etc.
rotation	Rotation on a page.
numberOfCharacters	Number of characters on the page (including linefeeds and spaces inserted).
string	String (with linefeeds and in some cases spaces inserted) representing the text on the page.
attributedString	Same as string, but with formatting.
displaysAnnotations	Whether to display annotations if page is drawn.
dataRepresentation	The page as a PDF document. Pass as parameter the file name to use for the container value.
width	The width of page.
height	The height of page.
X	The x offset of page bounds.
Y	The y offset of page bounds.

For X/Y/Width/Height you can specify which box to use in the parameter.

## 125.21 PDFKit.GetPDFPagesPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.2	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPagesPDF"; PDF; Indexes { ; Filename; DontRenderPreview } )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### Indexes

The index of the page. From zero to PDFKit.GetPDFPageCount-1. You can use several numbers separated with comma and ranges with minus.

"0-2,4,6-9,19"

#### Filename

Optional

Optionally, the file name to use for the container value.

"output.pdf"

#### DontRenderPreview

Optional

Pass 1 to not create a JPEG with preview of first page as part of the container.

0

**Result** Returns a container with a PDF document. The plugin adds a JPEG picture of the first page for preview as well as a file name. You can store it in a media field.

### Description

Filename is optional.

### Examples

Extract a few pages into a new PDF

MBS( "PDFKit.GetPDFPagesPDF"; \$ref; "1,2,5,6"; "newpdf.pdf" )

### See also

## 125.22 PDFKit.GetPDFPagesPDFRef

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFPagesPDFRef"; PDF; Indexes )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

\$ref

#### Indexes

The index of the page. From zero to PDFKit.GetPDFPageCount-1. You can use several numbers separated with comma and ranges with minus.

"1,2,6-9,19"

**Result** Returns a PDF reference for the new PDF document.

### Description

### Examples

Get the PDF pages with the given page numbers into a new PDF

MBS( "PDFKit.GetPDFPagesPDFRef"; \$ref; "1,2,5,6" )

## 125.23 PDFKit.GetPDFText

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.GetPDFText"; PDF )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

**Result** The text of the PDF Document as far as PDFKit knows it.

### Description

If you need only text for a given page, please use PDFKit.GetPDFPageText.

For solutions on Windows, Linux or iOS, please use DynaPDF.ExtractText.

### Examples

Extract all the text from the given PDF reference:

```
MBS( "PDFKit.GetPDFText"; $ref )
```

## 125.24 PDFKit.GetPrintLastSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	9.2	Yes	No	No	No	No

MBS( "PDFKit.GetPrintLastSettings" )

**Result** Returns text or error.

### Description

For user to read. To save settings, you can use PDFKit.SetPrintSetting and PDFKit.GetPrintLastSettings.

Since version 10.1 we return settings as JSON instead of XML and includes print parameter.

### Examples

Queries last print settings:

```
Set Variable [ $v ; Value: MBS( "PDFKit.GetPrintLastSettings" ) ]
If [ MBS("IsError") ]
Set Field [ PDFKit Print::Result ; $v ]
Else
Set Field [ PDFKit Print::Settings ; $v ]
Set Field [ PDFKit Print::Result ; "OK" ]
End If
```

## 125.25 PDFKit.GetPrintOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	9.2	Yes	No	No	No	No

MBS( "PDFKit.GetPrintOption"; Key )

### Parameters

#### Key

The key to use.

"com\_apple\_print\_PrintSettings\_PMCopies"

**Result** Returns value or error.

### Description

You can use PDFKit.SetOption to set options. Use PDFKit.GetPrintSetting for regular options.

#### See also

- 125.26 PDFKit.GetPrintSetting 6302

## 125.26 PDFKit.GetPrintSetting

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS( "PDFKit.GetPrintSetting"; Selector )

### Parameters

#### Selector

Which value to query.  
"FaxNumber"

**Result** Returns value or error.

### Description

See also PDFKit.Print function.  
See also PDFKit.SetPrintSetting where options are described.

You can query default printer name using "DefaultPrinter" as selector.  
New in 8.1 you can use selector LastSettings to query last settings as XML and discover what options are set by using the dialog, e.g. the tray names.

### Examples

Query printer:

```
MBS( "PDFKit.GetPrintSetting"; "printer" )
```

Query default printer:

```
MBS( "PDFKit.GetPrintSetting"; "DefaultPrinter" )
```

Query last settings as xml:

```
MBS( "PDFKit.GetPrintSetting"; "LastSettings" )
```

## 125.27 PDFKit.NewPDFDocument

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	5.0	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.NewPDFDocument" )

**Result** Returns a number for the PDF. Use PDFKit.Release later to free the memory.

### Description

This value can be used in other PDFKit calls to work on the same PDF.

See also PDFKit.Open.

PDF Document reference numbers are starting at 30000 and counting up for each new document.

### Examples

Create PDF from images:

```
# Start new document
Set Variable [ $doc; Value:MBS("PDFKit.NewPDFDocument") ]
# Add image in full size as new page
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image) ]
# Add empty page in default size
Set Variable [ $r; Value:MBS("PDFKit.AddEmptyPage"; $doc) ]
# Add image in given size as new page:
Set Variable [ $r; Value:MBS("PDFKit.AddImagePage"; $doc; test::image; 400; 300) ]
# get PDF document and store in container:
Set Field [ test::test; MBS("PDFKit.GetPDFDocument"; $doc) ]
# release memory
Set Variable [ $r; Value:MBS("PDFKit.Release"; $doc) ]
```

## 125.28 PDFKit.Open

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.2	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.Open"; PDF )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL.

**Result** Returns a number for the PDF. Use PDFKit.Release later to free the memory.

### Description

This value can be used in other PDFKit calls to work on the same PDF.

See also PDFKit.OpenContainer, PDFKit.OpenPath and PDFKit.OpenURL.

PDF Document reference numbers are starting at 30000 and counting up for each new document.

If you need to open a PDF file in the PDF Viewer, please use Files.LaunchFile with the path to the PDF file instead.

### Examples

Open the PDF from the container value:

```
MBS("PDFKit.Open"; myTable::myMediaField)
```

## 125.29 PDFKit.OpenContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.OpenContainer"; Container )

### Parameters

#### Container

A media value containing PDF data.

**Result** Returns a number for the PDF.

### Description

This value can be used in other PDFKit calls to work on the same PDF.

See also PDFKit.OpenPath and PDFKit.OpenURL.

PDF Document reference numbers are starting at 30000 and counting up for each new document.

Use PDFKit.Release later to free the memory.

### Examples

Open the PDF in the container:

```
MBS("PDFKit.OpenContainer"; myTable::myMediaField)
```

Rotate page and set title:

```
# open PDF from container
Set Variable [ $ref; Value:MBS("PDFKit.OpenContainer"; combine pdf::result) ]
# Set title for PDF
Set Variable [ $result; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "Title"; combine pdf::title) ]
# Rotate first page by 90°
Set Variable [ $result; Value:MBS("PDFKit.SetPDFPageRotation"; $ref; 0; 90) ]
# save document to container
Set Field [ combine pdf::result; MBS("PDFKit.GetPDFDocument"; $ref; "result.pdf") ]
# free memory
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]
```

## 125.31 PDFKit.OpenURL

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.OpenURL"; URL )

### Parameters

#### URL

A text with an URL.

**Result** Returns a number for the PDF.

### Description

This value can be used in other PDFKit calls to work on the same PDF.

See also PDFKit.OpenPath and PDFKit.OpenContainer.

PDF Document reference numbers are starting at 30000 and counting up for each new document.

Use PDFKit.Release later to free the memory.

Seems to work for HTTP protocol, too. The Apple frameworks transparently handle this out of the control of the plugin. With HTTPS after redirect from HTTP is also possible. For more control, please use CURL functions.

### Examples

Open the PDF with the given URL:

```
MBS("PDFKit.OpenURL"; "http://www.somedomain.invalid/somepath/test.pdf")
```

### See also

## 125.32 PDFKit.PageBounds

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.PageBounds"; PDF; index { ; box; mm } )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

#### box

Optional

Optionally, the PDF box to use. Can be Media Box = 0, Crop Box = 1, Bleed Box = 2, TrimBox = 3 or ArtBox = 4. If the box is not defined, we fall back to the media box. Default is 0.

1

#### mm

Optional

Optionally. If you pass 1, we convert the rectangle to millimeters. Else we return points where 72 points are one inch. Default is 0.

0

**Result** Returns four values separated with new line containing x, y, width and height.

### Description

Note that only the media box is required for a PDF. If you request the bounds for the crop box, but the PDF does not include a crop box, the bounds for the media box are returned instead. If you request the bounds for other box types, and the PDF does not includes these types, the bounds for the crop box are returned instead.

The coordinates for the box are in page space, so you might need to transform the points if the page has a rotation on it. Also, note that the bounds boundsForBox returns are intersected with the page's media box.

### Examples

Get media box of third page in a PDF in a container field:

```
MBS("PDFKit.PageBounds"; test::data; 2; 0)
```

Get crop box of sixth page in millimeters in a PDF with reference:

```
MBS("PDFKit.PageBounds"; $ref; 5; 1; 1)
```

## 125.33 PDFKit.Print

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

```
MBS( "PDFKit.Print"; PDF )
```

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

**Result** Returns OK or error.

### Description

Optionally if you have a fax printer, you can also pass fax number to send a fax.

Please use PDFKit.ResetPrintSettings and then call PDFKit.SetPrintSetting for all the settings you need.

Please use DynaPDF.Print for Windows.

Printing may fail on Server if no printer selected or printer is not turned on.

### Examples

Print a PDF container:

```
MBS( "PDFKit.Print"; MyTable::MyDocumentContainer )
```

Fax a PDF container:

```
MBS( "PDFKit.ResetPrintSettings" )
MBS( "PDFKit.SetPrintSetting"; "FaxNumber"; "+123456" )
MBS( "PDFKit.Print"; MyTable::MyDocumentContainer )
```

Print page 2 to 10 and make 3 copies:

```
MBS( "PDFKit.ResetPrintSettings" )
MBS( "PDFKit.SetPrintSetting"; "FirstPage"; 2 )
MBS( "PDFKit.SetPrintSetting"; "LastPage"; 10 )
MBS( "PDFKit.SetPrintSetting"; "Copies"; 3 )
MBS( "PDFKit.Print" )
```

Print with options:

```
# print pdf
Set Variable [ $print3; Value:MBS( "PDFKit.ResetPrintSettings" ) ]
Set Variable [ $print4; Value:MBS( "PDFKit.SetPrintSetting"; "Printer"; "Cliques Xerox" ) ]
Set Variable [ $print5; Value:MBS( "PDFKit.SetPrintSetting"; "FirstPage"; PDF::PrintPageFrom ) ]
Set Variable [ $print6; Value:MBS( "PDFKit.SetPrintSetting"; "LastPage"; PDF::PrintPageTo ) ]
```

```

Set Variable [ $print7; Value:MBS( "PDFKit.SetPrintSetting"; "Copies"; 1 ) ]
Set Variable [ $print8; Value:MBS( "PDFKit.SetPrintSetting"; "scalingMode"; "DownToFit" ) ]
Set Variable [ $print8; Value:MBS( "PDFKit.SetPrintSetting"; "DuplexMode"; "DuplexNoTumble" ) ]
Set Variable [ $print9; Value:MBS( "PDFKit.Print"; PDF::Annotated PDF ) ]

```

## 125.34 PDFKit.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.1	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.Release"; PDFReference )

### Parameters

#### PDFReference

A number referencing a PDF you opened before.

**Result** Returns OK on success. Do no longer use the reference number after this call as the object has been freed and accessing it again can crash your application.

### Description

#### Examples

Release the PDF reference in variable ref

```
MBS("PDFKit.Release"; $ref)
```

## 125.36 PDFKit.RestorePrintSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS( "PDFKit.RestorePrintSettings"; Container )

### Parameters

#### Container

The container value with printer settings.  
MyTable::PrinterSettingsContainer

**Result** Returns OK or error.

### Description

#### See also

- 125.26 PDFKit.GetPrintSetting 6302

Created 18th August 2014, last changed 18th August 2014.

## 125.37 PDFKit.SavePrintSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS( "PDFKit.SavePrintSettings" { ; FileName } )

### Parameters

#### FileName

Optional

The filename to use in the container value.

"Printer Settings.dat"

**Result** Returns container value with print settings or error.

### Description

Print settings are wrapped in a container value.

You can store them in a container and later restore them with PDFKit.RestorePrintSettings or PrintDialog.SetConfiguration function.

### See also

- 125.26 PDFKit.GetPrintSetting 6302

## 125.38 PDFKit.SetCurrentFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.3	Yes	No	Yes, macOS only	No	No

MBS( "PDFKit.SetCurrentFilter"; name )

### Parameters

#### name

The name of the filter. Use QuartzFilterManager.Filters to get list of filters. If Filter name is empty or missing, the filter is removed.

"Compress Pictures"

**Result** Returns OK or error.

### Description

You can use the Quartz Filter Manager panel to create a panel.

This is for all PDF saving in MBS Plugin with PDFKit functions.

Applied to PDF in PDFKit.GetPDFPagesPDF, PDFKit.GetPDFPagePDF, PDFKit.Combine, PDFKit.WriteToPath and other functions writing PDFs.

### Examples

Set a filter:

```
MBS("PDFKit.SetCurrentFilter"; "Compress Pictures")
```

### See also

Created 18th August 2014, last changed 3th June 2019.

## 125.39 PDFKit.SetIgnoreCombineErrors

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.4	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.SetIgnoreCombineErrors" )

**Result** Returns "OK" or error message.

### Description

If you call PDFKit.Combine or PDFKit.CombineRef and you pass several container values, those functions normally stop if one of the parameters is not a PDF reference of any kind. If you set errors to be ignored, you can still combine other PDFs.

### Examples

Ignore errors on Combine

```
MBS( "PDFKit.SetIgnoreCombineErrors"; 1 )
```

### See also

## 125.40 PDFKit.SetPDFAttribute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.3	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.SetPDFAttribute"; PDF; Key; Value )

### Parameters

#### PDF

A PDF reference from PDFKit.Open or other functions.

\$ref

#### Key

Which information to set. This can be one of the following: Title, Subject, Author, Creator, Producer, Keywords, CreationDate or ModificationDate.

"Title"

#### Value

The new value for this key. Either a text for text value or a timestamp for a date.

"new value"

**Result** Returns "OK" on success or an error message.

### Description

While you can pass here a container value or an URL to a PDF file, you should really pass a reference value. Because once you changed the PDF attribute, you want to save the PDF with a call to PDFKit.GetDocument.

New keys in v5.4: OwnerPassword, UserPassword, EncryptionKeyLength, AllowsPrinting and AllowsCopying.

If you need more control about encryption, restrictions or metadata, you may want to checkout our DynaPDF functions in the plugin.

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

### Examples

Set title to a PDF:

```
MBS("PDFKit.SetPDFAttribute"; $ref; "title"; "The new title for this PDF file." )
```

Rotate page and set title:

```
# open PDF from container
Set Variable [ $ref; Value:MBS("PDFKit.OpenContainer"; combine pdf::result) ]
# Set title for PDF
Set Variable [ $result; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "Title"; combine pdf::title) ]
# Rotate first page by 90°
```

```

Set Variable [ $result; Value:MBS("PDFKit.SetPDFPageRotation"; $ref; 0; 90) ]
# save document to container
Set Field [ combine pdf::result; MBS("PDFKit.GetPDFDocument"; $ref; "result.pdf") ]
# free memory
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]

```

Create PDF with passwords:

```

Set Variable [ $ref; Value:MBS("PDFKit.OpenContainer"; combine pdf::test1) ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "OwnerPassword"; "owner") ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "UserPassword"; "test") ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "EncryptionKeyLength"; 128) ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "AllowsPrinting"; 0) ]
Set Variable [ $r; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "AllowsCopying"; 0) ]
Set Field [ combine pdf::result; MBS("PDFKit.GetPDFDocument"; $ref; "result.pdf") ]
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]

```

#### 125.40.1 Blog Entries

- [MBS FileMaker Plugin, version 5.4pr2](#)

Created 18th August 2014, last changed 17th December 2018.

Key	Description
Title	The document's title. Optional; if present, the value of this key must be a text.
Author	The name of the person who created this document. Optional; if present, the value of this key must be a text.
Subject	The subject of a document. Optional; if present, the value of this key must be a text.
Keywords	The keywords for this document. This key is optional. Must be the keywords with comma separated.
Creator	The name of the application that created the original data used to create this document. Optional; if present, the value of this key must be a text.
OwnerPassword	The "owner password" of the PDF document. If this key is specified, the document will be encrypted using the value as the owner password; otherwise, the document will not be encrypted. The value of this key must be a text which can be represented in ASCII encoding; only the first 32 bytes will be used for the password. There is no default value for this key. If the value of this key cannot be represented in ASCII, the document will not be created and the creation function will fail.
UserPassword	The "user password" of the PDF document. If the document is encrypted, then the value of this key will be the user password for the document; if unspecified, the user password will be the empty string. The value of this key must be a text which can be represented in ASCII encoding; only the first 32 bytes will be used for the password. If the value of this key cannot be represented in ASCII, the document will not be created and the creation function will fail.
EncryptionKeyLength	Specifies the encryption key length in bits; see Table 3.18 "Entries common to all encryption dictionaries", PDF Reference: Adobe PDF version 1.5 (4th ed.) for more info. Optional; if present, the value of this key must be a number with value which is a multiple of 8 between 40 and 128, inclusive. If this key is absent or invalid, the encryption key length defaults to 40 bits.
AllowsPrinting	Used to specify whether the document allows printing when unlocked with the user password. The value of this key must be a boolean. The default value of this key is 1 (true).
AllowsCopying	Used to specify whether the document allows copying when unlocked with the user password. The value of this key must be a boolean. The default value of this key is 1 (true).
CreationDate	The creation date of PDF.
ModificationDate	The modification date of PDF.

## 125.41 PDFKit.SetPDFPageDisplayAnnotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	6.0	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.SetPDFPageDisplayAnnotation"; PDF; index; Value )

### Parameters

#### PDF

The PDF reference number.

\$pdf

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

#### Value

The new value for whether to display annotations. Can be 0 or 1.

1

**Result** Returns OK or error.

### Description

Function to turn on or off the display of annotations when the page is drawn.

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

### Examples

Render with or without image:

```
Set Variable [ $pdf; Value:MBS( "PDFKit.OpenContainer"; PDFKit Rendering::PDF ) ]
Set Variable [ $r; Value:MBS( "PDFKit.SetPDFPageDisplayAnnotation"; $pdf; 0; 0 ) ]
Set Field [ PDFKit Rendering::Image1; MBS( "PDFKit.GetPDFPageImage"; $pdf; 0 ) ]
Set Variable [ $r; Value:MBS( "PDFKit.SetPDFPageDisplayAnnotation"; $pdf; 0; 1 ) ]
Set Field [ PDFKit Rendering::Image2; MBS( "PDFKit.GetPDFPageImage"; $pdf; 0 ) ]
Set Variable [ $r; Value:MBS("PDFKit.release"; $pdf) ]
```

## 125.42 PDFKit.SetPDFPageRotation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.SetPDFPageRotation"; PDF; index; rotation )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### index

The index of the page. From zero to PDFKit.GetPDFPageCount-1.

1

#### rotation

The new rotation value.

90

**Result** Returns OK on success.

### Description

The rotation must be a positive or negative multiple of 90 (negative angles are converted to their positive equivalents; for example, -90 is changed to 270).

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

### Examples

Rotate page and set title:

```
# open PDF from container
Set Variable [ $ref; Value:MBS("PDFKit.OpenContainer"; combine pdf::result) ]
# Set title for PDF
Set Variable [ $result; Value:MBS("PDFKit.SetPDFAttribute"; $ref; "Title"; combine pdf::title) ]
# Rotate first page by 90°
Set Variable [ $result; Value:MBS("PDFKit.SetPDFPageRotation"; $ref; 0; 90) ]
# save document to container
Set Field [ combine pdf::result; MBS("PDFKit.GetPDFDocument"; $ref; "result.pdf") ]
# free memory
Set Variable [ $result; Value:MBS("PDFKit.Release"; $ref) ]
```

## 125.43 PDFKit.SetPrintOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	9.2	Yes	No	No	No	No

MBS( "PDFKit.SetPrintOption"; Key; Value { ; Type } )

### Parameters

#### Key

The key to use.

"com\_apple\_print\_PrintSettings\_PMCopies"

#### Value

The value to use. Depending on data type, the plugin will pass a number or a text.

3

#### Type

Optional

Available in MBS FileMaker Plugin 9.2 or newer.

The type of data to add. Default is empty to use type of value passed. So text or number type would be picked automatically. Valid values for type are boolean, text, number, integer and text. Integer is for integer numbers while number is for floating numbers.

**Result** Returns OK or error.

### Description

For regular options, please use PDFKit.SetPrintSetting.

### Examples

Sets a custom option:

```
MBS( "PDFKit.SetPrintOption"; "xxx"; 123 )
```

Sets a custom boolean option:

```
MBS( "PDFKit.SetPrintOption"; "xxx"; 1; "boolean" )
```

Asks for 4 pages per page:

```
Set Variable [ $r ; Value: MBS( "PDFKit.SetPrintOption"; "NSPagesAcross"; 2; "Integer" ) ]
```

```
Set Variable [ $r ; Value: MBS( "PDFKit.SetPrintOption"; "NSPagesDown"; 2; "Integer" ) ]
```

## 125.44 PDFKit.SetPrintSetting

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.0	Yes	No	Yes, macOS only	No	No

MBS( "PDFKit.SetPrintSetting"; Selector; Value )

### Parameters

#### Selector

Which value to set.

"FaxNumber"

#### Value

The value for the setting.

"+123456"

**Result** Returns OK or error.

### Description

See also PDFKit.Print function.

All settings are optional and if not set will use default setting.

Possible settings:

You can use PDFKit.SetPrintOption to set custom print options like with PrintDialog.SetOption function.

### Examples

Set a fax number:

```
MBS( "PDFKit.SetPrintSetting"; "FaxNumber"; "+123456" )
```

Print page 2 to 10 and make 3 copies:

```
MBS( "PDFKit.ResetPrintSettings" )
MBS( "PDFKit.SetPrintSetting"; "FirstPage"; 2 )
MBS( "PDFKit.SetPrintSetting"; "LastPage"; 10 )
MBS( "PDFKit.SetPrintSetting"; "Copies"; 3 )
MBS( "PDFKit.Print" )
```

Set a duplex:

```
MBS( "PDFKit.SetPrintSetting"; "DuplexMode"; "DuplexNoTumble" )
```

Horizontal and vertical fit:

```
$r = MBS( "PDFKit.SetPrintSetting"; "HorizontalPagination"; "fit" )
$r = MBS( "PDFKit.SetPrintSetting"; "VerticalPagination"; "fit" )
```

Set paper tray:

```
MBS("PDFKit.SetPrintSetting"; "Tray"; "Tray-2")
```

Enable print dialog:

```
MBS( "PDFKit.SetPrintSetting"; "ShowsPrintPanel"; 1 )
```

Enable progress dialog:

```
MBS( "PDFKit.SetPrintSetting"; "ShowsProgressPanel"; 1 )
```

## 125.44.2 FileMaker Magazin

- Ausgabe 6/2017, Seite 26

Created 18th August 2014, last changed 28th November 2019.

jobTitle	The title of the printing job.
faxNumber	A fax number for fax printers. This text is passed through and must match the format your driver expects.
PaperName	The name of the paper to use.
Printer	The name of the printer to use.
FirstPage	The number of the first page to print.
LastPage	The number of the last page to print.
Copies	The number of copies to print. Default is 1.
ReversePageOrder	Whether to reverse the page order. Pass 1 to reverse or 0 to not reverse. Default is not reverse.
MustCollate	Whether to collate or not. Pass 1 to collate or 0 to not collate. Default is 0.
AutoRotate	Whether to automatically rotate to match the PDF page format. Default is 1 (on).
ShowsPrintPanel	Whether to show the print panel. Default is 0 to not show it. Pass 1 for value to show dialog.
ShowsProgressPanel	Whether to show the progress panel. Default is 0 to not show it. Pass 1 for value to show progress.
DuplexMode	Whether to use duplex mode. Can be None (Print only on one side of sheet of paper), DuplexNoTumble (Print on both sides of the paper, with no tumbling), DuplexTumble (Print on both sides of the paper, tumbling on) or SimplexTumble (Print on only one side of the paper, but tumble the images while printing).
DetailedErrorReporting	Whether to enable detailed error reporting. If 1, produce detailed reports when an error occurs.
PagesAcross	Number of logical pages to be placed across a physical sheet.
PagesDown	Number of logical pages to be placed down a physical sheet.
TopMargin	The top margin. Default 0.
BottomMargin	The bottom margin. Default 0.
LeftMargin	The left margin. Default 0.
RightMargin	The right margin. Default 0.
HorizontalPagination	The horizontal pagination. Can be auto, clip or fit. Default is fit.
VerticalPagination	The vertical pagination. Can be auto, clip or fit. Default is fit.
scalingMode	The scaling mode to use. Default is None, but can also be DownToFit or ToFit.
Tray	The name of the paper tray. See <code>PrintDialog.GetTray</code> to find the name of the tray. (New in 8.0)

## 125.45 PDFKit.Watermark

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.7	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.Watermark"; PDF; PageNumber; Image; Transparency; X; Y { ; W; H; Background; DeltaX; DeltaY } )

### Parameters

#### PDF

A PDF reference from PDFKit.Open.

\$pdf

#### PageNumber

The page number of the page to modify.

0

#### Image

The image to be used for watermark. Should be a PNG with mask for best results. Pass a container value.

\$image

#### Transparency

The transparency level. From 0.0 (opaque) to 1.0 (full transparency).

0.5

#### X

X coordinate. If zero, the plugin will center the image. If negative, this value is the distance from right side.

0

#### Y

Y coordinate. As with all PDF coordinates, the 0 coordinate is on the bottom of the page. If zero, the plugin will center the image. If negative, this value is the distance from top side.

0

#### W

Optional

Desired width. If value is zero or not provided, the plugin will use the image width.

0

#### H

Optional

Desired height. If value is zero or not provided, the plugin will use the image height.

0

#### Background

Optional

Whether to put image in foreground or background. Default is foreground. Can be 1 for background or 0 for foreground. Does not work if existing page clears background with background color!

0

#### DeltaX

Optional

Additional positioning offset to be added after the calculations for above are done.

0

### **DeltaY**

Optional

Additional positioning offset to be added after the calculations for above are done.

0

**Result** Returns OK or error message.

### **Description**

This modifies an in memory PDF Document which you can create by opening one using PDFKit.Open, PDFKit.OpenContainer, PDFKit.OpenPath or PDFKit.OpenURL.

You can watermark several pages by calling this function in a loop.

Don't forget to use PDFKit.Release to later release memory.

You can do similar with DynaPDF with insert image command (DynaPDF.InsertImage) and alpha set (DynaPDF.SetAlpha).

Your changes are only done in memory, so please remember to write modified pdf back to disk, e.g. by using PDFKit.WriteToPath. Or use PDFKit.GetPDFDocument to get a PDF for storing in a container.

### **Examples**

Watermark with an image over full page:

```
MBS("PDFKit.Watermark"; $pdf; 0; Watermark PDF Page::WatermarkImage; 0; 0; 0; 0; 0)
```

## 125.46 PDFKit.WriteToPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	3.1	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.WriteToPath"; PDF; Path )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

#### Path

A valid native file path.

"/Users/test/Desktop/test.pdf"

**Result** Returns OK or error message.

### Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Load PDF, Write PDF and release it.

```
$h = MBS("PDFKit.OpenPath"; "/Users/cs/Desktop/test.pdf")
$r = MBS("PDFKit.WriteToPath"; $h; "/Users/cs/Desktop/output.pdf")
$r = MBS("PDFKit.Release"; $h)
```

## 125.47 PDFKit.allowsCopying

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.allowsCopying"; PDF )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

**Result** Returns 1 if copying is allowed and 0 else.

### Description

The ability to copy content from a PDF document is an attribute unrelated to whether the document is locked or unlocked. It depends on the PDF permissions set by the document's author.

This method only determines the desired permissions setting in the PDF document; it is up to the application to enforce (or ignore) the permissions.

This method always returns 1 if the document is not encrypted. Note that in many cases an encrypted document may still be readable by all users due to the standard empty string password. For more details about user and owner passwords, see the Adobe PDF specification.

### Examples

Check directly if a PDF in a container allows copying:

```
MBS( "PDFKit.allowsCopying"; Test::Document )
```

Shows some properties:

```
# Load PDF from container
Set Variable [ $pdf ; Value: MBS( "PDFKit.OpenContainer"; Popup Menu::logo ) ]
# Check some properties
Set Variable [ $allowsCopying ; Value: MBS( "PDFKit.allowsCopying"; $PDF ) ]
Set Variable [ $allowsPrinting ; Value: MBS( "PDFKit.allowsPrinting"; $PDF ) ]
Set Variable [ $isEncrypted ; Value: MBS( "PDFKit.isEncrypted"; $PDF ) ]
Set Variable [ $isLocked ; Value: MBS( "PDFKit.isLocked"; $PDF ) ]
# show in dialog
Show Custom Dialog [ "PDF Details" ; "allows copying: " & If($allowsCopying; "yes"; "no") & $&
"allows printing: " & If($allowsPrinting; "yes"; "no") & $&
"is encrypted: " & If($isEncrypted; "yes"; "no") & $&
"is locked: " & If($isLocked; "yes"; "no") ]
# release PDF
Set Variable [ $r ; Value: MBS("PDFKit.Release"; $pdf) ]
```

**See also**

- 125.28 PDFKit.Open 6306
- 125.29 PDFKit.OpenContainer 6308
- 125.34 PDFKit.Release 6317

Created 18th August 2014, last changed 25th November 2019.

## 125.48 PDFKit.allowsPrinting

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.allowsPrinting"; PDF )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

**Result** Returns 1 if printing is allowed and 0 else.

### Description

The ability to print a PDF document is an attribute unrelated to whether the document is locked or unlocked. It depends on the PDF permissions set by the document's author.

This method only determines the desired permissions setting in the PDF document; it is up to the application to enforce (or ignore) the permissions.

This method always returns 1 if the document is not encrypted. Note that in many cases an encrypted document may still be readable by all users due to the standard empty string password. For more details about user and owner passwords, see the Adobe PDF specification.

### Examples

Shows some properties:

```
# Load PDF from container
Set Variable [ $pdf ; Value: MBS( "PDFKit.OpenContainer"; Popup Menu::logo ) ]
# Check some properties
Set Variable [ $allowsCopying ; Value: MBS( "PDFKit.allowsCopying"; $PDF ) ]
Set Variable [ $allowsPrinting ; Value: MBS( "PDFKit.allowsPrinting"; $PDF ) ]
Set Variable [ $isEncrypted ; Value: MBS( "PDFKit.isEncrypted"; $PDF ) ]
Set Variable [ $isLocked ; Value: MBS( "PDFKit.isLocked"; $PDF ) ]
# show in dialog
Show Custom Dialog [ "PDF Details" ; "allows copying: " & If($allowsCopying; "yes"; "no") & §&
"allows printing: " & If($allowsPrinting; "yes"; "no") & §&
"is encrypted: " & If($isEncrypted; "yes"; "no") & §&
"is locked: " & If($isLocked; "yes"; "no") ]
# release PDF
Set Variable [ $r ; Value: MBS("PDFKit.Release"; $pdf) ]
```

### See also

- 125.28 PDFKit.Open 6306
- 125.29 PDFKit.OpenContainer 6308
- 125.34 PDFKit.Release 6317

Created 18th August 2014, last changed 25th November 2019.

## 125.49 PDFKit.isEncrypted

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.isEncrypted"; PDF )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

**Result** Returns 1 if encrypted.

### Description

If encrypted, reading the document requires a password.

Encrypted documents whose password is the empty string are unlocked automatically upon opening, because PDF Kit tries the empty string as a password if none is supplied.

### Examples

Shows some properties:

```
# Load PDF from container
Set Variable [ $pdf ; Value: MBS( "PDFKit.OpenContainer"; Popup Menu::logo ) ]
# Check some properties
Set Variable [ $allowsCopying ; Value: MBS( "PDFKit.allowsCopying"; $PDF ) ]
Set Variable [ $allowsPrinting ; Value: MBS( "PDFKit.allowsPrinting"; $PDF ) ]
Set Variable [ $isEncrypted ; Value: MBS( "PDFKit.isEncrypted"; $PDF ) ]
Set Variable [ $isLocked ; Value: MBS( "PDFKit.isLocked"; $PDF ) ]
# show in dialog
Show Custom Dialog [ "PDF Details" ; "allows copying: " & If($allowsCopying; "yes"; "no") & $&
"allows printing: " & If($allowsPrinting; "yes"; "no") & $&
"is encrypted: " & If($isEncrypted; "yes"; "no") & $&
"is locked: " & If($isLocked; "yes"; "no") ]
# release PDF
Set Variable [ $r ; Value: MBS("PDFKit.Release"; $pdf) ]
```

- 125.29 PDFKit.OpenContainer 6308

- 125.34 PDFKit.Release

Created 18th August 2014, last changed 25th November 2019.

## 125.50 PDFKit.isLocked

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	2.9	Yes	No	Yes, macOS only	No	Yes

MBS( "PDFKit.isLocked"; PDF )

### Parameters

#### PDF

A container value with the PDF content from a media field. Or a text with an URL. Or a PDF reference from PDFKit.Open.

**Result** Returns 1 if PDF is locked.

### Description

Only encrypted documents can be locked. Encrypted documents whose password is the empty string are unlocked automatically upon opening, because PDF Kit tries the empty string as a password if none is supplied.

### Examples

Shows some properties:

```
# Load PDF from container
Set Variable [ $pdf ; Value: MBS( "PDFKit.OpenContainer"; Popup Menu::logo ) ]
# Check some properties
Set Variable [ $allowsCopying ; Value: MBS( "PDFKit.allowsCopying"; $PDF ) ]
Set Variable [ $allowsPrinting ; Value: MBS( "PDFKit.allowsPrinting"; $PDF ) ]
Set Variable [ $isEncrypted ; Value: MBS( "PDFKit.isEncrypted"; $PDF ) ]
Set Variable [ $isLocked ; Value: MBS( "PDFKit.isLocked"; $PDF ) ]
# show in dialog
Show Custom Dialog [ "PDF Details" ; "allows copying: " & If($allowsCopying; "yes"; "no") & $&
"allows printing: " & If($allowsPrinting; "yes"; "no") & $&
"is encrypted: " & If($isEncrypted; "yes"; "no") & $&
"is locked: " & If($isLocked; "yes"; "no") ]
# release PDF
Set Variable [ $r ; Value: MBS("PDFKit.Release"; $pdf) ]
```

## 125.51 QuartzFilterManager.Filters

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.3	Yes	No	No	No	No

MBS( "QuartzFilterManager.Filters" )

**Result** Returns list or error.

### Description

This gives list of filters as localized names.

This includes by default: Black & White, Blue Tone, Create Generic PDFX-3 Document, Gray Tone, Lightness Decrease, Lightness Increase, Reduce File Size and Sepia Tone.

### Examples

Queries list of filters:

MBS( "QuartzFilterManager.Filters" )

### See also

## 125.52 QuartzFilterManager.HidePanel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.3	Yes	No	No	No	No

MBS( "QuartzFilterManager.HidePanel" )

**Result** Returns OK or error.

### Description

### Examples

Show the panel:

```
MBS( "QuartzFilterManager.ShowPanel" )
```

Hide the panel:

```
MBS( "QuartzFilterManager.HidePanel" )
```

### See also

### 125.52.1 Blog Entries

- [MBS Filemaker Plugin, version 4.3pr6](#)

Created 18th August 2014, last changed 25th August 2014.

## 125.53 QuartzFilterManager.ShowPanel

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
125 PDFKit	4.3	Yes	No	No	No	No

MBS( "QuartzFilterManager.ShowPanel" )

**Result** Returns OK or error.

### Description

This gives your users the possibility to create a filter and later use it with PDFKit functions. e.g. if you create a filter to compress images as JPEG, you can get smaller PDFs.

### Examples

Show the panel:

MBS( "QuartzFilterManager.ShowPanel" )

Hide the panel:

MBS( "QuartzFilterManager.HidePanel" )

# Chapter 126

## PHP

Run PHP scripts and get/set variables.

### 126.1 PHP.Execute

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS( "PHP.Execute"; phpCode )

#### Parameters

##### phpCode

the source code of the script you are executing

\$code

**Result** The string returned from the PHP function or error message.

#### Description

Same as calling PHP.Run and PHP.GetResultString, but returns the result directly.

#### Examples

Run test code and get result:

```
$r = MBS( "PHP.Execute"; "echo 'ok';" )
```

#### See also

- 126.3 PHP.GetResultContainer 6358
- 126.4 PHP.GetResultString 6359

- 126.9 PHP.Run 6365
- 159.10 SQL.Execute 7425
- 160.5 SSH.Execute 7611

### 126.1.1 Blog Entries

- [MBS FileMaker Plugin, version 8.1pr2](#)

Created 18th August 2014, last changed 18th August 2014.

## 126.2 PHP.ExistsVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

```
MBS( "PHP.ExistsVariable"; VariableName )
```

### Parameters

#### VariableName

the name of the variable.

\$name

**Result** Returns true if the variable exists, false if it does not.

### Description

### Examples

Check if variable FilePath exists:

```
$r = MBS( "PHP.ExistsVariable"; "FilePath" )
```

Check if the PHP variable with the name in the FileMaker variable FilePath exists:

```
$r = MBS( "PHP.ExistsVariable"; $FilePath )
```

Created 18th August 2014, last changed 18th August 2014.

## 126.3 PHP.GetResultContainer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	6.4	Yes	Yes	Yes	Yes	No

MBS( "PHP.GetResultContainer"; FileName )

### Parameters

#### FileName

The file name for the container.

"test.jpg"

**Result** Returns container or error.

### Description

Used to retrieve the results back into to FileMaker after script is run with PHP.Run or PHP.Execute. Please provide a file name to auto detect the content type.

### See also

- 62.112 CURL.GetResultAsContainer 1944

- [MBS FileMaker Plugin, version 6.4pr2](#)

Created 25th July 2016, last changed 25th July 2016.

## 126.4 PHP.GetResultString

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS( "PHP.GetResultString" )

**Result** Returns the result text.

### Description

Used to retrieve the results back into to FileMaker after script is run with PHP.Run or PHP.Execute.

### Examples

Run test code and get result:

```
$r = MBS( "PHP.Run"; "echo 'ok';" )
$t = MBS( "PHP.GetResultString" )
```

### See also

- [126.1 PHP.Execute](#) 6355

Created 18th August 2014, last changed 18th August 2014.

## 126.5 PHP.GetVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS( "PHP.GetVariable"; VariableName )

### Parameters

#### VariableName

the name of the variable to return

\$name

### Description

### Examples

Set and query variable:

```
Set Variable [ $result ; Value: MBS( "PHP.SetVariable"; "c"; 5 ) ]
```

```
Set Variable [ $result ; Value: MBS("PHP.Run"; "$c = $c + 1; echo $c;") ]
```

```
Show Custom Dialog [ "c: " & MBS( "PHP.GetVariable";... ; "Result: " & MBS("PHP.GetResultString") ]
```

### See also

- 126.10 PHP.SetVariable 6366

Created 18th August 2014, last changed 1st April 2019.

## 126.6 PHP.Init

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS( "PHP.Init" )

**Result** Returns Ok on success.

### Description

This must be called at least once before you execute any PHP code. You must call this after PHP.Load.

May work on server. Be sure to use right bit number to match server, not client!

Windows error 193 means that 64-bit FileMaker tried to load 32-bit library or 32-bit FileMaker tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.

You can set PHP runtime configuration path via shell variable on Windows, e.g. like this:

```
MBS( "EnvironmentVariables.SetValue"; "PHPRC"; "C:\Users\Christian\Desktop\php-5.6.12-Win32-VC11-x64\\" )
```

### Examples

Init PHP on Windows:

```
Set Variable [ $r; Value:MBS( "EnvironmentVariables.SetValue"; "PHPRC"; "C:\Users\Christian\Desktop\php-5.6.12-Win32-VC11-x64\\" ) ]
Set Variable [ $result; Value:MBS("PHP.Load"; "C:\Users\Christian\Desktop\php-5.6.12-Win32-VC11-x64\php5ts.dll") ]
If [ $result <>"OK" ]
Show Custom Dialog [ "php DLL was not found!"; "Please enter the path the php DLL in the field provided and try again." ]
Exit Script [ ]
End If
Set Variable [ $result; Value:MBS("PHP.Init") ]
If [ $result = "OK" ]
Show Custom Dialog [ "Success!"; "php is ready to go." ]
Else
Show Custom Dialog [ "Error!"; "php couldn't be started" ]
End If
```

### See also

## 126.7 PHP.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	7.3	Yes	Yes	Yes	Yes	No

MBS( "PHP.IsInitialized" )

**Result** Returns 0, 1 or error.

### Description

Returns 1 if initialized.

### See also

- 123.10 OCR.IsInitialized 6229
- 134.3 Proj.IsInitialized 6660
- 166.22 TAPI.IsInitialized 7877

## 126.8 PHP.Load

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS( "PHP.Load"; Path )

### Parameters

#### Path

The path to the dll (Windows) or dynamic library (Mac OS X)

\$path

**Result** Returns OK on success.

### Description

Pass the path to the php5ts.dll file on windows or the libphp5.dylib file on Mac OS X.

If you get a crash here on MacOS, please check if crash report says Code Signature Invalid. Then you may need to code sign the dylib yourself to match the code signature of your runtime application.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Load PHP:

```
MBS( "PHP.Load"; "/Library/FileMaker Server/PHP/libphp5.dylib" )
```

## 126.9 PHP.Run

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS( "PHP.Run"; PHPCode )

### Parameters

#### PHPCode

The source code of the script you are executing

\$code

**Result** Returns OK on success.

### Description

The result can be obtained with "PHP.GetResultString"

### Examples

Run test code:

MBS( "PHP.Run"; "echo 'ok';" )

### See also

## 126.10 PHP.SetVariable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS( "PHP.SetVariable"; VariableName; TextValue )

### Parameters

#### VariableName

the name of the variable

#### Text Value

the value of the variable

**Result** Returns OK on success.

### Description

This is one way to get data into php from FileMaker.

### Examples

Set varibale and output it:

```
Set Variable [ $result ; Value: MBS( "PHP.SetVariable"; "c"; 5 ) ]
Set Variable [ $result ; Value: MBS("PHP.Run"; "echo $c;") ]
Set Field [ Simple_php::result ; MBS("PHP.GetResultString") ]
```

## 126.11 PHP.ShutDown

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
126 PHP	2.9	Yes	Yes	Yes	Yes	No

MBS( "PHP.ShutDown" )

### Description

You can't execute any PHP script once this function has been called. If you want to start php again use PHP.Init.

### See also

# Chapter 127

## Plugin

Central plugin management functions.

### 127.1 ClearRegistration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "ClearRegistration" )

**Result** Returns OK on success.

#### Description

Added Windows support in plugin version 4.4.

#### Examples

Clears registration:

```
$r = MBS( "ClearRegistration" )
```

#### See also

- [127.51 StoreRegistration](#)

6432

#### 127.1.1 Blog Entries

Created 18th August 2014, last changed 21st October 2017.

## 127.2 CompileDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS( "CompileDate" )

**Result** The date as text.

### Description

Useful for determining if when the currently installed plug-in was released.  
See Plugin.CompileDate to get a FileMaker date instead of a text.

Format of this text is "mmm DD YYYY" with month as three letter text in English.

### Examples

Get the Compile Date

```
$r = MBS("CompileDate")
```

### See also

- [127.3 CompileTime](#) 6371

- [MBS FileMaker Plugin, version 10.0pr5](#)
- [MBS FileMaker Plugin, version 6.3pr3](#)

Created 18th August 2014, last changed 24th December 2019.

## 127.3 CompileTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS( "CompileTime" )

### Description

### Examples

Get the time of day that the plug-in was compiled

```
$r = MBS("CompileTime")
```

### See also

- 127.2 CompileDate

6370

Created 18th August 2014, last changed 21st October 2017.

## 127.4 Is64bit

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Is64bit" )

**Result** Returns 1 or 0.

### Description

Returns 1 for 64bit (e.g. FileMaker Server 13) or 0 for 32 bit (FileMaker Pro 13)

Returns 1 on FileMaker Cloud as this uses a 64-bit Linux.

See SystemInfo.Is64bitWindows to check if you are 32-bit Windows app on a 64-bit Windows OS.

### See also

- 164.11 SystemInfo.Is64bitWindows

### 127.4.1 Blog Entries

- [MBS Filemaker Plugin, version 4.5pr2](#)

Created 30th November 2014, last changed 21st October 2017.

## 127.5 IsClient

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "IsClient" )

**Result** Returns 1 on client or 0 elsewhere.

### Description

Returns 0 if running on a server.

See also IsRegistered, IsRuntime and IsServer.

### Examples

Run on client:

```
If [ MBS( "IsClient" ) ]
# runs on client
Else
# runs on server or where no plugin is installed
End If
```

## 127.6 IsError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	3.4	Yes	Yes	Yes	Yes	Yes

MBS( "IsError" )

**Result** Returns 1 or 0.

### Description

Returns 1 if last function returned an error.

Or returns 0 if no error happened.

This makes it easier to detect if the result text is an error message vs. a real result.

### Examples

Cause an error and handle it:

```
Set Variable [ $r; Value:MBS( "ZipFile.Open"; "" ) ]
If [ MBS("IsError") ]
Show Custom Dialog [ Title: "Error"; Message: $r; Buttons: "OK", "Abbrechen" ]
Exit Script [ ]
End If
```

## 127.7 IsIOS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "IsIOS" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if running on iOS and 0 if not.  
For FileMaker 14 and older this is definitive always 0.

If someday we get a plugin SDK for iOS, we can already have the function to return this.

## 127.8 IsIOSDevice

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	8.0	Yes	Yes	Yes	Yes	Yes

MBS( "IsIOSDevice" )

**Result** Returns 1 or 0.

### Description

Returns 0 in simulator or on macOS, Windows and Linux.

### Examples

Distinguish between device and simulator:

```
If [ MBS( "IsIOSDevice" ) = 1 ]
# iOS specific things for device
Else If [ MBS("IsIOSSimulator") = 1 ]
# iOS specific things for simulator
Else
# other cases
End If
```

## 127.9 IsIOSSimulator

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	8.0	Yes	Yes	Yes	Yes	Yes

MBS( "IsIOSSimulator" )

**Result** Returns 1 or 0.

### Description

Returns 0 on iOS Device or on macOS, Windows and Linux.

### Examples

Distinguish between device and simulator:

```
If [ MBS( "IsIOSDevice" ) = 1 ]
# iOS specific things for device
Else If [ MBS("IsIOSSimulator") = 1 ]
# iOS specific things for simulator
Else
# other cases
End If
```

## 127.10 IsLinux

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "IsLinux" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if running on Linux and 0 if not.  
For FileMaker 14 and older this is definitive always 0.

Returns 1 on FileMaker Cloud as this uses a 64-bit Linux.

## 127.11 IsMacOS

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "IsMacOS" )

(old name: IsMacOSX)

**Result** Returns 1, 0 or error.

### Description

Returns 1 if running on Mac OS X and 0 if not.

See also IsWindows, IsLinux and IsIOS.

### 127.11.1 Blog Entries

- [Formatting and error checking expressions in FileMaker](#)

## 127.12 IsMobile

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "IsMobile" )

**Result** Returns 0 or 1.

### Description

Value is 1 if running in iOS SDK app.

### See also

- 127.13 IsRegistered 6382
- 127.49 Register 6428

Created 18th March 2017, last changed 21st October 2017.

## 127.13 IsRegistered

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	3.0	Yes	Yes	Yes	Yes	Yes

```
MBS( "IsRegistered" { ; Component } )
```

### Parameters

#### Component

Optional

Which part you want to check.

"webview"

**Result** Returns 1 if the plugin is registered or 0 if not.

### Description

See also Register, IsRuntime, IsServer and isClient.

### Examples

Check if plugin is registered:

```
$v = MBS("IsRegistered")
```

Register only when needed:

```
If [ MBS("IsRegistered") = 1 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Runtime"; 123; 123) ]
Else If [ MBS("IsMobile") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "iOS"; 123; 123) ]
Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Server"; 123; 123) ]
Else
Set Variable [ $r; Value:MBS("Register"; "test"; "5 seats"; 123; 123) ]
End If
End If
```

Register with Startup script for server and client:

Startup Script:

```
# Register for client
Perform Script [ "InitMBS" ]
# Register for server. Will be ignored if no server or no plugin installed on server
Perform Script on Server [ "InitMBS" ]
```

InitMBS script:

```

# Enable debug logging. Shows messages in DebugView/Console.app
Set Variable [ $r; Value:MBS("Trace") ]
# Register if needed for right platform
If [ MBS("IsRegistered") = 0 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Runtime"; 123; 123) ]
Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Server"; 123; 123) ]
Else If [ MBS("IsClient") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "5 Seats"; 123; 123) ]
Else
Set Variable [ $r; Value:"Unknown platform: " & MBS("Platform") ]
End If
# Show errors, so developer can fix them
If [ $r "OK" ]
Show Custom Dialog [ "InitMBS failed."; $r ]
End If
End If
# May initialize other stuff
# like dynapdf with library in extensions folder
If [ MBS("DynaPDF.IsInitialized") = 0 ]
Set Variable [ $DynaPDFLicense; Value:"1003637-16022016-3-8-12-685C57F..." ]
If [ MBS("IsWindows") ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; "dynapdf.dll"; $DynaPDFLicense) ]
Else If [ MBS("IsMacOSX") ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; "dynapdf.dylib"; $DynaPDFLicense) ]
Else
Set Variable [ $r; Value:"Unknown platform: " & MBS("Platform") ]
End If
# Show errors, so developer can fix them
If [ $r "OK" ]
Show Custom Dialog [ "InitMBS failed."; $r ]
End If
End If

```

Script to report back status of MBS Plugin:

```

# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]
Set Variable [ $path ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $IsRegistered ; Value: MBS( "IsRegistered" ) ]
Set Variable [ $Name ; Value: MBS( "Plugin.LicenseeName" ) ]
Set Variable [ $Debug ; Value: MBS( "Plugin.isDebug" ) ]
If [ $version = "?" ]
Set Variable [ $text ; Value: "MBS Plugin not installed. " & Get ( ApplicationVersion ) ]

```

```

Else
Set Variable [ $l1 ; Value: "MBS Plugin " & $version & ", build " & $buildNumber & " installed in " & Get
( ApplicationVersion ) ]
Set Variable [ $l2 ; Value: "$Platform: " & $Platform & "$Path: " & $path ]
Set Variable [ $l3 ; Value: If($IsRegistered; "$Licensed for: " & $Name ; "$No license set.") ]
Set Variable [ $l4 ; Value: "$Debug: " & If($debug; "yes"; "no") ]
Set Variable [ $text ; Value: $l1 & $l2 & $l3 ]
End If
Exit Script [ Text Result: $text ]

```

## 127.14 IsRuntime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "IsRuntime" )

**Result** Returns 1 on runtime or 0 elsewhere.

### Description

Returns 0 if running on FileMaker Pro or Server.

See also IsRegistered, IsServer and isClient functions.

### Examples

Run something only in runtime:

```
If [ MBS( "IsRuntime" ) ]
# runs on runtime
Else
# runs on non runtime or where no plugin is installed
End If
```

## 127.15 IsServer

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	4.3	Yes	Yes	Yes	Yes	Yes

MBS( "IsServer" )

**Result** Returns 1 on server or 0 elsewhere.

### Description

So if you see 0 returned, your script or calculation is not performed on a server, but on a client. Should return 1 always for scheduled server scripts or web direct scripts.

See also IsRegistered, IsClient and IsRuntime.

### Examples

Run a script on server:

```

If [ MBS("IsServer") ]
# We run on server already
Else
# Call this script on server
Perform Script on Server [ Wait for completion; "Your Script"; Parameter: Get(ScriptParameter) ]
If [ Get(LastError) = 0 ]
# Can't run on server, e.g. too many connections.
End If
End If

```

Perform Script on Server:

```

# are we on Server?
If [ MBS("IsServer") = 0 ]
# perform same script on server and pass parameter
Perform Script on Server [ Wait for completion; "Do Something on Server"; Parameter: Get ( ScriptParameter ) ]
# check error and result
Set Variable [ $LastError; Value:Get ( LastError ) ]
# Maybe handle here error code if server is too busy and decide what to do, e.g. run script locally?
If [ $LastError = 0 ]
# run locally by fall through
# alternative: Exit script here and return error to caller
Else
Set Variable [ $ScriptResult; Value:Get ( ScriptResult ) ]
# Return result back to caller
Exit Script [ Result: $ScriptResult ]
End If
End If
# This now performs on Server or on Client if Server is too busy

```

### 127.15. *ISSERVER*

6387

```
Go to Layout [ "Test" ]  
New Record/Request  
Set Field [ perform::First; 1 ]  
Set Field [ perform::Last; 2 ]  
Commit Records/Requests [ No dialog ]  
# end of script
```

## 127.16 IsWindows

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	6.1	Yes	Yes	Yes	Yes	Yes

MBS( "IsWindows" )

**Result** Returns 1, 0 or error.

### Description

Returns 1 if running on Windows and 0 if not.

See also IsMacOSX, IsLinux and IsIOS.

### See also

## 127.17 Platform

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "Platform" )

(old name: Plattform)

**Result** Returns platform name.

### Description

Value can be FileMaker Pro Advanced, FileMaker Pro, Runtime, Server, Web Direct, Mobile, XDBC, Server-Scripting or InstantWebPublishing.

Older versions may return "Developer" or "Pro" for FileMaker Pro.

For FileMaker 17 or newer, MBS Plugin detects the status of whether Advanced Tools are enabled. Returns Developer if enabled and Pro if not enabled.

### Examples

Query the current platform:

```
$r = MBS( "Platform" )
```

Script to report back status of MBS Plugin:

```
# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]
Set Variable [ $path ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $IsRegistered ; Value: MBS( "IsRegistered" ) ]
Set Variable [ $Name ; Value: MBS( "Plugin.LicenseeName" ) ]
Set Variable [ $Debug ; Value: MBS( "Plugin.isDebug" ) ]
If [ $version = "?" ]
Set Variable [ $text ; Value: "MBS Plugin not installed. " & Get ( ApplicationVersion ) ]
Else
Set Variable [ $l1 ; Value: "MBS Plugin " & $version & ", build " & $buildNumber & " installed in " & Get ( ApplicationVersion ) ]
Set Variable [ $l2 ; Value: "$Platform: " & $Platform & "$Path: " & $path ]
Set Variable [ $l3 ; Value: If($IsRegistered; "$Licensed for: " & $Name ; "$No license set.") ]
Set Variable [ $l4 ; Value: "$Debug: " & If($debug; "yes"; "no") ]
Set Variable [ $text ; Value: $l1 & $l2 & $l3 ]
End If
Exit Script [ Text Result: $text ]
```

Check for WebDirect:

```
$r = (MBS("Platform") = "Web")
```

### 127.17.1 Blog Entries

- [My FileMaker 17 Release Notes](#)

Created 18th August 2014, last changed 31st January 2019.

**127.18 Plugin.BuildNumber**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.0	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.BuildNumber" )

(old name: BuildNumber)

**Result** Returns build number or error.

**Description**

Sometimes you may have two plugins with same version number, but one is newer as it has a higher build number.

Version 5.0 returns 1139.

**Examples**

Show build number:

Show Custom Dialog [ MBS( "BuildNumber" ) ]

**See also**

- 127.30 Plugin.LicenseeName 6403
- 127.35 Plugin.Path 6410

Created 27th November 2014, last changed 21st October 2017.

## 127.19 Plugin.CallCounter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	9.3	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.CallCounter" )

**Result** Returns number.

### Description

The MBS Plugin counts how often it is called and this function returns the current value. Calling this function increments the value.

### 127.19.1 Blog Entries

- [Heavy thread testing on FileMaker Server](#)

## 127.20 Plugin.CallErrorScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	8.5	Yes	Yes	No	No	Yes

MBS( "Plugin.CallErrorScriptTrigger" )

**Result** Returns OK or error.

### Description

To test your script trigger for error, you can call this method to test.

### See also

- [127.39 Plugin.SetErrorScriptTrigger](#)

6415

### Example Databases

- [Utility functions/Trigger Script on Plugin Error](#)

Created 24th October 2018, last changed 24th October 2018.

## 127.21 Plugin.CompileDate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.CompileDate" )

**Result** Returns date or error.

### Description

Allows you to compare current time to compile date to check how old the plugin is.

### Examples

Check age of plugin:

```
get(CurrentDate) - MBS( "Plugin.CompileDate" )
```

Check and ask user to install newer version than the prerelease they have:

```
If [ MBS("Plugin.IsPrerelease") ]
```

```
If [ Get(CurrentDate) - MBS( "Plugin.CompileDate" ) >= 14 ]
```

```
Show Custom Dialog [ "Update" ; "Please install newer version of MBS Plugin." & §& MBS("Version") ]
```

```
End If
```

```
End If
```

## 127.22 Plugin.DisableFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	2.8	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.DisableFunction"; name )

(old name: DisableFunction)

### Parameters

#### name

A function name like RemoteControl.ClickMouse.  
"RemoteControl.ClickMouse"

**Result** Returns OK on success.

### Description

This can be useful with security when you want to be sure your script does not use certain methods. The plugin removes the function from the global function list so it can't be called until you restart FileMaker.

### Examples

Disable a function:

```
$r = MBS( "Plugin.DisableFunction"; "RemoteControl.ClickMouse" )
```

### See also

- 140.1 RemoteControl.ClickMouse

Created 18th August 2014, last changed 21st October 2017.

## 127.23 Plugin.FunctionCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.FunctionCount" )

**Result** Returns number or error.

### Description

As some functions are not available, this number is usually lower than our total number.  
e.g. Windows only functions are not included on Mac count.

### 127.23.1 Blog Entries

- [MBS FileMaker Plugin, version 7.2pr1](#)

Created 20th March 2017, last changed 21st October 2017.

## 127.24 Plugin.Functions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.Functions" )

(old name: Functions)

**Result** Returns function names.

### Description

### Examples

Query the functions in the plugins:

```
$r = MBS("Plugin.Functions")
```

### See also

## 127.25 Plugin.GetSuccessReturn

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.GetSuccessReturn" )

**Result** Returns OK or error.

**Description**

**See also**

- 127.42 Plugin.SetSuccessReturn

6420

### 127.25.1 Blog Entries

- [MBS FileMaker Plugin, version 5.1pr4](#)

Created 7th April 2015, last changed 21st October 2017.

## 127.26 Plugin.InstallSignalHandlers

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	9.3	Yes	No	Yes	Yes	Yes

MBS( "Plugin.InstallSignalHandlers" )

**Result** Returns OK or error.

### Description

When something happens like a segmentation fault (a crash in C code), the plugin can print the backtrace (list of functions called) to help to debug the problem.

Usually you call this function only if we ask you to help on debugging a crash on Linux or MacOS.

### Example Databases

## 127.27 Plugin.IsPrerelease

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	10.0	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.IsPrerelease" )

**Result** Returns 1 or 0.

### Description

We set to 1 for prerelease versions and 0 for final version.

### Examples

Check and ask user to install newer version than the prerelease they have:

```

If [ MBS("Plugin.IsPrerelease") ]
If [ Get(CurrentDate) - MBS( "Plugin.CompileDate" ) >= 14 ]
Show Custom Dialog [ "Update" ; "Please install newer version of MBS Plugin." & §& MBS("Version") ]
End If
End If

### 127.29.1 Blog Entries

- [MBS FileMaker Plugin, version 8.2pr3](#)

Created 22nd March 2016, last changed 14th April 2018.

**127.30 Plugin.LicenseeName**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	8.3	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.LicenseeName" )

**Result** Returns name or error.

**Description**

Returns the name used in Register function.

**Examples**

Script to report back status of MBS Plugin:

```
# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]
Set Variable [ $path ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $IsRegistered ; Value: MBS( "IsRegistered" ) ]
Set Variable [ $Name ; Value: MBS( "Plugin.LicenseeName" ) ]
Set Variable [ $Debug ; Value: MBS( "Plugin.isDebug" ) ]
If [ $version = "?" ]
Set Variable [ $text ; Value: "MBS Plugin not installed. " & Get ( ApplicationVersion ) ]
Else
Set Variable [ $l1 ; Value: "MBS Plugin " & $version & ", build " & $buildNumber & " installed in " & Get
( ApplicationVersion ) ]
Set Variable [ $l2 ; Value: "$Platform: " & $Platform & "$Path: " & $path ]
Set Variable [ $l3 ; Value: If($IsRegistered; "$Licensed for: " & $Name ; "$No license set.") ]
Set Variable [ $l4 ; Value: "$Debug: " & If($debug; "yes"; "no") ]
Set Variable [ $text ; Value: $l1 & $l2 & $l3 ]
End If
Exit Script [ Text Result: $text ]
```

### 127.30.1 Blog Entries

- [MBS FileMaker Plugin, version 8.3pr3](#)

Created 19th June 2018, last changed 26th June 2018.

## 127.31 Plugin.LimitFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.LimitFunction"; name { ; privilegeSets; AccountNames; ScriptNames } )

### Parameters

#### name

A function name like RemoteControl.ClickMouse.

"RemoteControl.ClickMouse"

#### privilegeSets

Optional

List of privilege set names.

#### AccountNames

Optional

List of account names.

"admin"

#### ScriptNames

Optional

List of script names. Each entry contains the name fo the file followed with ":" and the script name.

"MyFile.fmp12:TestScript"

**Result** Returns OK or error.

### Description

Once limited, the function can only be called if current privilege set, account name and script name match those in the list. Lists can be empty if not needed.

For FileMaker hosting of several clients with one server, we highly recommend to limit the available plugin functions via Plugin.SetFunctions function. You also should limit some functions like Files.Delete or System.Shutdown to be only called by certain user accounts and/or script.

### Examples

Limit a function to be called only from a certain script:

```
MBS("Plugin.LimitFunction"; "Version"; ""; ""; "test.fmp12:test")
```

Limit a function to be called only from a certain account name:

```
MBS("Plugin.LimitFunction"; "Text.WriteTextFile"; "Backup"; ""; "")
```

## 127.32 Plugin.LockFunction

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.LockFunction"; name; password )

### Parameters

#### name

A function name like RemoteControl.ClickMouse.  
"RemoteControl.ClickMouse"

#### password

The password to use.  
"secure"

**Result** Returns OK or error.

### Description

The function can no longer be called until unlocked.

### Examples

Locks version function:

```
MBS("Plugin.LockFunction"; "Version"; "test")
```

## 127.35 Plugin.Path

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	3.3	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.Path" )

**Result** Returns path or error.

### Description

On FileMaker Cloud this returns a path like `"/opt/FileMaker/FileMaker Server/Database Server/Extensions/MBS.fmx"`.

On MacOS this points usually to the application folder, e.g. `"/Applications/FileMaker Pro 16 Advanced/Extensions/MBS.fmplugin"`

### Examples

Write DynaPDF library to same folder as plugin:

```
Goto Layout [ "MBS Update" (MBS Update) ; Animation: None ]
Go to Record/Query/Page [ First ]
Set Variable [ $folder ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $folder ; Value: MBS( "Path.RemoveLastPathComponent"; $folder ) ]
Set Variable [ $path ; Value: MBS( "Path.AddPathComponent"; $folder; "dynapdf.dylib" ) ]
Set Variable [ $Plat ; Value: MBS("Files.MoveToTrash"; $path) ]
Set Variable [ $Plat ; Value: MBS("Files.WriteFile"; MBS Update::dynaPdfMac; $path) ]
```

Script to report back status of MBS Plugin:

```
# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]
Set Variable [ $path ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $IsRegistered ; Value: MBS( "IsRegistered" ) ]
Set Variable [ $Name ; Value: MBS( "Plugin.LicenseName" ) ]
Set Variable [ $Debug ; Value: MBS( "Plugin.isDebug" ) ]
If [ $version = "?" ]
Set Variable [ $text ; Value: "MBS Plugin not installed. " & Get ( ApplicationVersion ) ]
Else
Set Variable [ $l1 ; Value: "MBS Plugin " & $version & ", build " & $buildNumber & " installed in " & Get ( ApplicationVersion ) ]
Set Variable [ $l2 ; Value: "$Platform: " & $Platform & "$Path: " & $path ]
Set Variable [ $l3 ; Value: If($IsRegistered; "$Licensed for: " & $Name ; "$No license set.") ]
Set Variable [ $l4 ; Value: "$Debug: " & If($debug; "yes"; "no") ]
Set Variable [ $text ; Value: $l1 & $l2 & $l3 ]
End If
Exit Script [ Text Result: $text ]
```

127.35. *PLUGIN.PATH* 6411

## 127.36 Plugin.ScriptStepParameter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	7.2	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.ScriptStepParameter"; Index )

### Parameters

#### Index

The zero based index of the parameter to query. Range from 0 to Plugin.ScriptStepParameterCount-1.  
0

**Result** Returns value.

### Description

If index is out of range, we return empty result.

### See also

## 127.39 Plugin.SetErrorScriptTrigger

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	8.5	Yes	Yes	No	No	Yes

MBS( "Plugin.SetErrorScriptTrigger"; FileName; ScriptName )

### Parameters

#### FileName

The name of the FileMaker File that contains the script.

"test.fmp12"

#### ScriptName

The name of the script to run.

"MyScript"

**Result** Returns OK or error.

### Description

You can call Plugin.CallErrorScriptTrigger to test this.

The script is called with JSON block as parameter and this JSON includes entries for Function, Parameters, Result, UserName, FileName, ScriptName, AccountName, HostName, RecordID, CurrentTimeStamp, LayoutTableName, LayoutName, WindowName and TraceID.

With plugin version 6.0 or newer the script name can be a script ID number. In that case the plugin queries the script name for the given script ID. This allows to call scripts by ID and avoid problems if scripts are later renamed.

## 127.40 Plugin.SetFunctions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.SetFunctions"; FunctionList )

(old name: SetFunctions)

### Parameters

#### FunctionList

The new function list.

"Version\$Functions"

**Result** Returns OK or error.

### Description

By default plugin allows use of 3000 and more functions.

You can use this command to limit what functions are available to your solution. This avoids some calling a function you don't want to have, e.g. not allow Files.Delete call.

For FileMaker hosting of several clients with one server, we highly recommend to limit the available plugin functions via Plugin.SetFunctions function. You also should limit some functions like Files.Delete or System.Shutdown to be only called by certain user accounts and/or script. See Plugin.LimitFunction for this.

### Examples

Allow only two functions:

```
MBS( "Plugin.SetFunctions"; "Version$Functions" )
```

A typical MBS Init script for server usage:

```
If [ MBS("IsRegistered") 1 ]
If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Server"; 123; 123) ]
# limit to the commands you need
Set Variable [ $r; MBS( "Plugin.SetFunctions"; "IsRegistered$CURL.New$CURL.Perform..." ) ]
# enable trace for errors
Set Variable [ $r; MBS( "Trace.ErrorsOnly"; 1 ) ]
Set Variable [ $r; MBS( "Trace"; "/Library/FileMaker Server/Logs/MBS.txt" ) ]
Else
# register on client
Set Variable [ $r; Value:MBS("Register"; "test"; "5 seats"; 123; 123) ]
End If
End If
```

## 127.41 Plugin.SetPreviewSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.1	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.SetPreviewSize"; Size )

### Parameters

#### Size

The size for width and height to use for generating previews. Default is 600.  
600

**Result** Returns OK or error.

### Description

When plugin returns PDF or Image, we add JPEG preview.  
e.g. in DynaPDF, PDFKit and Graphicsmagick functions.

### Examples

Set size for previews:

MBS( "Plugin.SetPreviewSize"; 1234 )

## 127.43 Plugin.StartTimeStamp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	9.5	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.StartTimeStamp" )

**Result** Returns timestamp.

**Description**

### 127.43.1 Blog Entries

- [MBS FileMaker Plugin, version 9.5pr3](#)

Created 11st October 2019, last changed 11st October 2019.

## 127.44 Plugin.TiffVersion

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	9.0	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.TiffVersion" )

**Result** Returns text or error.

### Description

e.g.

LIBTIFF, Version 4.0.9

Copyright (c) 1988-1996 Sam Leffler

Copyright (c) 1991-1996 Silicon Graphics, Inc.

### 127.44.1 Blog Entries

- [MBS FileMaker Plugin, version 9.0pr6](#)

Created 28th December 2018, last changed 28th December 2018.

**127.45 Plugin.UnlockFunction**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.4	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.UnlockFunction"; name; password )

**Parameters****name**

A function name like RemoteControl.ClickMouse.  
"RemoteControl.ClickMouse"

**password**

The password to use.  
"secure"

**Result** Returns OK or error.

**Description**

After unlocking you can use this function.

**Examples**

Unlocks version function:

```
MBS("Plugin.UnlockFunction"; "Version"; "test")
```

**See also**

- 127.32 Plugin.LockFunction 6407

## 127.48 Plugin.isDebug

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	7.1	Yes	Yes	Yes	Yes	Yes

MBS( "Plugin.isDebug" )

**Result** Returns 1, 0 or error.

### Description

The debug version is available on request and given to users to find the roots of a bug.

### Examples

Query debug status

```
MBS("Plugin.IsDebug")
```

Example result: 0

Script to report back status of MBS Plugin:

```
# Script to trigger somewhere to report back details about MBS Plugin
Set Variable [ $version ; Value: GetAsText(MBS("Version")) ]
Set Variable [ $platform ; Value: MBS( "Platform" ) ]
Set Variable [ $buildNumber ; Value: MBS( "Plugin.BuildNumber" ) ]
Set Variable [ $path ; Value: MBS( "Plugin.Path" ) ]
Set Variable [ $IsRegistered ; Value: MBS( "IsRegistered" ) ]
Set Variable [ $Name ; Value: MBS( "Plugin.LicenseeName" ) ]
Set Variable [ $Debug ; Value: MBS( "Plugin.isDebug" ) ]
If [ $version = "?" ]
Set Variable [ $text ; Value: "MBS Plugin not installed. " & Get ( ApplicationVersion ) ]
Else
Set Variable [ $11 ; Value: "MBS Plugin " & $version & ", build " & $buildNumber & " installed in " & Get
( ApplicationVersion ) ]
Set Variable [ $12 ; Value: "$Platform: " & $Platform & "$Path: " & $path ]
Set Variable [ $13 ; Value: If($IsRegistered; "$Licensed for: " & $Name ; "$No license set.") ]
Set Variable [ $14 ; Value: "$Debug: " & If($debug; "yes"; "no") ]
Set Variable [ $text ; Value: $11 & $12 & $13 ]
End If
Exit Script [ Text Result: $text ]
```

## 127.49 Register

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS( "Register"; Licensee Name; component; License Type; Expire Month; Serial number )

### Parameters

#### Licensee Name

This is the name of the person or organization that holds the license for the plug-in  
Your Name

#### component

The component that was licensed. For example "Complete"

#### License Type

Seats purchased. For example, "1 seat", "10 seats", "Developer"  
1 Seat

#### Expire Month

This is the month in which the serial will expire for new versions of the plug-in in YYYYMM format. Plug-in released before the end of that month will continue to work forever. New Releases after that date will require a renewal  
200708

#### Serial number

The license number  
your serial number

**Result** Returns OK on success.

### Description

If you use Server and Client licenses, be sure to register the right license for the right type.  
e.g. in your script detect if you are on the server or not.  
Before you register, you may want to check if already is registered.

See also StoreRegistration, IsRegistration, IsRuntime, IsServer and IsClient functions.

Newer plugins since 8.4 call StoreRegistration for iOS and Server automatically, so plugin registers automatically on loading and avoid problems with process is relaunched.

### Examples

Register only when needed:

```
If [ MBS("IsRegistered") 1 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Runtime"; 123; 123) ]
Else If [ MBS("IsMobile") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "iOS"; 123; 123) ]
```

```

Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Server"; 123; 123) ]
Else
Set Variable [ $r; Value:MBS("Register"; "test"; "5 seats"; 123; 123) ]
End If
End If

```

Register with license values in a text field:

```

Set Variable [ $result ; Valeu: Evaluation("MBS(\\"Register\\"; " & Register::License & ")") ]

```

Register with Startup script for server and client:

Startup Script:

```

# Register for client
Perform Script [ "InitMBS" ]
# Register for server. Will be ignored if no server or no plugin installed on server
Perform Script on Server [ "InitMBS" ]

```

InitMBS script:

```

# Enable debug logging. Shows messages in DebugView/Console.app
Set Variable [ $r; Value:MBS("Trace") ]
# Register if needed for right platform
If [ MBS("IsRegistered") = 0 ]
If [ MBS("IsRuntime") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Runtime"; 123; 123) ]
Else If [ MBS("IsServer") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "Server"; 123; 123) ]
Else If [ MBS("IsClient") ]
Set Variable [ $r; Value:MBS("Register"; "test"; "Complete"; "5 Seats"; 123; 123) ]
Else
Set Variable [ $r; Value:"Unknown platform: " & MBS("Platform") ]
End If
# Show errors, so developer can fix them
If [ $r "OK" ]
Show Custom Dialog [ "InitMBS failed."; $r ]
End If
End If
# May initialize other stuff
# like dynapdf with library in extensions folder
If [ MBS("DynaPDF.IsInitialized") = 0 ]
Set Variable [ $DynaPDFLicense; Value:"1003637-16022016-3-8-12-685C57F..." ]
If [ MBS("IsWindows") ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; "dynapdf.dll"; $DynaPDFLicense) ]

```

```

Else If [ MBS("IsMacOSX") ]
Set Variable [ $r; Value:MBS( "DynaPDF.Initialize"; "dynapdf.dylib"; $DynaPDFLicense) ]
Else
Set Variable [ $r; Value:"Unknown platform: " & MBS("Platform") ]
End If
# Show errors, so developer can fix them
If [ $r "OK" ]
Show Custom Dialog [ "InitMBS failed."; $r ]
End If
End If

```

## 127.50 Registration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS( "Registration" )

**Result** Returns "Registered." or "Not registered."

### Description

### Examples

Check Registration:

```
$r = MBS("Registration")
```

Created 18th August 2014, last changed 31st January 2016.

## 127.51 StoreRegistration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	3.0	Yes	Yes	Yes	Yes	Yes

MBS( "StoreRegistration"; Licensee Name; component; License Type; Expire Month; Serial number )

### Parameters

#### Licensee Name

This is the name of the person or organization that holds the license for the plug-in

Your Name

#### component

The component that was licensed. For example "Complete"

#### License Type

Seats purchased. For example, "1 seat", "10 seats", "Developer"

1 Seat

#### Expire Month

This is the month in which the serial will expire for new versions of the plug-in in YYYYMM format. Plug-in released before the end of that month will continue to work forever. New Releases after that date will require a renewal

200708

#### Serial number

The license number

your serial number

**Result** Returns OK on success.

### Description

This is very useful for trainings where you want to preinstall license on FileMaker installations.

Added Windows support in plugin version 4.4.

You can clear the license with ClearRegistration function.

Added Linux support for 7.5.

Saves in preferences file on Mac and Linux, saves to registry on Windows.

### Examples

Stores registration:

```
$r = MBS( "StoreRegistration"; $name; "Complete"; "5 seat"; $date; $code)
```

### See also

## 127.52 Trace

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	2.4	Yes	Yes	Yes	Yes	Yes

MBS( "Trace" { ; path; Append } )

### Parameters

#### path

Optional

The native file path to the log file.

"/Users/name/Desktop/debug.txt"

#### Append

Optional

Whether to append or create new file. Pass 1 to append or 0 (default) for new file.

1

**Result** Returns "OK" on success.

### Description

If you pass a path, debug messages are written to the file. Else the plugin writes to debug console. See Console.app on Mac or DebugView on Windows.

See also Trace.Off and Trace.ErrorsOnly.

On Linux, if no path is provided, the log output will go to stderr, which is usually redirected by our plugin to /FileMakerData/Logs/ or /opt/FileMaker/FileMaker Server/Logs/ folder. The log files are WebPluginsStdErr and WebPluginsStdOut for Web Direct and ServerScriptingPluginsStdErr and ServerScriptingPluginsStdOut for normal scripting.

On Windows with a FileMaker Server, you can see debug messages in DebugView if you run DebugView application as admin and enable global Win32 listening.

For FileMaker Server on Mac OS X you can see messages in /Library/FileMaker Server/Logs/stderr file.

On Windows the log file is UTF-16 with BOM and CRLF as line endings. On Mac, Linux and iOS, you get an UTF-8 file with BOM and LF line endings.

See Trace.GetErrorsOnly, Trace.GetWithTimes, Trace.SetErrorsOnly and Trace.SetWithTimes to set options.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Log plugin calls to console:

```
MBS( "Trace" )
```

Log plugin calls to desktop on Windows:

```
MBS( "Trace"; "C:\Documents\Christian\Desktop\plugin.txt")
```

Log plugin calls to temp folder on Mac:

```
MBS( "Trace"; "/tmp/MBS Plugin Log.txt")
```

Log to log file on desktop:

```
Set Variable [ $TracePath; Value:MBS( "Path.AddPathComponent"; MBS( "Folders.UserDesktop" ); "trace.txt" ) ]
```

```
Set Variable [ $r; Value:MBS("Trace"; $TracePath) ]
```

## 127.55 Trace.EnableErrorNotifications

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	5.0	Yes	No	No	No	No

MBS( "Trace.EnableErrorNotifications" )

**Result** Returns OK or error.

### Description

The plugin presents errors returned by plugin calls as notifications, so you more easier notice them. Notifications are only presented at most one per 30 seconds. They are not shown if last error is same as new error or if you run plugin on server or runtime. The plugin will close error notifications after 5 seconds. See also Trace.DisableErrorNotifications or Trace.AreErrorNotificationsEnabled.

## 127.61 Trace.WriteLine

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	9.1	Yes	Yes	Yes	Yes	Yes

MBS( "Trace.WriteLine" { ; Parameters } )

### Parameters

#### Parameters

Optional

The parameters to print to the trace line. Can be several parameters in various data types.

"Hello"

**Result** Returns OK or error.

### Description

### Examples

Add trace log entry:

```
MBS("Trace.WriteLine"; "Hello: "; 123)
```

### 127.61.1 Blog Entries

- [MBS FileMaker Plugin, version 9.1pr3](#)

## 127.62 Version

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	1.0	Yes	Yes	Yes	Yes	Yes

MBS( "Version" )

### Description

### Examples

Get the Plugin Version

```
$r = MBS("Version")
```

Query Plugin version on Server from Client with two scripts:

# First a script called "Query MBS Version on Server" which you can run:

```
Perform Script on Server [ Wait for completion; "Query MBS Version Helper" ]
Set Variable [ $e; Value:Get(LastError) ]
Set Variable [ $r; Value:Get(ScriptResult) ]
If [ $e = 0 ]
Show Custom Dialog [ "MBS Version on Server"; "Failed to run script on server: " & $e ]
Else
Show Custom Dialog [ "MBS Version on Server"; $r ]
End If
```

# Second, the helper script called "Query MBS Version Helper" which will run on the server:

```
Set Variable [ $r; Value:MBS("Version") & " " & MBS("Platform") ]
Exit Script [ Result: $r ]
```

Check and ask user to install newer version than the prerelease they have:

```
If [ MBS("Plugin.IsPrerelease") ]
If [ Get(CurrentDate) - MBS( "Plugin.CompileDate" ) >= 14 ]
Show Custom Dialog [ "Update" ; "Please install newer version of MBS Plugin." & $r & MBS("Version") ]
End If
End If
```

## 127.63 VersionAutoUpdate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
127 Plugin	2.4	Yes	Yes	Yes	Yes	Yes

MBS( "VersionAutoUpdate" )

**Result** the version as an 8 digit number.

### Description

### Examples

Queries version for auto update:

```
MBS("VersionAutoUpdate")
```

Convert from display format to auto update format:

```
Let ( [
v = Substitute ( MBS Update::VersionDisplayText ; "" ; §);
v1 = GetAsNumber ( GetValue ( v ; 1 ) );
v2 = GetAsNumber ( GetValue ( v ; 2 ) );
v3 = GetAsNumber ( GetValue ( v ; 3 ) );
v4 = GetAsNumber ( GetValue ( v ; 4 ) )
] ; v4+v3*100+v2*10000+v1*1000000)
```

# Chapter 128

## PortMidi

Access Midi devices and send/receive midi notes.

### 128.1 PortMidi.Abort

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.Abort"; StreamRef )

#### Parameters

##### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns OK or error.

#### Description

The caller should immediately close the output port; this call may result in transmission of a partial midi message.

There is no abort for Midi input because the user can simply ignore messages in the buffer and close an input device at any time.

#### See also

- 128.4 PortMidi.Close 6452
- 128.14 PortMidi.OpenInput 6463
- 128.15 PortMidi.OpenOutput 6464

Created 18th August 2014, last changed 18th August 2014.

## 128.2 PortMidi.CheckHostError

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.CheckHostError"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns any pending host error text or nothing.

### Description

#### See also

- 128.4 PortMidi.Close 6452
- 128.14 PortMidi.OpenInput 6463
- 128.15 PortMidi.OpenOutput 6464

Created 18th August 2014, last changed 18th August 2014.

## 128.3 PortMidi.ClearDataAvailableHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	8.5	Yes	Yes	No	No	No

MBS( "PortMidi.ClearDataAvailableHandler"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns OK or error.

### Description

#### See also

- 128.4 PortMidi.Close 6452
- 128.14 PortMidi.OpenInput 6463
- 128.15 PortMidi.OpenOutput 6464

## 128.4 PortMidi.Close

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.Close"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns OK or error.

### Description

Don't use the StreamRef after this call as stream is gone.

### See also

- 128.1 PortMidi.Abort 6449
- 128.12 PortMidi.GetDeviceName 6461
- 128.14 PortMidi.OpenInput 6463

## 128.5 PortMidi.CurrentEvent

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	7.1	Yes	Yes	No	No	No

MBS( "PortMidi.CurrentEvent" )

**Result** Returns list of values or error.

### Description

Returns several values: status, data1, data2 and timestamp.

You can use this to show current note playing.

### Examples

Queries current event:

MBS( "PortMidi.CurrentEvent" )

Example result: 128

56

95

0

## 128.6 PortMidi.DeviceCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.DeviceCount" )

**Result** Returns number.

### Description

### Examples

Check before and after a scan:

```
$CountBefore = MBS( "PortMidi.DeviceCount" )
```

```
$r = MBS("PortMidi.Rescan")
```

```
$CountAfter = MBS( "PortMidi.DeviceCount" )
```

### See also

## 128.7 PortMidi.GetChannelMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.GetChannelMask"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns value or error.

### Description

#### See also

- 128.4 PortMidi.Close 6452

Created 18th August 2014, last changed 18th August 2014.

## 128.8 PortMidi.GetDefaultInputDeviceID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.GetDefaultInputDeviceID" )

**Result** Returns Device ID.

### Description

Returns -1 if no device is found. You can pass the index to PortMidi.OpenInput function.

### See also

- [128.9 PortMidi.GetDefaultOutputDeviceID](#) 6457
- [128.14 PortMidi.OpenInput](#) 6463

### Example Databases

## 128.9 PortMidi.GetDefaultOutputDeviceID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.GetDefaultOutputDeviceID" )

**Result** Returns Device ID.

### Description

Returns -1 if no device is found. You can pass the index to PortMidi.OpenOutput function.

### See also

- [128.8 PortMidi.GetDefaultInputDeviceID](#) 6456

## 128.10 PortMidi.GetDeviceID

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	7.0	Yes	Yes	No	No	No

MBS( "PortMidi.GetDeviceID"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns number or error.

### Description

#### See also

- 128.4 PortMidi.Close 6452
- 128.11 PortMidi.GetDeviceInfo 6459
- 128.12 PortMidi.GetDeviceName 6461

### 128.10.1 Blog Entries

- [MBS FileMaker Plugin, version 7.0pr1](#)

Created 29th December 2016, last changed 2nd January 2017.

## 128.11 PortMidi.GetDeviceInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.GetDeviceInfo"; index; selector )

### Parameters

#### index

The device ID to query. From 0 to PortMidi.DeviceCount-1.

0

#### selector

Which detail to query. Can be Name, Interface, Input, Output or Opened.

"name"

**Result** Returns value or error.

### Description

Information to query are the name of the device, the name of the interface, whether it's an input or output device and the open status.

### Examples

Query if first device is open:

```
MBS( "PortMidi.GetDeviceInfo"; 0; "opened" )
```

Query name of third device

```
MBS( "PortMidi.GetDeviceInfo"; 2; "Name" )
```

## 128.12 PortMidi.GetDeviceName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	7.0	Yes	Yes	No	No	No

MBS( "PortMidi.GetDeviceName"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns text or error.

### Description

#### See also

- 128.4 PortMidi.Close 6452
- 128.10 PortMidi.GetDeviceID 6458
- 128.11 PortMidi.GetDeviceInfo 6459

## 128.13 PortMidi.GetFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.GetFilter"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns value or error.

### Description

#### See also

- 128.4 PortMidi.Close 6452
- 128.14 PortMidi.OpenInput 6463
- 128.15 PortMidi.OpenOutput 6464
- 128.25 PortMidi.SetFilter 6478

Created 18th August 2014, last changed 18th August 2014.

## 128.14 PortMidi.OpenInput

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.OpenInput"; DeviceID { ; BufferSize; Latency } )

### Parameters

#### DeviceID

The device ID, a number from 0 to PortMidi.DeviceCount-1.

0

#### BufferSize

Optional

Optional, number of events to buffer. Default is 100 if you don't pass this parameter.

0

#### Latency

Optional

The desired latency. By default 0 is used which means no latency.

0

**Result** Returns StreamRef or error.

### Description

Midi reference numbers are starting at 17000 and counting up for each new midi stream.

### See also

- 128.2 PortMidi.CheckHostError 6450
- 128.6 PortMidi.DeviceCount 6454

- 128.19 PortMidi.SendMessage 6469
- 128.20 PortMidi.SendMessageRaw 6471
- 128.21 PortMidi.SendSysExHex 6472
- 128.22 PortMidi.SetChannelMask 6473
- 128.25 PortMidi.SetFilter 6478

### Example Databases

- [Midi/Midi Receive](#)

Created 18th August 2014, last changed 9th January 2015.

## 128.15 PortMidi.OpenOutput

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.OpenOutput"; DeviceID { ; BufferSize; Latency } )

### Parameters

#### DeviceID

The device ID, a number from 0 to PortMidi.DeviceCount-1.

0

#### BufferSize

Optional

Optional, Specifies the number of output events to be buffered waiting for output. Default is 100 if you don't pass this parameter.

0

#### Latency

Optional

The latency you want. Default is zero. Latency is the delay in milliseconds applied to timestamps to determine when the output should actually occur. (If latency is <0, 0 is assumed.) If latency is zero, timestamps are ignored and all output is delivered immediately. If latency is greater than zero, output is delayed until the message timestamp plus the latency. In some cases, PortMidi can obtain better timing than your application by passing timestamps along to the device driver or hardware. Latency may also help you to synchronize midi data to audio data by matching midi latency to the audio buffer latency.

10

**Result** Returns StreamRef or error.

### Description

Midi reference numbers are starting at 17000 and counting up for each new midi stream.

### See also

- 128.4 PortMidi.Close 6452
- 128.6 PortMidi.DeviceCount 6454

## 128.16 PortMidi.Poll

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.Poll"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns 1, 0 or error.

### Description

Returns 1 if data is available and zero if not.

### See also

- 128.4 PortMidi.Close 6452
- 128.14 PortMidi.OpenInput 6463
- 128.15 PortMidi.OpenOutput 6464

### Example Databases

- [Midi/Midi Receive](#)

Created 18th August 2014, last changed 18th August 2014.

## 128.17 PortMidi.ReadMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.ReadMessage"; StreamRef )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

**Result** Returns message, empty or error.

### Description

Format of result is a list containing: Status, Data1, Data2, Timestamp and raw message first as decimal number and than also as hex number. Hex notation makes reading easier for debugging.

### See also

- 128.4 PortMidi.Close 6452
- 128.14 PortMidi.OpenInput 6463
- 128.15 PortMidi.OpenOutput 6464
- 128.19 PortMidi.SendMessage 6469
- 128.20 PortMidi.SendMessageRaw 6471
- 128.23 PortMidi.SetDataAvailableEvaluate 6475
- 128.24 PortMidi.SetDataAvailableHandler 6476

### Example Databases

- [Midi/Midi Receive](#)

Created 18th August 2014, last changed 18th August 2014.

## 128.18 PortMidi.Rescan

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.Rescan" )

**Result** Returns OK or error.

### Description

Than on next call midi devices are searched.

### Examples

Check before and after a scan:

```
$CountBefore = MBS( "PortMidi.DeviceCount" )
```

```
$r = MBS("PortMidi.Rescan")
```

```
$CountAfter = MBS( "PortMidi.DeviceCount" )
```

### See also

- 128.6 PortMidi.DeviceCount

6454

### Example Databases

- [Midi/Midi Receive](#)

Created 18th August 2014, last changed 18th August 2014.

## 128.19 PortMidi.SendMessage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.SendMessage"; StreamRef; Status; Data1; Data2 { ; Timestamp } )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

#### Status

The Midi status code.

144

#### Data1

The first data byte.

4\*12+0

#### Data2

The second data bytes.

127

#### Timestamp

Optional

The timestamp. If zero or not provided, note is sent immediately.

0

**Result** Returns OK or error.

### Description

The Status is the command code. 144 is note on and 128 is note off. For those note commands Data1 is the number of the note. 48 (4\*12) is C2 and then you can count over all notes till you get to next octave with C3 (5\*12).

### Examples

Press down a C note:

```
MBS( "PortMidi.SendMessage"; $StreamRef; 144; 4*12+0; 127 )
```

Release a C note:

```
MBS( "PortMidi.SendMessage"; $StreamRef; 128; 4*12+0; 127 )
```

- 128.15 PortMidi.OpenOutput 6464
- 128.17 PortMidi.ReadMessage 6467
- 128.20 PortMidi.SendMessageRaw 6471
- 157.51 Socket.SendMessage 7364

### **Example Databases**

- [Midi/Midi Send](#)

Created 18th August 2014, last changed 18th August 2014.

## 128.20 PortMidi.SendMessageRaw

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.SendMessageRaw"; StreamRef; Message { ; timestamp } )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

#### Message

The message encoded as a 32bit integer number.

\$msg

#### timestamp

Optional

The timestamp.

**Result** Returns OK or error.

### Description

This allows you to encode your own message data like this: status + data1 \* 256 + data2 \* 65536 + data3 \* 16777216.

You can send this way also 4 byte messages by including a third data item.

### See also

- 128.19 PortMidi.SendMessage 6469

Created 18th August 2014, last changed 18th August 2014.

## 128.21 PortMidi.SendSysExHex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.SendSysExHex"; StreamRef; Message { ; TimeStamp } )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

#### Message

The message to send.

#### TimeStamp

Optional

The timestamp.

0

**Result** Returns OK or error.

### Description

The input text must be hex encoded and is decoded before sending.

### Examples

Send SysEx:

MBS( "PortMidi.SendSysExHex"; \$out; "F000200D681020002BF7" )

### See also

- 128.4 PortMidi.Close 6452

- 128.15 PortMidi.OpenOutput 6464

Created 18th August 2014, last changed 11st December 2017.

## 128.22 PortMidi.SetChannelMask

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.SetChannelMask"; StreamRef; Mask )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

#### Mask

The new mask.

1

**Result** Returns OK or error.

### Description

The mask is a 16-bit bitfield corresponding to appropriate channels.

Pass sum of the channel mask values you need:

Channel	Mask Value
0	1
1	2
2	4
3	8
4	16
5	32
6	64
7	128
8	256
9	512
10	1024
11	2048
12	4096
13	8192
14	16384
15	32767

**See also**

## 128.23 PortMidi.SetDataAvailableEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	8.5	Yes	Yes	No	No	No

MBS( "PortMidi.SetDataAvailableEvaluate"; StreamRef; Expression )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

#### Expression

The expression to evaluate. Can be in local language of FileMaker Pro or english. For Server must always be in english.

"Let ( \$\$Done = 1 ; 1 )"

**Result** Returns OK or error.

### Description

When new data arrives, this expression is evaluated, so you can call PortMidi.ReadMessage function.

Be aware that expression may be evaluated when just a few notes are in the read buffer. So the data message you wait for may only be available partly.

In the expression the text \$\$ID\$\$ will be replaced when evaluated with the port midi reference, so you can pass it to other functions if needed.

### 128.23.1 Blog Entries

- [MBS FileMaker Plugin, version 8.5pr9](#)

Created 24th November 2018, last changed 24th November 2018.

## 128.24 PortMidi.SetDataAvailableHandler

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	8.5	Yes	Yes	No	No	No

MBS( "PortMidi.SetDataAvailableHandler"; StreamRef; FileName; ScriptName )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

#### FileName

The name of the FileMaker File that contains the script  
"MyDatabase.fp7"

#### ScriptName

The name of the script to run  
"DataAvailable"

**Result** Returns OK or error.

### Description

When new data arrives, this script is called, so you can call PortMidi.ReadMessage function. Be aware that script may be called when just a few notes are in the read buffer.

### Examples

Set script to be triggered if data is available:

```
Set Variable [ $r; Value:MBS("PortMidi.SetDataAvailableHandler"; $$port; Get(FileName); "ReadMessage") ]
```

## 128.25 PortMidi.SetFilter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	4.2	Yes	Yes	No	No	No

MBS( "PortMidi.SetFilter"; StreamRef; Filter )

### Parameters

#### StreamRef

The reference to the midi stream. You create those with PortMidi.OpenInput or PortMidi.OpenOutput and finally close them with PortMidi.Close.

\$stream

#### Filter

The new filter value.

0

**Result** Returns OK or error.

### Description

By default, only active sensing messages are filtered.

Filtering is useful when midi routing or midi thru functionality is being provided by the user application. For example, you may want to exclude timing messages (clock, MTC, start/stop/continue), while allowing note-related messages to pass. Or you may be using a sequencer or drum-machine for MIDI clock information but want to exclude any notes it may play.

Filter values (can be ORed):

Filter active sensing messages (0xFE)	PM_FILTER_ACTIVE	16384
Filter system exclusive messages (0xF0)	PM_FILTER_SYSEX	1
Filter clock messages (CLOCK 0xF8, START 0xFA, STOP 0xFC, and CONTINUE 0xFB)	PM_FILTER_CLOCK	7424
Filter play messages (start 0xFA, stop 0xFC, continue 0xFB)	PM_FILTER_PLAY	1024
Filter tick messages (0xF9)	PM_FILTER_TICK	512
Filter undefined FD messages	PM_FILTER_FD	8192
Filter undefined real-time messages	PM_FILTER_UNDEFINED	8192
Filter reset messages (0xFF)	PM_FILTER_RESET	32768
Filter all real-time messages	PM_FILTER_REALTIME	65281
Filter note-on and note-off (0x90-0x9F and 0x80-0x8F)	PM_FILTER_NOTE	50331648
Filter channel aftertouch (most midi controllers use this) (0xD0-0xDF)	PM_FILTER_CHANNEL_AFTERTOUCH	536870912
Per-note aftertouch (0xA0-0xAF)	PM_FILTER_POLY_AFTERTOUCH	67108864
Filter both channel and poly aftertouch	PM_FILTER_AFTERTOUCH	603979776
Program changes (0xC0-0xCF)	PM_FILTER_PROGRAM	268435456
Control Changes (CC's) (0xB0-0xBF)	PM_FILTER_CONTROL	134217728
Pitch Bender (0xE0-0xEF)	PM_FILTER_PITCHBEND	1073741824
MIDI Time Code (0xF1)	PM_FILTER_MTC	2
Song Position (0xF2)	PM_FILTER_SONG_POSITION	4
Song Select (0xF3)	PM_FILTER_SONG_SELECT	8
Tuning request (0xF6)	PM_FILTER_TUNE	64
All System Common messages (mtc, song position, song select, tune request)	PM_FILTER_SYSTEMCOMMON	78

### Examples

To prohibit, say, active sensing and sysex messages, call:

MBS( "PortMidi.SetFilter"; \$StreamRef; 16384 + 1 )

128.25. *PORTMIDI.SETFILTER*

6479

**See also**

## 128.26 PortMidi.TimeStamp

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
128 PortMidi	7.0	Yes	Yes	No	No	No

MBS( "PortMidi.TimeStamp" )

**Result** Returns number or error.

### Description

On Mac this is the time since booting in milliseconds.

### See also

- 157.51 Socket.SendMessage

# Chapter 129

## Preferences

Get or set preferences.

See also Registry functions for Windows.

### 129.1 Preferences.ClearRecentFiles

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Preferences	6.5	Yes	No	No	No	No

MBS( "Preferences.ClearRecentFiles" )

**Result** Returns OK or error.

#### Description

After calling this, you should restart FileMaker to see effect.

#### 129.1.1 Blog Entries

- [MBS FileMaker Plugin, version 6.5pr9](#)

Created 23th November 2016, last changed 17th June 2018.

## 129.2 Preferences.DeleteValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Preferences	6.0	Yes	Yes	Yes	No	Yes

MBS( "Preferences.DeleteValue"; Domain; Key )

### Parameters

#### Domain

The domain name for your preferences. Leave empty for default one.  
"de.mbsplugins.MyApp"

#### Key

The key for the value lookup.  
"Username"

**Result** Returns OK or error.

### Description

### Examples

Delete username value

MBS( "Preferences.DeleteValue"; "de.mbsplugins.MyApp"; "Username" )

### See also

- [129.4 Preferences.GetValue](#) 6484
- [129.8 Preferences.SetValue](#) 6490

### Example Databases

### 129.2.1 Blog Entries

- [MBS FileMaker Plugin, version 6.0pr6](#)

Created 4th January 2016, last changed 4th July 2019.

## 129.3 Preferences.GetTextSelectionWithDragAndDrop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Preferences	2.8	Yes	No	Yes, macOS only	No	No

MBS( "Preferences.GetTextSelectionWithDragAndDrop" )

**Result** Returns current value 0 or 1 or an error.

### Description

This function queries the preference setting from FileMaker (or Runtime) about allowing text selection by drag and drop.

Due to the way the preferences work, we can read the value which the setting has, but we can only set the value for the next launch of the application.

**See also**

- [129.7 Preferences.SetTextSelectionWithDragAndDrop](#) 6489

Created 18th August 2014, last changed 24th September 2019.

## 129.4 Preferences.GetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Preferences	2.7	Yes	Yes	Yes	No	Yes

MBS( "Preferences.GetValue"; Domain; Key )

### Parameters

#### Domain

The domain name for your preferences. Leave empty for default one.

"de.mbsplugins.MyApp"

#### Key

The key for the value lookup.

"Username"

**Result** Returns the text for the preference value.

### Description

Domain should be an unique name for your app, like with reverse domain name notation. An example: "de.monkeybreadsoftware.filemaker.runtimes.MyApp". If you use no domain, the default one is used.

If no value exists for the value, an empty text is returned.

Values are read from registry on Windows and preference files on Mac.

Key must not be an empty string.

### Examples

Gets preferences:

```
$username = MBS( "Preferences.GetValue"; "de.mbsplugins.MyApp"; "Username" )
```

Query file cache size:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:FileCacheSize")
# Mac only!
```

Query name of user:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:UserName")
# Mac only!
```

Query whether quick start window shows:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:ShowQuickStart")
# Mac only!
```

Query network name:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:NetworkName")
```

# Mac only!

Query memory cache size:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:CacheSize")
# Mac only!
```

Query user name for FileMaker preferences:

```
MBS( "Preferences.GetValue"; "com.filemaker.client.advanced12"; "Preferences:UserName" )
```

Query advanced tools flag for FileMaker Pro Advanced 17 (mac):

```
MBS( "Preferences.GetValue"; ""; "Preferences:UseAdvancedTools" )
```

Check flag for whether system or custom user name is used:

e.g. for FileMaker Pro 17 on MacOS:

```
MBS("Math.BitWiseAnd"; MBS( "Preferences.GetValue"; "com.filemaker.client.pro12"; "Preferences:AppGenOptions"); 8)
```

Value is 8 for custom name.

Value is 0 for system name.

Check whether flag "Notify me if updates are available" is on:

```
MBS("Math.BitWiseAnd"; MBS( "Preferences.GetValue"; "com.filemaker.client.pro12"; "Preferences:AppGenOptions"); 32768)
# returns 0 if checkmark is set
```

Check whether flag "Notify me when a new version is available" is on:

```
MBS("Math.BitWiseAnd"; MBS( "Preferences.GetValue"; "com.filemaker.client.pro12"; "Preferences:AppGenOptions"); 32)
# returns 0 if checkmark is set
```

Created 18th August 2014, last changed 29th April 2020.

## 129.5 Preferences.GetValueType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Preferences	9.3	Yes	Yes	Yes	No	Yes

MBS( "Preferences.GetValueType"; Domain; Key )

### Parameters

#### Domain

The domain name for your preferences. Leave empty for default one.  
"de.mbsplugins.MyApp"

#### Key

The key for the value lookup.  
"Username"

**Result** Returns text or error.

### Description

Types may be Text, Data, Integer, Double, Boolean, Array or Dictionary.

### Examples

Query type of an entry on Mac:

```
MBS( "Preferences.GetValueType"; "com.filemaker.client.advanced12"; "Preferences:FileCacheSize")
```

### See also

## 129.6 Preferences.HasValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Preferences	6.0	Yes	Yes	Yes	No	Yes

MBS( "Preferences.HasValue"; Domain; Key )

### Parameters

#### Domain

The domain name for your preferences. Leave empty for default one.  
"de.mbsplugins.MyApp"

#### Key

The key for the value lookup.  
"Username"

**Result** Returns 0, 1 or error.

### Description

## 129.7 Preferences.SetTextSelectionWithDragAndDrop

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Preferences	2.8	Yes	No	Yes, macOS only	No	No

MBS( "Preferences.SetTextSelectionWithDragAndDrop"; value )

### Parameters

#### value

The new value: 0 for off and 1 for on.

1

**Result** Returns OK or error.

### Description

Due to the way the preferences work, we can read the value which the setting has, but we can only set the value for the next launch of the application.

### See also

- [129.3 Preferences.GetTextSelectionWithDragAndDrop](#) 6483

Created 18th August 2014, last changed 17th June 2018.

## 129.8 Preferences.SetValue

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
129 Preferences	2.7	Yes	Yes	Yes	No	Yes

MBS( "Preferences.SetValue"; Domain; Key { ; Value; Type } )

### Parameters

#### Domain

The domain name for your preferences. Leave empty for default one.

"de.mbsplugins.MyApp"

#### Key

The key for the value lookup.

"Username"

#### Value

Optional

The new value text.

"Christian"

#### Type

Optional

The data type to use. (Mac only) Can be integer, double, boolean or text.

"text"

**Result** Returns OK or error message.

### Description

Domain should be an unique name for your app, like with reverse domain name notation. An example: "de.monkeybreadsoftware.filemaker.runtimes.MyApp". If you use no domain, the default one is used.

Values are stored in registry on Windows and preference files on Mac.

Key must not be an empty string.

This is the location where you can store global settings like the last used username for login.

Changing preferences of FileMaker only works, if you restart FileMaker for changes take effect. Going to the preferences dialog (even with cancel on exit), can cause FileMaker to write it's settings over what you just changed.

To change windows preferences for Windows, you may better go with Registry functions.

### Examples

Sets preferences:

```
MBS( "Preferences.SetValue"; "de.mbsplugins.MyApp"; "Username"; $username )
```

Set flag to not allow plugins to update:

```
MBS( "Preferences.SetValue"; "com.filemaker.client.advanced12"; "Preferences:AllowToUpdatePlugins"; 0; "integer")
```

Set file cache to 1 GB:

```
MBS( "Preferences.SetValue"; "com.filemaker.client.advanced12"; "Preferences:FileCacheSize"; 1048576; "integer")
```

Set user name in FileMaker preferences:

```
MBS( "Preferences.SetValue"; "com.filemaker.client.advanced12"; "Preferences:UserName"; "Chris" )
```

Switch off update checks:

```
Let(
[
oldValue = MBS( "Preferences.GetValue"; "com.filemaker.client.pro12"; "Preferences:AppGenOptions");
newValue = MBS("Math.BitwiseOr"; oldValue; 32 + 32768);
R = MBS( "Preferences.SetValue"; "com.filemaker.client.pro12"; "Preferences:AppGenOptions"; newValue; "integer")
];r )
```

# Chapter 130

## PrintDialog

Control the Mac printer dialog. Select printer on Mac.

See `Printer.Print` and `Printer.SetPrinter` for similar features on Windows.

### 130.1 PageSetupDialog.ClearOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.ClearOption"; Key )

#### Parameters

##### Key

The key to use.

**Result** Returns OK or error.

#### Description

#### See also

- 130.2 PageSetupDialog.ClearOptions 6494
- 130.7 PageSetupDialog.GetOption 6500
- 130.14 PageSetupDialog.SetOption 6508

Created 20th April 2019, last changed 20th April 2019.

## 130.2 PageSetupDialog.ClearOptions

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.ClearOptions" )

**Result** Returns OK or error.

**Description**

**See also**

- 130.1 PageSetupDialog.ClearOption 6493
- 130.7 PageSetupDialog.GetOption 6500
- 130.14 PageSetupDialog.SetOption 6508
- 130.20 PrintDialog.ClearOptions 6514

Created 20th April 2019, last changed 20th April 2019.

## 130.3 PageSetupDialog.Disable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.Disable" )

**Result** Returns OK or error.

### Description

### Examples

Disable it:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Disable") ]
```

### See also

- [130.4 PageSetupDialog.Enable](#) 6496
- [130.12 PageSetupDialog.Install](#) 6505

### Example Databases

- [Mac only/Print/Page Setup Dialog on Mac](#)
- [Mac only/Print/Page Setup Dialog](#)

### 130.3.1 Blog Entries

- [Page Setup Dialog example](#)

Created 20th April 2019, last changed 20th April 2019.

## 130.4 PageSetupDialog.Enable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.Enable" )

**Result** Returns OK or error.

### Description

Your page setup commands in FileMaker should show a dialog, so the plugin can intercept it.

Use Printer.SetPrinter for similar features on Windows.

### Examples

Enable:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Disable") ]
```

Run dialog with plugin:

```
Allow User Abort [ Off ]
```

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Install") ]
```

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Enable") ]
```

```
# set options here
```

```
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; ,1; "MBS( \"MenuBar.RunMenuCom-  
mand\"; 57606 )" ) // run Page Setup Dialog in 0.1 seconds ]
```

```
Pause/Resume Script [ Duration (seconds): 1 ]
```

### 130.4.1 Blog Entries

- [Page Setup Dialog example](#)

Created 20th April 2019, last changed 21st November 2019.

## 130.5 PageSetupDialog.GetLastSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.GetLastSettings" )

**Result** Returns text or error.

### Description

Please print once with enabled page setup dialog functions. After printing with dialog, you can query last settings and see what OS X or your driver uses.

Since version 10.1 we return settings as JSON instead of XML and includes print parameter.

### See also

- [130.30 PrintDialog.GetLastSettings](#) 6525

## 130.6 PageSetupDialog.GetNoDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.GetNoDialog" )

**Result** Returns value or error.

### Description

Use PageSetupDialog.SetNoDialog to set this setting.

### See also

- 130.7 PageSetupDialog.GetOption 6500
- 130.13 PageSetupDialog.SetNoDialog 6507
- 130.14 PageSetupDialog.SetOption 6508

Created 20th April 2019, last changed 20th April 2019.

## 130.7 PageSetupDialog.GetOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.GetOption"; Key )

### Parameters

#### Key

The key to use.

**Result** Returns value or error.

### Description

You can use PrintDialog.SetOption to set options or PrintDialog.ClearOption to clear one.

### See also

- 130.1 PageSetupDialog.ClearOption 6493
- 130.2 PageSetupDialog.ClearOptions 6494

- 130.14 PageSetupDialog.SetOption 6508
- 130.19 PrintDialog.ClearOption 6513
- 130.49 PrintDialog.SetOption 6548

Created 20th April 2019, last changed 20th April 2019.

## 130.8 PageSetupDialog.GetPaperName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.GetPaperName" )

**Result** Returns paper name or error.

### Description

You can set this with PageSetupDialog.SetPaperName.

### See also

- 130.10 PageSetupDialog.GetPrinterName 6503
- 130.15 PageSetupDialog.SetPaperName 6509
- 130.17 PageSetupDialog.SetPrinterName 6511
- 130.34 PrintDialog.GetPaperName 6530

Created 20th April 2019, last changed 20th April 2019.

## 130.9 PageSetupDialog.GetPaperOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.GetPaperOrientation" )

**Result** Returns value or error.

### Description

Result should be landscape, portrait or default.

### See also

- 130.16 PageSetupDialog.SetPaperOrientation

6510

Created 20th April 2019, last changed 20th April 2019.

## 130.10 PageSetupDialog.GetPrinterName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.GetPrinterName" )

**Result** Returns OK or error.

### Description

You can set this with PageSetupDialog.SetPrinterName.

### See also

- 130.8 PageSetupDialog.GetPaperName 6501

- 130.36 PrintDialog.GetPrinterName 6532

Created 20th April 2019, last changed 20th April 2019.

## 130.11 PageSetupDialog.GetScalingFactor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.GetScalingFactor" )

**Result** Returns value or error.

**Description**

**See also**

- 130.18 PageSetupDialog.SetScalingFactor

6512

Created 20th April 2019, last changed 20th April 2019.

## 130.12 PageSetupDialog.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.Install" )

**Result** Returns OK or error.

### Description

Only after PageSetupDialog.Install was called, you can use PageSetupDialog.Enable. You only call this function once.

This is Mac only. For Windows, please check Printer.SetPrinter and Printer.Print.

### Examples

Initialize paper setup dialog:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.Install") ]
```

Run dialog with plugin:

```
Allow User Abort [ Off ]
Set Variable [ $r ; Value: MBS("PageSetupDialog.Install") ]
Set Variable [ $r ; Value: MBS("PageSetupDialog.Enable") ]
# set options here
Set Variable [ $r ; Value: MBS( "Schedule.EvaluateAfterDelay"; ,1; "MBS( \ "MenuBar.RunMenuCommand\"; 57606 )" ) // run Page Setup Dialog in 0.1 seconds ]
Pause/Resume Script [ Duration (seconds): 1 ]
```

Created 20th April 2019, last changed 20th April 2019.

## 130.13 PageSetupDialog.SetNoDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.SetNoDialog"; Flag )

### Parameters

#### Flag

Whether to show page setup dialog.

1

**Result** Returns OK or error.

### Description

In FileMaker script step you need to use page setup with dialog. Than the plugin can control the dialog and either close it right away (with setting 1) or let it open (setting 0).

### Examples

Set to show dialog:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetNoDialog"; 0) ]
```

No dialog, please:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetNoDialog"; 1) ]
```

Created 20th April 2019, last changed 20th April 2019.

## 130.14 PageSetupDialog.SetOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.SetOption"; Key; Value; Type )

### Parameters

#### Key

The key to use.

#### Value

The value to use. Depending on data type, the plugin will pass a number or a text.

3

#### Type

The type of data to add. Default is empty to use type of value passed. So text or number type would be picked automatically. Valid values for type are text, number, integer and text. Integer is for integer numbers while number is for floating numbers.

**Result** Returns OK or error.

### Description

You can use PrintDialog.GetLastSettings after printing to query XML with all settings and pick keys and values.

## 130.15 PageSetupDialog.SetPaperName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.SetPaperName"; name )

### Parameters

#### name

The paper name.

"A4"

**Result** Returns OK or error.

### Description

You need to run paper setup dialog to let the plugin change values.

We found paper sizes for our printer in PPD files in /private/etc/cups/ppd folder. e.g. "Env10" for Envelope # 10.

### Examples

Set paper to be A5:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetPaperName"; "A5") ]
```

## 130.16 PageSetupDialog.SetPaperOrientation

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.SetPaperOrientation"; PaperFormat )

### Parameters

#### PaperFormat

The new paper orientation. Value should be landscape, portrait or default.  
"landscape"

**Result** Returns OK or error.

### Description

You need to run paper setup dialog to let the plugin change values.

### Examples

Set paper orientation to portrait:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetPaperOrientation"; "portrait") ]
```

Set paper orientation to landscape:

```
Set Variable [ $r ; Value: MBS("PageSetupDialog.SetPaperOrientation"; "landscape") ]
```

#### 130.16.1 Blog Entries

- [Page Setup Dialog example](#)

Created 20th April 2019, last changed 20th April 2019.

**130.17 PageSetupDialog.SetPrinterName**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.SetPrinterName" )

**Result** Returns OK or error.

**Description**

The plugin will try to find a printer with the given name and assigns it for the printing. You need to run paper setup dialog to let the plugin change values.

**See also**

## 130.18 PageSetupDialog.SetScalingFactor

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	9.2	Yes	No	No	No	No

MBS( "PageSetupDialog.SetScalingFactor"; Value )

### Parameters

#### Value

The new scale factor.

1.0

**Result** Returns OK or error.

### Description

If zero, we don't change it.

Value is 1.0 for 100% .

You need to run paper setup dialog to let the plugin change values.

### Examples

Set scaling to 150% :

Set Variable [ \$r ; Value: MBS("PageSetupDialog.SetScalingFactor"; 1,5) ]

### See also

- 130.11 PageSetupDialog.GetScalingFactor

### 130.21.1 FileMaker Magazin

- Ausgabe 5/2017, Seite 22

Created 18th August 2014, last changed 18th August 2014.

## 130.22 PrintDialog.Enable

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	3.5	Yes	No	No	No	No

MBS( "PrintDialog.Enable" )

**Result** Returns OK or error.

### Description

Your print commands in FileMaker should show a dialog, so the plugin can intercept it.

### Examples

Install and print to PDF:

```
Set Variable [ $r; MBS( "PrintDialog.Install" ) ]
Set Variable [ $r; MBS( "PrintDialog.Enable" ) ]
Set Variable [ $r; MBS( "PrintDialog.SetPrintToPDF"; 1 ) ]
Set Variable [ $r; MBS( "PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test.pdf" ) ]
Set Variable [ $r; MBS( "PrintDialog.SetNoDialog"; 1 ) ]
Print [ ]
```

## 130.24 PrintDialog.GetConfiguration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	8.0	Yes	No	No	No	No

MBS( "PrintDialog.GetConfiguration" )

**Result** Returns OK or error.

### Description

You can run with dialog, select all settings you like and than store the configuration.

Configuration is the serialized and base64 encoded setup data.

Just store as it is in a text field for later restoration with PrintDialog.SetConfiguration or PDFKit.SavePrintSettings.

Returns empty result if no print configuration was yet created.

See PrintDialog.GetLastSettings for a xml you can read.

### Examples

Query configuration after printing:

```
Set Variable [ $r ; Value: MBS("PrintDialog.Enable") ]
```

```
Print [ With dialog: On ]
```

```
Set Field [ Printer Dialog on Mac::Data ; MBS("PrintDialog.GetConfiguration") ]
```

## 130.30 PrintDialog.GetLastSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	6.2	Yes	No	No	No	No

MBS( "PrintDialog.GetLastSettings" )

**Result** Returns text or error.

### Description

Please print once with enabled print dialog functions. After printing with dialog, you can query last settings and see what OS X or your driver uses.

Since version 10.1 we return settings as JSON instead of XML and includes print parameter.

### Examples

Get last settings:

```
MBS("PrintDialog.GetLastSettings")
```

Query settings after using dialog:

```
Set Variable [ $r ; Value: MBS("PrintDialog.Install") ]
Set Variable [ $r ; Value: MBS("PrintDialog.Enable") ]
Print [ With dialog: On ]
Set Variable [ $r ; Value: MBS("PrintDialog.Disable") ]
Set Variable [ $r ; Value: MBS("PrintDialog.GetLastSettings") ]
Set Field [ Printer Dialog on Mac::Path ; $r ]
```

## 130.40 PrintDialog.Install

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	3.5	Yes	No	No	No	No

MBS( "PrintDialog.Install" )

**Result** Returns OK or error.

### Description

Only after PrintDialog.Install was called, you can use PrintDialog.Enable.  
You only call this function once.

This is Mac only. For Windows, please check Printer.SetPrinter and Printer.Print.

### Examples

Install and print to PDF:

```
Set Variable [ $r; MBS( "PrintDialog.Install" ) ]
Set Variable [ $r; MBS( "PrintDialog.Enable" ) ]
Set Variable [ $r; MBS( "PrintDialog.SetPrintToPDF"; 1 ) ]
Set Variable [ $r; MBS( "PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test.pdf" ) ]
Set Variable [ $r; MBS( "PrintDialog.SetNoDialog"; 1 ) ]
Print [ ]
```

## 130.41 PrintDialog.SetAllPages

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	6.2	Yes	No	No	No	No

MBS( "PrintDialog.SetAllPages"; Value )

### Parameters

#### Value

The new value. 1 = on, 0 = off, -1 = undefined

1

**Result** Returns OK or error.

### Description

Value is -1 if not defined.

### See also

## 130.42 PrintDialog.SetConfiguration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	8.0	Yes	No	No	No	No

MBS( "PrintDialog.SetConfiguration"; Configuration )

### Parameters

#### Configuration

The configuration data you got from PrintDialog.GetConfiguration.

**Result** Returns OK or error.

#### Description

The given configuration will be applied after reset of settings (if enabled) and before other settings are applied. This way you can still customize the saved configuration.

#### Examples

Restore configuration:

Allow User Abort [ Off ]

Set Variable [ \$r ; Value: MBS("PrintDialog.Enable") ]

Set Variable [ \$r ; Value: MBS("PrintDialog.SetConfiguration"; Printer Dialog on Mac::Data) ]

Print [ With dialog: On ]

## 130.43 PrintDialog.SetCopies

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	6.2	Yes	No	No	No	No

MBS( "PrintDialog.SetCopies"; Value )

### Parameters

#### Value

The new copies value. Use -1 for undefined.

2

**Result** Returns OK or error.

### Description

This property is the number of copies of the print job to be printed.

Value is -1 if not defined.

### Examples

Print with 5 copies:

```
Set Variable [ $r; Value:MBS("PrintDialog.Enable") ]
Set Variable [ $r; Value:MBS("PrintDialog.SetCopies"; 5) ]
Print [ ]
Set Variable [ $r; Value:MBS("PrintDialog.Disable") ]
```

## 130.44 PrintDialog.SetDestinationPath

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	3.5	Yes	No	No	No	No

MBS( "PrintDialog.SetDestinationPath"; Path )

### Parameters

#### Path

Native file path for PDF file.

\$path

**Result** Returns error or OK.

### Description

If you want the user to select a path, please use FileDialog functions.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

### Examples

Set print to PDF:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetPrintToPDF"; 1 ) ]
```

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test.pdf" ) ]
```

## 130.45 PrintDialog.SetDuplex

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	4.1	Yes	No	No	No	No

MBS( "PrintDialog.SetDuplex"; value )

### Parameters

#### value

The new duplex setting.

1

**Result** Returns OK or error.

### Description

Pass 0 for no duplex, 1 to enable duplex and -1 to not change it.

Version 6.5 adds 2 for duplex with tumble.

Version 7.5 changes value: 0 = off, 1 = long edge, 2 = short edge

### Examples

Enable duplex:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetDuplex"; 1 ) ]
```

## 130.46 PrintDialog.SetFirstPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	6.2	Yes	No	No	No	No

MBS( "PrintDialog.SetFirstPage"; Page )

### Parameters

#### Page

The first page to print.

2

**Result** Returns OK or error.

### Description

This property containing the one-based index of the first page in the job to print.

Value is -1 if not defined.

### Examples

Print page 2 to 3 copies:

```
Set Variable [ $r; Value:MBS("PrintDialog.Enable") ]
Set Variable [ $r; Value:MBS("PrintDialog.SetFirstPage"; 2) ]
Set Variable [ $r; Value:MBS("PrintDialog.SetLastPage"; 3) ]
Print [ ]
Set Variable [ $r; Value:MBS("PrintDialog.Disable") ]
```

## 130.47 PrintDialog.SetLastPage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	6.2	Yes	No	No	No	No

MBS( "PrintDialog.SetLastPage"; Page )

### Parameters

#### Page

The last page to print.

2

**Result** Returns OK or error.

### Description

This property containing the one-based index of the last page in the job to print.

Value is -1 if not defined.

### Examples

Print page 2 to 3 copies:

```
Set Variable [ $r; Value:MBS("PrintDialog.Enable") ]
Set Variable [ $r; Value:MBS("PrintDialog.SetFirstPage"; 2) ]
Set Variable [ $r; Value:MBS("PrintDialog.SetLastPage"; 3) ]
Print [ ]
Set Variable [ $r; Value:MBS("PrintDialog.Disable") ]
```

## 130.48 PrintDialog.SetNoDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	3.5	Yes	No	No	No	No

MBS( "PrintDialog.SetNoDialog"; Flag )

### Parameters

#### Flag

Whether to show print dialog.

1

**Result** Returns OK or error.

### Description

In FileMaker script step you need to use print with dialog. Than the plugin can control the dialog and either close it right away (with setting 1) or let it open (setting 0).

### Examples

Disable dialog:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetNoDialog"; 1 ) ]
```

Enable dialog:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetNoDialog"; 0 ) ]
```

Created 18th August 2014, last changed 25th November 2017.

## 130.49 PrintDialog.SetOption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	6.2	Yes	No	No	No	No

MBS( "PrintDialog.SetOption"; Key; Value { ; Type } )

### Parameters

#### Key

The key to use.

"com\_apple\_print\_PrintSettings\_PMCopies"

#### Value

The value to use. Depending on data type, the plugin will pass a number or a text.

3

#### Type

Optional

Available in MBS FileMaker Plugin 9.2 or newer.

The type of data to add. Default is empty to use type of value passed. So text or number type would be picked automatically. Valid values for type are text, number, integer and text. Integer is for integer numbers while number is for floating numbers.

**Result** Returns OK or error.

### Description

You can use PrintDialog.GetLastSettings after printing to query XML with all settings and pick keys and values.

### Examples

Set copies to 3 via options:

```
MBS("PrintDialog.SetOption"; "com_apple_print_PrintSettings_PMCopies"; 3)
```

Set border to double hairline:

```
MBS("PrintDialog.SetOption"; "com_apple_print_PrintSettings_PMBorderType"; 2)
```

Set border to single hairline:

```
MBS("PrintDialog.SetOption"; "com_apple_print_PrintSettings_PMBorderType"; 1)
```

Set duplex binding:

```
MBS("PrintDialog.SetOption"; "com_apple_print_PrintSettings_PMDuplexing"; 2) &
```

```
MBS("PrintDialog.SetOption"; "DuplexBindingEdge"; 2)
```

Set input slot and output bin:

### 130.49. PRINTDIALOG.SETOPTION

6549

MBS("PrintDialog.SetOption"; "InputSlot"; "4Tray") &

MBS("PrintDialog.SetOption"; "OutputBin"; "MailBoxBin7")

# those keys and values are print driver dependent and hand picked from configuration XML.

## 130.50 PrintDialog.SetPageNumberingOffset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	7.0	Yes	No	No	No	No

MBS( "PrintDialog.SetPageNumberingOffset"; Value )

### Parameters

#### Value

The new offset to use.

1

**Result** Returns OK or error.

### Description

Value -1 means to not change it. Value 0 is for no offset. Other values to start page numbering at given number.

Showing print dialog may reset this!

### Examples

Set offset to 5:

MBS( "PrintDialog.SetPageNumberingOffset"; 5 )

## 130.51 PrintDialog.SetPaperName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	5.0	Yes	No	No	No	No

MBS( "PrintDialog.SetPaperName"; name )

### Parameters

**name**

The paper name.

"A4"

**Result** Returns OK or error.

### Description

### Examples

Set paper to A4:

Set Variable [ \$r ; Value: MBS( "PrintDialog.SetPaperName"; "A4" ) ]

### See also

## 130.52 PrintDialog.SetPrintToPDF

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	3.5	Yes	No	No	No	No

MBS( "PrintDialog.SetPrintToPDF"; flag )

### Parameters

#### flag

The new setting. Can be 0 to disable PDF creation or 1 to enable it.

1

**Result** Returns OK or error.

### Description

Please also use PrintDialog.SetDestinationPath to print to PDF.

### Examples

Set print to PDF:

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetPrintToPDF"; 1 ) ]
```

```
Set Variable [ $r ; Value: MBS( "PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test.pdf" ) ]
```

## 130.53 PrintDialog.SetPrintType

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	5.0	Yes	No	No	No	No

MBS( "PrintDialog.SetPrintType"; Type { ; BlankOption } )

### Parameters

#### Type

What to print. Can be 0 for records being browsed, 1 for current record or 2 for blank record.

1

#### BlankOption

Optional

Optional, which option to select for blank. Can be 0 for "as formatted", 1 for "with boxes" or 2 for "with underline".

0

**Result** Returns OK or error.

### Description

Works only if dialog is not shown currently.

### Examples

Test all variants:

Allow User Abort [ Off ]

Set Variable [ \$r; Value:MBS("PrintDialog.Enable") ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetPrinterName"; "" ) ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetNoDialog"; 1) ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test-0.pdf") ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetPrintType"; 0; 0) ]

Print [ ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test-1.pdf") ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetPrintType"; 1; 0) ]

Print [ ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test-2-0.pdf") ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetPrintType"; 2; 0) ]

Print [ ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetDestinationPath"; "/Users/cs/Desktop/test-2-1.pdf") ]

Set Variable [ \$r; Value:MBS("PrintDialog.SetPrintType"; 2; 1) ]

## 130.54 PrintDialog.SetPrinterName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	3.5	Yes	No	No	No	No

MBS( "PrintDialog.SetPrinterName"; name )

### Parameters

#### name

The printer name.

"My Printer"

**Result** Returns OK or error.

### Description

The plugin will try to find a printer with the given name and assigns it for the printing.

### Examples

Sets printer name:

MBS( "PrintDialog.SetPrinterName"; "Test Printer" )

### See also

## 130.55 PrintDialog.SetReset

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	7.0	Yes	No	No	No	No

MBS( "PrintDialog.SetReset"; value )

### Parameters

#### value

The new value. Pass 1 or 0.

1

**Result** Returns OK or error.

### Description

When this is set to 1, we reset print settings to the default ones.

This removes any settings including presets.

### See also

### 130.55.1 Blog Entries

- [MBS FileMaker Plugin, version 7.0pr3](#)

Created 10th January 2017, last changed 10th January 2017.

## 130.56 PrintDialog.SetResetDestination

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	6.5	Yes	No	No	No	No

MBS( "PrintDialog.SetResetDestination"; Value )

### Parameters

#### Value

The new setting. Pass 1 to enable reset of destination. Pass 0 to disable.

1

**Result** Returns OK or error.

### Description

FileMaker 15 and older on macOS Sierra show a problem with printing.

If you once print to PDF, the print dialog in FileMaker will remember the PDF printing and even print to PDF if no PDF printing is selected.

If you set this option to 1, the plugin will reset the print destination to the printer before the dialog is shown or other options are applied.

### Examples

Initialize to fix printing issues with FileMaker and macOS Sierra:

```
Set Variable [ $r; Value: MBS( "PrintDialog.Install" ) ]
Set Variable [ $r; Value: MBS( "PrintDialog.Enable" ) ]
Set Variable [ $r; Value: MBS( "PrintDialog.SetResetDestination"; 1 ) ]
```

## 130.57 PrintDialog.SetTray

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
130 PrintDialog	6.1	Yes	No	No	No	No

MBS( "PrintDialog.SetTray"; Value )

### Parameters

#### Value

The name of the tray to use.

"Tray1"

**Result** Returns OK or error.

### Description

Value may be Tray1, Tray2, tray-1, tray-2, auto, Left, Right, Lower, Middle, Upper and depends on the printer driver. This is not the name displayed in dialog, but the internal value which is the same for all localization.

Same as using PrintDialog.SetOption with "InputSlot" as key and tray name as value.

### Examples

Set Tray-2 as the tray for paper:

```
MBS("PrintDialog.SetTray"; "Tray-2")
```

# Chapter 131

## Printer

List printers and set/get default printer. Select printer on Windows.

See `PrintDialog` functions for Mac, too.

### 131.1 `Printer.CurrentNumberOfCopies`

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	9.2	No	Yes	No	No	No

MBS( "Printer.CurrentNumberOfCopies" )

**Result** Returns number or error.

#### **Description**

This is queried when dialog opens after setting number of copies.

So it may be useful to use `Printer.Print` with mode 2 to just read current values.

Value is -1 if unknown.

**See also**

- 131.10 `Printer.Print`

6574

#### 131.1.1 **Blog Entries**

Created 9th April 2019, last changed 9th April 2019.

## 131.2 Printer.CurrentPaperFormat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.CurrentPaperFormat" { ; ReturnIndex } )

### Parameters

#### ReturnIndex

Optional

Pass 1 to return index or 0 to return name. Default is zero to return name.

0

**Result** Returns value or error.

### Description

This value is only available after Printer.Print or Printer.SetPrinter run.

### Examples

Show current settings:

```
Show Custom Dialog [ "Current Settings" ; "PrinterName: " & MBS( "Printer.CurrentPrinterName" ) &
&&
"PaperSource: " & MBS( "Printer.CurrentPaperSource" ) & &&
"PaperFormat: " & MBS( "Printer.CurrentPaperFormat" ) & &&
"PrintWhat: " & MBS( "Printer.CurrentPrintWhat" ) ]
```

### 131.3 Printer.CurrentPaperSource

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.CurrentPaperSource" { ; ReturnIndex } )

#### Parameters

#### ReturnIndex

Optional

Pass 1 to return index or 0 to return name. Default is zero to return name.

0

**Result** Returns value or error.

#### Description

This value is only available after Printer.Print or Printer.SetPrinter run.

#### Examples

Show current settings:

```
Show Custom Dialog [ "Current Settings" ; "PrinterName: " & MBS( "Printer.CurrentPrinterName" ) &
&&
"PaperSource: " & MBS( "Printer.CurrentPaperSource" ) & &&
"PaperFormat: " & MBS( "Printer.CurrentPaperFormat" ) & &&

## 131.4 Printer.CurrentPrintWhat

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.CurrentPrintWhat" { ; ReturnIndex } )

### Parameters

#### ReturnIndex

Optional

Pass 1 to return index or 0 to return name. Default is zero to return name.

0

**Result** Returns value or error.

### Description

This value is only available after Printer.Print run.

### Examples

Show current settings:

```
Show Custom Dialog [ "Current Settings" ; "PrinterName: " & MBS( "Printer.CurrentPrinterName" ) &
§&
"PaperSource: " & MBS( "Printer.CurrentPaperSource" ) & §&

## 131.5 Printer.CurrentPrinterName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.CurrentPrinterName" { ; ReturnIndex } )

### Parameters

#### ReturnIndex

Optional

Pass 1 to return index or 0 to return name. Default is zero to return name.

0

**Result** Returns value or error.

### Description

This value is only available after Printer.Print or Printer.SetPrinter run.

### Examples

Show current settings:

```
Show Custom Dialog [ "Current Settings" ; "PrinterName: " & MBS( "Printer.CurrentPrinterName" ) &
§&
"PaperSource: " & MBS( "Printer.CurrentPaperSource" ) & §&

## 131.6 Printer.ErrorLog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.ErrorLog" )

**Result** Returns list of error messages.

### Description

On success, the result is simply "OK".

### See also

- 131.10 Printer.Print 6574

Created 14th November 2016, last changed 14th November 2016.

## 131.7 Printer.GetDefaultPrinter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	3.0	Yes	Yes	Yes	No	No

MBS( "Printer.GetDefaultPrinter" )

**Result** Returns printer name or error.

### Description

### Example Databases

- [Printers/Printers](#)

### 131.7.1 Blog Entries

- [MBS Filemaker Plugin, version 3.0pr8](#)

Created 29th August 2017, last changed 29th August 2017.

## 131.8 Printer.PaperFormats

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.PaperFormats" )

**Result** Returns list or error.

### Description

The plugin will store the paper formats it sees in the dialog, so you can later query them. This value is only available after Printer.Print or Printer.SetPrinter run.

### Examples

Query formats:

```
# we run Print dialog
# as there is no printer or paper format with ?, this will not change it
# and 2 means cancel
#
Set Variable [ $r; Value:MBS("Printer.Print"; "?"; 2; ""; "?") ]
#
Pause/Resume Script [ Duration (seconds): 2 ]
#
Set Field [ Printer Dialog::PaperFormats; MBS( "Printer.PaperFormats" ) ]
Set Field [ Printer Dialog::Printers; MBS( "Printer.PrinterNames" ) ]
Set Field [ Printer Dialog::PaperSources; MBS( "Printer.PaperSources" ) ]
```

## 131.9 Printer.PaperSources

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.PaperSources" )

**Result** Returns list or error.

### Description

The plugin will store the paper sources it sees in the dialog, so you can later query them. This value is only available after Printer.Print or Printer.SetPrinter run.

### Examples

Query formats:

```
# we run Print dialog
# as there is no printer or paper format with ?, this will not change it
# and 2 means cancel
#
Set Variable [ $r; Value:MBS("Printer.Print"; "?"; 2; ""; "?") ]
#
Pause/Resume Script [ Duration (seconds): 2 ]
#
Set Field [ Printer Dialog::PaperFormats; MBS( "Printer.PaperFormats" ) ]
Set Field [ Printer Dialog::Printers; MBS( "Printer.PrinterNames" ) ]

## 131.10 Printer.Print

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.Print"; Printer { ; CloseDialog; Number of Copies; Paper Format; Paper Orientation; Paper Source; Pages From; Pages To; Collate Pages; What } )

### Parameters

#### Printer

The printer name to set. Must not match exactly, just the first letters. If empty, we use current. "Brother"

#### CloseDialog

Optional

Whether to close print dialog. Pass 1 to close or 0 to not close. Pass 2 to press cancel button in case you just want to learn the options. Pass 3 to leave dialog open.

1

#### Number of Copies

Optional

The number of copies. Leave empty to not change.

1

#### Paper Format

Optional

The name of the paper format. Leave empty to not change.

"A4"

#### Paper Orientation

Optional

The paper orientation. Pass portrait or landscape. Empty value leaves setting as is.

"landscape"

#### Paper Source

Optional

The paper source. Pass name of setting. Name doesn't need to match exactly, just first letters. So you can pass "Man" für Manual (English) and Manuell (German).

"Man"

#### Pages From

Optional

The start number of page range. Pass empty text for Pages From and To to select all pages.

1

#### Pages To

Optional

The end number of page range. Pass empty text for Pages From and To to select all pages.

1

**Collate Pages**

Optional

Whether to collate pages. Pass 1 to enable or 0 to disable. Other values are ignored, so pass -1 to leave existing value.

1

**What**

Optional

What to print: Pass 0 for records being browsed. Pass 1 for current record. Pass 2 for Blank Record showing fields. Default is empty (or -1) to keep current setting.

0

**Result** Returns OK or error.

**Description**

The plugin will show the print dialog from FileMaker, automatically set options and close dialog if requested. Sub dialog for paper is opened if paper format, paper orientation or source is passed.

The function returns before the dialog shows, so please do a script pause after calling this.

You can later call `Print.ErrorLog` to detect errors. If Windows ever change dialogs, features may no longer work. FileMaker may not show the print dialog if there is no record available or when debugger is open.

For Mac, please check `PrintDialog.Install` function.

After calling this method, you can call `Printer.PaperFormats`, `Printer.PaperSources` or `Printer.PrinterNames` to learn what was available.

Version 9.1 or newer allows you to pass 3 for `CloseDialog` parameter to leave dialog open while sub dialog is closed.

Source code sponsored by [schubec.com](http://www.schubec.com)

<http://www.schubec.com>

**Examples**

Print:

```
Set Variable [ $r; Value:MBS("Printer.Print"; Printer Dialog::Printer Name; Printer Dialog::Close Dialog;
Printer Dialog::Number of Copies; Printer Dialog::Paper Format; Printer Dialog::Paper Orientation; Printer
Dialog::Paper Source; Printer Dialog:... ]
```

```
Pause/Resume Script [ Duration (seconds): 2 ]
```

```
Show Custom Dialog [ "Result"; MBS("Printer.ErrorLog") ]
```

## 131.11 Printer.PrinterCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	3.0	Yes	Yes	Yes	No	No

MBS( "Printer.PrinterCount" )

**Result** Returns the number of printers.

### Description

### Examples

Queries number of printers:

```
$r = MBS( "Printer.PrinterCount" )
```

### See also

## 131.12 Printer.PrinterInfo

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	Yes	Yes	Yes	No	No

MBS( "Printer.PrinterInfo"; Name; Selector )

### Parameters

#### Name

The name of the printer.

"LaserPrinter"

#### Selector

The selector for the value to query.

"Name"

**Result** Returns value or error.

### Description

Selectors on Mac: Name, Type, languageLevel (PostScript language level or zero). If you ask for deviceDescriptionKeys, you get a list of other keys available.

Selectors on Windows: ServerName, PrinterName, ShareName, PortName, DriverName, Comment, Location, SepFile, PrintProcessor, Datatype, Parameters, SepFile, Priority, DefaultPriority, StartTime, UntilTime, Status, Jobs, AveragePPM, Status, Attributes.

Attributes and Status are returned as numbers.

If you pass "Keys" for selector, we return list of all available keys.

### Examples

Queries type of Mac printer:

```
MBS("Printer.PrinterInfo"; "Brother DCP-8085DN"; "type")
```

## 131.13 Printer.PrinterName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	3.0	Yes	Yes	Yes	No	No

MBS( "Printer.PrinterName"; index )

### Parameters

#### index

The index of the printer. From 0 to PrinterCount-1.  
0

**Result** Returns name of printer or error.

### Description

### Examples

Queries name of first printer:

```
$name = MBS( "Printer.PrinterName"; 0 )
```

## 131.15 Printer.SetPrinter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
131 Printer	6.5	No	Yes	No	No	No

MBS( "Printer.SetPrinter"; Printer { ; CloseDialog; Paper Format; Paper Orientation; Paper Source } )

### Parameters

#### Printer

The printer name to set. Must not match exactly, just the first letters. Leave empty to not change printer. "Brother"

#### CloseDialog

Optional

Whether to close print dialog. Pass 1 to close or 0 to not close. Pass 2 to press cancel button in case you just want to learn the options.

1

#### Paper Format

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

The name of the paper format. Leave empty to not change.

"A4"

#### Paper Orientation

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

The paper orientation. Pass portrait or landscape. Empty value leaves setting as is.

"landscape"

#### Paper Source

Optional

Available in MBS FileMaker Plugin 10.0 or newer.

The paper source. Pass name of setting. Name doesn't need to match exactly, just first letters. So you can pass "Man" für Manual (English) and Manuell (German).

"Man"

**Result** Returns OK or error.

### Description

Shows the printer setup dialog and switches target printer or paper settings.

Please use a script pause of at least a second after calling this function to let Windows show the dialogs.

You can later call Print.ErrorLog to detect errors. If Windows ever change dialogs, features may no longer work.

For Mac, please check PrintDialog.Install function.

Version 10.0 of MBS Plugin adds three new parameters paper format, orientation and source. And the plugin fills the internal lists for paper sources, formats and printers.

Source code sponsored by schubec.com  
<http://www.schubec.com>

### Examples

Switch printer:

```
Set Variable [ $r; Value:MBS("Printer.SetPrinter"; Printer Dialog::Printer Name) ]
Pause/Resume Script [ Duration (seconds): 2 ]
Show Custom Dialog [ "Result"; MBS("Printer.ErrorLog") ]
```

Change paper to Letter in landscape:

```
MBS( "Printer.SetPrinter"; "" ; 0; "Letter"; "landscape")
```

## 132.2 Process.FrontProcessName

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	4.2	Yes	Yes	No	No	No

MBS( "Process.FrontProcessName" )

**Result** Returns app name.

### Description

On Windows the app name is just the name of the exe file.

Returns empty string or error in case of errors.

### Examples

Show name of current process in front:

Show Custom Dialog [ "Front Process" ; MBS( "Process.FrontProcessName" ) ]

### See also

## 132.3 Process.FrontWindowTitle

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	4.2	Yes	Yes	No	No	No

MBS( "Process.FrontWindowTitle" { ; index } )

### Parameters

#### index

Optional

Optional for Mac. Pass -1 to return number of windows. Else pass index from 0 to count-1 to query title of nth window.

””

**Result** Returns window title.

### Description

On Mac OS X requires you to allow FileMaker accessibility functions. In System Preferences check privacy control panel and add FileMaker there to the list allowed for assistive input.

### Examples

Query title of focused window:

```
MBS( "Process.FrontWindowTitle"
```

Query on Mac number of Windows.

```
MBS( "Process.FrontWindowTitle"; -1 )
```

Query on Mac the second window:

```
MBS( "Process.FrontWindowTitle"; 1 )
```

## 132.4 Process.GetCurrentDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "Process.GetCurrentDirectory" )

**Result** Returns path or error.

### Description

Some OS functions look for files relative to this folder.

This function requires a native path. Use `Path.FileMakerPathToNativePath` to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use `FileDialog` functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Query current directory:

MBS( "Process.GetCurrentDirectory" )

### See also

## 132.5 Process.IsFrontMost

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	2.9	Yes	Yes	No	No	No

MBS( "Process.IsFrontMost" )

**Result** Returns 1 if FileMaker is frontmost and 0 if not.

### Description

If the function returns zero, you can call Process.SetFrontMost to move FileMaker to the front. Added support for Windows in plugin version 4.2.

### Examples

Check if we are in background and move us to front:

```
If [ MBS( "Process.IsFrontMost" ) = 0 ]
Set Variable [ $r ; Value: MBS( "Process.SetFrontMost" ) ]
End If
```

## 132.6 Process.IsRunning

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	4.0	Yes	No	Yes, macOS only	No	No

MBS( "Process.IsRunning"; Process )

### Parameters

#### Process

Either a number with process ID or a process name or a bundle ID.

123

**Result** Returns 0, 1 or error.

### Description

Returns 1 if process is found in process list or 0 if not.

### Examples

Check if Safari is running by name:

```
MBS( "Process.IsRunning"; "Safari" )
```

Check if Safari is running by bundle ID:

```
MBS( "Process.IsRunning"; "com.apple.safari" )
```

## 132.7 Process.KeepFrontMost

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	7.1	Yes	No	No	No	No

MBS( "Process.KeepFrontMost"; Enabled )

### Parameters

#### Enabled

Pass 1 to enable or 0 to disable.

1

**Result** Returns OK or error.

### Description

Can be enabled/disabled at any time.

If enabled, the plugin will bring FileMaker to front whenever it goes to background.

### Examples

Enable in script:

```
Variable setzen [ $$ref ; Wert: MBS( "Process.KeepFrontMost"; 1) ]
```

Disable in script:

```
Variable setzen [ $$ref ; Wert: MBS( "Process.KeepFrontMost"; 0) ]
```

## 132.8 Process.LoadLibrary

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "Process.LoadLibrary"; Path )

### Parameters

#### Path

The native path to the library.

"C:\Users\Christian\Desktop\dynapdf64.dll"

**Result** Returns OK or error.

### Description

This can be used to resolve dependencies with libraries in various places.

This should work with .dll files on Windows, .dylib files on macOS and .so files on Linux.

Windows error 193 means that 64-bit FileMaker tried to load 32-bit library or 32-bit FileMaker tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

For Server be aware that server has limited permissions and may not be able to access all files on a computer.

## 132.9 Process.SetCurrentDirectory

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	6.5	Yes	Yes	Yes	Yes	Yes

MBS( "Process.SetCurrentDirectory"; Path )

### Parameters

#### Path

The new native path.

"C:\Test"

**Result** Returns OK or error.

### Description

Some OS functions look for files relative to this folder.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions. For Server be aware that server has limited permissions and may not be able to access all files on a computer.

### Examples

Set current directory:

MBS( "Process.SetCurrentDirectory"; "/Users/cs/Desktop" )

Set current path on Windows:

MBS( "Process.SetCurrentDirectory"; "C:\Test" )

## 132.10 Process.SetFrontMost

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	2.9	Yes	Yes	Yes	No	No

MBS( "Process.SetFrontMost" )

**Result** Returns OK or error.

### Description

You can use Process.IsFrontMost to check the status.

You can use Window.Activate for Windows.

Implemented Process.SetFrontMost for Windows in version 9.2. The plugin builds a list of all FileMaker windows. Than we activate the top most of them and move all other windows in z order behind.

### Examples

Bring FileMaker to front:

```
Set Variable [ $r; Value:MBS("Process.SetFrontMost") ]
```

## 132.11 ProcessActivity.List

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	5.2	Yes	No	Yes, macOS only	No	Yes

MBS( "ProcessActivity.List" )

**Result** Returns list of IDs or error.

### Description

This helps debugging, especially finding scripts which do not release their objects properly.

### Examples

List all activities:

MBS( "ProcessActivity.List" )

### See also

- 132.13 ProcessActivity.Reason

6599

## 132.12 ProcessActivity.Options

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	5.2	Yes	No	Yes, macOS only	No	Yes

MBS( "ProcessActivity.Options"; ProcessActivityID )

### Parameters

#### ProcessActivityID

The process activity reference number as returned by ProcessActivity.beginActivity function.  
\$ref

**Result** Returns number or error.

### Description

### Examples

Query options of first activity:

MBS( "ProcessActivity.Options"; "39001" )

### See also

- 132.14 ProcessActivity.beginActivity 6600
- 132.13 ProcessActivity.Reason 6599

**132.13 ProcessActivity.Reason**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	5.2	Yes	No	Yes, macOS only	No	Yes

MBS( "ProcessActivity.Reason"; ProcessActivityID )

**Parameters****ProcessActivityID**

The process activity reference number as returned by ProcessActivity.beginActivity function.  
\$ref

**Result** Returns text or error.

**Description****Examples**

Query reason of first activity:

MBS( "ProcessActivity.Reason"; "39001" )

**See also**

- 132.14 ProcessActivity.beginActivity 6600

## 132.14 ProcessActivity.beginActivity

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
132 Process	5.2	Yes	No	Yes, macOS only	No	Yes

MBS( "ProcessActivity.beginActivity"; activity; Reason )

### Parameters

#### activity

The activity as a number or a text. The plugin allows you to pass texts like IdleDisplaySleepDisabled, IdleSystemSleepDisabled, UserInitiated, UserInitiatedAllowingIdleSystemSleep, Background and Latency-Critical. Those texts can be combined.

"IdleDisplaySleepDisabled"

#### Reason

The reason text.

"Doing backup"

**Result** Returns reference number or error.

### Description

Pass in an activity to this function, and a non-empty reason string. Indicate completion of the activity by calling the corresponding ProcessActivity.endActivity function with the result of this function. The reason string is used for debugging.

Requires Mac OS X 10.9 and newer.

This function allows to deactivate App Nap for FileMaker. So when a script has to do some work, you can disable system/display sleep here which also disables app nap.

### Examples

Start an activity:

```
MBS( "ProcessActivity.beginActivity"; "IdleSystemSleepDisabled UserInitiated"; "Doing Backup in File-Maker" )
```

Avoid display sleep:

```
MBS( "ProcessActivity.beginActivity"; "IdleDisplaySleepDisabled UserInitiated"; "Showing animation" )
```

## ProgressDialog

Show progress dialog.

### 133.1 ProgressDialog.ClearImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.ClearImage" )

**Result** Returns "OK" on success.

#### Description

If there is no image, there is more room for your text in the dialog.

#### Examples

Clear Image

MBS( "ProgressDialog.ClearImage" )

#### See also

## 133.14 ProgressDialog.Hide

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.Hide" )

**Result** Returns "OK" on success.

### Description

You may want to call ProgressDialog.Reset before reusing the progress dialog. Or later call ProgressDialog.Show again to show progress dialog with same settings.

Resets parent and enables parent window to make sure it is not disabled.

### Examples

Show the progress dialog:

MBS( "ProgressDialog.Show" )

Hide the progress dialog:

MBS( "ProgressDialog.Hide" )

**133.16 ProgressDialog.SetBottomText**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetBottomText"; text )

**Parameters****text**

The new bottom text.

"Hello"

**Result** Returns "OK" on success.

**Description**

Below the progress bar most applications shows some data like "x of y files processed" or "123 KB of 456 KB copied."

Please do not call this function more than one time per second to avoid the progress window redraw to slow down your process.

**Examples**

Report progress:

MBS( "ProgressDialog.SetBottomText"; \$index & " of " & \$total & " files" )

## 133.17 ProgressDialog.SetButtonCaption

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetButtonCaption"; text )

### Parameters

#### text

The new button text.

"Annuler"

**Result** Returns "OK" on success.

### Description

Default is "Cancel" if you don't call this method. If your solution supports multiple languages, it may be worth putting those texts into an extra table and picking the right text at runtime.

### Examples

Set button text for Germany:

MBS( "ProgressDialog.SetButtonCaption"; "Abbrechen" )

**133.18 ProgressDialog.SetCancel**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetCancel"; Flag )

**Parameters****Flag**

the new cancel state.

1

**Result** Returns "OK" on success.

**Description**

You can query in your loop whether user clicked cancel so you can exit your loop.

If your script does not make a pause or a long running plugin functions runs, there may be no reaction on the cancel button.

**Examples**

Set cancel state

MBS( "ProgressDialog.SetCancel"; 1 )

Reset Cancel state:

MBS( "ProgressDialog.SetCancel"; 0 )

## 133.19 ProgressDialog.SetFont

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.9	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetFont" { ; fontname; fontsize } )

### Parameters

#### fontname

Optional

The font name. If this is empty, the system font is used.

"Arial"

#### fontsize

Optional

The font size. If this value is 0, the system font size is used.

12

**Result** Returns OK on success.

### Description

### Examples

Set font:

MBS( "ProgressDialog.SetFont"; "Comic Sans MS"; 12 )

### See also

## 133.20 ProgressDialog.SetImage

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetImage"; image )

### Parameters

#### image

A container value with some picture. Can be JPEG, GIF, BMP, PNG or TIFF.

preftable::ProgressIcon

**Result** Returns "OK" on success.

### Description

For best results use a PNG with alpha channel, so you don't see a border. Size should be 64 x 64 Pixels (72 dpi). If the picture does not fit, the plugin tries to scale it.

Alpha Channel is not supported on Windows 2000, but works on Windows XP and newer.

Internally we use GraphicsMagick, so all the image formats supported by GraphicsMagick should work.

If there is no image, there is more room for your text in the dialog.

### Examples

Set Image:

MBS( "ProgressDialog.SetImage"; Globals::ProgressLogo )

**133.21 ProgressDialog.SetImageHeight**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	9.2	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetImageHeight"; Height )

**Parameters****Height**

The new height.

64

**Result** Returns OK or error.

**Description**

Sets the height for the image view showing the image.

Default is 64 points.

Image is stretched to this size on MacOS.

**See also**

## 133.22 ProgressDialog.SetImageWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	9.2	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetImageWidth"; Width )

### Parameters

#### Width

The new width.

64

**Result** Returns OK or error.

### Description

Sets the width for the image view showing the image.

Default is 64 points.

Image is stretched to this size on MacOS.

## 133.23 ProgressDialog.SetPosition

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetPosition"; X; Y )

### Parameters

#### X

Relative x coordinate.

100

#### Y

Relative y coordinate.

100

**Result** Returns "OK" on success.

### Description

With X and Y you can move the dialog relative to the top left corner of the main screen. Use functions like Screen.Height to learn about screen height.

### See also

## 133.24 ProgressDialog.SetPositionCentered

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetPositionCentered" { ; X; Y } )

### Parameters

#### X

Optional

Optional, Relative x coordinate.

0

#### Y

Optional

Optional, Relative y coordinate.

0

**Result** Returns "OK" on success.

### Description

With X and Y you can move the dialog relative to the center of the main screen. Use functions like Screen.Height to learn about screen height.

### Examples

Center dialog:

```
MBS( "ProgressDialog.SetPositionCentered" )
```

Center dialog a little bit lower on screen:

```
MBS( "ProgressDialog.SetPositionCentered"; 0; 200 )
```

### 133.24.1 Blog Entries

- [MBS Filemaker Plugin, version 2.4pr9](#)

Created 18th August 2014, last changed 18th August 2014.

**133.25 ProgressDialog.SetProgress**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetProgress"; value )

**Parameters****value**

New value. Range from 0 to 100 for a normal progress bar or negative value for indeterminated progress bar.

50

**Result** Returns "OK" on success.

**Description**

Depending on your range, you need to multiply/divide to get into range from 0 to 100. Typically you can simply do math like this:  $\$index * 100 / \$total$ . That calculates the percentage of files processed if you have  $\$total$  files and current file index is  $\$index$ .

If you process more than 100 items, please consider only updating progress if you actually moved forward 1% . You can do this by keeping variable with last progress you set and update only if new progress value is bigger.

Please do not call this function more than one time per second to avoid the progress window redraw to slow down your process.

**Examples**

Set progress bar to indeterminate while preparing operations:

```
MBS( "ProgressDialog.SetProgress"; -1 )
```

Set later progress bar to current value:

```
MBS( "ProgressDialog.SetProgress"; $index * 100 / $total )
```

Update only when changed by one percent:

```
Set Variable [ $percent; Value:Round(100 * $current / $total; 0) ]
If [ $percent $lastpercent ]
Set Variable [ $lastpercent; Value:$percent ]
Set Variable [ $r; Value:MBS( "ProgressDialog.SetProgress"; $percent ) ]
End If
```

## 133.28 ProgressDialog.SetTitleIcon

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	10.2	No	Yes	No	No	No

MBS( "ProgressDialog.SetTitleIcon"; ImageRef { ; bigIcon } )

### Parameters

#### ImageRef

The image reference for the picture image, a number returned from the GImage.New functions

1

#### bigIcon

Optional

Pass 1 to set big icon (for app switcher) or 0 for small icon (icon in title bar). Default is 0.

1

**Result** Returns OK or error.

### Description

You may need to use GImage.NewImagesFromContainer to read image from container first.

### Examples

Set progress dialog icon:

```
# load image
Set Variable [ $image ; Value: MBS( "GImage.NewImagesFromContainer"; ProgressDialog::Icon) ]
# set icon
Set Variable [ $r ; Value: MBS("ProgressDialog.SetTitleIcon"; $image) ]

# later free it
Set Variable [ $r ; Value: MBS( "GImage.Release"; $image) ]
```

**133.29 ProgressDialog.SetTopMost**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.6	Yes	Yes	No	No	No

MBS( "ProgressDialog.SetTopMost"; value )

**Parameters****value**

The new topmost state.

1

**Result** Returns "OK" or error message.

**Description**

Default is to have topmost enabled.

Top most means that dialog floats over other windows.

**Examples**

Enable top most:

MBS( "ProgressDialog.SetTopMost"; 1 )

Disable top most:

MBS( "ProgressDialog.SetTopMost"; 0 )

## 133.31 ProgressDialog.Show

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.4	Yes	Yes	No	No	No

MBS( "ProgressDialog.Show" { ; NoActivate } )

### Parameters

#### NoActivate

Optional

Available in MBS FileMaker Plugin 8.0 or newer.

Whether to activate the window (0) or not to activate (1). By default we move window to front to show user. But if you prefer being in background, you can simply show without activation.

0

**Result** Returns "OK" on success.

### Description

### Examples

Show the progress dialog:

```
MBS( "ProgressDialog.Show" )
```

Hide the progress dialog:

```
MBS( "ProgressDialog.Hide" )
```

Setup a progress window before an upload:

```
Set Variable [ $result; Value:MBS("ProgressDialog.Reset") ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetCancel"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetProgress"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetTopText"; "Uploading text...") ]
Set Variable [ $result; Value:MBS("ProgressDialog.SetShowButton"; 0) ]
Set Variable [ $result; Value:MBS("ProgressDialog.Show") ]
```

## 133.32 ProgressDialog.Update

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
133 ProgressDialog	2.6	Yes	Yes	No	No	No

MBS( "ProgressDialog.Update" )

**Result** Returns "OK" on success.

### Description

When you change something on the dialog, it's marked for needing a redraw and this redraw is normally performed when there is some free CPU time like in a script pause. You can call this function to redraw now.

Please do not call this function more than 10 times a second in your script. Else you may see a slowdown in script performance as redrawing the dialog takes time.

### Examples

Updates dialog with new button caption:

```
MBS( "ProgressDialog.SetButtonCaption"; "Abbrechen" )
MBS( "ProgressDialog.Update" )
```

## 133.36 Progressdialog.SetEvaluate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
?? Progressdialog	7.1	Yes	Yes	No	No	No

MBS( "Progressdialog.SetEvaluate"; Expression )

### Parameters

#### Expression

The expression to run. Can be in local language of FileMaker Pro or english. For Server must always be in english.

”\$\$cancel = 1”

**Result** Returns OK or error.

### Description

You can set global variable to stop something or call MBS functions here.

### Examples

Sets expression to hide dialog:

```
MBS("ProgressDialog.SetEvaluate"; "MBS(\"ProgressDialog.Hide\)")")
```

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
?? Progressdialog	7.1	Yes	Yes	No	No	No

MBS( "Progressdialog.SetScript"; FileName; ScriptName { ; Parameter } )

### Parameters

#### FileName

The file name for the script.

Get(FileName)

#### ScriptName

The script name to run. An empty name will disable the script calling.

"CancelScript"

#### Parameter

Optional

The script parameter to pass.

**Result** Returns OK or error.

### Description

### Examples

Set script to run

```
MBS("ProgressDialog.SetScript"; Get(FileName); "CancelScript"; "optional parameter")
```

# Chapter 134

## Proj

Transform geo coordinate between projections with PROJ library.

Learn more about this open source library here: <https://proj.org>

### 134.1 Proj.BatchTransform

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 Proj	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "Proj.BatchTransform"; Source Projection; Output Projection; InputCoordinates )

#### Parameters

##### Source Projection

The definition string for the source projection.

"+proj=longlat +datum=WGS84"

##### Output Projection

The definition for the output projection.

"+proj=utm +zone=31 +datum=WGS84"

##### InputCoordinates

The JSON array with the input coordinates.

**Result** Returns JSON or error.

#### Description

Reads x/y/z from JSON array and returns new JSON array with results.

#### Example Databases

- [Proj/PROJ Library](#)

## 134.2 Proj.Initialize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 Proj	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "Proj.Initialize"; Path )

### Parameters

#### Path

The file path to the framework or library.  
 "/Library/Frameworks/PROJ.framework"

**Result** Returns OK or error.

### Description

Please pass file path to DLL for Windows, framework for iOS/macOS and path to shared object for Linux. The plugin does not care where you install it or whether you just copy the library with your solution.

### Examples

Load framework on Mac from default location:

MBS( "Proj.Initialize"; "/Library/Frameworks/PROJ.framework" )

### See also

Created 22nd January 2020, last changed 22nd January 2020.

### 134.3 Proj.IsInitialized

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 Proj	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "Proj.IsInitialized" )

**Result** Returns 1, 0 or error.

#### Description

Returns 1 if initialized or 0 if not.

#### See also

- 123.10 OCR.IsInitialized 6229
- 126.7 PHP.IsInitialized 6363

- 193.118 XL.IsInitialized 9148

Created 22nd January 2020, last changed 22nd January 2020.

## 134.4 Proj.Transform

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
134 Proj	10.1	Yes	Yes	Yes	Yes	Yes

MBS( "Proj.Transform"; Source Projection; Output Projection { ; X; Y; Z } )

### Parameters

#### Source Projection

The definition string for the source projection.

"+proj=longlat +datum=WGS84"

#### Output Projection

The definition for the output projection.

"+proj=utm +zone=31 +datum=WGS84"

#### X

Optional

The x coordinate to transform.

#### Y

Optional

The y coordinate to transform.

#### Z

Optional

The z coordinate to transform. Not used by all transformations.

**Result** Returns JSON or error.

### Description

#### Example Databases

- [Proj/PROJ Library](#)

Created 22nd January 2020, last changed 22nd January 2020.

# Chapter 135

## QTExport

Older QuickTime based functions on OS X and Windows to transcode videos.

Can be used to compress videos as MPEG 4 video file. Or with LAME encoder component to create MP3 files.

Deprecated and only for 32-bit available. Will be removed someday.

### 135.1 QTExport.CloseMovie

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTExport	6.1	Yes	Yes	No	No	No

MBS( "QTExport.CloseMovie"; QTExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

#### Parameters

##### QTExporter

The exporter reference number.

\$\$QTExporter

**Result** Returns OK or error.

#### Description

Please close movie before you load a new one.

#### Examples

Close Exporter:

```
If [ not IsEmpty($$QT) ]
```

6664

CHAPTER 135. QTEXTPORT

```
Set Variable [ $r; Value:MBS("QTextport.Release"; $$QT) ]  
Set Variable [ $$QT; Value:"" ]  
End If
```

**See also**

- 135.14 QTextport.OpenMovie 6679
- 135.15 QTextport.Release 6680

Created 1st March 2016, last changed 1st March 2016.

## 135.2 QTEExport.Duration

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.Duration"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns number or error.

### Description

Returns duration in seconds.

### Examples

Query duration:

```
Set Field [ QTMovieExporter::Duration; MBS("QTEExport.Duration"; $$QT) ]
```

### See also

- 40.3 AVExport.Duration

## 135.3 QTExport.Export

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTExport	6.1	Yes	Yes	No	No	No

MBS( "QTExport.Export"; QTExporter; Path; FileType; Creator Code { ; Flags } )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTExporter

The exporter reference number.

\$\$QTExporter

#### Path

The native path for the destination file.

"/Users/cs/Desktop/test.mp3"

#### FileType

The file type code.

"MP3 "

#### Creator Code

The creator code. We normally use TVOD for the QuickTime Player.

"TVOD"

#### Flags

Optional

The flags.

0

**Result** Returns OK or error.

### Description

The export is running modal and may show a progress dialog.

Deprecated. Please move to use AVExport functions for new projects.

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

### Examples

Run exporter:

```
Set Variable [ $r; Value:MBS("QTExport.Export"; $$QT; QTMovieExporter::Output File Path; "MP3 "; "TVOD") ]
```

135.3. *QTEXTORT.EXPORT*

6667

**See also**

- 124.2 Path.FileMakerPathToNativePath

6247

Created 1st March 2016, last changed 16th November 2017.

## 135.4 QTEExport.GetHighResolution

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.GetHighResolution"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns setting or error.

### Description

Returns 1 if enabled or 0 if disabled.

### See also

- 135.16 QTEExport.SetHighResolution

6681

Created 1st March 2016, last changed 1st March 2016.

## 135.5 QTEExport.GetMovieHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.GetMovieHeight"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns value or error.

### Description

#### See also

- 135.6 QTEExport.GetMovieWidth 6670
- 135.17 QTEExport.SetMovieHeight 6682
- 135.18 QTEExport.SetMovieWidth 6683

Created 1st March 2016, last changed 1st March 2016.

## 135.6 QTEExport.GetMovieWidth

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.GetMovieWidth"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns value or error.

### Description

#### See also

- 135.5 QTEExport.GetMovieHeight 6669
- 135.17 QTEExport.SetMovieHeight 6682
- 135.18 QTEExport.SetMovieWidth 6683

Created 1st March 2016, last changed 1st March 2016.

## 135.7 QTEExport.GetSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.GetSettings"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns text or error.

### Description

The plugin encoded settings as base64 text, so you can store it in a global preferences field. Please use QTEExport.SetSettings to restore those settings for another export.

### Examples

Query settings:

```
MBS("QTEExport.GetSettings"; $$QT)
```

### See also

- 135.19 QTEExport.SetSettings

## 135.8 QTEExport.GetShowProgress

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.GetShowProgress"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns value or error.

### Description

Default is to 1 (on).

### See also

- 135.20 QTEExport.SetShowProgress

Created 1st March 2016, last changed 1st March 2016.

**135.9 QTEExport.GetSoundChannelCount**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.GetSoundChannelCount"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

**Parameters****QTEExporter**

The exporter reference number.

\$\$QTEExporter

**Result** Returns value or error.

**Description****Examples**

Query channel count:

MBS( "QTEExport.GetSoundChannelCount"; \$\$QT )

**See also**

- 135.21 QTEExport.SetSoundChannelCount

## 135.10 QTextExport.GetSoundSampleRate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTextExport	6.1	Yes	Yes	No	No	No

MBS( "QTextExport.GetSoundSampleRate"; QTextExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTextExporter

The exporter reference number.

\$\$QTextExporter

**Result** Returns value or error.

### Description

### Examples

Query sample rate:

MBS( "QTextExport.GetSoundSampleRate"; \$\$QT )

### See also

- 135.11 QTextExport.GetSoundSampleSize 6675
- 135.22 QTextExport.SetSoundSampleRate 6687
- 135.23 QTextExport.SetSoundSampleSize 6688

Created 1st March 2016, last changed 1st March 2016.

**135.11 QTextport.GetSoundSampleSize**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTextport	6.1	Yes	Yes	No	No	No

MBS( "QTextport.GetSoundSampleSize"; QTextporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

**Parameters****QTextporter**

The exporter reference number.

\$\$QTextporter

**Result** Returns value or error.

**Description****Examples**

Query sample size:

MBS( "QTextport.GetSoundSampleSize"; \$\$QT )

**See also**

- 135.10 QTextport.GetSoundSampleRate 6674
- 135.22 QTextport.SetSoundSampleRate 6687

Created 1st March 2016, last changed 1st March 2016.

## 135.12 QTEExport.ListExporters

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.ListExporters" { ; Type } )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### Type

Optional

The component type. Default is "spit" for movie exporters.

**Result** Returns list or error.

### Description

The list returned is tab separated: Type, SubType, Manufacturer, Name and Info texts. If no entry is found for the given type, an empty list is returned.

### Examples

List exporters:

```
MBS("QTEExport.ListExporters")
```

### See also

- 135.13 QTEExport.OpenExporter

6677

Created 1st March 2016, last changed 1st March 2016.

## 135.13 QTEExport.OpenExporter

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.OpenExporter"; SubType; Manufacturer )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### SubType

The exporter component subtype to identify the exporter to open.

"mp3 "

#### Manufacturer

The manufacturer of the exporter component.

"PYEh"

**Result** Returns reference number or error.

### Description

This function is only available for 32-bit. It may work on FileMaker Mac and Windows. For Windows please install QuickTime Player 7 for Windows.

Please use QTEExport.ListExporters to get a list of installed exporter components.

Please call AVExport.Release later to free the exporter.

### Examples

Open Exporter:

```
Set Variable [ $$QT; Value:MBS("QTEExport.OpenExporter"; QTMovieExporter::ExporterSubType; QT-
MovieExporter::ExporterManufacturer) ]
```

```
If [ MBS("IsError") ]
```

```
Show Custom Dialog [ "Failed to create export sessio..."; MBS("Text.RemovePrefix"; $$AVExport; " [ MBS
] ") ]
```

```
Exit Script [ ]
```

```
Else
```

```
Set Variable [ $r; Value:MBS("QTEExport.SetShowProgress"; $$QT; 1) ]
```

```
Set Variable [ $r; Value:MBS("QTEExport.SetHighResolution"; $$QT; 1) ]
```

```
End If
```

Created 1st March 2016, last changed 1st March 2016.

## 135.14 QTEExport.OpenMovie

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.OpenMovie"; QTEExporter; Path )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

#### Path

The native file path to the movie file.

"/Users/cs/Desktop/test.mov"

**Result** Returns OK or error.

### Description

This function requires a native path. Use Path.FileMakerPathToNativePath to convert a FileMaker path to a native path if required. If you like to have the user choose the path, you can use FileDialog functions.

### Examples

Open Movie:

```
Set Variable [ $r; Value:MBS("QTEExport.OpenMovie"; $$QT; QTMovieExporter::Input File Path) ]
```

- 124.2 Path.FileMakerPathToNativePath 6247
- 135.1 QTEExport.CloseMovie 6663

Created 1st March 2016, last changed 1st March 2016.

## 135.15 QTEExport.Release

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.Release"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns OK or error.

### Description

All memory is released.

Please call this when you are done with the export.

### See also

- 40.17 AVExport.Release 1062
- 135.1 QTEExport.CloseMovie 6663

Created 1st March 2016, last changed 1st March 2016.

**135.16 QTEExport.SetHighResolution**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.SetHighResolution"; QTEExporter; Value )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

**Parameters****QTEExporter**

The exporter reference number.

\$\$QTEExporter

**Value**

The new setting. 1 to enable, 0 to disable.

1

**Result** Returns OK or error.

**Description**

If you set it to 1 and you have QuickTime 7 on your Mac OS X copy, you can e.g. export a movie with 96000 HZ audio.

**See also**

- 135.4 QTEExport.GetHighResolution 6668

Created 1st March 2016, last changed 1st March 2016.

## 135.17 QTEExport.SetMovieHeight

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.SetMovieHeight"; QTEExporter; Height )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

#### Height

The movie height to export.

480

**Result** Returns OK or error.

### Description

If you don't set this, the default is used.

### See also

- 135.5 QTEExport.GetMovieHeight 6669
- 135.6 QTEExport.GetMovieWidth 6670
- 135.18 QTEExport.SetMovieWidth 6683

Created 1st March 2016, last changed 1st March 2016.

**135.18 QTEExport.SetMovieWidth**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.SetMovieWidth"; QTEExporter; Width )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

**Parameters****QTEExporter**

The exporter reference number.

\$\$QTEExporter

**Width**

The movie width to export.

640

**Result** Returns OK or error.

**Description**

If you don't set this, the default is used.

**See also**

- 135.5 QTEExport.GetMovieHeight 6669
- 135.6 QTEExport.GetMovieWidth 6670
- 135.17 QTEExport.SetMovieHeight 6682

Created 1st March 2016, last changed 1st March 2016.

## 135.19 QTEExport.SetSettings

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.SetSettings"; QTEExporter; Settings )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

#### Settings

The settings as base64 encoded text as returned by QTEExport.GetSettings.

MyPreferences::ExportSettings

**Result** Returns OK or error.

### Description

You can save the settings text you got from QTEExport.GetSettings and restore it with this function. Please make sure you use the same settings for the same exporter component.

### Examples

Load Settings from field:

```
MBS("QTEExport.SetSettings"; $$QT; QTMovieExporter::Settings)
```

### See also

Created 1st March 2016, last changed 1st March 2016.

**135.20 QTEExport.SetShowProgress**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.SetShowProgress"; QTEExporter; Value )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

**Parameters****QTEExporter**

The exporter reference number.

\$\$QTEExporter

**Value**

The new setting. Can be 1 to show progress dialog or 0 to hide it.

1

**Result** Returns OK or error.

**Description**

Pass 1 to show progress dialog automatically or 0 to hide it.

**Examples**

Enable progress dialog:

MBS( "QTEExport.SetShowProgress"; \$QTEExport; 1 )

**See also**

- 135.8 QTEExport.GetShowProgress 6672

## 135.21 QTextport.SetSoundChannelCount

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTextport	6.1	Yes	Yes	No	No	No

MBS( "QTextport.SetSoundChannelCount"; QTextporter; Value )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTextporter

The exporter reference number.

\$\$QTextporter

#### Value

The new channel count.

2

**Result** Returns OK or error.

### Description

### Examples

Sets sound settings:

```
Set Variable [ $r; Value:MBS("QTextport.SetSoundChannelCount"; $$QT; 1) ]
```

```
Set Variable [ $r; Value:MBS("QTextport.SetSoundSampleSize"; $$QT; 8) ]
```

```
Set Variable [ $r; Value:MBS("QTextport.SetSoundSampleRate"; $$QT; 22050) ]
```

### See also

- 135.9 QTextport.GetSoundChannelCount 6673
- 135.22 QTextport.SetSoundSampleRate 6687
- 135.23 QTextport.SetSoundSampleSize 6688

Created 1st March 2016, last changed 1st March 2016.

## 135.22 QTExport.SetSoundSampleRate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTExport	6.1	Yes	Yes	No	No	No

MBS( "QTExport.SetSoundSampleRate"; QTExporter; Value )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTExporter

The exporter reference number.

\$\$QTExporter

#### Value

The new sample rate.

44100

**Result** Returns OK or error.

### Description

### Examples

Sets sound settings:

```
Set Variable [ $r; Value:MBS("QTExport.SetSoundChannelCount"; $$QT; 1) ]
```

```
Set Variable [ $r; Value:MBS("QTExport.SetSoundSampleSize"; $$QT; 8) ]
```

```
Set Variable [ $r; Value:MBS("QTExport.SetSoundSampleRate"; $$QT; 22050) ]
```

### See also

- 135.21 QTExport.SetSoundChannelCount 6686
- 135.23 QTExport.SetSoundSampleSize 6688

Created 1st March 2016, last changed 1st March 2016.

## 135.23 QTEExport.SetSoundSampleSize

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.SetSoundSampleSize"; QTEExporter; Value )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

#### Value

The new sample size in bits.

16

**Result** Returns OK or error.

### Description

### Examples

Sets sound settings:

```
Set Variable [ $r; Value:MBS("QTEExport.SetSoundChannelCount"; $$QT; 1) ]
```

```
Set Variable [ $r; Value:MBS("QTEExport.SetSoundSampleSize"; $$QT; 8) ]
```

```
Set Variable [ $r; Value:MBS("QTEExport.SetSoundSampleRate"; $$QT; 22050) ]
```

### See also

- 135.10 QTEExport.GetSoundSampleRate 6674
- 135.11 QTEExport.GetSoundSampleSize 6675
- 135.21 QTEExport.SetSoundChannelCount 6686
- 135.22 QTEExport.SetSoundSampleRate 6687

Created 1st March 2016, last changed 1st March 2016.

## 135.24 QTEExport.SetupDialog

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.SetupDialog"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns OK or error.

### Description

The user can define the settings and you can store those in your preferences.

This way the user doesn't need to select settings each time.

If the user presses cancel button the text "Cancel" is returned.

### Examples

Show setup dialog:

```
MBS("QTEExport.SetupDialog"; $$QT)
```

Created 1st March 2016, last changed 1st March 2016.

## 135.25 QTEExport.Validate

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
135 QTEExport	6.1	Yes	Yes	No	No	No

MBS( "QTEExport.Validate"; QTEExporter )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### QTEExporter

The exporter reference number.

\$\$QTEExporter

**Result** Returns OK or error.

### Description

Returns "Valid" in case of success.

### Examples

Validate settings:

```
MBS("QTEExport.Validate"; $$QT)
```

Created 1st March 2016, last changed 1st March 2016.

# Chapter 136

## QTMovie

QuickTime Movie access.

Deprecated. Please move to AVPlayer functions for playing sound.

### 136.1 QTMovie.Autoplay

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS( "QTMovie.Autoplay"; Movie )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

#### Parameters

##### Movie

The reference number of the movie. Please use QTMovie.OpenContainer, QTMovie.OpenFile or QTMovie.OpenURL function to get movie reference.

\$mov

**Result** Returns OK or error.

#### Description

The autoplay method configures a QTMovie object to begin playing as soon as enough data is available that the playback can continue uninterrupted to the end of the movie. This is most useful for movies being loaded from a remote URL or from an extremely slow local device. For movies stored on most local devices, this method has the same effect as the QTMovie.play method.

#### Examples

Play now

MBS( "QTMovie.Autoplay"; \$Movie )

Play when enough data is loaded:

MBS( "QTMovie.Autoplay"; \$Movie )

**See also**

- 136.22 QTMovie.Play 6716

Created 18th August 2014, last changed 18th August 2014.

**136.2 QTMovie.CurrentFrameImage**

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS( "QTMovie.CurrentFrameImage"; Movie { ; ImageType; Filename } )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

**Parameters****Movie**

The reference number of the movie. Please use QTMovie.OpenContainer, QTMovie.OpenFile or QTMovie.OpenURL function to get movie reference.

\$mov

**ImageType**

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

**Filename**

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns an image as container value or error.

**Description****See also**

- 118.3 *MovieView.CurrentFrameImage* 6160
- 136.18 *QTMovie.OpenContainer* 6709
- 136.19 *QTMovie.OpenFile* 6711
- 136.20 *QTMovie.OpenURL* 6713

Created 18th August 2014, last changed 18th August 2014.

## 136.3 QTMovie.FormatTime

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 QTMovie	5.0	Yes	No	No	No	No

MBS( "QTMovie.FormatTime"; Seconds )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### Seconds

The number of seconds to format.

123

**Result** Returns text or error.

### Description

#### Examples

Format one second:

```
MBS("QTMovie.FormatTime"; 1)
```

Format 3 hours, 2 minutes, 1 second and one millisecond

```
MBS("QTMovie.FormatTime"; 3600*3 + 60*2 + 1 + 1/1000)
```

## 136.4 *QTMovie.FrameImageAtTime*

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 <i>QTMovie</i>	4.0	Yes	No	Yes, macOS only	No	No

MBS( "*QTMovie.FrameImageAtTime*"; Movie; Time { ; ImageType; Filename } )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### Movie

The reference number of the movie. Please use *QTMovie.OpenContainer*, *QTMovie.OpenFile* or *QTMovie.OpenURL* function to get movie reference.

\$mov

#### Time

The time of the movie to use in seconds.

5.0

#### ImageType

Optional

The type of image to return. Either JPEG, PNG, GIF or BMP. Default is JPEG.

"JPEG"

#### Filename

Optional

The filename to use for the picture. Default is "image" with the extension matching the image type.

"test.jpg"

**Result** Returns an image as container value or error.

### Description

Please use *AVAsset.Image* for new projects.

### See also

## 136.7 QTMovie.GetMuted

Component	Version	macOS	Windows	Server	FileMaker Cloud	FileMaker iOS SDK
136 QTMovie	4.0	Yes	No	Yes, macOS only	No	No

MBS( "QTMovie.GetMuted"; Movie )

This function was ?? removed for MBS FileMaker Plugin 9.0. Please move to newer functions or keep using older plugins.

### Parameters

#### Movie

The reference number of the movie. Please use QTMovie.OpenContainer, QTMovie.OpenFile or QTMovie.OpenURL function to get movie reference.

\$mov

**Result** Returns value or error.

### Description

Value is 1 if muted and 0 if not.
